The grace and force of the expression almost conceals the triteness of the thought; but when, time after time, some Aesopian moral of this kind is palpably worked-up to, and finally presented to us, clear and plain, we see the trick too well, and what we begin to expect we begin almost to dislike. The "Legend of Music," (pp. 29-47) is the finest thing in the book. If I remember rightly, its main thought—man's power of making or recognising music in the blending but discordant clamours of beast, and tree, and fiends, and waves—has been touched and developed with great power in "Paracelsus." But here, though the language tends towards the extravagant and rhetorical, the thought is finely maintained, and, there is no "moral," save the quiet record of the triumph of Jubal. The "Legend of Love," and that of "The Ideal," might really be one poem, and the former would gain by the amalgamation. Here also the expression is incomparably better than the thought. Adam walks through the world, haunted by the contrast between the Eve at his side and the remembered Eve of Paradise.

"That phantom, faultless fair
(The unforgotten Eve of Paradise,
Beautiful as he first beheld her there,
Ere any tear had dimmed her glorious eyes),
Long after Paradise itself had been
By him forgotten, haunted Adam's gaze.
And Adam made comparison between
The faithful partner of his faultful days,
Who strayed, and sinned, and suffered by his side,
And that imagined woman. With a sigh,
Her unattainable beauty, when he died,
Adam bequeathed to his posterity,
Who callèd it The Ideal.

And mankind
Still cherish it, and still it cheats them all.
For, with the Ideal Woman in his mind,
Fair as she was in Eden ere the Fall,
Still each doth discontentedly compare
The sad associate of his earthly lot;
And still the earthly woman seems less fair
Than her ideal image unforget."

Yes, we know—it is the child's discovery—"The world is hollow, and my doll is stuffed with straw, and so, if you please, I should like to be a nun." But what have poets, who

should be climbing Parnassus, to do with melodiously running down it in this style? It is the very function of poetry to keep us mindful that dreams *are* realities, and the only realities. There are several touches of Browning in this book, but where is the touch of "By the Fireside," or "One Word More"?

The second series, entitled "Man and Beast," is, on the whole, slighter and more humorous in quality, yet not devoid of pathos—witness pp. 74-5, 88-90. The "Legend of Eve's Jewels" and the "Legend of Fable" (pp. 93-115) are exceedingly clever and graceful—the latter especially so; the Envoi to Aesop, unknown yet well known, is very neat. Here is its last stanza:

"Great Sire of Fable! age to age
Extends from north to south,
From east to west, thine heritage,
That grows from mouth to mouth.
And, with its growth still growing thus,
Thou art thyself grown fabulous."

Of the remaining poems, the longer ones seem to me the less good. "Prometheia" is didactic and half political; "Uriel" is powerful, but perplexing; so is "Strangers." "Transformations" has a reminiscence of Browning. The "Lines composed in Sleep," though they cannot compare with the marvellous "Kubla Khan," have yet a touch of the same strange dream-world. "Cintra" is a vivid record of that marvellous landscape. But of all these lesser poems the best is "North and South"—it might have been written by Mr. Arnold.

"Far in the southern night she sleeps;
And there the heavens are hushed, and there,
Low murmuring from the moonlit deeps,
Faint music fills the dreamful air.
No tears on her soft lashes hang,
On her calm lips no kisses glow,
The throb, the passion, and the pang
Are over now.
But I, from this full-peopled north,
Whose midnight roar around me stirs,
How wildly still my heart goes forth
To haunt that silent home of hers!
There night by night, with no release,
These sleepless eyes the vision see,
And all its visionary peace
But maddens me."

It is not great, but it is deeply felt, and therefore real, poetry.

E. D. A. MORSEHEAD.

Italian Sketches. By Janet Ross. (Kegan Paul, Trench, & Co.)

THERE are two ways of looking at Italy, as there are two ways of looking at most things in this world—the way of enjoyment and the way of criticism, the way of acceptance and the way of rejection; and, as nothing in this world is either perfectly good or perfectly bad, it follows that both points of view must contain some element of truth.

We reviewed lately a book called *Our Home by the Adriatic*, which was a good specimen of the antagonistic attitude; the book before us is an excellent example of the opposite method. It depends very much upon temperament which method we adopt as a writer, or which method pleases us as a reader. For our own part we believe that the method of acceptance is the more fruitful, as it certainly is the more enjoyable.

Mrs. Ross's love of Italy and the Italians is written in every line of her book; the

whole is inspired by affection and tempered by knowledge, and the combination gives to her work the suave and mellow quality which it possesses. Mrs. Ross's knowledge on practical points is indeed very great; it is based upon an experience of eighteen years passed in intimate relations with the Tuscan peasantry. Popular songs, music and all, caught from the lips of Florentine "cabbies," or of contadini in the Val d'Arno, strange bastard Greek chants still sung by the shepherds of Leucaspidè, minute descriptions of the way in which oil and wine are still made in Tuscany, a parallel between the agriculture of Vergil's time and the Tuscan farming of to-day, an account of the metayer system with its advantages and drawbacks—all enlivened by vivid sketches of the peasantry drawn from the life—form the main subject of this charming book. We even get an analysis of the waters of Casciana, though the last item in that analysis, "residuum of complex composition," placed at a very high figure, seems to leave a good deal for the chemist to discover. Mrs. Ross's translations are very good and spirited; take for instance, "Palumella" (p. 76). The difficulty of rendering these popular songs is well known, and the masterly way in which Mrs. Ross has caught the spirit and the lilt of the originals proves how much she is in sympathy with her subject. But perhaps nothing in the whole book better displays the author's intimacy with the people about whom she writes than the numerous proverbial sayings, so essentially Italian in character, which are scattered broadcast over her pages. The real secret of Mrs. Ross's success lies in her deep sympathy with the people about her, and the remarkable camaraderie of her nature. When on a journey hers is the "song of the open road"; and she is always ready for the frank enjoyment of the people she meets, and so full of a quick spontaneous sympathy that they soon unlock to this magic key. For instances of these qualities take the charming story of "La Gioconda" and the episode of the young sailor at Tarentum. These are traits of a temper which an Italian appreciates. He enjoys frankness and trust, and he likes sympathy. Let an Italian feel that you think him a rogue, and he will very soon give you good reason for doing so; while, on the other hand, in a large number of cases he is grateful for and will justify confidence.

The freshest and, in some respects, the best chapters of the book are those on Tarentum and Leucaspidè; two charming descriptive papers on a part of Southern Italy that is little visited—they fill one with a desire to go there. The whole work, however, can be safely recommended for its knowledge and its information to those who intend to visit either the Tuscan hills or the plains of Magna Græcia. H. F. BROWN.

TWO FRENCH BOOKS ON IRELAND.

Paddy at Home ("Chez Paddy"). By the Baron de Mandat-Grancey. Translated by A. P. Morton. (Chapman & Hall).

Pour l'Irlande. Par Emile Piche, Prêtre Canadien. (Paris: J. Mérsch; Dublin: Gill.)

M. DE MANDAT-GRANCEY styles himself "an apostolic Roman Catholic"; at the same time he

is a landlord. While, therefore, he has strong sympathy with the Irish as, in the main, a Catholic people, he does not like the National or (as he insists on calling it) the Land League; and, since his travels were chiefly in what are called congested districts, he also believes in the exploded panacea of emigration. That is why the Unionist press attribute to his lively and amusing book an importance greatly above its deserts. It is simply the *impressions de voyage* of an admirable *raconteur*. The story of bailiff M'Grath and his five plain daughters—two of whom got married to his police-protectors, the result being a requisition from the other three that the father should lodge a complaint against his sons-in-law and get them replaced by single men—is told with a raciness which M. About never surpassed. Then M. de Grancey, though he appears to believe that the Irish peasants are a pack of lazy liars, never says a harsh word of them, and is evidently delighted at the enthusiasm with which they always received the announcement that he was a Frenchman. He did not see much of Ireland—Dublin, Castle Connell, Limerick, Killarney, Kenmare, Tralee, Shaunganeen, where he spent his Christmas as the guest of the strictly boycotted Mr. Thompson. Besides, as he was passed on from one landlord and agent to another, he naturally heard only one side of the question; and, moreover, having made up his mind that Home Rule is impossible, he did not take the trouble to learn what is to be said on the other side.

Nevertheless, when Mr. Gladstone had claimed that the whole of the civilised world is on his side, it was a grand thing to show one clever writer who was strongly the other way. *Chez Paddy* accordingly received an amount of attention altogether disproportionate to its real importance; and Mr. Morton's translation was doubtless hurried on for political ends, otherwise he would have given for *bail* its English equivalent; for roadsteads he would not have written roads; nor would he have described the inevitable doom of the iniquitous Grand Jury system as "it is fatal." I am glad, however, that *Chez Paddy* should have been thus early translated; for, to those who read him in cool blood, M. de Grancey's evidence tells much more against than it does in favour of the present system. Of agents, for instance, he says (as in duty bound), "no other nation owns a body of officials who can be compared with them; yet, since they are not accountable either to government or to the electors, their despotic power is felt to be a grievance." It is "dangerous," too, for "unquestionably it must be hard," says this French landlord, who certainly has no excessive sympathy for the tenant class, "to feel oneself so completely in a man's power, however honourable he may be." Land is a necessary of life to the Irish peasant; and this the agent can not only take from him, but can prevent him from getting it elsewhere, "a whole county being in the hands of five or six men, all interested in keeping on good terms with one another." And thus, on the French landlord's own showing, an eviction may easily become, in Mr. Gladstone's words, a death sentence (p. 225). M. de Grancey sees clearly how different all this is from England, where tenants are at a premium, and where there

are other industries for a man to turn to; though when he disputes the title of the tenant to be considered part-owner he shows that he has not realised the altogether peculiar conditions of land-tenure in Ireland. In France, as in England, the tenant takes a farm on which the landlord and his predecessors have expended much capital. In Ireland the expenditure has been, in almost every case, made solely by the tenant and his predecessors, whom the landlords have been robbing, generation after generation, except where Tenant Right has afforded a sort of compensation. This disposes of the whole of our author's concluding chapter. It is admirably reasoned, but the clearest logic can not make up for wrong premises; and the "association between capitalist and cultivator," which is a fair description of farming in almost every other European country, is wholly misleading when applied to Ireland. A Kerry or Donegal farmer, whose father and grandfather turned a bit of bog into fair land, stands in precisely the same position as the present representative of one of those Scotch or English settlers who gradually turned "the Ards" in County Down into a garden. The difference is that "tenant right" encouraged the latter to put labour and capital into the work and protected him when he had done so; the former was, till 1870, wholly at the mercy of an agent, whose business was to extort more rent as soon as the improved bog had acquired greater market value. This is enough to account at once for the prosperity of the "Orange part of Ulster," and for the backwardness of nearly all the rest of the island. But M. de Grancey, Frenchman like, had his theory; and if facts did not square with it so much the worse for them. Thus, he actually supports his emigration fad by the monstrous misstatement (p. 298) that the population is increasing, whereas, if he had travelled in the North (as I am now doing) he would have heard the cry against depletion raised quite as loudly by the landlord class as it is by the Nationalists of Dublin. If his object was to be amusing, his book is a complete success; as a contribution towards solving the Irish difficulty its value is *nil*, unless his reminder that England has never succeeded in assimilating any of her subject-populations (contrasting strangely herein even with those cruel colonists the Spaniards), leads some Englishmen to reflect that, after all, to concede Home Rule to the manifest wish of seven-eighths of the Irish people may be the real solution of this difficulty—that the Union of love and gratitude is a better thing than the farce of a United Parliament. He makes few blunders for a Frenchman, though to place in the Queen's County Glenbeigh, which Mr. Adair so cruelly cleared some twenty-five years ago, is startling. But he was evidently humbugged (and had an amused suspicion that he was being humbugged) by the facetious guests of Mr. Trench, who would not let him sit near the drawing-room window lest a shot should come through, and who gave him his choice of revolver, bowie-knife, or tomahawk for defence in case of an attack. He is most successful in his criticism of Mr. Gladstone's Purchase Bill; but, as that bill is dead, nothing need be said but that the landlords will never have such a chance again. I wish he had discussed the respective advantages of

state-ownership and peasant proprietary; but, looking on the whole matter as an impossibility, he naturally does not care to do this. I am glad that his practised eye saved him from giving in to the fallacy that Irish land is all good and that the grass is valuable in proportion to its abundance. He looked at things as an intelligent agriculturist and he writes accordingly. On many minor points—*e.g.*, the morality of the peasantry, the untidiness of the women, and whether the priests are or are not exacting in the matter of dues, his testimony is worth attention.

But I have already given too much space to a book which, but for the way in which a political party sounded its praises, hardly deserved so crushing a reply as that given by Father Piche. He has been five years at Lurgan, and, therefore, writes with authority. His little book will commend itself to every fair-dealing reader, and should be taken as a corrective by those who having read *Ches Paddy* desire to hear the other side of the subject. It is startling to find that one of the baron's raciest stories—that about priests condoning murder, when the murdered is a bailiff—was told him by Father Piche. It is, of course, a "cock and bull" as old as the hills; but the baron took it quite seriously. I am glad the translator has discarded the hideous caricatures which provoke Father Piche's ire.

HENRY STUART FAGAN.

NEW NOVELS.

A Secret Inheritance. By B. L. Farjeon. In 3 vols. (Ward & Downey.)

Cast on the Waters. By Hugh Coleman Davidson. In 3 vols. (Hurst & Blackett.)

Scheherazade: a London Night's Entertainment. By Florence Warden. In 3 vols. (Ward & Downey.)

A Daughter of the Tropics. By Florence Marryat. In 3 vols. (White.)

Dead Men's Dollars. By May Crommelin. (Bristol: Arrowsmith.)

Gracious Lady's Ring. By Mary E. Hullah. (Hatchards.)

MR. FARJEON has scarcely maintained his usual level in his latest book. The theme he has chosen—that of hereditary insanity—is neither new, nor well adapted to artistic purposes; and it ought to be either one or the other to redeem its inherent unpleasantness. No doubt, much pains have been devoted to invest the treatment with some novelty, and there is careful workmanship throughout; but the story drags even more perceptibly in its completed form than it did when appearing as a serial. The contrivance for producing a new effect is that the insanity is of a kind which bisects the life of the patient. Habitually strong and clear in mind, benevolent in will and habit, cautious and orderly in demeanour, he inherits a tendency to be maniacally affected by fears for those whom he loves, and while in somnambulism, or rather trance, to commit crimes for their protection against their real or fancied enemies, being quite unconscious afterwards of his conduct, and actively contributing to fix the acts on others whom he honestly believes guilty. This is complicated with the

adventures of two pairs of twins in successive generations, who are endowed with the same occult power of knowing each other's acts when absent (at least, as regards one twin in each pair), and who repeat the experience of falling in love with the same woman, much to the interruption of their previously affectionate relations with each other. But Mr. Farjeon has not made his puppets live. They do not present any very definite individuality (though this is just what he has been striving for); and, what is somewhat strange, although most of the story is laid in France, no attempt whatever has been made to keep the local colour true. Save a Dr. Louis, even the names of the French characters are not French; and Nerac, which is a very fair-sized country town of historical note, is spoken of several times over as a mere village. If the adventures there described by Mr. Farjeon were a tithe as entertaining as those of M. Chicot, when Henry the Great kept his tiny court there as King of Navarre, according to the veracious chronicle of M. Alexandre Dumas, the improbabilities of the plot might be freely condoned; but the incidents are not lively enough to float the book as a whole.

Mr. Davidson's story opens with a prologue, separated by a long interval of years from the succeeding matter. It tells how two girl-babies, suddenly deprived of their parents, were left as waifs, and variously provided for; and the remainder of the story carries on their adventures to the goal of marriage. But the narrative portion of the book is not its most salient feature, which is rather a sketch of the sordid and wearing cares of poverty as affecting persons of a class above the artisan level, and notably a struggling author, taken advantage of by the sharks who infest the publishing trade not less than other industries. Also there is one character upon which Mr. Davidson has spent a good deal of pains: a happy-go-lucky man, totally without principle in money matters, and thus ready to act dishonestly in order to tide over any difficulty, yet much more weak than knavish, being perfectly willing to give away freely what he has dubiously acquired, and goodnatured after his slovenly fashion. The defect in the drawing is that the bad side is brought out very much more forcibly than the good one, which has to be taken mainly on trust; though this criticism has to some extent to be qualified by noting that Mr. Whiffin, the character in question, is one of those numerous persons who never get to understand the value of money, and thus fail to recognise the immorality of doubtful transactions connected with it, even when including abundant falsehood. There is promise in *Cast on the Waters*, but the plot wants neatness of juncture; and Mr. Davidson doubles one of the leading situations, where variety of treatment would have been more effective.

Scheherazade is a story with a good deal of crude, rough vigour, and with at least half-a-dozen cleverly planned situations; but it has one most serious artistic defect. A novelist is quite within his rights when inventing perfectly impossible plots and situations; but he is bound to make his characters speak and act as they would be likely to do if by any

chance they could be so placed. That Mr. Besant possesses this gift in an uncommon degree is known to all readers of his novels; but Miss Warden has not attained it yet. She has, however, drawn her heroine (a sort of blended study after Undine and Dora Spenslow) with much deftness and some sympathy; and, while there are passages in the book where the crudity is not far removed from coarseness, yet this is more in style than in idea, and there is capacity shown for doing much better if a competent adviser would teach her the literary and ethical value of restraint and reticence. The title is not very appropriate, a strain of East Indian blood in the heroine being the sole discoverable reason for it.

"A Daughter of the Tropics" is an adventuress in London, by birth a West Indian octoroon, with beauty and talents, not the least of which is a talent for making mischief, and a perfect willingness to exercise it. She appears on the scene in the capacity of housekeeper and secretary to Mark Kerrison, a dramatic author, whom she desires to make her husband also; and the plot chiefly turns on her employment of *chantage* to get rid of a young lady whom he prefers, both before and after he has married herself. Lola Arlington, the adventuress, obtains the necessary information partly through her own keen-witted observation, but even more through the occult powers of her great-grandmother, an aged negress, who sets up in business as a spaw-wife in Whitechapel, and is credited by the author with really possessing the supernatural powers to which she lays claim, and with being a priestess of the Vaudou cult, regarding which, however, the abundant details supplied are more sensational than historically accurate. The manner in which her plots recoil unexpectedly upon herself forms the apex of the story, which is written with some dramatic power, but lacks all charm of style.

Dead Men's Dollars is a story of successful search for sunken treasure, which the seeker desires chiefly for the sake of a girl who throws him over while he is away looking for it, though with the excuse that there was reason to suppose him drowned. How he is consoled at last is prettily told; and the volume is one that will serve to wile away a couple of hours pleasantly enough—quite as much as it aims at.

Gracious Lady's Ring is a homely story of German life—so German, indeed, that it reads more like a translation than an original English composition. It tells simply how an honest servant-girl falls under suspicion of stealing a ring and suffers imprisonment for the alleged crime, but has her innocence accidentally established some years after she has emigrated to America. The weak point of the story is that the circumstantial evidence is not strong enough to warrant a conviction, since the only facts proved are the opportunity for making away with the ring and its actual disappearance. It is not probable that German law exacts no more.

RICHARD F. LITTLEDALE.

SOME RELIGIOUS BIOGRAPHIES.

Life of Monseigneur de Mérode. By Mgr. Besson. Translated by Lady Herbert. (W. H. Allen.) This book can be read with interest not only by Catholics, but by all students of modern European history. Mgr. de Mérode was first war minister and then almoner to Pius IX., and this record of his life throws much light on the tortuous policy of Napoleon III. at the Vatican. "The emperor protects us, as they shore up a house with the intention of demolishing it" (p. 121); thus Mgr. de Mérode aptly described the state of affairs at Rome in 1859. In September of the following year the Italian troops entered the Marches and defeated Lamoricière, the brave leader of the pontifical army, at Castelfidardo. As usual, Napoleon III. was disingenuous. "Do it, but do it quickly," he said to Cialdini, who asked for his authority to invade the Papal States (p. 145). At the same time his ambassador at Rome, acting on instructions from the minister for foreign affairs, telegraphed to the French consul at Ancona (then besieged by Cialdini)—"Orders have been given to embark fresh troops at Toulon, which cannot fail to arrive soon. The emperor's government will not tolerate this culpable aggression on the part of the Sardinian government." With good reason did Cialdini tell the pontifical general—"You have been deceived. We saw your emperor fifteen days ago at Chambery, and we know what we are about." Only on one occasion did the French emperor and Mgr. de Mérode meet, and that was in March, 1860. "Well, monseigneur, I don't hear that things are going on very well at Rome." The priest replied: "Ah, sire! in what country are things going on well?" The emperor twirled his moustache, and dismissed his inconvenient visitor (p. 127). On December 6, 1866, the last French soldier left Rome, and the protection of what remained of the Papal States was left to the little army which Mgr. de Mérode had formed. On October 26, 1867, Garibaldi laid siege to Monte Rotundo, five leagues from Rome. On October 29 a French corps landed at Civita Vecchia. The repulse of the Garibaldians at Mentana on November 3 was due to the bravery of the Papal Zouaves. But it is a fact of history that Napoleon never intended that the French troops should have aided the Pope at this critical juncture. When Garibaldi's invasion was first heard of, the French emperor gave orders for the embarkation of an expeditionary corps, then revoked them, then renewed them; and the army corps commanded by General de Failly had embarked and was on its way before a fresh counter-order reached Marseilles (p. 234). Montalembert married a sister of Mgr. de Mérode, and the letters of the great orator and writer form one of the most interesting portions of the book. We must content ourselves with two extracts:

"I found, a day or two ago, in the prophet Isaiah a text which seems to me to sum up in an admirable manner the whole history of the two Napoleons—*Posuimus mendacium spem nostram et mendacium protecti sumus*. I hope that the person who is employed to open my letters will take a note of this text and communicate it to his superiors" (p. 190).

In the same letter the great champion of the Catholic cause thus refers to his own daughter and sister taking the veil:

"For to the blanks which death creates around us as we go on in life, it is sad to have to add the other blanks left by those young lives who are gone to bury themselves in the cloister. This sadness may be disputed on higher grounds; but it will not yield to the most conclusive arguments, and we may say in truth, 'The heart has its reasons which reason does not recognise.'"

The energy of Mgr. de Mérode was by no means

confined to the Papal army. In every department of the public service he was the minister of reform and progress. Roads, streets, aqueducts, railroads, telegraphs, prisons, schools, convents, agricultural establishments, hospitals of every kind—all were transformed, created, or renewed by the unflagging zeal of this Belgian priest, who combined the enthusiasm of a modern philanthropist with that of a knight of old. "Those who see danger to the Church from the better instruction of the people are blind!" he would exclaim. His biographer justly says that Mgr. de Mérode did more in twenty years to overcome the priestly prejudice in Rome against education than had been done in the previous century. Numerous as were his services to the cause of education, his services in the cause of prison reform were even greater. We can only refer here to the wonderful improvements he effected in the prisons at St. Balbina and the Termini (pp. 94-104). Another biographer of Mgr. de Mérode has said that "the Piedmontese, who have so ruthlessly destroyed so many things, have not dared to change the prison system which he introduced." When Mgr. de Mérode was at Bologna with the pope in 1858, he asked to see the prisons. Fearful of inspection, the authorities replied that the keys could not be found. Instantly he sent for two masons, made a breach in the walls, and marched into the prison through the hole. We have quoted enough to show that this is an interesting book. We should have to quote much more were we to attempt to do justice to Mgr. de Mérode's varied and extraordinary gifts. Whatever may be thought of the object to which he devoted his life—the integrity of the Papal States—there can be but one opinion of Mgr. de Mérode's character. He was, in the best sense of the word, a prince of the church. The translation before us is creditable; but the book would have gained much in value had it contained a historical map and an index.

W. Lindsay Alexander, D.D., LL.D.: his Life and Work, with Illustrations of his Teaching. (Nisbet.) This biography gives a careful and minute account of the work of the leader of Congregationalism in Scotland during the last fifty years. Mr. Ross does not, perhaps, pay quite sufficient attention to Dr. Alexander's influence on his party, but this may be because the man is himself more interesting and important than the body he belonged to. Dr. Alexander was for more than forty years pastor of what became St. Augustine's Church in Edinburgh, and for more than twenty years Professor of Systematic Theology in the Theological Hall of the Congregational Churches; but his power as a preacher and his genial character gave him more than a local or sectarian reputation. His extensive attainments made all his work thorough. Besides a wide and scholarly knowledge of Latin, Greek, and Hebrew, he was well acquainted with German, French, and Italian; and his culture found full expression in his sermons. He disliked the modern custom of preaching only on isolated texts or subjects, and insisted that a minister should systematically and regularly instruct his congregation in the meaning and scope of the books rather than the texts of their Bible. His sermons consequently demanded attention and even study; but those who sat under him were apt to find other preachers shallow and careless. Of his literary work the most arduous and valuable was the editing of the third edition of Dr. Kitto's *Cyclopaedia of Biblical Literature*, of which the most important articles were by himself; but his pen was rarely idle. Principal Donaldson contributes to Mr. Ross's biography a sketch of Dr. Alexander as a scholar, which is only too short. Few men have worked harder, or done so much work so well.

THE literature of the Wesleys increases apace. A memoir of the founder of Methodism is followed by a biography of the mother whose energy inspired him with zeal, and that in turn is succeeded by Mr. Telford's *Life of the Rev. Charles Wesley* (Religious Tract Society). As the sweet singer of Methodism, the latter name is honoured in every Christian community; and in the religious body which he laboured so actively to promote the memory of his hymns has all but banished the recollection of his other labours. Among the itinerant preachers who scattered themselves all over England sowing the seeds of Methodism, none laboured with more thoroughness than Charles Wesley, and Mr. Telford's volume will rescue this fact from the neglect which it has hitherto suffered. We notice in the pages which describe the journeys of Charles Wesley through the West of England a few inaccuracies of names which are probably borrowed from the manuscripts of the original journals; but these are of slight moment and do not materially detract from the excellence of Mr. Telford's labours. A more important difference of opinion confronts us in the opening chapter, describing the early years of the sweet singer's life. Hitherto his biographers have been almost unanimous in asserting that their hero was born in December 1708; but Mr. Telford, on the ground that, if such were the case, Charles Wesley could not have been fourteen months old, as is invariably stated, when the rectory house of Epworth was burnt down in February 1709, has altered the birthday to December 1707. In making this apparent correction of a seeming error he has overlooked, we cannot but think, the circumstance that at this period of our history the year terminated in March. Certainly, if all the dates are taken, as would naturally be done, in the old style, a child born in December 1707 would be precisely fourteen months old in February 1709. A glance at the parish registers of Epworth would probably settle the fact; and before Mr. Telford's life of Charles Wesley is again set up in type the question should be authoritatively answered. This memoir of the hymn-writer of Methodism is written with judgment and good taste.

Life of the Rev. William Morgan, Professor of Theology at the Presbyterian College, Carmarthen. By his son, John Lloyd Morgan. (Elliot Stock.) Those who are interested in the history of Nonconformity in Wales will find this sketch of a leading Independent minister clear and useful. Mr. Morgan was for thirty-seven years pastor of the Independent Chapel in Union Street in Carmarthen, and for twenty-one years Professor of Theology at the Presbyterian College in the same town; but his life is chiefly remarkable for the vigour with which he fought the battles of dissenters on the questions of Church rates and education. In a controversy with Bishop Thirlwall he more than held his own, and won from his opponent a frank acknowledgment of his courteousness. The style of the biography is terse, but a little dry. Six sermons on various subjects are added at the end of the volume.

Only a Curate; or, Experiences and Reminiscences of Clerical Life. By E. G. Egomet. (Fisher Unwin.) If the author of this book intended it to be a record of his own experiences, he made a great mistake in not saying so. "The value of a story is its truthfulness," said Dr. Johnson; and Egomet would have added ten inches to his intellectual stature, had he stuck to facts, and dropped his *nom de guerre*. He is unquestionably an able man, but he cannot be described as an agreeable one. "I have always chosen an independent part," replied Egomet. "Truth and justice, honour and honesty, humility and piety, have been my guides as to what part and

path I should take in life." "Otherwise you might possibly have been a bishop," was the reply, with a smile. "Perhaps so; but I am satisfied with my present lot, having learned, like the apostle, 'in whatever station of life I am, therewith to be content.'" (p. 78). It is not customary for a gentleman, when asked whether he speaks French, to break forth into that language, yet such is the habit of this missionary from the backwoods (p. 235). Disrespect for colonial orders is possibly very improper; but it hardly seems an offence of sufficient magnitude, or sufficiently frequent, to justify the stress laid on it by Egomet. The "country parochial clergy" are, doubtless, very unapostolic in their lives; but is it fair to state of them, as the author does (p. 231), that he found "none like St. Paul, content with his lot"? We must also protest against the author's "regret that the temple of God [St. Paul's Cathedral] should be desecrated by"—a musical rehearsal (p. 53). This narrowness ill accords with the liberalism professed by the author in his interview with the Bishop of New York (p. 36). But consistency is not the author's strong point. He frequently contrasts the Church most disadvantageously with Dissent, and yet he dismisses disestablishment and disendowment as "a great misfortune and a great fraud" (p. 292). Like many another reformer, he regards the whole Church system as "corrupt, rotten and bad" (p. 98), but he thinks he can cleanse the State Church by abolishing all patronage. This is his panacea for all the ills that the establishment is heir to: "Vest all patronage in the diocese, by which I mean the bishop and his council, or cathedral chapter, in connexion with the parishioners of each church. Then let the bishop nominate, giving the people power to refuse, and so on, till both bishop and people agree. This will secure the minister most likely to promote peace in the parish, give satisfaction to the parishioners—and crowded churches will be the result where there are now so many empty pews" (p. 138).

Beecher Memorial: Contemporaneous Tributes to the Memory of Henry Ward Beecher. Compiled and edited by Edward W. Bok. (James Clarke.) This handsome volume consists of a series of letters, &c., written by divers persons—in America, England, and the continent of Europe—when the news of Beecher's death was yet fresh. While they afford much material for comment, we must content ourselves with pointing out one general moral—the very different position occupied by a popular preacher in the United States and in this country. Here the clergy, of whatever denomination, form a profession apart. None can combine successfully the influence of the platform with that of the pulpit; none can hope to gain the position of Beecher as the acknowledged spokesman of the nation. For this is the lesson taught by the book before us—that Beecher, by his faults and his weaknesses scarcely less than by his virtues and his strength, stands forth as the representative of the New England of to-day, recognised as such alike by theologians, politicians, men of letters, and journalists. It remains to add that the volume has been beautifully printed at the De Vinne press in New York, and that it is issued only in a limited edition.

Bekennnisse, Was sollen wir denn thun? Von Graf Leo Tolstoi. Aus dem russischen Manuscript übersetzt von H. von Samson-Himmelstjerna. (Leipzig: Duncker & Humblot.) Count Tolstoi's confessions show us a "walk through the valley of the shadow of death." A youth, belonging to the aristocracy, of gifts and of great sensibility, abandons the faith and the church in which he has been nurtured. He rushes into the excess of dissipation, but there is that within him which makes for righteousness. He throws himself into the study of

science and philosophy. He returns again to the church which he had deserted. This subject is not quite new, and it is treated in a manner which betrays the imitation of French and German models; but it has besides something of a peculiarly Russian flavour. It shows *finesse* of analysis; and the manner in which the successive mental states of our hero are made to pass by like the slides of a magic lantern is decidedly clever. The pictures bear the likeness of truth, except, perhaps, the one given on p. 10. The catalogue of offences which he professes to have committed would have brought a nobleman even in feudal Russia into the prison of SS. Peter and Paul, if not to Siberia.

NOTES AND NEWS.

Lotus and Jewel is the title under which Mr. Edwin Arnold's new volume of poems will shortly appear. The name chosen bears allusion to the two principal pieces in the work—"In an Indian Temple" and "A Casket of Gems." The former of these two discourses upon the mysterious philosophy enshrined in the sacred Hindu word *om*. The latter brings together, under a fanciful heading of eighteen letters, and in lyrical form, much recondite lore and many legends connected with precious stones. The volume also contains several minor poems, with translations from the Sanskrit of Kālidāsa and of the Mahābhārata. Messrs. Trübner & Co. will also publish at about the same time a reprint, with supplementary comments, of Mr. Edwin Arnold's "Death—and Afterwards," a paper contributed to the *Fortnightly Review* in August, 1885.

THE Rev. W. W. Tulloch has completed a popular biography of the Prince Consort, which will form a companion volume to his story of the Life of the Queen, recently published. We understand that the Queen has allowed Mr. Tulloch to submit his work to Her Majesty before publication. The volume will be published by Messrs. Nisbet & Co.

THE same publishers also announce for publication in October the *Autobiography and Other Memorials of Miss Maria V. G. Havergal*, the sister and biographer of Frances Ridley Havergal.

ARCHDEACON FARRAR, in addition to his little volume on *Everyday Christian Life*, is engaged on a larger work in Church history, and will contribute an instalment of it to an early number of the *Contemporary Review* under the title, "Was there a real St. Anthony?"

MR. B. L. FARJEON'S Christmas Story will this year appear as the special extra number of *Good Words*, with illustrations by Gordon Browne. Its title is "While Golden Sleep doth Reign," and its scene is laid partly in London, and partly in Paris under the Commune.

MR. J. W. ARROWSMITH, of Bristol, will issue in the middle of October a translation of Max O'Rell's last book, *L'Ami MacDonald*. The translation is by the author's wife. Nine editions of the French original were exhausted within one week of its publication in Paris.

MR. REDWAY announces *The Dance of Death*, a small volume containing a series of curious woodcuts discovered some time ago in a northern printing office. The letterpress is by Mr. T. Tindall Wildridge.

The Amenities of Social Life is the title of a new volume of essays, by Mr. Edward Bennett, announced in Mr. Elliot Stock's "Olive Series."

A NEW volume of ballads and stories in verse by the Rev. Frederick Langbridge, entitled *Poor Folk's Lives*, will be published immediately by Messrs. Simpkin, Marshall & Co.

THE sixth annual report of the American Dante Society (of which Mr. Lowell is president) contains a Dante bibliography for the year 1886, compiled by Mr. W. C. Lane. It also announces the completion of the Concordance to the *Divina Commedia*, upon which Prof. Fay, of Washington, has been engaged for several years. The text followed in the Concordance is that of Witte (Berlin, 1862), with the addition of such words in the edition of Niccolini, Capponi, Borghi, and Becchi (Florence, 1837) as differ from Witte's. The context and references are given for all the words of the *Divina Commedia* except the shorter and commoner pronouns, prepositions, adverbs, and conjunctions, and the more frequently recurring forms of the verbs "avere" and "essere." All these words and forms, however, are inserted in their proper place in the alphabetical index, so that the work, in addition to the usual features of a concordance, will present a complete list of the words and word-forms in the *Divina Commedia*. Words or forms more or less unusual used by Dante only in the verse-ending are marked with an asterisk; and words used only by Dante are marked with an obelisk. The work will form a volume of between 800 and 900 pages large octavo, and will be issued at the price of ten dollars (£2). Subscriptions in Europe will be received by Messrs. Trübner.

MESSRS. SWAN SONNENSCHN & Co. announce a new series of cheap novels, to be called the "Unicorn" series. The series will commence with Mr. Edward Jenkins's *Jobson's Enemies*; the young Dutch novelist, Miss Wallis's *In Troubled Times*; Miss O. C. Fraser-Tyler's *Jonathan*; and *The Basilisk*, a joint production of Messrs. H. Pottinger Stephens and Warham St. Leger.

THE National Society announces the following story-books: *Under the Storm*, by Miss Charlotte Yonge; *Prentice Hugh*, by Miss Peard; *A Little Step-Daughter*, by the author of "The Atelier du Lys"; *A Promise Kept*, by Miss Palgrave; *Uncle Ivan*, by Miss Bramston; and *For Half-a-Crown*, by Esmé Stuart.

THE National Society also announce, as an addition to their Series of Scripture Prints, *The Entry into Jerusalem*, adapted from Gaudenzio Ferrari by J. E. Goodall.

MESSRS. MACNIVEN & WALLACE, Edinburgh, announce for publication: *The People of the Pilgrimage*; an Expository Study of "The Pilgrim's Progress" as a Book of Character, by the Rev. J. Aken Bain; *Lectures on Missions*, by the late Rev. W. Fleming Stevenson; *Personal and Biographical Sketches*, by the late James Dodds, of Dunbar, with a brief Memoir by his wife.

MR. CHARLES WORTHY will shortly publish with Mr. George Redway, *How to trace a Pedigree*; the Science of Heraldry explained.

A POPULAR work, entitled *All about our Railways*, will be issued by Messrs. Carr & Co. next week.

THE forthcoming issue of the *Agnostic Annual*, which will be published next week, will contain a paper by Mr. Samuel Laing, entitled "Agnosticism and Christianity." Among the other contributors are Prof. Leon Delbos, Gerald Massey, John Wilson, and Dr. R. Bithell.

THE English Dialect Society has just sent out to its members the belated 1885 publication, *Four Dialect Words: Olem, Lake, Nesh, and Oss*, by Mr. Thomas Hallam; and one work for each of the years 1886 and 1887, namely, *A Glossary of Words in use in the Wapentake of Graffoe, South-west Lincolnshire*, by the Rev. R. E. Cole; and *A Second Report on Dialectal Work, from May 1866 to May 1887*, by Mr. A. J. Ellis.

The remaining publications for 1886 and 1887 are all in the printer's hands; and they will be issued, it is expected, before the end of the year, thus once more bringing the society's work abreast of the subscriptions.

MISS CROMMELIN'S popular story, *Brown Eyes*, has been translated into German by Baroness Stockmer, and is appearing in the *Alte und Neue Welt* magazine, with excellent illustrations of Dutch costumes and scenery.

The only English journal published in Austria—the *Vienna Weekly News*—has just celebrated the first anniversary of its birth.

THE *Schiller-Stiftung* received last year, from a private gentleman named Goldberk, a bequest in the shape of landed property. This has recently been sold, and, after deducting all the incidental expenses, there remains a balance of 90,000 marks (£4,500).

THE FORTHCOMING MAGAZINES.

PROF. JAMES DARMESTETER has written for the forthcoming number of the *Contemporary* an article on "Afghan Life in Afghan Songs," which embodies some of the results of his visit to the North-west frontier of India. The same number will also contain a reply by Prof. Robertson Smith to Mr. R. S. Poole's recent article on "The Date of the Pentateuch."

MR. GLADSTONE has written expressly for the *Youth's Companion* a paper on "The Future of the English-Speaking Races." This will appear in the next volume, which will also contain an article by Lord Wolseley on "Young Men in Battle"; an article by Archdeacon Farrar on "The Education of a Roman Boy"; and several papers by Justin McCarthy on "Life in the House of Commons."

AN important article dealing generally with Mr. Hall Caine's novels will appear in the *Westminster Review* for October. We hear that it is by a writer whose name is not unfamiliar in the scholastic world.

THE principal contents of the *Century* for October will be "Ely Cathedral," illustrated, by Joseph Pennell; "Twelve Years of British Song," by E. C. Stedman; "Mrs. Stowe's Uncle Tom at Home in Kentucky," by J. L. Allen; "Interpretation," by Richard E. Burton; "The American Game of Football," by Alexander Johnston; and a portrait of Harriet Beecher Stowe.

WITH the November number, which begins its second volume, the *Lady's World* will be much enlarged and improved; and at the same time its name will be changed to the *Woman's World*. While attention will continue to be paid to dress and fashion, the more elevated regions of woman's work and thought will now have special space devoted to them. Another new feature will be serial stories, of which the first is "The Truth about Clement Ker," by George Fleming (Miss Constance Fletcher). The editor is Mr. Oscar Wilde.

A PAPER on the curious extemporary drama of the Italians, called the "Commedia dell'Arte," will appear in the October issue of *Walford's Antiquarian*, to which Mr. A. E. Waite, author of "The Real History of the Rosicrucians," also contributes an article on "The Tarot: an Antique Method of Divination."

UNDER the title of "A Diplomatic Penjdeh," Mr. Charles Marvin will contribute an article to the October number of the *Illustrated Naval and Military Magazine*, denouncing the recent cession of the Kushk Valley to Russia, on the grounds that the country is fertile instead of desert, as alleged by Sir West Ridgeway, and that, contrary to the view of the Prime

Minister, it is of the highest strategical importance.

MR. G. MANVILLE FENN has been engaged in writing a new serial story for Cassell's *Saturday Journal*, which will be commenced in the first number of the enlarged and illustrated series to be published next Wednesday.

Illustrations, Mr. F. G. Heath's pictorial magazine, in commencing its third volume in October with a specially designed cover and pictorial section headings, will begin a series of illustrated articles on "Pretty Places," mostly by the editor; "The English Church and its Buildings," by the Rev. D. J. Mackey, Perth; "Musical Notes and Musings," by Mr. F. J. Crowest; "Garden, Field and Farm," by Mr. William Earley; "Fern Gossip," by the editor; and "Short Stories" and sketches, one of which will be "Our Neighbourhood," by Mrs. Pender Cudlip ("Annie Thomas"). Messrs. W. Kent & Co. are the publishers.

St. Nicholas for October will contain "An Ivy Spray," by Louisa M. Alcott; "The Low Countries and the Rhine," by Frank R. Stockton, illustrated; "The Boyhood of Whittier," by W. H. Rideing, illustrated; and "Cupid and the Mutineers," by Mary T. Safford.

FROM henceforth the *Journal* of the Bacon Society will be published by Mr. Redway. The society thinks the author of the *Novum Organum* was also the creator of Hamlet, and is determined to make its opinion general.

MESSRS. SAMPSON LOW, MARSTON & CO.'S ANNOUNCEMENTS.

MESSRS. SAMPSON LOW, MARSTON & CO.'S first list of announcements includes "Authentic Biography of the Rev. Henry Ward Beecher," largely autobiographic, by his son, William C. Beecher, and his son-in-law, the Rev. Samuel Scoville, assisted by Mrs. Beecher; "A Story of the Golden Age," by James Baldwin, illustrated by Howard Pyle; "The Pioneers of the Alps," a collection of portraits of some of the leading guides, by Capt. Abney and C. D. Cunningham; "Waste-Land Wanderings," by Dr. Charles C. Abbott; "Handbook of the Organ," by G. A. Audsley, a comprehensive and practical treatise on the appointment and construction of church, concert-room, and chamber organs; "The History of Wool and Wool-combing," by James Burnley; "Sir Richard F. Burton, K.C.M.G.: his Early, Private, and Public Life," also an abridgment of his travels and explorations, edited by Francis Hitchman, in 2 vols.; "New Games of Patience," by Lady Adelaide Cadogan; "Wanderings on Wheel and on Foot through Europe," by Hugh Callan; "Three Principles of Book-keeping," by J. J. Chaplin; "Concordance to the Poetical Works of Cowper," compiled by John Neve; "On a Surf-bound Coast; or, Cable-laying in the African Tropics," by A. P. Crouch; "Digging, Squatting, and Pioneering Life in the Northern Territory of South Australia," by Mrs. Dominic Daly; "Outlines of International Law," by George B. Davis, Assistant Professor of Law at the U.S. Military Academy; "Pictures of East Anglian Life," by Dr. Emerson; a new edition of Dr. F. Eismarch's "Handbook of Surgery"; a new edition of Evelyn's "Life of Mrs. Godolphin," edited by William Harcourt, of Nuneham; "Home Fairies and Heart Flowers," twenty studies of children's heads, by Frank French, with poems by Margaret E. Sangster; "Fresh Woods and Pastures New," by the author of "An Amateur Angler's Days in Dove Dale"; "Happy Hunting-Grounds," by W. Hamilton Gibson; "Birds in Nature," text by J. E. Harting, with forty coloured plates of birds as seen wild in nature; "The Native

Flowers of New Zealand," illustrated in colours, by Mrs. Charles Hetley; "Living Lights: a Popular Account of Phosphorescent Animals and Vegetables," by Charles Frederick Holder; "Our Hundred Days in Europe," by Dr. Oliver Wendell Holmes; "Our New Zealand Cousins," by the Hon. James Inglis; "Through Central Asia: with an Appendix on the Diplomacy and Delimitation of the Russo-Afghan Frontier," by Dr. Henry Lansdell; "Through the Yangtse Gorges; or, Trade and Travel in Western China," by Archibald J. Little, of Iohang; "The Vision of Sir Launfal," by James Russell Lowell, with illustrations by J. W. Alexander, Bruce Crane, F. W. Freer, B. S. Giffard, A. Kapper, H. S. Mowbray, Walter Sherlaw, and F. Hopkinson Smith; "The Boy Travellers on the Congo," adventures of two youths in a journey with H. M. Stanley "through the Dark Continent," by Col. T. W. Knox; "Life of Nathaniel Hawthorne," by J. R. Lowell; "Austral Africa: Losing It or Ruling It?" by John Mackenzie, in 2 vols.; "Maidenhood: a Poem," by H. W. Longfellow, illustrated by J. Stanley; "Life of Commander M. F. Maury," by his daughter, edited by Clements Markham; "The Pytchley Hunt, Past and Present: its History from its Foundation to the Present Day," by H. O. Nethercote; "The Corsairs of France," by C. B. Norman; "Ran Away from the Dutch; or, Borneo from South to North," by M. T. H. Perelaer; "Pepper and Salt; or, Seasoning for Young Folk," prepared by Howard Pyle, and illustrated by the author; "Portraits of Celebrated Racehorses of the Past and Present Centuries," vols. i. and ii.; a new edition, in 3 vols., of Rambaud's "History of Russia"; "The Frozen Pirate," in 2 vols., by W. Clark Russell; "China: its Social Life," by M. Simon; "Skinner's Pocket Encyclopaedia"; "The Educational List and Directory of the United Kingdom, 1887-88," edited by William Stephen; "The Dusanter," sequel to "The Casting Away of Mrs. Lecks and Mrs. Aleshine," and "The Hundredth Men," by F. R. Stockton; "A Manual of Practical Dairy Farming," by H. Upton; "Nicholas Godfried van Kampen: Historian and Man of Letters," with extracts from his writings, in 2 vols., by S. R. van Campen; "North against South," by Jules Verne; "The Fighting Veres: an Historical Biography of Sir Francis Vere and Lord Vere, his Brother"; the hundredth edition of Walton and Cotton's "Complete Angler"; "Their Pilgrimage," by Charles Dudley Warner, illustrated by Charles S. Reinhart; a new volume of the "Narrative and Critical History of America," edited by Justin Winsor, librarian of Harvard University; "Steam Yachts and Launches," by C. B. Kunhardt.

Novels.—"In the Web of Destiny," by A. L. Knight; "Yarmouth Coast," by Charles Gibbon; "The Maid and the Monk," by W. Stanhope, in 3 vols.; "Under the Stars and Under the Crescent," in 2 vols., by Edwin de Leon; "His Sisters," in 2 vols., by Herbert P. Earl; "Mohammed Benani: a Story of To-day"; "Hermosa; or, in the Valleys of the Andes," by Mrs. J. E. Martin, in 2 vols.; and "Raphael ben Isaac," by John Bradshaw, in 2 vols.

Art.—"The Art Carvings of Japan, Ivory and Wood," by G. A. Audsley and Michael Tomkinson, illustrated with fifty plates in heliogravure; Goldsmith's "She Stoops to Conquer," with drawings by Edwin A. Abbey, decorations by Alfred Parsons, and introduction by Austin Dobson; "The Italian Masters," by Prof. Attwell; Mr. Blackmore's "Springhaven," with illustrations by Alfred Parsons and F. Barnard; "Pen and Pencil in Asia Minor; or, Notes from the Levant," by William Cochran; Andersen's "Fairy Tales and Stories," a new translation by Carl Siewers; "Foreign Etchings," by celebrated artists of France, Germany, &c., from paintings by Rembrandt,

Titian, Palma Vecchio, Munkacsy, and others; and Dr. Franz von Reber's "History of Mediaeval Art," translated and augmented by J. T. Clarke.

MESSRS. KEGAN PAUL, TRENCH & CO.'S ANNOUNCEMENTS.

Theological.—"The Psalms, Translated with Introductions and Notes," by Prof. Cheyne; "The World to Come: a Research as to Future Life," by the Rev. Joseph William Reynolds; "Thomas à Kempis: Notes of a Visit to the Scenes in which his Life was spent, with some Account of the Examination of his Relics," by Dr. Francis Richard Cruise, with portraits and illustrations; the "Life of Archbishop Laud," by Arthur W. Benson, with a portrait of the Archbishop after the painting by Vandyck in Lambeth Palace; "Aristotle and the Christian Church," an essay by Brother Azarias; "Dives and Pauper, and other Sermons," by the Rev. Arthur Compton Auchmuty; and three new volumes in the "Pulpit Commentary," viz., "Hosea and Joel," with exposition by Prof. Given, and homilies by Prof. Thomson, Rev. A. Rowland, and Rev. Dr. Thomas; "I. and II. Thessalonians, I. and II. Timothy and Titus, and Philemon," with expositions by the Rev. Dr. Gloag, the Bishop of Wells, and Rev. Dr. Eales, homilies by Rev. B. O. Caffin, the Rev. R. Finlayson, Prof. Crokerry, the Rev. W. F. Adeney, the Rev. W. M. Statham, and Rev. Dr. Thomas; and "St. John," with exposition by Prof. Reynolds, with homilies by Prof. Crokerry, Prof. Thomson, the Rev. D. Young, Rev. B. Thomas, and the Rev. G. Brown.

General Literature.—"Bric-à-Brac," being some woodbury-type plates done at Gower Lodge, Windsor; a second series of "Chaucer's Canterbury Tales," edited by Alfred W. Pollard for the Parchment Library; "Aucassin and Nicolette: a Love Story," edited in Old French and rendered in modern English, with introduction, glossary, &c., by F. W. Bourdillon; "An Analytical Index to the Works of Shakespeare," giving reference, by topics, to notable passages and significant expressions, brief histories of the plays, explanations of allusions and phrases, &c., by Evangeline M. O'Connor; vols. iii. and iv., completing the work, of "An Old Shropshire Oak," by the late John Wood Warter, edited by Richard Garnett; "Victorian Literature and other Studies," by Prof. Dowden; "Tertium Quid: collected Essays on various disputed questions," by Edmund Gurney, in 2 vols.; "Venetian Studies," by H. F. Brown; "Shakespeare, and other Lectures," by the late George Dawson, edited by George St. Clair; "Studies in the Poetry of Robert Browning," by James Fotheringham; "Ethical Forecasts: being Essays on Religious Evolution and Morality," by William F. Revell; "The Axial Polarity of Man's Word-embodied Ideas and its Teaching," by Arthur Young; "The South Isles of Aran (County Galway)," by Oliver J. Burke; "A Handbook of Home Rule," by various writers; "Home Again," a novel, by George Macdonald; "Little Peter: a Christmas Morality for Children of any Age," by Lucas Malet, with numerous illustrations by Philip Hardy; "Practical Hints on Shooting: being a Treatise on the Shot-gun and its Management, Game, Wildfowl, and Trap-Shooting, together with notes on Sporting Dogs and Ferrets, and other Information relative to Shooting," by 20-Bore; "Historical Record of the Third and Fourth Battalions of the Worcestershire Militia," by Capt. Robert Holden, with portraits; "History of the 2nd Punjab Cavalry," by Col. F. Lance, with numerous portraits; a new volume in the "Military Handbook" series, entitled "Field Works: their Technical Construction and Tactical Application," by Col. C. B. Brackenbury;

"Infant Health: Chapters on the Physiology and Hygiene of Early Life," by H. Percy Dunn.

Poetry.—"Somnia Medici," third series, by John A. Goodchild; "Salome," by J. C. Heywood; "Fires of Greenwood," by Francis Prevost; "Sister Lucetta, and other Poems," by Zitella E. Tomkins; and "On Sea and Shore," by J. A. Langford.

Science.—In the "International Scientific Series": "Weather: a Popular Exposition of the Nature of Weather Changes from Day to Day," by the Hon. Ralph Abercromby; "Animal Magnetism," by Alfred Binet and Charles Féré; "International Law, with Materials for a Code of International Law," by Prof. Leone Levi, dedicated to the Queen; "The Origin of Floral Structures through Insect Agency," by George Henslow; and "A Manual of the British Discomycetes," with descriptions of all the species of fungi hitherto found in Britain included in the family, and illustrations of the genera in twelve plates, by William Phillips.

MESSRS. W. H. ALLEN & CO.'S ANNOUNCEMENTS.

"NAPOLEON AND HIS DETRACTORS," by Prince Jerome Napoléon, translated by Raphael L. de Beaufort, with portrait; "Como and Italian Lake Land," by the Rev. T. W. M. Lund, with three maps and eleven illustrations, by Miss Jessie Macgregor; "The Orders of Chivalry, English and Foreign, Existing and Extinct, brought down to the Present Time," compiled from original authorities by Major J. H. Lawrence-Archer, with sixty-four plates; "Modern Tactics," by Capt. H. R. Gall, with illustrations; "Haydn's Book of Dignities," revised and enlarged, by Horace Ockerby; "Other Suns than Ours: a Series of Essays on Suns, Old, Young, and Dead," with other science gleanings, and correspondence with Sir John Herschel, by Richard A. Proctor; "Adelaide Ristori: an Autobiography"; "Service Afloat; or, the Naval Career of Sir William Hoste"; "Some Hobby Horses, and how to Ride Them," by C. A. Montresor, with numerous illustrations; "The Lesters," by F. M. F. Skene, in 2 vols.; "James' Naval History," epitomised in one volume, by Robert O'Byrne; "The Romance of Life Preservation," by James Burnley; "Neo-Hellenic Manual," by Dr. Anton Tien; "Andamanese Manual: an Introduction to the Grammar of the Andamanese Language," by M. V. Portman; "Russian Reading Book," by J. Nestor Schnurmann; "Plane Trigonometry," by Thomas Boney. In "The Statesmen's Series": "Lord Beaconsfield," by T. E. Keibel; "The Prince Consort," by Miss Charlotte Yonge; "Prince Gortschakoff," by Charles Marvin. In the "Eminent Women" Series: "Mme. de Staël," by Bella Duffy; "Hannah More," by Charlotte M. Yonge. In "Biographies of Great Composers," "Handel," by J. Cuthbert Hadden. "Military Mosaics," by J. A. O'Shea; "French Self Tests," by J. Barrington, being the first of a series, German and Latin to follow shortly; "Watched by the Dead," Dickens's master-plot, analysed by Richard A. Proctor; "The Silver Trout," by Sir Randal H. Roberts; "My Life and Balloon Experiences," by Henry Coxwell, with portrait; "The New Paris Sketch-Book," by J. Alger; "Gabrielle; or, Worth the Winning," by Mrs. J. Bradshaw; "Puffs from the Engine of War," by an Officer of the Line; "Every Inch a Soldier," by M. J. Colquhoun; "A Lady's Life in Montana"; "The Miss Crusoes," by Col. Colomb, with numerous illustrations; "Westminster, Past and Present," by J. Cave Winscombe; "Taken In," being a Sketch of New Zealand life as seen by "Hopeful"; "Una's Revenge," by Melville Gray; "Sheikh

Hassan the Spiritualist," by S. Bergheim; "Rupee and Sterling Exchange Tables," by gradations of $\frac{1}{4}$ of a penny, from 1s. to 2s., rupees into sterling—from 4 pice to 500,000 rupees, sterling into rupees—from 1 penny to £50,000, by C. E. Johnston.

MR. T. FISHER UNWIN'S ANNOUNCEMENTS.

"GUATEMALA: the Land of the Quetzal," by W. T. Brigham, with 105 illustrations and five maps; "A Summer's Cruise in the Waters of Greece, Turkey, and Russia," by the Rev. Alfred Colbeck; "Daily Life in India," by the Rev. W. J. Wilkins; "Tuscan Studies and Sketches," by Leader Scott, with many illustrations; "The Fleet: its River, Prison and Marriages," by John Ashton, with seventy drawings by the author from original pictures; "The Theory of Law and Civil Society," by Prof. Augustus Puzscky, of Budapest; "The Ethic of Free Thought: a Selection of Essays and Lectures," by Prof. Karl Pearson; "The Sentence: a Drama," by Augusta Webster; "The New Purgatory, and other Poems," by Elizabeth Rachael Chapman; "Disillusion and other Poems," by Ethel E. de Fonblanque; "The Brownies: their Book," with the pictures and poems by Palmer-Cox as published in *St. Nicholas*; "New Fairy Tales from Brentano," told in English by K. Freiligrath Krolker and pictured in colours by F. Carruthers Gould; "Tom's Adventures in Search of Shadowland: a Fairy Tale," by H. Sweetland, with thirteen illustrations; "Master Minds in Art," by William Tirebuck, with portrait and frontispiece; "One That Wins: the Story of a Holiday in Italy," in 2 vols.; "More than he bargained for," an Anglo-Indian novel, by T. E. Hutchinson; "Birthrights," a novel, by Edgar Ray; "Christian Facts and Forces," by the Rev. Newman Smyth; "Faint yet Pursuing," by the Rev. E. J. Hardy; "The Decline of British Prestige in the East," by Selim Faris, editor of the late *El-Tuwaih* of Constantinople; "Johannes Brahms," by Dr. Hermann-Deiters, translated by Rosa Newmarch, edited by J. A. Fuller-Maitland.

MESSRS. GRIFFITH, FARRAN & CO.'S ANNOUNCEMENTS.

Illustrated Gift-Books.—"Queen of the Meadow," by Harriett M. Bennett, with original verses by R. E. Mack; "Daisy Days: Pictures of Country Life," by Mrs. A. M. Clausen; "A Christmas-Tree Fairy," by Mrs. Lizzie Mack and Robert Ellice Mack, with illustrations in colour and vignettes in monotyp; "The Children's Gallery," a collection of pictures illustrating child-life from babyhood to youth in four series, with designs by an American artist, printed in thirteen colours; "Songs of the Day," a series of new monotyp books, in 4 vols., with an appropriate selection of verses, selected and arranged by E. Nesbit and R. E. Mack; "Holly Leaves," Christmas carols and Scripture greetings; "The Star of Bethlehem," a story in verse by E. Nesbit, illustrated in monotyp; "Little Town of Bethlehem!" a Christmas memorial poem by the Rev. Phillips Brooks, illustrated by A. Wilde Parsons and Lizzie Mack; "Through the Year, Seasons' Songs and Sketches," compiled by E. Nesbit and R. E. Mack; "Treasures of Art and Song," arranged by R. E. Mack, containing original poems by Graham R. Tomson, Fred E. Weatherly, Theo. Gift, E. Nesbit, George Clausen, Miss May Kendal, and Austin Dobson, with illustrations by Mary L. Gow, Fred Hines, Julius Luz, Percy Tarrant, A. Wilde Parsons, Margaret Dicksee, Robert Ellice Mack, George Clausen, W. G. Addison, and Lizzie Mack;

the "Blue Bell" series, in 6 vols., with coloured frontispiece, and cover printed in colours; the "Christmas Stocking" series, in 6 vols., with coloured frontispiece and lithographed cover; "The Christmas Box," an illustrated book for the young, full of pictures and stories; "His Little Royal Highness," a story for children, by Ruth Ogden, illustrated by W. Rainey; "Pictures and Song for Little Children," with pictures on every page; "The Old Corner Annual," a volume of stories in prose and verse, with six full-page coloured illustrations.

Boys' Books.—"Perils in the Transvaal and Zululand," by the Rev. H. C. Adams, illustrated by A. W. Cooper; "The Duke's Own," by Percy Groves, with twelve illustrations by Lieut.-Col. Marshman; "My Friend and my Enemy," by Paul Blake; and "Jack's Yarn; or, Perils of the Pacific: a Tale of the Sea," by Robert Brown, illustrated by R. T. Pritchett.

Girls' Books.—"A Country Mouse," by Mrs. Herbert Martin, illustrated by Caroline Paterson; "Restful Work for Youthful Hands," by S. F. A. Caulfeild; "Mademoiselle's Story," by M^{me}. Ryffel; "A Far Away Cousin," by Katherine D. Cornish, illustrated by Miss Stoddart; "Two and Two; or, French and English," by Mrs. Seymour, illustrated by Miss E. Rope; and "Captain Fortescue's Handful," by C. Marryat Norris, illustrated by Miss Scannell.

Babies' Books and Fancy Stories.—"Child Elves: a Fairy Tale, founded on Fact," by M. Le Pont, illustrated by Miss Laura Troubridge; "Little Margit, by M. A. Hoyer, illustrated by Mrs. H. M. Paget; "In the Land of Nod: a Fancy Story," by Ada C. Marzath, illustrated by F. Carruthers Gould; "The Little Wonder Box," by Jean Ingelow, a series of six little volumes, daintily printed and quaintly bound; "Baby's First Book: Reading and Pictures for the very little Young," compiled by Uncle Charlie; and "The Prize Story-Book Series," six story-books for children of both sexes from five to seven years of age.

Educational.—"Standard Authors' Readers' Spelling Book," by G. H. Sergeant; "The Practical School Registers"; "Composition Exercises," No. 2, a Series of Exercises for Standard VI., and Key to Composition Tests, by T. Hudson; "Needlework," by M. Waite, Needlework Superintendent of Board Schools, Bradford; "Musical Drill," by Miss M. E. Hudson; and "Studies in Machine Design," a series of twelve cards, by C. F. Archer.

Miscellaneous.—"The Book of the Operas," a concise description of the plots and incidents of the principal operas, with biographical notices of famous singers; "A Manual for Confirmation Classes," by the Rev. W. Frankshaw; "New Canterbury Tales," by J. P. Emslie, illustrated by the author; "Daily Thoughts of Comfort for the Year," by Ellen Gubbins; "Sermons principally preached in Haileybury College Chapel," by the Rev. F. Butler; "The Ancient and Modern Library of Theological Literature" (new volumes)—"Baxter's Saints' Rest," vols. i. and ii.

MESSRS. NISBET & CO.'S ANNOUNCEMENTS.

Theological.—"St. Paul in Athens: the City and the Discourse," by Dr. Macduff, with illustrations; "Word Studies in the New Testament: the Synoptic Gospels, Acts of the Apostles, and the Epistles of St. Peter, James, and Jude," by Dr. Marvin R. Vincent; "The Doctrine of the Lord's Supper: I. The Real Presence, II. The Eucharistic Sacrifice," by the Dean of Peterborough; "The Philosophy of the New Birth," by the Rev. J. E. Briggs; "Papers on Preaching," by Bishop Baldwin,

Principal Rainy, Rev. J. R. Vernon, and others; "Sermons preached in Worcester Cathedral," by Precentor Hall; "A Popular Commentary on St. Paul's Letter to Timothy," with a series of 40 sermonettes, by Alfred Rowland; "Honey from the Comb," by the Rev. Jackson Wray; "The Christian Fulfillments, and Uses of the Levitical Sin-offering," by the Rev. Henry Batchelor; "Christianity and Evolution; or, Modern Problems of the Faith," by various writers; "Non-Christian Religions," by various writers; "Lessons on—I. The Words of Our Lord, II. Claims of Our Lord," by Dr. Flavel Cook; "Building for God," by Mrs. A. Russell Simpson; "Wisdom's House and Her Seven Pillars," by Lady Beaujolois Dent; "Flash Lights; or, Short Sunday Readings for Children," by Edith E. Smyth; "Cripple Joseph: a Story of Grace," by Maria V. G. Haverlag; "Short Prayers for Private Use: for every Morning and Evening of the Week, selected from Sources Old and New," by Dr. D. F. Sprigg; a new volume of verse by Miss F. R. Haverlag, entitled "Streamlets of Song for the Young," collected by her sister, J. Miriam Crane; "God's Garden," a sacred poem, illustrating the Christian graces, by "Heartsease"; "Eminent Workers: some Distinguished Workers for Christ," by the Rev. A. W. Murray; and "Three Friends of God," by Frances Bevan.

For Young Readers.—"The Fugitives: or, the Tyrant Queen of Madagascar," by Mr. R. M. Ballantyne; "Daphne's Decision: or, Which shall it be?" "Mistress Matchett's Mistake: a very Old Story," "The Story of John Marbecke: a Windsor Organist of Three Hundred Years Ago"—his work and his reward, by Mrs. Emma Marshall; "Miss Con: or, All those Girls," by Miss Agnes Giberne; "Cross Corners," by Miss A. Warner; "Primrose Garth," and "Jack Horner the Second," by the Rev. Jackson Wray; "Nellie Graham: or, the Story of a commonplace Woman," by Ella Stone; "The Lads of Lunda," by Jessie M. E. Saxby; "The Old Violin: or, Charity Hope's Own Story," by Edith C. Kenyon; "Winning His Laurels: or, the Boys of St. Raglans," by F. M. Holmes; "A New Exodus: or, the Exiles of the Zillertal," a story of the Protestants of the Tyrol; "Lotta's Life Mistake," by Mrs. Evered Poole; and the following new volumes of their Juvenile Library—"Both Sides," by Jessie W. Smith; "Stephen Gilmore's Dream: or, Coals of Fire," by Jessie W. Smith; "Judith, the Stranger," by the Hon. Gertrude Boscawen.

THE S.P.C.K.'S ANNOUNCEMENTS.

THE Society for Promoting Christian Knowledge has in the press, and will shortly publish, the following: "Pictorial Geography of the British Isles," by Mary E. Palgrave; "Domesday Book," by Walter de Grey Birch. In the "People's Library": "Factors in Life," by Prof. Seeley, F.R.S.; "Martyrs and Saints of the First Twelve Centuries," by the author of "The Schönberg Cotta Family"; "God's Englishmen," edited by the Rev. C. W. Stubbs; and "The Continuity of Scripture," by the late Lord Hatherly.

Among the tales announced for early publication by the Society are: "Adam Gorlake's Will," by O. E. M.; "Promises and Vows," by Helen Shipton; "Kathleen," by O. Selby Lowndes; "Queer Chums," by C. H. Eden; "Ire, Pol, and Pen," by F. Frankfort Moore; "Bird Stories," by Harrison Weir; "Cecily's Birds," by the author of "Our Valley"; "Her Will and Her Way, and other Stories," by Mrs. Newman; "Mère Suzanne, and other Stories," by Katharine S. Macquoid; "A Steadfast Purpose," by Mrs. Isla Sitwell; "Foxholt and the Light that burned there," by the Rev. E. N.

Hoare; "Hawbrook Farm; or, Esther Gaunt's Wooing," by L. M. Lane; "Mrs. Barth's Girl," by F. C. F.; "Out in the Cold," by Annette Lyster; "The Christmas Present," by A. Eubule Evans; "True to Training," by F. E. Reade; "With Hooks of Steel," by Crona Temple; "A Tale of a Country Village," by Sibella E. Bryans; "A Treasure Lost," by C. E. Smith; "Minon; or, the Cat that the King looked at," by Phoebe Allen; "Nell's Bondage," by F. E. Reade; "Rex," by the author of "A Hero Poet"; "The Best Book," by the author of "Higher and Higher"; "The Goldmakers," by Esmè Stuart; "From the Bench to the Battle," by Lady Dunboyne; "Walter Morris," by F. E. Reade; "Was he a Fool?" by Julia Goddard; "A Minor Chord," by Niall Herne; and "Two of Them," by the author of "Mike and his Brother Ben."

The Society will also publish soon: "Great Truths and Holy Lives," by Elinor Lewis; "Dispensation of the Spirit," by the Rev. C. R. Ball; "An Office of Praise for the use of the Clergy," by the Rev. P. G. Medd; "Mind of Christ as exhibited in the XVIIth Chapter of St. John's Gospel," "Sermons for the People," vol. vii., and "The Church and her Ministry," by the Rev. E. H. Beale.

MR. WALTER SCOTT'S ANNOUNCEMENTS.

"Great Writers."—"Keats," by W. M. Rossetti; "Shelley," by W. Sharp; "Smollett," by David Hannay.

"The Canterbury Poets."—"Ballades and Rondeaux," selected from English and American writers by J. Gleeson White, contributions by Austin Dobson, E. Gosse, W. E. Henley, Andrew Lang, John Payne, A. C. Swinburne, &c.; "Irish Minstrelsy," edited, with notes and Introduction, by H. Halliday Sparling; "Milton's Paradise Lost," with Introduction by Dr. John Bradshaw.

The "Camelot Series."—"The Prose Writings of Heinrich Heine," with Introduction by Havelock Ellis; "Reynold's Discourses," edited by Helen Zimmern; "Essays by Steele and Addison," with Introduction by Walter Lewin.

"Our American Cousins," by W. E. Adams, cheap and revised edition; "The Turkish Bath: its History and Use," by Dr. F. C. Coley; New edition of "The World of Cant"; "Nine Months on the Nile," by the Rev. Hampson S. Eckersley; "Chronological History of Newcastle-on-Tyne and Gateshead," vol. iii., 1581-1640; "The Thespian Papers," by Neville Lynn; "Elocution, with Select Recitations," by Rev. T. E. Walton Pearson and F. W. Waithman; "The Monthly Chronicle of North-Country Lore and Legend," vol. i.

MESSRS. VIRTUE & CO.'S ANNOUNCEMENTS.

Art Books.—The *Art Journal* volume for 1887, containing etchings by Axel H. Haig, E. Slocombe, Henri Lepuid, C. O. Murray (after Luke Fildes' picture, exhibited at the Manchester Exhibition, and after Seymour Lucoas); engravings after W. F. Yeames, J. Mac Whirter, G. Koller, the Hon. J. Collier, &c. The "Art Annual," 1887, The Life Work of J. L. E. Meissonier, by Lionel Robinson, containing a full-page photogravure of La Rixe and many illustrations, got up in similar style to the previous Annuals, on Tadema, Millais, and Leighton; "The Rhine: from its Source to the Sea," by Karl Steeler and others, with nearly two hundred illustrations; "The Amateur's Guide to Architecture," by S. Sophia Beale, with several hundred illustrations; "Glimpses of the Land of Scott," by David Hannay, illustrated by J. MacWhirter; "The Year's Art,

1888," compiled by Marcus B. Huish; "The Christian Year," printed in colours, with specially designed borders.

Children's Books, with numerous Illustrations.—"My Pleasure Book," "By the Winter's Fire," "Paul Luggershall," "Our Noah's Ark," "Short Stories for Sunday Readings," "Stories of Foreign Lands for Little Folk at Home."

ORIGINAL VERSE.

A "JEU D'ESPRIT" OF DR. WATTS ON THE LATE LORD AND LADY PEMBROKE.*

(In the Goodrich Court Collection.)

I. SATED with Love's high feast great Henry lay Enfolded in y^e fair Maria's Arms, Fearless of prying eyes, that might betray His manly Bosom, or her softer Charms: When Vulcan y^e much envy'd Pair espy'd, Their beauteous Offspring playing at their Side.

II. Away he hies, rag'd wing'd wth Hast his feet, And fills y^e Air wth Curses as he goes, Returns, and wth him brings th' enchanted Net Which o'er them (dreaming nought of ill) he throws. By Jove, I have 'em fast once more, He cries, And straight convenes y^e other Deities.

III. Witness my wrongs, ye Gods, says he, half weeping, Repeated Injuries and fresh Disgrace! See where, oh Shame! my Harlotry is sleeping Clasp'd in her brawny soldier's strong embrace. When Mars, wth Cupid and y^e Cyprian queen, Step't forth to view that skulk'd till then unseen.

IV. Bless us! Whom have we here, Quoth he ag hast! Turn, Deities of War, of Love, and Beauty. No, Oaf, says Venus, reckon not so fast; Blind Dolt, how ill your Jealousie does suit ye. Here's none but Pem, his Boy, and virtuous Dame; Learn from henceforth that Like is not the Same.

MAGAZINES AND REVIEWS.

THE chief subject of the *Boletín* of the Real Academia de la Historia for July-September is a full reprint of the proceedings of the Inquisition in 1490-1 against Jews and Christians who crucified a Christian child in a cave near la Guardia. Apart from subsequent exaggerations the fact seems to be proved. The motive is said to have been a belief that with the heart of a child thus crucified, and with a consecrated Host, a spell could be made to hinder the action of the Inquisition and to destroy Christians. A report by Javier de Salas on V. F. López's History of the Argentine Republic combats the theory of a prior Peruvian occupation founded on toponymical considerations, the interpretation of which is shown to be inexact. Fernandez Duro tells of a Spanish "admirable Crichton" who appeared in Paris, Ghent, and Burgundy, in 1445, vanquishing with equal ease the learned and the athletes, and therefore supposed to be the Anti-Christ. He makes it probable that this hero was Fernando del Pulgar, who had no such extraordinary fame in his own country. Jiménez de la Espada confirms, from the MS. of Fray Francisco de Aguilar in the Escorial, the destruction of Cortez's ships, making it, however, probable that they were scuttled and not burnt. Señors Saavedra and Fernandez-Guerra give some important Arabic and Latin inscriptions from the province of Cordova.

THE *Revista Contemporanea* for August opens with a necrology of Dionisio Chaulié, followed by an interesting account from his pen of

* Dr. Watts writes at the foot of this composition, "In imitation of Prior."

Ruperto Verdolaga—a Madrid street poet, pensioned at the close of his life by General Bulwer for an act of honesty at the battle of Talavera, 1809. Domingo Gascon supplements, with some valuable particulars, the account given of Martinez Salafraña by Menendez y Pelayo in his *Historia de las Ideas Estéticas*. Señor Guardiola y Valera lays the blame of the early atrocities of Pedro the Cruel on his minister, Alfonso de Albuquerque. J. S. de Toca invites Spanish agriculturists to join the Conservative party, and to work for an economical administration. Torres Muñoz notices favourably Delgado's Political and Economical Studies. Perez y Oliva continues his "Presas Marítimas," showing the gradual tendency towards the inviolability of private property at sea.

We have received No. 3 of *Euskara* (September 1), the organ of the Berlin Baskischen Gesellschaft. It contains a paper on Basque music, by W. Brambush, founded on the collections of Fr. Michel and Iztucta; also a mystic account of the origin of language, by José de Puiasola, in Spanish; and various short notices and reviews by the editor and others.

CORRESPONDENCE.

"ON TEACHING ENGLISH."

Aberdeen: Sept. 19, 1887.

I shall be content with a very few remarks in reply to Mr. Barnett's defence of his criticism of my two books on English. On many of the points, he so nearly repeats himself that my replies are as applicable now as they were to the original article.

I am not conscious of any inconsistency between my definition of English teaching after Locke, and the criticising of the great poetical authors. The criticism still keeps to the main chance of discriminating good and bad; and my fault is properly described not as inconsistency but as presumption.

I can only repeat that I consider Mr. Barnett perfectly right in pronouncing his conscientious judgment condemnatory of my 156 pages of analysed extracts. What I meant to say was that he erred in believing that the two extracts chosen, bearing upon two stanzas of "The Skylark," amounted to a proof of the badness of the whole.

He does not object to analysis, but only to anatomy or dissection, in dealing with composition. My reason for preferring analysis is simply this. While, in common with anatomy, it means dividing a complex object into its component parts, it supposes a previous synthesis the exact reverse of itself. Every literary work is put together, in the first instance, word by word. Words are its elementary atoms. It began in words, and may again be resolved into these if necessary. The careful writer has to take his work to pieces, that is to words, over and over again, and re-piece it till it satisfies him. The critical analyst in his word-to-word criticism merely puts himself into the position of the composer when he has finished a draft and is passing judgment on its quality. Anatomy, on the other hand, is the disintegration of what came into the world a finished whole. Nobody put it together out of the collection of an anatomical museum.

The objection of Mr. Barnett to dissecta membra seems to me to lose sight of the whole history and practice of criticism. I make the greatest allowance for the difference between my analyses and those of superior critics; but to insinuate that the method pursued is of my unprompted invention does me too much honour. It is quite true that criticism does not often go the length of taking single lines to pieces; but plenty of examples can be found to show that the practice is quite familiar to literature. Within the last month a distinguished critic employed it upon Keats, in the most remorseless fashion. It will be found in Coleridge, Campbell, Matthew Arnold, and many more that I could name. As to its shocking our feelings of admiration for great authors, that cannot be helped. Of course, I admit that it should be well done. But to make an objection of this kind is fatal to art criticism in every sphere. The greatest authors have survived all this, and even worse—namely, wholesale ridicule and travesty, from which none of them have escaped.

I have nothing to add on the Bacon question. I am at loss, however, to know what I have said to let it be supposed that I cared for the consistency or inconsistency of Milton's theology in Paradise Lost. What I cared for was its suitability and capability as a poetical subject; and that all his critics from Addison to Pattison have dealt with.

I will not weary you with more small details,

but will use my advantage in being permitted a second reply, to put myself right in a matter of more importance than any of these.

By his extremely narrow basis of criticism, by confining himself to the *Teaching English*, and to a small part of that, my reviewer has left your readers in entire ignorance of my purpose in bringing it out in company with the revised *Rhetoric*. A few sentences from the preface of the latter would have disclosed that purpose; but Mr. Barnett, while putting this work at the head of his article, has ignored its contents. The perversion of view thus arising is a serious matter to me. Mr. Barnett did not state, for example, that the long series of "anatomised" extracts is divided into two classes—those relating to the intellectual qualities, and those relating to the emotional qualities. He pounced at once on a passage under the last head, which seemed especially to grate on his sensibility, without hinting that there was an entirely different class of extracts, that could not give the same offence, although they might give some other. On entering on the emotional class, I give this warning: "These, by their very nature, are vague and indefinite; while the intellectual qualities are exact and scientific." But, in the preface to the new *Rhetoric*, I go much farther. I have there to give reasons for reproducing the work in two parts—the one for intellectual qualities, the other for emotional. Now, the principal reason is one that concerns the public chiefly. In my long connexion with teaching and teachers, I have found that many of these (good ones too) have based their preference for mathematics, as an education subject, on its remarkably definite character. This they think a recommendation, apart entirely from its application to practice. I have also been told by Cambridge tutors that the position of mathematics in the examinations there was greatly determined by the same peculiarity, one consequence being that comparative merits could be accurately appraised. Now, it was part of my intention, in compiling a separate volume on the intellectual quality of style, to provide teachers with a rhetorical text-book, treating of the department that approached nearest to the character of an exact science. The following sentences occur in the preface:

"It appears to me to be a possible thing to arrive at a definite code of prescriptions for regulating the intellectual qualities of composition. Granting that a certain progress has been made towards this consummation, the fact would seem to mark out the department as a fit subject for school discipline at the proper stage; not to mention its direct bearing upon the valuable accomplishment of writing well. The several topics embraced are mostly on a level as regards ease of comprehension; and the exposition is conducted with a view of bringing the pupil's own judgment into play."

It is on the fulfilment of this design that I desire the volume to be examined and judged. And as comparatively few of my critics have given the design the benefit of publicity, I find some compensation for Mr. Barnett's unfavourable estimate in being able to supply what I consider his most serious omission.

A. BAIN.

THE ANTIQUITY OF THE NAME "ISIS."

London: Sept. 17, 1887.

Mr. Harold Murray's very able letter does not prove that the name "Isis" is older than Leland. Whether Leland or some earlier writer invented it, there is a strong probability that it is a mere Latinisation of Ise. It must be remembered that Leland himself says that Isis is the Latin for Ise and Ouse. Whether the form of the Latinised name is simply modelled after

Tamesis, or whether it is partly due to a recollection of the name of the goddess, can scarcely admit of being determined. Some maps give a river Isis in Brecknockshire, but I know nothing of the history of the name in that instance.

The reference to the old map of course shows that the name Ise, as that of one of the head-waters of the Thames, was known in the thirteenth century. But the map-maker's statement, that "the Tame and the Ise make the Tamise, as the Jor and the Dan make the Jordan," deprives my testimony of all value as evidence of the genuineness of the name. Jor and Dan are, as everybody knows, mere patristic figments; and Mr. Murray will not deny that the mediæval etymology of Thames is as false as the similar etymology of Jordan. Notwithstanding, he is disposed to think that Ise may have been a real name of the upper Thames. I consider this extremely unlikely, because (unless the mediæval etymology was true) it would be a strange coincidence if the two rivers which unite to form the Thames had really happened to bear names identical in sound with the two halves of the names of the united streams. I think any one who knows that it is philologically impossible that "Jordan" could be derived from Jor and Dan, would be a good deal surprised if it should be proved that, nevertheless, these were genuine names of the two chief head-waters of the Jordan. Of course, very strange coincidences do sometimes happen, and we must not confound improbability with impossibility. But as yet there is not a particle of evidence in favour of the unlikely supposition that the upper Thames was ever named Ise—except, of course, by etymologising writers and those who followed them. It is true that Ise seems to be a possible river-name. The maps give an Ise in Northamptonshire; and there are, if I remember rightly, two or three others in England. If the Anglo-Saxon form were Y's, it might descend from a prehistoric *Usia*, related to, though not identical with, Ouse. It has occurred to me that *Usia* would be a possible antecedent for Gwy, the Welsh name of the Wye; but the forms Wye, Wey, &c., seem difficult to reconcile with this.

The map referred to by Mr. Murray is certainly not the handiwork of Matthew Paris. Sir T. Hardy settled that question long ago; and it is something like a libel on the great historian of the thirteenth century to suppose him capable of so childish a performance. I am not judging it by the standard of modern knowledge. The beautiful thirteenth century map, of which there is a facsimile in another volume of the same collection, shows that some of the contemporaries of Matthew Paris could do excellent work in the way of cartography.

Mr. Murray's theory, that "the natural man" gives a distinct name to each main portion of a river, certainly seems in accordance with abstract probabilities. But it is difficult to find unequivocal examples that are really relevant to the present case. Mr. Murray's instances—the Danube, Niger, Nile, &c.—are rivers which pass through the territories of peoples speaking different languages; and, of course, each people had its separate name for the river. In the Old-English charters we do not, so far as I know, find any instance of a river having distinct names in different parts of its course. It is true, however, that the charters may be fairly considered to represent literary, rather than popular, usage in this respect. I do not agree with Mr. Kerslake that a river and all its tributaries were anciently considered as a unity, and had a common name; but his view appears to have this much of truth in it, that sometimes one and sometimes another of the head-waters of a river gave its name to the united stream.

There can be no doubt that the Celtic name of the Thames was *Tamēsa* or *Tamēsis*. As a foreign *s* was in Old-English represented in borrowed words by *t* (as in *pin* from *poena*), we can account for the early Old-English *Tamīsa*; and if the name was accented in the first syllable the *i* might be shortened, so as to yield the documentary *Temese*. Mr. Murray's conjecture, as to the origin of the divergence between the written and the spoken forms of the river-name, seems probable.

HENRY BRADLEY.

Dunstable: Sept. 19, 1887.

In reference to Mr. H. J. R. Murray's interesting letter in the last number of the ACADEMY, there is no tributary of the Thames at or near Dunstable. There is, however, a tributary of the Ouse close to Dunstable, and this stream is probably the Yse of the map in the thirteenth-century *Abbreviatio Chronicorum*. The popular name of the stream I mention was (when I was a boy, forty years ago) the Ouse—sometimes the Little Ouse or Ousle. On the ordnance map it is called the Ouzel. Celtic names occur close to the source, the hollows in the hills close by are called *combes*, and on the top of an adjoining hill is *Osley pond*, not named on the large scale ordnance maps. Nine miles from the source of the tributary (to the north, near Woburn) is a minor tributary now called *Crawley Brook*; but its old name was probably *Ouse Bourne*, for it rises at a village called *Husborne Crawley*. Another tributary of the Ouse (at Hitchin, near by) is the *Hiz*. We therefore have the Ouse, Ouzel, Hus, Hiz, and, as pointed out by Mr. Murray, Yse. Whether Isis is another form of these words is perhaps uncertain, but to me it seems probable.

WORTHINGTON G. SMITH.

THE STOWE MISSAL.

London: Sept. 19, 1887.

I have neither time nor inclination to expose many more of Dr. MacCarthy's errors in logic, grammar, and palaeography. But his letter of September 2 ACADEMY, September 17, 1887, p. 184) contains some misstatements made with such audacity that they are likely to mislead.

I called, and still call, the scribe of the Oxford Tripartite Life of S. Patrick (Rawl. B. 512) "a careful and learned person," meaning, of course, that he was a careful scribe, and learned in his own tongue. To impugn this statement, Dr. MacCarthy quotes, not from the MS., but from a transcript by some anonymous scholar, the following words as specimens of the scribe's latinity. I give the readings of the MS. on the right:

DR. MACCARTHY.	THE MS.
ecclesie aque	ecclesia[e]que
populis Israel captus	populus Israel captus
in hoc mundum	in hunc mundum
literiam	litri riam

The last-mentioned words are, of course, Irish; and the passage in which they occur is *inti na rofoglaind litri riam*, "he who never had learned letters."

Proceeding with his imaginative citations, Dr. MacCarthy asserts: "Laeth a taebi, however, caps the climax. Mr. Whitley Stokes, I know, thinks it is correct." With deference to Dr. MacCarthy's superior knowledge of my thoughts, I beg to say that I not only think, but know, that this quotation is incorrect. The MS. here has, quite rightly, *leth ataebi*—a phrase of which about three years ago I discovered the meaning. It signifies "context"—literally "side that adheres," *ataebi* being, not as Dr. MacCarthy supposes, a corruption of *atoibthe*, "of adherence," but the regular act. pres. ind. sg. 3 of the *i*-verb *atoibim*. Compare *atoibi* (gl. herenti), Ml. 57 d 18. In connexion with this,

Dr. MacCarthy says, with a sneer, "Toíbe, as genitive of *toeb*, will prove a novelty to Irish scholars." Will nothing ever teach him a little modesty? He, and other "scholars" like him, may find the form in question in the *Lebar Brecc*, 251 a, line 68: *isind achsaill toíbe deiss Iau*, "in the armpit of Jesu's right side."

I challenged Dr. MacCarthy to produce from a MS. older than the fifteenth century an instance of *Ruen* as the genitive of the name of Ruadán, the founder of Lothra. He now answers this challenge by producing from one of the four inscriptions on the reliquary containing the Stowe Missal what he calls "the genitive Ruacín." The inscription in question reads very clearly: "Orat̄ do-Gilla-Ruadan u-Macan don-comarba lasar-cumdaiged ("A prayer for Gilla-Ruadán, descendant of Macán, by whom [this shrine] was covered"). An engraving of it will be found at the end of the second volume of O'Connor's *Rerum Hibernicarum Scriptores*, where, as Dr. MacCarthy himself says (*Stowe Missal*, p. 1), "the shrine has been well depicted." Dr. MacCarthy's *Ruacín* may join his *imabred*, *lelachaich*, *sonsa*, *codling*, *boberim*, &c. (ACADEMY, Nos. 778, 795).

The result is that, after nearly five months, Dr. MacCarthy has failed to produce a single instance of *Maile* as the gen. sg. of *Mel*, the name of the first bishop of Ardagh, or of *Ruen* as the gen. sg. of *Ruadán*, the name of the founder of Lothra. The obvious explanation of *Maile ruen* as the gen. sg. of the name of *Mael ruen* of Tallaght therefore remains in force; and with this explanation Dr. MacCarthy's argument as to the antiquity of the Stowe Missal falls to the ground. The question whether *Mael ruen* was or was not a bishop depends on the answer to the question whether Dr. MacCarthy is or is not a better authority than the *Lebar Brecc* and the *Annals of Ulster* (see Mr. Warren's letter, the ACADEMY, July 9, 1887, p. 27).

Here is the documentary evidence that *Mael ruen* of Tallaght was a bishop:

"Moelruain o Thamlacta et Colman nomen patris eius. Broicsech nomen matris eius ocus eccep he féin ('and he himself a bishop')."—*Lebar Brecc*, p. 91, left margin.

"An. Dccxci. Maelruain Tamlactai, Aidain (?) Rathain, Aidan hua Concumba (!) Episcopi et Militis Christi in pace dormierunt."—*Annales Ultonienses* ed. O'Connor, *Rerum Hibern. Script.*, iv. 116.

WHITLEY STOKES.

THE ENGLISH PYRRHIC.

Hampstead: Sept. 20, 1887.

Nearly a year ago, in a series of letters in the ACADEMY, I endeavoured to draw attention to Shakspeare's accentuation of proper nouns. Prof. Elze, of Halle, in *Englische Studien*, agreed with my accentuation, "Córíoli" and "Córíolánus," but fell foul of my use of the word "pyrrhic." Prof. Elze's contention is that, as accent is an essential element in an English foot, there can be no foot without accent, and consequently the pyrrhic is an impossibility, in fact, an absurdity. Now I am not at all anxious to retain the name pyrrhic, if he, or anyone else, will suggest a better. What I contend is this: in lines consisting of disyllabic measures or feet, the syllables are conveniently taken in pairs and named iambus or trochee, and the exceptional pairs spondee or pyrrhic. By pyrrhic is meant a pair of syllables without stress, or two stressless syllables, or a stressless pair of syllables, "a stressless pair," "a beatless pair."

That such pairs do occur the following lines will probably be sufficient to show:

Shakspeare, "King John"—
"To the yet unbegotten sin of times," 4.3.54 (first place).

"Your breath first kindled the dead coal of wars," 5.2.33 (third place).

Spenser, "The Faerie Queene"—
"The whites with a love lay she thus him sweetly charmd," 2.6.14.9 (second place).

"Of God; of Grace; of Justice; of Free-will," 1.10.19.6 (fourth place).

Milton, "Paradise Lost"—
"By simply meek; that suff'ring for truth's sake," 12.569 (fourth place).

"To good malignant, to bad men benign," 12.538 (third place).

Will not some one invent a name for "the beatless pair," *alias* the pyrrhic, *pace* Prof. Elze?

There is possibly danger lest the occasional consecution of stressless syllables should be lost sight of if we have no name for the combination.

BENJAMIN DAWSON.

"BABY MINE."

London: Sept. 20, 1887.

A friend in New York has sent me a cutting from one of the newspapers of that city, from which I learn that a gentleman named Johnston, who is stated to have been the author of the popular song, "Baby Mine," was buried a few days previously at the cemetery of Woodlawn, in the presence of a numerous assemblage of sympathising mourners. The song entitled "Baby Mine" was written by myself more than a quarter of a century ago, and happened to hit the fancy of several musical composers in the United States (one of whom, I suppose, was the deceased Mr. Johnston), not one of whom asked my consent to its republication with their music. The song—as I learned last year from an American friend then travelling in England—became exceedingly popular in the United States, and has reached an almost unprecedented circulation, which he estimated, rightly or wrongly, at 200,000 copies. If an international copyright in literary property existed between the United States and Great Britain, and the property in brain-work was held as sacred as the watch or money in one's pocket, the coat on one's back, or the goods in one's warehouse, I should have been entitled to demand a royalty or percentage on the sale of this favourite composition, which at the small rate of two cents, or one penny per copy, would have amounted to the handsome sum of £833 3s. 4d., which, I need not say, I should have been very glad to have received.

Till our bakers and our butchers, our house proprietors, and our rate and tax-collectors, allow me to transact business with them on similar conditions, I shall not cease to be dissatisfied with the existing law—or absence of law—that prevails in the United States with regard to the literary property of Englishmen which American publishers of books and music "convey" to their own pockets without scruple or remorse.

CHAS. MACKAY.

"LATHE."

Brigg: Sept. 18, 1887.

Mr. Watkins is, I am glad to say, mistaken in his belief that the word *lathe* (a barn) is becoming obsolete in Lincolnshire. I frequently hear it from the lips of the young as well as the old.

I am pained to have to admit that newspapers and schools are injuring to some extent our local speech, but their evil effects are often exaggerated. The greater part of the children who are taught in the Bottesford Board School pass my garden on their way home. I have very frequently overheard their conversation when I have been unseen by them. It gives me extreme pleasure to be able to say that the most devoted conservative, could such a one have been present on these occasions, would have heard little that ought to have pained him. Unperverted instincts are still strong enough to lead our lads and lasses to fling

behind them, as soon as the doors of the scholastic torture-chamber are closed, the ugly words and speech-forms of the lesson-books, and to speak in the good homely fashion that they have learned from their parents.

EDWARD PEACOCK.

SCIENCE.

A LITHUANIAN PREACHER OF THE SEVENTEENTH CENTURY.

"Litauische und Lettische Drucke des 16 und 17ten Jahrhunderts" herausgegeben von A. Bezenberger.—IV Heft. Szyrwid's *Punktay Kazan* (Punktay Sakimu) vom Jahre 1629. Mit einer grammatischen Einleitung herausgegeben von R. Garbe. (Göttingen: Vandenhoeck & Ruprecht.)

Just four years ago Prof. Bezenberger's *Litauische Forschungen* was reviewed in the ACADEMY (No. 594, Sept. 22, 1883), and it was then pointed out that he would probably make a life study of the languages, literatures, customs, and antiquities of Lithuania and Lettland. This conjecture has so far proved correct, since almost all the papers or memoirs published by him during the last four years have reference either to Lettish or Lithuanian; and, further, the interesting series of "Litauische und Lettische Drucke," begun in the year 1862, is under his general editorship—a series which cannot fail to be of great use and service to students of these languages. Part IV. of the series, Szyrwid's *Punktay Kazan* (Puntay Sakimu), now lies before me, the special editor being Dr. Richard Garbe.

The volume begins with an Introduction by Dr. Garbe, containing a short biography of Constantine Szyrwid, writer of the *Punktay Sakimu*, and a grammatical and etymological account of the text. The title-page of the *Punktay Sakimu* is in Polish, and reads in English thus: "Headings (or Sketches) for Sermons from Advent to Lent, in the Lithuanian language, with a translation into Polish by the Priest and Theologian Constantine Szyrwid, Member of the Society of Jesus: published with the permission of his Superiors. Wilna, 1629." The dedication to the Bishop of Wilna which follows is in Latin; the text itself is in Lithuanian. The grammatical portion of Dr. Garbe's Introduction (pp. xii.-xlviii.) seems to me to be accurate, careful, and original; and not seldom light is thrown upon obscure points in Lithuanian orthography and accidence. The text I readily believe to be what the editor asserts it is, "diplomatisch getreu."

There are two copies in existence of the original *Punktay Sakimu*, which are both preserved in the Russian Imperial Public Library at Wilna. They bear the dates 1629 and 1644 respectively. The present text is a reprint of the 1629 edition. The original work consists of the Gospels for Sundays and Saints' days in Advent and Lent, printed across the width of every page. Below, the page is divided into two columns; and on the left in Lithuanian, on the right in Polish, are brief sketches for sermons on the Gospels given above. The Polish version is not given in Dr. Garbe's edition, nor are the marginal notes; as footnotes, however, are given all scripture references found in the margins.

Prof. Bezenberger, in his *Litauische Forschungen* (VI. Anm. 3), gives some account

of the author of the *Punktay Sakimu*, Szyrwid; and a further account of him is to be found in Włodczewski's *Wiskupiste* (Wilniuj, 1848). Constantine Szyrwid was a native of Lithuania. When he was eleven years old he entered the Jesuit Order, and in the year 1598 he took the customary vows of the society. From this time onwards he spent his whole life in teaching and preaching and writing. Living in a cloister in Wilna, he used on Sundays and Saints' days in the morning to preach in Lithuanian to the peasantry in the church of S. John; at mid-day in Polish to people of rank in the cathedral; and in the evening again in Lithuanian to the professional and trading classes in the church of S. Ignatius. When his friends warned him that he preached too long and too often, that he would injure his health, and wear out his strength, he used to answer, "What is my health good for, if not for work?" The following are the names of his books:—(1) *Clavis linguae lithuanicae Vilnae*, (2) *Dictionarium Polono-lithuanicum* (of which there have been several editions published), and (3) the present small volume *Punktay Sakimu* in Lithuanian and Polish. Szyrwid died at Wilna in the year 1631. It has elsewhere been pointed out by Prof. Bezenberger that Szyrwid was one of the few priests who spoke pure and true Lithuanian, in contrast to those Polish priests who preached, indeed, a sort of Lithuanian, but a Lithuanian made up of Polish words, to which Lithuanian terminations had been tacked on. His dictionary, it is true, swarms with Polish words; but this was inevitable. A large number of foreign words—and here foreign means Polish—were perforce used by Lithuanians to express ideas and notions which found no place in their own language. In like manner we come across Polish words in the *Punktay Sakimu*; this, too, was unavoidable—the Lithuanian language had little power of rendering Biblical or ecclesiastical phrases or words. But, to express simple, common ideas Szyrwid very seldom uses any save Lithuanian words. Foreign words, such as *staras* = old (Polish *stary*) 27, 13, occur very seldom; and words like *cielas*, *lynciuogas*, *padanas* had most probably before this time been adopted into the Lithuanian language.

Prof. Bezenberger and Dr. Garbe both maintain that Szyrwid wrote in "Ostlitaunisch" and not in "Zemaitisch." The evidence for this must be sought in the *Punktay Sakimu* rather than in the *Dictionarium trium linguarum*, since only late editions of the latter are now attainable, while the former bears the early date 1629. Speaking generally, however, the spelling and grammatical forms of the dictionary and the *Punktay Sakimu* agree pretty closely.

To fix the limits within which East-Lithuanian was spoken in Szyrwid's time is more than difficult: we have really no evidence at all. It is even difficult to define within what limits East Lithuanian is spoken in our own day. The assertion that it is spoken in the eastern parts of the region extending from Szaule (Szawle) and from the river Neveša eastward is sufficiently vague to be safe. So much, however, is known that Wilna is no longer to be included in the region where East-Lithuanian is spoken. From

the other dialects spoken in Russian Lithuania—"Szaule-Eirogalisch" and "Zemaitisch" (Samogitian)—East-Lithuanian stands out distinct and separate. Dr. Garbe gives in his introduction certain definite points of difference, while, however, he adds:

"Im übrigen halte ich mich nicht für competent die Beziehungen des Ostlitaunischen zu diesen beiden Dialecten genau abzugrenzen, da die wissenschaftliche Dialectologie des russischen Litauen noch im Argen liegt und namentlich in den Kalbos lėtuvizsko lėzuv'o nur oberflächliche Züge angegeben sind" (S. xlvi.).

In the *Beiträge zur Kunde der indo-germanischen Sprachen*, as well as elsewhere, Prof. Bezenberger has written various articles on the "Szaule-Eirogalisch" dialect, which I commend to the reader's attention.

As to the similarity between modern Lithuanian and Szyrwid's language, Dr. Garbe writes:

"Unleugbar hat der dialect seine alterthümlichen Züge; aber die charakteristischsten Eigenthümlichkeiten liegen nicht in der Bewahrung alt-litauischen Laut- und Formenbestandes, sondern stellen sich als sprachgeschichtlich jüngere Erscheinungen dar" (S. xlvi.).

He then enumerates some of the characteristic peculiarities of Szyrwid's time—namely: (1) the pronunciation of *e* after *a*; (2) the frequent appearance of *a* for *o*; (3) the contraction of a final *e* with following *a* to *o*; (4) the weakening of *a* to *u*, and of *e* to *i* through the influence of a following nasal; (5) the large use of the guttural *l*; (6) the frequent use of preterite for present stems; (7) the strong and marked influence of the Polish language (S. xlvii). Of these characteristic peculiarities, the East Lithuanian of our time has preserved 1, 2, and 5; 4 and 6 it has lost in part; 3 it has lost altogether; while, instead of Polish, White Russian is now the prevailing influence.

The interest of the *Punktay Sakimu* is of course linguistic, not literary. Still, it may be worth while to give here a rough literal translation of part of one of Szyrwid's abridged sermons or homilies. I take Punktas I. on the Gospel for the first Sunday in Advent, S. Luke, xxi. 25 (in the English Liturgy at present this is read as the Gospel for the second Sunday in Advent), it reads thus:

"Heading (or sketch) I. Eight comparisons between the judgment of God and the judgment of men. 1. Among men when they are at variance, and have a dispute, and cannot come to any understanding, the one summons the other before the judgment-seat. And so it will come to pass at the judgment of God, which he will hold on the last day. For from long ago, since the creation of the world, we have all been summoned to this dreadful judgment, through the words and writings of the patriarchs, prophets, and apostles. As to this, we read much in Holy Scripture. And the seventh man after Adam, namely, Enoch, prophesied of this when he said: 'Behold the Lord cometh, with ten thousands of his Saints, to execute judgment upon all.—*Jude. Epist.*, &c. 2. The judgment of men has a set place in which it is executed. So, too, God has appointed a place in which he will judge us. I will gather together all generations on the threshing floor of Josaphat, and I will try them. 3. Men appoint for their trials a set day, on which they contest or dispute. So God has appointed for his judgment the last day;

but of that day knoweth no man, not even the angels which are in heaven, but the Father only. 4. At the judgment of men there assemble the judges who are thereto appointed. So will it also be at the judgment of God, at which the highest and greatest judge is our Lord Jesus Christ. He is there, whom God appointed as the judge over quick and dead. Others who will sit with him, judging with him, will be the apostles and other servants of the great holiness of God, according to these words: Ye shall sit on twelve thrones, judging the twelve tribes of Israel. 5. At a trial instituted by men, it is often necessary to have complainants and witnesses. Although God has no need of these, for he knows all things, and sees who is guilty and who is righteous, yet he will accept of complainants and witnesses, and will hear them. The complainants will be man's own heart and the knowledge which he has in himself, whether he has transgressed or whether he has not transgressed, and the witnesses will be the holy angels, the devils, and other creatures" (S. 6).

I am glad to see that Dr. Garbe promises us a second part—to contain a reprint of the 1644 edition of the *Punktay Sakimu*, together with an index to both parts, and possibly some additional grammatical notes.

JANE LEE.

RECENT SCIENTIFIC LITERATURE.

Palaeolithic Man in North-West Middlesex. By J. Allen Brown. (Macmillan.) This work embodies the substance of a number of papers which the writer has contributed during the last two or three years to various antiquarian and natural history societies. Its prime object is to study the origin of the old river-drifts in part of the Thames Valley, and to discuss the antiquity of those relics of human workmanship which they occasionally yield. In order to throw light upon his own investigations in the neighbourhood of Ealing, the author enters into a general dissertation on prehistoric matters; and for the purpose of deducing conclusions as to the probable state of culture of the early inhabitants of Middlesex, he has been led into a long discussion of the conditions of life among savages in various parts of the world at the present day. In this way his work has grown to a volume of 200 pages. To the student of prehistoric archaeology, however, the interest of the book centres in that part which deals with Mr. Brown's own observations. With plausible enthusiasm he has lost no opportunity of examining sections of the pleistocene deposits in his own neighbourhood; and has been led from his studies to regard certain black seams and bands of bleached stones in the high-terrace gravels as representatives of ancient land-surfaces, or old floors upon which palaeolithic man lived and worked. The gravel-pits at Creffield Road, Acton, have yielded evidence of three successive land-surfaces, from all of which worked flints have been obtained. On one of these seams, just beneath the brick-earth, Mr. Brown was fortunate enough to discover nearly five hundred flint-flakes, as sharp as when first chipped from their cores—the relics, he believes, of an ancient factory, or primitive workshop, where the river-drift men dressed their flints, and fabricated rude weapons and implements. The site seems to have been suddenly abandoned, perhaps through a flood which buried the flints beneath a deposit of silt, where they lay concealed until brought to light by Mr. Brown. It will thus be seen that the author's researches supplement those of General Pitt-Rivers, Mr. Worthington Smith, and other workers in the northern part of the Thames Valley, and that

his book forms an acceptable addition to the literature of prehistoric archaeology.

Proceedings and Transactions of the Royal Society of Canada. Vol. III. (Montreal: Dawson Brothers.) A quarto volume of upwards of 600 pages represents the work of this young and vigorous society during the year 1885. The papers here published deal with a great diversity of topics, since the scope of the society ranges on the one hand over literature, history, and archaeology, and on the other over most departments of natural and experimental science. It is notable, however, that in every volume of the *Proceedings*, a conspicuous place is assigned to geology and anthropology. In the present volume Sir J. W. Dawson has a paper on "The Mesozoic Floras of the Rocky Mountain Region of Canada," which may be regarded as supplementary to a memoir published two years ago in the first volume of the *Proceedings*, wherein the author described the Cretaceous and Tertiary Floras of British Columbia and the North-West Territories, so far as they are known. The President of the Royal Society of Canada for 1885 was Dr. T. Sterry Hunt, who contributes to the volume under notice an elaborate paper on "A Natural System in Mineralogy." This paper is necessarily of a highly technical character, but will be read with interest by students who are puzzled over the classification of the natural silicates. Dr. Daniel Wilson, who succeeded Dr. Sterry Hunt in the Presidential Chair, publishes two papers—one on "Palaeolithic Dexterity," and the other on "The Artistic Faculty in Aboriginal Races"—naturally drawing his most instructive illustrations from the work of the American Indians. It is interesting to note that the society some time ago appointed a committee to enquire into the forms of aid given in other countries to young men who desire to engage in literary or scientific work of an original character. The report of this committee appears in the present volume, and contains a mass of information relating to college fellowships and other pecuniary aids to research. As the seats of learning in Canada are too poorly endowed to provide the necessary funds, the committee recommend that a general appeal be made to friends of education for the purpose of assisting young men of promise throughout the Dominion in the prosecution of original investigations.

Mineral Resources of the United States, 1885. (Washington: Government Printing Office.) This is the third of a series of annual volumes issued by the Geological Society for the purpose of affording general information on the mineral productions of the United States. The preceding volumes were edited by Mr. A. Williams, jun., but the work has since passed into the hands of Mr. David T. Day. It appears that the total quantity of coal raised in the United States during 1885, exclusive of that consumed at the mines, was 95,834,705 long tons. Compared with the preceding year there was a decline in the output of coal, but an advance in value. The production of gold, silver, and copper, has increased; while the value of the iron and steel manufactured in the States has diminished. An interesting section of the present volume is devoted to the subject of "natural gas" or "rock gas." The yield of this inflammable vapour has increased tenfold since 1883, but it clearly cannot go on increasing without the subterranean stores becoming impoverished and ultimately exhausted. At a time when search is being actively made for sources of zirconia, for use in incandescent lights, it is worth noting that 2,000 pounds' weight of zirconia have been obtained from Buncombe County, North Carolina. Before dismissing the book, attention should be called to the low price at which it is issued. Here is an

octavo volume of upwards of 580 pages sold by the Government for forty cents!

Report on the Mining Industry of New Zealand. (Wellington: George Didsbury.) With the view of directing attention to the mineral resources of New Zealand, and assisting in their development, certain Parliamentary papers are here collected together and issued "by authority." At the head of these documents stands the annual "Mines Statement"—a speech delivered in the House of Representatives last session by the Minister of Mines, the Hon. W. J. M. Larnach. This address gives an admirable sketch of the present position of the mining industries of the colony. It appears that quartz-mining for gold and silver is steadily increasing, and that coal-mining is also making steady progress; while various other minerals are beginning to receive attention. Through Mr. Larnach's energy, mining schools have been established at various centres, and an interesting report on their work is contributed by Prof. Black. The Geological Department, with Dr. Hector as its director, has been recently placed under the Minister of Mines, who seems anxious to increase its efficiency by building a new museum. Reports on various details connected with mining are appended by Mr. Gordon, the inspecting engineer, and by the several wardens of the gold-fields.

CORRESPONDENCE.

THE LETTER "SH" ON INDO-SCYTHIAN COINS.

London: Sept. 18, 1887.

By an ingenious suggestion, Dr. Mark Aurel Stein (ACADEMY, September 10, p. 170) explains the shape of the special letter somewhat resembling *h*, which, as he has rightly shown, appears for *sh* on the Indo-Scythian coins, by the Greek *San* or *Sampi*.

But is not this explanation too ingenious and far-fetched? And is it a sound process which assimilates forms so distant in date and surroundings? For how could strangers in Central Asia, acquainted by mere chance with the current cursive Greek characters employed by the Greek kings, be acquainted also with so delicate a peculiarity as the phonetic value of an obsolete Greek character used only as a numeral? And how is to be explained the violent transition presented by the contemporary forms of the two letters? In comparing forms of letters, I am aware that the morphology of the shape, so to speak, must be taken into account as often as the material shape. But in the proposed assimilation the morphology does not help, and the bridge which separates the two shapes must be built up by a strong effort of imagination.

The Indo-Scythians had learned the current Greek alphabet after having known and employed the Aryan-Pali or North-Asoka alphabet, as is shown by the joint coinage of the Greek Hermaeus and the Indo-Scythian Kadphises I., which is bilingual. This body of characters gives, in my opinion, a much more natural prototype, for the desired shape of *h*, in the Aryan-Pali letter *ḥ* *sa*, with which the Indo-Scythians were well acquainted, and which probably represented the soft sound of *s* in their phonesis.

The slight difference of form between the Aryan-Pali *sa* and the Indo-Scythian *sh* consists in this: that the head stroke is an extension of the loop, while on the coins here spoken of it is a prolongation upwards of the perpendicular stroke or *hasta* of the letter. This peculiarity might explain why the engravers of the dies were not always faithful to the special shape, but have sometimes drawn it as a P. If these dies had been engraved by Greek artists,

acquainted with a peculiar shape of an obsolete letter of their own writing, they would not have made such a confusion.

T. DE LACOUPERIE.

THE AVESTA WORD "ASPERENÓ."

Munich.

The Avesta *asperenó* is usually supposed to be a word borrowed by the Iranians from a foreign language, either Greek or Semitic. It occurs only thrice in the published text of the Avesta (in the *Vendidad*, iv. 136, v. 169, vii. 50, of Spiegel's edition), and always in the compound term, *asperenó-masô*, "the amount of an *asperen*." In the Pahlavi version this compound is merely transcribed in the form *asperenô-masât*, which, in *Vend.* v. 169, vii. 50, is explained by a gloss that may be read *chīgūn dādan-1*, "like a dirham," whence it has been concluded that the *asperenô* was a small coin or weight, equivalent to a dirham, or about sixty-three grains. This gloss may also have been the authority on which the Farhang-i 'Otm-aévak explains *asperenô* by *dādan*, "a dirham." But, as it is now known that some of the commentators mentioned in the Pahlavi *Vendidad* lived in the period A.D. 500-900, we cannot be sure that this gloss is of any earlier date; and, if so, it merely implies that Pahlavi writers were aware of the existence at that time of an *asperena* coin or weight equivalent to a dirham.

The word *asperenô*, with its derivatives, occurs, however, seven times in the unpublished Avesta text of the Nirangistān, and is six times translated by one of the Pahlavi words *anaspōrk*, *anaspōrk*, "incomplete," or *anaspōrkāh*, *anaspōrkāh*, "incompleteness, imperfection, insufficiency," which point at once to a satisfactory Iranian etymology of the word. According to this explanation *asperenô* is a negative form *a + sperenô* (= *perenô*), indicating the existence of a root *spar*, "to fill," equivalent to *par*. Of this root *spar*, "to fill," we have many traces. Besides the common Pahlavi words, *spōr*, *spōrk*, "full, complete, perfect," and their derivatives, we have the Persian words *sipar-dan*, "to perfect, finish"; *sipart*, *sipart*, "complete, perfect"; *sipargah*, "completed, finished"; *asparish*, *asparish*, "completion, perfection"; and the Sanskrit words, *sphāra*, "increase, abundance"; *sphārita*, "extended"; *sphira*, "abundant, capacious"; in addition to Sāyana's explanation of *sprinavāma* by *pārayāma*.

As the Nirangistān is hardly accessible to European scholars, and not very intelligible to anyone, it seems desirable to quote the passages in which the word *asperenô* is found. They occur in two groups which, in a MS. of 250 pages, would be found about pp. 5 and 223. The first group begins (after speaking of a priest going to a house on priestly duty) in a Pahlavi commentary containing a variety of Avesta quotations, applicable to various attendant circumstances, one of which is stated as follows: "When there is not the loss, or gain, of a dirham in his property, it is *gaēthanām vā asperenô avōit*." Here the dirham has no connexion with the *asperenô*; but the passage implies that when the priest has nothing to gain by his visit he should still act according to the Avesta quotation, that is, he should assist *unremunerated* by the family. This is clear from the text that follows the commentary, although imperfectly expressed by the Pahlavi version. The text is as follows: "*Katārem āthravāna athaurunem vā pārayat gaēthanām vā asperenô avat*, [Pahl.] through which of these two (I mentioned previously), him who is a priest who shall proceed on priestly duty (that is, shall go to provide for a priestly assembly), or him who assists the *insufficiency* of those of the family (that is, shall provide the guardianship of the property), *gaēthanām asperenô avōit*,

[Pahl.] does one assist the *insufficiency* of those of the family (that is, may they provide a guardian of the property)?”

The second group begins with the following: “*Yēzi aṅtarem asperenō-vastrahē aiwyāonhayā-ōñti ratufryō*, [Pahl.] even they who gird inside of *incomplete* clothing are agreeable to the spiritual chiefs; *anasperenō-vastrahē aiwyāonhayāōñti aratufryō*, [Pahl.] if they so gird what is *not incomplete* they are not agreeable to the chiefs.” After some intervening matter comes the following: “*Yēzi asperenō-vastrahē aiwyāstem dādarayō ā anaiwyāsti streñti*, [Pahl.] if they shall hold *incomplete* clothing by girdling, they cover that which is for girdling; *yēzi āat nōit asperenō-vastrahē aiwyāstem dādarayō nōit anaiwyāstō*, [Pahl.] if they do not hold *incomplete* clothing by girdling, they do not cover for want of girdling. (It is that they declare where a man has walked naked with no sin.)”

From none of these phrases would it be possible to obtain a satisfactory meaning if *asperenō* were taken as a coin or weight; nor could the negative *anasperenō* be readily explained. But, as the possible coexistence of an *asperenō* coin or weight might be urged, it is necessary to explain how the meaning “incomplete” can apply to the occurrences of the word in the *Vendidad*. In *Vend.* iv. 136, the term *asperenō-mazō* is the lowest of a series of amounts which run upwards in the order of value of an *asperena*, an *anumaya*, a beast of burden or pack-bullock, and a man or slave. *Anumaya* is known to be an epithet of the *pasu*, “sheep or goat,” and probably means “bleating after.” If, in like manner, we take *asperena* as an epithet, meaning “imperfect, immature,” we can readily suppose that it stands here for “a lamb or kid,” thus satisfactorily completing the series of values of a lamb, sheep, bullock, and slave. The other passage, which occurs twice (in *Vend.* v. 169, vii. 50), refers to the sin of wasting garments on purposes which would render them impure, and teaches that such waste should be “not the amount of an *asperena*, not even such an amount, in measure, as a damsel shall throw away in waste.” Here the epithet *asperena*, “incomplete,” can hardly mean anything but “a rag”; and, singularly enough, the Pahlavi gloss which has been read *dādan-1*, “a dirham,” can also be read *yāgo-1*, “a rag” (Pers. *yāk*), so that the gloss can be quoted in favour of either meaning.

The conclusion I draw from these details is that it is now perfectly safe to strike *asperena* out of the very short and doubtful list of foreign words which have been supposed to exist in the Avesta. This would, no doubt, have been done long ago, if any scholar had thought of considering *asperena* as a negative form.

E. W. WEST.

PHILOLOGY NOTES.

A VERY handy edition of the Welsh story of Peredur has been issued by Dr. Kuno Meyer, of Liverpool, in a brochure of 84 pages octavo, published by Hirzel, at Leipzig. About 40 pages are devoted to the text, about half of which had passed through the press some time ago; so the editor is now able to add about two pages of corrections from Rhys and Evans' Oxford text of the Red Book of Hergest. But though this is a somewhat “large order” of errors for so short a text, it is far from representing all the shortcomings. We have taken the trouble to go through pages 12 to 16, and we have counted in them over 50 errors of all kinds, of which we find only about 20 corrected, which leaves rather over 30, that is to say, an average of about six uncorrected errors to each of the five pages in question. Dr. Meyer may be an excellent Irish scholar, and his Irish comparisons may be all that is desirable; we venture no opinion on that, but we fail to

appreciate him as a Welsh scholar. What, for instance, would make him suggest that such a word as *angerdd* (in the MS. *angerd*) should mean “equipment” we cannot make out. There are plenty of Welshmen in Liverpool who could have directed him to Dr. Pughe's dictionary, where he would find the word explained: “A hot steam, heat, strength, force, animal spirits, disposition.” Besides, if Dr. Meyer had thought it expedient to look at the preposition following the word *angerd* in the text, he would find that he would have to put his “equipment” in the knight instead of on him. Now and then we meet with a word of Dr. Meyer's own make, such as *difefawd*, which is his modern spelling of *dineuawd*, which is his misreading of *dineuawd*, a past tense form of *dineu*, “to pour or shed.” Here, also, the aid of the despised Dr. Pughe would have been useful. A still more hopeless case of helplessness is that of Dr. Meyer's *meddawt*, for what he reads *m dawt*; but the MS. has *meddawt* (divided by the ending of the line into *med-dawt*), which has to be transcribed after the analogy of modern Welsh spelling into *med-dawt*, “intoxication or drunkenness.” Such a word as Dr. Meyer suggests has no existence. In spite, however, of these and other errors which we cannot notice, Dr. Meyer has made considerable progress in his study of Welsh since he began with the Peredur, for in his original account of his object in publishing he wrote as follows: “I have collated Lady Guest's edition with the MS., and all the numerous mistakes and omissions of that edition are now for the first time corrected and supplied.” These “prave” ords are, we are happy to say, not reproduced; and we hope that Dr. Meyer has by this time learnt to know that Lady Charlotte Guest did not after all do her work so very badly, at any rate in comparison with his own somewhat briefer performance.

Correction.—In Dr. Neubauer's letter, entitled “Raymundus Martini and the Rev. Dr. Schiller-Szinessy,” in the last number of the ACADEMY (p. 189, col. 1, l. 25 from bottom), for “Yizhagi” read “Yarhi.”

FINE ART.

GREEK VASES OF THE SIXTH CENTURY.

Les Céramiques de la Grèce Propre. By Albert Dumont and Jules Chaplain. (Paris: Firmin Didot.)

THIS important work, which seemed likely to terminate abruptly on M. Dumont's death, is now being completed with discretion and skill by M. Potthier. The fourth *livraison* has just been issued, and it is announced that the first volume (*Vases Peints*) will be concluded in the fifth. We shall then possess a characteristically French account of this complicated subject, comprehensive and admirably arranged, the essentials emphasised and the details subordinated, the exposition lucid throughout; and, although occasionally contradicted by facts, never contradicting itself. We shall then consider this account as a whole; but, meanwhile, we may indicate the scope of the present *livraison*.

It deals with vases of the sixth century, and chiefly with those discovered at Caere; and it assigns them to four principal fabrics—Later Corinthian, Chalcidian, Cyrenaic, and Attic. This classification proceeds mainly on the evidence of inscriptions. It is a matter for serious regret that the deductions drawn by Prof. Kirchhoff from a comparatively small number of inscriptions, and published by him

as preliminary studies for a history of the Greek alphabet, should be accepted by so many writers in various languages as a final history of that alphabet. The broad distinctions based on the use of the non-Phoenician letters, Φ, Χ, Ψ, and of the Ζ, are no doubt settled; but the minor distinctions, based on the varying forms of individual letters, cannot be considered as proved until many more early inscriptions have been unearthed and examined. It should be clearly understood that the statement that a number of vases from Caere have inscriptions in the Corinthian alphabet merely amounts to this, that in the inscriptions on these vases there is a peculiarity in the forms of two letters which has also been observed in two or three inscriptions from the neighbourhood of Corinth. This coincidence hardly justifies the attribution of these vases to a Corinthian fabric, or even their separate classification. It merely raises the question whether these vases have other peculiarities in common which are not to be found in vases with inscriptions in the other “alphabets.” The corresponding question with regard to vases with inscriptions “in the Chalcidian alphabet” may, we think, be answered with some certainty in the negative. Some of them are, no doubt, in a style which is exceptional, and has been, therefore, called “the Chalcidian”; but others are in the ordinary Attic style. While other vases, again, which are in this “Chalcidian style,” have inscriptions in the ordinary Attic alphabet. As for the Cyrenaic vases, their inscriptions, as Dr. Klein has already pointed out, are “in the Laconian alphabet.” Sparta is, however, too unæsthetic for M. Potthier, and he leaves them provisionally at Cyrene. There are, we think, sufficient points of affinity between the so-called Corinthian, Chalcidian, Cyrenaic, and Attic vases treated in this *livraison* to negative the theory of widely separated fabrics; and, seeing that these vases were probably made about the time when the industrial population of Athens was in course of formation, it is not improbable that the inscriptions upon them in these various local alphabets—taking the theory of local alphabets as proved—were written by settlers from those localities who worked in the Cerameicos. Be that as it may, we are indebted to the authors for presenting the history of the vases of this period, as deducible from the evidence of the inscriptions, with completeness and precision, and for thereby bringing the question of the value of this evidence considerably nearer to a solution. We must, however, remark that the forms of the letters in the inscriptions are not always given with perfect accuracy; and also that the work would be more convenient if the references in the footnotes to illustrations in somewhat inaccessible publications were more frequently supplemented by woodcuts in the text. The coloured plates at the end, which are due to M. Chaplain, belong to the text of the next *livraison*. They are chiefly of polychrome Attic lecythi, and are satisfactory enough, but a trifle too sketchy.

As to the difficulties raised by Prof. Brunn in his *Problems* about the date of many of the vases treated in this *livraison* the authors display great discretion, mentioning his views in footnotes as things that cannot well be ignored, but still hardly require serious discussion. It

may be noted that Prof. Brunn, in drawing attention to Sig. Antonio Zannoni's account of the excavations at the Certosa at Bologna, has lately restated his views about archaic and archaistic vases, and advanced some new arguments in their support, complaining at the same time that his *Problema* has not received all the attention it deserved, and demanding a new and searching investigation into the whole history of Greek vases. We would venture to observe that, in the peculiar circumstances of the case, this investigation would be most fittingly undertaken by Prof. Brunn himself.

CECIL TORR.

CORRESPONDENCE.

ROMAN INSCRIPTIONS AT CHESTER AND THE AGE OF THE WALLS.

Liverpool: Sept. 19, 1887.

Since my letter in the ACADEMY of September 17, I have had full particulars of some of the later discoveries there referred to; and I now send copies of eight inscriptions:

(1.) (2.)

L. ANNIVS. L. F. D. M.
TRO . MARCEL FLAVI
A. SATV
RNINA .

(3.) (4.)

D. M. D. M.
M. SEXTIVS . . . * * * * * INA
CLAV . BELLIO
CIA . CELEIA . A
* * ORVM . X * * *
* * * PEND

(5.)

D. M.	*
M/. AVR. NEPOS > LEG .	*
XX . V . V . CONIVX	SVB
PIENTISSIMA . F . C .	ASCI
VIX . ANNIS . L .	AID

(6.)

* * > LEG . V . MACED . ET
VIII . AVG . ET . II . AVG . ET XX . VV
VIXIT ANNIS . LXI . ARISTIO
LIB . H . F . C .

(7.) (8.)

D. M. DIS . MANIBVS
M. CLVVI . M . ATAN * * * N * *
ANI . VALENTINVS * * ATILANVS ANX
FORO . IVLII PROTVS . AN . XII
POMPEIVS
OPTATVS . DO
MINVS . F . C .

These are all tombstones. No. 1 is only the upper portion of the inscription, which reads: L(ucius) Annius L(ucii) F(ilius) Tro(mentina) (tribu) Marcellus, or, translated, "Lucius Annius Marcellus the son of Lucius of the tribe Tromentina."

No. 2 is a portion of a stone similar to No. 1 in my last letter, having represented upon it the defunct in a semi-recumbent posture, &c.; but only the lower part of the sculpture is visible. The reading is simply D(iis) M(anibus) Flavia Saturnina.

No. 3 is unornamented, but is on a large block of stone within a panel. From a rubbing sent to me, the letters I find are about 3 1/4 inches high, and finely formed. The reading is D(iis) M(anibus) M(arcus) Sextius (M[arci] F[ilius]) Clau(dia) (tribu) Belliccia(nus), Celeia A(dno-rum) X . . . (Sti)pendiorum i. e., "To the gods the shades. Marcus Sextius Bellicianus the son of Marcus of the tribe Claudia, a native of Celeia, — years of age, and — of service."

I have given the name of the father, obliterated on the stone, as Marcus, as it is the most likely rendering. The two c's in Bellicianus are, no doubt, the stonecutter's error. The age has probably been over thirty. Celeia was a town of Noricum (now called Cilly), and was styled a Colonia, bearing also the name of Claudia (see Orelli, No. 501).

No. 4 is only a fragment, as far as the inscription is concerned; but above the latter was the scene which occurs on so many of these stones—a female lying on a couch, with a tripod table in front.

No. 5 is very interesting. It is over 6 feet in height, and bears upon the upper part of its face the defunct in a standing position, with his wife upon his left. Beneath is the chief inscription, reading: D(iis) M(anibus). M(arcus) Aurelius Nepos > (centurio) Leg(ionis) XX. V(aleriae) V(ictricis) Conjux Pientissima F(aciendum) C(uravit). Vix(it) Annos L. "To the gods the shades. Marcus Aurelius Nepos, a centurion of the Twentieth Legion, the Valerian the Victorious. His most dutiful wife caused (this) to be made. He lived fifty years."

On the upper portion of the stone at the left-hand edge beneath the representation of an *ascia* (or, rather, what resembles two *asciae*) is the small second inscription. As there is an I in the last line which rises direct from the base of the A, being thus ligulate (I have thought ANI might be intended, which is quite possible, but it hardly seems so) I would read the whole as Sub *ascia* j(ussu) d(edicavit). It is the first instance that has occurred in Britain of the phrase "sub *ascia* dedicavit," though it is common in the south of France. Numerous examples occur in the Lyons Museum. Its exact meaning is still a mystery, though much has been written upon it. Two Roman tombstones (at least), discovered in Britain, bear representations of the *ascia*, but without the above phrase—one found at Colchester, the other at Lincoln. The meaning of "j(ussu)," introduced into this example, I take to be by order of the defunct himself. In the chief inscription on this stone at the commencement of the second line it will be noticed that there is a stroke ligulate with the M. It arises, I think, from the sculptor having originally intended to carve MAR (for Marcus) in a ligulate form.

No. 6 is only the lower part of what has been a large monument of apparently some pretensions. It is said that before the centurial mark > in the first extant line, the letters P. B. occur; but I cannot from a rubbing so read them, and it would be difficult to gather the sense, if they were there, without knowing what had preceded them. The remainder is clear, and reads C(enturio) Leg(ionis) V. M(acedonicae) et VIII Aug(ustae) et II Aug(ustae) et XX. V(aleriae) V(ictricis) Vixit Annis lxi. Aristio Lib(ertus) H(eres) F(aciendum) C(uravit) — "A centurion of the Fifth Legion (surnamed) Macedonica, and of the Eighth (surnamed) Augusta, and of the Second (surnamed) Augusta, and of the Twentieth (surnamed) Valeria Victrix. He lived for sixty-one years. Aristio (his) freedman (and) heir caused (this) to be made." The name Aristio has a German sound. As it seems almost certain, from continental inscriptions, that a vexillatio of the Eighth Legion was among the reinforcements brought over to Britain by the Emperor Claudius in A. D. 44, and also probable that a vexillatio of the Fourth Legion (likewise surnamed Macedonica) came over at the same time, it is possible that this monument may be of an early date, though its lettering is not so good as some of the inscriptions just found, and that the defunct served in all these legions in Britain. If so, a vexillatio of the Fifth Legion must also have been here. But it is more probable that he served in this legion on the continent.

A vexillatio of the Eighth Legion also came over to Britain in Hadrian's time. The ET in this inscription, three times repeated, is in each case ligulate.

No. 7, of which the termination is wanting, has several ligulate letters. F at the end of the second line is apparently wanting. ANI is ligulate, so are LE and TI in the same line; and though VS seem to be at first sight the letters after the T, there can be little doubt that NVS are ligulate. The second I in IVLII is a continuation of the upright of the L. The whole I would read D(iis) M(anibus) M(arcus) Cluuius M(arci) [(Filius)] Ani(ensia) (tribu) Valentinus Foro Julii. "To the gods, the shades. Marcus Cluuius Valentinus the son of Marcus, of the Aniensian tribe a native of Forum Julii." There were several places which bore the name of Forum Julii. From the tribe being the Aniensian, I am inclined to think the deceased was a native of Frejus. Had it been the Arniensian, he might have hailed from Friuli.

No. 8 is on a much shattered stone. It commemorates several slaves, to whom their *dominus* (or master) had erected this monument. The one last named was Protus, a youth twelve years of age. The master's name was Pompeius Optatus. Although the letters are ligulate and uncertain, I think that the third line (except the commencement, which may be ET ligulate) reads as I have given it, and consequently names Atilianus of ten years of age. I may, of course, be wrong here, and so wish it to be understood; but no doubt strict examination will bring out the correct reading. We have at the commencement of this inscription D(iis) Manibus in full, while it closes with F(aciendum) C(uravit). In the second line a person whose name commences with the letters ATTAN has been named. We have in this stone, also, the sole example in Britain of *dominus* occurring in the sense of "master."

Though I have not yet seen the stone, I am inclined to believe that the *ascia* is again represented on the edge of the second stone I described in my last letter, of which only the letters D.M of the inscription remain.

I must also notice to some extent the remarks of Mr. Brock in the ACADEMY for September 17. He starts by saying that I make the tablet I refer to, bearing two figures, to be "circa the fourteenth century." I do nothing of the kind, nor did I intend to. I do not pretend for a moment to be a judge of the exact date of any mediaeval sculpture; but I can certainly see when a slab is genuine Roman, and when it is of Christian times. My contention over this stone has been that it is post Roman and Christian, the male figure having ecclesiastical vestments. True, I say the face of the female "is of some beauty much resembling the faces found on corbels, &c., circa the fourteenth century"; but as to the date of the stone I say nothing. I leave its date for mediaevalists to decide. Few people who have seen the stone have denied the strong resemblance between the male figure and a mediaeval ecclesiastic. Many are positive on the point. Mr. W. de Gray Birch, who lately wrote upon it in the *Liverpool Daily Post* (in which paper I replied to him), says that he "at first relegated it to mediaeval times;" but as he is anxious to prove the wall just opened to be Roman, if he held to that idea, it would upset the theory. He adds that the vestments of the man "do in some measure represent the surplice and flowing stole of a bishop." The writer of the report of the Chester meeting of the Association in the *Athenaeum* says that it is "so exactly like the mediaeval representations of a bishop's vestments that at first sight one refuses to believe in its Roman origin." Mr. Roach Smith improves upon the matter by saying that the

tablet is certainly Romano-British, and that he sees in the male figure "a female with a mirror." "I will not cite" (he adds) "a dictum of my own, but refer to the *Bulletin Monumental*." I have not the least doubt but that by referring to the *Bulletin Monumental* I might easily find a basrelief of a female with a mirror; but as to finding a Roman basrelief containing a figure in stole and surplice, there is no such example.

Mr. Brock goes on to argue that, because the wall just laid open is composed of large stones very closely jointed, they *must* be Roman. Why so? Some explanation is necessary as to his reference to Puritan builders. My use of the term arose in this way. It was the north wall of the city, and a great extent of it, which, as is well known, was breached by Sir W. Brereton's forces in 1646. After the fall of the city, the Parliamentary forces would hastily rebuild it, as they were themselves liable to a siege at any moment. Learning by experience the powers of artillery, they would naturally get hold of the largest and most massive stones in their power to repair the breach; and we know (I refer to Ormerod, who in turn quotes from MSS.) that many large buildings, said to be temples, were at this time visible in a ruinous state in Chester. Their foundations, and such stones from them as had been buried since Roman times, would quickly be made available; and when the Royalists threw up intrenchments in the large Roman graveyard at Lady Barrow's Hey, many sepulchral stones like those now turned up would be found, and would be lying about when the siege was over. Since Mr. Roach Smith wrote (in the *Chester Courant* of September 7) on the tablet named above, it has been still more severely examined; but referring to only one writer, Mr. E. W. Cox (in the *Liverpool Courier*, September 14, *Liverpool Post*, September 15, and *The Architect*, September 16), this gentleman avers that the "ecclesiastic" has the cope and stole, and holds a chalice, or bowl, containing the consecrated wafer. The outline of a nimbus, he says, is visible. This outline of the nimbus, by the way, was pointed out to me as far back as August 9, by one of the Chester city officials. The other figure Mr. Cox takes to be that of a youth (not a female), and probably an acolyte. The tooling and countersinking, as both Mr. Cox and many others aver, and as I have stated in my letter to Mr. Birch, are certainly not peculiar to Roman date, but may be of any period. Mr. Cox considers the slab to have been taken from a tomb of late Gothic work. This fits in with the idea that it was the Puritan soldiers who raised this part of the wall (it seems to be admitted by all to be a reparation). Chester escaped at the suppression of monasteries, but the Puritans desecrated the churches to a great extent. And if this stone is mediæval, is not the fact of its being found at the base of the wall subversive of Mr. Brock's theory? The Roodeye stones are far out of the line of the original Roman *castrum*, as I have shown in my *Roman Cheshire*. They are in front of the estuary bank, behind which are villas and graveyards sloping down from the site of the Roman wall on the plateau above. I will refer Mr. Brock to my letter in last week's *Builder*, or to my *Roman Cheshire*. I have said the walls are built of Roman stones, brought from elsewhere at different periods. Why should not these stones have had masons' marks upon them when they were first used? These marks are no proof that the stones were purposely cut for their present position. As to the endurance of the stone, that is more in Mr. Shrubsole's way than mine. But I have specially said in *Roman Cheshire* that when buried, the sandstone will endure for ages; and hence I have looked for Roman foundations to be found, in fact, expect

they will be found with Roman concrete, for from large lumps of concrete met with, and the southern wall having been found to possess a massive foundation of concrete and boulders, concrete *must* have been used in the north wall, as in others. Mr. Brock seems to be unaware that the face of the wall, both at the Roodeye and the Kaleyards, was laid bare (to a still greater depth than the later excavations) some three or four years since, and all appearances noted and plans taken by competent persons.

He refers to Sir J. Picton. Well, I hardly know what to say about him. Last year he distinctly denied the walls to be Roman. Recently he averred they must be Roman, and stated that the "irresistible evidence of the excavations" should "set at rest" the question. Later still, on September 17, there is a letter from him in the *Liverpool Courier* to the effect that we should wait until further excavations are made; and he adds, "I pronounce as yet no opinion as to the date, or the builders."

From Mr. Cox's letter, it would appear that only one member of the party which accompanied the Association (besides Mr. Cox) descended the shaft at the point of excavation at the actual time of the visit. It is certain that Mr. Brock was the only speaker at any length on this excavation, except a few words from Sir J. Picton and the city surveyor. As to no contrary opinion being expressed, the fact was that, beyond the persons named, hardly any one expressed any opinion at all. The anti-Roman party were, by agreement, silent.

Mr. Brock concludes by referring to my not being aware of the number of inscriptions found. I was fully aware of these discoveries, as my letter, side by side in your columns with his, shows; but the readings, until accurate copies, or as nearly so as possible, are obtainable, I always refrain from giving. It may interest him to know that in the *Chester Courant* of July 20 I predicted that "hundreds" of Roman inscriptions were built up in these walls, and that I hoped the excavations would lay some of them bare.

In conclusion, besides myself, large numbers of persons who know much about the subject aver that there has not yet been found any Roman portion of the wall (except the buried foundation of the south wall in Bridge Street); but I hope the excavators will find part of it, for I am satisfied it is not entirely removed.

Mr. Brock's idea, expressed at Chester, that there had been large public buildings in Chester without mortar, and that the remains of these in Roman times had been built up, still without mortar, in the walls of the *castrum* to repair them, thus accounting for the friches, cornices, &c., found, is, I think, one of the most improbable of suppositions. That there were large Roman buildings constructed without mortar I do not deny, but they were of a very different class to this wall.

W. THOMPSON WATKIN.

Chester: Sept. 17, 1887.

The few hours that Mr. Brock has devoted to our local archaeology have not sufficed to prevent him from falling into serious error, and the so-called Roman wall on the Roodeye. For his information may I state that we have found on the Roodeye a Roman pig of lead at the depth of twenty-two feet, and that over the spot in question was deep water in Roman times? Hardly the place, one thinks, for the wall of a *castrum*. On the bank above and in the immediate rear of the wall we unearthed last year one of a series of Roman villas, while twenty Roman graves have been found close by. Graves and villas are not usually included within the walls of a Roman camp. I will mention only one other objection—the mortar

in the wall has none of the characteristics of Roman mortar.

Mr. Brock has seen on the Roodeye the remains of an old wall, but not the wall of the Devan *castrum*.

GEORGE W. SHRUBSOLE.

NOTES ON ART AND ARCHAEOLOGY.

SIR J. E. MILLAIS's "Portia," which was on exhibition in a private gallery during the past summer, has been purchased at the price of 2,000 guineas for reproduction, in colours, as the Christmas number of the *Illustrated Sporting and Dramatic News*.

MR. P. M. C. KERMODE, of Ramsey, whose letters on the Runic inscriptions in the Isle of Man will not have been forgotten by readers of the ACADEMY, has done a useful and laborious work in compiling a catalogue of all the crosses and fragments of crosses in the island—seventy in number. To this he has appended a transliteration in Roman capitals of all the Runic inscriptions to be found on these crosses (twenty-one in number), together with the various readings and renderings of Cumming, Munch, Vigfusson, &c. We hope that Mr. Kermode will be encouraged to complete his more ambitious project of publishing a full description of the crosses, with a large plate of each face and edge of every one of them, from photographs that he has had taken by Mr. Paterson, of Ramsey. It should be added that the profits of the sale of this catalogue will be devoted to the discovery of other crosses which are known to be either hidden away in walls or buried under ground.

WITH reference to the *Documenti* illustrating the history of St. Marks, which was reviewed in the ACADEMY of September 3, we are requested to state that the publisher (Ferdinando Ongania) has had an English summary of the contents of the large volume prepared by Mr. William Scott, an architect residing in Venice. This summary, which is entitled "A Glance at the Historical Documents relating to the Church of Saint Mark in Venice," is itself (with its woodcuts) an admirable example of Italian printing.

AGENCIES.

London Agents, Messrs. W. H. SMITH & SON, 186 Strand.

Copies of the ACADEMY can also be obtained every Saturday morning in EDINBURGH of Mr. MENZIES; in DUBLIN of Messrs. W. H. SMITH AND SONS; in MANCHESTER of Mr. J. HEYWOOD. Ten days after date of publication, in NEW YORK, of Messrs. G. P. PUTNAM'S SONS.

LITERATURE.

Life of Leo XIII: from an Authentic Memoir. By Bernard O'Reilly. (Sampson Low.)

Life of Leo XIII. By John Oldcastle. With Chapters contributed by the Archbishop of Westminster, T. W. Allies, W. H. Anderdon, and Alice Meynell. (Burns & Oates.)

The present occupant of the Holy See holds a very different position in the eyes of the English-speaking peoples from that filled by any former pope since the date when England was separated from the Catholic communion. The reasons for this are many—some complex and so hidden as to be unrealised by most of those who are influenced by them. Others are on the surface, and should be visible to all whose thoughts ever range beyond the controversies of the hour. The old bitter political Protestantism—which looked upon all those of the Roman obedience as traitors in heart, only waiting for an opportune time to hatch some new plot as foul as that which little boys still commemorate on the Fifth of November—is not dead, but so far gone in dotage that no one heeds the low mutterings of its impotent rage. We never hear of it now except when some provincial town has its quiet disturbed by an “escaped nun,” or some itinerant lecturer whose fierce harangues commonly do not even find a column to preserve them in the nearest local paper.

The religion of which the Pope is the head is still dreadful to many as representing a theological system which they conceive to be contrary to the teaching of Holy Scripture; and to others because it is believed by them to be, as it undoubtedly is, an enemy of certain things which go under the name of liberty. Whether the liberty on which the Church wages war be of a kind which Englishmen understand or would value is a question on which we need not enter.

This change of feeling has grown up slowly. Those who are old enough to remember the “Papal Aggression” turmoil are aware that at that time there was no small danger of new penal laws being enacted. A generation has grown up since then, and vast and utterly unforeseen changes have taken place in every civilised land. Italy has become a powerful kingdom, and the pope is no longer a temporal monarch. Leo XIII. is the first pope for many ages past who, from the very beginning of his reign, has had to depend solely on his spiritual power. Men had been told, ever since the religious changes of the sixteenth century, that the papacy was a mere monarchy upheld for the convenience of the Catholic

states; that the spiritual authority was an imposture which was not exposed because it was to the interest of certain of the great powers of the Continent to give it their support. The changes of the last few years have demonstrated that this crude notion had no foundation. The governments which rule the Catholic populations of Europe are either violently hostile or passive spectators, yet we must go back to a period long antecedent to the Reformation before we find a pope exercising the unquestioned power now possessed by Leo XIII.

When the decree of papal infallibility was promulgated, late in the life of Leo's predecessor, it came as a shock to many Catholics and to almost all Protestants. The mind of Mr. Gladstone was exercised thereby not a little, as his pamphlets bear testimony. He was in that, as in so many other things, a type of his countrymen, given to reason on words he but half understood. On matters pertaining to theology it is not our purpose to enter. We may, however, be permitted to point out that it was an immense boon to many Catholics, as it defined the limits of a power which was before but vaguely apprehended. Had the papal throne become during the old state of things the seat of a vain or fanatical person untold dangers might have arisen. The conciliar decree makes it almost impossible that a catastrophe such as some members of the Latin communion and many outsiders have dreaded or longed for should take place.

To those who believe that freedom and order are among the greatest blessings that man can enjoy—sisters, not antagonistic forces—the election of Cardinal Pecci to the pontifical throne gave much satisfaction. He was known to be a pure-minded, honest ecclesiastic, seemingly without ambition, but with a habit of doing his duty in a plain, straightforward manner, without cowardice, bravado, or parade. He had, as governor of Benevento, when a very young man, made the people love him; and—what, perhaps, tells still more to his credit—he had incurred the hatred of the brigands by whom the country was infested and of the scoundrel-aristocracy who protected them. As Nuncio in Belgium at the court of Leopold I., he was placed in a most trying position. Leopold has earned the character of a good king. There are probably few Belgians who do not respect his memory. He was, however, promoted to the new throne by a series of intrigues which do little credit to any concerned in them. As the Protestant king of a country almost entirely Catholic, his position was unfortunate. The peculiarities of his own mind did not tend to soften the evils which a difference in religion was calculated to create. He was above all things doctrinaire. His mind was as incapable of seeing that much must be allowed for imagination and sympathy as was that of Guizot himself. To such a man as we know the Pope then was, it must have been no small trial to act as Nuncio at the court of a man whose ideal of life was in almost everything the opposite of his own. On one matter we may believe that there was cordial agreement. Those who take the least exalted view of Leopold must admit that he showed a desire to make those he ruled happy.

When the time came for Pecci to leave

Belgium, he crossed over to this country. Though the days spent in England were few, we are sorry that so little regarding them has been recorded. We can well imagine that certain things seen here—the flaunting vulgar wealth, the miserable poverty and brazen vice, contrasted, as it is, with so very much of ardent unselfish charity and deep religious feeling—must have made a lasting impression on the mind of the ardent and poetical Italian priest. Shortly after his return to Italy Pecci became Bishop of Perugia. To follow his government of that see, even in the most sketchy detail, is impossible. His lot was cast in evil times for an ecclesiastic whose faith in the religion which he had learned at his mother's knee had never been shaken. All accounts, even the most hostile, represent him as governing with moderation, fairness, and zeal. His desire was not to hide, but to stamp out, abuses. The secret societies were at work everywhere, and with them he could make no compromise. At length came the fall of the temporal power of the pope, the suppression of the religious orders and other confiscations, accompanied by a desire on the part of the Italian Government to subject the Church to the State. A condition of things had come about which placed every bishop who desired to do his duty in the most trying position. The Bishop of Perugia was now reckoned one of the foremost men in Italy. The war he carried on with the government is the more noteworthy on account of the excellent temper with which it was conducted. The bishop struck some very hard blows; but there was none of the bad language and false rhetoric which would certainly have been used by an inferior man. In style and manner those who differ most widely from his sentiments must admit that there is nothing but what is excellent.

It would seem to be a loss to the world that so much of the future Pope's life had to be occupied with fighting political battles which few but Italians can thoroughly understand. The eloquent denunciation of vice and those things which directly lead to a deterioration in morals must appeal to the hearts of all; and many in this country will be gladdened as well as surprised to find that Pecci always advocated a wide and liberal culture for all classes and both sexes. He had himself studied physical science in youth with ardour, and has always shown himself utterly opposed to those obscurantist fancies which have led narrow-minded folk to denounce many of the most important discoveries as the very smoke of the pit.

The future Pope had in childhood a happy home. This inestimable advantage, which is the lot of so few, evidently exercised a very marked effect upon his life. We know no one of our contemporaries who has said wiser and nobler things on domestic life and the duties of parents and children. In England, however much men and women may go astray, there are very few who consciously set themselves to uproot the foundations on which all civil society is built. In some other lands this is not the case. There are compactly organised bodies of men who have come to the conclusion that the laws which govern human life are capable of repeal, and that something higher and nobler than the

home may be evolved. That those who dogmatically hold this opinion are a numerous body in any Christian land we do not believe; but the poison in its diluted form has spread widely, and is the cause of much that is most hateful in modern life. The insane worship of money, the mad chase after the lower pleasures of life, and the consequence which follows—that all the higher and nobler virtues and desires are thrust on one side or treated as a mild form of insanity—may be directly traced to the unhappy homes in which so many of us have found ourselves when we first became self-conscious beings. The man who once said in our hearing that Father Damien was “a fool” for devoting his life to the lepers of Molekai was a specimen of a class, we fear a large one, which has no ideal of life higher than that of the Roman rabble, whose cry was for bread and games. Could we regard such as he as a survival from the ancient world—a specimen of a type of man long since passed away, he would be valuable as an anthropological curiosity. We fear, however, that such is not the case; but that a new type is being formed which will try to adapt all the appliances of modern civilisation to the gratification of the lower desires and the extinction of such things as are noble in man—a sort of being that will war with revolutionary fury on those faculties which make souls like Shakspeare and Saint Francis possible, for it must ever be borne in mind that if the heroic be blotted from the minds of men, poetry and art in any forms in which we care to know them will as certainly perish as the nobler virtues. The man or men who composed the Iliad and the sad lay of the Niblungs were no more absorbed in the lower pleasures than Saint Bernard or Mrs. Fry. Their thoughts differed in kind as well as in degree from the people who so complacently tell us that it is their full intention “to make the most of life,” and imply, without as yet having the courage to say so in plain words, that they and theirs can live in a fool’s paradise of ever-changing delights they care little for the unhappy toilers around them, so long as the existing organisations—the state, the church, or anything else—remain strong enough to keep suffering humanity from revolutionary violence.

It is evidently the opinion of Leo XIII., as it is of all persons who understand anything of the growth of the human faculties, that the earliest years of life mould the character for good or for evil, and that nothing can supply the place of a mother’s love or the mild, firm rule of a good and sensible father. As bishop and as Pope this subject has been dwelt upon by him again and again. We are in the fullest agreement with Dr. O’Reilly where he says that Leo XIII., when defending the institutions and morals of his own communion, “defends the dearest, deepest, most vital and sacred, interest of every Protestant country on the face of the globe, the essential liberty, morality, and happiness of every Protestant home in existence.”

Dr. O’Reilly, as a devout Roman Catholic, naturally says many things which his Protestant readers will not accept in the sense in which he means them. Those who acknowledge the papacy as a divine institution, and those who look upon it as a mere political growth—

the resultant of many favourable conditions long continued—are severed from each other by a line which no amount of good feeling on either side will obliterate. Modern revolutions have also complicated matters. The position of the state in Italy, existing, as it at present does, as a power bitterly hostile to the church, renders Dr. O’Reilly’s pages much less peaceful than we could have wished them to be; but no honest and sincere man, however strong his sympathies may be with the modern changes in Italy, can know the truth concerning much that has in recent days taken place in that land without feeling that an amount of harsh disregard for the interests of others has been exhibited by those in authority which is utterly without excuse. Those who hold the opinion that it was wise and just to confiscate the property of the religious houses will not be prepared to affirm that the interests of living people should have been sacrificed. Dr. O’Reilly—though he is, we gather, a fervent Liberal so far as politics are concerned—takes a very dark view of all the dealings of the Italian State with the Holy See. Whether we agree with him or not, the opinions of an accomplished American who knows the country well are worthy of the careful consideration of those who have derived all the knowledge they possess from partizan newspapers and the gossip picked up in hotels.

For English readers the most important part of the volume consists in the picture which it paints of a most interesting character. The devout child of devout parents, calm, strong of will, and of extreme mildness of expression. We rougher Teutons, had any of us been compelled by circumstance or conscience to write at length on many of the subjects that have employed the pen of Leo, would have used an amount of hard words such as could not fail to exasperate our antagonists. The great Italians of to-day are like their forefathers: they can smite with a gentleness which is very terrible. That the Pope is in the first rank of statesmen none can call in question who are in possession of the facts of his long career. The difficulties he has had to encounter have been enormous. The Italian State, the German Empire, and the French democracy have been at war with him. There is now peace with Germany and truce elsewhere. In all the wide world beyond the European continent, over Ireland, the Americas, and our own great Indian Empire, he is ever watchful. To some it will have come as an unmixed cause for thankfulness, to others as a horrible portent; but the fact is clear that he whom his followers call “the prisoner of the Vatican” exercises a far wider and more undisputed sway than any one of his predecessors.

We have but one fault to find with Dr. O’Reilly’s volume. Agreeing as we do with him in every point of importance, we are bound to say that we think his taste faulty in one particular. In writing of a living man, a reticence of praise is called for which is not required when speaking of the dead. The office and the man are distinct. It is a pity that we are sometimes reminded in these pages of the way laudatory persons think it becomes them to write of American presidents and English ministers who have happened to win the affections of the democracy.

We cannot find space to make remarks on Mr. Oldcastle’s book. There is hardly a fact worth knowing in it which is not contained in the larger volume. We have by no means a high opinion of the author’s style; and the eminent persons who have contributed to his pages are not seen at their best.

EDWARD PEACOCK.

Underwoods. By Robert Louis Stevenson. (Chatto & Windus.)

Even if *Underwoods* had not been preceded by *A Child’s Garden*, there would doubtless be many of Mr. Stevenson’s readers who would not be oblivious to the fact that he had written some charming verses. Those who have read the *Travels with a Donkey* can hardly fail to have been allured from the direct stream of narrative by such snatches of song as “The Caravanserai” or “The Country of the Camisards”; while the author’s “House Beautiful” and other poems have won admirers prior to their inclusion in the volume just published. But it is a different thing to charm a reader by an occasional lyrical outflow, and to win his loyalty by a collection of poems.

Mr. Stevenson has been complimented for his happy adoption of the title which Ben Jonson gave to his collection of fugitive poems and verses—I confess I fail to see on what grounds. The title has no particular relevancy to the contents of the book—certainly none, at least, to the latter portion of it, that written in “Scots.” If, instead of from Ben Jonson, Mr. Stevenson had appropriated from Herrick the collective name which that genial singer gave to his poetic offspring, there would have been less objection to urge. The same blithe spirit animates the poet of these new *Underwoods* as inspired the author of the *Hesperides*. There is no imitation of Herrick, yet this poet is more frequently suggested than any other. It is significant, moreover, that the best verses in Mr. Stevenson’s volume are those which positively or vaguely call to mind memories of the delicate music, the bland graciousness, of him who so long dwelt and lilted in “miry Devon.” This Herrick-strain is perceptible not only in the charming envoy:

“Go, little book, and wish to all
Flowers in the garden, meat in the hall,
A bin of wine, a spice of wit,
A house with lawns enclosing it,
A living river by the door,
A nightingale in the sycamore!”—

or in these opening lines of “The House Beautiful”:

“A naked house, a naked moor,
A shivering pool before the door,
A garden bare of flowers and fruit,
And poplars at the garden foot:
Such is the place that I live in,
Bleak without and bare within!”—

or, again, in the poem “To a Gardener,” with its closing quatrain:

“And I, being provided thus,
Shall, with superb asparagus,
A book, a taper, and a cup
Of country wine, divinely sup!”—

not only in these, but even in such a paradoxical couplet as

“Dew, frost and mountains, fire and seas,
Tumultuary silences.”

Underwoods consists practically of two books: the one of poems in English, the other of poems in Scots. The two portions are as distinct as if they were the productions, say, of a contemporary Herrick and of a contemporary Burns. The attempt to criticise them as a poetic whole is absurd. This, of course, not because of the linguistic distinction, nor on account of the different metrical methods pursued in each; but because the dominant mental mood of the second portion of the book entirely differs from that of the first, because the aspects of life therein viewed are seen with other eyes, and are interpreted for us in a manner absolutely alien to what we have grown accustomed to ere we leave the English section.

Thirty-eight poems make up Book I. Of these, about a third are addresses to friends and relatives. Most of these rhymed epistles are touched with dainty grace, though their inclusion is a mistake in so far that it inevitably leads to the inference that the author's poetic store must be meagre indeed if these are his choice gatherings therefrom. It would be unfair to assert that any one of them is too slight for publication. It would, on the other hand, be unjust to state that they have any poetic warrant for their insertion in a volume wherein we naturally expect to find only the rarest flowering of a writer's mind, selected with the most careful discrimination. The best (excepting one) of these dedicatory pieces are those addressed to the author's father and to his friend, Mr. H. F. Brown. The first affects us by its filial reverence and by its graceful diction; the second pleases even more by its dexterous simplicity. In neither, however, is there a single noteworthy line—a word or phrase so especially fortunate that the reader at once recognises the coinage as the product of that occult faculty which we call genius. The exception referred to is the poem in admirable blank verse inscribed to N. V. de G. S. Here Mr. Stevenson shows that he can make as well as merely speak in verse.

"And from the shore hear inland voices call"

is one of the two, at most three or four, haunting lines which remain when the volume is laid aside. To have uttered even one or two lines memorable for their quintessential poetry, their subtle, inexplicable magic, is something in these days, when an infinitude of jargon passes for poetry. But one or two really noteworthy lines do not make a poem, much less many poems, any more than one snowstorm makes a winter.

A curious uncertainty is apt to arise in the mind of the critic while his ear is tickled with the delight of some such line as that quoted above. If he be wary, he will at once seek to determine whether the haunting words do indeed, howsoever remotely, derive from some ancestral line of potent music; or whether, in truth, they inherit nothing of their magic, and are, like the first pieces of a new coinage, fresh from the mint of their author's mind. If, on the contrary, the critic allow himself to dally with doubt, he will be apt either to make a sweeping assertion of plagiarism or, more probably, to lose all sense of haunting reminiscence. And it so happened, during the perusal of *Underwoods*, that now and again I was aware of tantalising echoes of

familiar verse. The most noteworthy lines in the book seemed at once to call to mind and to hold up a veil of obscurity before certain words, phrases, or poems. The epistle to N. V. de G. S.—is not Landor at once suggested, even though no single line has its prototype in the poetry of the author of "The Hamadryad"? Even the already quoted admirable line,

"And from the shore hear inland voices call,"

strikes me as distinctly Landorian, in its concision even more than in its balanced rhythm. In the same poem, does not the opening line,

"The unfathomable sea, and time, and tears,"

contain an echo of Shelley's monumental lines on "Time"? In the rhymed address to Mr. Andrew Lang (very charming in its graceful ease and frank personalities) the reader encounters the line:

"Or of the old unhappy gods."

Probably he is at once perturbed by some vague feeling that he has previously read this line. Then the mental atmosphere grows clearer, and while he remembers that Wordsworth's imagination was touched not by the olden gods, but by a Highland reaper, who sang as she stood amid the corn, he realises who it was that wrought such subtle music out of the simple words "old" and "unhappy":

"For old, unhappy, far-off things."

On the opposite page, in an epistolary poem entitled "Et Tu in Arcadia Vixisti," there occurs this fine passage:

"And perilous lands thou sawest, sounding shores
And seas and forests drear, inland and dale
And mountain dark."

What lover of English poetry but would at once hear beneath these lines the deeper, the supreme music of one of Keats's most exquisite lines? Genius seems to have the power to usurp the prerogative of using certain words, so that any writers who adopt them thereafter run the risk of designation as singers of borrowed strains. It is unfortunate for the bard who does not possess genius, and it is, perhaps, illogical and foolish; but the fact remains. Shakspeare would seem to have a prescriptive right to the word "wrought," since he used it so wonderfully of Othello when "perplexed in the extreme." None can write of "perilous" lands or seas without apparent infringement of Keats's literary patent in that felicitous adjective; nor can the contemporary verse-writer, howsoever dexterously, insert an "immemorial" without tempting his critics to remind him of Tennysonian echoes.

It is significant that the finest lines in this volume are so markedly reminiscent. They emphasise—to one reader at any rate—the inference that the author of *Underwoods* is a man of fine poetic culture, but not a poet. I have a very strong admiration for Mr. Stevenson as a story-teller and an essayist. His prose is virile, flexible, delicate, and rhythmical. These qualities combine to form a style which has a vital charm not excelled by that of any living writer. So fine an artist in words can well afford to be content with prose—the prose of the richest and most potent language in the world. No one could read Mr. Stevenson's recently published collection of stories

(*The Merry Men*, &c.) without being struck by his variety and resource of language. Four such radically distinct yet thoroughly original tales as "The Merry Men," "Olalla," "Thrawn Janet," and "The Treasure of Franchard," could hardly have been written by any other English romancist of the day. They can be read again and again for the mere pleasure afforded by their felicitous words and phrases. The writer, one feels, is a master of his art.

But in *Underwoods* there is nothing of this. To begin with, the reader realises that he brings to the perusal something of the same pleasurable expectancy wherewith he would take up any new tale or essay by Mr. Stevenson. Former pleasure has produced an intellectual prejudice, as it were, whereby the author gains greater benefit than is his due. In the next place, there is in these poems little or nothing either of that originality or of that satisfying beauty which conjointly characterise Mr. Stevenson's best prose. They are the production of an accomplished writer and a cultivated student of literature; but from first to last they carry no emblem of the royalty of poetry. As verses by a prose writer they deserve high praise, and, for their author's sake, a glad welcome. As practically the first poetic fruits of a writer who has had long literary experience, they hold out no golden promise, nor have they in themselves that which will preserve them from the avarice of time.

When we turn from the English to the Scottish poems we have to reckon, as it were, with a new author. The delicate air, the dainty fancifulness, the pleasant personalities and individuality of the first half of *Underwoods* belong to another sphere than the racy and vigorous vitality of the second section. In his admirable preface Mr. Stevenson, in acknowledging that he is no purist in his choice of Scottish, and while referring to his preference for the "Lallan tongue," admits that Burns has often appeared to him as a foreigner. Yet it is Burns rather than Scott whom he follows linguistically as well as in metrical methods. He speaks in good "Lallan" indeed; yet he only occasionally rivals Scott's "brave metropolitan utterance." He has the secret of the force and point of good Scottish; but not, as in his prose, that of its magic pathos and extreme beauty. Yet how admirably delineative are these bucolics—despite the townsman's slip in the second line of the second stanza:

"Frae the high hills the curlew ca's;
The sheep gang baaing by the wa's;
Or whiles a clan o' roosty craws
Cangle together;
The wild bees seek the gairden raws,
Weariet wi' heather."

"Or in the gloamin' douce an' gray
The sweet-throat mavis tunes her lay;
The herd comes linkin' down the brae;
An' by degrees
The muckle siller mune maks way
Among the trees."

It is in irony and satire, however, that Mr. Stevenson most reveals his affinity to Burns. What caustic speech, what happy freedom of expression—where English would be blasphemous or vulgar—what keen incisiveness in poems like "The Blast," "The Counterblast Ironical," and "Embro' Hie Kirk"! The

first-named must surely have been inspired by the Ayrshire singer.

"It's raintin'. Weet's the gairden sod,
Weet the lang roads whaur gangrels plod—
A maist unceevil thing o' God
In mid July—
If ye'll just curse the sneckdraw, dod!
An' sae wull I!

"He's a braw place in Heev'n, ye ken,
An' lea's us puir, forjaskit men,
Clamjamfried in the but and ben
He ca's the earth—
A wee bit inconvenient den
No muckle worth."

In the second the irony is too keen and bitter for the poet who would fain have seen the Deil sneak into some unfrequented neuk in Paradise. It is the production of a Scottish Heine.

"It's strange that God should fash to frame
The yearth and lift sae hie,
An' clean forget to explain the same
To a gentleman like me.

"It's a different thing that I demand,
Tho' humble as can be—
A statement fair in my Maker's hand
To a gentleman like me:

"A clear account writ fair an' broad,
An' a plain apologie;
Or the devil a ceevil word to God
From a gentleman like me."

But none other than Burns, again, could have inspired the third, wherein we hear how, among other forethoughts for His chosen folk of the Free Kirk—

"The Lord Himsel' in former days
Waled out the proper tunes for praise
An' named the proper kind o' claes
For folk to preach in."

Mr. Stevenson certainly deserves to see the fulfilment of his modest wish—the wish to have his hour as a native maker, and be read by his "own countryfolk in our own dying language; an ambition, surely, rather of the heart than of the head, so restricted as it is in prospect of endurance, so parochial in bounds of space." Scottish, it is too true, no longer prevails as a national language, though it still lingers among the peasantry and poor folk of remote districts. No poets since Burns have surpassed Tannahill, Motherwell, and that little known poet of the poor—David Wingate. Mr. Stevenson does not excel any of these; but as a maker of true and delightful Scottish poetry he deserves to be read and remembered.

Yet when I come to say a last word of *Underwoods*, it is to refer again to the first portion thereof. "The House Beautiful" and "Skerryvore"—"for love of lovely words"—I recall with growing pleasure. But, to my mind, better than any of its more ambitious neighbours, better than any poem either of those in English or of those in Scots, is the little piece called "A Requiem." The haunting music of this unvarnished, this simplest and homeliest of dirges, is not for either praise or blame. Some will feel all its subtle charm; to others it will seem nothing else than the fragment of a song; yet I believe it will outlive—it assuredly deserves to outlive—the whole of *Underwoods*, and perhaps, so greedy is oblivion, the greater portion of the author's prose.

"Under the wide and starry sky,
Dig the grave and let me lie.
Glad did I live and gladly die,
And I laid me down with a will

"This be the verse you grava for me:
Here he lies where he longed to be;
Home is the sailor, home from sea,
And the hunter home from the hill."
WILLIAM SHARP.

TWO BOOKS ON FRENCH PRISONS.

In Russian and French Prisons. By Prince Kropotkine. (Ward & Downey.)

Prison Life in Siberia. By Fedor Dostoieffsky. Sole and Authorised Translation by H. Sutherland Edwards. (Maxwell.)

PRINCE KROPOTKINE'S work consists mainly of a reprint of the articles which appeared in the *Nineteenth Century* when the Lansdell-Kropotkine controversy was raging. It will be remembered that Dr. Lansdell was sent by the British and Foreign Bible Society to distribute the Scriptures among Russian criminals in Siberia, and that he published his experiences in two ponderous volumes which gave a very rose-coloured description of Russian and Siberian prisons. Mr. Lansdell had got hold of the official side of the question, and had seen the prisons and exiles in the company of official superintendents, who had taken care to have everything prepared for his reception. Prince Kropotkine shows how this is done:

"All serious explorers of our penal institutions are unanimous in saying that one learns nothing from a mere inspection of a prison. 'Each prison undergoes a magical change when a visitor is expected,' says one of them. 'I did not recognise the lock-up which I had visited *incognito*, when I went afterwards to the same lock-up in my official quality,' says another. 'The prisoners never unveil to an inspector the horrors committed in the prison, as they know that the inspector goes away and the jailer remains,' says a third explorer."

In another place, Prince Kropotkine quotes from the *Russkaya Ryeck* the experiences of a Russian officer who was imprisoned under Loris-Melikoff:

"On one occasion we were visited by an inspector of prisons. After casting a look down the scuttle, he asked us if our food was good? or was there anything of which we could complain? Not only did the inmates declare that they were completely satisfied, they even enumerated articles of diet which we had never so much as smelt. This sort of thing is only natural. If complaints were made, the inspector would lecture the governor a little and go away; while the prisoners who made them would remain behind and be paid for their temerity with the rod or the black-hole."

That Dr. Lansdell was the victim of the kind of deception only too frequently practised by Russians on foreign travellers who are suspected of "taking notes" is pretty certain. Indeed a Russian official of high standing told a friend of the present writer as much; but I am inclined to think that the picture which Prince Kropotkine presents of Russian prison-life, though by no means highly coloured or untruthful, is likely to give an exaggerated idea of the brutality of the Russian government. In perusing the interesting pages of Prince Kropotkine's book English readers should not leave out of sight that the conditions under which the ordinary middle-class Russian lives are far from sanitary, and that consequently the privations he would be

subjected to in prison, severe and terrible enough, no doubt, even to him, would not be so unbearable as they would be for the average Englishman. But the cruelty consists in incarcerating refined young ladies and students in such dens. The treatment the prisoners receive at the hands of the governors is, of course, brutal and cruel, sometimes revolting in the extreme. This is not surprising. The men singled out for these appointments are not picked from the best classes of Russian officialism. They are generally uneducated good-for-nothings, who have gone through the mill of official corruption, and are lost to every sense of humanity. The way these monsters rob, flog, and otherwise ill-treat their unfortunate victims—who, it should not be forgotten, have forfeited their right to citizenship, and are dead in the eyes of the law—is ably described by the prince, who contents himself with giving extracts from official reports, private diaries, newspaper articles, and sober facts only.

Prince Kropotkine's experience of French prisons does not appear to have been much better. The petty tyranny of the prison officials is such as to drive a large proportion of the prisoners mad; and the treatment of juvenile offenders, in particular, appears to be criminal in its brutality. That the prisons of republican France should not be superior to those of autocratic Russia will not, perhaps, surprise English readers; but the conclusion at which the prince arrives will certainly set them thinking. He maintains that all forms of incarceration that are based on the principle of subjecting the will and character of the individual to a uniform mechanical system of repression tend to deprave the criminal and prevent him from becoming a useful member of society on his release.

Not content with this statement, however, Prince Kropotkine proceeds to lay down that, as all crime is a disease, and frequently but the result of an artificial state of society, imprisonment should no longer be regarded as a punishment, but as a sort of social hospital, in which the characters of the patients are to be educated into self-reliance and morality. The attitude assumed by Prince Kropotkine is thoroughly logical, and one, moreover, which has been adopted in theory at least by our own government. Indeed, if statistics prove anything, they certainly prove that our enlightened prison policy has resulted in a remarkable decrease of crime, notwithstanding the very great increase in our population; and for this reason I feel rather inclined to quarrel with Prince Kropotkine for his somewhat unjust treatment of our prison system, which he states is much inferior to that of France.

Whatever opinions readers may have on this very vexed subject, they will all agree that the prince has given a most vivid picture of Russian prison life. But the student of the Siberian convict system should read also the reminiscences of another victim of Russian autocracy, Dostoieffsky, now dead, whose *Notes from the Dead House* has been translated by Mr. Sutherland Edwards under the title of *Prison Life in Siberia*. Nothing can be more powerful in style and more intensely realistic than these ghastly experiences, told in simple language, and put into the mouth

of a repentant murderer. I take this opportunity of complimenting Mr. Sutherland Edwards on the elegant and faithful rendering by which one of the masterpieces of Russian literature has been reproduced to English readers.

E. A. BRAYLEY HODGETTS.

A Modern Zoroastrian. By Samuel Laing. (White.)

"If I am good for anything," says Mr. Laing, in the preface to this volume, "it is for a certain faculty of lucid condensation." Readers of his former volume on *Modern Science and Modern Thought* will probably not be indisposed to concede him a fair measure of this "certain faculty" without stopping to enquire how far "condensation" can, in the nature of things, be properly qualified by "lucidity." It may easily happen that inordinate and unscrupulous "condensation" may have its natural issue in "density" rather than in "lucidity"; and in my opinion this is precisely the effect of his present volume. Here Mr. Laing condenses a goodly number of the facts and processes of the material and moral universe, until he obtains as their outcome and expression a single general law of duality or mutually antagonistic principles. He terms this, "the all-pervading principle of polarity which manifests itself everywhere as the fundamental condition of the material and spiritual universe." Now with Mr. Laing's collection of instances and illustrations which seem to manifest these phenomena in the material universe I am not disposed to find fault. He has collected them with an industry and zeal not always attended with discrimination; but a little oversight of that kind might be forgiven a man bent, at all hazards, to prove a favourite theory. What I complain of is the inability to distinguish between a natural process or phenomenon and its verbal relation to us. Like many another scientist, Mr. Laing suffers himself to be borne along on the wings of a definition or mere verbal symbolism, not reflecting how imperfectly it may connote the real facts of the case. With his extended studies of most departments of science, Mr. Laing ought to be aware not only that many of the phenomena comprehended for convenience under the term polarity are as yet very imperfectly investigated, but that even when their determinations are most clearly expressed we are not in a position as yet to lay down any general truth respecting them. To take a single instance—the centrifugal and centripetal forces in the law of gravitation: it would surely be a hasty inference which would bring these under a supposed general law of polarity, thereby ascribing them to dual principles, instead of assuming them to be diverse phases of one and the same principle; and the same observation may be extended *mutatis mutandis* to almost every other illustration employed by him. In truth, Mr. Laing seems to have forgotten that the value of such a verbal symbol as polarity is purely hypothetical. Like the law of gravitation, evolution, and similar terms, it is used as a convenient class designation of certain similar phenomena, not as a definitive determination of truth. Much more must be learnt concerning its operations, with its determining causes, conditions, and

limits, before it can be fairly described as it is by Mr. Laing as the fundamental condition of the material and spiritual universe.

But the consideration of polarity as a primary law of the physical world is only a part of Mr. Laing's object. To quote his own words (p. 89): "It remains to show how the fundamental law of polarity affects the more complex relations of life and of its various combinations." Whereupon he proceeds to trace what he conceives to be its action in any department of human knowledge wherein he finds the least semblance of diverse or mutually conflicting principles, ending in its application to metaphysics and religions. I need hardly say that its crowning merit is claimed to be its complete solution of the mystery of evil. He says:

"The existence of evil in the world is as palpable a fact as the existence of good. There are many things which to our human perceptions appear to be base, cruel, foul, and ugly, just as clearly as other things appear to be noble, merciful, pure, and beautiful. Whence come they? If the existence of good proves a good Creator, how can we escape the inference that the existence of evil proves an evil one?" (p. 171).

But though Mr. Laing states thus explicitly this Zoroastrian conclusion of his speculations, I cannot perceive that he makes the use of it which a firm persuasion in its universal applicability would lead one to expect. In order to make his theory homogeneous, in order to prove that polarity in physics is identical with Zoroastrianism in metaphysics and theology, he ought to admit not only that this duality is the general law of the universe, but that it is conditioned and set in motion by antagonistic agencies. Is Mr. Laing prepared to contend that positive and negative electricity, the centrifugal and centripetal forces in gravitation, must equally with heredity and variation in species, predestination and free-will, beauty and ugliness, truth and falsehood, be ascribed to mutually conflicting powers? With this enlargement of his scope required by philosophical consistency, it would be interesting to learn, as to "the polarity of the sexes," which he would place under the dominion of Ormuzd, and which under the rule of Ahriman.

In short, Mr. Laing has been led away by the seductive influences of a specious definition and superficial analogy to put forth a theory of the universe which he is not only wholly unable to prove, but which runs counter to much of his own speculation. At present the tendencies of scientific enquiry—the conservation of energy, the capacity of each force for assuming the form of another, such phenomena as isomerism, &c.—all point in the direction of the ultimate unity of science, not of a Zoroastrian duality; and there are many phenomena in the moral and spiritual world which tend in a similar direction of an all-comprehensive one-ness. It is astonishing to me to find that Mr. Laing has failed to grasp other and, in my opinion, more philosophical reconciliations of the various antagonisms which he enumerates. *E.g.*, can he imagine the free play of any natural law or process in an infinite variety of circumstances which would not yield diverse results: nay, in which the results might not appear from a human standpoint to segregate

themselves into two kinds like the behaviour of iron filings brought into contact with the opposite poles of a magnet? I should be sorry to be thought capable of treating an important subject with undue levity, but I cannot say that Mr. Laing advances a single argument in favour of a dual and mutually antagonistic rule of the universe more cogent than the undoubted fact that the two ends of a walking-stick, in whatever position it be held, point in diametrically opposite directions.

JOHN OWEN.

NEW NOVELS.

Major and Minor. By W. E. Norris. In 3 vols. (Bentley.)

Caswell: a Paradox. In 2 vols. (Fisher Unwin.)

Old Blazer's Hero. By D. Christie Murray. (Chatto & Windus.)

The Jacksons of Jackgate: a Cumberland Story. By Elma. (Remington.)

The Mesmerist's Secret. By Daniel Dormer. (Maxwell.)

The Park Lane Mystery: a Story of Love and Magic. By Joseph Hatton. (Bristol: Arrowsmith.)

What She Cost Him. By R. Langstaff de Havilland. (The London Literary Society.)

Mr. W. E. NORRIS has to our mind given the world, in *Major and Minor*, the best novel he has as yet produced. There is all the cleverness of character-drawing which he long ago accustomed us to expect from him. We still recognise the almost photographic minuteness of detail in his descriptions—especially those of scenery. There is no falling off in the supply of shrewd apothegms, or of passages in which, under the guise of quaint humour, food is afforded for serious reflection; and, added to all this, the story is a pleasant one. There is an absence of the painful element that struck one, for instance, in *Mademoiselle Mersao*; and one can read from title-page to finis without a suspicion of the heart-ache which must sometimes attack even the most hardened of novel-readers while going through a work by an acknowledged master of the story-telling art. Because, although Gilbert's treachery is sufficiently revolting, one feels all along that right must prevail in the long run; and when the catastrophe comes no one will be found to aver that the author has meted out too severe justice to the culprit. We think, by-the-by, that the one inartistic touch occurs in the presentment of "Segrave Minor." There is nothing about the man, as he is at first placed before us, to induce a suspicion that he will turn out so unutterably mean a hound; and one cannot easily believe that an English gentleman would so quickly sink to such depths of turpitude. However, it is perhaps a true study of the moral degradation which might befall a thoroughly selfish man, totally devoid of principle, and possessed by the sole idea of self-advancement. Brian, the disinherited brother, is a very lovable character; one of those dreamy, inconsequent men of whom we must all have known instances, and who engage all our affection and respect, even while we laugh gently at

their blunders—much in the same spirit that we laugh over the mishaps of that grandest of gentlemen, Don Quixote. It must be admitted, however, that "Segrave Major" was, despite his artistic temperament and blunt chivalrous honesty, very dull of comprehension, or how could he have failed to see that the heroine was in love with him from the first? Again, there seems to us something unreal in his depreciatory estimate of himself. Supposing that he *was* for a time "an impecunious composer of music," it is in the last degree improbable that the eldest son of one of the oldest West Country houses would seriously think of himself in that light only. It occurs to one that he was at least the equal of a young lady, however rich and beautiful, who was undeniably of *roturier* origin; while it is by no means improbable that he was of a great deal better blood than Lord Stapleford. Beatrice Huntley is an admirable and original study: the beautiful, wilful heiress, devoured by her unsatisfied longings after some higher phase of existence, yet, at the same time, frankly enjoying the whirl of fashionable society, as an honest girl in her circumstances, audaciously taking her own way to bring about what she held to be a good and desirable state of things, and too proud to defend herself even when the whole happiness of her own life seemed to depend upon her defence. We are not going to defend Miss Huntley's plan of campaign. It was distinctly of the guerilla style of warfare; and, for aught she knew, it might have proved most disastrous to the very person whom she desired to benefit, pretty Kitty Greenwood. Suppose, for an instant, that the latter had been really as sincerely in love with her unworthy *fiancé* as she believed herself to be. The probable result of Beatrice's scheme would have been to break the poor child's heart. Playing at Providence, with however good intentions, is rather a risky game. But there is not one of the *dramatis personæ* who is not excellently well studied. The generality of them are sympathetic, and all of them are living human beings. The two old cronies, Sir Brian and Admiral Greenwood, are extremely natural: the choleric old K.C.B., with his perpetual twinges of remorse and his warm heart; and the hearty old sailor who, when greatly moved, had sudden and involuntary recourse to a style of language formerly much in vogue in the Royal Navy. Equally good is Mr. Monckton, the so-called "ritualistic" priest—as if any form of worship were possible without ritual!—and he is the grand, manly fellow, to boot, who one would have expected to evangelise the wild fisher-folk of Kingscliff. Not the least impressive out of many striking scenes is that in which he appears as *deus ex machina* on Waterloo Bridge at Brian's most critical moment; and, for a piece of genuine comedy, commend us to his interview with Master Daniel Puttick. It must not be supposed, however, that the novel is one exclusively of character, although we have dwelt somewhat at length upon the personages. There is plenty of action; and some of the scenes—notably Sir Brian's death at the picnic and the parting between the hero and heroine in Park Lane—are eminently dramatic. The whole of the young musician's career in London, again, is

pourtrayed with the most delicate, though firm, touch, and must appeal to many a one who has fought the battle of artistic poverty. In fine, we consider *Major and Minor* to be distinctly one of the leading novels of the year.

The anonymous novel *Caswell*, which Mr. Fisher Unwin has just published, is in many respects a remarkable book, and one which will appeal to more than one class of thoughtful readers. It will be studied with interest by those who busy themselves with the various forms of religious development which are a special phase of the present age. It presents food for reflection both to the psychological student and to those who more particularly affect general social philosophy; while it is sufficiently exciting in semi-romantic detail to arrest the attention of the lovers of sensation novels. Probably these last-named *purs et simples* will find a good many passages which will appear rather heavy reading, but then it is so easy to skip; and the life-histories of the hero, of Sampson, and of Delilah are so engrossing that such readers will find the unravelling of them worth a little extra trouble. To say that the story is a painful one is to almost understate the case; to deny that it is powerful would be as false as absurd. But we must take exception to the sub-title, for there is no "paradox" whatever about the personality of John Caswell. It is simply a case, such as must have been known to most of us who have lived in the world and studied our fellow men, of duality of existence, both moral and physical. It is common enough. It is that of a man, keenly sensitive, keenly sensuous, with ardent aspirations towards the highest mental and spiritual life, who, in spite of his more perfect sensibilities—perhaps because of them—is at perpetual warfare with himself. Even when barely free from the glamour of those influences which incline him to the higher standards of thought and existence, he will suddenly find himself impelled by the wild beast within him to wild debauchery, of which a more prosaic man can form no conception, any more than he can of the agonising remorse and repentance that will inevitably follow. It was quite right to represent the hero as ending as he does—a Catholic priest; to such natures the claims of strong belief are the only possible safeguard. Sampson is a terrible study; a portrait of a man ruined by his self-righteous bigotry and the influence of the ghastly Calvinistic dogmas which one would fain hope are gradually losing the credence of the people. Of the utter pitifulness of the result, poor, gentle old Mrs. Rayner furnishes a striking example. We must confess that Delilah seems to us rather a failure. She was really nothing more than a beautiful, vulgar girl, who deliberately fell to sin for the gratification of her own selfish longings for luxury, so that there is a lack of the sympathetic element. Still her death is terrible enough, in all conscience. The story is not without a lighter element. The satire of the author's description of the Linford bazaar is as delicate as it is witty; but, on the whole, the effect of the novel is rather "to purge the soul by pity and terror." At the same time we strongly advise all who can appreciate a thoughtful tale of modern life to read it.

As good a story as we have read for a long time is *Old Blazer's Hero*. One is always certain of something above the ordinary level when taking up a novel by Mr. Christie Murray; and this is, to our thinking, up to his best mark. One cannot help seeing that, although the book is in no sense that most objectionable of all things in fiction a "novel with a purpose," the author had one very definite idea in his head—viz., the intolerable evil arising from excess in drink. But the moral of Hackett and Blane's careers only suggests itself—Mr. Christie Murray is too good an artist, and too much a man of the world, to cram it down his readers' throats. "Old Blazer," we may state, was a mine rather addicted, it would seem, to catching fire; but on the occasion when Ned worthily gained his "to-name" it varied the monotony by getting flooded, and the whole episode is positively splendid. It would be difficult to conceive of a more dramatic scene than that where Blane saves Shadrach in the air-shaft. Except it might be the half-suggested scene on the ice when he "snatched his own salvation." The hero is a fine fellow. Even at the time of his lowest degradation one cannot help feeling more pity than blame for him. It is so terribly true what is said at p. 212:

"He was doggedly bent on going to the devil with all possible expedition—a condition of mind which is only possible for men of originally good quality. He made no excuses, offered to himself no palliations. The fiend had clapped him by the shoulder, and he, looking him in the face and recognising his ugliness, had elected to go with him."

For Mary we cannot pretend to care greatly. We think she would have been a trial to any man, and Ned deserved a better fate—even if he did not desire one. But, in schoolboy parlance, it is "a rattling good book."

Clever as it is, and interesting as is the story, one cannot help feeling a sense of disappointment in *The Jacksons of Jackgate*, because it ends all wrong, almost as mad-denyingly as *St. Ronan's Well*, and we do not know that we could put it much stronger. Eva had no business to be left in her unhappy plight, and Hugh had no more right to turn missionary than we have. Such a man as he is shown to have been would surely have made certain of the actual facts before giving up the pursuit of the one woman he loved. It strikes one that the Cumbrian code of morality was something of the strictest. Supposing that the poor girl's mother committed a fraud, how did that affect her character? Because the unhappy woman had never been brought to trial, and only some few intimates—who might just as well have held their cackling tongues—knew anything about the matter. The story is a good one, showing some power of character-drawing, as in the case of the party at Jackgate, and considerable acquaintance with both general literature and folklore. But why did Andrew Ling misquote the old saw? It properly runs, "When the gorse is out of bloom, kissing is out of fashion." The broom is out of bloom during the greater part of the year.

Every persistent reader of contemporary fiction must have noticed the singular fact that novels seem to go in cycles, so to speak. We have had the shocking-accident novel—it

was generally on a railway—the scandal-in-high-life novel, the novel with a purpose, and others too numerous to mention. It was very curious to notice that when one of either kind appeared it was sure to be followed by half-a-dozen of the same description. Now we seem to have got into the mystical groove, and *The Memorist's Secret* cannot be said to be one of the best examples of its class. To begin with, the story is so inartistically constructed that the real gist of it requires to be revealed near the end by means of a delirious woman's raving. Then, even granting the possibility of such supernatural powers as are attributed to the villain of the piece, there seems no adequate motive for their employment; but the whole thing is unreal, and the people have no vitality. The plot is briefly this: a certain transpontine villain, Eustache Navette, marries, and, for no apparent reason, deserts, a beautiful English woman, Hester, who assumes another name, and sets up a school in Paris. He also murders the young Marquis de Mensonge, and is allowed to assume his victim's personality and estates without let or hindrance. Having a considerable "odious" power, he exercises it to keep an uninteresting young English lady called Edmie—why cannot novelists give their heroines rational Christian names?—and gets her to his castle; but he shoots himself by accident, and she is rescued. That sums up the main plot. Why, except for the purposes of rather inane sensationalism, should all the servants at a continental château have been Hindoos? And did it not occur to the author that in saddling Navette with the name of De Mensonge his feeble joke recoils on himself? Because, of course, the name of the true marquis must have been the same.

Yet another bogey story; and we cannot congratulate Mr. Joseph Hatton upon it. He can do, and has done, far better work than this. The idea is that a certain flagitious clerk contrives to project his own spirit into the dead body of his wealthy employer, and makes rather a good thing of it from a pecuniary point of view. However, finding that the experiment is, on the whole, unsatisfactory, he returns to his proper carcass, marries the right girl, and lives happily ever after. Had we been Hannah, we would have been content to lead apes rather than marry such a creature!

It is well-nigh impossible to understand what good end could be supposed to be answered by the publication of Mr. de Haviland's novelette. It is not specially clever; and the most rabid lover of sensationalism would attach to it no other name than that of repulsive. The moral seems to be that young barristers who are addicted to giving way to tears on the Thames Embankment should not pick up French women of doubtful antecedents, and marry them out of hand, else the consequences are likely to be disastrous. There is plenty of death, destruction, and shame in the book, and it may suit some tastes. It is rather too highly spiced for us. We may suggest to the author that he certainly should not say "Lady Pearl Penny-cuick," inasmuch as Sir Joseph's wife was a commoner's daughter; but, perhaps he meant "Pearl, Lady Penny-cuick."

B. MONTGOMERIE RANKING.

SOME HISTORICAL BOOKS.

"The Story of the Nations."—*Hungary*. By Arminius Vambéry, with the collaboration of Louis Heilprin.—*The Saracens*. By Arthur Gilman. (Fisher Unwin.) Prof. Vambéry is probably to Englishmen generally the best known of living Hungarians, and his name is sure to attract many readers to the present volume. The book does not profess to be founded on original research; in fact the author says in his preface that he makes no claim to any special knowledge of the history of his country beyond what is ordinarily possessed by educated Hungarians. The narrative, however, is well proportioned; and the style, though not brilliant, is lucid and unaffected. The history is brought down to the inauguration of the new constitution of Austro-Hungary in 1868. With regard to the political controversies of recent times, Prof. Vambéry adopts a neutral tone, which, perhaps, will satisfy few of his countrymen, but which English readers will probably not regard as a disadvantage. Mr. Gilman's volume on *The Saracens* is decidedly one of the best of the series. The author does not appear to have any knowledge of Arabic; but his work shows wide and careful study of the modern writers who have treated of the subject, and also of such of the original authorities as are accessible in translations. Perhaps his style is a little too ambitious; but it is spirited and attractive, and full justice is done to the picturesque aspect of the story. We have observed some inaccuracies of detail. The emperor Nicephorus, in his famous letter to Harūn, certainly did not describe himself as "King of the Greeks," nor would any Arabic historian represent him as doing so, whatever the translators may say. The derivation of "tariff" from the name of the Moorish general Tarif, implied on p. 326, is a vulgar error, which a very little Arabic would have enabled Mr. Gilman to avoid. The spelling "kalif" is on all grounds unjustifiable: if *khalifa* was thought too pedantic, it would have been better to keep to the traditional "caliph." It is possible that Arabic scholars might be able to discover errors of a more serious character than these; but at all events Mr. Gilman has produced the most readable and complete account of Saracen history that has hitherto appeared in a volume of the same size. The appendix includes an excellent bibliography, a table of the order of the suras of the Koran according to the scheme of Nöldeke, and a carefully compiled chronological table. In both volumes the illustrations are extremely unequal, some of them being very bad indeed. The maps are roughly executed, but those in Mr. Gilman's volume deserve praise for the clearness with which the essential points are brought out.

The Black Cabinet. By Count d'Herisson. Translated by C. H. F. Blackith. (Longmans.) We confess that the title of this book, savouring so strongly of the shilling dreadful, did not attract us, and a perusal of its 344 pages has not done much to efface this first impression. By far the most interesting portion of it (chaps. x. to xv.) has appeared before in a London newspaper. Count d'Herisson states that these six chapters were "published in an incomplete form in 1817." Not having access to the papers in which these letters of the English doctor from St. Helena appeared, we are unable to judge; but the book before us is made up rather of other books than of original documents. Having said this, we do not deny that its perusal will interest those who have a taste for historical gossip. The translator, too, has done his work well. Napoleon banished morality so completely to the planet Saturn that he will always remain an object of interest to psychologists, even when historians have nothing further to say about

him. It is curious to notice his anxiety to clear his own character not only from the murder of the Duc d'Enghien, but from the charge of giving opium to his plague-stricken soldiers at Jaffa, to save them from falling into the hands of the Turks, who would have mutilated them. Napoleon informed this doctor that he had only seven plague-stricken men at Jaffa, and that he delayed the departure of his rearguard until they were dead (p. 241). He represents himself as induced by Prince Bénévento (Talleyrand) to sign the order to arrest the Duc d'Enghien, and defends his conduct as a state necessity. He laid great stress on the fact that he never committed "useless crimes." On one occasion the Emperors of Austria and France were conversing together about the revolution of '93. "It came from far," said Napoleon; "yet it would have been easy to prevent its great catastrophe if my uncle's character had not been so essentially weak." It took the Emperor Francis some time to perceive that he was alluding to Louis XVI.—his wife's uncle (p. 230). When Napoleon felt death approaching, he wished to die with the rites of the Church. Marshal Bertrand, who had not threaded all the intricacies of his master's mind, was for stopping the "mummery." On hearing this, Napoleon said to Montholon—"What does that foolish Bertrand want? Let him leave me alone. If he does not believe, what is it to him that others have faith? If a mother were praying for her son, would he go and disturb her? After all, who knows the ties that unite this earth to the Divinity?" The translator believes that the well-known letters from St. Helena were written not by Dr. O'Meara, but by Mr. John Stoke, an English physician.

The Icelandic Discoveries of America; or, Honour to whom Honour is due. By Marie A. Brown. (Trübner.) This book has for its end the establishment of the thesis that Columbus stole his knowledge of a new world from Iceland; that the knowledge of this new world, originally discovered by Icelanders, had been kept secret by Rome; that Columbus should be made a saint, he being a liar, a slave-dealer, and a thief; that the truthful North is the natural antagonist of the lying South, and that we all suffer by neglect of Northern history and literature. An irrational hatred of Catholic Christianity, a belief in the historical authority of a certain Dr. Felix Oswald, and a curiously un-historic treatment of the subject of the discovery of Wineland, also run through the little volume. No historian, competent to judge the facts, now doubts the discovery of the North-American continent by Northmen from Iceland at the end of the tenth century. A MS. of Adam of Bremen even tells us that Harold (Hard-rede) set out on a voyage thither:

"Temptavit hoc nuper experientissimus Nordmannorum princeps Haraldus, qui latitudinem septentrionalis oceani percurtatus nauibus tandem caligantibus ante ora deficientis mundi finibus inmane abyssi baratrum retroactis uestigiis pene uix saluus euasit. Istud etiam dixit quidam nobilis Carthusiensis præsentium scriptura [scriptori] et est uerum. Sed iste locus [supp. a Thylensibus] in eorum idiomate Gimmende-grp [Ginnungagap] [supp. nominatus est] Miles uero capitaneus regis dicebatur Olyden [Hallden] Helgesson [Helgasson] nauta uero Gunar oaswen [rá-sweinn].—[Hamb. fol. 22. The names are restored by Dr. Vigfusson.]

What is not proved is the connexion between Columbus and any written account of these discoveries. Greenland had long been left to itself when he went North; and though the oral traditions of Wineland can never have been lost, they must have been as vague as the lapse of centuries could make them, for there is no proof whatever of the large circulation of either the Western or Northern written versions of Eric's Saga in Iceland in the fifteenth century. This little

book is no doubt well-meant, but it is superfluous; and it is one of those books that only tend to stop the way for a better one, and to discredit the cause it advances. Why should we necessarily try to degrade the Corsican-born Columbus because we wish we exalt the Icelander Leif Ericsson? Honour is due to both; but it is the honour of copying their perseverance, courage, and patience, not of screaming one's self hoarse over their anniversaries.

The Story of Iceland. By Letitia M. Maccoll. (Rivingtons.) This agreeable little book consists chiefly of well-selected extracts from the sagas and the Icelandic poetry. The poems are usually quoted in the prose versions of the *Corpus Poeticum Boreale*; the passages of the sagas are taken from the translations of Dasent, Magnússon, and others. There is not much in the volume that is original, even in the limited sense of being in the author's own words; but what there is is pleasantly written, though the language is now and then more childish than it need have been for readers capable of understanding the extracts. Altogether, the book gives a very interesting picture of the life and manners of the Icelanders both in ancient and modern days.

NOTES AND NEWS.

MR. SWINBURNE has almost finished a new drama, to be called *Lochrine*. The volume of selections from his poems recently published has already reached a second edition; but no alterations have been made.

MESSRS. RICHARD BENTLEY & SON will publish this month the Autobiography and Reminiscences of Mr. W. P. Frith, R.A., in two volumes, with portraits. It contains anecdotes of the Duke of Wellington, Lord Palmerston, Bishop Wilberforce, Sir G. Cornwall Lewis, as well as of many literary and artistic personages of the Victorian era.

The Life of Ralph Waldo Emerson, by Mr. J. E. Cabot, who was deputed by Emerson to be his literary executor, will be published next week by Messrs. Macmillan & Co., in two volumes.

MESSRS. CASSELL & COMPANY will publish early in October *Abbeys and Churches of England and Wales*, edited by Prof. T. G. Bonney, containing contributions by Harold Lewis, William Senior, J. Penderel Brodhurst, C. C. Hodges, the Rev. G. F. Browne, Thomas Archer, Godfrey Werdsworth Turner, Edwin Poole, the Rev. J. J. Raven, J. J. Housden, and the Rev. T. Gregory Smith. The book will be fully illustrated.

OF Mr. F. Marion Crawford's two novels, which have lately been appearing in serial form, *The Crucifix of Marzio* will be issued immediately by Messrs. Macmillan & Co. considerably augmented. *With the Immortals* will not be republished in book form until the end of the year. Mr. Crawford contemplates adding several new chapters.

MESSRS. W. H. ALLEN & Co. will publish, early in October, the new work by Prince Napoleon, entitled *Napoleon and his Detractors*, translated from the French by Raphael L. de Beaufort.

THE Queen has been pleased to accept the dedication of Mr. Alfred Austin's new poem, *Prince Lucifer*, which will be ready on October 7.

PROF. HENRY SIDGWICK has been at work on a revised edition of his *Principles of Political Economy*, which will be published next week by Messrs. Macmillan & Co.

MESSRS. SONNENSCHN & Co. announce a new book which throws a curious light upon

the perpetual pension question, as well as upon the politics, manners, and morals of Charles II. and his court. This is *Louise de Keroualle*, Duchess of Portsmouth in the Court of Charles II.; or, How the Duke of Richmond gained his Pension. It is translated from a work by M. Fornéron, which was compiled from the archives of the French Foreign Office, and contains some curious items of secret history. Mrs. G. M. Crawford, the well-known Paris correspondent, has written the preface.

Haarlem the Birthplace of Printing, not Mentz, is the title of a work by J. H. Hessels announced for immediate publication by Mr. Elliot Stock.

MR. STANILAND WAKE has written a book on totemism, serpent-worship, primitive marriage, and similar esoteric subjects, which will be published by Mr. Redway under the title of *Serpent-Worship, and other Essays*.

THE author of "Olrig Grange" has just finished a volume of short poems, being sermons in verse, which Messrs. James MacLehose & Sons, publishers to the University of Glasgow, will issue immediately under the title of *Thoughts and Fancies for Sunday Evenings*.

Scenes from the "George Eliot" Country, by Stephen Parkinson, is the title of a volume now in the press which deals more especially with the early life of George Eliot, and identifies characters in her novels with persons of whom she had knowledge in actual life, and places and scenery with portions of the Midland counties amid which she spent her youth and young-womanhood. The publisher is Mr. Jackson, of Leeds, and the book will be illustrated.

THE Hon. Roden Noel contributes a poem, entitled "The Life-Boat," to the forthcoming number of *The Scottish Church*. The same number will also contain "A Chaplain's Reminiscences," and an article on the poetry of Robert Ferguson.

"WHEN A MAN'S SINGLE" is the title of a new story by "Gavin Ogilvy," which is to be commenced in an early number of the *British Weekly*. The papers on "Books which have influenced me," by Messrs. Ruskin, B. L. Stevenson, Rider Haggard, Archdeacon Farrar and others, will be republished next week as a *British Weekly* "extra."

MESSRS. ISBISTER announce the second volume of Dean Plumptre's *Dante*, completing the work; *Everyday Christian Life*, by Archdeacon Farrar; a cheap edition of *John Bunyan: his Life, Times, and Work*, by the Rev. Dr. John Brown; *The Self-Revelation of Jesus Christ*, with an Examination of some Naturalistic Hypotheses, by Dr. John Kennedy; *Natural History Object Lessons*, by George Ricks; and the following volumes of a new series of prize and gift books: *Leaders Upward and Onward*, *Brief Biographies of Noble Workers*, edited by Henry C. Ewart, with eighty illustrations; *Round the Globe, through Greater Britain*, edited by W. C. Proctor, with eighty illustrations; *The Romance of Animal Life*, by the Rev. J. G. Wood, with eighty illustrations; *Britta, a Story of Life in the Shetland Isles*, by George Temple, with illustrations by Lockhart Boyle.

MR. DAVID NUTT's forthcoming publications include an entirely re-written edition of the Rev. C. W. King's *The Gnostics and Their Remains*, ancient and mediæval, with extensive additions both of text and illustrations, full indices, and a bibliographical appendix by Joseph Jacobs; Prof. Terrien de Lacouperie's *Beginnings of Writing and Ideology of Language*; an Elementary Grammar of the German Language, for the use of Wellington College; an edition of *Deutsche Liebe, aus den Papieren*

eines Fremdlings, by Prof. Max Müller, with English notes; a new and thoroughly revised edition of Bremiker's *Logarithms*, with a supplementary table of natural functions and circular measures of angles to each minute of arc, by Prof. A. Lodge; Mr. W. H. Hutton's *Simon of Montfort and his Cause* (1253-65); and Mr. T. Archer's *The Crusade of Richard I.*, in the "English History from Contemporary Writers" series.

DR. FURNIVALL's edition of the first part of Robert of Brunne's *Chronicle*, A.D. 1338, is just out, in two volumes, in the "Rolls Series of Chronicles and Memorials." This *Chronicle* is mainly an Englishing of Wace's historical romance, with a few additions from Bede, Geoffrey of Monmouth, &c. The second part of the *Chronicle* was long ago printed by Hearne; and its original, by Pierre de Langtoft, was edited for the "Rolls Series" by the late Thomas Wright.

THE Rev. W. Quick has just reprinted 500 copies of the *Positions* (a treatise on the education of the mind and body), by Richard Mulcaster, high-master of St. Paul's School. The book may be obtained from the editor, Earlswood Cottage, Redhill.

MR. W. J. ROLFE, of Boston, U.S.A., contemplates a volume of annotated selections from Shelley in his series of "Modern English Poets." Mr. Rolfe's new volume of Milton's *Minor Poems*, with notes and introduction, is just out. It will probably be followed by like editions of *Paradise Lost* and *Paradise Regained*.

PROF. BRANDL asks Dr. Furnivall to notify to English Shelley-students that the first homage paid to Shelley by any German author of renown is that by K. Gutzkow, in his essays entitled *Götter, Helden, und Don Quixote*, 1838. This work begins with a brilliant panegyric of Shelley, pp. 3-19.

THE Rev. T. P. Wadley notes from the Record Office "41 Eliz., Sept. 1, 1599: licence to Robert Burdett esq. to alienate a messuage in Packwood, co. Warwick, called Shaxpere's house."

ANNOUNCEMENTS OF THE CLAR- ENDON PRESS.

Owen; also, by the same author, "Lectures on Latin Grammar"; "Selections from Latin and Greek Poetry for School Repetition, &c.," edited by Mr. E. H. C. Smith; "First Exercises in Latin Prose," by Mr. E. D. Mansfield; "Elements of Greek and Latin Comparative Grammar," by Mr. T. C. Snow; "Easy Selections from Plato," edited by Mr. Arthur Sidgwick; "Cicero Pro Cluentio," edited by the Rev. W. Yorke Fausset; "Livy, Books XXXI. to XXXIII.," edited by Mr.

George Nutt; "Livy, Book XXXIV.," edited by Mr. A. K. Cook; "Cicero's Verrine Orations: De Supplicis," edited by Mr. A. C. Clark; "An Easy Abridgment of Caesar's De Bello Civili," with Notes, &c., by Mr. Herbert Awdry; "A Latin-English Dictionary," by the Rev. C. G. Gepp and Mr. A. E. Haigh; "Rivington's Annotated Greek Texts: Xenophon," with Introduction, Notes, Vocabulary, &c.; "A History of Greece," for the use of middle forms, by Mr. C. W. C. Oman; "A History of England," for the use of middle forms, Vol. II. from the death of Henry VII. to the present time, by Prof. Mackay, of University College, Liverpool; "A Skeleton Outline of the History of England," for beginners, by Mr. A. H. Dyke Acland and Prof. Cyril Ransome, of the Yorkshire College, Leeds; "Shakspeare's The Merchant of Venice," edited by the Rev. H. C. Beeching; "Shakspeare's King Richard III.," edited by the Rev. W. H. Payne Smith; "Scott's Rokeby," edited by Mr. B. W. Taylor; and "Milton's Samson Agonistes," edited by Mr. C. S. Jerram, forming new volumes of the "English School Classics"; "A History of the Early Empire of Rome," for lower and middle forms, by the Rev. W. D. Fenning; "An Elementary Treatise on Chemistry," by Mr. W. A. Shenstone; "A Text-Book on Heat," by Mr. L. Cumming; "An Elementary Text-Book on Heat," by Mr. H. G. Madan; "Elements of Dynamics (Kinetics and Statics)," by the Rev. J. L. Robinson; "The Harpur Euclid," by Mr. E. M. Langley and Mr. W. S. Phillips; "The Elements of Plane and Solid Mensuration," by Mr. F. G. Brabant; "Geometrical Drawing," for schools, by Mr. W. N. Wilson; "A Key to Mr. J. Hamblin Smith's Exercises in Arithmetic"; "Questions on General Information," by Mr. T. O. Sturges-Jones; "Elementary Chapters in Comparative Philology," by the Rev. G. W. Wade; "A Primer of Elementary Law," by Mr. C. E. Jolliffe; "A French Grammar," by M. Eugène Pellissier, consisting of Accidence and Syntax, with Exercises; "Scenes from Corneille's Le Cid," edited by M. Eugène Pellissier, forming the first of a series of "Scenes from French Plays"; "A Class-Book of French Translation, Composition, and Grammar," by M. Eugène Pellissier; "An Introduction to French Literature and French Prose Composition," for advanced classes, by Mr. H. C. Steel; "A First French Writer," for lower and middle forms, by Mr. A. A. Somerville; "Short Stories in French," and "Easy Pieces for French Exercises," by Mr. G. Gidley Robinson. The following works by Mr. F. V. E. Brughera:—"A First French Reader"; "Molière's Le Bourgeois Gentilhomme," and "Violet le Duc's Le Siège de la Roche Pont"; "Molière's Les Fourberies de Scapin and Le Tartuffe," edited by Mr. A. H. Gosset; "Mérimeé's Colomba," edited by Mr. C. H. Parry; "Malot's Sans Famille," edited by Mr. W. E. Russell; "Daudet's Le Petit Chose," edited by Mr. A. F. Hoare; "Dumas' La Bouillie de la Comtesse Berthe," edited by Mr. Cornell Price; "Dumas' Lydéric," edited by Mr. A. K. Cook; "Dumas' Les Hommes de Fer," edited by Mr. J. D. Whyte; "Victor Hugo's Hernani and Ruy Blas," edited by Mr. H. A. Perry; "Voltaire's Charles XII.," edited by Mr. R. H. M. Elwes; "A Book of French Dictation," by M. George Petilleau; "An Easy French Reading Book of Interesting Stories," by Mr. W. E. Russell; "A German Exercise Book," by Mr. W. G. Guillemard; "Schiller's Wallenstein," edited by Mr. R. A. Ploetz; "Schiller's Maria Stuart," edited by Mr. J. L. Bevir; "Selections from Börne's Works," edited by Dr. Hermann Hager; "Lessing's Minna von Barnhelm" and "Goethe's Hermann und Dorothea," edited by Mr. C. C. Perry; "Von Sybel's Die Erhebung Europas gegen Napoleon I.," edited by Mr. G.

Sharp; also, by the same author, an "Elementary French Exercise Book," "A First Book of German Exercises," by Mr. G. J. R. Glüncke; "Hoffmann's Tales from History" and "A Manual of German Composition," by Mr. H. S. Beresford Webb; "An Elementary German Reading Book," by Mr. G. C. Macaulay; "An Italian Grammar," with Exercises, and "A First Italian Reader," by Mr. H. E. Huntington.

MESSRS. TRÜBNER & CO.'S ANNOUNCEMENTS.

General Literature.—"Lotus and Jewel," a new volume of Oriental poems by Mr. Edwin Arnold; "Death—and Afterwards," by Mr. Edwin Arnold, reprinted with supplementary comments from the *Fortnightly Review*; "Poems and Epigrams," by the late Dr. Clement Mansfield Ingleby, with a short memoir by his son; the conclusion of Sir W. W. Hunter's "Imperial Gazetteer of India," forming fourteen volumes in all; "Women and Work: an Essay on the Relation to Health and Physical Development of the Higher Education of Girls and the Intellectual or more Systematic Effort of Women," by Mrs. Pfeiffer; "The Death of Roland: a Poetical Romance," by Mr. J. F. Rowbotham; "Alassio: a Pearl of the Riviera," by Dr. Joseph Schmeer; "History of Canada," vol. i., including the period previous to the descent of the Mississippi to the Gulf of Mexico by De la Salle in 1682, by Mr. William Kingsford; "The Icelandic Discoveries of America: or, Honour to whom Honour is due," by Miss Marie A. Brown; "The Sinclairs of England"; "The India Delta Country: a Memoir chiefly on its Ancient Geography and History," by Major-Gen. M. R. Haig; "Japanese Fairy World: Stories from the Wonder-lore of Japan," by Mr. W. E. Griffin, illustrated by Ozawa, of Tokio; "Folk Tales of Kashmir," by Rev. J. Hinton Knowles; "Concordance to the Divina Commedia," by Prof. E. A. Fay, of Washington; the "Bankside" edition of Shakspeare, on behalf of the Shakspeare Society of New York; and "Domesday Studies," in two parts, on behalf of the Royal Historical Society.

Philosophy, &c.—In the English and Foreign Philosophical Library—a second edition of Dr. W. Pole's "Philosophy of Music," with amendments and additions; Fichte's popular works, "The Nature of the Scholar," "The Vocation of Man," "The Doctrine of Religion," "The Science of Knowledge," and "The Science of Rights," translated by A. E. Kroeger, with a memoir by Dr. William Smith; also "The New Catholic Church, with Thoughts on Theism, and Suggestions towards a Public Religious Service in Harmony with Modern Science and Philosophy."

Natural Science.—"South African Butterflies: a Monograph on the Extra-tropical Species," by Roland Trimen and Col. J. H. Bowker, vols. i. and ii., containing the Nymphalidae, Erycinidae, and Lycaenidae, with a map and nine coloured plates; "A Short Practical Treatise on the Nature, Causes, and Treatment of Cholera," by Deputy Surgeon-Gen. Bellew; "Air Analysis: a Practical Treatise on the Examination of Air," with appendix on Coal Gas, by J. A. Wanklyn and W. J. Cooper.

Philology, &c.—Brugmann's "Elements of a Comparative Grammar of the Indo-Germanic Languages," vol. i., translated by Dr. Joseph Wright; "The Rig-Veda Sanhita," vol. v., translated by W. F. Webster; "The Bhagavad Gītā," with commentary, translated by Mohini M. Chatterji; "A Note on Indo-European Phonology," with special reference to the true pronunciation of ancient Greek, by D. B. Murdoch; "The Origin of Greek and Latin Roots," by the Rev. James Byrne; "A Ten-

tative Chronological Synopsis of the History of Arabia and its Neighbours from B.C. 500,000 (?) to A.D. 679," by Dr. J. W. Redhouse; "A Language Study based on Kantu; or, an Enquiry into the Laws of Root-Formation, the Original Plural, the Sexual Dual, and the Principles of Word-Comparison," with tables illustrating the primitive pronominal system restored in the African Bantu family of speech, by the Rev. F. W. Kolbe; "A Dictionary of the Kongo Language as spoken at San Salvador," in two parts, English-Kongo and Kongo-English, by the Rev. W. Holman Bentley, with an Introduction by Dr. R. N. Cust; "A Grammar of the Kongo Language," with an Appendix of Tales, Proverbs, &c., by the Rev. W. Holman Bentley; "The Fortunes of Words: Letters to a Lady," by Dr. Federico Garlanda; "The Philosophy of Words: a Popular Introduction to the Science of Language," by Dr. Federico Garlanda.

MESSRS. FREDERICK WARNE & CO.'S ANNOUNCEMENTS.

Bemrose, new and revised edition; "The Corporation Plate, Insignia of Office, and Seals, &c., of the Cities and Corporate Towns of England and Wales," by the late Llewellyn Jewitt, edited, and completed with large additions, by W. H. St. John Hope; "Coal Tar Tree Chart," illustrating the various chemical products derived from coal and coal tar, designed in the form of a genealogical tree, including all the more important compounds, together with those formed by chemical treatment, and leading upwards to the varied and beautiful dyes known as the coal tar colours, compiled by Mr. Benjamin Nickels, size 34 by 26 in.; "Map of North Warwickshire, South Staffordshire, and East Worcestershire Iron and Mineral Districts," showing the railways, private railway sidings, the names of firms whose works are situated upon railway and canal, the canals, public wharves, and basins on the canals recognised as depôts for the receipt and dispatch of traffic by the railway companies, gas works, tramway routes intersecting the districts, chief turnpike roads, scale of 3 in. to a mile, size 4 ft. 6 in. by 5 feet; "Three Centuries of Derbyshire Annals," as illustrated by the records of the quarter sessions of the county of Derby, from Queen Elizabeth to Queen Victoria, edited by the Rev. Dr. J. Charles Cox.

ORIGINAL VERSE.

LOVE'S SLUMBERS.

"Quis non malarum quas amor curas habet
Hæc inter obliviscitur!"
Love hied him to the Court and flung him down
Upon a gold-fringed pillow—tired-out Love—
His impish train their light-winged fancies
wove
Round hyacinthine locks and white-rose crown;
Love turned—oft dozed—woke oft—with anxious
frown,
For swift steps that to Lydian music move,
And bawling knaves, and eager wheels that
drove,
Or youth or beauty past, his slumbers drown.
Love fled where babbling streams long sleep
might rock;
'Mong green meads, where the lark prevents the
sun,
And guileless swains come, slept Love on a
fleece,
Or soothed with tuneful pipe the silly flock;
And Love still haunts Arcadia, set at one—
Kind Love—twin hearts, breeding delicious
peace.

M. G. WATKINS.

MAGAZINES AND REVIEWS.

THE *Expositor* for October wisely puts in the foreground another vividly written article by Prof. Westcott, on the Revised Version of the New Testament. Dr. David Brown follows with his painfully interesting reminiscences of Edward Irving. Whether these are in place in a journal of critical and historical exegesis may be doubted; but their intrinsic value will induce scholars to pardon the irregularity of their admission. The other articles present no features of special interest except to homilists. "Ichabod" will be the regretful verdict of many readers. Perhaps, however, an exception may be made for a brief note by Mr. Chase, on the word *vab* in Eph. ii. 21.

SELECTED FOREIGN BOOKS.

GENERAL LITERATURE.

- ANDERSEN'S, H. C. Briefwechsel m. dem Grosseherzog Carl Alexander v. Sachsen-Weimar-Eisenach u. anderen Zeitgenossen. Hrg. v. E. Jonas. Leipzig: Friedrich. 4 M.

CORRESPONDENCE.

AN UNPUBLISHED LETTER OF WORDSWORTH.
Eastbourne: Sept. 28, 1887.

Subjoined is an exact copy of a letter from Wordsworth to Edwin Hill Handley, who had submitted some verses of his to the poet for his opinion upon them. The original was given many years ago to a member of my family by the recipient, and is now in my possession. It has of course never been published. There is a word or two I cannot read, so have I left a dash. The writing of the original is singularly rough and careless, though the expression is so polished.

A. F. WHEELER.

"Rydal Mount, Kendal, October 4th, 1830.

"Dear Sir,—I lose no time in replying to your communication, and will proceed to the point without ceremony or apology. I protest, on your behalf, against the competence of the tribunal whose judgment you are content to abide by. A question of this moment can be decided only by and within the mind that proposes it. Allow me to say that you have reversed the order of judicial proceedings by appealing from the higher (higher assuredly 'quoad hoc') to the lower power. What more then shall I say? That your interesting letter evinces extraordinary power would be obvious to the dullest and most insensible. Indeed, I may declare with sincerity that great things may be expected from one capable of feeling in such a strain and expressing himself with so much vigour and originality. With your verses upon — Abbey, I am in sympathy when I look on the dark side of the subject; and they are well expressed, except for the phrase—'Supercilious damn' (if I read aright), which is not to my taste. And now for the short piece, that contains the "thoughts of your whole life." Having prepared you for the conclusion that neither my own opinion, nor that of anyone else, is worth much as to deciding the point for which this document is given as evidence, I have no scruple in telling you honestly that I do not comprehend those lines; but, coming from one able to write the letter I have just received, I do not think the worse of them on that account. Where any one to show an acorn to a native of the Orcaides who had never seen a shrub higher than his knee, and, by way of giving him a notion or image of the oak, should tell him that its 'latitude of boughs' lies close folded in that 'auburn nut,' the Orcadian would stare, and feel that his imagination was somewhat unreasonably taxed. So is it with me in respect to this germ. I do not deny that the 'forest's monarch with his army shade' may be lurking there in embryo, but neither can I undertake to affirm it. Therefore let your mind, which is surely of a high order, be its own oracle.

"It would be unpardonable were I to conclude without thanking you for not having abstained from expressing your sense of the value of my imperfect, and comparatively unworthy, writings. The true standard of poetry is high as the soul of man has gone or can go. How far my own falls below that no one can have such pathetic conviction of as my poor self.

"With high respect, I remain, dear sir,

"Sincerely yours,

"WM. WORDSWORTH."

PARIS AND TRISTAN IN THE "INFERNO."

Melbourne, Victoria: Aug. 17, 1887.

There has always been a doubt as to whether Dante intended the Paris of *Inferno*, v., 67, to be the lover of Helen, or the Paris of mediæval romance. The chief argument in support of the latter is that, in the passage referred to, Paris is coupled with Tristan, the hero of the mediæval story of Tristan and Isolt.

It is probable, however, for several reasons, in spite of the collocation, that Paris of Troy, "Sir Paris far renowned through noble fame," was intended; and the following passage from Chaucer's *Legende of Goode Women* (Prologue) is interesting to readers of Dante as seeming to support this view:

"Hyde, Absolon, thy gilte tresses clere;
Ester, ley thou thy mekenesse al adoun;
Hyde, Jonathas, al thy frendly manere;
Penelope, and Marcia Catoun
Make of youre wifhode no comparysoun;
Hyde ye youre beautyes, *Yeonde and Bloyne*,
My lady cometh, that al this may disteyne."

So far as I am aware, this curious parallel, which was pointed out to me, has not before been noticed.

PAGET TOYNBEE.

THE NAME "OXFORD."

Nottingham: Sept. 17, 1887.

I have waited for a fortnight to see if any one would expose the nature of the "facts" that Mr. Kerslake fondly imagines justify him in pouring out the vials of his wrath upon Prof. Skeat, Mr. Bradley and myself; and I should not now join in the fray had some one else been willing "to hold himself in contact with the cloud of supercilious and irrelevant positivisms" in which Mr. Kerslake enshrouds himself. But the "facts" upon which Mr. Kerslake takes his stand, as the triumphant destroyer of phonological laws, are of so peculiar a consistency that I feel compelled to draw attention to them.

Mr. Kerslake's ideas of the value of evidence are, to say the least, peculiar. He has the most intense scorn for any documentary evidence, such as Domesday, that conflicts with his pet theories, and yet he is content to entrench himself behind mere assumptions, which he labels as "actual facts." And, while railing at the dogmatism of the scientific etymologists, he is most dogmatic in the enunciation of these "actual facts." From the tone of his remarks one would imagine that these "actual facts" were as well established and as much above question as the multiplication table, whereas they are pure assumptions. They may be probable or improbable, but they are nevertheless assumptions and not facts. Because the "prescript voice-names" of rivers are much older than any of our written documents, the latter are, when they clash with more modern forms that favour Mr. Kerslake's guesses, quite valueless and contemptible. Although he admits that local names may be "qualified," or "slightly varied by caprice of tradition" (in plain English, may become corrupted in the course of centuries), he yet prefers, when it suits him, a modern form to an older one that must come, even on his own lines of reasoning, "from an issue much nearer the source." With all his contempt for "documentary evidence," he does not hesitate to appeal to it when, as in the case of *Exan-ceaster* (where he comes to grief through his inability to discriminate between a stem and an inflection), it seems to favour his theories. In short, Mr. Kerslake is a most eccentric adversary; for so many of his principles are "in perverse conflict" with one another that it is impossible to pin him to any one. It is quite in character that he should, shortly after

indulging in a sneer at my "contemptuous and irrelevant verbosity," treat us to an utterly irrelevant and incomprehensible *farrago* of mixed metaphors about "ripple images," &c., and should scold Mr. Bradley, Mr. Mayhew, and me with an energy worthy of Thersites himself. After these inconsistencies, it is matter for small wonder that he chooses a word of admittedly French origin as a text for a warning against "having our birthright in our own speech adjudicated from us" by such incompetent blunderers as Prof. Skeat, while he is himself endeavouring to make out that a large portion of "our own speech" is Celtic.

I propose to leave the etymological side of this subject out of sight; for Mr. Bradley has effectively settled Mr. Kerslake's latest contentions. But I am really surprised that even Mr. Kerslake should plead that it has "become time that a little of the popular or jury principle should be infused into these matters." If Mr. Kerslake's idea were ever carried out, what a glorious time the perpetrators of "ingenious etymologies" would have! One shudders at the thought of what the standard dictionary of the future would be with its etymologies settled for ever by plebiscite. Perhaps a final text of Shakspeare, as settled by the "intelligent electors," would be an advantage, for it would save us from the flood of frequently foolish emendations with which we are inundated; but the omniscience of the "British democracy" would scarcely be equal to the task of editing the *Ormulum* or Piers Plowman. It is surely a novel theory, even in the poor, ill-used science of etymology, that the opinions of those who have studied the subject scientifically are to be overwhelmed by the votes of men absolutely ignorant of the merest rudiments of the science. Yet this is the consummation that Mr. Kerslake sighs for! But, as a fact, there is to-day a great deal too much of "the popular or jury system" introduced into etymology. A man entirely ignorant of chemistry or botany wisely lets those subjects alone, as Prof. Skeat has well said; but "a man entirely ignorant of the first principles of etymology does not leave the subject alone, but considers his 'opinions' as good as the most assured results of the most competent scholars" (*N. & Q.*, 7th S., iv., 31.) And, if his etymology be ingenious, picturesque, or paradoxical, he will have a larger following among the people than the competent scholar. S. Jerome might have had the tribulations of the scientific etymologists in his mind when he wrote a passage whose opposite character must be my excuse for borrowing it from Ducange (*Praefatio*, § 78):

"Felices," inquit Fabius, 'essent artes, si de illis soli artifices judicarent.' Poetam non potest nosse, nisi qui versum potest struere. Philosophos non intelligit, nisi qui scit dogmatum varietates. Manufacta et oculis patentia magis probant artifices. Nostra quam dura sit necessitas potest animadverti, quod vulgi standum est iudicio; et ille in turba metuendus, quem, cum videris solum, despicias. Hoc praeteriens tetigi, ut eruditus contentum auribus, non magnopere curemus quid Imperitorum de ingenio nostro rumusculi jactitent" (*Ep.*, 26, c. 4).

Dr. Johnson defines a "fact" as "a thing done; something not barely supposed or suspected, but really done; reality, not supposition; not speculation." Now, it is quite impossible to square most of Mr. Kerslake's "actual facts," even when they are "in the native matrix of their own surroundings," with this definition of an ordinary fact. His "facts" are speculations, or inductions that have assumed in his mind the consistency of facts. Mr. Bradley has shown that Mr. Kerslake's "indisputable and typical evidence," his "decisive fact," that "Eurauch = York is situated on that part of the river Eure which

had already, even in prehistoric times, become the Ouse," is only, at the most favourable estimate, a plausible guess. It is, moreover, an assumption, not a fact, that the river-names *Eure* and *Ouse* are identical, and that one had changed to the other, "even in prehistoric times."

Another of Mr. Kerslake's "facts" is that Oxford "already [that is, when it received its English name] contained three churches of Celtic dedication." This is not a fact, but an assumption; and, similarly, it is not a fact, but an assumption, that S. Aldate = S. Eldad; and it is an improbable assumption, not a fact, that S. Ebbe = S. Abban. Now, I maintain that even if these dedications undoubtedly referred to Celtic saints, and if Mr. Kerslake could prove that these dedications existed before the Norman Conquest, it would still not convert his assumption that these dedications existed in (say) the sixth century into an "actual fact." But his dogmatism is so excessive that he considers this "actual fact" strong enough to condemn any documentary evidence that should conflict with it, "even though it should include a paradigm of an Anglo-Saxon grammar"; and he triumphantly holds this up as "another example of the conflicts of philological certainties with actual facts"! In the light of such "actual facts" it is easy to understand Mr. Kerslake's contempt for "documentary evidence." Of a verity such "facts" have only "a treacherous footing in the shifting quicksands" of erratic speculations.

With such ideas of what constitutes an "actual fact," it is not surprising to find Mr. Kerslake's inductions rest upon very shaky foundations. The Abingdon history (vol. ii., p. 155) contains a list of saints' relics possessed by that monastery in 1116. Mr. Boase refers to the fact that this list includes relics of three Breton saints—Winwolaus, Judocus, and Sampson—as evidence tending to prove that a Celtic infusion existed in the population of Oxfordshire. Mr. Kerslake adopts this argument, and gives us some more "facts," viz., that these saints were "Dannonian," and not Bretons, that Columbanus, of Luxeuil, was a "S. Columba of Cornwall," and holds that "when these relics were enshrined there, their names must have been held in local veneration." That is, because a monastery had bought, begged, or stolen the relics of a particular saint, it is "a sound historical induction," or, possibly, even "an actual fact," that that particular saint had a local connexion with the district. If he should happen to be a Celtic saint, it is proof conclusive of a Celtic element in the population. This will appear a most astounding method of manufacturing "actual facts" to anyone acquainted with the miscellaneous character of monastic relics. I do not think a better proof of the absurdity of this contention could be cited than the case of S. Amphibalus, whose relics were enshrined at St. Alban's, who was supplied with the regulation life and miracles, and whose "name must have been held in local veneration when his relics were enshrined there." Yet it is all but certain that S. Amphibalus is merely the *amphibalus* or cloak of S. Alban, whose own existence is not free from doubt. Similarly, the name of S. Ives was undoubtedly "held in local veneration" when his relics were enshrined in Romsey Abbey, and when the village of Slepe changed its name to that of S. Ives. What historic "facts" we might work out from these circumstances, "when certain prejudices" in favour of documentary evidence shall have exhausted themselves! But we find, when we act on these "prejudices," that the very existence of S. Ives depends upon an abbot's interpretation of a simple countryman's dream! See the Ramsey History, p. 114; and we have the

evidence of Malmesbury (*Gesta Pontificum*, 319) that, when these supposed relics were found, "provinciales nec locum sepulchri, nomen Sancti norant." If we turn to the Abingdon list, we shall find that the abbey possessed, in addition to relics of most of the Apostles, portions of the anatomy of S. Cuthbert, who can never have been in Oxfordshire. S. Columba of Iona, and of various Frankish saints, such as Wandregesil, Audoen, Medan, Geneviève, Radigund, Gaugeric, &c. Nothing but the most reckless romancing could lead any one to assert that these saints ever preached the Gospel in Oxfordshire; and there is no reason why Winwolaus, Judocus, and Sampson should be separated from their fellows and exhibited as Celtic evangelists in Oxfordshire. The importation of the relics of Breton and Norman saints began as early as the reign of Æthelstan, who procured, through his friendship with Rollo, the relics of various Breton and Norman saints (Malmesbury, *Gesta Pontificum*, p. 198). Ælfgifu-Emma, the widow of King Æthelred, purchased at Rouen the body of S. Audoen. She gave his trunk to Canterbury (*Idem*, p. 419)—a circumstance that probably accounts for the Kentish dedication to this saint. Malmesbury Abbey became possessed of his head in a very immoral manner (*Idem*, p. 420). This Norman traffic in saints' relics which aroused Malmesbury's indignation, probably accounts for the Breton relics at Abingdon. But, shadowy as is the evidence derived from the accident of a monastery possessing some odd bones of a particular saint, it is comparatively substantial compared with another source of Mr. Kerslake's "facts"—the dedications of churches. There are three dedications to S. Audoen in England; but who would have the audacity to state as an "actual fact" that he preached the Gospel at these places? Following up Mr. Kerslake's system of discovering early historic facts "in the native matrix of their own surroundings," I find that this district must have been converted by S. Leodegar, for we have at Basford a dedication to this saint that can be traced back quite as far as the Oxford dedications. But there are the awkward considerations in the way of this "actual fact" that this turbulent Frank was not addicted to converting the heathen; that he was, so far as we know, never in England; and, finally, that this district was probably converted to Christianity before he was old enough to have participated in the work. If "the conquests of the next fifty years" are to proceed on Mr. Kerslake's favourite lines, the nineteenth century will have little reason to fear a comparison with its successor as regards historical and philological work. I am quite content that Mr. Kerslake should accuse me of wishing to "seal up the very sources of knowledge [!] for the future" by the use of these so-called "laws" of philology. He has brought the same charge, in almost the same words, against Zeuss, when the results of the misguided grammarians' studies came into "disastrous conflict" with some of Mr. Kerslake's "actual facts," so that I am incurring Mr. Kerslake's ban in excellent company.

W. H. STEVENSON.

SCIENCE.

A Dictionary of the Welsh Language. By the Rev. D. Silvan Evans. Part I. pp. 420 (Carmarthen: Spurrell.)

THE appearance of the first part of Mr. Silvan Evans's dictionary forms an era in the history of Welsh lexicography. The volume before me takes in the whole of the letter A, but not more; so it will be seen that the work is on a large scale, at any rate as compared with

anything hitherto attempted of the same kind in Wales. The author's main object is to give a complete list of the vocabulary of Welsh literature, and to fix the meanings of the words given by reference to the passages where they occur. The etymological remarks in it are reduced within narrow limits, which I think is, on the whole, wise and prudent, since it is early as yet to attempt to treat of the origin of Welsh words in anything like an exhaustive manner. Welsh etymology is a subject which can only be successfully attacked with the aid of the other Celtic languages, and more especially Old-Irish. But the discoveries recently made in Irish philology have been so fast following one another that one has as yet scarcely had time to appreciate their full bearing on the study of the kindred dialects. In the meanwhile Mr. Silvan Evans pursues with vigour and precision a work to which his whole life has been devoted, and one for which he is far the fittest man living. When it is finished, it will serve, among other things, to deliver the student from the distrust and feeling of insecurity which must haunt everybody who has occasion to use Pughe's dictionary.

But even subject to the limitations under which Mr. Evans regards himself working, the volume is by no means wanting in very interesting and instructive etymologies. Take, for example, that of the Welsh word *augrym*, which now means a "sign" in the widest sense of that term; Mr. Evans traces it back to the Old-English *augrim*, or *algrim*, which meant "arithmetic," and was called in late Latin *Algorismus*. This in its turn is traced to "Alchoarizam magister Indorum," that is to say, Mohammed ben Musa, who, in the ninth century, wrote a treatise on algebra, which was translated into Latin. Having traced the word to its origin, Mr. Evans follows it down in Welsh through all its modifications of meaning and use to our time. Among words interesting from the point of view of early culture may be mentioned *adail* "to build," *adeilad* "a building," which is analysed in a way that shows the word to have originally referred to the making of a structure of wattling rods, such as are sometimes still used for the roofs of outhouses, and such as I have sometimes seen when old houses in the principality are being pulled down. The volume contains several articles bearing on Welsh mythology, such as *abred*, *afano*, and *Ananrod*, in which the reference to Arthur's court should, however, be cancelled. The terms relating to Old-Welsh law are comparatively numerous; but one of the most interesting of them is that of *Aill* or *Aillt*, which Aneurin Owen renders "villain" in his edition of the laws. I have no doubt as to the etymology of the word; in fact, it is proved by Mr. Evans's quotations. The word is of the same origin as the verb *ailio* "to shave," and *ellyn* "a razor," and an *aillt* was a man whose head had been shaved or tonsured as a sign of his being a bondsman or thrall. Whether the term *Mab Aillt* was synonymous with it, or denoted a grade higher and nearer that of a freeman, is a point which I cannot at present decide. What is otherwise known about Celtic tonsure has been touched upon in my *Celtic Britain*, pp. 73-5; but the term *Aillt* shows that the subject has far more

historical importance than has hitherto been supposed.

It is useless, however, to select articles of interest from a volume whose almost every page contains several, so I will only add a remark to the effect that it gives a good many words borrowed from Latin. The writer of the leading article in the *Times* on Prof. Sayce's address at Manchester has been made, by a slip of the pen, to speak of the total absence of Latin from the speech of Wales, to which I might answer that I have years ago published a long list of such words. Many of them date from the Roman occupation, and occasionally they throw valuable light on the pronunciation of ancient Latin. Take, for example, from the volume before me the Welsh word *addurn*, "ornament," borrowed from the Latin *adorno*. One would in vain ask the average student of Latin whether the *o* of *orn-* in that word was long or short, even if he could be made to distinguish between the length of the vowel and the length of the syllable, or, what comes to the same thing, between *örn* and *örn*. But one knows from the laws of Welsh phonology that the Latin word must have had *örn* before the Welsh word could become *addurn*, and not *addorn* or some like form. Conversely, as it happens to be handed down that the Latin *aratrum* was *arättrum* and not *arättrum*, it is impossible, as some will still have it, to derive the Welsh *aradr*, "a plough," from Latin—not to mention that the other Celtic forms of the word are equally impossible to trace to a Latin origin. However much it may be the fashion to look down on the Aryan farmer of prehistoric times, and however hard it may prove to fix the place of his first home in Europe or Asia, comparative philology, it seems to me, leaves one in no doubt that the Western Aryan at any rate was a farmer of some kind. This digression brings me back to where I started from—namely, the subject of the Welsh words of interest from the point of view of early culture; but it would take up too much space to give here a summary of Mr. Evans's article on *aradr*.

I will only add that I hope it will not be long ere the publication of another part of the dictionary will bring articles of similar interest under the notice of the readers of the ACADEMY. Such a work can only proceed slowly if it is to be done well; and it is sincerely to be hoped that the author may enjoy health and life to finish an undertaking which, besides proving a great boon to Celtic scholars, cannot fail to be an everlasting monument to his diligence and devotion.

J. RHYB.

CORRESPONDENCE.

THE COMPOSITION OF THE "DE VERBORUM SIGNIFICATU" OF VERRIUS FLACCUS.

Oxford: Sept. 26, 1887.

In the first volume of the *Breslauer Philologische Abhandlungen*, Dr. Reitzenstein has recently published an essay entitled "Verrianeische Forschungen," in which he has made valuable contributions towards settling the question of the method pursued by Verrius Flaccus in the composition of his lexicon. This essay deserves the serious attention of all scholars interested in the subject; but I have to complain that Dr. Reitzenstein has, in his introductory remarks, treated me with considerable injustice.

In the preface to his edition of Paulus and Festus, Müller observed four points in the arrangement of Verrius's books as we have them in their abridged form. (1) Each book may be divided into two parts, in the first of which regard is paid not only to the first letter of each word, but also to the second and third. (2) The same word is often interpreted twice over, the writer sometimes giving different explanations in the different places. A word so repeated may occur in the first and the second part of each book, but never occurs twice in the first part. (3) In the second part of every letter we find a series of glosses illustrated from Cato, some from Plautus, and some remarks on religious law arranged together. The quotations from the contemporaries of Verrius Flaccus, Veranius and Antistius Labeo, are to be found at the end of the letters under which they occur; and, like those from Cato, were inserted by Festus from other works of Verrius Flaccus. (4) At the beginning of some letters we find words of religious signification placed apparently by way of good omen, as *Augustus* at the beginning of *A*, *Lucetium Jovem* at the beginning of *L*.

I published two essays on Verrius Flaccus in the first numbers of the *American Journal of Philology*, which I afterwards revised and reprinted, without any important alterations, in my *Lectures and Essays* (1885).

The question between Dr. Reitzenstein and myself only affects Müller's third proposition. With this I expressed disagreement, saying with regard to the quotations from Cato, that it was reasonable to suppose that, as Verrius wrote a book upon Cato, his numerous quotations from that author were the result of his own researches, not taken by Festus from Verrius's book, and afterwards inserted in the abridgment. Dr. Reitzenstein complains that I do not prove my theory. I do not see how it can either be proved or disproved, though I think that Dr. Reitzenstein has succeeded in strengthening the presumptions against Müller's view, which has the support of Gruppe and Hoffmann.

Turning to Müller's notice of the Catonian and Plautine quotations, I said (p. 214):

"The facts elicited by Müller are undeniable, but they are not all. There is another phenomenon which has apparently escaped his notice, and which goes far, in my opinion, towards justifying us in raising the question whether he has hit on the true explanation of the arrangement of the articles in Festus. There are some traces even in the epitome of Paulus, and many more in the large work of Festus, of the fact that Verrius arranged his instances under each letter in successive series, each of which contained glosses headed by citations from the same author. Müller noticed that many of the letters in Festus and Paulus are concluded by a series of examples from Plautus and Cato. But I wish to point out that not only in the second part, and at the end of the letters, but in the first part, and throughout them, there are distinct traces not only of Cato and Plautus, but of many other authors, having been used in the same way."

I endeavoured to prove this by statistics showing the existence of such series of glosses, and added (p. 217):

"It should also be observed that the citations from the poets usually come together, and the same is true of those from the orators, and the books of historical or religious antiquities."

Verrius, I went on to say, probably

"took one author at a time, or commentaries on him, and arranged the notes which he made or extracted in alphabetical order, and the whole of each letter is an aggregate of such separate series of authors. Verrius did not strictly observe an alphabetical order beyond the first letter of the words. His book still bore traces of its origin from separate commentaries, treatises, and monographs. Under every letter there are the clearest

indications, where the hand of the epitomator has left anything but the barest skeleton, that the same authors were cited in single series."

Under the term "authors" I meant, as anyone reading my essay will see, to include not only poets, orators, and historians, but writers on law, antiquities, and religion.

Dr. Reitzenstein dismisses my theory as unworthy of consideration; but I must observe (1) that he does not represent my position accurately; (2) that, rightly understood, my position is essentially the same as that to which his own researches have led him.

1. He says that my reasoning is self-contradictory and leads to no results, because side by side with my own theory I maintain the correctness of Müller's ("er daneben die Behauptungen Müller's als richtig anerkannt"). I do nothing of the kind. I agree, and, so far as I know, everyone else agrees with Müller, that the books of Festus may roughly be divided into two parts; but I expressly said that Müller's other hypothesis as to the arrangement of the books was not based on a sufficient induction, and was, therefore, untenable. My own hypothesis, again, is not exactly what Dr. Reitzenstein represents it to be. I did not go so far as to say that Verrius arranged his books in "regularly recurring series of citations from the same authors" ("in regelmässig wiederkehrenden Reihen"). Dr. Reitzenstein calls my enumeration "flüchtig," by what right I do not know. I can assure him that it cost me a great deal of labour, and that it was thoroughly revised before the essays were reprinted. No doubt, had I been writing a separate book on Festus, I should have strengthened my case by full quotations of the glosses in question; but from various circumstances I was obliged to consult brevity, and to leave my readers to verify my statistics with Festus before them.

2. But what is Dr. Reitzenstein's own theory? His whole argumentation tends to prove the existence, as the basis of Verrius's work, of sets of "gleichartige Glossen in unmittelbarer Verbindung," for which common authorities must be assumed. Again, on p. 22, he says, "Die einzelnen Glossen des uns vorliegenden Werkes bezeichnen oder verraten sich überaus oft als Anzüge aus zusammenhängenden Darstellungen." This is essentially my own theory; but there is a difference between Dr. Reitzenstein's way of going to work and mine. I started from a statement of the number of times the name of an author (say Ennius) occurs within a short space, and inferred from the repetition of the name the previous existence of a series of glosses to the author in question. Dr. Reitzenstein sets himself, by a comparison of glosses under different letters, to prove the existence of homogeneous groups of glosses under each letter, referable to the same authorities. He goes further, and endeavours to analyse some of these groups into smaller ones. He assumes, also (p. 67), that Verrius made the extracts for his different books at the same time; his extracts, I suppose, from his various authors or commentators. He finds no more difficulty than I do in holding side by side with this that each letter in Festus is divided into two parts; but, like me, he asserts the existence of these similar "groups" of glosses, each referable to one authority in both parts (p. 28). I maintain that in its main outlines my theory anticipates his own, though differently stated and differently led up to; and I am unable to see, therefore, why he should treat it as unworthy of discussion.

H. NETTLESHIP.

THE LETTER "SH" ON INDO-SCYTHIAN COINS.
London: Sept. 25, 1887.

Will you grant me space for a short reply to Prof. Terrien de Lacouperie's remarks on the

character $\beta = sh$ of the Indo-Scythian coins and the derivation I had proposed for it?

I do not wish to dwell at length upon the professor's introductory remarks. As they seem to imply a much more accurate knowledge of a most obscure epoch than sober historical criticism can ever hope to recover from the few documents at present at our disposal, the arguments based on them cannot seriously affect my explanation of β . The Scythians, whom Prof. de Lacouperie represents as "strangers in Central Asia, acquainted by mere chance with the current cursive Greek characters," had, as a matter of fact, settled in Hellenised Bactria more than two hundred years before the character which I suppose to be Greek Sampi, utilised for Scythian requirements, made its first appearance on the coins of Kanishka (after A.D. 78). As regards the professor's palaeographic objection, based upon "the violent transition presented by the contemporary forms of the two letters," I will only remark that it is just the contemporary form of Sampi which remains to be discovered.

After the clear evidence of the coins had convinced me of the existence of β as a separate letter in the Indo-Scythian legends, it was inevitable that, in my endeavours to find an explanation for this curious character, I should look to the Ariano-Pali alphabet. The apparent resemblance between β and the Ariano-Pali σ (Ψ) had not, of course, escaped me; but, for reasons which to my mind still appear conclusive, I felt obliged to reject the idea of historically connecting the two characters.

If β had been borrowed from the Ariano-Pali alphabet, not only would this be an isolated example of Arianian influence on the Greek writing of the Indo-Scythians, but it would be most difficult to explain why β should bear a shape so different from that of the contemporary Ariano-Pali σ , which we can follow up by means of coins and inscriptions from the first Scythian invasion of Bactria down to the later times of the Indo-Scythian empire.

But, apart from this objection, the direction of the writing has to be taken into account. Ariano-Pali writing runs from right to left; the Indo-Scythian Greek legends (almost without exception) run, like ordinary Greek writing, from left to right. As the well-known palaeographic principle of shifting the shape of the characters to the opposite side when the direction of writing changes was observed in Indo-Scythian writing,* the Ariano-Pali σ could not have retained in the Greek legends the original position of its component parts, but would have appeared rather like ρ .

As to the phonetic argument of Prof. de Lacouperie, that "the Ariano-Pali letter σ . . . probably represented the soft sound of s in their [the Indo-Scythian] phonesis," it is enough to point out that the β of true "Scythic" words, like KOPANO (Kushan) and BAO (Shâh), is rendered by the character for sh , not by the character for s , in the Ariano-Pali legends of Kadphises and Kadaphes, and also in the inscriptions of Huvishka.

In conclusion, I may remark that the statement of Prof. de Lacouperie, as to $\beta = sh$ being sometimes drawn as P , rests on a misunderstanding. In my original contribution to the *Babylonian and Oriental Record* I had mentioned a few cases in which β appears to represent the sound of r . But of the opposite change I know no example; and Prof. de Lacouperie will find it easy to verify this statement by an inspection of the coins in the British Museum.

M. AUREL STEIN.

* Compare the reversed characters on the rare coins of Huvishka and Vâsudeva, Nos. 15, 34, and 14-18 in the British Museum Catalogue, which have legends running to the left.

PHILOLOGY NOTES.

THE subject of Prof. Church's introductory lecture, to be delivered at University College, London, on Tuesday next, October 4, at 3 p.m., is "Ausonius: Professor, Consul, and Poet." The lecture is open to the public without payment or ticket.

Corrections.—In Miss Lee's article in the ACADEMY of last week, on "A Lithuanian Preacher of the Last Century" (p. 206, col. 2, l. 4 from bottom), for "threshing floor of Josaphat" read "valley of Jehoshaphat." Also in the "Philology Note" (p. 208, col. 2, l. 21) for "m dawt" read "medawt."

FINE ART.

GREAT SALE OF PICTURES, at reduced prices (Engravings, Chromes, and Olographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—Geo. REES, 115 Strand, near Waterloo-bridge.

CORRESPONDENCE.

ARCHAEOLOGY AND THE DATE OF THE PENTATEUCH.

British Museum: Sept. 29, 1887.

I shall be much obliged if you will insert these few lines in reference to the charges of inaccuracy which Mr. Robertson Smith brings against me in his reply to my article in the *Contemporary Review*, "The Date of the Pentateuch"; the reply in the new number being entitled, "Archaeology and the Date of the Pentateuch."

What I wrote as to the mention of "Pul" in the First Book of Chronicles, he does not understand. I admit that my statement is involved. I should have written, not that "Pul" was alone mentioned by the chronicler, but that by him he was alone mentioned in such a manner as to be undoubtedly distinct from Tiglath-Pileser. Further, I should not have maintained that the discovery of the name of "Pul" in a cuneiform list of kings was, other evidence considered, sufficient to prove his separate identity; in other words, that the Assyriologists did not sanction the view I hastily advocated.

Mr. Robertson Smith says that my argument for the minute accuracy of the biblical narrative of the oppression and Exodus, based on Mr. Naville's discovery of the store-city Pithom, moves in a vicious circle. He argues that the fact that Tel-el-Maskhuta is Pithom, not Rameses, destroys the reasoning of Lepsius, that the builder of Rameses, Rameses II., was the great oppressor. Nothing of the kind. Lepsius's argument rests on an identity of name. Naville's discovery proves that the founder of Rameses was also the founder of a store-city Pithom.

Mr. Robertson Smith says that I "forget to mention" that the supposed Israelite names in the list of Thothmes III., occur in "a list of the districts of Palestine which His Majesty conquered at Megiddo," &c. I did not forget that the title reads "Congregatio gentium Ruten superiorum quos clausit rex in urbe Megiddo." (De Rougé, *Rev. Arch.*, N.S., iv. 346; so also Groff, *Rev. Egypt.*, 1885, 95). The rendering "conquered" is impossible.

Mr. Robertson Smith closes with some very strong remarks on my last paragraph. I admit that it is open to misconception by the general reader, which I regret. My intention was to draw attention to the extraordinary scantiness of records *in situ* in Palestine and Phoenicia, and the consequent want of evidence, like that of Greece and Assyria, of a literate people. I was justified in omitting coins, but I was not in omitting the inscription of the Phoenician bowl dedicated to Baal-Lebanon; but if by the inscription of Arak-el-Emir, my critic means the five letters discovered by Count de Vogué, which the scarcity of Palestinian lapidary

records has dignified with the name of inscription, I think I was justified in passing this "inscription" by. We are all fallible, even the critics. It was, therefore, with some satisfaction that I read the following remarks of my critic:

"Hosea began to write before the extinction of the Dynasty of Jehu, and Assyria came into no direct contact with Israel till after that event. The rulers of Israel had, no doubt, as the Assyrian monuments appear to imply, already had occasional relations with the court of the great king; but the first mention of Assyria in the history of Kings (2 Kings, xv. 19) is in the reign of Menahem. Under the dynasty of Jehu Damascus was the all-engrossing foreign power to which every one's eyes were directed."

How about the Battle of Karkar, in which Ahab and Benhadad II. fought Shalmaneser, and the tribute of Jehu recorded on the same Assyrian king's black obelisk? It is impossible to understand the politics of the houses of Omri and Jehu without giving full weight to the Assyrian evidence. On this subject Mr. Robertson Smith should be the last man to write without due thought. He and I saw each other's articles in proof. It would have been a great advantage if we had sent our corrections to each other.

REGINALD STUART POOLE.

THE RUTHWELL CROSS.

Edinburgh: Sept. 17, 1887.

While in the south of Scotland recently, I visited Ruthwell to see its famous cross, and in the course of my examination I had the good fortune to discover several more runic letters. These letters occur on the raised borders surrounding the panel supposed to contain the salutation of Mary and Elizabeth, and are as shown in the following diagram:

The borders of the next panel, containing the archer, also show traces of letters, but they are too illegible to make out. On the west side the letters which Prof. Stephens and Mr. Hough read "idægiscæf" are clearly "dægis gæt" with part of the perpendicular stem of another letter after *f*. I next examined the top stone to see what remained of the inscription there. The name Caedmon has all but disappeared, being represented only by five faint perpendicular strokes. The other two words, "mæ fæuþo," are quite distinct, with the exception of the last *o* in *fæuþo*, which is not so clear.* Mr. Sweet, in his *Oldest English Texts* objects to this reading of the words as being impossible forms of the pronoun and verb, but nevertheless they are there. No other points of any importance were discovered.

GEO. F. BLACK.

A ROMAN PATERA FOUND AT SOUTH SHIELDS.
South Shields: Sept. 26, 1887.

A few days ago I purchased from the finder a fine Roman *patera* of bronze, six inches in diameter. It had been found at low-water

* In Vigfusson's *Icelandic Prose Reader*, p. 444, the inscription on the top stone is given as "kadma ma fa(or) æuþo." It is difficult to understand where he gets the first five letters, and, besides, he omits the *p* in *fæuþo*.

mark on the Herd Sand, South Shields—a stretch of sand dry at low tide, on the south side of the mouth of the Tyne. The handle is missing, but the shield-like outline where it was affixed remains. In the inside of the saucer-shaped vessel and around a central boss is the inscription—

APOLLINI ANEXTIOMARO M A SAB
which Prof. Hübner, in a note on the subject to be read at the next meeting of the Newcastle Society of Antiquaries, expands "Apollini Anextio Maro M(arcii) A(ntonii) Sab(ini) servus). Apollo Anextius occurs for the first time. He considers it a local divinity like Apollo Maponus, &c.
ROBT. BLAIR.

ROMAN INSCRIPTIONS AT CHESTER.

Liverpool: Sept. 26, 1887.

Since my letter in the ACADEMY of September 24 (in which I referred to the probable existence of a representation of the *ascia* on the second stone named by me in my letter in the ACADEMY of September 17), I have had the stone examined by Mr. Shrubsole, and find that my idea is confirmed. Not only is the *ascia* there, but also what appears to be a *malleus* or mallet. Instead of "two *asciae*," I should have said that there were on the stone No. 5 in my last list (September 24) "an *ascia* and a *malleus*."

It seems also that on the stone No. 3, in list of September 17, there exist on the side representations of what appear to be two *asciae*, a *malleus*, a *ligo* or spade, and a *scalper* or chisel; and we have thus the whole of the implements necessary both for digging the grave and cutting and inscribing the gravestone. This seems to prove that the phrase "sub *ascia* dedicavit," to which the implements refer, was not confined to digging the grave only, as as some have considered, nor solely to sculpturing the stone, as others have thought, but to both combined; and thus the tombstones just found are valuable as illustrating the phrase. The *ascia* occurs also on an uninscribed stone found, on which is said to be the figure of a man hurling a javelin.

The letters P V B appear to commence the first extant line of the inscription No. 5 in the list of September 24. They may possibly refer to the *tribus* of the defunct Pub(lilia), though in that case they are not in the normal position; but they more probably refer to some office he held, e.g., he may have had *Publicani* under his orders. But in the absence of the lost context, it is difficult, if not impossible, to give their real meaning.

Work has for a short time been suspended at the excavation on the walls, but more inscribed stones are, I hear, in sight, and only want dislodging. The question, however, arises, whether the gain to epigraphy be great or not, is it not vandalism to destroy the charm of the walls? Whether they date from A.D. 400, or from A.D. 1646, they are still ancient; and their disintegration, by removing some stones, and recutting the others, takes away every vestige of antiquity.

W. THOMPSON WATKIN.

[With reference to the ligulate M in the inscription No. 5 in Mr. W. Thompson Watkin's letter in the ACADEMY of September 24, the Rev. J. Hoskyns-Abrahall writes that "this is a well-known representation of the *praenomen* 'Manius.'"]

NOTES ON ART AND ARCHAEOLOGY.

THE *Art Annual* for 1887 will be devoted to the life and work of Meissonier. The text is from the pen of Mr. Lionel Robinson; and there will be a full-page photographure of "La Rixe," as well as illustrations of many other pictures.

THE autumn exhibition of the Photographic Society of Great Britain will open on Monday next, October 3, in the gallery of the Royal Water-Colour Society, Pall Mall East. The exhibition will remain open daily from 10 a.m. till dusk until November 14. On each Monday, Wednesday, and Saturday, it will also be open from 7 to 10 p.m.; and on every Monday evening transparencies will be shown with the society's optical lantern.

THE next examination for certificates and diplomas by the London Institute for the Advancement of Plain Needlework will be held at St. Michael's Schools, Picnic, on Saturday, October 29, at 11 a.m. For further particulars apply to the Secretary, 36 Balcombe Street, Dorset Square, N. W.

THE STAGE.

AT THE THÉÂTRE FRANÇAIS.

THINGS have not gone very brilliantly with the Théâtre Français of late; and a rapid passage through Paris, towards the end of September, is not likely to permit one to see an "epoch-making" performance. Mdlle. Weber's, in "Hernani," might have been that, but is not, so it seems. For myself, I saw nothing fresher last week than "Le Gendre de Monsieur Poirier"—the most admirable, it is true, of those comedies in which Jules Sandeau has collaborated with "the Molière of our day." But "Le Gendre de Monsieur Poirier," however admirable, is not quite so characteristic as one or other of the plays which we owe to Emile Augier's unaided observation and fancy; nor is its interpretation, as a whole, at the present moment as remarkable as it has been aforesaid. Much fascination of manner would always be needed to reconcile us to "Le Gendre" himself—Gaston, assuredly, is but a single remove from a rogue, and we are invited to consider him a gentleman. When such a demand as that is made upon us, there is nothing like the personal charm of a performer to enable us to get over the difficulty, or to pass it unnoticed. M. Delaunay—Gaston's earlier representative—had, for many men and for most women, just that personal charm. To sigh so delicately, one must be full of feeling; to move so graciously, one must be full of virtue—Delaunay led the judgment captive. But the eternal youth—though at last it was but the painted youth—of the French comedian ornaments or makes possible the part of Gaston no longer. The son-in-law of Monsieur Poirier—the aristocrat in facile conflict with the bourgeois—is played by M. Worms; and M. Worms has knowledge, discretion, a measure of fervour: everything, perhaps, but the alpha and omega—everything but charm. Accordingly, there are moments when the character of the son-in-law is disclosed, not only as unsympathetic, but as revolting; and only a small share of such interest as the whole performance retains is due to M. Worms. Delaunay has retired, but Got remains. Monsieur Poirier, the typical bourgeois—solid, affectionate, limited, to whom money-getting is, indeed, a vocation and art but an *agrément*—was always one of the strongest, perhaps, indeed, the very strongest of M. Got's rôles; and M. Got, though he does not throw apparently quite the old energy into the new creation of new

parts, is as forcible and as finished as ever when he finds himself in his old ones. For those who have never seen him act Monsieur Poirier it is as necessary that they should hasten to do so while yet the vigour and delicacy remain intact, as it was that the playgoers of my youth should see Frédéric Lemaitre while yet it was possible for this prince of the melodrama to go without error and with all the familiar verve and devilry through the part of Robert Macaire. In the future, Got's name will be associated with the bourgeois of Emile Augier as irrevocably as that of "Frédéric" with Macaire, that of Jefferson with Rip Van Winkle. The part does not require passion, and Got has never been greatest in passion. But it wants conviction, flexibility, a minute observation of the man of the suburban villa, a perfect intelligence and experience in turning that observation to account; and the result is now, and has been for a score of years or thereabouts, the production, by M. Got, of a genre picture as finished in every detail of gesture, raiment, and expression, as the genre pictures of Wilkie and of Webster. Got's Monsieur Poirier is never very seductive; but it is a masterpiece, nevertheless.

The parts which are next best played are those which are to-day in the hands of M. Barré, M. Roger, and Mlle. Blanche Baretta. Barré has held his part—that of Monsieur Poirier's sensible and broad-minded friend—for a long while already; and he has made it as effective, as sympathetic, and as true as it is possible for it to be. It is the happy lot of the gentleman impersonated by M. Barré to bring back from the ways of prejudice and folly both Monsieur Poirier and his son-in-law; and you have only to see M. Barré in the part for two minutes to feel that he is potent in such a mission. Roger, a minor actor—never extraordinarily good, because he is a minor actor, and never extraordinarily bad, because he is an actor at the Français—plays Vatel, the cook. Vatel is an artist whom the *cuisine bourgeoise* revolts; and it is as an artist of sensibility—a cook and not a servant—that M. Roger manages to represent him. I am told the part has been played still better. That is quite possible; but it is played well. To Mlle. Blanche Baretta falls the only woman's character: that of the virginal young wife of Gaston. When the piece was first performed at the Français—ten years after the Gymnase had produced it—was it not Madame Favart who portrayed the sufferings, the generosity, the womanliness of this young lady? At the Gymnase itself it had been Rose Chéri, an actress wholly simple and sympathetic, who died young, and who could never have become old. Well, Mlle. Baretta is not quite as well fitted as Rose Chéri must have been to present a character which is practically that of an *ingénue*. She has not, perhaps, that degree of simplicity; not quite that youthfulness of spirit. Still, her performance of the part is anything but inefficient. She knows her business, to begin with; is essentially "jeune dame," and is all the better for not being a "grande dame." She has the charm of quietude—can be as still upon the stage as Mrs. Kendal—and wears her dresses admirably. An actress not of genius at all, but of sympathetic talent; and one who even in a part of difficulty may be seen without complaint.

But I said at the beginning, these were not very brilliant days for the Théâtre Français. With Delaunay gone, in something approaching old age; with Sarah Bernhardt gone, in the very splendour of her art; with Coquelin gone, to shine alone elsewhere; with Got creating nothing new with distinction; with the great actor and actress of the future still undeclared and unsuspected; with the wanted genius still missing—under these conditions, as a matter of fact, it is only the enormous prestige, the old tradition of the Théâtre Français which allows it to keep its place. Looked at bluntly, the present place cannot seem to be quite the old one. The Français remains desirable to belong to; interesting always, of course, to visit. But the gulf that separated it from other theatres seems to be narrowing; or, if it is wide still, it is wide not so much by reason of the extraordinary excellence of the performance of any single play as by reason of the existence of the great *répertoire*—the theatre's capacity to present not one thing startlingly, but so many things very well.

FREDERICK WEDMORE.

STAGE NOTES.

EXCEPT for the production of "Pleasure" at Drury Lane—an immense spectacle, no doubt, with the actors as inevitable accessories—the London theatrical season has as yet made no sign. For revivals are hardly a sign. Of these there have been two, at the least. "A Winter's Tale," in which Miss Mary Anderson appeared in the Midland Counties in the summer, has been put on by her at the Lyceum, with a cast not incompetent, not notably worse than usual, but still not distinguished. An esteemed writer ("W. H. D. A."), who went into the Midland Counties for the purpose, gave to the readers of the ACADEMY, months ago, his impressions of Miss Anderson as Hermione and Perdita. They were not very favourable, and we ourselves have no wish whatever to hold forth on the mistaken diligence of the lady's effort. Miss Anderson should have less zeal, and should attempt only the possible. The Haymarket has another revival. Mr. Beerbohm Tree has assumed intelligent command of a house lately associated with disaster and that had ceased to be interesting. "The Red Lamp" is moved thither from the Comedy, for the most part, with the original cast, but with Miss Achurch just now in the part first played so very ably by Lady Monckton. And Miss Achurch is an actress of very high promise—of resource, of feeling, of charm. There is yet a third revival, or removal rather, though it is not a very recent one. At Poole's Theatre—pending the rebuilding of the Court in its south-western suburb—Mr. Clayton, deserted both by Mr. Cecil and Miss Norreys, presents "Dandy Dick."

Two events are within measurable distance. We will mention what they are, and then the business of chronicling the more important movement at the London theatres will for the moment be done. M. Coquelin, who has just been acting in Bordeaux and Lyons, promises us a visit within about three weeks time. He will appear in a piece of which he reserves the rights, which was written for him, and which fits him—or, to say the very least, fits his ambition—to a T. Alas! it is but at the Royalty—one of the least inviting playhouses in London—that this most noteworthy comedian will appear. The second event will be the re-appearance of Mr. Wilson Barrett and Miss Eastlake somewhat later. We shall welcome this with warmth; so indeed will the greater part of the town.

UNIVERSITY COLLEGE of SOUTH WALES and MONMOUTHSHIRE.

DEMONSTRATOR and ASSISTANT LECTURER in CHEMISTRY stipend £180 a year.
ASSISTANT LECTURER in MATHEMATICS. Stipend £100 a year.
The above appointments are now vacant. APPLICATIONS, together with Testimonials, must be sent in on or before SATURDAY, OCTOBER 8TH, 1887, to the undersigned, from whom all further particulars may be obtained.
IVOR JAMES, Registrar.

Cardiff, September 6th, 1887.

THE MASON COLLEGE, BIRMINGHAM.

SESSION, 1887-88.

FACULTIES OF ARTS and SCIENCE.

The NEXT SESSION COMMENCES on MONDAY, 8th OCTOBER. No Student will be admitted under the age of 16 without having passed a preliminary examination.
STUDENTS, containing complete information as to the various Courses of Instruction, Fees, Lecture days and hours, Entrance and other Scholarships, Prizes, &c., may be obtained from CORNHILL BROS., New-street, Birmingham, price 3d.; by post, 4d.
GEO. H. MORLEY, Secretary.

UNIVERSITY COLLEGE, BRISTOL.

The SESSION, 1887-8, will begin on 5th OCTOBER. The College supplies for persons of either sex, above the ordinary school age, the means of continuing their studies in Science, Law, Logic, History, and Literature. The Chemical, Physical, Engineering, Geological, and Biological Laboratories are open daily. The Engineering Department includes Civil, Mechanical, Electric, and Mining Engineering and Surveying; and special arrangements for practical work have been made with various engineers in and near Bristol. Information with regard to the lodging of students may be obtained on application. Several SCHOLARSHIPS are tenable at the College. Calendar containing full information, price 1s. (by post, 1s. 3d.). For prospectus and further information, apply to the REGISTRAR.

THE YORKSHIRE COLLEGE, LEEDS.

The FOURTEENTH SESSION of the DEPARTMENT of SCIENCE, TECHNOLOGY, and ARTS, and the FIFTY-SEVENTH SESSION of the DEPARTMENT of MEDICINE, begin MONDAY, OCTOBER 3rd, 1887. The Classes prepare for Professions, Commerce, and the Universities. The Physical, Chemical, Mineralogical, Biological, and Engineering Laboratories, and the Weaving Sheds, Dyehouse, and Printing Rooms will be open daily for practical work.
The following prospectuses may be had free from the Secretary:—
1. Prospectus of all Day Classes in the Department of Science, Technology, and Arts.
2. Prospectus of Classes for Occasional and Evening Students.
3. Prospectus of Day and Evening Classes in Civil and Mechanical Engineering.
4. Prospectus of the Department of Medicine.

In the press, and shortly will be published, royal 8vo, price 7s. 6d.

SANCTUARIES.

"Hate stands without and Horror sits within."
Drayton's "Wars of the Barons."
Dedicated, by permission,
To the Right Hon. ARTHUR BARON WROTTESLEY.
By THOMAS JOHN DE MAZZINGHI, M.A., F.S.A., Librarian of the
William Salt Library, Stafford.
Stafford: HALDEN & SON, 44, Greengate-street.

THE TRUTH about HOMER. With

Remarks on Professor Jobb's "Introduction to Homer." By F. A. PALLET, M.A., LL.D.
London: F. NORRIS, 7, King-street, Covent Garden.

TWO NORTH-COUNTRY MAIDS: AN EVERY-DAY STORY.

By MABEL WETHERAL.
"This little story is prettily told, and shows a delicate appreciation of the author's part for some of the finer traits of female character."
Athenæum.
"Drawn by one apparently to the manner born and with many natural touches."
Morning Post.
London: HOPKIN & DROWLEY, 29, Ludgate Hill, E.C.

NEW NOVEL BY THE AUTHOR OF "MY TRIVIAL LIFE AND MISFORTUNE."

THIS DAY IS PUBLISHED.

POOR NELLIE.

3 Vols., post 8vo, 25s. 6d.

MY TRIVIAL LIFE AND MISFORTUNE. A GOSSIP WITH NO PLOT IN PARTICULAR. New Edition. Crown 8vo, 6s.

"The story of 'My Trivial Life' is a genuine book, and may indeed be esteemed for one of the bitterest and cleverest novels produced of late years.... We can recall few books of recent years in which there is such an intensity of life, such a passionate outpouring of experience."
Saturday Review.

"She delights the intellect by a continuous succession of bright, witty, often caustic sketches of what is commonly known as 'good society.'"

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

Ireland from the Restoration to the Revolution, 1660-1690. By John P. Prendergast. (Longmans)

It is now almost forty years since Mr. Prendergast, searching for documents which should help to elucidate that important event in history known as the Cromwellian settlement of Ireland, was at last, after many disappointments, led to the discovery in the Tower of Dublin Castle of that portion of the records of the Commonwealth government which, covered with the dust of many years, had survived the ravages of the Restoration era, and which now, carefully bound and placed within the public muniment office, presents an almost inexhaustible mine of information to those who have the curiosity and courage to enquire into that memorable episode, which, rightly understood, is the key to the whole of modern Irish history.

For the Cromwellian settlement possesses a two-fold significance. It is at once the consummation of a policy and the inauguration of a new epoch. Ever since the days when the first tentative efforts had been made to reduce the O'Mores and O'Conors to "civility and good government" by ousting them from their woods and bogs in Leix and Offaly and by planting their lands with English colonists, it had become year by year more and more the settled conviction of English statesmen that the only way to govern Ireland and prevent the constant succession of rebellions there was by the establishment of a strong English landlord interest in the country. In the opinion of the Long Parliament the rebellion of 1641 had been due, not to the plantation policy in itself, but to the timidity with which it had been carried into execution. The policy of planting Ireland with Englishmen culminated in the Cromwellian settlement, the history of which was for the first time, in all its details, graphically depicted by Mr. Prendergast. But the Cromwellian settlement also marks the beginning of a new epoch—the epoch of the Protestant ascendancy in Ireland. The state of things then established and essentially confirmed by the Restoration Acts of Settlement remains practically undisturbed to the present day. And for this reason it is important that we should be made thoroughly acquainted, not only with the Cromwellian settlement, but also, in all its details, with the Restoration settlement, for the elucidation of which, we are informed by Mr. Prendergast, there are even more abundant materials at hand, presumably in the Great Carte Collection (which it is to be hoped the University of Oxford will shortly recognise it as their duty to calendar),

than there were in the case of the Cromwellian settlement. In the work before us Mr. Prendergast, though not attempting what we should describe as a *history* of the period, throws not a little light on this subject by means of family sketches, which are, indeed, so full of general interest that our only regret is that he has not entered into it more fully. Unfortunately his excuse, that "the history of Ireland is distasteful to the English public," is unanswerable.

At the time of the restoration of the Stuarts the situation of affairs in Ireland may be thus briefly summed up. With the exception of the province of Connaught, or rather of that portion of it which had been assigned to those Irish proprietors whose claims the Commonwealth government could not altogether ignore, the whole of Ireland was in the possession of loyal Protestant Englishmen, viz., Commonwealth soldiers who had been forced to receive lands there in lieu of their arrears of pay, and "adventurers"—i.e., gentlemen, members of parliament, London merchants, and the like, who had advanced money to the Long Parliament for the suppression of the Irish rebellion (which had been diverted from its original purpose to furnish an army against Charles I.) on security of the confiscated lands. Thus, it is evident the Cromwellians were, so to speak, masters of the situation. But the Cromwellians were divided into two parties: the extreme Commonwealth men like Ludlow and the regicides, who, for their safety, independent of any principles they held sacred, could admit of no compromise with the restored Royalists; and the "moderates" or turncoats, as their enemies would have described them, and perhaps not unjustly—like Sir Charles Coote, Lord Broghill, and Sir Theophilus Jones—who, foreseeing the doom that was about to overtake the Commonwealth, were anxious to secure their own properties by making reasonable terms with Charles II. The latter, it is needless to say, though at first they did not realise their own strength, being the more powerful, carried the day. The condition of their support—security for their possessions—was conceded by Charles in his letter from Breda, and confirmed by the Act of Settlement. Sir Maurice Eustace, and the Irish officers who had loyally trailed their pikes for Charles on the continent, after fighting valiantly for him at home, might well exclaim against the manifest injustice of a compact whereby traitors, and not loyalists, were to be rewarded; but unless Charles was prepared for their sakes—for the sake of his promises—to venture on a fresh reconquest of Ireland, the restoration of the old proprietors was simply an impossibility. The ultimate consequences of the compact were, however, not as yet anticipated, and for the nonce all was bright and hopeful. By the Declaration of November 30, 1660, the English were to keep all they had acquired, the Irish to be restored to all, or nearly all, they had lost. Of course, as Mr. Prendergast puts it, the thing was a mere "juggle."

"If," said Ormonde, "the adventurers and soldiers must be satisfied to the extent of what they suppose intended them by the Declaration, and if all that accepted and constantly adhered to the Peace in 1648 be restored, as

the same Declaration seems also to intend, there must be new discoveries made of a new Ireland, for the old will not serve to satisfy these engagements."

But, in truth, the services that the Irish had rendered to the monarchy were as yet too fresh in the memories of all to allow them to be openly neglected; and accordingly it was pretended that there would be an immense fund for repressing such Cromwellians as should be put out for king's friends by the estates of fanatics and regicides, by forged debentures, and false admeasurements. The fallacy soon became manifest, and the Declaration of November 30, 1660, was followed by the Act of Settlement of September 27, 1662, classifying and restricting the claims of the Irish who were to be restored to their estates. But even this arrangement, disqualifying though it did numbers of Irishmen who had faithfully served the king, proved unsatisfactory. For when the court for hearing claims was opened, so numerous were the claims to innocency that the Cromwellians, trembling for their estates, prepared to resist any attempt to extrude them from their newly acquired possessions. In the House of Commons they even ventured to charge the commissioners for hearing claims with having a design to destroy the English Protestant interest in Ireland. And so, though it had only sat seven months, and though scarcely a tithe of the claims had been heard, the "Court of Irish Innocents," as Mr. Prendergast aptly calls it, was closed on August 21, 1663. Two years afterwards the Cromwellians consented, in order that a final settlement might be obtained, to surrender a third of their estates so as to enlarge the fund for reprisals. This concession formed the basis of the Act of Explanation of December 24, 1665. For a moment, but only for a moment, were the hopes of crowds of expectant Irish widows, orphans, and soldiers raised. But when the final court of claims closed, it was found that only sufficient land remained for the satisfaction of those "innocents" whose claims had already been heard. Six thousand Irish who had filed their claims of innocence found the door finally closed on them, and thus ended one of the many tragic scenes in Irish history. Well might Swift, with bitter irony, describe the Irish as the most loyal fools in Christendom! The sufferings of some of these "innocents" whose claims could not be heard "for want of time," and of the ensign men, to whose services both at home and abroad Charles acknowledged himself deeply indebted, are heartrending. But the limited space at my disposal will permit me to give only one of these incidents of family history, which, as I have already said, give to this book its chief interest:

"Col. Charles MacCarthy Reagh, of Kilbrittan Castle, near Bandon, in the county of Cork, was once the owner of a principality. . . . Col. MacCarthy had married the sister of the Earl of Clancarty, Ormonde's brother-in-law. He was named among the ensignmen as having served the king in foreign parts; but, finding no provision made for the ensignmen in the Act of Explanation, he besought Ormonde to save from utter ruin an ancient loyal family related to his Grace. He (Col. Charles MacCarthy), his wife and their seven children, were (he said) in a most sad and deplorable condition

himself and his wife and some of his children being forced for want of means or habitation to repair to Dublin, where they were then destitute even of necessary clothes to appear in, not having penny or penny's worth to relieve them; but, in the words of truth (added Col. MacCarthy), in a condition ready to perish with starving; and such of them as were in the country, he said, had no other being or subsistence than wandering from house to house looking for bread."

Luke Sedgrave, of Killeglan, whose civility and loyalty were attested by Sir Thos. Harman, captain of Ormonde's Life Guard, was unable to have his claim of innocence heard for lack of time. Killeglan had been set out to Henry Cromwell for his arrears, and the Duchess of Ormonde had besought the king on her knees that he might be allowed to retain all his lands in return for his kindness to her and hers during Oliver's reign. Luke Sedgrave being dead in 1675, his widow, "a virtuous woman of a constantly loyal family," according to the Bishop of Ferns, "wandered with her children in poverty without jointure or relief."

The question naturally suggests itself—What became of all these unsatisfied claimants? Some, no doubt, returned to the Continent and enlisted in foreign armies; some became tenants on the lands that had once been their own; some, too, were "ranging, the Lord knew where, having not a bit to put in their mouths;" while others, driven wild by the treatment they had received, took to the woods and turned torie. One of the many deplorable effects of the English rule in Ireland has been the creation at intervals of a class of social outlaws—tories or rapparees, as they have been called at different times—who have ever been ready, in revenge for the injuries they have received and in the expectation of recovering their old positions and estates, to foment, and to take a desperate part in, any movement that offered to convulse the state. During the stern and vigorous government of the Commonwealth the tories had practically been exterminated; but shortly after the Restoration a new race sprang into existence, the offspring, for the most part, of the dispossessed gentry, who were "nussled up" by their priests and followers in the belief that they would one day recover their ancestral lands, and who for more than thirty years continued seriously to menace the peace of the state. The most stringent laws were passed against them. Wherever they were found they were shot down without mercy. But all, seemingly, to no purpose. "Would to God," said Orrery in 1664, "we had some vent for the many loose people who, having served abroad, will not work at home, and, therefore, live upon robbery to the great detriment of the public." On January 16, 1666, the year of the great tory rebellion, Sir Thomas Harman informed the Earl of Ormonde that a hundred of them, under the command of one Anthony Kirwan, had appeared at Leighlin Bridge in the County of Carlow. Some twenty years later the town of Macroom was pillaged and burnt by a body of tories in retaliation for the prosecution and execution of some of their kinsmen by its inhabitants. At the time of the Revolution they played an important part, and formed no inconsiderable portion of James's army. In 1695 a law was made whereby any tory killing

two other proclaimed tories was entitled to a free pardon, for all former crimes except murder; and, in 1718, the like immunity was extended to any tory who had killed one of his fellow tories. These laws only disappeared in 1776. Some of the incidents in this tory warfare, narrated by Mr. Prendergast, are full of interest: that, for example, of Redmond O'Hanlon or Count O'Hanlon, "the incomparable and indefatigable tory," who seems to have enlisted the sympathy of the daughter of the redoubtable Dr. Henry Jones, Bishop of Meath and Scoutmaster General under the Commonwealth. But, stranger even than those of O'Hanlon, were the adventures of the "Three Brennans," tories of the county Kilkenny, who, after robbing his majesty's good subjects of £18,000 and upwards, escaping from the gallows in Ireland and the jail in Chester, and committing various other depredations, among them robbing the lord lieutenant himself, were eventually received into protection. The whole story reads more like one of Harrison Ainsworth's romances than a sober page of history. The tory race died hard; and it is no wonder, as Mr. Prendergast remarks, that the name of tory and the sport of tory-hunting should have become familiar words in Ireland. He himself, as he tells us, well remembers how his grandfather used to sing for the amusement of his children:

"Ho! brother Teig, what is your story?

I went to the wood and shot a tory,

I went to the wood and shot another:

Was it the same or was it his brother?

"I hunted him in and I hunted him out,
Three times through the bog and about and about,

Till out of the bush I spied his head,

So I levelled my gun and shot him dead."

Mr. Prendergast says that Irish history is distasteful to English readers. Perhaps it is; though, at the same time, I think there are not wanting signs of a more careful and more appreciative study of it on the part of English historians; and to them, and even more to the political student, such books as the *Cromwellian Settlement* and these present historical sketches of Ireland from 1660 to 1690 are simply invaluable. R. DUNLOP.

THE ELIZABETHAN NOVEL.

Le Roman au Temps de Shakespeare. Par J. J. Jusserand. (Paris: Delagrave.)

M. JUSSERAND's high reputation as one of the very first English scholars of France will lose nothing by the present volume. He is perhaps best known as an accomplished and agreeable guide to the highways of Old England, more particularly to that most famous of them which Chaucer's pilgrims thrived with their unbroken chain of tales. He now offers us his guidance along that highway of literature in which the *Canterbury Tales* themselves form the brilliant and alluring starting-point, but which is otherwise of second-rate attraction, and rarely even by native pilgrims trodden from end to end. The Elizabethan novel, which forms the central subject of M. Jusserand's study, has in fact suffered much the same fate at the hands of the literary historian and of the contemporary reader. It has been overshadowed by the Elizabethan drama, for which it prepared both the mate-

rials and, in some degree, the method. With its sporadic and spasmodic brilliance, its starchy enthusiasms, its academic passion, its tormented eloquence, it was a *Fehlgriff*—a tentative and, in the main, infelicitous effort of the Elizabethan genius to find its natural medium; and the drama, which offered that medium, drove it from the field. The novel was in fact beaten in the struggle for existence. Its most fascinating page was closed, at the best, in very good time for the afternoon visit to the play; and it paled at length before a form of art which, in its most unlearned mood, was more like life than the romantic Arcadia of Sidney, and which was able, moreover, to borrow for itself the woodland charm of pastoral, and the high debates of Euphuism, and animate them with that fire of nature and of passion of which neither Lyly nor Sidney knew the secret. Moreover, the authors followed the readers. Lyly followed up his first dazzling success in the novel with a series of plays; and Greene and Lodge presently initiated their master in making the same transition to an art which, in addition to its other attractions, was better paid.

The matter is well and clearly arranged in six chapters, the first and last of which, on the romance "before" and "after" Shakespeare, serve as prologue and epilogue to the discussion in the intervening four of Lyly, Greene and Lodge, Sidney and Nash. The first chapter sketches—but only sketches—the "origin" of the romance. This is not the best part of M. Jusserand's book; for his gift is rather literary than historical, and the historical treatment of the romance offers peculiar difficulties. It is not a closed and well-defined domain, like the drama, but an expansive territory, opening on every side into allied regions, from which it is only divided by an invisible line. M. Jusserand is perhaps inclined to draw this line within too narrow limits, and to ignore too much all that lies without it. He has the French instinct for drawing distinctions rather than the German instinct for discovering relations; he shows more eye for congruity than for kinship, and treats his subject rather as a curiosity from which all alien matter is to be carefully detached than as an organic growth which is understood the better by help of the soil that clings about its roots. It is obvious, for instance, that the distinction of verse and prose is not at all of primary importance in the history of the novel; in other words, that no historian of the modern narrative in prose can rightly ignore its mediæval representatives in verse. Yet M. Jusserand is more than half inclined to insist upon this distinction. He gives us a few inevitable pages, it is true, on the Middle-English romance-cycles, and even carries us back "presque au déluge" in order to announce that "l'étrange poème de *Béowulf*" is the "oldest of English romances." On the other hand, the Middle-English *conte* is illustrated not from Chaucer or Gower, not even from such earlier scattered specimens as the *Lady Siris*, but from a brief and insipid prose anecdote of Richard Rolle of Hampole. That so accomplished a student of Chaucer should have thus sternly ruled him out of court may be heroism, but it is hardly scholarship. And when we are told that his *Troilus and Cressida* "si elle était en prose, serait le premier vrai roman d'Angleterre," we are

forced to remember that this honour has already been conceded to the Old-English epic poem, the language of which is certainly far more remote from prose than Chaucer's, far more persistently imaginative in detail, if also far less luminous and coherent in the mass. In spite of qualities of style which give it an imperishable place in the history of English poetry, *Troilus and Cressida* is assuredly inseparable also from the history of the English romance; it belongs to it as closely as Clough's *Mari Magno* to the contemporary novel.

It is probable, again, that the original destination of these chapters, as introductory to the classical period of the English novel, has been not altogether favourable to their success as an independent treatment of the novel of Elizabeth. M. Jusserand frankly announces that he is here concerned only with such literature as has left its lasting mark—with the "ancestral" books whose "grandsons and daughters," as he prettily puts it, are still alive and cherished among us. This method has its obvious advantages and disadvantages. Lyly appears in a new and suggestive light as a precursor of Richardson, whose didactic pedantry and insensibility to the poetic aspect of love he shared, while wholly wanting his power of construction and his pathos. And we probably owe to M. Jusserand's desire to find an Elizabethan parallel for Fielding and Smollett some part at least of the admirable chapter in which, for the first time, justice is done to Nash's *Jack Wilson*. Yet the historical link between the two groups is in reality of extreme tenuity. The fashionable novels of the sixteenth century enjoyed, in the eighteenth, at the best, a barren *succès d'estime* in the literary world; and they were fortunate if they found their way to those purlieus of St. Aldermay's where their dainty phrases were reprinted on coarse paper and in coarser type, to be laboriously spelled out by servants and apprentices. Richardson's *Pamela* takes its title from a book to which it assuredly owed little else; and in *Clarissa*, characteristically enough, it is a cook who is found reading Greene's *Dorastus and Fawnia*. And, on the other hand, the continual juxtaposition of the finished eighteenth century types with the pale and rude Elizabethan sketches tends to obscure the relation of the latter to their own time. The Italian novels which, from Lyly's birth to the appearance of *Euphues*, held literary England under their spell are barely referred to. The popular prose romances are deliberately ignored. The *Euphues* and the movement which it led must, indeed, be considered as in some sense a literary revolution against the former, pitting the pseudo-stoicism of Guevara's *Aurelius* against their ardent sensualities, and his affectation of rural sentiment against their complacent worldliness. Lyly's own conceptions of plot are nevertheless perceptibly coloured by them; and this is still more obvious in Lodge and Greene, the *dénouement* of whose *Philomela* is closely copied, as every reader must have noticed, though we do not remember to have seen any such notice recorded, from the well-known *Titus and Gysippus* of the Decameron. We must express a wish, by the way, that M. Jusserand had given us the more detailed account of Greene's novels, of which he is so eminently capable. This has never yet been done, for the Russian biography familiar to

Mr. Grosart's subscribers is not, on its literary side, much more than a full summary of their contents. But we are, after all, inviting M. Jusserand to follow a way along which he has politely but decidedly declined to go; for it must be admitted that Greene, as a whole, is not precisely "cherished," even by the most literary of contemporary cooks.

Our cavillings, it will be seen, concern rather M. Jusserand's method than his performance. We wish he had given us something more; but what he has given us is, in its way, exceedingly good, and unapproached by any account of the same subject, as a whole, known to us elsewhere. It is full of unobtrusive scholarship and lightly borne learning. It combines the ease and crispness which we expect of a good Frenchman—and for the most part find—with the accuracy which we find less often, and do not, perhaps, very definitely expect. We trust it may shortly appear in translation.

C. H. HERFORD.

Our Hundred Days in Europe. By Oliver Wendell Holmes. (Sampson Low.)

IN his essay on *Addison*, Macaulay speaks of certain privileges enjoyed by good writers, one of which he holds to be that when "from one cause or another," they fail, they "shall not be subjected to the severe discipline which it is sometimes necessary to inflict upon dunces and impostors, but shall be merely reminded by a gentle touch like that with which the Laputian flapper roused his dreaming lord, that it is high time to wake." Dr. Holmes seems to have been himself troubled with doubts about the quality of his latest book. After completing the very first chapter he begins his apologies:

"The reader who glances over these papers, and, finding them too full of small details, and the lesser personal matters which belong naturally to private correspondences, turns impatiently from them, has my entire sympathy and goodwill. He is not one of those for whom these pages are meant. Having no particular interest in the writer or his affairs, he does not care for the history of the 'migrations from the blue bed to the brown' and the many Mistress Quicklysisms of circumstantial narrative. Yet all this may be pleasant reading to relatives and friends."

Not feeling quite assured that even this will suffice to justify his book, he returns to the subject later on, and devotes a portion of the concluding chapter to an explanation "Why this record is printed." These papers, he says with emphasis, "are written for friends rather than for a public which cares nothing about the writer." The words with which he closes the book indicate the still lingering doubt: "I hope I need never regret giving to the public the pages which are meant more especially for readers who have a personal interest in the writer."

To tell the truth, there was very good cause for Dr. Holmes's anxiety. Had he printed his book for private circulation or indicated in some unmistakable way that it was a work of limited interest, and thus warned off unwary buyers, he would have been excused; for the author of the "Breakfast Table Series" has far more friends and readers who have a "personal interest" in

him than could be reached by private correspondence. But, as it is, the book having been announced in the usual way, and published and offered for sale in America and England as a new and important work by Dr. Holmes, assuredly the general reader has a good right to complain. I myself have a very hearty interest in the author of such-valued books as *The Autocrat* and *Elsie Venner*; and his doings and welfare cannot be indifferent to me. But I must say this book about his visit to Europe thoroughly disappoints me. I did expect that so acute an observer of men and manners would say instructive and entertaining things about my fellow country-men and women, even in his semi-private correspondence. He was in England fifty years ago; and, coming again after such an interval, surely his imagination should have been stirred by the changed England of to-day, so that he would carry away some valuable and suggestive impressions to be put on record. Certainly, he tries to recal emotions—about Stratford-on-Avon and Stonehenge, for example—which, no doubt, he felt when he was on the spot; but, making "copy" for the *Atlantic Monthly*, his attempt to work them up again in his study at Boston, is far from successful.

What, then, has he to tell us? That he went into London society and was made a great fuss over; that after society had gone out of town he wandered about the streets, looked into the shop-windows and did a little shopping; that he visited Salisbury, Brighton, Stratford-on-Avon, Edinburgh, Paris, &c., and that he felt always that he was being treated as a distinguished visitor. He was received so cordially and entertained so well that we cannot wonder that England and English life are pleasant in his eyes. If his visit was not precisely as it is described by his American publisher—"a triumphal procession through literary and social England"; if he was not "for the time the one man whom England delighted to honour," at any rate, in a limited circle, he was one of the minor lions of a season. From his particular point of view his visit was certainly a success. He was introduced to the Prince of Wales and the "lovely youthful-looking Alexandra," and travelled in their special train to Epsom; the Princess sent her album for him to write a verse in; he attended a garden-party given by "the always affable and amiable" Princess Louise; he chatted, unawares, with Prince Christian, and because he was not snubbed, thought to himself—"You are a Christian prince anyhow if I may judge by your manners." The lords and ladies of high degree with whom he had intercourse include an archbishop and a duke, several marquises, bishops, barons and baronesses, whose names are all enshrined in his book. Finally, an invitation reached him to "meet her Majesty" at a garden party; alas! too late: he was on his way home. "I know full well," he remarks, "that many readers would be disappointed if I did not mention some of the grand places, and bring in some of the grand names that lend their lustre to London society." As it is, they will surely be satisfied. He was quite in his element, for "it is really much easier to feel at home with the highest people in the land than with the awkward commoner who was knighted yesterday." Henceforth, his

old enemy, the New England deacon, who says "Haöw's your haälth," will be quite intolerable to him.

Is there, then, nothing in this book worthy of our excellent autocrat? Yes, here and there we have glimpses of his old genial and instructive humour, which show us what the whole of the work should have been, and indicate that the present failure is not due to any decay of the author's powers. True, he often closes his eyelids and startles his household by saying, "Now I am in Salisbury," or, "Now I am in Stratford" (p. 194); but for my own part I only regard what appears at first sight to be nervous apprehension on their part, as evidence that his friends are of the same impressionable temperament as the friends of Mr. Peter Magnus. Dr. Holmes certainly ranks among "good writers"; as certainly he has failed in his present work. Bearing well in mind the treatment recommended by Macaulay, I have thought it right to take upon me the humble office of the Laputian flapper, and, by a gentle touch, to warn him that it is high time for him to wake.

WALTER LEWIN.

Romantic Love and Personal Beauty. By Henry T. Finck. In 2 vols. (Macmillan.)

THE title of Mr. Finck's work is a little misleading. The word romantic is commonly associated with something exceptional and abnormal; and romantic love is a name generally appropriated to the passion entertained for one another by two persons who are separated by great material or social obstacles, and who, by their high qualities, prove themselves on a level with the difficulties of the situation, thus justifying the intensity of the feelings that have drawn them together. From the very nature of things, such love must always be as rare in real life as it is abundant in literature. It is the prerogative of daring and delicate natures, which are neither the best fitted to survive in the struggle for existence, nor to transmit their characters to a numerous and healthy progeny. Out of harmony with the society into which they are thrown, "gey ill to live wi'," as old Mrs. Carlyle said of her son Tom, they are often unable to bear the restraints of married life even when mated with the companion of their choice, and not the less so if that companion is as high-spirited, as exacting, and as intolerant of opposition as themselves. Still more, if the passion is directed towards unlawful or unattainable objects, is it at war with the very conditions of a healthy and progressive civilisation.

Mr. Finck, on the other hand, understands by romantic love the passion which precedes and leads up to, but never survives, the marriage of any two young people whose union is the result of mutual choice and affection. It is essentially pre-nuptial—"the adoration of a maiden by a youth." We are never told, in so many words, that the passion cannot be felt by a widower or for a widow; but the whole tenor of the work seems to imply that such is the author's opinion. Anyhow, romantic or not, the feeling in question is ordinarily found among marriageable young people; and we may admit that only as enter-

tained by or for them is it very intimately connected with the general interests of mankind, though from this point of view Mr. Finck seems considerably to exaggerate its importance and novelty. He describes it as "one of the greatest (if not the greatest) moral, aesthetic, and hygienic forces that control human life" (i., p. 46); and as "almost as modern as the railway, the telegraph, and the electric light" (i., p. 288). Only allow young people to mix freely together, and to choose their mates according to purely personal preferences, and the result will be a beautiful, healthy, high-bred, intellectual, and happy race.

This philosophy is evidently inspired in about equal proportions by Darwin's theory of sexual selection (with some assistance from Schopenhauer), and that extremely good opinion of their civilisation and its products entertained by most Americans; for I suppose it may be assumed that Mr. Finck is American either by birth or adoption. His name indicates a German extraction, and there is a good deal of the German passion for systematisation about his method of working. Unfortunately, instead of the rigour of German logic and the profundity of German knowledge, it is accompanied by a looseness of reasoning, a superficiality of information, and an inaccuracy of statement which politeness forbids us to associate with any nation in particular. Thus, in analysing the emotions which, when combined with the sexual instinct, go to make up romantic love, and which by a very fanciful analogy with Helmholtz's theory of sound-colour he calls its "overtones," Mr. Finck reckons among the number "gallantry" and "self-sacrifice," which are not emotions at all but dispositions of the will, and "hyperbole," which is a belief; while hope, a most prominent and distinctive element, is altogether omitted.

In all cases we may readily concede to the author that gallantry and aesthetic admiration, the "overtones" on which he lays most stress, are very important elements of amorous passion in its intensest manifestation; and also that of these two gallantry is a comparatively modern development. How modern is another and very interesting question, to the solution of which Mr. Finck's historical scholarship seems scarcely adequate. A writer who evidently believes that King John of France was taken prisoner at Agincourt (ii., p. 204) inspires us with little confidence as an authority in this line. Still more unsafe is it, in dealing with the past, to take as our guide one who betrays a manifest tendency to exalt the present at the expense of every former age. Undoubtedly love occupies a very subordinate place in biblical and classical literature; but why, without any knowledge of Hebrew, make the English translators responsible for the fervid splendour with which the Song of Songs gives utterance to that sentiment (i., p. 113)? The passage quoted to illustrate this assumption (chap. viii., vv. 6-7) is most faithfully, and even literally, rendered in the Authorised Version with the exception of a single clause, where the words translated, "jealousy is as cruel as the grave," really mean "passion is as inexorable as Sheol"; and, as this misconception dates at least from the Septuagint, there can be nothing specially

modern or English about it. In the section on Greek love we miss any reference to the famous chorus, "Ἔρως ἀνικατὲ μάχαν"; in that on Roman love the beautiful line of Tibullus,

"Non ego sum tanti ploret ut illa semel,"

which expresses more chivalrous feeling than all the poetry of Ovid put together, is similarly ignored.

That the modern respect for women originated in the later Middle Ages, and was even pushed to extravagant lengths during that epoch, Mr. Finck does not attempt to deny; but a writer on romantic love might well have given a somewhat deeper study to the causes of so vast a revolution. In the thirty pages devoted to mediæval love there is not a trace of original research; and the farrago of quotations from contemporary essayists, of which these pages are chiefly made up—as, indeed, is much the greater part of the whole work—does not even embody the best available information on the subject. Apparently the author's attention has never been drawn to that most interesting and suggestive chapter of the *History of Civilisation in France*, where Guizot connects the chivalrous feeling towards women with the exalted and commanding position occupied by French *châtelaines* in feudal times during the frequent absences of their lords—a phenomenon altogether independent of Christianity and even antagonistic to its influence. Following up the line of reflection thus opened we may see that gallantry and respectful behaviour towards women—so far from being, as Mr. Finck holds, a generalisation from the conduct of lovers towards their mistresses—has, contrariwise, been imposed on lovers by a change in the position of the sex due to political and economical forces. And if we are to expect a continuation of the same movement it will probably be effected less by the sentimental intercourse of boys and girls than by the further political and industrial emancipation of women, which is just what Mr. Finck contemplates with most alarm and disgust.

So much for gallantry. Let us now turn to aesthetic admiration, which, according to Mr. Finck, is already the most prominent element in love and is destined to still greater importance in the future. Where unrestrained intercourse between the young of both sexes is permitted wives will be chosen for their beauty, which, together with the good constitution of which it is most frequently an index, will be transmitted to the children, by which process a healthy, handsome, and happy race will in time be formed. Even couples without much to boast of in the way of good looks, having been drawn together by the attraction of complementary qualities, will neutralise each other's bad points and leave behind them a progeny superior to themselves. Here we have the well-known doctrine of Schopenhauer without his pessimistic principle that in love-matches the happiness of the parents is sacrificed to the physical perfection of their offspring. For, as our author shrewdly observes: "Is it not more conducive to conjugal happiness to know that one has lovely children and that the race is increasing, than to have ugly children and to know that the race is dying out?" (ii., p. 72). America, and to a less extent England, are the standing

verifications of this view. To which country the aesthetic palm should be adjudged is a question never very clearly decided, but each in turn comes in for lavish praise. "The Americans have the most beautiful children in the world" (ii, p. 72). "The English are beyond all dispute the finest race in the world, physically and mentally" (ii, p. 430). In each instance love-matches have to be thanked for the result. The beauty of the lower classes in Italy and Spain is due to the same cause; while an effective counterproof is supplied by France, where both romantic love and personal beauty are rarer than in any other country. Mr. Finck, indeed, omits no opportunity of trampling on the unfortunate French nation; and he even goes the length of saying, what is shamefully untrue, that "the only love depicted by French novelists and playwrights is the adulterous love of a faithless wife" (i, p. 310). After all, however, these distinctions are purely relative, since "pretty girls are so rare that they are almost sure to be spoiled by flattery" (i, p. 249); and "most women are ugly and ungraceful" (ii, p. 198) even in England and America. Perhaps the selective process has not been in operation sufficiently long to work out its full possibilities; but is it not just conceivable that part of the rapturous homage now paid to beauty may be due to its extreme rarity, and would, if it became much more common, be transferred to other distinctions?

Of course, nobody will deny that the habit of marrying for beauty has a tendency to embellish the race. It is another question whether this result is mainly secured by sexual selection; whether, among the highest races, sexual selection is mainly determined by personal beauty; whether, if so, it is a tendency that deserves to be encouraged. Mr. Finck himself seems to agree entirely with Mr. Wallace, as against Darwin, in attributing the aesthetic superiority of the males among the lower animals not to the aesthetic choice of the females, but to the greater vigour developed in an incessant contest for their possession. He also holds that health is a prime cause of good looks among human beings, and mental refinement another. He would admit that the physical and intellectual superiority of one nation or class over another has sometimes been won through causes unconnected with its marriage customs. Thus the great moral and material advantages enjoyed by the English and Americans, and denied to most, if not to all, continental Europeans, may, for all he shows to the contrary, have more to do with their greater beauty, supposing it to exist, than has their freedom from chaperonage.

To many persons this whole view of love, as mainly determined by admiration for personal beauty, will seem a somewhat degrading one. Such a phrase as that "the capacity for feeling romantic love is dependent on intellectual culture, and increases with it" (ii, p. 56), will not do away with the general impression conveyed by the whole work that mental culture possesses no erotic value except through its power of gradually embellishing the features—an influence which, by the way, might cease to tell were the physical perfection of women to become much more than at present the leading motive for

selecting them as wives, for good looks are the result of many causes besides intellect, whereas intellect, if it affects the looks at all, can only affect them for good. But, after all, pretty women, present or future, can easily atone for their deficiency in brains by marrying men of genius; for our author agrees with a famous *Fortnightly* reviewer in holding that geniuses are as plentiful as blackberries, and recommends them to heiresses as desirable husbands. At the same time, to judge by the instances cited in the very entertaining section on "Genius in Love," girls who value their happiness had much better follow Mrs. Carlyle's advice on the subject. Meantime, as we further learn from these pages, women persist in showing a marked preference for athletes or officers, however stupid they may be. Nor on Mr. Finck's principles can their taste be condemned. In the interest of the race it is surely just as reasonable that husbands should be chosen for their strength and presumed courage as that wives should be chosen for their beauty.

Mr. Finck's low view of love is in perfect keeping with his low estimate of women. There may be a touch of irony in the case made out against them as a prescription for hopeless love (i, p. 415); but, scattered up and down the two volumes, one finds sarcasms enough on feminine heartlessness and folly to satisfy the most thoroughgoing misogynist alive.

Nearly the whole of the second volume is filled with a discussion on personal beauty, chiefly composed of very sensible, but it is to be feared very useless, strictures on the crazes of fashion. As to the practical advice for improving one's appearance, it seems a rather impertinent interference with the operation of sexual selection, being principally directed towards the removal of defects which will, after all, be transmitted to offspring. Mr. Finck promises all girls who follow his advice that they will be "gobbled up before twenty-three by eager bachelors" (i, p. 311). But, in the interest of posterity, it seems undesirable that a plain girl who wears false ears (ii, p. 271) should be preferred to a pretty girl who does not, even should the former possess the additional merit of having discarded her dress-improver and stays.

ALFRED W. BENN.

Russian Lyrics in English Verse. By the Rev. C. T. Wilson. (Trübner.)

THE number of those who furnish us with translations from Russian seems almost daily on the increase. We have had Russian novels by the score, both in English and French versions; and M. Vogüé, in his *Roman Russe*, has given us some excellent criticisms upon them. Translators of Russian poetry are now occasionally making their appearance. The Germans have been before us in this respect, and have produced several—to mention only Bodenstedt. But among us they have been but few, counting from the very weak versions of Sir John Bowring, published as far back as 1822, to the translation of a Russian minor poet by Mr. Hart-Davies, reviewed recently in the *ACADEMY*. The new competitor in the field offers us a volume of Russian lyrics.

The title of the book is, indeed, a promising one; and, on glancing over the list of authors

from whom specimens are taken, we cannot find fault with the selection, although two or three famous names—that of Derzhavin, for instance—are omitted, and some rather insignificant postasters find an entrance. But, although we are pleased with the representative authors chosen by Mr. Wilson, we cannot say much in praise of the style of his translations. They are, as a whole, prosaic, and not calculated to give a favourable impression of Russian literature to outsiders. The versions of the fabulist Krylof—we adopt Mr. Wilson's spelling of the Russian names to avoid confusion—are exceedingly flat. Could anything be conceived more pointless than the conclusion of the fable entitled "The Grandee"?

"In court, but yesterday, I saw a judge,
To whom a passage straight to heaven none
would grudge."

When we turn to Mr. Wilson's versions from Jukovski, we find, to begin with, that he has changed the metre of "Svetlana," which he styles, strangely enough, a humorous poem. By this alteration he has done away with much of its special excellence, for the versification of this fantastic story is charming. Even Sir John Bowring, dull though he be, has succeeded better. The same must be said of Mr. Wilson's translation of Pushkin's "Bridegroom," which is an attempt to imitate the Russian national tales. Here, again, the metre is completely changed. The extract from the longer poem, "Poltava," giving an account of the battle, is turned into blank verse, and that of rather a weak kind. The striking poem, "The Demons," is hardly recognisable. Baratinski and Yazikof are now but little read in Russia, and their names might safely have been omitted.

In Koltzëf—as Mr. Wilson writes the name—we come to one of the most truly national writers ever produced by Russia. As his poems are redolent of the soil, they necessitate unusual skill, if we are to have a faithful version. The metre at the outset is a stumbling-block. How reproduce in English the short, unrhymed lines in which they are generally written, so forcibly reminding us of the old Russian popular songs? Mr. Wilson has not attempted it. He gives the song of the ploughman—one of the most delightful lyrics in the whole range of Russian poetry—in somewhat spiritless octosyllabics, and is even more unsuccessful with the "Peasant's Misgivings"—a poem extremely difficult to translate, it must be confessed.

When we come to the extracts from Lermontof, we cannot feel that the poet has been adequately rendered. The fine, vigorous lyric, "The Dispute," so rich in Oriental colouring, is hardly to be recognised. Let us take the following verses as a specimen:

"Beneath the shade of mulberries,
Where foams the luscious wine,
The Persian lets upon his dress
The falling nectar shine.
There, seated on his couch at ease,
He smokes the narghleh,
And does round the Teheranite
Where pearly fountains play."

The italics are our own. In addition to the want of harmony conspicuous in these lines, we must challenge the translation "mulberries." The original is *chinar*, which we take to mean a plane-tree. The "Cradle Song of the Cossack Mother"—so celebrated

t throughout Russia—appears in a less unpleasing garb; but it cannot be considered a successful version.

Omitting some trivial authors who have gained no great reputations, we come to Nicholas Nekrasof, the last poet of conspicuous merit who has appeared in Russia. Mr. Wilson has tampered a great deal with "The Field Unreaped." Instead of the two short lines of which each stanza of the original consists, we get stanzas of six lines, and the style of the poem in consequence is wholly changed. It is possible that some of our readers may remember this production of one of the most realistic of the Russian poets, who does not hesitate to paint in striking colours some of the less pleasing features of Russian life. He is gradually attracting the attention of students out of his own country, as is shown by the publication last year at Boston (U.S.) of a version of his pathetic tale in verse, "Red-nosed Frost" (*Moroz, Krasni Nos*). The remarkable poem by Nekrasof, entitled "The Hospital," appears in blank verse in Mr. Wilson's book.

The last author whom we shall notice is Nikitin, who in so many particulars of his career resembled Koltzef. Indeed, these uneducated, and in many instances peasant, authors form a strangely interesting feature of Russian literature. We notice in the July number of the Russian magazine, *Starina*, some striking verses by a new poet of very humble position, named Drozhzhin. Mr. Wilson has naturally attempted "The Grandfather," by Nikitin; but he has not succeeded in rendering the spirit of its Wordsworthian simplicity. It belongs to the category of such lyrics as the "Simon Lee" of our English poet. The first verse strikes us as rather harsh:

"With head quite bald and snow-white beard
Sits grandsire old;
Before him bread and cup, which doth
Cool waters hold."

The effect of these lines is rather weakened in the translation, for the poet means that the poor old man has only bread and water for his meals. There is no qualifying adjective to "water" in the original. Mr. Wilson makes it appear as if he was taking something cool on a summer-day.

We are truly sorry to have been able to say so little in favour of this book. We are quite willing to give the author all credit for accuracy. He is evidently well acquainted with the Russian language; but he has clearly not been admitted into the fellowship of the Muses, and we cannot help thinking that a prose version would have been better.

Mr. Wilson seems to take his account of the authors he introduces to his countrymen from some Russian book. They strike us as rather meagre; and the English reader will require further explanations. When we see the inadequate result to which so much careful study and linguistic knowledge has led our author, we cannot help thinking that there is a great deal to be said for prose versions of poetical works, if they are written with elegance and spirit. We have all seen what Prof. Butcher and Mr. Lang could do with the *Odyssey*. It was, no doubt, from a feeling that the fables of Krylof—which Mr. Wilson so rashly attempts—could not be adequately rendered in verse that Mr. Ralston was

induced to publish his excellent prose version. We respect his reverential powers of abstinence and self-restraint the more when we see the failures of others.

W. R. MORFILL.

NEW NOVELS.

Like and Unlike. By M. E. Braddon. In 3 vols. (Spencer Blackett.)

A Real Good Thing. By Mrs. Edward Kennard. In 3 vols. (White.)

The Earth Trembled. By Edward P. Roe. (Ward, Lock, & Co.)

Under Suspicion. By Edith Stowe. (Fisher Unwin.)

Passions Subdued. By Louisa Lacy. (London Literary Society.)

Three Lucky Shots. By Oscar Park. (Spencer Blackett.)

Gordonhaven. By an Old Fisherman. (Edinburgh: Oliphant, Anderson, & Ferrier.)

In *Like and Unlike* Miss Braddon returns to her early style—and more's the pity. Her object is to contrast two brothers, Adrian and Valentine Belfield, and to give in Valentine a wildly passionate and essentially animal nature, to some extent purified and ennobled—though, unhappily, when it is too late—by the pure love which a poor girl, with a gipsy temperament and a disreputable mother, whom he has failed to seduce, cannot help giving him. Miss Braddon unquestionably accomplishes her object, although at the cost of her readers' pleasure. Valentine is as striking an individuality as even she has drawn, and as repulsive. Incapable of altruism even to a conventional extent, holding and acting upon Rochester's theory of feminine virtue, he sets himself deliberately to subjugate every woman he comes across. Unfortunately for himself, he conquers his brother's fiancée, marries her, and finding that, on being neglected by him, she has transferred her affections to another man, strikes and unintentionally kills her. The result is a complication of mysteries and misunderstandings quite of the old *Lady Audley's Secret* type. The company that we are introduced to in *Like and Unlike* is by no means good. Lord St. Austell, the habit-and-repute seducer, is a shade worse than Valentine Belfield, and Valentine's wife's sister, Mrs. Baddeley—a heartless mercenary coquette of the Anglo-Indian kind—is worse than either. Adrian Belfield, who is at once so like and so unlike his brother, and is as unselfish as that brother is the reverse, is a trifle too chivalrous. It may not be weak of him to give up Helen Deverill to his brother, but it is decidedly weak of him to be willing to take the consequences of his brother's brutal homicide upon himself. Happily there are in *Like and Unlike* two women who are not quite the slaves of Ouidaish passion—Lady Belfield, Valentine's too indulgent mother, and Madge, his good angel and saviour. Happily, too, these are not only the best, but the best-drawn characters in the story. Miss Braddon shows here no falling-off in point of style or of skill in plot-construction. Her English becomes at times positively Corinthian in its "nervous-

ness"; but, such as it is, it is seen at its best in *Like and Unlike*.

Mrs. Edward Kennard cannot be congratulated on her latest "sporting novel." It is intolerably long; the plot drags sadly; and the table-talk is excruciatingly slangy. Then there is a character in *A Real Good Thing* that is quite unworthy of her—a Miss Georgie Beaumont, who has the culture of a stable-boy and the soul of a courtesan, and who, when a chance comes her way, "displays her charms"—of course—with "indecent liberality." There are, however, some good country scenes and country "spins" in *A Real Good Thing*. The hero, "poor old Hopkins," is a strong character; and unselfish Kitten Morrison and her parsimonious father are cleverly contrasted. Kitten's wooing of "poor old Hopkins," when he is (or seems to be) physically ruined for life, is too commonplace an incident. All things considered, *A Real Good Thing* has just missed being a complete failure.

Mr. Roe's story of life in Charlestown before and during the great earthquakes is twice as long as it should be; but no other fault can be found with it. It is a very artistic attempt to utilise, for the purposes of fiction, not only the recent earthquakes in the Southern States of America, but the loves and hates produced by the Civil War. The two girls, Ella and Mara, are exceedingly well-drawn, and so are their lovers, George Houghton and Owen Clancy; although it is hardly possible to conceive of such a sensible fellow as Clancy being bound, even for a time, by silken chains, to such a selfish and sensuous coquette as Miss Ainsley. Southern patriotism and prejudice after the war are cleverly reproduced in the straightforward Captain Bodine and Mara Wallingford's relentless duenna, Mrs. Hunter. The best characters in the story, however, are the negroes, selfish old Uncle Sheba, his wife, and his son-in-law, Kern Watson. Their almost Poyserish conversation, and their primitive religiosity, are perfect in their way, although there is too much of both. The earthquake scenes, too, are skilfully and not too stagily managed.

Under Suspicion is a rather commonplace, but carefully written and not unpromising story of a Welsh earl who comes among his people in the guise of a working man. It also contains a bad baronet and a charming girl, with a weak papa and the delightfully Tennysonian name of Essylt; and "plain John Chandler, just retired from the grocery business," but one of nature's noblemen, all the same; and Aunt Timothy, troubled with many things—such as calculating how much benzoline is required to take out a grease-spot. That is all that need be said of *Under Suspicion*. Miss Stowe will probably write a better story than this some day—one better constructed, simpler in its aims, and free from pseudo-aristocratic personages.

Passions Subdued looks like the effort of a Sunday-school teacher to tell a good story for the benefit of her pupils. The sentiments are very correct, and so is the English, in the thin sense that a pupil's is who has profited by dictation lessons. The story, however, is too prosaic and pettily realistic. Brough Duval—he might very well have dispensed

with the initial "B"—is an energetic young Scotchman, who, being left, by the death of his father, with the task of bringing up and supporting his younger brothers, proceeds from college to a shop in London, the profits from keeping which are so great that he is able to take one of these brothers into partnership, and to make the other (who has the ridiculously un-Scotch name of Alonzo) a lawyer. But he has a temper like that of a country dominie; and as he finds it extremely difficult to keep his hands off his brother and even his wife, it is not easy to see how Miss Lacy comes to give her account of his career the title of *Passions Subdued*. Altogether this story is a queer mixture of "the Lord's work," bad temper, and the somewhat sordid details of London shop-keeping. It was hardly worth Miss Lacy's while to write it.

There is some vigorous, although here and there a trifle too "tall," writing in *Three Lucky Shots*, a sensational story, which belongs to the American school of Green and Lynch. The impossible incident upon which it turns—"the instantaneous photographing" of what appears to be a murder, but is, strictly speaking, a suicide—does not look quite new, for there was something of the same sort in Boucicault's *Octoroon*. But the introduction of a mysterious cipher and the difficulty of discovering the key to it have the appearance of novelty even in American sensational fiction; and the author manages both cleverly enough, although he pulls his strings in too jerky a fashion. Mr. Oscar Park is also too fond of expressing emphasis by adjectives, and it is not easy to see what he gains by repeating them so often. The word "dingy" makes seven appearances in about half-a-page.

Gordonhaven, which consists of scenes and sketches of fisher-folk on the shores of the "Pearly Firth" in the north of Scotland, deserves the hearty commendation it receives in an introduction from so very high an authority on Scotch humble life as the author of *Johnny Gibb of Gushetneuk*. It presents, under a very thin disguise of fiction, a number of facts bearing on the life, sacred and secular, of a fishing village, where perhaps, provided Presbyterianism runs high enough, the sacred and the secular commingle more than they do anywhere else at the present day. As a study of customs and "characters"—of superstitions, adventures, joys, grievances, "revivals," and what not—*Gordonhaven* supplies an undoubted want in modern Scotch literature. The writer has a keen eye for oddities in human nature, and a turn for satiric expression. The sketch of "Feel Robbie," a young man of weak intellect, is remarkably good. The Scotch in *Gordonhaven*, although it is as much a variety of dialect as Mr. Stevenson's "Lellan," is unexceptionable, the English not quite so. A plain writer on plain people and plain things should not use such a word—unlovely in any case—as "mobocracy."

WILLIAM WALLACE.

SOME BOOKS OF TRAVEL.

Through Cyprus. By Agnes Smith. (Hurst & Blackett.) Miss Smith needs no introduction to the numerous admirers of her *Glimpses of Greek Life*. Her new work, which tells the story of her travels in Cyprus, is written in the same pleasant and simple style. She does not profess to be an archaeologist, or a zoologist, or a sociologist, or even a politician. She is merely an intelligent traveller, able to converse with the natives in their own language, to sketch the scenery she passes through, and to describe what she has seen and done with freshness and ease. She has consequently produced a book which the general reader will find full of interest, though the special student must look elsewhere for the information he wants. The earlier part of the volume is occupied with an account of Cairo and its sights, which does not present anything very novel. The real interest of the book begins when the author and her companion had left Beyrout for Cyprus, preceded by servants, tents, and a canteen. The idea of travelling through the island with tents was a new one, but the experiment proved on the whole to be successful. On two or three occasions Miss Smith was driven by bad weather to seek a better shelter than that provided by her tent, but the storms she met with were not much worse than those encountered by most travellers in Palestine. Her chief difficulties were with the Cyprian muleteers; but these also she managed to overcome, by the exercise of a little tact and patience, and her preliminary prudence in taking with her a Syrian "Arab" to look after the tents. Those, however, who have travelled in Cyprus will easily understand the horror of the Cyprian muleteers at the size of the canteen they were ordered to convey. The illustrations attached to the volume are good, and the printing is excellent. There are very few misprints or oversights, such as "El Kaniset" for el-Keniseh (p. 44), "Brugsch Pasha" for Brugsch-Bey (p. 40), and the German *im* for the English "in the," on p. 15. We hope Miss Smith's work will have the effect of inducing Englishmen, and Englishwomen also, to travel through an island which is full of interest, and enjoys an exceptionally good climate during the winter and spring.

Sketches of Life in Japan. By Major Henry Knollys. (Chapman & Hall.) It is not easy to write anything very novel about a short visit to Japan. A "fugitive traveller with a limited time at his disposal," as Major Knollys calls himself, must have extraordinary gifts of observation to be able to add to impressions of the "beaten tracks" of a country so often and so well described. We all know about jinrikishas or "rickshaws," as this author calls them, with their wonderful runners, of the tea houses with their fascinating Hebes, of the difficulties in procuring edible food, of the fleas and the sliding screens, of the cleanliness and good nature, the shamelessness and simplicity of the people, which strike all travellers. We have read so many times of their festivals and their flowers, their lanterns and fireworks, their inundations and conflagrations, and have performed so often the journey to Nikko, that our curiosity is not greatly roused at the announcement of a new book of travels in Japan. Almost the only novelty we can expect in a book like this of Major Knollys is the freshness with which the often described sights may strike a new mind. To say that Major Knollys' book will be interesting to those who have not read many similar narratives, and will not be dull to those who have read them all, is under the circumstances a panegyric. The journey out is often rather weary reading; but Major Knollys started from Hong Kong, and was fortunate enough (from a literary point of

view) to get into the middle of a typhoon, so that he had no difficulty in making a spirited beginning. Coaling at Nagasaki, a hurried visit to Osaka, a description of Yokohama, and a trip to Miyanosita, the journey to Nikko, an account of Tokio and Kioto, furnish material for plenty of bright description in the rest of the book. So far as his travels are concerned, and the comments interspersed, there is not much to add to what we have already said. He finds the Japanese a pleasant contrast to Chinamen, he thinks some of the women almost as beautiful as Italians, and he has the courage to express very plainly his unfavourable opinion of the architecture and carvings of Nikko and his disgust at Japanese temples and priests and priestesses. All this will be found amusing enough to the ordinary reader; but, to those more versed in things Japanese, the interest of the book will rest mainly on the Major's account of the Japanese army, which he thinks very creditable, and in his very plain, not to say sickening, account of cremation at Kioto.

The New Chum in the Queensland Bush. By Walter S. S. Tyrwhitt. (Oxford: Vincent; London: Simpkin Marshall & Co.) This lively and amusing book contains in a small compass most of the information likely to be wanted about Queensland. Mr. Tyrwhitt, however, does not paint that colony in very attractive colours. To an Englishman the ordinary landscape of the Queensland bush is ugly and uninteresting to a degree; but the worst side of it is the climate. English people are apt to abuse theirs; but if they could

"realise what six months' rainlessness can do in a hot country they would, once and for all, cease to complain about their own moist climate. A serious drought in Australia is, I think, without doubt, the greatest trouble that either farmers or graziers can have to contend with. In England, there are fine rivers and running streams everywhere. Not within the memory of man did an English river of any size ever absolutely cease to run. In Queensland, to see running water at all is quite exceptional. Even the largest rivers are seldom navigable for more than a few miles above the sea. Up country, a river means in ordinary times nothing better than a long chain of stagnant holes at the bottom of a huge river bed."

Then come the mosquitoes and other nocturnal insects that make the night hideous; but the day is made, if possible, more intolerable by swarms of flies. The author enters his protest against the custom of sending patients far gone in consumption out to Australia. This is positive cruelty. In less serious cases of consumption and for asthma the Australian climate often effects a cure, but such cases also might well be cured nearer home. If a fault is to be found with Mr. Tyrwhitt's book, it is the entire absence of dates. There is none to the title-page or preface. He does not tell us when he went to Australia, when he left it, or if he is still there. We only learn, incidentally, that he passed three years in the Queensland bush. He concludes with this advice, addressed to all who think of emigrating to Queensland:

"Lastly, to all classes, I would say, beware of lecturers on the Colonies, who let their enthusiasm run away with them until they produce utterly false impressions in their hearers' minds. Distrust high-flown descriptions wherever you meet them. How many people have gone out to Australia expecting to find an earthly paradise will never be known; and the higher the expectations, the greater the disappointment. It is the great size and half-developed state of the country and the want of population that makes it better than England for the working classes, not that it is more productive or pleasanter to live in."

Life on the Congo. By Rev. W. H. Bentley. (Religious Tract Society.) This little volume of 126 pages is an excellent text-book for those interested in the Congo. Its information is by no means confined to the missions of Central

Africa. We should like to have heard something of the Mohammedan Missions, if any extend so far south; but we do not imply by this remark that Mr. Bentley writes in a narrow or sectarian spirit. Quite the contrary is the case, and Mr. Bentley's modesty about his own exploits is manifest throughout. The introduction is written by the Rev. George Grenfell, the well-known explorer of the Upper Congo. The book contains a sketch map.

NOTES AND NEWS.

THE conclusion of Mr. Kinglake's *History of the Crimean War*—which the author never contemplated carrying beyond the death of Lord Raglan—is now at press, and may be expected during the coming winter. Vol. vii. will take up the story where the last volume dropped it—how many years ago?—just after the battle of Inkerman, and will come down to the substitution of Marshal Canrobert by Marshal Pélissier in the command of the French Army. Vol. viii. will cover the remaining period down to the death of Lord Raglan.

MESSRS. SAMUEL BAGSTER & SONS intend to issue a new series of *Records of the Past*, the first two volumes of which will appear next year under the editorship of Prof. Sayce. He has received promises of assistance in the work from Mr. Le Page Renouf, Prof. Maspero, Mr. Budge, Mr. Pinches, Dr. Oppert, M. Amiaud and other distinguished Egyptian and Assyrian scholars. The new series of volumes will mainly differ from the well-known series edited by the late Dr. Birch in containing fuller introductions and notes, more particularly of a historical and geographical nature; and attention will be specially drawn to the illustrations of Scripture afforded by the monumental records of the ancient East. It is proposed to publish translations of Egyptian and Assyrian texts in the same volume.

THE widow of the late Mr. E. C. Grenville Murray is preparing his memoirs for publication. Messrs. Sampson Low & Co. will publish the book, which will be in two volumes.

MESSRS. RICHARD BENTLEY & SON announce the autobiography of the late Sir Douglas Forsyth, an Anglo-Indian officer, who is perhaps best known for his mission to Yarkund and Kashgar. The volume has been seen through the press by his daughter, Miss Ethel Forsyth.

MESSRS. SONNENSCHN & Co., will publish very shortly a brochure, entitled *Better Dead*, which, by reason of its *bizarre* humour, is likely to attract considerable notice. The hero regards social questions from a novel and somewhat startling point of view, having reached a profound conviction that society should be weeded out like a turnip field; and a number of prominent politicians and other notorieties are amusingly hit off. The titlepage will bear the name "J. M. Barric."

MESSRS. CHAPMAN & HALL announce three books of African travel:—*Twenty-five Years in a Waggon in the Gold Regions*, by Mr. Andrew A. Anderson, in 2 vols., with illustrations; *The Tshi-speaking Peoples of the Gold Coast: their Religion, Manners, Customs, Laws, Language, &c.*, by Major A. B. Ellis, of the First West India Regiment, with map; and *South African Sketches*, also by Major Ellis.

THE next volume in the series of "Philosophical Classics for English readers" will be *Spinoza*, written by Principal Caird, of Glasgow.

MESSRS. HODDER & STOUGHTON announce a series of volumes, called the "Expositor's Bible," under the editorship of the Rev. W. Robertson Nicoll, editor of the *Expositor*. They will consist of lectures upon the several books of the Bible, popular in form, but containing

the latest results of critical scholarship. The first of the series, to be published this month, is *St. Mark*, by the Dean of Armagh. This will be followed by *Colossians and Philemon*, by the Rev. Dr. Alexander Maclaren; *Genesis*, by the Rev. Dr. Marcus Dods; *I. and II. Samuel*, by Prof. Blaikie; and *Hebrews*, by Principal Edwards. Among future contributors to the series are the names of Prof. Cheyne, Dr. Plummer, Bishop Barry, Bishop Alexander, Principal Rainy, and Prof. Milligan.

TWO new novels are announced for early publication by Mr. Elliot Stock—viz., *Cyric Danely*; or, the Blue Hill, and *Only an Advertisement*.

THE piece from *The Ingoldsby Legends* chosen for illustration this year by Mr. Jessop is "The Vulgar Boy; or, Misadventures at Margate." It will be published in a few days by Messrs. Eyre & Spottiswoode.

It is said that *The Choice of Chance*, a title which has puzzled the reviewers, is by Miss Mary de Morgan, the author of "On a Pinchusion."

DR. FURNIVALL has at press, for his Shakspeare Quarto Series, the facsimiles of the first editions of "The Contention" (1594), "True Tragedy" (1595), and "The Troublesome Reigne of King John" (1591).

A NEW and permanently enlarged series of the *Quiver* will be commenced in the November part, the price remaining the same as heretofore. The quantity of letterpress will be increased from 64 to 80 pages a month, and the magazine will be printed on paper of improved quality, in new type.

WE are asked to make a correction in the list of books about to be published by the Clarendon Press. The work on which Prof. Rhys is engaged will deal with the Arthurian Legend, not the wider subject of Celtic Heathendom.

UNIVERSITY JOTTINGS.

FULL term begins at Cambridge on Tuesday next, October 11; and at Oxford on Friday and Saturday of the same week.

DR. PEILE, university reader in philology, and author of *Greek and Latin Philology* (which has passed through several editions), has been elected to the Mastership of Christ's College, Cambridge, vacant by the recent death of Dr. Swainson.

THE election to the Lady Margaret's Professorship of Divinity, which was likewise held by Dr. Swainson, has been fixed for Wednesday, October 26. The electors are the doctors and bachelors of divinity who are also members of the senate. Among the candidates is the Rev. Dr. F. J. A. Hort, now Hulsean Professor of Divinity.

WE understand that the reformed pronunciation of Latin, as set forth in the Cambridge Philological Society's pamphlet, *The Pronunciation of Latin in the Augustan Period* (Trübner), will be widely adopted in Cambridge during the present term.

WE hear that Prof. Peter Peterson, of Bombay—author of an edition of the *Hitopadesa* recently reviewed in the ACADEMY, and perhaps still better known for his elaborate series of reports upon Sanskrit MSS. in Western India—is a candidate for the new deputy-professorship of Sanskrit at Oxford.

PROF. MARSHALL will deliver a course of lectures at Cambridge during the coming term on "Foreign Trade, Money, and Banking," of which he has issued the following syllabus:

"The causes which determine the course of foreign trade; the terms on which it is carried on and the

underselling of one country by another. The excess of England's imports over her exports. The theory of money. The influence of the depreciation of silver on the trade with the East. International currency. Bimetallism. The organisation of credit. The English banking system and stock exchange."

PROF. ANDREW SETH has been appointed to the combined professorship of English Literature and Logic at St. Andrews University, vacant by the death of Dr. Thomas Spencer Baynes.

MR. WILFRED GILL, Fellow of Magdalene College, Cambridge, will deliver, at 13, Kensington Square (King's College Department for Ladies), on Tuesday next, at 11 a.m., an introductory lecture (free), to a special course, on ancient moral philosophy. The subject will be: "Greek Philosophy in its Bearing upon Modern Thought."

MESSRS. LONGMANS, GREEN & CO.'S ANNOUNCEMENTS.

General Literature.—"Athletics and Football," by Montagu Shearman, with numerous illustrations from drawings by Stanley Berkeley, and from instantaneous photographs by G. Mitchell, in the "Badminton Library of Sports and Pastimes," edited by the Duke of Beaufort and Alfred E. T. Watson; "The Life of the Right Hon. Sir Stratford Canning, Viscount Stratford de Redcliffe, K.G., G.O.B., D.C.L., LL.D., &c.," from his private and official papers, by Stanley Lane-Poole, with three portraits, in 2 vols.; "The Literary Remains of Fleeming Jenkin, F.R.S.S. L. & E., late Professor of Engineering in the University of Edinburgh," edited by Sidney Colvin, with a memoir by Robert Louis Stevenson, in 2 vols.; "Myth, Ritual, and Religion," by Andrew Lang, in 2 vols.; "Johnny Nut and the Golden Goose," done into English by Andrew Lang, from the French of Charles Deulin, illustrated by Am. Lynen; "The Marriage of Near Kin, considered with respect to the Law of Nations, the Result of Experience, and the Teachings of Biology," by Alfred H. Huth, new edition; "Biographies of Words," by F. Max Müller, a series of articles reprinted from *Good Words*, with considerable additions, and a full discussion of the question of the original home of the Aryans; "An Inquiry into Socialism," by Thomas Kirkup, author of the article on "Socialism" in the *Encyclopaedia Britannica*; "Picturesque New Guinea," by J. W. Lindt, with fifty full-page photographic illustrations reproduced by the Autotype Company, strongly mounted on guards; "Studies in Naval History: Biographies," by Prof. John Knox Laughton, of King's College, London; "The History and Antiquities of Pudsey, in the West Riding of the County of York, with a Short Account of Fulneck, and Biographical Sketches of Eminent Natives," by the late Simeon Rayner, of Pudsey, edited, with a biographical sketch of the author, by William Smith, illustrated by photographs, steel and wood engravings; "England and Napoleon in 1803: being the Despatches of Lord Whitworth and others," now first printed from the originals in the Record Office, edited, for the Royal Historical Society, by Oscar Browning; "From a Garret," and "Dreams to Sell: Poems," by May Kendall; "Poems of Many Years and Many Places, 1839-1887," by A. Lifelong Thinker and Wanderer; "Our Sentimental Journey through France and Italy," by Joseph and Elizabeth Robins Pennell, with map and numerous illustrations by J. Pennell.

Science.—"A Manual of Operative Surgery, having special reference to many of the Newer Procedures," by Arthur E. J. Barker, of University College, London, with fifty-eight woodcuts in the text; "A Treatise on the

Diseases of the Dog: being a Manual of Canine Pathology—especially adapted for the Use of Veterinary Practitioners and Students," by Prof. John Henry Steel, of the Bombay Veterinary College; "Astronomy for Amateurs: a Practical Manual of Telescopic Research adapted to Moderate Instruments," edited by J. A. Westwood Oliver, with the assistance of Messrs. Maunder, Grubb, Gore, Denning, Franks, Elger, Burnham, Capron, Backhouse, and others, with several illustrations; "A Course of Lectures on Electricity, delivered before the Society of Arts," by George Forbes; "A Text-book of Elementary Biology," by R. J. Harvey Gibson, of University College, Liverpool; "Modern Theories of Chemistry," by Prof. Lothar Meyer, translated from the fifth edition of the German by Prof. P. Phillips Bedson, of the Durham College of Science, and Prof. W. Carleton Williams, of Firth College, Sheffield; "The Testing of Materials of Construction," embracing the description of testing machinery and apparatus auxiliary to mechanical testing, and an account of the most important researches on the strength of materials, by Prof. William Cawthorne Unwin; "A Handbook for Steam Users: being Notes on Steam Engine and Boiler Management and Steam Boiler Explosions," by M. Powis Bale.

MESSRS. GEORGE BELL & SONS' ANNOUNCEMENTS.

"THE British Army: its Regimental Records, Badges, Devices, &c.," by Major J. H. Lawrence-Archer, with numerous illustrations. This volume has been prepared with the object of supplying in a handy and abridged form, and at a comparatively moderate price, the regimental records of every regiment of the British army, with illustrations of all the badges of corps, so that each regiment which already has its own history *in extenso* may place alongside of it an epitome of the history of the whole of the others; "The Story of Spenser's *Faerie Queene*," done into English prose by J. E. Raabeth; "Genealogy of the Pepys Family, 1273-1887," compiled by Walter Courtenay Pepys, 250 copies only; "The Revolutionary Movement of 1848-49 in Italy, Austria, Hungary, and Germany," with some examination of the previous thirty-three years, by C. Edmund Maurice, with an engraved frontispiece and other illustrations; "Canute the Great: a Cup of Water," two new plays by Michael Field; "Schumann's Early Letters," translated by M. Herbert, with a preface by Sir George Grove; "Bryan's Dictionary of Painters and Engravers," with a list of ciphers, monograms, and marks, new edition, thoroughly revised and enlarged, by R. E. Graves and Walter Armstrong, Part IX. (Par-Rub); "Sophocles' *Electra*," with introduction and notes by Dr. F. A. Paley; "Grimm's Teutonic Mythology," vol. iv., containing additional notes and references by J. S. Stallybrass, and completing the work; "The Building of the British Islands," a study in geographical evolution, with maps, by A. J. Jukes-Browne; "Woollen and Worsted Cloth Manufacture," by Roberts Beaumont, assistant-lecturer in the Yorkshire College, Leeds, forming the fifth volume of the "Technological Handbooks"; "The Epistle to the Romans," with notes, critical and practical, by Prebendary Sadler; "Sermons on Old Testament Characters," by Canon Lloyd; "Frau Wilhelmine," by Dr. J. Stinde, translated by Harriet F. Powell, the concluding volume of "The Buchholz Family"; "Mrs. Sharpe," by the author of "Shadrach," in 3 vols.; "Poor Jack," by Capt. Marryat, with forty-six illustrations by Clarkson Stanfield, taken from the original woodblocks; "Hibernian Nights' Entertainments," by the

late Sir Samuel Ferguson, two series; "Mathematical Examples: a Collection of Examples in Algebra, Trigonometry, &c.," compiled with a view to the needs of Army and Indian Civil Service Candidates, by J. M. Dyer and R. P. Smith. And the following additions to Bohn's Libraries: "Seneca's *Minor Essays*," newly translated by A. Stewart; "Victor Hugo's *Dramatic Works*," edited by Mrs. Newton Crosland; "Hoffmann's *Works*," translated by Major Ewing, vol. ii.; "Dunlop's *History of Fiction*," with introduction and supplement, bringing the work down to recent times, by Henry Wilson, in 2 vols.; "Ebers' *Egyptian Princess*," translated by Miss E. Buchheim; "Heaton's *Concise History of Painting*," new edition, revised by W. Cosmo Monkhouse; "Lucian's *Dialogues of the Gods, the Sea Gods, and the Dead*," translated and edited by Howard Williams; "The *Early Diary of Frances Burney (Mdme. d'Arblay)*," with notes.

MESSRS. JOHN F. SHAW & CO.'S ANNOUNCEMENTS.

"IN CONVENT WALLS: the Story of the Despensers," by Emily S. Holt; "His Adopted Daughter; or, A Quiet Valley," by Agnes Giberne; "City Snowdrops; or, a House of Flowers," by M. E. Winchester; "The Shepherd's Darling," by Brenda; "In the Dashing Days of Old; or, the World-wide Adventures of Willie Grant," by Dr. Gordon Stables; "Right Onward; or, Boys and Boys," by Ismay Thorn; "Goldengates; or Rex Mortimer's Friend," by M. L. Ridley; "Armour Clad; or, Arthur's Victory," by G. P. Dyer; "Cousin Dora; or, Serving the King," by Emily Brodie; "Over the Hills and Far Away," by Mrs. Stanley Leathes; "Dickie's Secret," by Catharine Shaw; "The Story of Little Hal and the Golden Gate," by M. M. Butler; "Joyce Tregarthen; or, Obedience better than Sacrifice," by Mrs. Clutton-Brock; "Will Foster of the Ferry," by Agnes Giberne; "Mr. Bartholomew's Little Girl; or, the Lost Image Regained," by L. Marston; "Barney: a Soldier's Story," by the author of "Young Ishmael Conway"; "Dora Ashley; or, the Patience of Hope," by M. Irwin; "Tim's Treasure, and how he Found it," by Alice Lang; "Acting on the Square," by H. Boulwood; "Charlie's Success," by M. Seymour; "His Servants who Serve," by Eleanor Grant; "Left Behind; or, a Summer in Exile," by J. Chappell; "One Day; or, Viola's Wanderings," by M. Chapman; "A Large Thought in a Large Word," a new packet of the "Something for Sunday" series, forty-eight outline texts on card and paper, by Catharine Shaw. Three New Issues are to be added to "Shaw's Home Series": "Little Freddie," by E. Everett Green; "Aunt Hester, and Why we Loved Her,"; "Nobody's Lad," by Leslie Keith. The annual volume of "Our Darlings," edited by Dr. Barnardo, containing coloured illustrations, pictures on every page, and attractive stories.

ORIGINAL VERSE.

CUPID'S DECADENCE.

In ancient days, when all was young,
And Love and Hope were rife,
Dan Cupid fed on rustic fare,
And lived a country life.

He rose betimes at break of day,
And round the country harried:
Upstirring hearts that were unwed,
And soothing down the married.

But then, on wider mischief bent,
He hid him to the city;
And finding much to suit his taste,
He stayed there—more's the pity.

Men built him there a golden house,
Bedight with golden stars;
They feasted him on golden grain,
And wine in golden jars.

They draped his pretty nakedness
In richest cloth of gold,
And set him up in business,
Where Love was bought and sold.

And thus he led a city life,
Forgetting his nativity;
Since then he's gone from bad to worse,
From Cupid to cupidty.

ELLIOT STOCK.

THE "HENRY IRVING SHAKSPERE."

MESSRS. BLACKIE & SON announce a new illustrated edition of the works of Shakspeare, under the joint editorship of Mr. Henry Irving and Mr. Frank A. Marshall, with the assistance of other Shaksperian scholars for special plays. The illustrations are by Mr. Gordon Browne.

In addition to his share in the editorial work, Mr. Irving contributes a general introduction, the object of which is to show that Shakspeare was a practical playwright, and that his plays were designed above all things for the stage. He proves how little warrant there was for the mutilation to which the dramas were subjected during the eighteenth and earlier part of the nineteenth centuries, and takes up a strong position in favour of giving them the completest possible setting.

The text is given entire, without garbling or mutilation. It has been subjected to critical and careful scrutiny; and in doubtful or corrupt passages the best readings of former editors have been adopted, or new and preferable readings substituted, the grounds for and against all changes of importance being fully set forth in the notes. To each play is appended a synopsis of original emendations adopted in it or proposed by the editor. A new feature is that each play is printed so as to furnish readers with an acting edition, arranged by Mr. Irving on the principle of preserving as much of the correct text as can be presented within a reasonably limited time. A simple line in the margin indicates the passages which are not essential for public or private representation.

The introduction prefixed to each play is divided into three sections: the first of these takes up the literary history of the play; the second treats of its stage history, giving some account of the chief occasions on which it has been performed, with the names of the principal actors; the third consists of critical remarks on the subject, construction, and characters of the play, with an estimate of its merits as compared with others of Shakspeare's dramas.

The notes to the plays are very numerous, difficult passages being discussed in them, and, if possible explained; while a great many subjects useful to the full understanding of the text are also elucidated. Many points are made clear that have been left untouched by former commentators; and the needs of the general reader, and not merely of the Shaksperian student, have been always kept in view. Rare words and phrases are illustrated by quotations from Shakspeare himself or his contemporaries; and passages from the old writers who have furnished the poet with some of his materials are often reproduced verbatim. The notes to the historical plays, or those in which historical personages largely figure, comprise brief biographical accounts of such personages. All the more important notes are placed at the end of each play, but there are also many foot-notes given on the pages below the text. These comprise explanations of words which are obsolete or used in peculiar significations; also translations of Latin, French, Italian, or other foreign words employed. Peculiarities of pro-

nunciation are often pointed out in the footnotes, special attention being devoted to the requisites of rhythm and metre.

To each play is appended a list of words that occur only in that play—a feature that has a very interesting bearing on the literature with which Shakspeare's mind was imbued at various periods of his career, and, indirectly, on the question of his being joint-author only of some of the plays. Each play is also furnished with a time analysis, showing the probable period of time covered by each scene and act, and the length of any intervals supposed to elapse in the course of representation.

The illustrations have been drawn expressly for this edition by Mr. Gordon Browne, and are reproduced in facsimile of the original drawing. They will consist of thirty-seven full-page etchings, representing one of the more important scenes in each play, and above 550 designs placed in the text at the passages they illustrate. In further illustration, sketch maps will accompany certain of the plays, showing the countries in which, and the chief places where, the action is supposed to occur.

The edition will be issued in eight volumes, small quarto, the first of which is announced to appear on November 15. An *édition de luxe*, limited to 150 copies, will be issued concurrently, choicely printed on highly finished paper, royal quarto, with India proofs of the etchings. Every copy will be numbered, and orders will be accepted only for the entire set of eight volumes.

CORRESPONDENCE.

THE ETYMOLOGY OF "EMBELIF."

Melbourne, Victoria: Aug. 23, 1887.

This word *embelif* occurs in Chaucer's treatise on the "Astrolabe," and apparently not elsewhere. Chaucer speaks of *embelif orisonte*, *embelif cercle*, *embelif angle*, in opposition to *rihte orisonte*, *riht cercle*, *riht angle*. The meaning of the word is obviously "oblique," "slanting."

Prof. Skeat, in the glossarial index to the edition of the "Astrolabe" prepared by him for the Early English Text Society, declares himself unable to conjecture to what language it belongs, and adds: "It looks like an extraordinary corruption of the word *oblique*."

In the early French romances (e.g., in the *Lancelot du Lac*) I have frequently come across an old word—*beli*, *belic*, or *belif*—used as a term of heraldry, in the sense of "slantwise." This word is derived by Paulin Paris from Latin *obliquus* (the form *belif* being accounted for by the consonantalisation of the *u*—*obliquus*); and this etymology has been accepted, I believe, by M. A. Darmesteter, and other recent authorities. Surely *embelif*, then, is simply the French *en belif*, from Latin in *obliquo*.

If this be the case, it is primarily an adverb; and it is noteworthy that Chaucer several times so employs it: e.g., in part ii., § 28, he says: "These same signes . . . ben cleped tortuous signes or kroken signes for they arisen *embelif* on oure Orisonte."

With regard to the word *belic* or *belif*, I may add that Cotgrave, Littré, and others, explain it as meaning *red*, *gules*—"Terme de blason. Couleur rouge, dite aussi gueules," says Littré, without giving any etymology. That this is incorrect is shown not only by the derivation of the word, but also by the fact that one reads of "bandes de *belic blanches*." The expression "bande de *belic*" seems to mean simply what we call in heraldry a "bend," without any reference to colour. PAGET TOYNBEE.

Cambridge: Oct. 5, 1887.

Permit me to add that the above etymology has been kindly pointed out to me more than

once since the appearance of my edition of Chaucer's "Astrolabe" in 1872, though I have taken no opportunity of publishing it. My difficulty consisted in not recognising the preposition *en* as forming a part of the word.

Mr. Fitzedward Hall long ago sent me a quotation, showing that the word occurs again in Lydgate, though I dare say he took it from Chaucer. Lydgate uses the phrase "and by *embelif tournynge*"; the original of which is to be found at fol. cxxxvii., back, of De Guilleville's "Romant des trois pelerinages," ed. 1500—"et par *obliques tournemens*."

Further information is to be had by consulting Godefroy's Old-French Dictionary, s.v. *belif*. He gives quotations for the phrases a *belif*, *de belif*, and *en belif*, all in the sense of "across." Thus "ii. voies *en belif* la terre," i.e., two ways across the land, occurs in Raoul de Boun, *Le Livre des Reis de Britannie* (see P. Meyer, *Bullet. de la Soc. des A. T.*, 1878, p. 110). WALTER W. SKEAT.

[The radical is treated in the *New English Dictionary*, under the form *Belief*, with two quotations for a *belief*, as an adverbial phrase, in sense "obliquely, aslant, scarfwise," and with a reference to Chaucer's *Embelife*. According to Dr. Murray a *belief* represents Old French *à belif*, *belif* (late Latin type **bis-liquus* = *obliquus*), cf. French *belong*, Mediaeval Latin *belongus* = Latin *oblongus*.—ED. ACADEMY.]

THE IRISH MSS. IN THE FRANCISCAN CONVENT, DUBLIN.

London: Sept. 22, 1887.

In No. 5 of the *Göttingische gelehrte Anzeigen* (March 1, 1887) Herr Prof. Doctor Heinrich Zimmer, who presently fills to overflowing the chair of Sanskrit in the University of Greifswald, for the second time does me the honour to mention my name; and in a manner which for the second time leaves nothing to be desired on the score of gratuitous personal impertinence.

To-day I will only deal with a certain proposition based upon the postulate *da er wenig davon verstand*, and will on the spot, and in Dr. Zimmer's own individuality, demonstrate not merely what *wenig davon verstehen* is, but the full force of *durchaus und durchaus gar nichts davon verstehen*. This learned person has ever since 1881 been fairly running amuck: it is now high time that, as he passes in his wild career, he should be lassoed, brought up short and in some small measure put upon his defence.

In the library of the Franciscan Convent, Merchant's Quay, Dublin, there is a very fine copy on vellum of the famous *Agallamh na Sindrach*, or "Dialogue of the Ancient Men." Bibliographical details being beside the present question, it will suffice to say that this MS. has all the appearance of having been written in the fifteenth century. It contains many marginalia, apparently written by successive proprietors or readers, and of these memoranda one bears date 1584 (not as Dr. Zimmer prints, 1589). But at the end of the codex are several short compositions in the cursive hand of the early seventeenth century. Let us consider Dr. Zimmer's treatment of one of these, which in the above-mentioned paper he prints thus: *Mo mheallacht ort a Phinn, darlind atáoi goholc mar nach (?) bhfuaruistu regles, ata in lebran fein goholc*. Here is what the MS. shows *lucé claríus*, to use the doctor's own stock phrase:

"Mo mheallacht ort a phinn.
dar linn atáoi go hola.
mar nach bhfuaruistu thu re glís.
ata in lehrán fein go hola."

This quatrain, which is in the spoken language of the present day, he has taken for a bit of prose. He has run the words together to please himself, instead of leaving them as the scribe

and composer wrote them and I here print them; while, for the word *mallacht* "a curse" he substitutes *meallacht*, the abstract noun of the adjective *meallach* "gratus, amenus." Other discrepancies I pass by, and come at once to a delicious little commentary appended to the Irish stanza. This I take the liberty to translate:

"If you consider that numerous episodes of the text treat of the gallant adventures of Finn Mac Cumall, of Ossian, of Calte and of other heroes, you will comprehend how an austere minded friar could, in a fit of ascetic zeal, suffer himself to be so far carried away as to use the words 'be cursed *O Fingal*, [the italics are mine] and to call the MS. 'a bad book.'"

Now for a modest super-commentary.

The Irish lines literally rendered = "my curse on thee *O pen*. In my opinion thou art bad. As I did not get hold of thee to mend thee. The little book itself is bad" (i.e., the book has suffered). Here a *phinn*, the vocative of *peann*, "a pen," has been taken for a *Fhinn*, the vocative of *Fionn*, a proper name. A truly portentous blunder on the part of one who not only professes to be a master in Israel where abstruse philological problems are involved, but to possess practically and fluently the living language, seeing that a *phinn* is pronounced a *finn*, whereas a *Fhinn* sounds a *Inn* ("fh" being everywhere quiescent). The attempt to hold up the Ossianic heroes as a gang of eighteenth century *coureurs de ruelles* is rich in the extreme; in fact, among the many "pot-shots" that Dr. Zimmer has made in the Irish preserves he has never made a more egregious miss than at this little poem. That is saying a good deal, but so it is. To cap the whole matter, there is in the same collection a paper MS. written in 1626-27 by Hugh O'Dogherty and Niall O'Kane, members of the Irish Franciscan community in the Low Countries. Of this volume one portion is a transcript of the aforesaid vellum MS. (No 12), the rest consists of Ossianic poems. Those two good brothers of St. Francis were not, I fear, quite up to Dr. Zimmer's standard of propriety, for, though their book contains various marginalia, there is nothing to show that either of them "turned a hair" during the writing of it, and for the best of reasons: there was nothing in their subject matter to call forth any manifestation of *asketischer Eifer*. Again, inside the end board of this MS. is a memorandum in Irish which I here translate: "Of this book the poor brother, Donall Maglone, had (permissu superiorum) the use in the year of the Lord's Age 1792."

The Ossianic poems in this codex number sixty-nine. Dr. Zimmer prints the initial lines of all, and a careful collation of his paper with the original MS. shows that he has given fifty-one out of sixty-nine inaccurately. In some instances his errors are very serious, e.g., for *clabhán caill* "a cradle or crib of hazel" of the MS., he prints *clabhán cuil* "a cradle of incest"; for a *bhend na nuabharr* we get *abend nan uabar*, the former meaning "O hill of the bright summits," the latter "O hill of the pride"; and the mistake is intensified by putting *uabar* "pride" in the gen. pl., which is as much against usage as "prides" would be in English. These all are no slips of the pen; they proceed from ignorance of the language. A man may do a good deal, and do it well, with the "prehistoric accent" and other abstruse matters, but translating is quite another affair. Dr. Zimmer has here printed a great many marginalia from these two Franciscan MSS. I have translated one of them for him and challenge him to translate the others, immediately and without appealing to the good nature of my friend Mr. Hennessy, or of any one else who really "knows Irish."

With one portion of Dr. Zimmer's paper I am happy to be able in the fullest sense of the word to agree, and that is where he acknowledges the great kindness and courtesy of the Franciscan brethren on Merchant's Quay, which (not for the first time) I too experienced last month, when I chanced to spend a few days in Dublin.

STANDISH H. O'GRADY.

"VARIÆ LECTIONES."

Oxford: Oct. 2, 1887.

In your reviewer's very kind notice of *A Second School Poetry Book* (ACADEMY, September 10) he refers, nevertheless, to the "unpardonable blot" of *gods for birds* in Lovelace's poem "To Althea." The poem was copied from Southey's *British Poets*, which has the reading *gods*; and that this was not an oversight on Southey's part is shown by an English Anthology of the last century, whose compiler (I do not know whether for the first time) suggests *birds for gods* and *linnet-like confined for like committed linnets* as improvements on the reading of the edition of 1649 (I presume the first), published nine years before the author's death. And I see that Mr. Palgrave, in his last edition of the "Golden Treasury," has substituted *gods for the birds* of the previous editions, with the following note: "*Gods*; thus in the original; Lovelace, in his fanciful way, making here a mythological allusion. *Birds*, commonly substituted, is without authority."

Kingsley's line, "Was never salmon got that shone so fair," in which, I remember, *got* was quoted as a misprint in your review of the first book, was copied from the complete edition of Kingsley's poems published by Messrs. Macmillan, and was, I am told, so written by him, and afterwards altered without his sanction.

Near for *ne'er* in Wordsworth's "Solitary Reaper" is, of course, a misprint, and I am much obliged to your reviewer for pointing it out.

M. A. WOODS.

The reviewer confesses his fault. He can only offer the following explanation, for what it may be worth.

As to Lovelace's poem, he had consulted Prof. Henry Morley's anthology of Cavalier and Puritan song entitled *The King and the Commons* (1868), the compiler of which somewhat ostentatiously avers (Introduction, pp. xxi.-xxii.) that, in order to avoid misprints and the liberties of previous editors, "where he did not himself possess original editions to quote from, he looked for them in the reading room of the British Museum." And yet he gives (p. 51)

"The birds that wanton in the air."

It must be admitted that "gods" agrees better with the conceit in the two first lines of the same stanza:

"When love with unconfined wings
Hovers within my gates."

A curious example of the fatal facility of misquotation may be found in the case of this very poem in the current number of the *Fortnightly Review* (p. 581), where Mr. Edwin Arnold is represented as entitling it "To Althea in Prison," ascribing it to Lord Lovelace, and making both the second and fourth lines of the first stanza end with "gates." However, Mr. Edwin Arnold does give "gods."

As to the line in "The Sands of Dee," the reviewer had consulted the collected edition of Kingsley's poems published by Messrs. Macmillan in 1884, uniform with the Eversley edition of the novels. This has (p. 103) the common reading:

"Was never salmon yet that shone so fair."

Here again it must be admitted that "got" has a Kingsleian smack.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, Oct. 10, 8 p.m. Royal Academy: "Anatomy, Introductory," by Prof. John Marshall.
WEDNESDAY, Oct. 13, 8 p.m. Microscopical: "Twenty-four new species of Rotifera," by Mr. F. H. Gosse; "Observations on the Metamorphoses of Amoebae and Actinophrya," by Mr. C. R. Beaumont.
FRIDAY, Oct. 14, 8 p.m. Royal Academy: "The Bones of the Human Body," I., by Prof. John Marshall.

SCIENCE.

A NEW CRITICAL THEORY OF THE "CULEX."

"Studien auf dem Gebiete der Römischen Poesie und Metrik." Von Dr. Richard Hildebrandt.—I. *Vergil's Culex*. (Leipzig.)

THIS work appears to be the first instalment of a series of more or less elaborate studies on Roman poetry. In it, for the first time, I believe, the *Culex* is subjected to a minute examination of the thorough-going German kind, as will be obvious to anyone who compares its 176 pages with the slight discussion given to the same poem in Ribbeck's *Appendix Vergiliana*. The only work known to me which can claim to speak with equal minuteness on any of the Vergilian opuscula (I do not include here the *Aetna*) is Näke's admirable monograph on the *Dirae*, published posthumously in 1847. But the scope of Näke's work is wholly different from the scope of Dr. Hildebrandt's. Näke was no sceptic. He accepted the view of Scaliger that the *Dirae* was by Valerius Cato, and was in no sense of the word a follower of the destructive school of criticism. Dr. Hildebrandt, on the contrary, deals with the *Culex* as the theologians of Germany have dealt in successive schools with the Hebrew and Christian scriptures. His book may fairly be compared with these, and may, therefore, be thought in some senses to mark a new period in the development of criticism as applied to these opuscula.

Suetonius tells us that Lucan in the preface to one of his works, when comparing himself with Vergil, ventured to say "et quantum mihi restat ad Culicem!"—words which, whether explained with Ribbeck "how much younger am I than the author of the *Culex*," or, with Hildebrandt, "how far inferior is my work to the *Culex*," prove that a poem known as *Culex*, and ascribed to Vergil's youth, was read and considered to be genuine in the time of Nero. Statius, in the preface to his first book of *Silvae*, ranks the *Culex* with the *Batrachomyomachia* as the juvenile performances of two great poets; and in his *Genethliacon Lucani* speaks of certain works of Lucan as composed *ante annos Culicis Maroniani*, i.e., before the age at which Vergil wrote his *Culex*. Martial, viii. 56.20, and again xiv. 185, mentions the *Culex* as preliminary to the *Aeneid*.

It is certain, therefore, that, as early as the first half of the first century A.D., a poem called *Culex* was in circulation which was ascribed to Vergil's youth. This agrees with the statements of Servius (Prolegom. to *Aeneid*), and Suetonius, if he be the author of the *Vita Vergilii* known as Donatus's, that among the works popularly attributed to Vergil was a *Culex*.

Was this poem, which was read by Lucan, Statius, Martial, Suetonius, Servius, identical with the *Culex* that has come down to us in many MSS., some of them as early as the

ninth century? Dr. Hildebrandt's reply to this question is that our *Culex* contains what was the original poem, plus a vast amount of posteriorly superinduced padding. He traces in the 414 verses of the extant poem two distinct hands—one the genuine Vergil, as we may imagine him in early youth; the other a Christian of a much later, perhaps a post-Augustinian, time. The genuine portions are marked by a careful, almost photographic, reproduction of nature and natural objects; the superinduced additions by a pedantic, lamp-laboured, tasteless accumulation of mythological stories and personages. What there is in them of nature-description is got from books. The language, too, is faulty and might come from an imitator of Vergil, never from Vergil himself—even at the age of sixteen. Christian influences are discernible, and the doctrine of Purgatory is not obscurely adumbrated. And these forged additions form by far the larger part of our extant *Culex*. The genuine poem of Vergil which lies embedded in them consists of ninety-six verses only; a centre and two side-wings, which are symmetrically grouped 24 + 48 + 24.

The first side-section consists of two segments, each of twelve verses, 45-57 (omitting v. 50), 98-109. The centre or nucleus, which comprises the main action of the poem—i.e., the approach of the serpent, the description of its body, its preparation for attacking the goat-herd, the waking of the goat-herd by the gnat's timely sting, the tumult of the goat-herd's feelings, his energetic and instantaneous defence by means of a strong sapling, the death of the serpent, the renewed and now secure sleep of the goat-herd, the appearance to him in a dream of the gnat's ghost—all this, narrated in language which (with some trifling alterations) is not unworthy of the author of the *Eclogues*, *Georgics*, and *Aeneid*, comprises vv. 157-201, 206-209. The second side-section, like the former, is made up of two segments: vv. 210-212, 223-231, and vv. 385-387, 390— $\frac{2}{3}$ of 395 with $\frac{1}{3}$ of 411 (i.e., a compounded verse), 412-414. This second side-wing contains (1) the complaint of the gnat, which had lost its life in saving the life of the goat-herd, and now craves the reward of this kind interference; (2) the construction by the grateful goat-herd of a tomb, accompanied by an appropriate inscription. Both (1) and (2) consist of twelve verses each.

This result will not astonish anyone familiar with much German and some Dutch criticism; nor, indeed, with Peerkamp's almost forgotten analysis of the *Odes* of Horace. I have found Dr. Hildebrandt's similar analysis of the *Culex* interesting. It is marked throughout by care, patience, and a fair amount of research; but convincing it is not. It is very difficult to imagine, e.g., any poet, much more the young Vergil, rushing so very literally *in medias res* as to begin with the abrupt, "Propulit e stabulis ad pabula laeta capellas Pastor," &c. Compare this with what our *Culex* actually gives us, "Lusimus, Octaui, gracili modulante Thalia." Most readers of poetry will probably side with me in preferring this to what Dr. Hildebrandt would offer us. But he is not content with cutting away our existing exordium of twenty verses; the invocation to Apollo, Pales, and Octavius which follows it is condemned also, partly as inconsistent in its grandiloquence

with the self-disparaging tone of the first exordium, and partly as an obvious imitation of the opening lines of the *Aetna*. To this criticism I must demur. The two invocations perhaps bear traces of being known, the one to the author of the other; but there is nothing to show that the invocation of the *Aetna* preceded that of the *Culex*, though no doubt the *sancto puer* of *Cul.* 28 could hardly have been written by young Vergil to young Octavius. It might, I think, have been written soon after the battle of Actium; it might well have been written ten years later. To say that it has a Christian look, and that its author thought of Vergil's relation to Octavius as of S. John the Baptist to Jesus Christ, is to trifle with criticism. Meanwhile, let us be grateful to Dr. Hildebrandt for fixing our attention on a point which may help us to a different theory from his, viz., that the *Culex* was not by Vergil, young, middle-aged, or old, but by a junior contemporary, familiar with all Vergil's works, and writing at a time when Augustus, if not yet actually deified, was habitually treated as divine.

Again, I cannot feel the difference which Dr. Hildebrandt draws between the faultless 96 genuine, and the 318 spurious, verses. Take, for instance, the passage *O bona pastoris* (58-97), in which the life of the country is eulogised, and to which the famous counterpart in *Georgic* II., *O fortunatos nimium* obviously supplied the leading motifs. Our critic finds this ideal picture in our *Culex* so far removed from the actual life of goat-herds as to be quite inconsistent with the exact, minute, almost severe, drawing from life of the real *Culex*. He might just as well say that the minute directions about planting trees in *Georgic* II. could not have been written by the author of the idyllic, utterly unreal picture of country happiness with which the same *Georgic* ends. Or, again, to take a specific instance, the verse *Tondebant tenero uiridantia gramina moreu* is pronounced spurious (1) because there could have been no green grass on the hills at midsummer, (2) because goats do not bite tenderly, but with a sharp jerk. I hope I shall not be thought presumptuous if I ask Dr. Hildebrandt whether his observation of the goat and its ways is actual, or got from books, because the most exact descriptions given by the profoundest observers of nature can only be general—place, time, conditions of weather or body, produce variations which are exceptional and particular. Can anyone believe that an Italian, to whom the goat is a familiar object, would speak of its cropping the herbage with a tender bite if he had not witnessed it? I confess that to me the fact of such a description occurring in a poem elsewhere remarkable for its accuracy of observation, far from suggesting any such inference as Dr. Hildebrandt draws from it, would be a reason for distrusting those mere general impressions which alone books can convey.

But there is so much to say that I must reserve what else I have to object for the pages of the *Classical Review*.

ROBINSON ELLIS.

MATHEMATICAL BOOKS.

American Journal of Mathematics. Vol. ix, No. 4. (Baltimore.) In this number we have abstracts of xxv. to xxxii. of Prof. Sylvester's lectures on "The Theory of Reciprocants" (pp. 297-352). This present course is promised to be concluded in a subsequent number. Our previous notes have sufficiently indicated that these lectures form a remarkable contribution to the higher mathematics, and that they have already led to much good work among the younger mathematicians in the University of Oxford. The memoir that follows (pp. 353-380), "Sur une Classe de Nombres remarquables," by M. Maurice d'Ocagne, is on a class of numbers which the mathematician comes across again and again, and which, like Bernoulli's and Euler's numbers, "jouent un rôle important dans maintes formules d'analyse." Arrange the numbers in rows and columns (as on a chessboard), then the fourth and fifth rows are 1, 7, 6, 1; 1, 15, 25, 10, 1; where $15 = 2 \cdot 7 + 1$, $25 = 3 \cdot 6 + 7$; $10 = 4 \cdot 1 + 6$, and so on, the law of formation being now obvious. Many interesting results are collected in the memoir. The number (and volume) closes with "Extraits de Deux Lettres adressées à M. Craig par M. Hermite (sur la Formule de Fourier, sur une Formule de Gauss, and sur une Formule de Weierstrass)" and "Two Proofs of Cauchy's Theorem," by F. Franklin.

Higher Algebra; a sequel to *Elementary Algebra for Schools*. By H. S. Hall and S. R. Knight. (Macmillan.) This, as its title indicates, is the advanced volume promised by our authors on the appearance of their school textbook, and is as admirably adapted for college students as its predecessor was for schools. It is a well-arranged and well-reasoned-out treatise, and contains much that we have not met with before in similar works, though the writers admit their indebtedness to Dr. Todhunter's treatise. For instance, we note as specially good the articles on convergency and divergency of series, on the treatment of series generally, and the treatment of continued fractions. The subject of probability is very intelligibly treated on the lines of Whitworth's *Choice and Chance*; and much more matter is introduced, for which our authors are indebted to the advice of the Rev. T. C. Simmons, whose contributions on this branch of algebra are well known to readers of the *Educational Times*. Determinants have their now usual niche, and a good part of the book is taken up with those parts of the theory of equations which of late years have crept into scholarship examination papers. A clearly written text, a large store of well-chosen examples, good print, and handy size, leave little, if aught, to be desired by the student. The book is almost indispensable, and will be found to improve upon acquaintance.

Elementary Trigonometry. By the Rev. T. Roach. (Oxford: Clarendon Press.) This work does not call for any special remark. The author has "endeavoured to explain carefully each step, and to slur over no difficulty," and so, we would hope, do other writers. We cannot say that the book is better than any other on the same subject; but it is a good textbook, and the matter is clearly put. There is, as in most other similar works, a large store of examples, many of which are given as parts of the examination papers in which they were originally set. The appearance of the volume is such as we are used to in works from the Oxford Press.

Four-Figure Mathematical Tables: comprising Logarithmic and Trigonometrical Tables, and Tables of Squares, Square Roots, and Reciprocals. By J. T. Bottomley. (Macmillan.) A handy and compact collection likely to be very serviceable to physicists and

others. At the end is a collection of useful formulas and constants. We would suggest that a few lines should be devoted to the powers and reciprocal powers of π .

Exercises in Arithmetic. By J. Hamblin Smith. (Rivingtons.) These are "arranged and adapted to the sections" in the same author's treatise on arithmetic, and form a useful means of testing a pupil's knowledge after he has read the bookwork corresponding to any particular exercise. Answers are given at the end.

TRÜBNER'S "ORIENTAL SERIES."

THE following new volumes are announced by Messrs. Trübner & Co. as in preparation in their "Oriental Series":

A second series of "Linguistic and Oriental Essays," written between the years 1847 and 1887, by Dr. R. N. Cust, hon. secretary of the Royal Asiatic Society, with six maps; a second series of "Miscellaneous Papers relating to Indo-China and the Indian Archipelago," reprinted for the Straits branch of the Royal Asiatic Society from the *Journals* of the Royal Asiatic, Bengal Asiatic, and Royal Geographical Societies, &c., edited by Dr. R. Rost, librarian to the India Office, in 2 vols., with several special indexes; an English edition of "Alberùn's India," containing a preface, translation of the Arabic Text, notes, and indexes, by Prof. Edward Sachau, of Berlin, in 2 vols.; "Essays on the Intercourse of the Chinese with Western Countries in the Middle Ages and on Kindred Subjects," by Dr. E. Breitschneider, physician to the Russian Legation at Peking; "The Life of Hsien Tsiang, by the Shamans Hwui Li and Yen-taung," forming a sequel to the "Si-yu-ki," with a preface, containing an account of the works of I-Tsing, by Prof. Samuel Beal, of University College, London; "A Sketch of the Modern Languages of Oceania," by Dr. R. N. Cust, being a companion volume to the same author's "Modern Languages of the East."

CORRESPONDENCE.

THE HYKSOS.

Plymouth: Oct. 3, 1887.

It is with great satisfaction that I note so sound an authority as Dr. Taylor publishing his belief in a Turanian element of Egyptian population—a view which also finds expression in his *Etruscan Researches*. It is equally satisfactory to find that he regards the Hittites (or their chiefs, at least) as Mongolian. Since 1883 I have constantly urged this view in opposition to that which would make them Alarodian. I find that more than one scholar now admits the Mongolian theory to be correct.

The only point on which it appears to me that further light is required concerns the antiquity of the Turanian element in Egypt. There are at least 200 Tartar words in the Egyptian dictionary, and some of these are traced to the time of the earliest monuments. It seems to me, also, that a Tartar type may be recognisable in the early wooden statues and other representations of Egyptians long before the Hyksos period. The question is, I think, worthy of further study.

The question whether the Tartar language of the Hittites is to be compared with Akkadian depends on our estimate of the character of that language. I do not find that any exhaustive comparison seems to have been attempted; but I do find that in some 800 cases the Akkadian words determined by Lenormant and Delitzsch are easily comparable with Tartar roots.

C. R. CONDER.

THE FINNIC ORIGIN OF THE ARYANS.

St. John's College, Oxford: Oct. 1, 1887.

The subject of Canon Isaac Taylor's paper before the British Association, of which an abstract appeared in the *ACADEMY* of September 17, is so interesting and important that perhaps I may venture, though having no claims to speak with authority, to mention what at first sight seem serious difficulties in the way of accepting it.

In the first place, if the location of the primitive Aryan race in Finland be correct, should we not have expected that the Finnish language would stand in much the same relation to the Teutonic languages as a whole, as Gothic does to the Scandinavian group? I mean that just as Gothic is most closely allied to the latter, but forms in certain respects a transition to the other branches of the Teutonic languages, so Finnish would resemble most closely the Teutonic languages in their most primitive words, but form a transition between them and the Slavonic, Celtic, and other branches of Aryan family? But what do we actually find? We get in Finnish, to begin with, a very large number of words which stand in an almost unvarying phonetic relationship to corresponding words in Gothic, Swedish, or Icelandic. Now, as many of these are undoubtedly loan-words, borrowed by the Fins from their known constant intercourse with Sweden from a far distant date (and I think Canon Isaac Taylor admits as much), is it not reasonable to suppose that all words which only differ from Swedish, Gothic, or Icelandic in their regular phonetic differences are words borrowed from the same source? But this, if admitted, would at once cut at the root of the theory, because such a word as *kulta*, "gold," for instance, must then be considered a loan-word. The changes of *g* into *k*, and *d* into *t*, take place, without a single exception, I believe, in words borrowed from Swedish. In the same way words appear to have been borrowed from other sources from a very early date. Is it not extremely likely, for example, that *suola* ("salt") is after all only the Russian *sol*? The change of *o* into *uo* is regular in borrowed Swedish words, as in *tuoli* ("seat") from *stol*. We seem hardly then justified in saying that gold and salt were articles known to the primitive Fins.

In the second place, besides these loan-words, we get a very large number of others which have no obvious connexion with any Aryan words. These comprise nearly all those likely to be used by a primitive people in a state of civilisation corresponding very nearly to that of the Swedes in their Bronze Age. Such are the names of all the common domestic animals, except *lammas* ("sheep") and *pukki* ("buck"); but there are also several Finnish names for these animals in different states of sex, age, &c. Such are also the words for a house and its necessary parts, as distinct from the furniture, tables, seats, benches, &c., which may well have been a later introduction. Such, again, are nearly all words for the common objects of nature—sun, moon, star, wood, hill, river and the like. To these we may add very nearly all words for the common animals and plants indigenous in Finland. Among these classes of words we have, no doubt, one or two striking exceptions. *Lohi* ("salmon") may be an Aryan word; but the other indigenous fish have with, I believe, only one exception, Finnish names. Is it likely that the primitive Fins were able to catch salmon, but not eels, perch, or *strömming*, all of which abound in the gulf of Bothnia, and the two first in the Finnish lakes? Again, *vesi* ("water" or "lake") and *meri* ("sea") are probably both Aryan words; but the latter is, at any rate believed by Thomsen to be merely a loan-word = Gothic *marei*. The word *veri* seems difficult to explain on any hypothesis. These

few exceptions are hardly enough to seriously affect the general argument. The natural conclusion of all this would seem to be that when the Fins first came into contact with the Swedes they were in an early, but not altogether primitive, state of civilisation.

It may be argued that, all this admitted, even this lower stratum of Finnish, if I may call it so, may be proved by philological analysis to contain a very early Aryan element. This I should not care, and feel quite incompetent, to dispute; but it appears far less than what Canon Isaac Taylor aims at proving. The words expressing relationship would certainly appear on the face of them to go strongly against the theory he advances. The only words of the kind which have any appearance of being Aryan, are *äiti* "mother," *sisär* "sister," and *tytär* "daughter." But the first of these is, according to Thomsen, merely a loan word = Gothic *aithai*, and the real Finnish word is *emä*. This is still used of animal mothers, and in the form of *emo* of the human mother. *Sisär* appears to be merely a corruption of Swedish *syster* similar to what takes place in every nursery. *Tytär* again seems to be merely another form of the Finnish *tyttö* "girl." This is rendered still more probable from the fact that the Swedish *pojka* or *pojka* "boy," is used in Finnish in the sense of "son" as well. It would appear then that there were originally no special words in Finnish for son or daughter.

The view here suggested seems to gain further support from archaeology. According to Dr. Montelius, the antiquities of the Stone Age in Finland are quite different in type from those of the south of Sweden and of Denmark. They resemble those of the northern and middle parts of Sweden and Lapland. It is, therefore, supposed that Finland was once inhabited by a Lappish or some kindred race. This would seem to show that the primitive Fins immigrated into the country probably from the East. In this case, they probably borrowed the language of the conquered race. But if so, the ethnological argument falls to the ground. We should have to look to the modern Laps, rather than the Fins, as the most representative type of the true Aryan race, which, of course, is absurd. If, on the other hand, the Fins brought their language with them, and the Laps derived it from them, no argument can be drawn from the Finnish language to support the theory that the Aryan race came from the shores of the Baltic. With that theory, on other grounds, I neither venture nor wish to quarrel; I only feel inclined, with all humility, to call in question some of the grounds on which Canon Isaac Taylor has based it.

F. H. WOODS.

THE LETTER "SH" ON INDO-SCYTHIAN COINS.

Fulham: Sept. 30, 1887.

Dr. Mark Aurel Stein's reply to my criticism is far from conclusive, and my chief objection to his doubtful identification of the letter "sh" on Indo-Scythian coins with the Greek *sampi* still stands good.

I do not know how far it is correct to say that the contemporary form of *sampi* remains to be discovered. Dr. Stein's original communication (*ACADEMY*, September 10) gives several shapes, the nearest in date of which (about 200 B.C.) has the form of *T*. In Dr. Isaac Taylor's *Alphabet*, ii., p. 93, from which these forms were borrowed, the author remarks that the uncial form of that date can be easily recognised in the minuscule form of the ninth century A.D. This latter form only differs by a greater length of the *hasta* in both directions, the two pendent strokes of the older form being carefully preserved. Between these two dates the form of the letter underwent no change

like that which occurred at a later time, so as to give the shape required to justify the theory of Dr. Stein. Therefore, so far as the form of the letter may be taken as an argument—and I think it is a most important one—the letter *sh* of the Indo-Scythian coins cannot have come from the disused and, probably, little-known Greek *sampi*. TERRIEN DE LACOUPERIE.

THE COMPOSITION OF THE "DE VERBORUM SIGNIFICATU" OF VERBIUS FLACCUS.

Oct. 3, 1887.

Prof. Nettleship's protest against M. Reitzenstein has been partly anticipated by Prof. Gütz, who remarks, in the *Philologische Wochenschrift* for September 10:

"Erwünscht gewesen wäre es wenn Nettleships Ansicht weniger kurz abgethan worden wäre. . . . Leider waren mir die Darlegungen Nettleships nicht zu Hand; doch hat es selbst nachd. knappen Angaben Reitzensteins den Anschein als ob eine eingehendere Würdigung zu Platz gewesen wäre."

As readers of German reviews know well, the lesser scholars of Germany are wont to write very sharply of Englishmen who neglect the smallest "results of German learning," while they have not the least compunction themselves in ignoring all English scholarship. Are we to agree with Prof. Jowett, and infer that the ordinary German does not understand English very perfectly?
H.

SCIENCE NOTES.

Mr. F. A. BATHER and Mr. G. W. Gregory have been appointed assistants in the Department of Geology of the British Museum (Natural History) to fill the vacancies caused by the resignation of Mr. William Davies and Mr. Robert Etheridge, Jun.

AN interesting collection of specimens has just been received at the Natural History Branch of the British Museum, Cromwell Road, from Emin Pasha. They were dispatched from Wadelai in November last, via Zanzibar, through Mr. Mackay, of the Church Missionary Society in Uganda. The collection consists of skins of birds and mammals, butterflies, and some anthropological objects; and when worked out by the officers of the Museum, will be described in detail at one of the meetings of the Zoological Society during the ensuing session. In a letter received a few days ago by Prof. Flower, dated Wadelai, April 15, Emin Pasha speaks of a further consignment of specimens (chiefly ethnological) as being ready for dispatch to the Museum on the first opportunity.

THE last number of the *Mineralogical Magazine* contains Mr. Fletcher's detailed description of the new mineral Cliftonite, already noticed in the ACADEMY. In the same number Mr. Teall calls attention to the occurrence of andalusite in the granite of the Chesswring in Cornwall, while Prof. Bonney describes a glaucophane rock from the Ile de Groix, off the south coast of Brittany.

THE September number of the *Matériaux pour l'Histoire de l'Homme* opens with an article by M. E. Piette, in which he describes the various types of horse represented in rude sculptures and engravings of the quaternary period. From this evidence he concludes that the ancestors of the horse were zebra-like animals, and that representatives of this type lived in Western Europe during the reindeer-age. When the Asiatic horse came in with the neolithic emigrants, it to a large extent supplanted the less elegant native horse, though the primitive type was still preserved by crossing, and traces of it yet survive in horses remarkable for size of head or length of ear or occasional stripes, recalling the markings of the zebra.

PHILOLOGY NOTES.

DR. SCHILLER-SZINESSY is preparing a considerably enlarged edition of his article on the *Pugio Fidei*, which appeared in the last number of the *Journal of Philology*.

DURING the vacation the *Philologische Wochenschrift* has contained several reviews of English books. The chief among these are the notices of Tyrrell's *Cicero* (September 3), of Ramsay's *Tibullus*, &c., and Pearson and Strong's *Juvenal* (September 17)—the latter a very unfavourable criticism by Friedländer, and of Simmons's *Metamorphoses* (October 1). In the last named, the reviewer, Ewald, does full justice to Mr. R. Ellis's contributions to the volume.

FINE ART.

Revue Egyptologique. Quatrième Année, Nos iii. et iv. Cinquième Année, Nos. i. et ii. Paris: Leroux.)

THESE two double numbers of the *Revue Egyptologique* derive special interest from the publication of the first instalments of a series of memoirs on the Apis stelae of the Serapeum, by the late Vicomte Emmanuel de Rougé. These stelae date, for the most part, from the periods of Greek and Roman rule, and are written with ink in the demotic script. Others are engraved upon the stone, and some are even cut in basalt. They chiefly consist of short votive formulae; and they generally give the dates of the birth and death of the Apis, and the name and year of the king in whose reign he was embalmed and buried. At the time when the Serapeum was discovered by Mariette (1852-1853), Brugsch had not yet published his demotic grammar, and demotic scholarship was in its infancy. Despite these drawbacks, and despite the great difficulty caused by the careless writing of the scribes, de Rougé was so impressed by the historical and chronological value of the Apis tablets that he at once applied himself to the classification and decipherment of the whole series. In 1854, as related in the prefatory letter of M. Jacques de Rougé, he read his first paper on this subject at the Académie des Inscriptions; whereupon Mariette entreated him to pursue it no further, alleging that his own work on the Serapeum stelae was ready for publication, and that to anticipate him would be "to rob him of the fairest flower in his coronal." De Rougé, with chivalric generosity, conceded the point—though with keen regret, this being one of the undertakings which lay nearest to his heart. Mariette, meanwhile, published his *Renseignements sur les 64 Apis* in 1855-1856; but the work was never completed, and it remains a fragment to this day. Years, then went by; de Rougé passed away; and M. Jacques de Rougé, finding the MS. of his father's interrupted work among his papers, resolved himself to take up and complete what was so admirably begun. But, he says, "lorsque j'appris que Mariette prenait des dispositions pour faire lui-même cette publication, qui devait figurer au nombre de travaux scientifiques de la dernière exposition universelle, fidèle aux sentiments qui avaient guidé mon père, je suspendis mes projets. Cette fois encore les monuments du Sérapéum ne virent pas le jour; et depuis Mariette nous fut enlevé par la maladie qui minait depuis si longtemps sa robuste constitution. Aujourd'hui, ce me semble, cette publication peut et doit être entreprise."

M. de Rougé then goes on to say that he not only has his father's copies of the tablets, made before the surfaces of the stones had suffered from the humidity of a European climate, but that he also possesses the notes and translations which that indefatigable scholar had prepared for his prospective series of papers. These will now be completed and classified by Prof. Revillout and M. de Rougé, and will be given to the world in the pages of the *Revue Egyptologique*.

The most interesting feature thus far of de Rougé's "Mémoire sur quelques Inscriptions trouvées dans la Sépulture des Apis" is the translation and analysis of a basalt tablet, dated the 52nd year of Ptolemy Euergetes, which, curiously enough, is entered in the same author's *Notice Sommaire des Monuments Egyptiens du Musée du Louvre* (1873) as being in black granite, and dating from the 51st year of this king. The interest of the inscription is great. It contains a brief but complete biography of an Apis who was born at Memphis, in the temple of Ptah, on the 24th day of the month Tybi, in the 28th year of Euergetes and Cleopatra. He continued to live in the temple till he was nearly three years old—i.e., till the first of Thoth in the year 31; and was then removed to Heliopolis, where he arrived on the 20th day of the same month. As he could not possibly have taken nineteen days to travel from Memphis to Heliopolis, it is evident that he must have stayed at some intermediate station—probably that mentioned by Diodorus as the place where each Apis was put upon a special diet for forty days. On the 21st, he was received into the temple of Hapi at Heliopolis (the Nilopolis of Diodorus), and here he probably underwent some kind of consecration. On the 23rd, he returned to Memphis a full-blown divinity, and there dwelt "in his house in [the quarter of] the White Wall for 20 years, 11 months, and 22 days." Then follows the entry of his death: "Went forth this God towards the heavens the 22nd day of Mesori in the Lth year of His Majesty, the King of Upper and Lower Egypt, Ptolemy, the Ever-living, Beloved of Ptah," &c.; and, lastly, we are told that "the good life of this God" numbered 23 years, 6 months, and 29 days, after which "he passed 70 days in the arms of Anubis, Lord of Taser." In other words, he remained for the prescribed term of 70 days in the hands of the embalmers. The entry of his burial heads the tablet, and informs us that on the 27th day of Thoth, the year 52 of Ptolemy Euergetes, "the Majesty of this august God Apis-Osiris" was conveyed to the Serapeum and laid "in his sarcophagus of black stone, after all the rites had been duly performed in the holy place."

Nothing, apparently, can be more precise than these dates; but they will not stand the test of verification. In order to make out the full term of 20 years, 11 months and 22 days, during which this Apis dwelt as a deity in the temple of Ptah, it is necessary to include the 20 days which elapsed between his departure from Memphis and his arrival at Heliopolis, as well as the 2 days of his sojourn at that place. There is also a discrepancy of 30 days between the date of his burial and that of his death. That he must have had a first-class embalmment, and consequently have been for the full 70 days in the hands of the

embalmers, may be taken for granted. The date of his death must also be accepted without reserve, since it occurs twice in the course of the inscription. The error, therefore, must lie in the date of burial, and it is evident that for the 27th of Thoth, we must read the 27th of Paophi. That so important an official record should not only contain a wrong date, but actually start with that wrong date at the top of the tablet, is very curious. It shows, at all events, that some caution is necessary in dealing with even the most authentic documents.

Besides the foregoing, M. J. de Rougé continues in both numbers his excellent comparative study of the poem of Pentaur, giving the copies of Karnak, Luxor, and the First Sallier Papyrus, in parallel lines. The variants are many, but unimportant; and the close correspondence between the three versions gives good proof of the purity of the text. M. Pierret, faithful as ever to the monotheistic theory, contributes two instalments of an article on Dr. Brugsch's pamphlet, *Religion und Mythologie der alten Aegypten nach den Denkmälern bearbeitet*, which consists largely of a translation of Dr. Brugsch's text. From the same author we have also the first part of an interesting paper *à propos* of Schiaparelli's *Libro dei Funerari*. Dr. Charles Wesely continues his valuable letter on the Greek contracts from the Fayoom in the Louvre collection; and MM. Revillout and Wilcken give the first of a series of joint papers on bilingual ostraka.

From M. Cattaul, a student of the Ecole du Louvre, we have an exciting account of his archaeological campaign among the Arab dealers of Thebes, who have now become so learned and so wary that it is scarcely possible to do business with them at all. They know the difference between hieratic and demotic, and have so keen an appreciation of the value of the latter that they no longer care to sell them out of hand, but hoard them in the hope of indefinitely raising their prices. In the house of one Arab, M. Cattaul beheld "un véritable petit musée," from which he succeeded in carrying away no less than six papyri, two being of considerable length, and one exquisitely illustrated. He also saw, but could not purchase, a most curious book, consisting of ten wooden tablets covered with black wax, precisely like those discovered a few years ago at Pompeii. It had the appearance of a pupil's copy-book with corrections by the master. The price asked for this curious relic—which was, however, most likely of Roman date—was 10,000 fra.!

Mr. William N. Groff brings forward the testimony of MM. Revillout, Lambin, and Daveluy to show his prior claim to the discovery of the tribal names of "Jacob-El" and "Joseph-El" in the Karnak lists of the prisoners of Thothmes III. after the battle of Megiddo. The discovery is of extreme interest and value, and Mr. Groff is to be congratulated upon the completeness with which he proves his claim. It is also satisfactory to learn that Prof. Meyer (who wrote upon the same subject, though by no means from the same point of view, in the *Zeitschrift für die Alttestamentliche Wissenschaft* in 1886) was entirely ignorant of Mr. Groff's article at the time when he wrote and published his own.

To the first double number of the new volume Mr. Groff also contributes an "Etude sur les noms propres chez les Egyptiens." These he classifies under three heads: (1) Mere names such as Beba, Pepi, and the like, which, so far as we can discover, have no special meaning; (2) descriptive names, such as *User "strong," Nefer "good," Tu-Khal "the Syrian," Ankhi "the living,"* and so on; (3) names composed with the name of a divinity, as *Bak-Amen* and *Bak-Ptah*, "the servant of Amen" and "the servant of Ptah," or, in the feminine form, *Bak-t-Maut* "the handmaid of Maut." To this class belong, also, such names as *Nes-Amen* "attached to Amen," *Ra-kha-f* "Ra is his diadem," *Tat-Ptah-au-f-ankh* "says-Ptah-he-lives"; and all those names associated with the notion of a divine gift, as *Petu-Amen* "the gift of Amen," *Tu-t-Anhur* "gift of Anhur" (fem.), &c. These gift-names, probably borrowed from the Egyptians by the Romans, have come down to our own day in Theodore, Theodora, Dorothea, &c.; and it may be pointed out that one purely Egyptian name, *Petu-Ast* or *Petisis* "the gift of Isis," survives intact to this day as "Isidore"—a fact which Mr. Groff would doubtless not have omitted to notice had he allowed himself more space for the development of his interesting little paper.

Prof. Revillout, as usual, is his own largest and weightiest contributor. In two instalments of a paper entitled "Une Page de l'Histoire de la Nubie," he gives translations of a host of new *graffiti*, some from Dakkeh and Dendoor, communicated by the Marquis de Rochemonteix, and some from Philae, copied by M. Cattaul. Among the latter, is one by a Nubian prince, son of Hornekht, king of the Nubians, who made a pilgrimage to the temple of Isis "of the Abaton of Philae" in the seventh year of Alexander Severus; another makes us acquainted with a certain king of Nubia named Abraaman (Abraham) and his Queen Niklou; another yields the name of a certain King Tererermen (who assumes the royal cartouche), and also introduces us to the Princess Liter, daughter of the chief Uinti, who is represented as taking part in a great festival to Isis, at which annual libations and bread-offerings were presented by "the Nubians of the south, the north, the east, and the west." "We made great libations," writes the scribe of the inscription. "We prayed in the name of our Ethiopia. We caused wine and beer, in sufficient quantity for the townsfolk who were present, to be brought to the dromos of Isis." The history of Nubia is so obscure that every fresh side-light is welcome, and Prof. Revillout's new collection will form a valuable appendix to his previous "Mémoire sur les Blemmyes."

From the same learned and unwearied pen we have also obituary notices of the late Dr. Birch and M. Miller; a translation of some new documents relating to the married life of a certain woman named Tanefer, whose singular matrimonial contract was translated and analysed in a preceding number of the *Revue*; and, last not least, the opening lectures of Prof. Revillout's fourth and fifth official courses, delivered at the Louvre School on December 7, 1885, and December 6, 1886. Continuing his masterly in-

vestigations into the jurisprudence of Egypt from the time of the ancient hieratic law and the reformed code of Bocchoris, down to the Ptolemaic, Roman, and Byzantine periods, Prof. Revillout takes for the subject of his former lecture the legal value of the oath, illustrating his argument from a large selection of documents, many of which have been recently acquired by the British Museum and the Louvre. The value of the oath in ancient Egypt, as in Chaldaea, appears to have been well nigh supreme in cases of litigation; and testimony by oath was actually equivalent, in the eye of the law, to documentary evidence or the evidence of witnesses. These oaths, taken in the names of the gods and the king, evidently date back to a period when the administration of justice was entirely vested in the hands of the priesthood, and point to a primitive system of which few, if any, direct examples survive. In Ptolemaic times, the oath was the prime factor in every form of legal engagement. The farmer, when he hired his field, undertook by oath to irrigate it with the water of a certain year, and to pay a certain tax out of the produce. The son who claimed his due share of an inheritance proved his claim by oath; the debtor disclaimed his indebtedness upon oath, and in the absence of written proof to the contrary, was acquitted by the judge. The oath also played an important part in marriage settlements.

Having, in 1885-6, treated of the civil law of ancient Egypt, and of the religious element involved in the administration of justice (as shown in the solemnity of the oath), Prof. Revillout took up the still more obscure and difficult subject of ecclesiastical law in his opening lecture of 1886-7. That apparently inexhaustible mine, the Serapeum papyri, has furnished him with a number of documents which must have been originally deposited in the archives of the great temple of Ptah, and which relate to cases of misconduct on the part of various scribes convicted within the jurisdiction of the high priest of Memphis. In one instance a large number of priestly officials are accused of fraud and oppression. They are summoned to render up their accounts in the presence of the said high priest. Some fly from justice, one escapes to Lusitania, the officers of the law start in pursuit; but at this point the thread is broken, and we are left to wonder whether the fugitives were caught, and what punishment was awarded to them. Some day, perhaps, the rest of the evidence may unexpectedly turn up in an unsuspected corner of some obscure provincial or private collection. In the meanwhile, the value of Prof. Revillout's enquiries into the jurisprudence of ancient Egypt cannot be over-estimated; and, treated as he treats it, the subject is as full of human interest as of historical information.

AMELIA B. EDWARDS.

CORRESPONDENCE.

"ARCHAEOLOGY AND THE DATE OF THE PENTATEUCH."

Christ's College, Cambridge: Oct. 1, 1887.

Permit me to assure Mr. Poole that I had no opportunity of sending my corrections to him when his article on the date of the Pentateuch was still in proof. The article appeared in the *Contemporary Review* for September, and the editor favoured me with

an early "pull" of it, inviting me to reply in his pages. This early pull reached my hands on August 28, when the sheets must have been all printed off.

Mr. Poole now withdraws his argument about King Pul, and modifies his statement about Palestinian written records, which he proposes to limit to records *in situ*. But the point in dispute was as to the monumental evidence that writing was known in Palestine, and for this purpose coins and gems are quite as good as monuments *in situ*. Mr. Poole corrects his statement of facts at the cost of destroying his argument. Again, he puts aside the inscription on the castle of Hyrcanus because it consists of only five letters. But five letters prove the use of writing as fully as fifty. The apology "that it was such a little one" is not generally offered except by humourists.

As regards the inferences for Biblical criticism to be drawn from M. Naville's discoveries at Pithom, I apprehend that Mr. Poole and I disagree, not as to the facts, but as to the validity of arguments that have been built on them. Mr. Poole believes that Lepsius "proved" that Rameses II. was the builder of the city of Rameses, and, therefore, was the Pharaoh of the oppression. I deny that the arguments offered by Lepsius amount to proof unless his identification of Rameses with Tell-el-Maskhuta (where Rameses II. is known to have built) is accepted. Mr. Poole says that the name Rameses is enough. Enough perhaps, I reply, to prove that the city was built by a king of the same name, but not enough to settle which King Rameses built it. Rameses III., for example, also built in the Delta.

Mr. Poole's next point is as to the inscription of Thothmes III., on which Jacob and Joseph are supposed to be mentioned. I pointed out that the use he makes of this inscription is inconsistent with its title, which shows that the supposed Jacob and Joseph were Palestinian districts, or people settled in Palestine. To show this, I quoted the latest translation of the title that is known to me, that of E. Meyer. Mr. Poole prefers the older version of De Rougé who gives "clausit" for the word that Meyer renders "Ibezwang" and Brugsch "gefangen hatte." De Rougé may be right and Brugsch and Meyer wrong, but it will still remain true that the supposed Joseph and Jacob were tribes or districts of Palestine; and this was the only point on which I built.

As regards the date at which a Hebrew writer on the antiquities of his nation might be expected to make mention of Assyria I advanced an argument resting entirely on Biblical evidence. There is no conceivable reason why there should be much reference to Assyria in any part of the Pentateuch written before the date at which Hebrew prophets and chroniclers begin to speak of that power. From this point of view it is most significant that in the Book of Kings Assyria is first mentioned by name in the reign of Menahem, and that Amos alludes to the empire of the Tigris without naming it. Clearly too, the writer of 2 Kings, xiii. 5, had very vague information as to the wars of Damascus with Assyria. Such facts as these supply the only true measure by which to judge whether a Hebrew writer of the ninth century was likely to have much to say about Assyria. Why should the battle of Karkar or the tribute of Jehu leave their mark on the Pentateuch when there is no trace of them in the Book of Kings?

W. ROBERTSON SMITH.

THE AGE OF THE WALLS OF CHESTER.

Canons-Aahby: Sept. 26, 1887.

The ACADEMY of September 17, and that of September 24, contain some letters on the remains recently exposed at Chester. A few

days ago I had the opportunity of seeing the part of the wall now in process of repair, and the part of the wall lately exposed on the Roodeye, and the sculptures discovered.

There has been, and is, considerable difference of opinion on several points connected with the walls. For the sake of assisting some of your readers to understand the matter, I send the following observations.

It is much to be wished that someone would publish an account of the facts connected with the wall, so far as they are known up to the present time, leaving to others to draw their own conclusions from the evidence. So far as I know, no elevation of the wall has been made, nor any series of sections. This would be very easy to do. The elevation might be on the scale of one-sixteenth or one-eighth inch to a foot, with a datum level and the sections at half an inch to a foot.

The walls of Chester form a parallelogram of about fifty chains north and south, by about thirty chains east and west (the south side being irregular), with main roads cutting it in two in both directions. Part of the north wall to the east of the north gate lately showed subsidence, and accordingly the city surveyor began repairs. The top of this part of the wall appears to be the highest as to a datum level, the ground falling considerably to the south and south-east. The appearance of the ground makes it probable that there was always a considerable fall to the north from the line of the present north wall. Here was a deep fosse in the Roman time. If there was originally this brow, it appears probable that the present wall occupies the position of the first wall by whomsoever and whensoever built, or is within a few feet of that position. It is agreed on all sides that Chester was a considerable Roman station, and probably it is not disputed that it had a wall in Roman times. It is supposed by some that the station was at one time (during, I presume, the Roman occupation) enlarged to the south. It is asserted by some that nearly all the wall is Roman; others hold that none is Roman, and that nearly all is mediæval; and others that a considerable part is of the time of the Civil War, at which time it is historically known that breaches were made by the Parliamentary troops. Doubtless there are various modifications of these views.

At the part under repair the ground to the south of the wall is about six feet below the footpath on the wall. The outer face of the wall and its whole substance (here about ten feet thick) descend to about seven feet below the surface of the ground on the south. Below this is rock cut to a nearly perpendicular face of twenty or thirty feet, at the foot of which is the towing-path of the canal. The wall as well as the rock is of red sandstone. At the time of my visit about ten yards had been rebuilt, and adjoining it was an opening into, and through, the wall. Nearly the whole material of the part taken out and rebuilt consisted of sculptured stones—plinths, cornices, copings, sepulchral slabs, bas-reliefs of figures about two feet high and other moulded stones—evidently the remains of large, ornate, solid buildings. It is impossible to suppose that a city which held such buildings was not walled. It is not disputed that these sculptures and mouldings (with one exception to be mentioned presently) are Roman, and that they were re-used in their recent positions.

It must be specially borne in mind that these sculptured stones were found at the bottom of the wall as well as higher up and equally distributed; so that it is certain that the builders of this part of wall began with sculptured stones. This part of the wall consists chiefly of squared and dressed stones from two to five feet long, one to two feet wide, and one to two feet thick, all of red sandstone, carefully laid,

but without mortar. Most of them have lewis holes, which, however, are contemporary with their first use on the temples or basilicæ or other buildings. It is evident that the part of the wall is more recent than the first occupation of Chester by the Romans, when the large buildings were erected. What has become of the first wall? This question is equally puzzling and equally important, whatever date we give to the wall. Perhaps no one has asked it, but no one has attempted to answer it.

In the part recently opened, no mortar Roman or mediæval, no pottery, no coins, no iron remains were found.

About six or seven chains to the west, close to the east of the north gate, is a part of wall which contains what is apparently a Roman cornice in position. This is described and figured in C. R. Smith's *Collectanea*, vol. 6, p. 42. This wall is in the same line as the part now under repair. We are, however, ignorant of the construction of the wall under the cornice. It is to be noticed that on the cornice are laid some pieces of a coping of Roman form, which, of course, could not have been there originally. This is not noticed in the text, and could not be shown in the plate.

It is stated that a year or two ago a repair was made to the west of the north gate, and that a rough buttress applied to the wall, but not bonded into it, was taken down, which buttress was composed, like the wall recently exposed, of large stones sculptured in Roman times re-used and put together without mortar. It is asserted that the wall against which this buttress was placed was certainly not Roman. The inference drawn is that the buttress could not be Roman; and that the wall now being re-constructed, being identical in material and construction, cannot be Roman. Some say that it cannot be Roman because it has no mortar; but it is stated on the other hand that many examples exist of Roman walls without mortar where large stones could be obtained.

As to the notion that this part was built in or soon after the Civil War, it should be stated that there was no appearance of a "repair" at the place, and that it is unlikely that the opposing force would try to breach this part of the wall. Moreover, it is, I see, recorded in the maps that the fire was directed against the west wall. The builders of that day had no Roman buildings to obtain materials from. If a breach was made in this part, and the wall repaired, how was it that the construction was uniform from bottom to top?

Some persons assert that the wall in question is not Roman, because one piece of sculpture of two figures is, as they assert, mediæval and ecclesiastical. If similarity of material, design, size, and workmanship is any evidence, this sculpture is contemporary with the rest of those found. It would be easy to produce Chinese or Buddhist figures which to some extent resemble mediæval ecclesiastics.

Supposing the wall in question is late Roman, it is certain that it is not, at this part, *exactly* in the position of the first wall. Repairers do not pull up well-laid foundations. Supposing it is mediæval or later, the same difficulty presents itself.

On the Roodeye, previous to the excavation, one saw a sort of rough wall of five courses of large stones, extending for forty or fifty yards, several feet in advance of the city wall and below it. The alternate courses project beyond the others. It is supposed by some that these courses are a comparatively modern rough wall put into their present position to keep up the bank. Others, I believe, suppose it to be the original face of a Roman wall of the city, somewhat decayed as to its face. However, when Sir James Picton and some other antiquaries excavated a spot about ten feet long

in front of this jagged wall they found a wall of about eight feet deep in seven courses, with a smooth face (battered nine inches in eight feet), three feet six inches in front of the jagged courses before mentioned. This three feet six inches is obtained in two deep courses between the eight-foot smooth wall and the upper jagged wall. It appeared to me that these irregular courses are the back or interior of a wall of which the face was flush with the lower wall lately exposed; and this view I learn is that taken by the city surveyor. I say nothing as to the date of this wall. I saw no sculptured stones in it. H. DRYDEN.

ROMAN INSCRIPTIONS AT CHESTER.

York: Oct. 3, 1887.

I express the earnest desire of many in wishing that the excavations at the walls of Chester should be continued, and every Roman inscription extricated. There can be no harm in rebuilding a wall of a comparatively late date, provided that old face-stones are used in the work. The vandalism, in my idea, would be in suffering the inscribed stones to remain where they are. The ancient history of Deva is a matter of the greatest consequence to every student of antiquity, and we cannot afford to lose the evidence which these easily attainable inscriptions would probably afford.

J. RAINE.

Liverpool: Oct. 3, 1887.

I am much obliged to Mr. Hoskyns Abrahall for his explanation of the ligulate form with the M at the commencement of the inscription No. 5 in the list I gave in the ACADEMY of September 24. My own experience is that when Manius is intended to be given as the *praenomen*, a form something like the modern comma follows the M, but that is not the case in the present instance. Still, Mr. Abrahall may be right. On the same stone, the last letter but one of the small side inscription may be, I think, from further examination, a T instead of an I; and, in this case, instead of *j(ussu)* the reading would be *t(itulum)*, *d(edicavit)*, which would probably be more orthodox. *Titulum* would of course refer to the inscription, and mean that the widow had dedicated the stone *sub ascia*.

In the inscription to the memory of the Praefectus Castrorum (ACADEMY, September 3) the ET in the last line may simply be H (the stone is much worn), and thus be part of one of the various *formulae* commencing H. S; but E (for *hic situs est*) does not appear to follow the s. Portions of letters like II or LI seem to precede the CES, but no sense can yet be gathered from them. (FE)LICES would not suit, so far as I can ascertain.

W. THOMPSON WATKIN.

THE ROMAN PATERA FOUND AT SOUTH SHIELDS.

Combe Vicarage, near Woodstock: Oct. 1, 1887.

Mr. Blair gives us this inscription—

APOLLINI ANEXTIOMARO M A SAB

He says—

“Prof. Hübner . . . expands ‘Apollini Anextio Maro M(arci) [no doubt, a misprint for Marci] A(ntonii) Sab(ini servus).’ Apollo Anextius occurs for the first time. He considers it a local divinity like Apollo Maponus, &c.”

I would take ANEXTIOMARO as one word, agreeing with APOLLINI; the letters M A might then stand for Marcus Antonius. We should thus have an addition to the many Kelto-Latin words that bear this termination, the masculine form being *-mārus* (inaccurately made *-mārus* by Propertius, iv. 10.41), the feminine being *-māra*, a termination identified by Zeuss (*Grammatica Celtica*, ed. Ebel, p. 16) with Irish *mór*, “great,” the Welsh word being, I would add, *mawr*.

As to divinities, the masculine form of the termination is in *Dinomogetimārus* (*Mém. des Antiq. de France*, 13, xviii.); while, in regard to the female form, we find mention of a temple dedicated to a goddess of the Bituriges (a people on the upper Loire) who is named *Solimāra* (Orelli, 2050), a goddess whose name the Leuci (a people on the upper Moselle) had on their coins (Akerman, *Coins of Gallia, &c.*, p. 1667). J. HOSKYNs-ABRAHALL.

NOTES ON ART AND ARCHAEOLOGY.

THE exhibition of Mr. Vassili Verestchagin's pictures at the Grosvenor Gallery will open to the public on Monday next, October 10.

MESSRS. CHAPMAN & HALL will shortly publish a translation of M. Eugène Muntz's *Life of Raphael*, with 51 full-page plates and 155 wood-engravings. The work has been translated and also edited by Mr. Walter Armstrong.

AN inaugural lecture will be given at Bedford College, London, by the Professor of Art, Frederick Smallfield, of the Royal Water Colour Society, on Wednesday next, October 12, at 4.30 p.m. The professor will take for his subject “The Use of Memory in Art”; and he will illustrate his lectures with drawings by the late Frederick Walker.

THE School of Art Woodcarving at the City and Guilds Institute, Exhibition Road, South Kensington, has re-opened after the usual summer vacation; and we are requested to state that there are vacancies for the Free Studentships maintained by the Institute in the day and evening classes. To bring the benefits of the school more within the reach of artisans, a remission of half fees for the evening class is made to students connected with the trade. Instruction is also given by correspondence to amateurs unable to attend the classes.

MONDAY next, October 10, has been appointed for the reception of works of art intended for the autumn exhibition of the Nineteenth Century Art Society, at the Conduit Street Galleries.

MUSIC.

MUSIC BOOKS.

A Short History of Cheap Music. (Novello.) This is really a history of the rise and progress of the house of Novello; for, since the year 1811, when Vincent Novello issued his “Collection of Sacred Music,” that house has laboured to make good music cheap. Sir G. Grove, in the preface to this work, tells us how the pianoforte score of “The Messiah” in the first year of the reign of Queen Victoria cost one guinea. Now it can be had for one shilling. Vincent Novello commenced the good work. Alfred Novello introduced moveable music types, and helped to get the taxes on literature removed, such as the advertisement duty, the compulsory stamp, and the duty on paper; while Henry Littleton, head of the firm since 1861, who has just retired, continued to make music more and more accessible to the million. The Novello house in enriching the public enriched itself; but it fully deserves whatever of worldly prosperity it may enjoy. The facility of obtaining the best music at a cheap price has resulted in an immense spread of musical knowledge, and consequent improvement in public taste; and it is this fact which gives special interest to this little book. At the beginning of Queen Victoria's reign there were but few choral societies, and few concerts. The chief show piece on the pianoforte was “The Battle of Prague,” or “The Linnet Waltz” written “by somebody and dedicated to everybody.” The flute was the favourite instrument with gentlemen. The pianoforte was considered a ladies' instrument; for we are informed

that the undergraduates of Oxford hissed a male pianist off the stage of the Star Assembly Rooms, for undertaking what they considered to be a duty which should have been left to the other sex. The collapse in 1848 of the Ancient Concerts, founded in 1776, showed, the folly of ultra-conservatism. It was a principle with that society to give no music by living composers. A succinct account is given of the choral and orchestral and chamber concert societies established during the present reign, and of the revival of English music; and all these movements can be traced more or less directly to the energy and enterprise of the respected musician Vincent Novello. The author of the book is not mentioned.

Review of the New York Musical Season. By H. E. Krehbiel. (Novello.) This volume contains programmes of important concerts and details of opera performances at New York during the season 1886-7. We note the popularity of “Tristan,” which was given eight times. Goldmark's two operas “Königin von Saba” and “Merlin,” were also heard several times. Berlioz's “Les Troyens à Carthage” was performed as a dramatic cantata. Liszt's oratorio, “Christus,” also came to a hearing. Besides programmes, the volume includes many articles written by the well-known musical critic of the New York *Tribune* which are extremely interesting. The long enthusiastic account of Berlioz's “Troyens,” makes one wish that Mr. Manns or Mr. Henschel would let us hear it. “No estimate,” says Mr. Krehbiel, “of Berlioz's works is complete which does not take this score into account.”

Pianoforte Album. Woycke. (Ascherberg.) Among this collection of pieces are three Sonatas, named respectively “Dramatique,” “Romantique,” and “Poétique.” Yet we fancy a far more appropriate title for all three would be “Fantastique.” The composer is evidently bent upon being original at any cost, but the result is more curious than pleasing. And the music is written in so uncomfortable a style, that only a few hardy pianists would be tempted to try the sonatas to see what is in them. A Nocturne, Légende, and Barcarolle are more likely to secure favour, but they are only of the type of ordinary drawing-room music. Another piece is Schubert's “Forelle,” as a study for the left hand. Schubert's lovely melody is lost amid a cascade of scales, arpeggi, and octaves. A “Fugue à 4 voix” is as ugly as it is weak.

Two Pieces for Violin and Piano. By M. M. Ames. (London Music Publishing Company.) The first is a Barcarolle, the second a song without words. So long as the composer keeps to plain simple melody there is not much fault to find, but the attempts at harmony and passage writing are anything but satisfactory.

Annabel Lee. For Tenor Solo, Chorus, and Orchestra. By F. St. John Lacy. (London Music Publishing Co.) The music is tuneful, but not original. Well sung, the little piece might prove effective; but the composer has not much to say. Having only a pianoforte score we cannot speak about the orchestration.

Sketches in Dance Rhythms. By E. Allon. (London Music Publishing Co.) It is now the fashion to write pieces in the old dance rhythms; but it is rare to find any of striking merit. Mr. Allon's pieces form no exception. They are correctly written, but monotonous.

Cavatina. For Violin. By F. G. Webb. (London Music Publishing Co.) A simple little piece, and rather elegant. The effect is somewhat spoilt by the not very interesting accompaniment. Besides lacking interest, in some places this accompaniment does not show pianistic skill. J. S. SHEDDOCK.

THE NEW NOVEL.

MISS BRADDON'S NEW NOVEL.

At all Libraries, in 3 vols.

LIKE AND UNLIKE.

By the Author of "Lady Audley's Secret," "Mohawks," &c.

LONDON: SPENCER BLACKETT (Successor to J. & R. MAXWELL), 35, ST. BRIDE STREET.

MESSRS. W. BLACKWOOD & SONS' NEW BOOKS.

This day is published,

POOR NELLIE. 3 vols., post 8vo, 25s. 6d.

BY THE SAME AUTHOR.

MY TRIVIAL LIFE and MISFORTUNE. New Edition. Crown 8vo, 6s.

"The Story of 'My Trivial Life' is a genuine book, and may indeed be esteemed for one of the bitterest and cleverest novels produced of late years. We can recall few books of recent years in which there is such an intensity of life, such a passionate outpouring of experience."

Saturday Review.

"She delights the intellect by a continuous succession of bright, witty, often caustic sketches of what is commonly known as 'good society.'"

Scotsman.

This day is published,

A THIRD EDITION OF

EPISODES in a LIFE of ADVENTURE: or, Moss from a Rolling Stone. By LAURENCE OILPHANT, Author of "Pleasantly," "Allora Peto," "Halfa," &c. Third Edition, post 8vo, 10s. 6d.

"Probably no living man but Mr. Laurence Oilphant could have made such a collection of sensational reminiscences. . . . What strikes us after a perusal of this book is the surprising fact that he should have survived to write it. He has gone through all manner of dangers. . . . Altogether it is very long since we have read a volume so rich in interest of all kinds, and we can recommend it as one of the rare books which will bear reading a second and even a third time."—*Times.*

"The book bristles with adventures in every page. Among these his sporting reminiscences will be found the most absorbingly exciting. We wish we could transcribe some of them."—*Saturday Review.*

This day is published,

NEW AND CHEAPER EDITION,

SARACINESCA. By F. MARION CRAWFORD, Author of "Mr. Isaac," "Dr. Claudius," "Z-roaster," &c. New Edition, complete in 1 vol. Crown 8vo, 6s.

"'Saracinesca' is a very remarkable book, and a great advance upon any of the author's previous works."—*Academy.*

"It is a book of which even the greatest masters of fiction might with reason have been proud."—*Pictorial World.*

"Clever, striking, interesting."—*Spectator.*

"No better picture has been drawn of Roman society than the one contained in Mr. Crawford's new novel 'Saracinesca.'"—*Morning Post.*

THE CITY OF SARRAS. By U. ASHWORTH TAYLOR. Crown 8vo, 7s. 6d.

This day is published,

WALLENSTEIN: a Dramatic Poem. By FREDERICK VON SCHILLER. Translated by C. G. N. LOCKHART. Fcap. 8vo, 7s. 6d.

This day is published,

THE SEVENTH EDITION, REWRITTEN AND ENLARGED,

A MANUAL of ZOOLOGY, for the Use of Students. With a General Introduction on the Principles of Zoology. By HENRY ALLEYNE NICHOLSON, M.D., D.Sc., Ph.D., F.R.S., F.G.S., Regius Professor of Natural History in the University of Aberdeen. Seventh Edition, Rewritten and Enlarged. With 555 Engravings. Post 8vo, pp. 356, 18s.

Wm. Blackwood & Sons, Edinburgh and London.

Now ready for OCTOBER, price 1s.

LITERATURE.

Doncaster, from the Roman Occupation to the Present Time. By J. Tomlinson. (Wyman.)

MR. TOMLINSON is already well known as an indefatigable enquirer into the antiquities of the country round Doncaster; and his works on the Level of Hatfield Chase, on the region lying between Doncaster and Sherwood Forest, and on the etymology of the place-names in that neighbourhood, have secured for him more than a local reputation for industry and scholarship. He now gives us a handsome volume of "secular items," showing the growth of his native town from its rude and obscure beginnings in Roman and Anglian times to the days of its present prosperity. Its Church-history is reserved for another volume, which is to deal with the mission of Paulinus and the building of the church at "Campodunum" the royal residence of Edwin the Fair, the history of the monastic houses, and the lives of various clergymen and preachers of eminence who have flourished in the town.

Doncaster appears to have been a post of some military importance during the Roman occupation of Britain. The station of "Danum," as it was originally called, protected the junction of main roads which converged at a ferry over an arm of the river Don. There has been some confusion as to the course of these roads and their identification with the great highways of mediæval times. Part of the road from Doncaster to York was claimed as belonging to the Foss-way, which extended between Bath and Lincoln; and Leland described part of the same road as "the very mayn crest" of Watling Street. The real facts seem to be as follows. From the cavalry-station at Doncaster a road ran to Gloucester and the mouth of the Severn, parallel to the line of the Foss-way, and about sixty miles to the northward. This road, which passed by Birmingham, and through Staffordshire, as is shown by various descriptions of parcels in ancient conveyances, was afterwards known as the "Ryknield Way" or "Rykneld Street." The great road from London to Lincoln, which passed across a ferry over the Humber to as far north as Newcastle, threw out a branch to Doncaster and York. This branch of the "Ermine Street," portions of which still exist under the name of the Roman Rig, is best known by De Foe's description. At Doncaster, he says, "we saw the first remains of the great Roman highway which, though we could not perceive before, were eminent and remarkable just at the entrance into the town." In another passage he says that his party rode some miles out of their way over Barnsdale in order to see the great Roman

causeway, "which runs across this moor from Doncaster to Castleford." He described it as being perfect in many places. Where it was broken up, the courses appeared to be of different materials: "the bottom is clay or earth, upon that is chalk, then gravel, and upon the gravel is stone, and then gravel upon that." From York this road was continued as one of the three great meridional lines by which communications were kept up between the upper wall and the principal cities in the south of the province. Mr. Tomlinson gives an interesting account of the various Roman antiquities which have been found in the town and its neighbourhood. Some of his inferences, however, are hardly trustworthy; and the reader should be cautious in accepting such etymological fancies as that which finds in "Austerfield" a memento of a fight between Ostorius Scapula and the natives of Brigantia.

Passing to the time of the English settlement, we learn from Bede that the site of the Roman station was occupied, under the name of Campodunum, as a villa or estate belonging to the kings of Northumbria. In the reign of Edward the Confessor the place belonged to Earl Tostig. It appears to have been at that time a rural township consisting of two plough-lands held by small freeholders, who owed suit and service to the Soke of Hexthorpe. In Domesday Book it is entered among the possessions of Robert Earl of Moretain; and when the estates of his family were confiscated for rebellion by Henry I., the soke and its dependant township passed to the family of Fossard. The heiress of the Fossards married Robert de Turnham, "a mighty crusader"; and his daughter, becoming a ward of the crown, was sold in marriage, after the high-handed fashion of those days, to Peter de Maulay. Seven barons of the same name successively became lords of the "manor and soke of Doncaster," now separated from the lordship of Hexthorpe. Their feudal rights over the town were undoubted as a matter of law; but they had to sustain continual contests with the crown, the town being claimed as part of the king's ancient demeane. The townsmen, as often happened, profited largely by the contentions of the superiors. Richard I. by an important charter, which is still preserved among the corporation archives, granted the borough absolutely to the burgesses in consideration of a fee farm-rent; and the continued payment of the rent was proof that the crown had some rights over the borough, however clearly the De Maulays might prove their feudal title. King John acknowledged that Doncaster was their town, while treating it as his own; for we find him ordering the bailiffs of Peter de Maulay to inclose their lord's town of Doncaster "with hertestone and pale, according as the ditch that is made do require, and that ye make a light brecest or barbican upon the bridge to defend the town, if need shall be." Whether the fortifications, apart from the castle, extended to anything more than a ditch and palisade, we cannot now be sure. On this point, perhaps, Leland's authority may be taken as sufficient.

"There appere no tokens," he says, "as far as I could lerne or see, that ever Doncaster was a waulled town: yet there be three or four gates in it, whereof that on the west side is a praty

Tower of Stone; but S. Marie Gate is the fairest."

The manorial lords seem to have had complete control over the trade of the borough. The profits and regulation of the annual three days' fair belonged to them, and they even succeeded in imposing a tax on the sale of all victuals by retail-dealers or "regraters." This appears by a charter of Peter de Maulay the fifth, whereby he released to the commonalty of Doncaster, both rich and poor, "the pernicious custom raised from the same town heretofore by my ancestors, which we were wont to receive from all manner of regratery." The complete emancipation of the borough was practically assured when it began to send members to Parliament, but it was a long time before its legal rights were conclusively recognised. At last, an important charter of Edward IV., after recounting that the liberties of the town, through defect of a declaration thereof, might be molested and incommoded, established the townsmen as free burgesses with the right to have a merchant-guild, to elect a mayor, to exercise legal jurisdiction in the borough, and to hold an annual three-days' fair. This charter, says Mr. Tomlinson, embodied the town's privileges, and defined the municipal administration. It was left for successive kings, especially Henry VII. and Charles II., to secure to the town its property and manorial estates. All the feudal rights over the town having become vested in Henry VII., that king granted the whole manor, town and lordship, with all the villages and hamlets belonging thereto, to the corporation to be held under a fixed rent, which is still paid to the family of the late Gen. Kinsey, whose ancestors purchased it from Charles II. The largeness of the words of gift in this grant was the occasion for a terrible litigation between the corporation and the owners of certain lands which were claimed as part of Doncaster Moor, the corporation succeeding in the end in making good their title to the greater part of the property.

The record of this litigation is now interesting only so far as it bears on the question of the antiquity of the Doncaster races. In the year 1598 we find Hugh Wyrall, the rival claimant, setting up a stoop or stand on Doncaster Moor "att ye west end of ye horse-race," and the corporation sending a workman "to cutte down or digg up the saide stoop." The quarrel about the possession of the ground led soon afterwards to the entire suppression of the races. An entry in the corporation books for 1615 states that the race "hath brought and bred many cares and suits to the great damage and prejudice of the corporation, and quarrels and other inconveniences have by reason of this race bene stirred up"; and that for the prevention of murder and bloodshed it had been agreed that the meeting should be discontinued "and the stoops and stand shall be pulled up and employed to some better purpose." The public interest in the sport revived at Doncaster, as elsewhere, during the reign of Charles II.; but it was not until nearly a century had elapsed after the suppression in 1615 that the corporation gave a subscription "to encourage the horse-racing." The great increase in the prosperity of the Doncaster meeting dates from 1776, when a new course was laid out and the celebrated sweepstakes was instituted which now

takes its name from Gen. Anthony St. Leger. The present importance of the race week may be estimated from the fact that the corporation clears about £5,000 profit, after allowing for expenses of equal amount in the way of subscriptions and management.

Mr. Tomlinson adds a very complete and interesting account of the markets for which Doncaster has always been famous, of the antiquated soke-mills at which the townsmen were obliged to grind their corn, of the freemen's commons which, as he supposes, exist "by a mistake or omission in the Municipal Reform Act," and of the numerous public works and institutions which testify to the prosperity of the town. The book is handsomely illustrated; and its readers will probably all be anxious for the appearance of the volume of "clerical items" which is to complete the work.

CHARLES ELTON.

Ballades and Rondeaux, Chants Royal, Sestinas, Villanelles, &c. Selected, with chapter on the various forms, by Gleeson White. (Walter Scott.)

THIS little volume, full of many poems, may be said to represent very fairly the effects of some experiments made about ten years ago by a few men who had already earned reputation as writers of verse. These have been years of experiment and new life in all arts great and little; and in poetry scarcely any kind has been left untried, from the loosest to the most organic—from the poetry in solution of Walt Whitman to these highly crystallised forms of old France. Feeling the beauty of the forms when thoroughly understood, as by old writers like Villon and Voiture, and moderns like Théodore de Banville and Boullier, and attracted perhaps by the very difficulty, as well as by the novelty, of the attempt, they commenced to write English poems in the form of "ballades and rondeaus, chants royal, sestinas, villanelles, &c.," as the title of this book has it. That they had any more serious intention than to amuse themselves and others by an interesting literary experiment may be doubted; that they thought of supplying a grave deficiency in English literature or forming a new school of poetry may be safely denied; but whether they wished it or not they created at least a fashion, and the number of authors (over sixty) who contribute to this volume probably represents less than half the number of verse writers in England and America who have set their wits to work on these dainty devices.

The movement, though not yet exhausted, has gone far enough to prove that, unless it takes some new and unexpected turn, it will not get much farther. Notwithstanding that many very beautiful poems have been written in these forms—poems which could not have given quite the same kind of delight if written in any other form—there are few, if any, signs of their real naturalisation. These beautiful poems have been written by a few men, and it is only a few of these few men who have written more than two or three of them, only one who may be said to have proved himself a master in several of the forms. Moreover, it is doubtful whether these exceptionally skilful singers will give us many more. An occasional ballade we

may still hope for, perhaps, from Mr. Andrew Lang, and Mr. Austin Dobson possibly may, to use his own words, "unlock his heart in a rondeau" now and again. Mr. John Payne may still find in these forms exercise for his inexhaustible faculty of versification, but Mr. Gosse is not likely to repeat his triumphs in sestina or chant royal. Mr. Henley, who in this volume for the first time appears as the acknowledged author of what Mr. Gleeson White rightly calls "the brilliant series of these poems" which appeared in the *London* during 1877-8, has long been silent, and there is no sign of any new writer who is likely to make up for these and other secessions from the quire.

It is scarcely necessary here to say much with regard to these initiators and their works. Such of the latter as appear in this volume are already well-known favourites. Mr. Dobson's ballades, rondeaus, villanelles, and triolets are models for imitation, correct in form, skilful in versification, and, moreover, poems. No one has entered so completely as he into the science of the different structures, and has seen so clearly the nature and description of theme specially suitable to the particular form. Apart from all the wit, the happy fancy, the charms of rhythm and cadence, and other characteristics of the writer, this sense of literary fitness is a special mark of his "French Forms." Mr. Lang has spoken of this class of poetry as "decorative," and there is a close analogy between the art of decoration and the art of "fixed forms." The "little blue mandarin" of Mr. Dobson's charming villanelle was no doubt part of a decoration which made the "Nankin Plate" a pretty thing without destroying its existence as a plate; and Mr. Dobson's villanelle is a pretty thing, but still a villanelle and nothing else. Of Mr. Lang's "ballades" it may be said that if not always so finely chiselled as Mr. Dobson's, they have a happy grace and flexibility, a spontaneous audacity, a freshness of flow as though straight from the source, which give them a charm peculiarly their own. Despite their strict observance of the rules, they frequently approach the freedom of improvisation. In his ballades, perhaps, more than in any others, we see the possibility that the ballade, with some slight modifications perhaps of rhyming difficulties, may become a favourite means of self-expression among English poets of the future. Yet it is Mr. Dobson, and not any other writer, who is the true begetter of this book.

As to which was the first to publish in England this form or that is not of much consequence. Mr. Andrew Lang was the first writer of the double ballade, not Mr. Henley, as stated in Mr. Gleeson White's preliminary chapter. Mr. Gosse is credited with the first villanelle, with the first sestina in the Italian unrhymed form, and also with the first chant royal; and no one has excelled him in either of these two latter very difficult forms. Mr. Bridges's two charming triolets were the first in English (since Mr. Patrick Carey's); and there are others who might put in claims for being first in the field with this and the other form, or some variation of it. But though the seed was sown by many Mr. Dobson has done more than anyone to spread the cultivation of these forms in England and America, and most of the poems in this book

by new writers show that the seed has been taken from his flowers. Although Mr. Lang's inimitable wit and style in the use of the ballade form has had a crowd of followers, no imitation of him is closer to the original than Mr. Ernest Whitney's echo of Mr. Dobson's double ballade of prose and rhyme; and there are few writers whose rondeaus and triolets do not bear very clear traces of similar parentage. For these reasons the majority of the poems in this volume by American writers, while they testify to a widespread skill in versification, add little to the poetical interest of the book, although in an article of more critical detail it would be a pleasant duty to call attention to the ballades of Mr. Sherman and Mr. Brander Matthews, and to several of Mr. Clinton Scollard's pieces. Of English writers the most important of what at least to the majority of readers may be called "novelties" are Mr. Henley's *London* poems before mentioned. They show a true lyrical gift, a large range of feeling, and much happiness, force, and originality of language; but too many of them have been written in a hurry, and some of those which contain the most faultless and poetical of his stanzas are damaged by want of care in the execution of other stanzas. Nevertheless, one of the features of the volume is the exhibition of Mr. Henley's remarkable power in verse.

It is impossible here to quote from or to enter minutely into the merits of his work; but it may be noted that though he has used the forms for the most casual and trivial of purposes he is also one of those few who has employed them for the expression of the deeper emotions. There are few "forms" here which are more truly pathetic than his beautiful rondeau, "When you are old." The aptitude of these "conventional" forms for such serious feeling is a question which cannot be discussed here; but there are more than one example of it in Mr. Gleeson White's book—e.g., Miss Mabel Robinson's triolets from "Fiammetta," especially the exquisite one beginning "Since I can never come again," and Mr. Samuel Waddington's fine chant royal of "The New Epiphany."

Nevertheless, although Mr. Swinburne has written some grand ballades, and though such well-known prose-writers as Mr. William Black and Mr. Grant Allen have been tempted into verse by the ballade form, there is not much promise in the future for the expansion of this French colony of forms.

The fact is that, to use a homely phrase, the game is well-nigh played out. It has been interesting, exciting, delightful while it lasted, and it will leave its mark on English literature for some time to come. It has been an excellent school for young students in the art of poetry. It has done something to raise the technical standard of verse, and it has enriched our literature with many beautiful things; but the thorough naturalisation of these forms, certainly of most of them, in their exact French shape is not to be expected. They need a lightness of hand and of thought, a lightness also of language it may be said, which is native to the land which produced them, and cannot be imported with the forms themselves; and a still more palpable obstacle to their habitual use by English poets is the paucity of rhymes in English. Mr.

Dobson has suggested that this difficulty may be partly overcome by allowing words composed of the same vowel sounds, preceded by the same consonant, to rhyme with one another, provided the sense is different; but he adds that no purist would use such rhymes, and it is doubtful whether this addition to English rhyme power would be easily accepted by others who are not purists, and whether, if accepted, it would prove adequate to the purpose. How serious an obstacle it is can be seen by anyone who examines the ballades, where the inexpert poet generally gets into difficulties in the third stanza; and even in the less exacting form of the rondeau he is often put to palpable shifts.

At the same time the experiment seems to have revealed a real want in English literature. It has recognised beyond doubt the value of fixed forms, their special beauty of music and shape, and their use in expressing, with a neatness and charm otherwise unattainable, slight thoughts, moods, fancies, compliments, and sentiments both grave and gay. Especially is there need for them in this hurried age, when many besides Dr. Garnett seek for some pretty ready shrine in which to fix the "rare and coloured thoughts" which come across their minds at odd moments. Perhaps this movement will end in the invention and adoption of some modification of the ballade and the rondeau better suited to English thoughts and English words than the French forms. Perhaps Mr. Swinburne's "roundel," of which some beautiful specimens are given in Mr. Gleeson White's volume, will strike root. The modern movement towards greater perfection in lyric form, and cultivation of the sense of lyric music, owes more to him than perhaps to any poet except Rossetti; and it would be only fit that he should succeed in naturalising the rondeau in an English form. But if he fails in this, it need be no reason for wonder, when we remember that even Shakspeare failed to make his sonnet grow.

Cosmo Monkhouse.

My Consulate in Samoa. By William B. Churchward. (Bentley.)

Of all the minor Pacific groups the Samoan, or Navigators, Islands are in many respects the most interesting. They occupy a somewhat central position on the oblique line running from New Zealand to Hawaii, which roughly marks the boundary between the watery domains of the large brown Polynesian race to the east and of the dark Papuans (Melanesians) to the west. The Samoans themselves are not only typical Polynesians, superior to most others both in physical beauty and mental endowment, but are on good grounds regarded by many ethnologists as the original stock of all the brown Polynesian islanders. Their dialect is the most archaic, at least in its phonetic system, as shown by the retention of organic *s* (*Samoa*, *Savaii*, *Saisai*, &c.), which elsewhere passes over to the aspirate or disappears (*Hawaii*, *Aiai*), except in the neighbouring Tokelau and in a few Tongan words.* The island of

* It is noteworthy that Samoan not only preserves the *s*, but in foreign words tends even to substitute it for *h*, which sound is not known in this dialect. Thus *Sapai* for *Hapai* (Rev. S. J. Whitmee).

Savaii,* largest of the Samoan group, would seem to be the cradle of the race, or at least the point of dispersion after their arrival in the Pacific, where this word occurs in diverse senses and dialectal forms throughout the whole of the Polynesian domain. Thus, in Tahiti—Hawaii—the universe, the world; in Rarotonga—Avaiki—the land under the wind; in New Zealand—Hawaiki—the land whence came the Maori people; in the Marquesas—Havaiki—the lower regions of the dead; in the Sandwich Islands—Hawaii—the chief member of the archipelago.

But for some time back the interest attaching to the Samoan group has been rather of a political than a scientific character. Unfortunately for itself it has entered into the comity of nations; and its direct relations with England, the United States, and Germany have converted it into a sort of diplomatic cockpit for these rivals for supremacy in the Pacific waters. The resolute and not over-scrupulous Teuton has so far had the best of it; and according to the latest reports the authority of the native King Malietoa has been practically replaced by that of Herr Weber, whilom Hamburg trader, and present accredited "Agent" of Germany to the Court of Apia.

But these political squabbles have not been an unmixed evil, for to them we are at least indebted for the book under notice, decidedly the best that has yet appeared on the social condition of the Samoan Islanders. It constitutes a pleasantly-written record of Mr. Churchward's personal experiences during his four years' residence in Samoa, to which he was appointed British Consul in 1882, with the option of accepting the collateral position of "Adviser and Chief Secretary to King Malietoa." A very brief residence in the capital, Apia, sufficed to show that this was not a desirable position; and not the least amusing portions of the book are the descriptions of the interviews between the consul and the king's ministers, in which the former declines, and the latter urge his acceptance of, the proffered honour.

"In spite of what I could say, they would not realise that I had honestly declined their service, for I was the first white that had done this extraordinary thing. Their experiences showed them that their greatest trouble had ever been to keep foreigners out from taking up Government positions among them, whether they wanted them or not; that white volunteers, premiers, land commissioners, chief justices, treasurers—the latter especially—were to be had for the asking, and that they could fill these positions four deep any day they pleased. Yet here was a man who refused to come to them and revel in the glory of all these titles, although, as they thought, he had been commanded to do so by his great chief."

Mr. Churchward has a good eye for the beauties of nature, and describes with considerable power his frequent visits to the enchanting scenery of these lovely South Sea Islands. The region of the wonderful waterfall visible from Apia above the Vaisigago Valley was thoroughly explored almost for the first time, and views obtained of the fall both from above and below. It was seen

"tumbling over the edge of a precipice which closed in the entire valley like a wall, impass-

able at any point but by the lofty heights on either side. The place where the fall itself occurs is a water-worn reef in the solid rock, through which the river takes its desperate leap of quite four hundred feet, and flashes so brightly in the sunshine to the observer at Apia. From thence is to be seen the whole course of the Vaisigago Valley, with the sea brightly blue beyond. When gazing into the giddy depths below, where the largest trees appeared like small shrubs, the thick body of water continually passing by us appeared in falling to get thinner and thinner, until, dwindling to a silver thread, it ended in snowy-white fleecy mist."

But when seen from below this fleecy mist

"appeared in all its reality in the form of an immense ever-rising fountain shower of feathery spray dashed up by the everlasting crash of the upper waters from their giddy height into the pool below. Immediately over this lovely sight hung suspended a glittering border of prismatic hues, changing every moment and dancing and quivering in the sunlight."

The author had the rare good fortune to witness the annual arrival of those singular marine creatures, the Palolo worms, which appear in prodigious numbers at certain points in the reef-openings only once a year, and just for the single hour immediately before sunrise. The time of their arrival is calculated to a moment by observing the juxtaposition of the moon with a certain star; and should they fail to appear on that day, they are sure to do so on that day four weeks. Then the natives gather in their canoes from all parts to capture them in all sorts of vessels, and distribute them as great delicacies to their friends all over the archipelago.

"Suddenly, as if let loose at the one exact time, were to be seen wriggling and writhing up from the nethermost depths millions upon millions of long thread-like worms of many colours, all seeming to be racing at their topmost speed to arrive at the surface and make the most of the short time permitted them for their annual exhibition. Up they came in myriads until the surface was thickly covered with one solid vermiculating mass of living animals. Shouting and laughing, everyone now plied his or her scoop as busily as possible baling up the writhing delicacies at top speed, to make as good use of the short time available as could be. No sooner had the sun thrown his first ray on the water than, as if by magic, with the same common accord with which they had risen to the surface, they all disappeared, sinking lower and lower to the depths below, until not a single sign of their presence was to be observed in the very spot where, a moment before, the water was perfectly muddy with animal life."

The Palolo feast is naturally one of the great events of Samoan life; and to the other amusements of the islanders has lately been added the English game of cricket, greatly modified, however, to suit the national taste for display with the least possible expenditure of physical exertion. Yet even in this mitigated form the game soon acquired in these touchy times of international rivalries a sufficient amount of political significance to excite the umbrage of His Imperial Majesty's representative at the Court of Apia.

"Once during a time of trouble cricket assumed a political importance, by the aid of which the natives hoped to tide over a dangerous time until their expected relief arrived, in the shape of British annexation to put them out of their misery. They had officially written to England

* Organic form: *Savaiki*.

offering their country, and then, to avoid all further complications or roughly exacted explanations, they determined to start a cricket match of such stupendous proportions that it would last until they got an answer from home; during which time they considered that, being engaged in playing, they had a valid excuse for not taking notice of any business that might unpleasantly crop up. In fact, the entire government was playing cricket, and could not be disturbed. The game began, but I don't know whether it was ever finished or not. Anyhow, I don't think it had any particular effect upon the usual run of politics, but I do know that their letter to England was never answered. Shortly after this incident the Germans were very much down upon the natives, finding fault with everything they did, and continually informing them that their insignificant little group was insulting the great German Empire; and they eventually forbade the King, under dire penalties, to play the game called 'cricket' at his seat of government."

It is evident from this and several other still more outspoken passages that at least one British functionary still survives who has the courage of his opinions. But his fate in Samoa was not such as to encourage others; for the Germans not only suppressed the British game of cricket, but also extinguished the British Consul himself, the only man who dared to stand between them and their Samoan victims.

"Such conduct, however, did not appear to please the powers that were; for it happened that many hints I had received from Germans to the effect that if I did not cease to oppose them in their native intrigues my relief would be effected—a warning I could not bring myself to believe had any official significance—*did prove true, and my official reign in Samoa was brought to an end.*"

It seems there is some reason to congratulate ourselves that this crowding out policy has begun about a century too late. However meekly we may now be contented to go to the wall, and however eagerly each successive party administration may vie in pusillanimity with its predecessor, it is still a fact that many of the fair places on the surface of the earth were luckily already secured for our overflowing population before the irrepressible Teuton was able to put in a claim for his share of the spoils.

Mr. Churchward is not a scientific observer, nor does he deal at all with the difficult problems of Oceanic ethnology. Nevertheless, he has sufficient commonsense to distinguish between the brown Polynesians and the black Papuans, which some recent specialists have failed to do. "Nothing whatever of the Papuan about them," is his emphatic remark on the physical appearance of the Polynesian Samoans. Like others who have associated much with them, he is eloquent on their genial, kindly disposition and high intellectual qualities. At the same time he clearly sees that they lack the mental stamina necessary for permanent self-government, and hence must sooner or later fall into the hands of some foreign power. At the same time it seems a pity that, according to present appearances, they are not likely to be permitted to choose their own masters.

"Samoa never will be settled until some power takes her in hand. The natives know it, and openly say so themselves; but for choosing the country they would wish to be annexed to, they

have had to suffer many persecutions, which, however, have not in the smallest degree shaken their resolution. They are painfully aware of their hopeless weakness, and heartily sick of the shuttlecock, no-child-of-mine sort of existence that they have had to endure, tossed about between three nationalities, each jealous of the other, and who will neither let them alone nor take them up. Their choice for annexation is most decidedly British, for which they have petitioned over and over again since very old times. American protection they sought once, but to Germany they never have appealed, though several times ordered to do so."

The book is well printed, but has neither map nor illustrations; and, worse still, lacks an index.
A. H. KEANE.

Beyond the Seas: being the Surprising Adventures and Ingenious Opinions of Ralph Lord St. Keyne, told and set forth by his Cousin, Humphrey St. Keyne. By Oswald Crawford. (Chapman & Hall.)

We shall not call this book a novel. It is not so denominated on the title-page, and it has no more claim to the designation than has *Gulliver's Travels* or *Robinson Crusoe*. It has become a fashion of late, why, we know not, to call every book which deals subjectively with the imagination a novel. We do not care to go into the derivation of words, for old meanings have little to do with new ones; but we are certain that a novel, as the word was understood by our fathers, had a limited meaning, which excluded books such as the one before us. Considering the mountains of ill-digested rubbish which are now manufactured with little more strain on the intellect than patent blacking or "Indian pickles," we should be insulting Mr. Crawford if we compared his book with them.

Beyond the Seas is an imaginary history of two relatives, Lord St. Keyne and his illegitimate cousin Humphrey. It is written in a dialect which has a seventeenth-century flavour, but no archaisms are introduced which jar upon the ear or make reading in any way task-work. There is the slightest possible love story in it. Much about the sea and fights thereon with Barbary rovers, and still more—more in value that is, not in bulk—concerning Lord St. Keyne's mystical philosophy or theology. This is the best part of the book. There are many passages in it, whole pages indeed, which would lead a careless reader to imagine that the author was a Roman Catholic; other passages, however, could be pointed out which render this conclusion in a high degree improbable. With the religious or philosophical views of the author we are not concerned. It is those of his hero that interest us. We are bound to say that he has represented a gentleman of the seventeenth century, a cavalier and a member of the old religion, in a manner that we have never seen surpassed. There is hardly a thought of his recorded that might not have passed through the brain of some one of the many heroic souls who fled from "the crowning mercy" of Worcester. The thinking men of that day who were not Puritans or Hobbists were almost all mystics. Some, of which Sir Kenelm Digby was a type, were Catholics; others clung to the established religion, which had for a time fallen as much

by the wretched propping and underpinning of Laud and the creatures of the court as by the onslaught of the Puritans in the council or on the battlefield. A third section, of which Lord Herbert of Cherbury is an illustrious example, were sceptics; but their doubts were the result of the mind acting on thought or thought-forms, not of methods afterwards popularised by Locke.

We should like to persuade ourselves that Lord St. Keyne was really one of the first class—that the notes of his life before us were not the creation of a nineteenth-century intellect which has come in contact with the lights and darkneses of our modern time, but in very truth what they seem to be. On laying down the volume the sweet charm of thoughts set in such quiet, homely, living words so overpowers the mind that it is difficult for one who has once made the self-surrender to throw off the illusion, or to refrain from asking what would have been Lord St. Keyne's suggestions towards solving this or that moral or philosophical problem which oppresses us in these weary days of pessimism, wantonness, and sloth. Though they did not write or talk so much as people do now, we have not all of us forgotten that the men of the seventeenth century had a conception of justice which is not common with us. They could admire virtue if they would not practise it; and they knew with the certainty of an uncorrupted faith that good and bad, virtue and vice, were not mere names, but stern realities, between which was a gulf as wide and as impassable as that which cut off Dives from Lazarus. Though Mr. Crawford's pages are in no sort didactic he has felt this, and never made his characters talk as if they thought success was to be achieved here or anywhere else by trying "to make the best of both worlds." This is high praise, we know, but we are constrained to give it. We should speak far differently were there any notes of the mere book manufacturer to be found; but there are none, or if there be they have remained undiscovered after careful scrutiny. We believe *Beyond the Seas* to have been written without any thought as to how many copies the great circulating libraries would gulp down, and that the dreadful face of the reviewer has not intruded between Mr. Crawford and the sunlight. As the merit of the book does not consist in splendour of diction, but in the quiet harmonies, quotations can be of little service. The following paragraph may, as well as any other, be torn out of its setting:

"I would propose, sir, to divide mankind into two kinds or species—a higher, a rarer, and by comparison almost a divine species, the individuals of which act by their own spontaneity; and a lower species, which acts and moves and thinks and speaks from necessitation and of blind impulse and instinct, unwitting and unaware."

The description of the sea-fights are first-rate. Whether right or wrong in technical detail, they have all the clear-cut sharpness of those old tales of adventure, which now, it is sad to say, remain unopened on the shelves of our great libraries, while every libidinous tale in prose or verse finds eager readers, annotators, and renderers into English.

EDWARD PEACOCK.

Ourselves and our Neighbours: Short Chats on Social Topics. By Louise Chandler Moulton. (Boston, U.S.: Roberts.)

THIS brightly written book is another *Conduct of Life*—of life in its social rather than its individual bearings—from the point of view of a sensible woman. Mrs. Moulton does not write like Emerson, or think like him, but she is quite as sound a philosopher. In one important respect her style is to be preferred even to his, for it is cheerful, humorous, and fluent. Emerson would have found some difficulty in treating of such subjects as "Rosebuds in Society" and "Young Beaux and Old Bachelors"; but to Mrs. Moulton they suggest reflections that are as useful in their way as the more abstract results of reason. The "rosebud," for instance, is "thorny," especially in America, where a girl "speaks of a single woman past her first youth as 'that poor old thing'!" The young beau and the pretty rosebud—be it never so thorny—have the best of the more fleeting pleasures of life; but what of the over-blown ungathered bud, and the gay bachelor grown old?

"The old beau looks about him and sees his contemporaries buying houses and leading their children by the hand, and he scoffs a little perhaps, and tries to think that he is glad not thus to be bored and burdened. But his laughter is hollow; and when he goes home at night and sits before his lonesome fire, he sees in the firelight glow the long-lost Spanish castle, of which he threw away the key in his youth, and fancies what might have been if youth had but known."

Yet in regard to marriage, like a sensible woman and sound philosopher, Mrs. Moulton urges delay. "Marriage should be waited for, not sought. Who knows round what corner his destiny may be hiding?" The man should wait until destiny has done mocking him with make-believes; the girl until it has been revealed to her that she is this same hiding destiny. In the case of such a girl as a recent Senior Classic, there is another reason for delay. "We should at least give a girl time enough to lock up her diploma and rest from her own examinations before she is called on to examine the claims of some young man to be her suitor." For those who are already married Mrs. Moulton has the wisest of good counsels. She approves the mutual devotion of husband and wife whose understanding of each other is so complete that speech is almost unnecessary between them. "There comes a time to men when the dearest and holiest things are rather lived than spoken, and the woman makes a mistake who feels herself unloved because the fervours of early utterance are absent from the speech of her husband." But the lesson has another side. "Men should remember that women hunger for words, and not wait, as Carlyle did, to breathe their vain remorse and despair beside a grave." The fact that there are unsympathetic husbands and wives suggests a chapter on "A Statute of Limitation," which gravely discusses the propriety of putting an end to relations that have become insupportable. But it is a discreet chapter, like all the rest, and is not calculated or intended to promote divorce. Mrs. Moulton has invented the happy notion that a dinner-party to married people is "a

benevolent scheme for giving the too-much-married a little vacation," inasmuch as the husband takes somebody else's wife in to dinner. But the repose of this short vacation is marred by the reflection that the partner for the time being of the dull or stupid wife will pity her husband. Of course the argument cuts both ways, though Mrs. Moulton is good enough to spare the husband all the humiliation she can. For it may be that it is he who is stupid, and not his wife, in which case, while the short vacation still results in the chagrin of the husband, it is the wife who finds a temporary relief in the society of a brighter partner. Dulness, however, is only a relative quality, and Mrs. Moulton very wisely qualifies her scorn of it; for, as she says, the man who takes some other man's dull wife in to dinner "will pity him, not knowing what a household blessing she is, or where the wings are hidden away underneath the silken shoulders of her best gown."

One of these interesting "short chats" is about "Courtesy at Home," a subject on which there is every need—as much in England, I fear, as in the writer's own country—for the excellent lessons she enforces. Courtesies omitted to children or to inferiors in station, the absence between equals of those nice observances which show respect, rudeness to servants, undue liberties with anyone—these and the like breaches of good conduct are effectively denounced. The household in which none of them occur is very happily described:

"The perfect home is one where no least detail of courtesy is omitted between husband and wife, parents and children, masters and servants; but where this good-breeding is not the slavish obedience to a set of fixed rules, but of honest respect for individual rights, and heartfelt desire on the part of each one to be as agreeable and as much beloved as is possible."

Not the least interesting chapter is one on "Watering-Place Society." Mrs. Moulton has a smart vein of satire, which she indulges here in regard to Saratoga trunks, hotel toilettes, counts who are no counts, peers with fictitious pedigrees, and all the dubious, but free and easy, adjuncts of most summer resorts. "The Caprices of Fashion" (embodying a brilliant sketch of the whilom "girl of the period," changed into a disciple of "Beauty in Life," and, at a later period, from something early English into something Greek, but now degenerating again into a new vulgarity), "The Gospel of Good Gowns," and other similar topics, furnish matter for very lively treatment. There is absolutely no twaddle in the book until we approach the end, when we get an unmitigated dose of it in a chapter on "The Fashion in Poetry." Here we begin with "old Homer," who "sang joyfully in the morning of his art," and end with a sickly poet (so-called) on whom "fate had surely smiled." But the absurd young man, notwithstanding the smile of fate and the assurance of fame and the love of an admiring girl, was "the very wretchedest of men."

"In the midst of his joys and hopes, Death, having an idle moment on hand, had stepped to his side and whispered, 'Sometime you must come with me—sometime, and it may be soon.' And this whisper was the heart of his despair."

Poor fellow! Pity that Death wasted time in whispering. He had better have made a summary end of the business. Mrs. Moulton mistakes the fashion in poetry; but she perfectly well understands everything else that she writes about. GEORGE COTTERELL.

NEW NOVELS.

The Gay World. By Joseph Hatton. In 3 vols. (Hurst & Blackett.)

The New Antigone. In 3 vols. (Macmillan.)

Lady Grace, and other Stories. By Mrs. Henry Wood. In 3 vols. (Bentley.)

The Great Bank Robbery. By Julian Hawthorne. (Cassell.)

In the Shires. By Sir Randal H. Roberts, Bart. (White.)

From Deacon to Churchwarden. By J. W. Kirton. (Sonnenschein.)

The Gates Between. By Elizabeth Stuart Phelps. (Ward, Lock & Co.)

In many respects *The Gay World* is the ablest novel Mr. Hatton has written. A greater unity, and more of human passion, perhaps, were noticeable in *Clytie*; but the later work is evidently by a man of riper experience, and one thoroughly acquainted with the ways of the world. Dedicated to a distinguished explorer, upon whom the eyes of all Europe and America are at present fixed, *The Gay World* seeks to relate the deeds of a youthful hero of Mr. Stanley's type in Godfrey Jessop. The pioneer is not only shown in his private life, where he is all that a hero should be; but his adventures and hairbreadth escapes in Sulungun, an island in the Eastern seas, are traced with considerable skill and vigour. Jessop had previously done good work in Central Africa, which caused him to be sent out to Sulungun, in whose exploration he was backed by Government power and every resource of civilisation. He is reported to have been killed by the natives; and the news carries sorrow into faithful hearts in England, of whom the charming heroine, Helen Kennett, is the chief. But of course he lives, and returns to claim his bride, with whom he goes out to Sulungun, having been appointed British governor of the island. The episodes connected with Jessop and his love affairs absorb only a portion of the elements of the story; and herein, we think, Mr. Hatton makes a mistake. His canvas is not large enough for all he endeavours to put upon it; and, consequently, things are very much hurried in the third volume. Time would fail us to tell of the myriad incidents crowded into this novel. We pass from a dinner to Mr. Stanley to detective revelations in Piccadilly; from a great diamond robbery in Africa to the Van Beers' Exhibition in New Bond Street; from adventures in Sulungun to the last show of the Royal Academy; from the earthquake at Ichia to the pastoral beauties of Dove Dale in Derbyshire; and from trains in motion on the South-Eastern Railway, where a notorious bullion robbery is going on, to Loftus Kennett's magnificent villa on the Thames. The Hon. Eric Yorke relates the story, one of whose main purposes is to unravel the mystery of "The White

Star" diamond, together with the vast forgeries of Loftus Kennett, philanthropist and millionaire—a kind of "Jim the Penman," whose gorgeous house of cards ultimately topples about his ears, while he himself passes into penal servitude. Even yet we have not exhausted the author's conceptions. Besides the history of a fallen society beauty, who is intimately associated with Kennett, and a Yankee swindler of a very "tall" order indeed, there is the recital of a once famous trial at the Central Criminal Court, when the great robbery of gold on the South-Eastern line, between London Bridge and Folkestone, was brought home to the criminals concerned. The title of the novel seems a little forced, though we do obtain passing glimpses of "The Gay World" of the metropolis. As a whole the book is most interesting; and it is interspersed with many clever passages, bits of choice description, and happy touches of character. The printer's reader has not done his work well. We read of "a landscape by Carot," "the Partheon" (Parthenon), "Mr. Justice Willis" (Wills), "Mr. Sergeant Shea," &c. We cannot charge upon the reader, however, the ascription of the novel *Joan* to Mrs. Burnett. Mr. Hatton brings into his pages several living characters who will easily be recognised.

A very unconventional novel is *The New Antigone*, and one written with marked ability and literary skill. It probes the new revolutionary doctrines of Free Love, Socialism, Nihilism, and so forth, to the core, and shows how utterly inadequate they are to satisfy the deeper cravings of human nature. The heroine, Hippolyta Valence, is presented to us in the outset as at war with the customs of society. She does not believe in the marriage bond. The crown of life for her "is to love and be loved. There was nothing beyond it, nothing to compare with it, nothing that would compensate for its loss." This doctrine, and others quite as advanced, she translates into action. It is in vain she is warned that "the young are enthusiastic without knowledge, as the old have knowledge without enthusiasm." But when the revulsion of thought and feeling does come with Hippolyta, her sufferings are very keen. She is saved, but so as by fire. There is real tragedy in this part of the story. Against the subversive social ideas are set forth the practical virtues of Christianity, as exemplified in Miss Desmond:

"The delight of her life was to save the young out of that terrible devouring fire through which they are passed to a worse than Moloch. She had ransomed many hundreds and sent them to the far continents which have been created to redress the injustice and lighten the shameful misery of a civilisation become so chaotic as our own."

The fever dens of London welcomed this true sister of mercy; and there are other characters in this book equally noble. The author teaches, in regard to deliverance from the crime and oppression of the world, that there is only one revolution—that described by Victor Hugo, which "means liberty and light. It means equality in the best things, the only things worth having—love, and justice and truth. It means reason, not dynamite." We shall look with great interest to the next

appearance of the anonymous author of *The New Antigone*.

The posthumous stories by Mrs. Henry Wood do not, we regret to say, sustain the reputation acquired by the author of *The Channings* and *East Lynne*. No doubt, in *Lady Grace* there are reminiscences of that facility in the construction of plot which did so much to give the excellent writer now deceased her reputation; but it lacks grip and cohesion. *Lady Grace* is well drawn, yet the best character of all is her husband, the Dean of Denham, who dies the victim of accumulated troubles, and who begets in us a real sympathy. There are certain incidents in the life of both which seemed to call for mutual explanation before it was too late. The Dean's sons, Cyrus and Charles Baumgarten, are not ordinary youths, though they cause great anxiety, as boys with some originality generally do. As for the rest of the narrative, there is a good deal of marrying and giving in marriage before it comes to a close. "A Soldier's Career," one of the minor sketches, tells the pathetic story of a gallant young Englishman's death during the Sikh War; and a touching picture is drawn of the fidelity of an Indian girl. If the story entitled "The Surgeon's Daughters" points to anything at all, it is to a belief in witchcraft. The predictions of a nineteenth-century wizard are given in such a manner as to bespeak credence for them on the part of the reader—at least the author assures us that the sketch is no fancy one, but absolutely true. "The Unholy Wish" accentuates two morals—one the wickedness of calling down curses upon your enemy's head, and the other the foolishness of flirtation. If these sketches are not equal to Mrs. Henry Wood's earlier productions, they are far more readable than many novels which see the light.

Mr. Julian Hawthorne's sketch of *The Great Bank Robbery*, compiled from the diary of a police inspector of New York, is very clever and exciting. The reader's interest is held all through, and the encounter on a railway journey between Inspector Byrnes and the beautiful and fascinating criminal heroine of the story is as good as anything in Gaboriau.

In the Shires is a rattling novel, with plenty of go in it, though some of the characters we are introduced to are of a very shady character, and several degrees worse than the average blackleg. The story lifts the veil on several aspects of London life, while it is also redolent of the hunting country.

From Deacon to Churchwarden unfolds the history of a purse-proud parvenu, who becomes the ruling spirit of a Dissenting church, browbeating minister and people at his pleasure. As the worm will turn at last, however, so the Rev. Arthur Bradford and his flock revolt against the iron sway of the worldly deacon. By-and-by he loses all his influence, severs his connexion entirely with Dissent, and takes his wealth and power into the Church of England, where he is made much of, and becomes churchwarden. His career is for a time brilliant if arrogant; but his proud domineering spirit is at length

broken down by a series of trials, domestic and other. From the literary point of view, Dr. Kirton's sketch is miserably poor, and destitute of the faintest gleam of originality. It is written in a bald and feeble style, not a whit superior to that in which second or third-rate prize tales are composed. Take a couple of sentences from page 2, the italics being ours: Wakley, the deacon, had "successfully pushed *his way on* step by step, until he had fought *his way up* from one position to another, leaving others who started at the same time far behind. He had somehow been able to edge *his way on*, higher and higher," &c., &c. There is a fearful and wonderful use of the comma all through this volume.

Of a wholly different type is *The Gates Between*, by Miss Phelps. Here we have literary talent of a high order, combined with a weird and pathetic story. The whole narrative is beautifully written, while in conception it is very uncommon. This is not only one of the few books calculated to linger in the memory, but is one eminently deserving of remembrance. G. BARNETT SMITH.

RECENT THEOLOGY.

St. Paul's First Epistle to the Corinthians: with a Critical and Grammatical Commentary. By Charles J. Ellicott, Bishop of Gloucester and Bristol. (Longmans.) Though "more than a generation has passed away" since Bishop Ellicott's commentaries on other Epistles of Paul made their appearance, these have kept their ground so well that it cannot be necessary to say more of this one than that it is, with some modifications, on the same general plan as its predecessors. That is to say, the commentary is, as it professes to be, essentially a critical and grammatical one, being a continuous attempt to ascertain—"by means of a close and persistent consideration of the grammatical form and logical connexion of the language," and with all the aid that could be afforded by a thorough knowledge of the Versions, the Greek expositors, and the works of living commentators—the precise meaning of the original; though, at the same time, other points of interest suggested to the reader are not wholly passed over, and copious references point to trustworthy sources of information. The bishop has not adopted any of the critical texts, but has preferred to exercise his own judgment upon the materials supplied by Tischendorf and Tregelles; and thus, in every doubtful case, the reader has the benefit of Bishop Ellicott's ripe judgment, while he is not embarrassed with the details of the evidence on which that judgment is based. In all important cases the decisions of Lachmann, Tischendorf, Tregelles, Westcott and Hort, and the Revisers have been specified. One feature in which this volume will be found to differ from its predecessors is the absence of the complete translation added to the text. The reason for this is, of course, the publication in the meantime of the Revised Version of the whole New Testament. Of the translation of this First Epistle to the Corinthians, Bishop Ellicott's judgment, after renewed and unbiassed examination, is that it is the most accurate version "that has ever yet appeared in any language."

The Picture of Paul. By the Rev. R. H. Haweis. (Charles Burnet & Co.) This is the fourth volume of Mr. Haweis's series entitled "Christ and Christianity," the first volume of which is to be published last. The author, by his treatment of the Epistles to the Seven Churches, in his *Story of the Four*, has pre-

pared us for his point of view in the "Picture" before us. Holding that the Nicolaitanes of Revelation ii. 6 were followers of St. Paul, and the Epistles to the Seven Churches a counterblast to the teaching of the Apostle to the Gentiles, he of course conceives of St. Paul's life as one long warfare against the machinations of "the Pillars," endorsing fully the views of the Tübingen school of criticism. Mr. Haweis's plan is to state his own view clearly and positively without discussing rejected theories, but this only makes it the more essential that Mr. Haweis's own view should be the right one. In the present case he has against him the most learned and thorough of recent commentators, Bishop Lightfoot, and also St. Luke, whose "diary," if Mr. Haweis be right, is surely disingenuous in the extreme. But although it is a most serious blot on *The Picture of Paul* that it practically ignores Bishop Lightfoot's candid and careful volumes, yet Mr. Haweis's graphic and vigorous statement of his own view deserves a hearing. Its essential and fatal weakness is its thoroughly modern style and tone. As Tübingen critics see in St. Paul a German professor, so Mr. Haweis sees in him a Broad Church divine, or, to be quite just and accurate, a Mr. Haweis. It is, perhaps, a true and useful analogy to compare, with some reservations, St. Paul's position in the early Christian Church with a Broad Churchman's in the Anglican Church of to-day; but this is not to say that St. Paul was a Dr. Arnold or a Dean Stanley, still less a Mr. Haweis. Against the statement that St. Paul "sowed the seeds of a new Broad Church Christianity throughout Asia Minor," even the most convinced Broad Churchman will protest; and when he finds Mr. Haweis instituting a comparison between St. Paul's troubles at Antioch and those caused by "certain fussy creatures . . . who complain now that the clergyman wears a black gown in the pulpit," he will smile. Mr. Haweis's exposition has at least the advantage of simplicity. St. Stephen was "the *enfant terrible* of the Jerusalem Church," for before he preached "Christians had been regarded as a sort of revivalist Jews, nothing more." After his death St. Paul took his place, and the Pauline party henceforth "remained the *enfants terribles* of the pure Jews and Jew Christians alike." It will be seen that Mr. Haweis's style is as colloquial as ever. In one place at least—where we are told that St. Paul "nearly did for himself at Lystra"—it is more than familiar. Moreover, we strongly suspect that the jaunty imaginative expansions of speeches occasionally indulged in by Mr. Haweis are as false in realism as they are questionable in taste. But even if the realism be accurate, what possible end is gained by expanding St. Luke's remark, after his account of the speech on Mars' Hill, that "some mocked," into this sort of rubbish:

"'Paul, your eyes look rather weak,' one would say, 'Stand out of the sun, my good man. I'm sure you've had enough for to-day—we have. It's very warm; hadn't you better go home? What! you can't see your way down the steps? We'll help you.' Or the more polite Stoic would say, as the words 'Resurrection of the Dead' left Paul's lips—'Good Jew! We can't stay any longer—we go to the baths—we've got an appointment. A word in your ear—we did ask you to speak, no doubt, but your style's not the thing.'"

Mr. Haweis gives us quite a page in this strain, and he does it very smartly; but it surely is a complete waste of paper and wit. St. Luke's two words were enough. We have dwelt so far upon the faults of the book, but the merits are equally obvious. In force and vigour it contrasts very favourably with more bulky, if more accurate, rivals. A short, terse, vivid life of St. Paul has not yet been written

in English, even Canon Farrar's vigorous picture has too much frame. Mr. Haweis's dramatic power finds full scope in his rapid sketch. The death of Stephen, the prison scene at Philippi, the speech on the castle steps at Jerusalem, the storm on the way to Rome, are described with splendid energy and vividness. Noticeable phrases and sentences are frequent. "We are not enough in our deserts," "the deep slumber of a decided opinion," St. Paul was "the sanest mystic that ever lived," may be given as instances. The pathetic beauty of many passages in the book makes us especially impatient of the undignified descents we have noted. The volume, on the whole, contains finer passages than either of its predecessors, and is more forcibly and connectedly written, but probably tells us more about Mr. Haweis than about St. Paul.

Kirchengeschichtliche Studien. Hermann Reuter zum 70 Geburtstag gewidmet von Theodor Brieger, Paul Tschackert, Theodor Kolde, Fried. Loofs und Karl Mirbt. Mit einer Beigabe von August Reuter. (Williams & Norgate.) These studies in church history, based on original research, and bringing to light, as they do in several cases, sources of information hitherto inaccessible, will be found of great interest to specialists in the departments to which they severally belong. The first, which, it may be said, is critical rather than historical, is a very full discussion of the MSS. of Irenaeus, by Prof. Loofs, of Halle, with an attempt at their classification, leading to the result that the Latin Irenaeus is textually as perfect as few old writers, and that until the Greek can be found there is nothing more to desire. The second paper collects and balances the opinions of the "Gregorians" and "Anti-Gregorians," in the matter of the deposition of the Emperor Henry IV., while in the third Prof. Tschackert avails himself of researches which he has been privileged to make among the archives of the city of Königsberg to throw an interesting light on the character of the often-named, though little-known, Georg von Polentz, the reforming Bishop of Samland. Mention must also be made of several valuable contributions to the history of the Reformation by Prof. Kolde, including a letter of Cochleus to Capito, throwing light on his change of sentiment towards Luther; and, now for the first time printed in full, the confession of Johann Denk, schoolmaster of Nuremberg, as well as other documents pertaining to his trial and that of the "three godless painters," banished for their share in the heresies of Müntzer. Students of confessional literature will no doubt turn with interest to Prof. Brieger's paper on the Articles of Torgau, in which he seeks to advance the question beyond the point at which it was left by Engelhardt in 1865. It is certainly a remarkable example of good taste and self-restraint even carried to an extreme that this birthday offering appears without dedication of any kind, indeed, without either preface or introduction, the only personal reference being contained in a note prefixed to the last-named essay. What more acceptable offering, however, could there be presented to a venerable teacher, on his seventieth birthday, than such a collection of original researches carried on in his spirit and under the stimulus of his instructions by grateful pupils? May it be a *monumentum aere perennius*!

Sketches of Church and State in the First Eight Centuries. By the Rev. W. Armitage. (Rivingtons.) The object in writing these sketches has been to describe in popular form some of the leading persons and events, parties and movements, in the Church and the world, during the first eight centuries of the Christian Era. That this object may be attained the

sketches should be remarkable either for their interest and picturesqueness, or for their clear statement of results; but they fail in both these respects. Mr. Armitage has gone carefully through his authorities, and what he tells us is generally correct; but his whole narrative is singularly colourless and languid. He is at his best in the chapters on English Church History, just because his field becomes a little narrower, and he has time to tell us something of his subject, instead of merely alluding to it. This failure to be interesting is unfortunate, because the book makes no pretence to be a statement of general results, or an abridgment of facts. It is interesting or it is nothing. We notice that Mr. Armitage repeats the story of the altar found at Rome dedicated "Simoni Deo," and seems unaware that the inscription should be "Semoni," and probably has nothing to do with Simon Magus.

The Story of our Lord. By Frances Young-husband (Longmans.) This is an attempt to tell the life of Christ for children, that they may be able to picture it as a connected whole. It does not profess to be more than a "stepping stone," and its simplicity and clearness will make it useful. The copious engravings which illustrate the volume are taken "from a very beautiful edition of the New Testament, published some years ago by Messrs. Longmans & Co., as the life-work of a member of their firm"; but they will be appreciated by grown-up people more than by children.

Of the Imitation of Christ. By Thomas à Kempis. A newly revised Translation. (Griffith, Farran, & Co.) This is the first of a proposed series of "handy shilling volumes," which, "well printed and bound in cloth," will constitute "The Ancient and Modern Library of Theological Literature." Price, printing and binding, are equally admirable, and the editing has been careful. A short, but sufficient introduction, and a very few well-chosen notes, accompany the text. The quotations from Scripture are given in the words of the Authorised Version and the Prayer-Book Psalms. The edition should be a favourite one.

The History of Tithes from Abraham to Queen Victoria. By Henry W. Clarke. (Redway.) Mr. Clarke writes under two great disadvantages. He seems imperfectly acquainted with English, producing such extraordinary sentences as the following: "And what makes the case worse, is to distort Scripture so as to deceive the people who could neither read nor write, and even those who could read had no open Bible to consult to see for themselves whether these things were so." "The journey to Britain was then considered a hazardous undertaking, being considered in so remote a part of the world." And, secondly, he states in his introduction that "the Catholic Revival has transformed the Church of England into a nursery or recruiting depot for the Church of Rome," which statement, whether we accept it or not, has nothing to do with the question of tithes, and makes us at once doubtful of the impartiality of our author. But in spite of these defects Mr. Clarke's book is useful. He has thoroughly mastered his subject, and manages to present us with most of the facts in a comparatively short compass. He is candid and just, and very careful to quote his authorities when discussing disputed questions. His criticisms of the "Brief" of the S.P.C.K. and of Lord Selborne's *Defence* are sensible and accurate. The chapter on the redemption of tithe-rent charge is a useful statement of what it would cost the nation to abolish tithes. But the faults of style which we have noticed make Mr. Clarke very stiff reading. He gives us nowhere a clear explanation of why he thinks it advisable that tithes should be redeemed. The reader is left to find this out for himself from

the facts which Mr. Clarke awkwardly plumps down before him, or to accept the absurd reason of the introduction. The book, in short, will be helpful to the student, but baffling and wearisome to the general reader.

The Church of England, by E. Venables (S. P. C. K.), is an elementary account of the planting, settlement, reformation, &c., of the National Church. It is merely a digest of well-known books on the same subject, so that the reason of its publication is not easily perceived. Probably the best use to which it could be put would be its adoption as a reading book in Church Sunday schools.

Selections from the Book of 2 Kings. By Rev. H. H. Clifford. (Oxford: Clarendon Press.) Two maps, copious references to the Revised Version, and some short but careful notes will make this little treatise useful to the teacher. The selections are judiciously chosen.

NOTES AND NEWS.

It is stated that Mr. Aldis Wright is preparing for the press an edition of the writings of the late Edward Fitzgerald, the translator of Omar Khayyam, and the friend of Carlyle and Lord Tennyson. According to the *New York Nation*, the edition will include several works hitherto unpublished—such as his renderings of the "Oedipus Rex" and the "Oedipus Coloneus," as well as a copious selection from his correspondence.

The first instalment of Messrs. Macmillan & Co.'s new history of English literature, viz., *Elizabethan Literature*, by Mr. George Saintsbury, will be published immediately. It aims at giving a complete and clearly arranged view of the actual literary performance of the period from 1560 to 1600. The narrative is illustrated by abundant extracts from the less-known writers.

A WELL-KNOWN African traveller meditates trying his fortune as a writer of fiction. Some of the scenes of the story on which he is engaged will be laid in the vicinity of Kilimanjaro.

SIR LEPHEL GRIFFIN is understood to have inspired the very plain-spoken article in the October number of the *Asiatic Quarterly Review* on "Indian Princes at Court."

MESSRS. MACMILLAN & Co. will publish immediately a new volume of Essays by Mr. R. H. Hutton, entitled *Modern Guides of English Thought in Matters of Faith*. The essays deal with Carlyle, Newman, Matthew Arnold, George Eliot, and F. D. Maurice.

THE Queen, as well as the Prince of Wales, have accepted copies of the fine edition of *Benevenuto da Imola's* famous commentary on Dante from the Hon. W. B. Warren Vernon, at whose expense the work has been printed, under the editorship of Sir James P. Lacaita. A copy was presented to the King of Italy on the occasion of the unveiling of the *facciata* of the Cathedral of Florence on May 12. Another has been accepted by the Queen of Italy, whose taste for learned studies is well known. The latter copy, together with those destined for the Queen and the Prince of Wales, have recently been sumptuously bound by Riviere in a style worthy of the best traditions of English bookbinding.

THE Cambridge University Press will publish immediately *Bracton's Note Book*, being a collection of cases decided in the king's courts during the reign of Henry III., annotated by a lawyer of that time, seemingly Henry of Bratton. The work will form three volumes, and has been edited by Mr. F. W. Maitland, reader in English law at Cambridge.

MESSRS. RICHARD BENTLEY & SON announce a work, in two volumes, by Mr. Arthur Nicols, entitled *Wild Life and Adventure in the Australian Bush*, with eight illustrations from sketches by Mr. J. T. Nettleship.

MISS FRANCES MARTIN'S Memoir of Miss Elizabeth Gilbert, whose name is so well and honourably known in connexion with institutions for the blind, will be published by Messrs. Macmillan & Co. towards the end of the month.

THE popular lectures on theology, delivered at Philadelphia, shortly before his death, by the Rev. Dr. A. A. Hodge, sometime Professor of Didactic and Polemic Theology at Princeton, are announced for immediate publication by Messrs. Nisbet & Co.

The House of Surprises: a Story for Children, by L. T. Meade, is the title of the forthcoming "Little Folks' Annual," to be published on October 25.

MR. JOHN A. STEWART, author of *A Millionaire's Daughters* (reviewed in the *ACADEMY* of March 5), is writing a serial for the *People's Journal*.

THE Rev. Alfred Rowland has in the press a popular commentary on St. Paul's Letter to Timothy, together with a series of forty sermonettes. Messrs. Nisbet & Co. will publish the volume.

THE *Century* will soon begin the publication of a series of papers, by Mr. Charles de Kay, on "Ireland, its Ethnology and Customs, Landscape, Town Life, Literature, and Arts." The illustrations will be, in large part, from sketches recently made in the country by Mr. J. W. Alexander.

A CONFERENCE on "The Teaching of History in Schools" will be held, under the auspices of the Royal Historical Society, on Saturday next, October 22, at 3 p.m., in the great hall of the Society of Arts, Adelphi. Prof. Mandell Creighton will preside; and an address will be delivered by Mr. Oscar Browning, which will be followed by a discussion. The headmasters of most of the great public schools have promised their co-operation.

AT the first meeting of the session of the New Shakspeare Society, to be held at University College on Friday next, October 21, at 8 p.m., Dr. F. J. Furnivall will read a paper on "Henley-in-Arden, Bidford, and Shakspeare's Country," and the Rev. H. C. Beeching "Some Notes on Criticisms of 'The Merchant of Venice.'"

MR. EDMUND GOSSE will deliver the inaugural lecture of the new session at the Crouch End Literary Society on Tuesday next, October 18, at 8 p.m. The subject chosen is "Wordsworth and Pope"; and the future meetings will largely deal with the writers of Queen Anne's reign, in connexion with which a selected list of books has been issued by the society.

M. CHARLES BIGOT, Professor of French Literature at Saint-Cyr, will shortly give in London four lectures on "The Influence of English Ideas on French Thought in the Eighteenth Century." The lectures will be given at Mr. Frederic Harrison's house, 38 Westbourne Terrace, on the following dates:—October 27 and 29, November 1 and 3. Application for tickets (one guinea for the course) should be made to Mr. David Nutt, 270 Strand.

THE Prince of Wales has joined the Council of the Selden Society. Thanks to the exertions of Prof. Thayer, of Harvard, the Society is spreading rapidly in America, local secretaries having been appointed in many of the principal towns. In France, also, the Society has obtained the support of M. Léopold Delisle.

ORIGINAL VERSE.

BIMETALLISM.

WHEN Clara's little golden head
Is lifted up to greet you, Fred,
If every kiss of hers secures
Just fifteen and a half of yours,
'Tis plain, a constant price for gold
In poorer metal can be told.
But if she rather, as I guess,
Deals you her kisses, more or less
According as she judges you
Deserve them plentiful or few;
A precious thing, you're forced to say,
Is worth whate'er one's forced to pay.
Or if your richest merchandis
Seems poor and worthless in her eyes,
So that the most that you can give
Can't win you wherewithal to live,
Then Clara may your want supply
Not as of debt, but charity.

W. H. S.

OBITUARY.

AT the moment of going to press we hear of the death of Mrs. Craik, *née* Miss Muloch, known to all the world as the author of *John Halifax, Gentleman*. She died suddenly, from heart disease, on the afternoon of Wednesday, October 13, at her house at Shortlands, Kent. She was in the sixty-second year of her age.

MAGAZINES AND REVIEWS.

PERHAPS the most noticeable paper in the magazines of this month is that on "Afghan Life in Afghan Songs," contributed by Prof. James Darmesteter, of the Collège de France, to the *Contemporary*. While not ignoring the labours of Major Raverty, Dr. Bellew, and Mr. Thorburn, the writer justly claims to have given the first picture of the wild tribesmen of the North-west frontier of India as drawn by themselves. The article owes not a little of its piquancy to the attitude of the professor, who spent a full twelvemonths in India on a commission from the French government. We are glad to learn that his collection of Afghan songs, of which the present is only a specimen, will shortly be published in full in Paris in the original Pushtu, with translation, notes, and a vocabulary.

WE would also call attention to a charming article in *Murray's Magazine*, quaintly entitled "For those who love Music." It is written by Dr. Axel Munthe, the author of *Letters from a Mourning City*, and is marked by that combination of simplicity and depth of feeling of which Scandinavian writers appear to possess the secret.

WE have received from Mr. Elliot Stock the first number of a new American magazine called the *Curio*, "devoted to genealogy and biography, heraldry and book plates, coins and autographs, rare books and works of art, old furniture and plate, and other colonial relics." As if this list of subjects were not long enough, we have also an instalment of a novel, by Mr. Edgar Fawcett, and a portrait of the Prince of Wales. The format of the magazine is commendable; and, if we may judge from the prospectus, some of the future numbers may be superior in value to the first.

HARVARD TO CAMBRIDGE.

THE following is the reply to the address recently sent by the University of Cambridge to Harvard:

"ACADEMIA HARVARDIANA ACADEMIÆ
"CANTABRIGIENSIS S. P. D.

"Periurandum nobis fuit quod, cum vos ludis nostris saecularibus frequentes interesse non possetis, litteris tamen benignis per virum illustrium missis absentes quodam modo nobiscum

fuitis. ut enim longinquo spatio oceanoque dissociabili remotos ita animo vobiscum artissime coniunctos nos esse semper iuvat cogitare. nos quoque illorum dierum meminisse gaudemus, quibus, cum nuper conlegi nostro conlegio iustis de causis carissimum saecularia sacra tertio celebraretis, civem illum nostrum gratulationes nostras ad vos perferentem tanto cum hospitio exceperatis. singulos quidem e vobis subinde apud nos salutare contigit, nec umquam sine magna voluptate nostra: quem numerum volventibus annis usque auctum iri speramus.

"Hoc vero tempore testimonium vestrae benevolentiae praecipua nos adficit laetitia, quo tempore memoriam a ducentis quinqueaginta annis repetimus, ac nobiscum consideramus, quatenus munere a patribus nobis mandato fideliter perfungamur. ita cursum studiorum laborumque sanorum nonnunquam intermittere et praeterita tempora contemplari omnibus profecto utile est, eisque utilissimum qui eo in saeculo eaque in civitate vivunt, ubi corporis et fortunae bonorum cupiditate quasi fatali vi homines efferri videantur. tum maxime comparatis maiorum institutis vitaeque rationibus cum his, quae nunc apud nos florent, facilius intellegitur quae prava sint atque mutanda, quae diligentius servanda. tum maxime sunt grata amicitiae pignora ab aliis accepta qui easdem ac nos consecantur virtutes. sic verbis vestris in memoria nostra haerentibus laborabimus, ut fax illa veritatis, quam olim de vestris aris adcaensum juvenis ille secum in novam terram tulit, semper clarior luceat, academiaeque nostra dignior sit illius nomine, dignior vobis illustribus qui eam a maioribus acceptam nobis tuendam tradiderunt, dignior ea scientia eaque vita expolita quae inter imperitos per totum orbem terrarum conservare semper est munus ac ius doctorum. Valet."

CORRESPONDENCE.

HOCCELEVE'S "LETTER OF CUPIDE."

Cambridge: Oct. 12, 1887.

There is an interesting allusion to Chaucer in Hocceleve's "Letter of Cupide," which is much obscured by a singularly corrupt reading in the black-letter editions. I quote from the edition of 1561 of Chaucer's Works, stanza 46 of the poem, on fol. 328, back:

"In my legende of natures male men finde,
Who so liketh therein for to rede," &c.

As I lately re-read these lines, it struck me at once that the word *natures* is ridiculous. Cupid is the speaker, so that *my* refers to him. Obviously Cupid's "legend of natures" ought to be "legend of martyrs"; for Chaucer speaks of the Legend of Good Women as the "Seintes legende of Cupide," or, as we should now say, Cupid's Legend of Saints. The good women were saints and martyrs in the cause of love. The title "Incoipit legenda Cleopatrie martiris" suggests the right word at once.

But all guessing is evil till it be certainly confirmed. Being at Oxford, I took a short and easy way of settling the question at once. MS. Fairfax 16 contains a very fair copy of the poem; so I repaired to the Bodleian Library to see what I could find. Accordingly, in the course of the copy in that MS. (which begins at fol. 38, back), I quickly found the lines—

"In my legende of martres men may fynde,
Who so that lyketh therein for to rede,
That othe in no beheast may no man bynde," &c.

whereby the question is thus definitely settled. The whole force of the context now appears. For the two preceding stanzas discuss the behaviour of Jason to Medea, and of Aeneas to Dido, the very subjects which are so fully treated in the Legend aforesaid.

WALTER W. SKEAT.

DANTE, OROSIUS, AND ALEXANDER THE GREAT.
Melbourne, Victoria: August 30, 1887.

Among the tyrants placed by Dante in the seventh circle of hell we find two belonging to the world of the ancients—Alexander and Dionysius (*Inf.* xii. 107). The latter is generally recognised to be the tyrant of Syracuse; but there is a divergence of opinion

as to the identity of Alexander. The commentators are divided between Alexander the Great, and the Thessalian tyrant, Alexander of Pherae.

As regards Alexander the Great, it is objected that Dante would not condemn to a place in the "stream of boiling blood" a man of whom he speaks with admiration both in the *De Monarchia* and in the *Convito*. But this objection is hardly a serious one; since Dante is not always consistent with himself in his estimate of historical personages, his tendency being to regard them rather as types than as men.

Alexander of Pherae, on the other hand, was scarcely famous enough to be recognised simply as Alexander, without any further description; and in the absence of any other evidence, the natural assumption is that Dante is speaking of Alexander the Great,

"The conquereour,
That conqeryt Bablonys tour,
And all this world off lenth and breid
In XII yher, throw his douchty deid."

The expressions, "*proles vesana Philippi*" and "*felix praedo*," applied by Lucan to Alexander the Great, are generally quoted as sufficient justification for Dante's condemnation of the latter. But Dante had stronger grounds for his opinion than this. His knowledge of ancient history, as is well known, was very largely derived from Orosius. Now it is remarkable—and I have not seen the fact noticed elsewhere—that Alexander the Great is repeatedly branded by Orosius as blood-thirsty and cruel. For instance, he describes him (*lib.* iii., cap. vii.) as "Alexander Magnus, magnus vere ille gurgis miseriarum, atque atrocissimus turbo totius Orientis"; and says of him (*lib.* iii., cap. xviii.), "humani sanguinis insaturabilis, sive hostium sive etiam seclorum, recentem tamen semper sibiabat cruorem"; and, again (*lib.* iii., cap. xxiii.), "per duodecim annos trementem sub se orbem ferro pressit." After recording that he died at Babylon, "adhuc sanguinem sitiens," Orosius ends up with a long apostrophe on the ruin and misery brought by him upon the whole world.

With this tremendous invective before one, it is no longer possible to wonder at Dante's assigning to Alexander the Great a place in hell, alongside of the execrated Azzolino, in

"La riviera del sangue, in la qual bolle
Qual che per violenza in altrui noccia."

It may not be out of place here to note that Dante was evidently also indebted to Orosius for his estimate of Sardanapalus (*lib.* i., cap. xix.); and for the story of Cyrus and Tomyris (*lib.* ii., cap. vii.); as well as for what he says of Semiramis (*Inf.* v. 58)—in fact he has in this case followed Orosius (*lib.* i., cap. iv.; *lib.* ii., cap. iii.) so closely as to practically justify the reading *succedette* instead of *sugger dette*, which has somewhat strangely found favour of late.

PAGET TOYNBEE.

PROF. ZIMMER AND FIND MAC CUMAIL.

London: Oct. 8, 1887.

The amazing blunder which Mr. Standish H. O'Grady has pointed out in to-day's ACADEMY—Prof. Zimmer's translation of a *phinn* ("O pen!"), by "O Fingal!"—reminds me of a similar specimen of the professor's scholarship, which also occurs in the *Göttingische Gel.-hrte Anzeigen* for March 1, 1887.

In p. 185 of that journal, Prof. Zimmer prints from a Bodleian MS. (Rawl. B. 502) two short poems, one describing winter, the other summer. In the first poem, after referring to the cold, the storm, the floods, the drops as big as the bosses of shields, the poet declares, with intentional exaggeration, that every snowflake is as large as the white fleece of a wether (*met molt-*

chroann find cech slamm), and says, in the third stave:

"Na helta ní[co]sta dín
snechta finn fir doroiach tóin,"

that is, "the herds, they have no shelter: white pure snow comes up to the breech."

Prof. Zimmer, mistaking the common adjective *finn* for the name of the hero whom he (following Maopherson) calls Fingal, prints the last line thus:

"snechtaí Find fir doroiach tóin,"

but does not tell us what we are to understand by "snows of true Find," or how the singular verb *doroiach* comes to have a plural nominative. Mr. Diok was unable to keep King Charles I. out of his memorial. Prof. Zimmer has a similar difficulty with Find. At p. 173 of his article he gives us as the title of one of the Ossianic poems in the Franciscan MS. of the Dialogues of the Ancient Men, *Is fada anocht anoil Finn*. The MS. has (*teste* S. H. O'Grady) *Is fada anocht an-Oilfinn*, that is, "It is long to-night in Elphin," a well-known place in the county Roscommon, so called from the white rock (*aíl finn*) near which S. Patrick is said to have built a church. But, to return to the poem in Rawl. B. 502, Prof. Zimmer calls it a "dreistrophige Gedicht." The poem really contains four stanzas, the first and finest of which he has mistaken for, and printed as, prose. It runs thus in the Bodleian codex:

"Fúit coibráth.
ismo isdonenn arcaeh.
isob caehetrice an
isloch lan caeh áth."

"Cold till Doom. Greater is the storm upon everyone. Every fiery furrow is a river. Every ford is a lake." In the copy of this poem, preserved in the Book of Leinster, p. 208 a, the first quatrain runs thus: "Fúit coibráth | rodáil indonend arcaeh | isáth cach n-étrigi n-án | ocus is lind lán cach n-áth, "Cold till Doom the storm hath dealt out on everyone: every fiery furrow is a ford: and every ford is a full riverpool." In his edition of the other quatrains there are six inaccuracies, whereof (as Lord Coke would say) this little taste shall suffice. The third quatrain begins thus: *Meit cuithi cach laithrach* "As big as a pit is every puddle." Prof. Zimmer, not understanding the common ligature for *at*, prints the last word *laithrach*, which of course is mere gibberish. I do not challenge Prof. Zimmer to translate the rest of these stanzas. It would be cruel to do so. He obviously does not understand one word of them.

In the same article (pp. 181-83), Prof. Zimmer gives some extracts from another Bodleian codex (Rawl. B. 512). This is the way he reads the title of a piece beginning on fol. 101a: *Incip(it) díbaile inScail inso arslícht hsenlib(ur) Duibdaleitius .i. coarpa Pat(raic)*. Anyone who knows anything of Middle-Irish will see that this also is mere gibberish. The MS. has, *luce clarius* (to use one of Prof. Zimmer's pet phrases) *Incipit díBaile inScail inso arslícht hsenlibuir Duib da leithi .i. comarpa Patraic*, that is, "This is the *incipit* ('beginning') of 'the Champion's Frenzy,' according to (the) old book of Dub-dá-leithe, i.e., a successor of Patrick." Prof. Zimmer has here committed no less than five errors. Not understanding the digraph *hs* for *sh* or dotted *s*, and not knowing that the nominal prep. *arslícht* governs the genitive, he has, without notice, inserted an *i* after *h*, thus manufacturing the preposition *hi* (= *in*), and then made *libur* a dative governed by his fraudulent *hi*. Mistaking *h* with *i* subscript for *i*, followed by the compendium for *us*, he has then produced his wonderful genitive *Duibdaleitius*, where good Irish is made into bad Latin, and three words are printed as one. Lastly, he has overlooked the remains of the curvilinear *m* over the *o* of

coarpa. It is altogether an instructive instance of the professor's knowledge of Irish palaeography and grammar. The same article furnishes other such instances. Thus, in p. 184, we have:

PROF. ZIMMER.	THE MS. (RAWL. B. 502.)
1. 4. Cerball	fo. 47 b. 2 Cerball
8. Geinemain . . .	70 b. 2 Genemain . . .
Cumall	Humail
15. Orguin	73 b. 2 Orgguin
33. Calnech	60 a. 1 Calnech
34. innothainne . . .	innorthainne
Calnech	. . . Calnech
42. iocirthi	59 b. 2 iocirthi

So much for his skill in reading an easy Irish MS. His knowledge of Irish grammar is further exemplified by his quotation (p. 183, l. 23) of *laithiu* as an Old-Irish accusative plural. Now, *laith* (day) is a neuter stem in *io*, and its acc. pl. is *laith*. What would be thought of the Latin scholarship of a man who should give *gaudios* as the acc. pl. of *gaudium*? This illustration is meant for those who have learned Latin, not for Prof. Zimmer. Here are specimens of his latinity: "e codice Milano" (*Glossae Hibernicae*, 1881, p. 55 n.); "ad significandum quod filii Israel non intelligent mysteria et quod esset velamen incredulitatis inter eorum cor" (*ibid.*, p. 99 note). How a man like Mommsen must shudder when he reads such stuff, and remembers that it has been published with the help of the illustrious Academy of which he is now the most illustrious member! In the passage above referred to (*ní sluinidfid dou c6 cenn .L. laithiu*) *laithiu* is a corrupt Middle-Irish genitive plural.

The blunders now pointed out are not comparable, either in number or absurdity, to those which Prof. Zimmer has made in the new double number of Kuhn's *Zeitschrift für vergl. Sprachforschung*. But these require and deserve a separate letter. WHITLEY STOKES.

"CAVING IN."

London: Oct. 9, 1887.

Mr. Mayhew, in the ACADEMY of June 25 last, impugns the explanation of the above expression accepted by Prof. Skeat, Mr. Palmer and myself, as signifying the falling in of a mass of earth from the side of a cutting, by the metaphor of a cow dropping its calf—a natural metaphor surely for the separation of a limited portion from a larger mass. So a small island that seems to have broken off from the mainland of the Isle of Man is called the Calf of Man. And Mr. Gibbs, in *Notes and Queries* (fourth series, No. xii.), remarks that the Arctic glaciers are said to *calve* when a portion of the sea-cliff breaks off and falls into the sea, while the *calf* floats away in the shape of an iceberg. Mr. Peacock, in his glossary of Manley and Corringham, Lincolnshire, seems to overlook the true force of the metaphor when he explains "cauf" as "a breakage in a bank or wall." The story by which he illustrates the word in *Notes and Queries* (fourth series, No. xii.) clearly shows that the Lincolnshire navvies, who used the word, applied it to the mass of falling earth, and not to the breakage of the bank. When a small boy, he says, he was watching some "bankers" engaged in widening a drain. Suddenly three of the men jumped out of the cutting, shouting out, "Tak' heed, lads, there's a cawlf a comin'." "In this part of the world," says Mr. Peacock, "we all say *calved in*, never *caved in*." Precisely in the same way the Dutch has *kalven*, to *calve*, and *inkalven*, s'ébouler, to *cave in* (De Bo, West Flanders Dictionary.) "De gracht *kalft in*," the ditch caves in. De Vries, in his great Dutch Dictionary, cites *afkalven* in the same sense, signifying first to *calve*, and then to *cave in*, to break away, used often of the breaking away of embankments. But he maintains (as Mr.

Mayhew informs us) that *afkalven* in this latter sense is a totally different word, being derived, not from *kalf*, a calf, but from *kalf*, a corrupt form of *kalve*, meaning the bare surface of the ground, an older form of which was *kaelwoe*. Resting, then, on the authority of De Vries, the theory by which Mr. Mayhew would replace our derivation is that the Lincolnshire *cauf* (which is merely the local pronunciation of *calf*) is directly borrowed from the Dutch *kalf* = *kalve* = *kalwoe*, "callow," "the earth on the surface"; and that the expression *cave in* is borrowed from the Dutch *inkalven*, used literally of the falling in of the surface. To this it may be replied that *cauf* was never used either in Lincolnshire or in any other English dialect in the sense of sward; and in the outcry of the "bankers" whom young Peacock was watching, it certainly meant to signify the falling mass of earth from which they were escaping. And, in the next place, *inkalven*, with the English equivalent, to *cave in*, distinctly signifies the falling in of the subjacent earth, and not of the surface. Hence the corruption of the term in ordinary speech to the modern form of *cave in*, so as to give the word an apparent derivation from the *cave* or hollow left in the yielding bank or cliff. To *cave in* is essentially to give way below. No doubt, when a cliff caves in, the surface commonly though not necessarily, sinks with it; but that is a secondary aspect of the phenomenon. The primary manifestation, of such urgent interest to those engaged in banking, is the detachment of a mass of earth falling upon them. It was of such an impending fall that the "bankers" meant to give notice when they exclaimed that a *calf* was coming.

De Vries can, of course, have no certain knowledge from which of the two senses of *kalf* the verb *inkalven* derives its meaning. It is mere matter of inference from considerations as to which of the two gives the better account of the actual signification of the verb. Thus far, Mr. Mayhew has adduced nothing which shakes my faith in the explanation of the expression from the metaphor of a cow dropping its calf. H. WEDGWOOD.

AN ISOLATED PEOPLE IN SWITZERLAND.

Malvern Oct. 10, 1887.

In the Val d'Anniviers, which lies south of the Rhone Valley, having the Turtmanthal above it and the Val d'Hérens (often called the Evolena Valley) below it, I found this summer a very marked type of people. They have dark hair and eyes, the colour being black rather than brown; the shape of the face is square, with a well-developed forehead, the head rather round. They are of moderate height, shorter rather than tall, with square-built figures. They are very friendly and bright in their manner, greeting the stranger in a pleasant way which contrasts with the somewhat churlish reserve of the ordinary Swiss peasant. They talk a very peculiar dialect, but I was not able to learn any words.

Their houses are built of rough logs, dove-tailed and morticed in a rude fashion, and they are without the carved ornamentation to be seen elsewhere in Switzerland. There is something almost savage in the simplicity of the buildings. I noticed an outside flight of steps which was hewn out of a solid tree-trunk. The houses and barns are almost invariably raised on logs to a height of two or three feet above the ground, and the lowest story forms a barn or stable, often without any windows. The villagers lead a sort of nomadic life, moving from one habitation to another, each family possessing two or more dwellings; and I found whole villages without an inhabitant.

There is a traditional belief that these people

are a remnant of the Huns. But is it not more probable that they are a Moorish or Arab race, who have crossed over one of the passes from the south side of the Rhaetian Alps, where many traces of them are to be recognised, and who have remained, with comparatively little intermixture of blood, shut in by the high walls of this narrow valley? And may not the name of the adjacent Turtmanthal point to a similar origin?
G. E. KNIGHT.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, Oct. 17, 8 p.m. Royal Academy: "The Bones of the Human Body," II., by Prof. John Marshall.
TUESDAY, Oct. 20, 5 p.m. Hellenic Society: "Two Vases from Cyprus," by Mr. A. S. Murray.
FRIDAY, Oct. 21, 8 p.m. Royal Academy: "The Bones of the Human Body," III., by Prof. John Marshall.
8 p.m. New Shakespeare Society: "A Few Words on Henley-in-Arden, Bidford, Stratford-on-Avon, and Shakespeare's Country," by Dr. F. J. Furnivall; "Some Notes on Criticisms of 'The Merchant of Venice,'" by the Rev. H. C. Beeching.

SCIENCE.

BOTANICAL PUBLICATIONS OF THE CLARENDON PRESS.

Comparative Morphology and Biology of the Fungi, Mycetozoa, and Bacteria. By A. de Bary. English translation by Henry E. F. Garnsey. Revised by J. Bayley Balfour. (Clarendon Press.)

Lectures on the Physiology of Plants. By Julius von Sachs. Translated by H. Marshall Ward. (Clarendon Press.)

Annals of Botany. Vol. I., No. 1. Edited by J. Bayley Balfour, S. H. Vines, and W. G. Farlow. (Clarendon Press.)

THE appearance nearly together of these three publications from the Clarendon Press cannot fail to suggest to all interested in the progress of botanical studies in this country that a turning point has been reached in that department which deals with the structure, the development, and the functions of plants. On the one hand, we have two good translations of German standard books of the highest excellence; on the other, the first part of a journal destined to contain the fruits of new work largely inspired and stimulated by the labour and the example of such men as the authors of the translated books. It has been said that the days of hack translators of scientific books are numbered; and to those who seek a sign it must surely be apparent that this first number of the *Annals of Botany* is the herald of a state of things in the progress of botany in this country when translation may be well-nigh dispensed with.

It has already been pointed out in the ACADEMY that a great deep of ignorance and apathy was broken up by the translation twelve years ago of Sachs's textbook. That translation had its faults; but they were far outweighed by the foresight of its authors, who doubtless undertook the work less for the actual good it would do by itself, than as a foundation for future independent research. The era of translations from German then set in; and it must be confessed that among the good, the harmless and necessary books there appeared such as had far better been left in their original German obscurity. These first fruits of the rejuvenescence of physiology and morphology in the country of Stephen Hales and Robert Brown have been received, each on its appearance (I speak only of the better sort), with a rejoicing which

showed more exuberance than judgment. Some have been dignified with such descriptions as "epoch marking" and the like, which, it may be, the originals were in the history of botany, but so far as its progress in this country is concerned they have been but as milestones by the way. Far more noteworthy has been the research stimulated by the new movement. It has steadily grown in bulk, and has at last reached that condition of abundance and fertility that demands an additional outlet of its own. Perhaps one may be now permitted to mention the word "epoch," which the impatient and enthusiastic have been making so free with in advance.

Prof. de Bary's *Vergleichende Morphologie, &c.*, was published in 1884, and then proved a very welcome contribution to botanical science. Though in name a second edition of his *Morphologie und Physiologie, &c.*, published eighteen years before, it was in reality a new book. These intervening years had been so fruitful in research that an entire rearrangement of the great mass of material became necessary. Not only was the bulk of it enormous, but there were entangled with it new views of the utmost importance, and points of controversy requiring a power in their elucidation possessed by no man in Germany nor out of it in so high a degree as by the distinguished author who undertook the labour. Of his success no one has ventured to doubt. The more the book has been used and put to the proof, the greater has its worth appeared. It is a book of the kind that always will deserve translation whenever and wherever such may appear. Mr. Garnsey, who has already done the same service for Goebel's *Outlines*, has performed the labour of translation in a most painstaking and accurate fashion; and he has kept his language free from the translator's faults, which have disfigured not a few English editions of German text-books. Aided by the judgment of Prof. Bayley Balfour, he has produced a version that loses little of the force of the original. A translation invites fault-finding in a way of its own; and I can hardly say more in favour of this one than confess a happy desire to abstain from the process, since it would be concerned with minor points.

The translation of Prof. Sachs's *Vorlesungen* into English has been made with the fidelity to be expected from Prof. Marshall Ward. The original is a series of lectures on the physiology of plants—a subject full of difficulty to all but the most accomplished lecturers. It is nevertheless one of the most lucidly and forcibly written treatises to be found in botanical literature. Prof. Ward has not spared himself in the effort to reproduce the book worthily, and it may be said at once that he has succeeded so far as a faithful translator may hope. It would be easy to select passages where so competent a man as Prof. Ward would have done better to give himself "plenty of rope," even with the certainty before his eyes that the same "rope" would be turned to other uses by critics—albeit of no great vigour of arm. But the excellence of his performance disposes one to be more than critical. The book is intended for students and cultivated readers, and the form of lectures has been adopted as better fitted for the purpose of clear exposi-

tion, free from all "the trammels of learned descriptions of apparatus," &c. Prof. Sachs has found it advisable to introduce a system of physiological organography in place of formal morphology to suit this purpose as well; but I venture to think his practice will be received in this country with considerable misgiving. His object is clear enough to all botanists who know the subject, and in the attempt he has the sympathy of all but the timid. But the effect of it on "the students and cultivated readers," to whom the book is addressed, is another matter—which I would gladly be convinced that I am timid in regarding as fraught with dangers. In spite of this there is no book which may be more unhesitatingly recommended to all who desire a thorough knowledge of the physiology of plants. It is the work, not only of the greatest living authority on the subject, but of one who is at the same time an unrivalled master in the exposition of it.

The first part of the *Annals of Botany* gives good promise of a useful future. The original papers are good, solid pieces of work of a kind that is happily becoming more abundant in this country. The notes are an attractive feature, and it is to be hoped that workers will use this channel for publishing those minor observations which too commonly are left in note-books. It is pleasant to be able to point to the fact that the only contributor of both an original paper and a note is a lady—Miss Agnes Calvert. Finally, there are forty-one closely-printed pages containing a record of current literature carefully prepared. As in the two volumes previously noticed, the printing and the illustrations are excellent, and in every way worthy of the Clarendon Press. It is to be sincerely hoped that a long and vigorous career is before the *Annals*, and that it will have the effect desired by its founders of stimulating research in this country and in America.

GEORGE MURRAY.

TWO BOOKS ON HEBREW PHILOLOGY.

Notes on the Hebrew Text of the Book of Genesis. By G. J. Spurrell. (Oxford: Clarendon Press.) Revision by a scholar of Prof. Driver's eminence must confer a certain value upon any work. Doubtless it has enabled Mr. Spurrell to avoid many of the errors incident to first attempts at scholastic authorship. To students ignorant of German—we would fain hope a rapidly decreasing body—his book may prove helpful, though he is prone to rely a little blindly upon his German oracles, and, as a consequence, to reproduce their mistakes. His remarks on the origin of the Hebrew relative particles (p. 67) are quite erroneous. The Assyrian *shā* proves that the corresponding Hebrew term is not "a fragment of 'asher.'" The two former are not connected at all, except as synonyms are connected; and the German suggestions cited in the note are ridiculous, though it be flat blasphemy against the dogma of German omniscience to allege it. In Assyrian, the relative *shā* is the accusative of *shū*, the demonstrative and personal pronoun "that," "he"; and this connexion between the relative and the demonstrative pronoun finds its parallel in Ethiopic (*zā*, *zātī* = Heb. *zeh*, *zoth*, "this"; Ethiop. *za* "who," as in *zawahabana*, "which he gave us"; Ethiop. *ellu*, "these"; Hebrew *'allah* "these"; Ethiop. *ella*, "who.") In the same way our word "that" is both demonstrative and relative. 'Asher, on the other hand, is to

be compared with the Babylonio-Assyrian *ashru*, constr. *āshar*, "place"; Aram. *'āthra*, *'athar*. Mr. Spurrell has worked hard with his German friends, but an original insight into the principles of grammar is not his strong point. In the note on *bereshith* it might have been said at once that adverbs consisting of a noun with prefixed *be*, *ke*, or *le*, are naturally anarthrous. The note on the accentuation of the passage is of little value. Attention should have been called to the position of *Athnach*, which lays stress on the mode of origination. "Originally *Elohim* [and not another] created [not made in ordinary human fashion] the heavens and the earth." The other meaning of *reshith*, which it bears in Deut. xxxiii., 21, should have been mentioned; and Josh. iii. 15 sq., which formally corresponds almost clause for clause with the whole passage, might have been referred to in favour of Rashi's interpretation. A reference to the *ber'ah* of Num. xvi. 30 would have illustrated the force of *bārā*. *Shamaim* is certainly not "a dual" any more than *maim*. The two nouns are plurals of unused **shamai*, **mai* (like *sadai*, e.g.), formed like *nokrim* by simple addition of *m*; cf. the Ethiopic singulars *samai* and *mat*. Hypothetical forms like *𐤑𐤍𐤓* ought to have the asterisk, or some other distinguishing mark; otherwise they will inevitably mislead beginners into substituting them for the forms they are meant to explain. The Syriac root *rehef* signifies "to pity" and "to love"; cf. its use in such phrases as *rehme weruhofo*, *merah'mon wamrah'fon*. What is said about *'adam* might have been made more complete by reference to the Babylonio-Assyrian *adāmē*, "inhabited regions," "dwelling places," as opposed to the wilderness; and *admānu*, the seat or abode of a god; cf., Isa. vi., 11, *me'en yosheb . . . me'en 'adam*. Something might have been added (p. 15) about the meaning of "in his own image." The text seems to define it by the clause *zakar unegebah bara 'otham*. The bisexual aspect of deity is characteristic of Semitic religions; and if this be the original sense of the passage, it is, *pro tanto*, an argument for the antiquity of the account in its earliest form. Mr. Spurrell will do better than this, though this, in its kind, is not bad.

Einleitung in den Talmud. Von Hermann L. Strack. (Leipzig: Hinrichs. London: Williams & Norgate.) This is a separately printed extract from vol. xviii. of the new edition of Herzog's well-known *Real-Encyclopädie für Protestantische Theologie und Kirche*. Need we say that the name of the author is a pledge of a thorough and unprejudiced treatment of this difficult subject? No attempt is made to be interesting. Those whom the theme itself does not interest need not knock at this door. Hence alone it has been possible to condense within seventy-six large octavo pages all such preliminary information and bibliographical material as every one needs who either studies or even refers to the Talmud. The vagueness with which English writers refer to the Talmud is a proof how much such a work as this is needed at home. May our theological teachers and examiners take the lesson to heart, and see that the road to honour starts henceforth from the German dictionary! Why not, seeing that German encyclopaedists have taken a lesson from ourselves, and shown themselves, sometimes at least, as capable of condensation and arrangement as their French and English colleagues? Prof. Strack's arrangement of his material is what it should be. He begins with the explanation of important technical terms, such as "Mishna," "Baraita," "Tosefta," &c.; then he proceeds to the order of the parts and tractates of the Mishna, and gives a short but useful sketch of their contents, and a brief notice of the Aboth of Rabbi Nathan and the "small tractates" (a postscript on p. 76 refers

to Schechter's important edition of the former treatise in two distinct recensions, 1887). He then proceeds to the history of the Talmud and its text, noticing first of all the rise of the Soferim or "scribes" in the Babylonian exile, whose studies were not confined to prophetic literature, but were largely occupied with the Pentateuch legislation. Few scholars will question any of the statements in this first paragraph, even though English prejudices may be shocked by the candid recognition of the post-Isaianic origin of Isa. xl.-lxvi. In this portion of the "Introduction," we notice Dr. Strack's well-known opposition to some of the statements of the acute Jewish scholar, Dr. M. Joel. Valuable information is appended on the manuscripts and editions of the Talmud. After a chronological list of the great doctors of law comes a too concise section, headed "Zur Charakteristik." Dr. Strack seeks to promote a more moderate and dispassionate view of the Talmud than is as yet prevalent in Germany. But could he not have set forth briefly the varied interest and importance of the historical study of the Talmud? The concluding part is bibliographical; and we heartily thank the author for limiting his notices to the most valuable books, especially from the point of view of those not themselves Talmudists. The printing must have been difficult; but why give the admirable J. J. Wetstein a double *t*?

SOME BOOKS ON GEOLOGY.

The Student's Handbook of Historical Geology. By A. J. Jukes-Browne. (Bell.) By "Historical Geology," Mr. Jukes-Browne means the history of the earth as revealed by its rocks; but as the moderate compass of his volume rendered it necessary to exclude, so far as possible, references to foreign geology, the book comes to be substantially an historical account of the British area. Fortunately, the British area contains representatives of almost every formation, from the oldest archæan rocks to the comparatively modern deposits of prehistoric times, so that it is only in exceptional cases, as in discussing the triassic and miocene periods, that it becomes necessary to supplement our record by reference to the fuller chronicle preserved in the continental strata. It is evident that "historical geology" includes much more than a description of the stratigraphical relations of the various sedimentary deposits and the associated igneous rocks. It deals also with the forms of life that peopled the earth in the past, and with the restoration of the physical features of the earth's surface at successive epochs of its history. The geographical story of the British Islands has been told so often and so well that little novelty is to be expected in a text-book devoted to this topic. Nevertheless, Mr. Jukes-Browne offers some suggestions well worthy of careful study. His treatment of the cretaceous system should command especial attention, since his work as an officer of the Geological Survey has lain so largely among the rocks of this group. Here he follows the usual classification in placing the Wealden at the base of the system; but this arrangement, though sanctioned by high authority, leads to the separation of the Wealden from the closely related fresh-water beds of the Purbeck series. Mr. Jukes-Browne has prepared us, in previous writings, for his substitution of the term "Vegetian" for the old and inappropriate "lower greensand"; and it is to be hoped that this new term—suggested by the characteristic development of these rocks in the Isle of Wight—will come into general use. The eocene and oligocene groups are united under the term "Hantonian," in allusion to their occurrence in the Hampshire basin; while the pliocene and pleistocene series are associated under the

common name of "Icenian," in reference to their development in East Anglia. As an example of the author's conscientiousness in bringing his work well up to date, we note that he alludes to Mr. Clement Reid's recent determination of the pliocene age of the Lenham beds. Altogether Mr. Jukes-Browne's work—which should be regarded as a companion to his previously issued *Handbook of Physical and Structural Geology*—may be safely recommended as an excellent manual for the student—well-written and well-illustrated, trustworthy in detail, and exceptionally moderate in price.

The Geology of England and Wales. With Notes on the Physical Features of the Country. By H. B. Woodward. Second Edition. (Philip.) When the first edition of this work appeared, it received a very favourable notice in the ACADEMY. After an interval of more than ten years a new edition has been called for, and Mr. Woodward has responded to the call by producing what is practically a new work. The value of the earlier edition was officially recognised by the Geological Society on the occasion of the author's reception of an award at the hands of Prof. Bonney, as president. The present edition, however, is in every way greatly in advance of its predecessor. Not only has a large amount of additional matter been introduced, but some marked improvements are noticeable in the general plan of the book. Of these improvements one of the most useful is the insertion of copious references to original authorities. The number and range of these references sufficiently indicate the labour expended upon the preparation of the present edition. It would indeed be difficult to point to any paper of importance on the geology of any part of England or of Wales that has escaped the author's notice. But while Mr. Woodward has thus diligently compiled from the best and latest authorities, he has also inserted in his work much original matter, the result of personal observation over a large part of Southern Britain. The author's fulness of knowledge, his conciseness of expression, and his independence of classification conspire to give his treatise in very high position in our geological literature. It is accompanied by an admirable geological map, drawn by Mr. J. G. Goodchild, and very neatly printed in colours.

Outlines of the Geology of Northumberland and Durham. By G. A. Lebour. (Newcastle: Lambert.) Eight years have passed since Prof. Lebour published his *Outlines of the Geology of Northumberland*—a work primarily intended for the use of his classes in the Newcastle College of Physical Science. In preparing a new edition of this useful book, he has extended its scope by including the county of Durham, and even the north-eastern part of Yorkshire, in order to say something about the important mining district of Cleveland. So far, therefore, as Northumberland is concerned, the present work is a second edition; while so far as Durham and Cleveland are concerned it is an entirely new work. On opening the book, it is evident that it represents a marked advance on its predecessor, if only in the plates and woodcuts that meet the eye. A small geological map is also inserted; but the distribution of the several formations is indicated only by a system of shading and conventional signs. Such a method, always more or less confusing, has only cheapness to recommend it; and it seems a pity that a coloured map could not have been introduced. The text, however, is written with the clearness and accuracy which might be expected from the author's intimate knowledge of the country he describes, and from his long experience in the field and in the class room. Any geologist wishing to explore the stretch of country between the Tweed and the Tees will find

Prof. Lebour's little book to be as neat a guide as he could desire.

Terra. By A. A. Anderson. (Reeves & Turner.) Mr. Anderson seems to have been a great traveller; but his scientific notions are unfortunately of a very crude character. He is under the impression that he has discovered a new motion of the earth—a second axial rotation, "hitherto unsuspected"—and can thereby explain the origin of earthquakes and other great physical changes in the earth's crust. By transferring the poles to what are now equatorial regions, he alters the shape of the earth, producing a flattening at the new poles, and an equatorial bulge passing through the old polar regions; and by these disturbances he seeks to explain those elevations and depressions, the effects of which are familiar enough to geologists.

CORRESPONDENCE.

ΛΩω FREMERE, ETC.

Stroud.

The verb ΛΩω, according to old authorities, is said to be synonymous with βλεωω, and Passow renders it by "anblicken, erblicken." As an old epic word it occurs in only three passages, viz., *Od.* 19, 229, 230, and *Hom. Merc.* 360. It is evident, however, that, in the above passages in the *Odysey*, this verb is capable of a more forcible construction than that of merely "seeing, beholding," &c. I propose, therefore, to offer the following as an explanation of the word. The form ΛΩωω seems to be parallel with λεωω, and, following Leffmann's explanation of the latter, may be traced to an original *Λδωω. Further, the syllable λα-, as Prof. Sayce reminds me, may be referred to the sonant liquid; and this again may represent the vowel of the aorist of an earlier *Λδω. The root of Λδωω would then be *lu = Sanskrit ru "fremere, etc." E. SIBREE.

PHILOLOGY NOTES.

THE recent numbers of *Bursian's Jahresbericht* contain reports on Homer, Propertius, and Cicero's *Orations*, and Roman history and chronology, the latter by Dr. Schiller. Mr. Ellis's and Mr. Postgate's papers on Propertius are fully noticed.

Correction.—In the Rev. F. H. Woods' letter on "The Finnic Origin of the Aryans," in the *ACADEMY* of last week, p. 239, col. 2, for "their" (line 36) read "these phonetic changes"; and for "veri" (line 2 from bottom) read "vesi."

FINE ART.

GREAT SALE of PICTURES, at reduced prices (Engravings, Chromos, and Olographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—GEO. REES, 115, Strand, near Waterloo-bridge.

ART BOOKS.

THE value of Mr. Gomme's last volumes of the "Gentleman's Magazine Library," containing the articles in that ever-to-be venerated periodical on *Romano-British Remains*, is enhanced by a preface, criticising, in moderate but adverse language, the opinions of Mr. Coote and Mr. Seebohm on the manner in which Roman influences moulded the life of the communities succeeding them in the occupation of England. The question can never adequately be settled until a complete record has been constructed of the Roman remains which have been found in our country; and the compiler, in reproducing the paper of an antiquarian student—a paper which was published so far back as 1795—urging the preparation of a map "accurately and completely illustrative of the Roman topography of this island," drops a tear over the circumstance

that the index of places where traces of the Romans have been revealed, which the Index Society has long promised, remains a promise still. Mr. Gomme must be of good courage and persevere in his undertaking. The very volume on which he is now engaged will speed the publication of such an index; and if the Index Society has not yet fulfilled its undertaking, the delay must be attributed to the number of vehicles which its directors would fain drive, and the difficulty in literature, as well as in politics, of forcing six omnibuses at a time through Temple Bar. He is well justified in putting forward in his introduction, as a crowning proof of the value of these articles, the fact that Huebner, in his exhaustive work on Latin inscriptions in Great Britain, obtains nearly all his early information from the pages of the *Gentleman's Magazine*. Such a tribute to the excellence of the antiquarian papers which he has grouped together in these two volumes cannot be estimated too highly. The first describes the discoveries in England in the various counties arranged in alphabetical order as far as Shropshire. The second finishes our own country, and includes the remains in Wales and Scotland. It also incorporates the notes in elucidation of this section of Mr. Gomme's labours.

Bryan's Dictionary of Painters and Engravers. New Edition. Parts 7 and 8. (George Bell.) These parts form the commencement of vol. ii., and we are glad to find that there is a decided improvement in the editing. Although Mr. Graves still retains his name alone upon the cover, we learn from an advertisement that Mr. Walter Armstrong has been associated with him in the editorship; and the effect of his collaboration is distinctly evident in a good many of the important articles which are signed W. A. Menline, Méryon, Morland, Palma Pesellino, are among the artists he has treated; and, although the space does not afford scope for more than an outline, it is sufficient to prove that he has consulted the latest authorities. There is still, however, need for improvement. Although Louis Leloir and Auguste Lançon are included, Bastien Lepage, a more important artist than either, is omitted; and surely a few lines might have been spared to Kenny Meadows. John Linnell is treated as if his strength lay rather in portrait than in landscape. In the article on John Landseer we read—"He devoted considerable attention to a series of engravings of animals after the great masters, which were afterwards published in a collected form"—a sentence from which few would gather that five of the designs were by his son Edwin, and all were engraved by his son Thomas, and that he wrote the letter-press himself. If under Licinio (Pordenone) it was thought necessary to mention the doubtful "Apostle" in the National Gallery, one example of Liberale da Verona should not have been omitted. Under Marinus de Zeeuw or Van Romerswale we are informed that the name Zeeuw "means simply the sea-lander." If such defects strike one on the surface, there may be worse below; but, as we said, the book is improving, and there is hope that the second volume may be much more valuable than the first.

Claude Gellée le Lorrain. By Owen J. Dullea. (Sampson Low.) This latest addition to "The Great Artist" series has been well and carefully compiled, and is very fairly illustrated with engravings, &c., from pictures, drawings, and etchings. Mr. Dullea compares with patience the different accounts of Sandrart and Baldinucci, and does not appear to have neglected any important authority upon the artist. All the known facts of Claude's life are arranged in a clear and connected narrative, the history of nearly all his pictures is traced, and a great deal of information is

given about the "Liber Veritatis." In the appendix is given the artist's will, which was discovered by Lady Dilke, together with a list of the drawings in the "Liber Veritatis," and another of the pictures by Claude in public and private collections. We can sincerely recommend the book not only to the lovers of Claude, but to the lovers of Turner—especially to those of the latter who, owing to the teaching of Mr. Ruskin and his followers, have failed to appreciate the immense obligations of Turner to the great French artist, and are under the false impression that Claude was not an ardent student of nature.

Life and Nature Studies. By Hume Nisbet. (Sampson Low.) No doubt Mr. Nisbet has read his Ruskin, but he also seems to have read his Walt Whitman. His style is at all events like a strange mixture of both; while his spelling appears to be influenced by the example of our Transatlantic cousins, and his grammar to be peculiarly his own. We do not know which we like least of the three. We gather from various notes to the book, and quotations from laudatory press notices at the end of it, that Mr. Nisbet is young, that he resides in Edinburgh, where he practices as artist and art teacher. He has also published poems. We do not wish to discourage him. He is full of ardour, has high views of the mission of the artist, and evidently thinks he observes for himself; but he has begun to teach when he should still be learning. Among his many aphorisms is the following: "What is perfect and beautiful to you just now, before you begin to study, will buffet you in the eyes when you are trained." If Mr. Nisbet's intelligence develops as we hope it will, this book of his will "buffet him in the eyes" a good deal a few years hence. The lectures will buffet him as an art teacher, and the illustrations as an artist.

Table Decoration. By William Low. (Chapman & Hall.) Mr. Low, the gardener of the Duke of Grafton, at Euston Hall, has evidently considerable taste in the now fashionable art of decorating the table with flowers. Without a good deal of imagination, it is not easy to realise how his tables looked when they were decorated according to his designs; but the descriptions are ample, and the designs are all given in black and white, and both will no doubt be found very useful in giving hints to others.

THE SOCIÉTÉ DE L'ART ANCIEN EN BELGIQUE.

THE issue to the members for the third year comprises a considerable variety of objects. The earliest in point of date are a collection of Frankish and Merovingian ornaments of the fifth and sixth centuries—from the Archaeological Museum at Namur, the treasury of the Church of Our Lady at Tongres, the Diocesan Museum at Liège, and the collection of Mr. Eugene Poswick—reproduced in chromo-lithography.

Secondly, the reliquary bust of Pope St. Alexander, martyred in 117, now in the Museum of Antiquities at Brussels, but formerly in the Benedictine Monastery at Stavelot. This reliquary, here reproduced by an admirable phototype of E. Aubry, of Brussels, was executed by order of Abbot Wibald, who, on April 13, 1145, enshrined in it the skull of the saint, together with several fragments of clothing stained with his blood. The bust, of silver, rests upon an altar-shaped coffer, supported on four feet, the two foremost of which are formed by wiverns. Each side of the coffer is adorned with three enamelled plaques, reproduced in full size. Those in front represent St. Alexander and his two companions, St. Eventius and St. Theodolus. The two former are vested in chasubles, and have a pastoral staff in the left hand. The latter, in dalmatic, has a book.

The pope has a low mitre. The plaques on the other three sides have half-length female figures representing Divine wisdom and eight virtues holding scrolls, on which are inscribed the beatitudes. The spaces between these plaques, the top of the coffer, and the collar of the saint's vestment, are adorned with cabochons and jewels.

The fourth plate reproduces five plaques of the thirteenth century. The largest of these, now in the Museum of Namur, is adorned with branches of foliage and fruit, enclosing within their curves flowers and monsters. The other four, from the shrine of St. Remacle, at Stavelot, present most exquisitely designed foliage in gold, on a ground of oxidised copper, executed by the method described in chapter lxx. of the *Diversarium Artium Schemata* of Theophilus.

Plates V. to VIII. represent six glasses, executed by Venetians in Belgium in the seventeenth century; and specimens of Binche and Antwerp lace, the latter of the description called *Pottelant*, from the vase of flowers forming the central object in the design. The accompanying text gives full information as to the history of the objects and the technical method of manufacture.

W. H. JAMES WEALE.

CORRESPONDENCE.

"JACOB" AND "JOSEPH" IN THE INSCRIPTION OF THOTHMES III.

Paris: Oct. 11, 1887.

I notice in the last number of the ACADEMY a discussion on the names of Jakob-El and Joseph-El in the lists of Thothmes III., at Karnac. As I not only made the first publication on this subject (*Rev. Egypt.* 1885), but have given it a great deal of careful study, perhaps a line from me in your journal would not be inappropriate.

The gentlemen do not appear to have read my second article (*Rev. Egypt.* iv., p. 146), wherein, I think, I definitely established the translation on which their controversy rests—namely, the title of the monument.

The word *tethu* never means to conquer (*bezuvingen*), either in the ancient Egyptian or in Demotic, where it is often found; but always has the sense of "to shut up," "to imprison." The word *test* has two meanings—either territory or people (principality). We are here obliged to accept the ethnographical sense, as it would have been impossible for the king to have imprisoned the territories in the city of Megiddo. If they were cities (*test* never means city) taken by the king in his expedition against the "re-union of people," he would have said so, and we should have found mention of it in the history of the war.

There is, at present, absolutely no reason why Jakob-El and Joseph-El should not be tribes, and the two tribes which the Bible represents to us as the families of Jacob and Joseph.

WILLIAM N. GROFF.

THE AGE OF THE WALLS OF CHESTER.

London: Oct. 9, 1887.

I have to render reply to two of your correspondents—Mr. Thompson Watkin and Mr. Shrubsole—whose letters appear in the ACADEMY of September 24. Mr. Shrubsole says I have fallen into "serious error." Let us see. I stated that the Roodeye wall is "of unknown thickness and depth." He states that a pig of lead was found at a depth of 22 ft., where there was deep water in Roman times. "Hardly the place one thinks," he says, "for the wall of a *castrum*." Who has said that where the pig of lead was found, there was the wall? Certainly not I. Where is my error, serious or otherwise? Where is there the least figment of error? The lead was found in one place, the wall is in another.

If Mr. Shrubsole is prepared to say that

because a pig of lead is found in deep water, *ergo* there could not have been a wall on the bank of the stream, he is quite welcome to the argument. I am obliged to him for desiring to render me information as to this discovery; but the time I have devoted to Chester archaeology has already made me familiar with it, and with the following reference to its position in relation to the Roodeye wall in Mr. Frank H. Williams's *Synopsis*:

"The stratum in which it occurred—a bed of gravel and marl intermixed with shells—clearly indicates its having anciently been part of the course of the river Dee, which in the time of the Romans extended over a great part of the Roodeye, in some places reaching to the walls of their camp."

I am aware, also, of the curious fact that the sloping bank within the Roodeye wall is filled with early Roman tombs. Your correspondent will find the counterpart of this just within the late portion of the Roman wall of London, at Newgate, where, at Messrs. Tylor's foundry, Roman tombs of early date were not long since discovered. Other interments have also been found from time to time within the area of the London wall in other positions. These indicate that the walls in both cases were erected to inclose an area once outside the original settlement. I am glad that your correspondent now acknowledges the Roodeye wall to be an ancient wall. In his published paper, however, he described the stones forming it as "no part of a wall properly so-called. They are certainly not Roman, since they exist only as a single row of stones. . . . The base of the stones rests upon a quicksand." This statement was actually made subsequently to the first excavations which Mr. Watkin describes, when the wall was found to go down deeper than the depth of our recent diggings.

I need not trespass much upon your space to reply to Mr. Thompson Watkin's remarks, since Sir Henry Dryden's letter has gone so greatly over the same ground. For this reason I need not go farther into the question as to the age of the slab with the ecclesiastical-looking figure; and I am content that he should assign it to whatever age he deems best, so long as he allows me my opinion as to its Roman date. His suggestion that the huge mass of confessedly Roman sculptured and inscribed stones were brought from an ancient cemetery to repair the wall with after the siege deserves more attention. In one comparatively small gap we have now found something close upon forty stones, and there are others—who can say how many?—yet to be discovered. During the siege, were the combatants likely to have devoted much time to the unearthing of Roman stones from the spot where their battery was erected? Supposing that some were found, would the builders, after the siege was over, have been likely to cross the ditch to fetch these small stones, when, had stone been wanted to repair the walls, there were the suburbs lying in ruins closer at hand, as well, I fear, as many a goodly building, battered to pieces within the walls. Again, Chester was surrounded with cemeteries, most of which have been built over in modern times by the growth of the city, including even the one specially referred to. But yet, have the works of excavation all over their surfaces in recent years, when everyone is on the alert to see anything that may be met with, produced any such mass of sculptured and inscribed stones? Take the whole area of the cemeteries, take all recent years, and how meagre has been the sum of the discoveries! How, then, in this special cemetery, and in a time of great public trouble, could such a number have been found? The remarks made relative to old Roman foundations within the walls, I have replied to at some length in last week's *Builder*, and they

need not, therefore, be repeated here. But is it actually a matter of fact that the walls on the north side and on the east were so much battered as is implied? Can Mr. Watkin produce any records that such was the case?

I am sorry to learn from your correspondent's letter that "the anti-Roman party" at the period of our visit "were, by agreement, silent." This appears to indicate some preconcerted plan, which is greatly to be regretted. We were desirous of arriving at the truth; and all the points now being discussed on paper could have been so much more readily pointed out and considered on the spot, frankly, one with the other. I believe the "anti-Roman" party to be a very small minority, and I trust that the reward of this correspondence will be to adduce so much evidence as to make it easy for them to come over to the majority.

E. P. LOFTUS BROOK.

P.S.—It may be of interest to Sir Henry Dryden to know that a vast quantity of fragments of Roman pottery were found in the excavations.

THE ROMAN PATERA FOUND AT SOUTH SHIELDS.

South Shields: Oct. 10, 1887.

I have read Mr. Hoskyns-Abrahall's letter concerning the Roman patera from South Shields, and his suggested reading of it. Since my letter appeared—but too late for insertion in last week's issue of the ACADEMY—Prof. Hübner thus writes me: "Looking again at the text of the inscription, I find that one may read also *Apollini Anaxiomaro M. A. Sab(inus)*." Thus it will be seen that in his alternative reading he agrees with Mr. Hoskyns-Abrahall.

ROBERT BLAIR.

NOTES ON ART AND ARCHAEOLOGY.

By the appointment of Mr. M. H. Spielmann to the post of editor of the *Magazine of Art*, that very popular publication promises to be again conducted with the energy and spiritedness which characterised it of old. Mr. Spielmann assumes command in time for the issue of the December number.

MISS AMELIA B. EDWARDS is announced to deliver a lecture on "The Buried Cities of Ancient Egypt," at the Town Hall, Manchester, on November 2; and on "The Social and Political Position of Woman in Ancient Egypt," at the room of the Fine Arts Club, Alderley Edge, on November 8. Miss Edwards will also lecture at Warrington and other places in the neighbourhood of Manchester.

A NEW edition of the late Mrs. Heaton's *Concise History of Painting*, revised and enlarged by Mr. W. Cosmo Monkhouse, will shortly be published by Messrs. Bell as a volume in "Bohn's Standard Library."

MR. AUBREY HUNT's exhibition, chiefly, if not entirely, of pictures and sketches in France, will be one of the first to which Messrs. Boussoad Valadon and Company will invite the public at the Goupil Gallery this winter. Mr. Hunt has but lately returned from the scene of his summer's labours.

MR. HARRY FURNISS will hold, next week, in the Gainsborough Gallery, New Bond Street, a second exhibition of his work, consisting, this time, of his original drawings for *Punch*, &c., and entitled "Politics and Society." Next week, also, the Fine Art Society will exhibit a collection of drawings by Mr. George Q. P. Talbot, entitled "The Sunny South."

THE tenth annual exhibition of the Scottish Society of Painters in Water-Colours will open at Glasgow, in the galleries of the Institute, Sauchiehall Street, towards the end of next week.

A GENERAL Meeting of the Hellenic Society (the first of the ensuing session) will be held at 22 Albemarle Street, on Thursday, Oct. 20, at 5 p.m. Prof. Percy Gardner will take the chair; and a paper will be read by Mr. A. S. Murray, upon "Two Vases from Cyprus."

MR. WALTER ARMSTRONG'S work on the new English edition of M. Müntz's *Life of Raphael*, has, he informs us, been confined to editing the translation published some years ago, and incorporating with it the corrections and new matter contained in the second French edition.

THE STAGE.

STAGE NOTES.

THE theatrical season "makes haste slowly." There is a curious absence of pieces—long pieces at all events—of any importance. It is true we may have to go to see the "Red Lamp" again very soon: partly to see the "Red Lamp" itself again and the excellence of its first interpreters; partly to see Mrs. Beerbohm, free for the first time in a very strong part, played last season by Lady Monckton, and lately by Miss Achurch; and partly, too, for the sake of the one-act piece, by Mr. Walter Besant and Mr. Walter Pollock, to which the manager has paid the reasonable compliment of removing it once a week, at least, from its place, as mere *lever de rideau*, and giving it at an hour when even the least diligent playgoer is in his seat. That would be an evening not badly spent, probably.

But attendance at the Gaiety and the Strand—two playhouses where new things are, or old things essentially, perhaps, under new names—we should surmise, is hardly compulsory. But the doings there may have a word of chronicle, nevertheless, since at the Strand it is Cellier's opera, "The Sultan of Mocha," which they are giving, with Miss Violet Cameron, Mr. Bracy, and Mr. Birch in the cast; while at the Gaiety, Mr. Leslie, the comedian, it is said, under the name of A. C. Torr, collaborates with another in the production of a characteristic burlesque. But though Mr. Leslie, the author, may be present, Mr. Leslie, the comedian, is elsewhere. It is Mr. Leslie, the comedian—from "Rip van Winkle" to "Monte Christo"—whom we are sure of enjoying. Miss Farren, too, who still permits so much of piquancy to Gaiety burlesque, whom years cannot wither, nor can custom stale her pleasing monotony—Miss Farren, alas! is absent. Still, our contemporaries—those most learned in the matter—assert the piece to be all that a Gaiety audience can demand: brilliant as to spectacle, tuneful as to music, and even rather funny as to dialogue.

But it is for M. Coquelin that the playgoer is really waiting. He makes his first appearance, on Monday week, at the little band-box in Soho, which M. Mayer—never hitting the golden mean in these matters—gets as a somewhat absurd alternative to the vastness of Her Majesty's Theatre. "L'Ainé"—M. Coquelin's special piece—will not be performed till two or three days afterwards. And the comedian will not leave us till he has played "Don Caesar de Basan," "Les Précieuses Ridicules," "Gringoire," and, more than that, has played, within half a mile of Mr. Irving's own theatre, Mr. Irving's own part in "The Bells."

MUSIC.

THE NORWICH FESTIVAL.

Norwich, Oct. 12.

THE twenty-second Triennial Festival, which commenced in St. Andrew's Hall on Tuesday evening, promises to be one of considerable interest. Mr. A. C. Mackenzie, who obtained such success three years ago with his "Rose of Sharon," is represented only by his Jubilee Ode, and a song from "The Story of Sayid." Sir

A. Sullivan's "Golden Legend" is, of course, almost a necessity. But musicians will be anxious to hear about the novelties. From Germany has come many a masterpiece; from France we have had "Faust" and "The Redemption"; and now the Festival authorities have determined to see if anything good can come out of Italy, once the land, *par excellence*, of music, and especially of sacred music. Whatever may be thought of the new works they cannot fail to excite a certain legitimate curiosity.

The programme of the opening concert began with the above-mentioned Jubilee Ode. Due justice was done to this skilful *pièce d'occasion* by Mdme. Albani, Mr. E. Lloyd, choir and orchestra under Mr. Randegger's direction.

This was followed by M. Camille Saint-Saëns' clever though curious setting of the Nineteenth Psalm. The strange mixture of old and new styles is disturbing. The principal vocalists were Miss A. Marriott, Miss L. Lehmann, and Messrs. B. McGuckin and Barrington Foote. Miss Lehmann obtained well-deserved applause for her solo, "Thou, O Lord."

The concert concluded with Mendelssohn's "Hymn of Praise," with Mdme. Albani, Miss L. Lehmann and Lloyd in the solo parts. The chorus, "Praise thou the Lord," and the famous "Night is departing," gave one an excellent idea of the powers of the festival choir. The voices are fairly well balanced. Those of the men preponderate slightly. The quality of tone is good, if not particularly rich. Hence they are more successful in passages requiring loud and vigorous singing. Their rendering of these choruses deserves high praise.

On Wednesday morning was produced Signor Bottesini's oratorio, "The Garden of Olivet." The solemn tragedy of Gethsemane is treated briefly in Bach's "Passion" music; and it forms the subject of Beethoven's single oratorio. The one only gave us the Biblical narrative in recitative; while the other, with the exception of a few numbers, did not approach his subject with sufficient seriousness and sympathy. Both Mr. J. Bennett, who prepared the book, and also the composer have evidently been anxious to deal reverently with their theme. The Scripture narrative is given in recitative, and entrusted to a contralto voice. The actual words of Jesus are treated more elaborately, and sung by a baritone. The narrative is interspersed with solos, duets, quartets, and choruses of a reflective nature. The work has been appropriately described as a "sermon set to music." From a purely art point of view a more dramatic—using the word in a technical sense—form would, perhaps, have been more satisfactory; but, considering the great danger of giving offence to susceptible minds, it was a wise course. Moreover, the work is entitled a "devotional" oratorio. The book is carefully and skilfully constructed, as one would indeed naturally expect from so experienced a writer as Mr. Bennett.

Signor Bottesini is known in England as a double-bass player, and as a composer of solos specially written to show his wonderful command over that unwieldy instrument. In the "Garden of Olivet," however, we find something very different. It cannot be denied that the music of the oratorio shows us a man who has studied and has been influenced by all sorts of composers. Had Signor Bottesini absorbed into his system the teachings of various schools, and then evolved a well-defined style of his own, all would be well. But a recitative, *à la* Wagner, followed by a concerted piece in Italian style, and a phrase here of Rossini or Donizetti, there of Mendelssohn or Gounod, produce a somewhat patchy effect. The frankness, however, with which the composer yields to any particular mood is refreshing. The *leit-motif* enters largely into the work, and is employed with skill. The second section "Be-

trayal," contains, in our opinion, the best music. The contralto solo, "Deliver me," the aria for soprano, "The Lord is my light," and a pleasing duet in canon form for soprano and tenor, "I, the Lord," are, to our mind, the numbers most deserving of mention. There are some good passages in the choral numbers; but, altogether, the music is of too light a character for the words. The story of Gethsemane is so touching, so solemn, and to most so sacred, that anything which recalls operatic music carries with it its own condemnation. The scoring of the work is effective in many of the accompaniments to the portions for baritone. But the introduction of the brass in the Intermezzo, descriptive of the angel from heaven strengthening Jesus in the hour of agony, is particularly unsuitable and distressing. Besides, too frequent use of the brass in the choral numbers fatigues the ear. Signor Bottesini, who conducted his own work, by no means adhered to the metronome marks in the vocal score. The "Marcia" movement at the beginning of the second part was not improved by the rate at which it was taken.

With regard to the performance, we need only say that the choir sang well, but not its best. The solo parts were in the safe hands of Miss A. Marriott, Miss H. Wilson, Messrs. Lloyd and Santley and Mr. J. H. Brookbank. The hall was fairly well filled, but the oratorio was coldly received. Choir and orchestra, however, bestowed considerable applause on the composer.

The morning concert concluded with Dvorák's beautiful "Stabat Mater." In the grand opening number for quartet and chorus the choir did, with one or two small exceptions, exceedingly well. Concerning the vocalists the names must suffice—Miss A. Marriott, Miss Wilson, and Messrs. Lloyd and Santley.

We are compelled to defer until next week our notice of the rest of the week's music. This evening's programme includes a new song by M. Gounod for Mr. E. Lloyd, and a new scena by Mr. Prout for Miss Hilda Wilson. To-morrow morning Signor Mancinelli's cantata, "Isaiah," will be performed. From reading the vocal score and rehearsal, we venture to say that it is a work of considerable power; though how far the composer has employed his talents in a right direction may be a matter for discussion.

J. S. SHEDLOCK.

MR. PROUT'S NEW DRAMATIC CANTATA.

MR. E. PROUT and Mr. W. Grist have once more entered into partnership, and have illustrated another story from early English history. From the times of King Alfred and the Saxon hero, Hereward, they have passed on to the period of the Crusades. The tale of the new Cantata, briefly told, is as follows:—The winner in a three days' tournament is to obtain the castle and lands of Whittington, together with their heiress, Lady Edith. Lord Morice, a partisan of Prince John the Regent, has jousted victoriously for two days; but on the third he is defeated by Roland, a Red Cross Knight, who loves, and is beloved by, the fair lady. The Lord Morice seeks, by treachery, to rid himself of his rival. Roland, left for dead, revives by the aid of King Richard, who, with his minstrel Blondel, has returned from the East. Then all ends happily. Edith and Roland are united, and the return of England's truant king is welcomed by all. For the main outline of his plot, the librettist acknowledges that he is indebted to the "Knight of the Silver Shield," a story in H. Neale's *Romance of History*. The tale is extremely well laid out for musical purposes, and Mr. Prout has coloured it with some of his best music.

The "Red Cross Knight" is decidedly an advance on the composer's earlier Cantatas. There is more power of characterisation, a richer

vein of melody, and a freer handling of the chorus. Mr. Prout has not, however, changed his style. The music is straightforward, and for the most part, diatonic, and bears but few traces of effort. Much study and labour are needed to apprehend the meaning of some works—the form may be difficult, the phraseology puzzling. And there is a tendency in these days to value a work in proportion to the effort which it gives us to understand it. This is sometimes a mistake, but it is no less wrong to think lightly of music which makes a direct appeal. With Mr. Prout a simple style is a matter of choice, and not of necessity. He is a musician of recognised ability, and, if he willed, could fill his scores with Wagnerian devices and highly-spiced harmonies. He does not ignore the system of representative themes—the king, the knight, and the lady have each a musical phrase assigned to them; and these are used with skill, yet with moderation. As an example of skill we would note the development of a Roland love-theme, in the fourth and fifth scenes. While admiring Mr. Prout for his courage in following Handel and Haydn rather than Schumann or Wagner in the matter of harmony, we are pleased when he introduces a bit of modern colour, and this he does on several occasions. There is one thing in the Cantata to which we would take exception. The musical thread is often rudely snapped asunder by those fatal cadence-chords which are the weak and not the strong points of many a master-piece of the eighteenth century. Mr. Prout knows well the practice of modern writers to avoid breaks, and has followed it successfully in some places. In the matter of orchestration the composer has displayed his usual mastery. In his delicate treatment of wood-wind and brass he often reminds us of Schubert. Space will not allow us to speak in detail of the various numbers of the work; but we would single out for special praise the bright chorus, "Welcome tidings;" the bold "Tournament" chorus—"Hark to achievement"; and the quiet tenor recitative and air at the opening of Scene 4. There is also a very graceful chorus for female voices, "Gaily the Herald."

The "Red Cross Knight" was specially written for the Huddersfield Choral Society, and was produced, under the direction of the composer, at their first concert of the present season, on Friday evening, October 7. The hall was crowded, and the work was enthusiastically received. Attempts were made to encore many numbers, but Mr. Prout only yielded in one instance. This was after the bright chorus, "Welcome tidings." The Huddersfield choir sang this (and indeed all the choruses) superbly; and it was natural that the composer should, for once, give way. The soprano music was sung with considerable power by Miss Annie Marriott; and Mr. E. Lloyd, as the knight, captivated, not only the Lady Edith, but the whole of his audience. Miss Hilda Wilson and Mr. Watkin Mills were very good, but Mr. Riley found the "Morice" music somewhat beyond his strength. Applause, calls for composer, and chorus-master (Mr. J. North), and a speech of thanks from Mr. Prout to the choir for their admirable singing, brought the evening to a highly satisfactory conclusion.

ROPER & DROWLEY'S LIST.

In crown 8vo, handsome cloth, 5s.

TWO NORTH-COUNTRY MAIDS:
an Every-day Story. By MABEL WETHERAL.

"This little story is prettily told, and shows a delicate appreciation on the author's part for some of the finer traits of female character."
—*Athenæum*.
"Drawn by one apparently to the manner born and with many natural touches."
—*Worthing Post*.
"Nicely written."
—*Globe*.
"Sure to become a popular favourite."
—*John Bull*.

This day, in crown 8vo, cloth, with 38 Illustrations, on hot-pressed paper, price 2s. 6d.; in half-morocco, Roxburgh style, 4s. 6d.

THE STUDENT'S
HANDBOOK to the MICROSCOPE:

a Practical Guide to its Selection and Management. By A QUEBRET CLUB-MAN, Author of "My Microscope and some Objects from my Cabinet."
This Manual is intended to be a complete handbook to the instrument; it gives valuable advice to those commencing the use of the microscope, descriptions of the different classes of instruments, complete explanation of the various accessories employed by observers, and practical instructions as to the use of them.
"Affords much practical information."
—*Bookseller*.

BY THE SAME AUTHOR.

Very tastefully printed in fcap. 8vo, with head and tail pieces, and bound in extra cloth, gilt top edges, with Five Illustrations, price 1s. 6d.

MY MICROSCOPE and some Objects from my Cabinet. A Simple Introduction to the Study of "The Infinitely Little."

CONTENTS:—I. The Instrument.—II. A Vegetable Parasite.—III. A Skeleton.—IV. A Monster.—V. A Wing.—VI. An Eye.—VII. A Slice of Rock.—VIII. Man's Work.—IX. One Hundred Objects.—X. Index.

SOME OPINIONS OF THE PRESS.
"We are greatly pleased with this little volume. It is just the very thing to create and whet the appetite for the study of the infinitely little. The topics are well chosen, and the chapters are short, chatty, and full of information."
—*Literary World*.
"The author has managed to make his little essays interesting. . . . he has perhaps written enough to induce some of those who are not already possessors of a microscope to get one."
—*Nature*.
"The anonymous author is evidently one who has had a considerable range of experience, and his preliminary observations on the manipulation of the instrument are excellent. . . . the list of a 'hundred' objects is an excellent one, and will suggest how to begin the formation of a cabinet."
—*Oxford Times*.
"An interesting little volume."
—*Pall Mall Gazette*.

LITERATURE.

A Memoir of Ralph Waldo Emerson. By James Elliot Cabot. 2 vols. (Macmillan.)

SOME great men recently have not been fortunate in choosing their literary executors; at any rate, their friends have thought they were not fortunate. The outcry against John Forster's biography of Dickens is not forgotten; the greater outcry against Mr. Froude for his treatment of Carlyle is still loud. The cause of complaint in both cases would appear to be that the biographers were candid about the faults and weaknesses of their subjects. If Mr. Cabot, forewarned by the fate of Forster and Froude, had given the world a pleasing biography in place of a truthful one, I, for one, would have thought Emerson the most unlucky of all in his choice of a literary executor. Happily, Mr. Cabot was exposed to no such temptation. He found himself able to write a biography both truthful and pleasing. He states that he has been

"entirely free from the gravest embarrassment that can meet the biographer of a man of letters who aspired to be a public teacher—I mean the traces of a discrepancy between the teachings and the character. Commenting in his journal on the remark of a friend, that no one would dare to uncover the thoughts of a single hour, Emerson says:—'Is it so bad? I own, that to a witness worse than myself and less intelligent, I should not willingly put a window into my breast; but to a witness more intellectual and virtuous than I, or to one precisely as intelligent and well-intentioned, I have no objection to uncover my heart.' He was right, he could only have gained by it."

Mr. Cabot has had access to Emerson's private journals, letters, and unpublished MSS., and has drawn largely from all these sources. In addition to long personal acquaintance with Emerson, he has had the further great advantage of receiving from living persons their recollections extending back to Emerson's school-days. All these opportunities he has used well; on the one hand avoiding needless intrusion of his own views, and on the other presenting the statements and records in a compact narrative. They are not thrown together but properly welded; and his work is much more than a collection of facts about Emerson. He possesses the prime essential of a good biographer—sympathy. Without this quality a true understanding of any man is not possible. The unsympathetic biographer may be accurate as to facts, but he cannot comprehend the spirit or motive of his subject. With him the facts never assume their proper shape, for they are not plastic in his hands. He cannot explain what they signify. He is only a collector of material that a better man

will one day use. But Mr. Cabot gives the facts, and also gives them their place and relation; and, accordingly, in his pages we see the man Emerson as he was.

The chief incidents in Emerson's life were known before; and in them, and still more in his writings, his character was revealed. Mr. Cabot expresses the opinion that the records to which he has had access "do not often bring us closer to him than we are brought by his published writings"; but this is a mistake. He was revealed in his writings at a distance. The private records, as presented by Mr. Cabot, make him—shall I say?—more human, not by showing flaws in his character, but by discovering the growth and steady working of his life. We had a correct outline before; now we have a finished and satisfying portrait. To be chosen by Emerson for this task was a high privilege; and Mr. Cabot has justified to the full the wisdom of the choice.

Of course the book is not absolutely perfect. Mr. Cabot might very well have given us more of Emerson's opinions about his contemporaries. One subject of great interest to Emerson was the growth of distinctively American literature, but no one would suppose so from this book. Once upon a time he was greatly interested in Whitman. Is there nothing in the journals to show whether his interest increased or diminished? Appendix C, giving a list of Emerson's contributions to the *Dial*, is pretty accurate; but it would have been more accurate if Mr. Cabot had submitted it to Mr. Alexander Ireland for revision. These, however, are comparatively small matters.

In this history, and especially in the earlier portion of it, the fact is made abundantly clear that Emerson's habitual serenity belonged to his character and not to his good fortune. He was early inured to poverty; for, when he was eight years old, his father died, leaving a widow and a family of five boys and a girl unprovided for. The struggle was a hard one for mere daily bread. We read among other pathetic incidents that, when he won a prize of thirty dollars for declamation at school, the money, instead of buying a shawl for his mother as he hoped, had to go to pay the baker's bill. In the essay on "Domestic Life," Emerson describes the "eager, blushing boys" of a household and their occupations of work and play, and speaks of "the iron band of poverty, of necessity, of austerity," as "the hoop that holds them staunch." They "sigh for freedom, for fine clothes, and other luxuries," he says, but "Woe to them if their wishes were crowned! The angels that dwell with them and are weaving laurels of life for their youthful brows are Toil and Want and Truth and Mutual Faith." This passage, as Mr. Cabot points out, is clearly autobiographical.

Yet, whatever their service, it is to be feared that the toil and want of those days had their consequences in the early death of two of the brothers and in the delicacy of constitution and not infrequent sickness that pursued Emerson himself through life. Edward Emerson died in 1834, and Charles in 1836. Add to these losses Emerson's early discovery that the ministry for which he had been trained must be abandoned by him, the further losses by death of his young wife, of

his eldest child Waldo—a "bud of God" and "piece of love and sunshine" he had called him—and later of his mother, and, in the midst of all, his own ill-health, and it becomes evident that more than a common share of sorrow fell to him during those years. How deeply he felt his losses is indicated in his "Dirge" and "Threnody," as well as in his letters; but it seems to me that the strong spirit with which he bore them, more perhaps than anything else, shows his greatness as a man. He never grumbled, be his sorrows and sufferings ever so great. "There is one topic peremptorily forbidden to all well-bred, to all rational mortals—namely, their distempers," he wrote in his essay on "Behaviour"; and, on his own part, he never transgressed this excellent rule.

From his mother Emerson seems to have derived "a native serenity that nothing could deeply disturb," and from his father that brightness of humour that manifested itself in whatever he did and wrote. Emerson's father, in a letter written just before his death, spoke of "the threads of levity which have been interwoven with the entire thread of my life." More than once in his own early letters Emerson refers to his own "silliness," as he calls it. Writing in 1822 to that worthy Puritan, his aunt, Miss Mary Moody Emerson, of a journal he had kept of a pedestrian tour with his brother William, he apprehends "it hath too many jokes to please you"; an admission which calls forth a prompt rebuke: "So your journal is *jokey*. While the places which Virgil and Cicero trod are met with real or affected enthusiasm, the children of God tread on his footsteps with *ennui*."

Yet this levity, or silliness, or brightness of humour—call it what we will—doubtless helped to save him from the fate that overtook his gifted brother Edward. The brothers had many qualities in common, but this saving lightness of spirit seems to have been lacking in Edward. He was too terribly in earnest, and, as a result, at twenty-three years of age his mind gave way; and, though he soon recovered his reason, his pursuits had to be abandoned, and he died six years later. Emerson, on the contrary, was willing to take life as it came, not looking regretfully back, nor too eagerly or anxiously forward. When sickness overtook him he did what would best help his recovery, promptly relaxing any undue strain on his powers. On one occasion he wrote in his journal:

"It is a peculiarity (I find by observation on others) of humour in me, my strong propensity for strolling. I deliberately shut up my books in a cloudy July noon, put on my old clothes and old hat, and slink away to the whortleberry bushes, and slip with the greatest satisfaction into a little cow-path where I am sure I can defy observation. This point gained, I solace myself for hours with picking blueberries and other trash of the woods, far from fame behind the birch trees. I seldom enjoy hours as I do these."

When he resigned his Boston pulpit on a question of the administration of the "Lord's Supper," his action was described by some as "quakerish," and "there were loud whispers of mental derangement." But, in reality, Emerson was pre-eminently sane, and his ability to "stroll" helped to make him so. He never lost his head or let ideas run away

with him. He was charged with being a fanatic after his famous Divinity School Address, and frequently besides; while, on the other hand, zealots accused him of coldness and indifference. He was neither a fanatic nor indifferent. On the occasion of a gathering of old class-mates he notes in his journal: "I, too, resumed my old place, and found myself, as of old, an amused spectator rather than a fellow." An amused spectator, or, when occasion demanded, a serious and profoundly interested spectator he always was. Emerson lived in an age of new theories and experiments. Total abstinence, phrenology, communism, and innumerable other doctrines were being set forth, and, more even than usual, the demand was made for people to take sides. It was assumed that everyone had, or ought to have, an "ism." Emerson's sympathies were, of course, as Mr. Cabot points out, with the renovators, "the idealists, the reformers, the party of progress, or, at least, of aspiration and hope." But he rejected all "isms." He saw too deeply to be a partisan. The "Lord's Supper" question was, after all, only the exciting cause of his separation from the ministry. There was a predisposing cause deep down in his nature which, if it had not found this vent, would, sooner or later, have found some other. He was a critic. He could see flaws in the existing order of things as clearly as anyone, but he could not help seeing also "that the existing order, since it is here, has the right to be here and the right to all the force it can exert." Moreover, the proposed remedies failed to satisfy him:

"Abolition or abstinence from rum, or any other far-off, external virtue, should not divert attention from the all-containing virtue which we vainly dodge and postpone, but which must be met and obeyed at last, if we wish to be substance and not accidents."

Mr. Cabot gives an important extract from Emerson's journal of 1840 that bears on this point:

"I told — that I thought he must be a very young man, or his time hang very heavy on his hands, who can afford to think much and talk much about the foibles of his neighbour, or 'denounce' and play the 'son of thunder' as he called it. I am one who believe all times pretty much alike, and yet I sympathise so keenly with this. We want to be expressed; yet you take from us War, that great opportunity which allowed the accumulations of electricity to stream off from both poles—the positive and the negative. Well, now you take from us our cup of alcohol, as before you took our cup of wrath. We had become canting moths of peace, our helmet was a skilet, and now we must become temperance milksops. You take away, but what do you give? Mr. Jeffs has been preached into tipping up his barrel of rum into the brook; but day after to-morrow, when he wakes up cold and poor, will he feel that he has somewhat for something? If I could lift him up by happy violence into a religious beatitude, or imparadise him in ideas, then should I have greatly more than indemnified him for what I have taken. I should not take away; he would put away, or, rather, ascend out of this litter and sty in which he had rotted to go up clothed and in his right mind into the assembly and conversation of men."

Even on the negro question Emerson maintained his accustomed critical attitude. In an address delivered in 1837 he claimed for

every man the right of free speech on the question, but added:

"When we have distinctly settled for ourselves the right and wrong of this question, and have covenanted with ourselves to keep the channels of opinion open, each man for himself, I think we have done all that is incumbent on most of us to do. Soberly as we may feel the wrongs of the poor slave in Carolina and in Cuba, we have each of us our hands full of much nearer duties. . . . Let him not exaggerate by his pity and his blame the outrage of the Georgian and Virginian, forgetful of the vices of his own town or neighbourhood, of himself. Let our own evils check the bitterness of our condemnation of our brother; and, whilst we insist on calling things by their right names, let us not reproach the planter, but own that his misfortune is at least as great as his sin."

The professional philanthropists were, to Emerson, "an altogether odious set of people." He disliked the "impatience of discipline" that they exhibited, "the haste to rule before we have served, to prescribe laws for nations and humanity before we have said our own prayers or yet heard the benediction which love and peace sing in our own bosom." "This denouncing philanthropist," he says in his "Lecture on the Times," "is himself a slaveholder in every word and look." The time came when Emerson saw that some effort must be made to give the negroes liberty—physical emancipation at least; but, when we look at the condition of the negroes in America, and of the men who were once their masters, nearly a quarter of a century after that emancipation, we can see how true the insight was that in 1844 dictated these lines:

"The degradation of that black race, though now lost in the starless spaces of the past, did not come without sin. The condition is inevitable to the men they are, and nobody can redeem them but themselves. The exertions of all the Abolitionists are nugatory except for themselves. As far as they can emancipate the North from slavery, well.

"The secret, the esoteric of abolition—a secret too from the Abolitionists—is that the negro and the negro-holders are really of one party, and that when the apostle of freedom has gained his first point, of repealing the negro laws, he will find the free-negro is the type of that very animal law; standing as he does in nature below the series of thought, and in the plane of vegetable and animal existence, whose law is to prey on one another, and the strongest has it."

Yet Emerson did not mean that the negro, or even the planter, was irretrievably imbecile. He delivered his address on West India Emancipation, wherein the wrongs of the negroes and their possibilities as freemen were forcibly stated, about the same time. But he spoke from the standpoint of justice; and he did not then, nor at any later period, fancy that legal emancipation and moral freedom were one and the same thing.

The relations of Carlyle and Emerson are set forth in some detail. "God's greatest gift is a teacher; and when will he send me one full of truth and boundless benevolence and heroic sentiments?" said Emerson; and there was a time, probably, when he hoped to find that teacher in Carlyle. After his first visit he was disillusioned; but the two men continued to love one another to the last, despite a coolness that certainly arose at the time of Emerson's second visit. Mr. Cabot might well

have been more explicit on a point which has been considerably canvassed; but he has preferred to follow the example of the judicious Mr. Norton in the Carlyle-Emerson correspondence, and pass it over.

One of the pleasantest parts of this book is the picture given in its pages of Emerson's domestic life. Emerson as a teacher and as a critic is great and inspiring, but greater and more inspiring still is his example. "In him," it may be said as he said of Michael Angelo, "all things recorded agree together. He lived one life, pursued one career. . . . Especially we venerate his moral fame." In his life his own best teachings were exemplified.

WALTER LEWIN.

"Chronicles and Memorials of Great Britain and Ireland during the Middle Ages."—*The Metrical Chronicle of Robert of Gloucester*. Edited by W. Aldis Wright. In 2 vols. (Longmans.)

A new edition of the chronicle of Robert of Gloucester has long been urgently wanted. Although the work has no great literary merit, and its value as an independent historical authority is almost confined to a few incidents of the Barons' War, it is from a purely philological point of view of the highest importance. It is in fact one of the books with which every student of the early forms of English ought to be familiar; but until now it could be read as a whole only in Hearne's edition of 1742, or the reprint of 1810, both of which, if not "scarce" in the bookseller's sense of the word, are at any rate not generally accessible. It is needless to say that Hearne's edition, though an admirable performance for its own day, does not satisfy the requirements of the present time, even apart from the fact that it gives for the most part the readings only of one, and that not the oldest, of the many extant MSS. In the present edition the text is founded on the earliest MS., and the readings of seven other copies are given in the notes. That the work is published in the "Rolls Series" is perhaps on one account to be regretted, as the plan of the series does not admit of any notes except those illustrative of the various readings; but the disadvantage is compensated for by the very moderate price at which the volumes are issued. Mr. Aldis Wright's Introduction does not enter into philological questions, but it contains a thorough examination of the sources from which the chronicler derived his information; and there is an excellent glossary, with references to the passages in which the words occur, as well as a complete index of proper names.

The editor's remarks on the authorship of the chronicle, and the new materials which he has contributed to the discussion of the question, are likely to lead to a good deal of controversy. The work exists in two different recensions. The older of these is represented by three MSS., one of which forms the basis of Hearne's edition. The later text coincides in the main with the former down to the death of Henry I., but from that point onwards is entirely different. In the earlier text the history from the accession of Stephen to the year 1270 (where the chronicle ends abruptly) occupies 2,900 lines; in the later

text the same period, together with a few sentences bringing down the story to the accession of Edward I., occupies only 590 lines. In explanation of these facts three hypotheses are *prima facie* possible. We must either suppose (1) that, as in the case of *Piers Plowman*, both texts proceeded from the original author; (2) that the longer text represents the original work, and that an unfinished or mutilated copy of it was completed by some later hand; or (3) that the earlier part of the work and the two continuations were written by three different authors. The first of these suppositions Mr. Aldis Wright decisively rejects; and his opinion appears to be well founded. If the divergence of the two texts had begun with the reign of Henry III., it might have been a plausible conjecture that the author in preparing a second edition of his chronicle had found it expedient to suppress the strong expressions of sympathy with the rebel party which appear in the narrative of the Barons' War as given by the earlier text. No such motive, however, can be assigned for the re-writing of the history from the reign of Stephen; and, besides, an author who remodels a work of his own is sure to leave some vestiges of the original form of expression. We may, therefore, take it as proved that the original author did not write the shorter of the two continuations. Whether he wrote the longer continuation is a question which Mr. Wright leaves undetermined; but he is inclined, "on *a priori* grounds," to favour the hypothesis of duality of authorship. I should not like to dogmatise in opposition to the opinion of so high an authority, but my impression is that the internal evidence points the other way. The original author and the earlier continuator have, at any rate, a great deal in common. They both use the same south-western dialect; their style and versification are indistinguishably the same; they both display the same fervent patriotism and detestation of foreigners; and they both reproduce many passages from the metrical lives of saints, commonly ascribed, on the ground of identity of style and metre, to Robert of Gloucester himself. Now none of these characteristics, except that of dialect, can be found in the later continuation. The metre is, indeed, formally the same; but the rhythmical complexion is sensibly different, and the style is decidedly less fluent and vigorous. With regard to the authorship of the metrical lives, Mr. Wright sees no reason for ascribing them to any of the three writers whom he believes to have been concerned in the chronicle. The whole question needs to be carefully re-examined in the light of the new facts contained in the present edition; but at present it appears to me that the preponderance of evidence is in favour of a common authorship of the metrical lives and of the whole of the older text of the chronicle.

The current designation of the chronicler as "Robert of Gloucester" is derived from the earlier continuation, which mentions the author's Christian name, and contains evidence of his intimate acquaintance with Gloucester and its neighbourhood. If it should hereafter be established that the older text of the chronicle is the work of two different authors the name of Robert of Gloucester will still belong to the writer of the portion which

ranks as an original historical authority. It will be awkward, however, to have to refer to "a nameless writer" when quoting the following famous passage:

"bus com lo engelond · in to normandies houd ·
& þe normans ne couþe speke þo · bote hor owe
speche ·
& speke frence as hit dude atom · & hure
children dude also teche ·
So þat heimen of þis lond · þat of hor blod come ·
Holdeþ alle þulke speche · þat hil of hom nome ·
Vor bote a man conne frenss · me telþ of him
lute ·
Ac lowe men holdeþ to englis · & to hor owe
speche zute ·
Ic wene þer ne beþ in al þe world · contreyes
none ·
þat ne holdeþ to hor owe speche · bote engelond
one ·
Ac wel me wot nor to conne · boba wel it is ·
Vor þe more þat a mon can · þe more wurþe
he is."

I am unable to see any sufficient ground for the editor's somewhat startling suggestion that the earlier portion of the chronicle was first written in the reign of Henry I. Mr. Wright is, of course, quite aware that the language of the existing text is that of the end of the thirteenth century, and he apparently considers that the original form of the work was prose. Whether it was probably in Latin or in English he does not say; the common theory of a French original he elsewhere explicitly rejects. His principal argument appears to be drawn from the following passage, in which the writer is speaking of the abbeys founded by King Edgar and St. Ethelwold:

"Vor ey3te & fourty abbeys · hii rerde in this
londe echon;
Ar vrs king þat we abbeþ nou · adde yrerd so
vale ·
To monye him wolde þenche · viftene bi tale."

On this passage the editor remarks:

"The king here referred to, 'our king that we have now,' is apparently King Henry I., who, after Edgar, was the greatest founder of monasteries. But, as it is impossible that the Chronicle, in its present form, can have been written at so early a period, it is more than probable that the reference in this passage was taken from the original document which the versifier had before him."

It is to be regretted that Mr. Wright has not given a paraphrase of the last two lines, the meaning of which is by no means transparent. The only sense I can put upon them is something like this: "Before our king that we have now had built so many as even fifteen abbeys he would have thought he had done too much." If this be an admissible construction of these obscure words, they would appear to be a sneer at Edward I., whose want of liberality in Church matters the chronicler alludes to in another passage, which is quoted on the next page in the introduction. After referring to Edward the Confessor's gift of twenty manors to the monks of Winchester, he says: "Fore God, the next King Edward that came after him did not give them quite so much in all his kingdom." According to my interpretation the parallel between the two passages is curiously exact: in each case Edward I. is compared, to his disadvantage in the matter of generosity, with an Anglo-Saxon king.

Mr. Wright justly rejects the notion that the chronicle is a translation from a French original. The only ground that can be

alleged for this supposition, apart from the analogy of Robert Manning's work, is the occurrence of such forms as *the March* (Mercia), *Picards* (Picts), *Daneis* (Danes), *Londreus* (Londoners); but it is not probable that a translator would have copied such forms from his original, unless they were already in English use. Even the statement that the poems of Wace and "La Estoire Saint Aedward" were among the sources used by the writer is considered by the editor to rest on no sufficient evidence.

With regard to the literary qualities of the work, Mr. Wright's verdict seems a little too severe.

"As literature," he says, "it is as worthless as twelve thousand lines of verse without one spark of poetry can be. Here and there we find a trace of the quiet humour in which gentle dulness delights, but of this the instances are rare and widely scattered."

Certainly it would be in vain to look for poetry in Robert of Gloucester, but he is by no means so dreary reading as this criticism would suggest. Mr. Wright's judgment is perhaps a little coloured by the weariness of a laborious and not wholly congenial task.

The long list of errata is explained by Mr. Wright to be owing to the fact that in the first instance he took the readings of the Harleian MS. from Hearne's edition, which he afterwards found was not to be trusted in minute points of orthography. The volumes appear to be printed with remarkable correctness, the only mistakes I have noted being "morten" for *worten* on p. x. (Preface), and "Bebou" for *Boreu* on p. 892.

HENRY BRADLEY.

A History of Vagrants and Vagrancy, and Beggars and Begging. By C. J. Ribton-Turner. (Chapman & Hall.)

WHEN an author has filled over seven hundred ample pages with curious and interesting matter upon a subject that has many claims upon the attention both of the student and of the statesman, it may seem hypercritical to raise objections. It is, however, necessary to point out that Mr. Ribton-Turner's topic is much more circumscribed than the title he has chosen might imply; for while beggary and vagrancy are almost as old as the hills, fully one half of this book is occupied with England, the remainder being devoted to Scotland, Ireland, Wales, the Isle of Man and the Channel Islands, the secret jargon of the vagrant and mendicant, the begging friars, the gypsies in England, Sweden, Denmark, Belgium, and Holland, France, the German empire, Austria, Italy, Russia, Portugal, and Turkey, and ending with a long series of extracts from various writers illustrating the habits and impostures of vagrants and beggars from the fourteenth century to the present time. Mr. Ribton-Turner's subject is European vagrancy, and the whole world of Oriental mendicancy is excluded from his view. Except for the picturesque contrasts which the wider scope would have supplied this may not be a matter of regret. Vagrancy and mendicancy have a different aspect as presented to the Eastern and the Western mind. An European beggar belongs either to the ranks of the lazy or the unfortunate; but an Oriental mendicant may have adopted his

career from sincere, even if mistaken, religious feeling.

Within its more restricted sphere Mr. Ribton-Turner's book is not so much a history as a collection of materials for the historian. He has sought far and wide; and while it cannot be denied that some of his speculations are more than doubtful, it would be ungracious not to frankly recognise the value of the mass of detailed information here brought together from all sorts of sources. Wherever the reader may dip into the book he will find something noteworthy.

The vagrants of the present day cause plenty of trouble to the authorities. But in the reign of Edward VI. the vagrants must have driven the powers desperate, since a law was passed by which a vagabond might be branded and assigned as a slave for a term of two years. Doubtless the social changes consequent upon the suppression of the monasteries had increased the difficulty of dealing with the social evil that has proved to be unhappily permanent in type.

"Worke is undone at home," is the complaint of Sir John Cheke, "and loiterers linger in strates, lurk in alehouses, range in highwaies, valiaunte beggars play in tounes, and yet complaine of needs, whose staffe, if it be once hoat in their hande, or sluggishness bred in their bosome, they wil never be allured to labour againe, contenting themselves better with idle beggary than with honest and profitable labour. And what more noisem beastes be in a comune wealth?"

Mr. Ribton-Turner chronicles the long struggle between legislation and vagrancy, and has to confess that the beggar obstinately refuses to be improved off the face of the earth. The credulous public are still deceived by the transparent frauds which the beggar of to-day has inherited from predecessors of centuries gone by. Nothing is more remarkable than the permanent type of the impositions by which vagrants gain a dishonest living, and make an income far exceeding that of many of the deserving and industrious poor. The tricks by which the good-natured almsgivers of the Tudor period were deceived serve equally well to bamboozle the philanthropists of the Victorian age. The money given to vagrants and beggars in England and Wales is reckoned to be at least £3,000,000, and if the cadgers were workers they would add at least that sum to the common wealth of the country. Moreover, in estimating the cost of vagrancy it would be necessary to take into account what these gentry cost in workhouses and prisons, and the losses that arise from their depredations. This army of the worthless who prey upon society are encouraged, if not recruited, by the good-natured souls who do not realise that almsgiving is no charity unless it is based upon knowledge and directed to a definite end. In every great town in England at this moment there are men and women living lives of drunken debauchery, and bringing up children to their infamous trades, who derive their means for riotous extravagance from the ignorant kindness of decent hard-working people. George Atkins Brine has told how he "stood pad" at Shudehill Market in Manchester on the Saturday night when the artisans were making their weekly purchases. Brine hired three children decorated with placards stating

that they were "Motherless," and stood with them in the street making only a mute appeal to the passers-by. In five hours he received 30s., as much as some of his benefactors would earn in a week. Mr. Ribton-Turner says that in the course of his long experience, extending to several thousand cases, he has never met with a beggar who was driven to beg by sheer want or misfortune. When Brine, already named, was asked what induced him to adopt a life of vagrancy, he replied

"I left Sherborne to seek employment at my trade (that of a butcher), and not succeeding for a time, I soon discovered that more money could be got without work than with it."

The ranks of the professional beggars are continually recruited from the "wastrels" of all classes. Drunkenness may lead a man of ability from the common room of a college to the kitchen of a licensed lodging-house.

There are, however, hereditary vagrants, if that is not too harsh a term for those protests against Western civilisation—the gypsies. Not all are gypsies who "go a-gypsying"; and the true Romanis look with something of scorn upon both the *posh-and-posh* and upon the mere *gaiujo* tramps—the Hinditimgre. The Romanis, in their Westward march from Hindostan, have now reached America, but in England they are beginning to feel the pressure of the surrounding civilisation. They are no longer all tent-dwellers. Some have taken to vans, and some—for a portion of the year at least—are now house-dwellers. By and by the School Boards will capture the children, and their talents will be turned to something better than cheating by "fast and loose" or fortune-telling.

Wherever Mr. Ribton-Turner's book is opened the reader will light upon some suggestive fact. Its miscellaneous character will be a recommendation to many, while those who from taste or official position have to deal with social problems will find it helpful. There are some notable omissions. For instance, no mention is made of Count Rumford's Bavarian experiments. The book is encouraging; for grave as are the sores of the body politic here unveiled, yet they are milder forms of the diseases that have perplexed English rulers for centuries. Generations of repressive legislation have had but little fruit. The wiser policy is to remove the causes, since "prevention is better than cure"; but it will be a good while before the manufacture of vagrants and beggars comes to an end, if that consummation is ever reached.

WILLIAM E. A. AXON.

Ballads of Books. Chosen by Brander Matthews. (New York: Coombes.)

THE title of this book is to some extent misleading, inasmuch as the greater portion of the selection does not consist of "ballads," but of epigrams, sonnets, rondeaus, triolets, and various other forms of verse; and it includes, also, George Crabbe's somewhat lengthy poem entitled "The Library," Dr. John Ferriar's "Bibliomania," and Lord Lytton's "The Souls of Books." It is, however, a very attractive and very interesting little volume, and will doubtless obtain, as it deserves, a prominent and permanent place among modern anthologies. The editor has,

with but few exceptions, made his selection with judgment and good taste; and he aptly describes the scope and limitations of his volume in the following paragraph, which I quote from his "prefatory note":

"The present collection of varieties in verse has little or naught to do with the great world and its errors; it has to do chiefly, not to say wholly, with the world of the Bookmen—the little world of the Book-lover, the Bibliophile, the Bibliomaniac—a mad world, my masters, in which there are to be found not a few poets who cherish old wine and old wood, old friends and old books, and who believe that old books are the best of old friends."

And no doubt they are the best of old friends, for, as Thomas Fuller quaintly observes, "they always receive you with kindness"; and they have, moreover, this great and excellent quality, that you can always put them aside when you grow tired of them. It is, I think, Prof. Dowden who tells us, in one of his sonnets, how he spent the whole of an afternoon "in the green heart of a wood," with a copy of Keats's poems by his side, but—"not a line read of rich 'Endymion.'" Probably this is an experience with which we are all more or less familiar; and it is in consonance with the witty observation attributed to the statesman, Fox, that there is nothing more delightful than to lie under a tree, in the summer, with a book, except to lie under a tree, in the summer, *without a book.*

Mr. Matthews's volume, however, is one which few persons, we should imagine, will keep long by their side without reading, and probably enjoying its contents. There is to be found in its pages that happy blending of the old and modern poets which lends a special charm to so many of our recent anthologies, and enables the reader to compare the respective merits of past and living authors. Thus we here find, on opposite pages, lines by Isaac D'Israeli and Mr. Austin Dobson; and again we find Charles Lamb and Mr. Andrew Lang gazing at each other across the board with a merry twinkle in their eyes; and Mr. Walter Herries Pollock seated in juxtaposition to Barry Cornwall. Of the compositions by the older poets represented in the selection that by Robert Southey, beginning "My days among the dead are past," is *facile princeps*; but among those by living authors the lines by Mr. Edmund Gosse, entitled "The Sultan of my Books," appear to be especially deserving of praise. The following are the two first and two concluding stanzas of the poem, which will enable the reader to judge for himself of the lightness of touch, the graceful facility, and rhythmic excellence of these verses:

"Come hither, my Wither,
My Suckling, my Dryden!
My Hudibras, hither!
My Heinsius from Leyden!
Dear Play-books in quarto,
Fat tomes in brown leather,
Stray never too far to
Come back here together!

"Book: writ on occult and
Heretical letters,
I, I am the Sultan
Of you and your betters.
I need you all round me;
When wits have grown muddy,
My best hours have found me
With you in my study.

"No book shall tap vainly
At latch or at lattice
(If costumed urbanely,
And worth our care, that is);
My poets from slumber
Shall rise in morocco,
To shield the new comer
From storm or sirocco.

"I might prate thus for pages,
The theme is so pleasant;
But the gloom of the ages
Lies on me at present;
All business and fear to
The cold world I banish.
Hush! like the Ameer, to
My harem I vanish!"

It is true that "slumber" and "comer" is an imperfect rhyme; but we must not be too exacting in these days, when Mr. Browning has familiarised us with such curious rhymes as "equals" and "weak walls," or when we remember that our finest lyric, Shelley's "To the Skylark," abounds with rhymes which are equally incorrect. Nevertheless, it is a defect which Mr. Gosse would do well to remove before reprinting the verses.

Among other noticeable poems included in the selection may be mentioned Mr. E. D. Anderson's humorous lines, entitled "The Baby in the Library," Mr. Monkhouse's "De Libris," Mr. Scollard's "In the Library," and Mr. Dobson's version of Horace's epistle, beginning:

"Vertumnus Janumque, liber, spectare videris."

These are admirable; but the same cannot be said of the rondeaus by which Mr. Peck and Mr. Beverly Chew are here represented. I am disposed to think that this is not the fault of the authors, but of the particular form of verse in which they have chosen to write. The manifest trickiness and artificiality of the rondeau will always prevent any poetry of permanent value being written in that form. Mr. Matthews would probably have been well advised had he omitted one or both of these contributions, and inserted in its place Cowper's translation of Vincent Bourne's Latin poem on "A Manual: more Ancient than the Art of Printing, and not to be found in any Catalogue":

"Exiguus liber est, muliebri creber in usu,
Per se qui dici Bibliotheca potest."

But, so long as the compilers of anthologies are not gifted with omniscience, we must not complain because they may perchance have overlooked this or that particular poem, even though the poem in question may be an especial favourite with ourselves.

There is one striking feature of many of the compositions here printed which should be referred to, and that is their being markedly characteristic of the respective authors by whom they are written. For instance, when we read the following lines:

"What famous folk of old are here!
A royal duke comes down to us,
And greatly wants his Elzevir,
His Pagan tutor, Lucius.
And Beckford claims an amorous
Old heathen in morocco blue;
And who demands Kobanus
But stately Jacques Auguste de Thou!

"They come, the wise, the great, the true,
They jostle on the narrow stair,
The frolic Countess de Verrue,
Lamoignon, ay, and Longepierre,
The new and elder dead are there—
The lords of speech, and song, and pen,
Gambetta, Schlegel, and the rare
Drummond of haunted Hawthornden"—

we know by the lilt, and by the proper names set to such excellent music, that Mr. Lang alone can be the author of them. So, too, when we read the lines, "To a Missal of the Thirteenth Century," we at once recognise Mr. Dobson's characteristic manner and delicate workmanship; while no one who peruses such verses as these—

* * * * *
"Before her, in the street below,
All powder, ruffs, and laces,
There strutted idle London beaux
To ogle pretty faces;

Past and forgotten, beaux and fair;
Wigs, powder, all out-dated;
A queer antique, the sedan chair;
Pope, stiff and antiquated"

—will hesitate for a moment to affirm that they also are by Mr. Dobson; yet, strange to say, they are *not*—they are by Mr. Walter Learned. The sonnets by Longfellow, Leigh Hunt, and Tennyson-Turner, are also typical of their respective authors; but these are hardly equal to the celebrated sonnet by William Roscoe, "To my Books on parting with them," which is here printed opposite another excellent sonnet by Lord Rosslyn.

Before parting with this dainty collection we would call the reader's attention to a striking epigram by the poet Burns, which is to be found at p. 31. Burns, we are told, saw a splendidly bound, but sadly neglected, copy of Shakspeare in the library of a nobleman in Edinburgh; and he wrote these lines on the ample margin of one of its pages, where they were found long after the poet's death:

THE BOOKWORMS.

"Through and through the inspired leaves,
Ye maggots, make your windings;
But oh, respect his lordship's taste
And spare the golden bindings!"

There are many good things in Mr. Matthews's volume, but it would be difficult to find anything wittier or better than this.

SAMUEL WADDINGTON.

NEW NOVELS.

Poor Nellie. By the Author of "My Trivial Life and Misfortune." In 3 vols. (Blackwood.)

Ismy's Children. By the Author of "Hogan, M.P." In 3 vols. (Macmillan.)

Gretchen. By "Rita." In 3 vols. (Ward & Downey.)

Can it be True? By F. H. Cliffe. In 2 vols. (Remington.)

St. Bernard's. By Aesculapius Scalpel. (Sonnenschein.)

A Professor of Alchemy. By Percy Ross. (Redway.)

Mr. Barnes of New York. By A. C. Gunter. (Vizetelly.)

No one who knows a fresh and unusual talent when he sees it could fail to experience some curiosity as to a second book by the author of "My Trivial Life and Misfortune." To say that *Poor Nellie* shows a great advance on its forerunner would not be true; to say that it shows any falling-off in talent would be still less true. The talent is, indeed, still, as was said, if we do not mistake, of Richter, *ohne Organ*, but there is no diminution of it. The story covers a considerable time—a

dangerous thing in itself—and is crowded with characters, and still more crowded with the author's reflections. She hunts rather too many hares at once. There is, to begin with, a satire on three generations of match-making and managing ladies, of whom No. 1 is a mere ordinary Belgravian mother; No. 2, a woman with some saving qualities in her, but still a "manager" first of all; No. 3, a kind of human fiend—a "white angel" in appearance, who is something more than an ordinary black angel in deed, who begins with cold heartedness and ends in positive murder. "Poor Nellie," the heroine, is the daughter of this white—this black-and-white—angel: neither manager nor match-maker, but a drunkard in fact, a light o' love, not indeed in fact, but in intention, and in the end a murderess and a suicide. This is a pretty scheme to fill up, and would have taken no slight powers to work it off in any way successfully. But the author has further burdened herself with all sorts of minor characters and all sorts of subsidiary interests. The boy and girl loves—cross loves and unlucky ones—of "Poor Nellie" and her sister Adela, George Crofton and his brother Charles, all of whom are played upon maleficiently by the black-and-white angel; the humours of the black-and-white angel's husband, an easy-going gentleman of large fortune, who is a temperance fanatic, and is punished therefor in the person of poor Nellie; the Croftons' uncle and father, "the admiral," the white angel's father, "the bishop," and divers other things and persons, major and minor, have to be attended to. It is a kind of Mahabharata of a novel—a gigantesque and superhuman plan. Also the author has awkward mannerisms and tricks of style and phrase. She dwells constantly on the "scattered bits" of the white angel's husband, that is to say what less original persons would probably call his scattered wits. She talks of a "dully" which does not rhyme to bully it would seem, and is guessed with much labour to mean a dull person; of "crocking," which does not mean, as it usually does, putting little bits of broken pots at the bottom of unbroken pots to drain them, but "cooking" or spoiling; and so forth. All these things, with her inveterate pessimism, her plethora of matter, and her slight tendency to preach, give the book an undigested, not to say indigestible, character, which prevents any critic from speaking of it with unqualified praise. But, at the same time, it is full of strokes of human observation, of acute phrasing, of "criticism of life" generally, which would make the fortune of half a dozen novels, if they were used with the economical discretion of an "old hand." We do not wish the author of *Poor Nellie* exactly that discretion; but we do wish her the happy mean between it and her present indiscriminate and somewhat inartistic prodigality. If she can hit that mean, the wicked people who complain that we have not got a really great novelist at present will have to cease their presumptuous fanning.

Another writer with whom, though in a less markedly original way, the reader is hardly likely to go wrong is the author of "Hogan, M.P." The merit here is not so much acute judgment of humanity in general,

as a distinct observation and a distinct faculty of reporting observation of certain local and out-of-the-way types. "Ismy's Children" are the two daughters and the son of a certain Ismay Mauleverer and her husband Godfrey, whose selfish and sleeveless neglect not only exposes his children to the stigma of bastardy, but loses them a great estate to which they are entitled. They settle, however, in or on the land that ought to be theirs under the charge of their mother's aunt, Juliet D'Arcy—a study of dying Irish character, perhaps the least commonplace and the best worth preserving that the author has yet done. That a handsome Englishman should fall in love with the handsome eldest daughter Marion is, of course, necessary—that is what Englishmen and Irish girls have existed for from the days of Strongbow (let it be quite understood that we are well aware that there are persons who don't call Strongbow an Englishman, as it seems to be necessary in this nineteenth century to say everything under penalty of being supposed not to know it). Originality is provided, however, in the immediate cause of their meeting, which is an infuriated ram. Bulls have had their day: *ventum est ad arietes*. The wild slip of a younger girl Gertrude is, also, comparatively commonplace, though only comparatively. The author has spent most strength on the character of Godfrey Mauleverer, the heir "kept out of his rights," who joins the Fenians and comes to a sad, though hardly a bad, end. The indefinable touches which make Godfrey so entirely different from what a high-spirited English boy would be are given with a great deal of skill, and the story draws to its close with much pathos. As the time is twenty years back, the author can show without improbability a somewhat happier state of things than prevails in Ireland now; but there are shrewd, though not obtrusive, hints on the interminable Irish question.

The most experienced reviewer is a little put to it to find new remarks for the novels of writers like "Rita." They are never mere duplicates of each other, but the family likeness is so strong that "Rita No. 1," "Rita No. 2," and so on, would seem, on the whole, to be their best designations. *Gretchen* is like her sisters—general colour decidedly hectic, chapters generally headed by something between inverted commas, an occasional (thank heaven! only an occasional) drop into the present tense, a kind of lump-in-the-throat sentiment pervading the whole, a certain cleverness, and little good result of that cleverness. It is the kind of thing that has its public, and of its public it will, no doubt, be justified.

We do not know whether *Can it be True?* is likely to have a public or not. It is a much simpler book than *Gretchen*, and begins with a private pupil, who is not in the least like Frank Fairleigh. That excellent youth never thought of ordering Dr. Mildmay to take his things out of his trunks on his arrival at Helmstone. But then Mr. Philip Beverley was older and wickeder than Frank, and the Reverend Mr. Berner was very much less of a scholar and gentleman than Dr. Mildmay. The book goes in a curiously amateur fashion through a crowd of improbable characters, and

not very probable incidents, just lighted up here and there by some touches which are not quite conventional. Unluckily for Mr. Cliffe, he is given to bursts of fine writing (there is one in particular which is sure to strike everyone, being on the first and second pages of the second volume), and then he is more than a little absurd. But smaller absurdities occur throughout. One lady reproaches another "for being such a powerful factor in bringing about her marriage." Oh, English language, what crimes are perpetrated in thy name!

It must be becoming rather unpleasant to be a doctor if a man is also a novel reader. *St. Bernard's* is the second story which we have read in the course of a few months suggesting that most clever physiologists poison their wives, and that hospital practice merely means experimenting on patients by communicating to them worse diseases than they have, or operating on them in a perfectly unnecessary fashion. However, this does not much matter to a critic who is too old to be a doctor, and whom reasons sufficient, though not under his own control, prevent from ever being a doctor's wife. It is more to the point to suggest that this style of fiction is not very amusing. *St. Bernard's* has comic passages, manifests a certain amount of not always well-employed talent and good intention, and is a kind of description of medical student life generally. Whether its portraits are meant for personal satire those who know hospitals must decide.

Mr. Percy Ross has made a not unaffecting story out of the misfortunes of the alchemist Denis Zachaire, which he seems to have learnt from M. Figuier. The book would have been better with more incident and conversation and less miscellaneous talk on the author's part. The late Dr. Strauss told in his *Bohemian Reminiscences* an excellent story of a certain Scotch guest at a literary dinner who cried out, "Man o' the hoose! Gi' us less o' yer clack and mair o' yer Jairman wine!" This sounds rude; but it is a capital caution to writers of renaissance or mediæval stories.

There are some bad things about *Mr. Barnes of New York*. A great deal of it is in the present tense. The English heroine (there are two, a Corsican and an English) is meant to be an angel, but is rather too much of the downright Dunstable description of angels, and is sometimes almost vulgar; while "Mr. Barnes, of New York," the Yankee Crichton, owes copyright to Mr. Marion Crawford and others. However, there is a duel in the beginning which is interesting though too long, and there is a certain vivacity here and there which keeps the reader going.

GEORGE SAINTSBURY.

SOME BOOKS ON INDIA.

Kristo Das Pal: a Study. By Nagendra Nath Ghose. (Calcutta: Lahiri.) This is a book which, though for some reasons not very well suited for circulation in England, we would commend to the attention of those who take their ideas of the "Bengalee baboo" from the calumnies of the English press. The author, who himself belongs to that much-abused class, bears a family name which ranks with those of the Tagores and the Mitras

among the cultivated Hindus of Calcutta. He is a barrister of the Middle Temple, and must therefore have spent some three years in this country. Considering the absurd ignorance that prevails about "baboo English," it may perhaps be as well to say that he writes with a perfect command of our language, and with a studied simplicity of diction. Here is an example taken at random (p. 107):

"Kristo Das realised, as has been pointed out, the earnestness of life; he had not grown weary of it; but it is doubtful if he had fully appreciated the end of life to be worked for its own sake. He had closed his Byron, not opened his Goethe."

But we must pass on from the writer to his subject. The story of Kristo Das Pal's life is of extreme interest for all who concern themselves with that pressing problem—the future government of India. Sprung from a comparatively low caste, with no special advantages of education, and unaided by hereditary wealth or influential connexions, he raised himself to the highest place open to a non-official native of India. When he died, at the early age of forty-six, he was recognised, alike by his fellow countrymen and by the English, as the political representative of modern Bengal. And this position he attained by no arts such as are sometimes reckoned characteristically oriental. As the editor of the most influential native newspaper in Calcutta printed in English—the *Hindu Patriot*—he lived neither by vilifying nor by flattering the government, but by expressing in plain and well-reasoned language the opinions of his principal supporters, the landowners of Bengal. Similarly, as a public speaker, he made no pretension to the flowers of rhetoric, but impressed successive governors and members of council with the sobriety of his views and the cogency of his arguments. Nor was the slightest imputation of corruption, or even of self-seeking, ever breathed against his name. In short, Kristo Das might seem to us to be cast in a peculiarly English mould—hard working, clear headed, moderate, and pre-eminently practical—precisely such a man as our own municipal institutions are credited with producing. His biographer laments that he has left no successor. But the influence of his example must needs be very great in his own country; and this "study" of his career ought to be of no little service in dispelling the gross delusions that are entertained in England concerning the capacity of "Bengalee baboos" for public life.

A Short History of the Bombay Presidency. By Edmund C. Cox. (Thacker.) In a small volume of little more than 400 pages, Mr. Cox has sketched the history of the presidency in which he has for some years been serving. The result justifies the motives which prompted the task. The history of India (the word being taken as a name for the vast peninsula enclosed between the parallels of the Himalayas and Cape Comorin) cannot be given in a single volume without great discomfort to the reader. Of the multitude of such histories scarcely one is free from the faults of tediousness and dryness. The best of them, perhaps, is that of Colonel Meadows-Taylor; and his is a book to be plodded through rather than read with any special interest. Not only is the mass of matter too vast to be dealt with satisfactorily in a single book, but the interest of the subject is well nigh-lost when we find ourselves reading what is really the history of many distinct countries. Even if we confine ourselves to the rise and growth of British power in India, we must be content to make some one part more prominent than the rest. Mr. Cox has, therefore, done wisely to take in hand the history of the province which he knows best; and the introduction of his book

into government schools will be a boon to the students who still have to use manuals written in insufferably stilted Johnsonese English. Mr. Cox speaks of Bombay as a province whose annals abound with incident. The remark would be true, even if the historian had before him simply the great drama of the rise and fortunes of the Maratha power. The student who has leisure for the task may find mines of information in the Bombay Government Records and Gazetteers; but the general reader will look in vain for a concise work on the subject. Mr. Cox's narrative is, of necessity, brief; but it nowhere has the look of toilsome abridgment or compression, while throughout it is the work of one who has the gift of knowing how to use his own tongue, and whose judgment may be taken as sound and trustworthy. This soundness of judgment is conspicuous in all the remarks which bear on the Russian scare, and on the circumstances which led to the dealings with the Amirs of Sind in reference to that scare. These chiefs would, perhaps, have been left to themselves, if the English Government had been free from fears of Russian aggression. After the successful expedition to Karrak "it was urged," Mr. Cox tells us,

"upon Lord Auckland and his Council that Russia could only act through Persia; and that, Persia being now dealt with, nothing further need be done, and Doet Muhammed should be left in peace at Kábul. Subsequent events have shown what Russia can do without aid from Persia."

The dealings with the Amirs of Sind led to some bloody battles and to not a little diplomacy which has called for very strong language from some critics, and which provoked a long and painful controversy between Major Outram and Sir C. Napier. Whatever the injustice done may have been, Mr. Cox rightly insists that it was not a wrong done to a nation.

"It was against Amirs who had usurped the country within the memory of living men, and who were the most atrocious tyrants that can possibly be imagined. The British camps offered an asylum to thousands; and of the Queen's subjects in India none have gained more from the British Government than the peaceable inhabitants of Sind."

The struggle with the Amirs, when it came, was a fierce one; and the battle of Miáni (Meenae) was one of the most brilliant of English military achievements in India.

"Dashing across the plain, swept by the Beluchi cannon and matchlocks, the British troops pressed eagerly on to close with the numberless masses of the enemy. When they were within a hundred yards of the high sloping bank, over which the heads of the Beluchis could be seen, they wheeled into line. The voice of the general, shrill and clear, commanded the charge; with a British shout the guns were brought into position, and the infantry rushed up the sloping bank. For a moment they staggered back at what they saw beyond it. Far as the eye could reach, the wild Beluchi warriors covered the ground, brandishing their sharp swords. . . . A moment later the Irish, and the Bombay Sepoys, with cheer upon cheer, met their charge and sent their foremost masses rolling back in blood. For three hours and a half the furious contest raged. . . . Nearly all the English officers were slain or wounded, and victory had not yet shown itself. Napier saw that in another twenty minutes the battle must be lost or won."

It was won by the charge of Napier's reserves; and a force of less than 2,000 had discomfited a savagely brave army of 35,000. The contrast of these gigantic conflicts with the puny growth of English power in Bombay in its earlier days is wonderful indeed. Having traced the course of British enterprise to the

time when Calcutta was founded by Job Charnock in the little fishing village of Chutanati, Mr. Cox reminds us that "the three Presidency towns of modern India are entirely of European origin." The prosperity of Bombay was virtually insured by the possession of "an impregnable stronghold and an unrivalled position for trade." In the spelling of local names Mr. Cox has, as a general rule, followed "the authorised government spelling," and he gives a table of sounds explaining the system. The authority of government may disarm criticism; but if some exceptions are made, it is not quite easy to see where the line should be drawn. Twenty-five names are given which are spelt in the older English way—among these are Cawnpore and Lucknow. If the exceptions are made on the score of the familiarity of these names to English readers generally, why should Benares and Meerut appear as Banáras and Mirat? The question here, as with Greek names, is an extremely difficult one. For some time to come, perhaps, we must be content to tolerate inconsistencies in systems which may be made complete hereafter.

Fortune's Wheel: a Tale of Hindoo Domestic Life. By K. Viresalingam, Pandit. Translated by J. Robert Hutchinson. (Elliot Stock.) This book, as first of its kind, is full of interest for all who love India and its people. Though the scene is laid 250 years ago, it is the life of the present day that passes before our eyes. Adventures with tigers and robbers are, indeed, no longer possible where there are English sportsmen and English rule; but the actual customs in a Brahmin's home, and the mode of thinking of the people, are here unveiled to us as they still exist. We are told that the author first intended to give his fellow-countrymen a Telugu version of the *Vicar of Wakefield*, but preferred to write them this transcript of their own lives. A mirror thus held up to nature causes many an unconscious alteration in those who see their own image reflected. For ourselves it awakens keen sympathy for the credulous people, grown old in superstition, and brought up with fears and prejudices which hedge them around on all sides. Dreading alike their *guru*, their deities and daily portents, their lives are rendered bitter by a ceaseless anxiety to avoid they know not what malicious fortune. Rajasekhara, of an open, confiding, generous temper, fond of flattery and approbation, spends all his fortune on parasites, astrologers, alchemists, *yogis*, *byragis*, and priests. Every detail of Hindu religion and ceremonial, and the peculiar customs entailed by each event, are most cleverly interwoven in the tale. The two opening chapters are by far the best. They are full of naive, truthful touches. The description of the river Godaveri, with which it opens, will bear comparison with the well-known tale of the German river, the *Princess Ilse*. The tender family love, which makes the members of the Brahmin's household so lifelike, is indicated with great simplicity, and constant little homely touches; also the sameness of their lot. When about to start for Benares, we are told, "their only pilgrimage up to that time had been from the bank of the Godaveri to the house, and from the house to the bank of the Godaveri; but further from home than this they had never travelled." The father thus moralises on the delight of his children in enjoying the sight of nature's beauties for the first time:

"When we constantly remained close at home, we knew nothing whatever of such delights, and yet we piqued ourselves on being happier than all the rest of the world. How fortunate are those uncivilised wanderers of the wilderness who, living their whole life among such scenes, enjoy pleasures which have as their source the goodness

of that Great Spirit who is kinsman to the lowly!"

Oriental words are scattered throughout, which add to the local colour. They are all translated at the foot of the page. Of one word, "Namaskara," a young civilian gave the present writer an amusing anecdote. He thought the *munshi* told him that the word meant "basins," and henceforth he never washed his hands without using it. All the servants quickly fell into his notion; and, whenever he called "Namaskara," his brass basin was brought. By mere accident he discovered that the word really meant "obeisance," made by bowing to the earth with joined hands. The simplicity of the natives of India is far greater than those who have received an artificial training can give them credit for. A Telugu ayah who had come to Bath in charge of some children, was anxious to find her old mistress. During two months, when she went out with her charge morning and evening, she asked all she could approach "if they knew where Mrs. C— lived." At last, after two months' patient questioning, a stranger took out her pencil, and wrote the address at Weston she had so long been seeking. The history of Subrahmanya, as *comedwar* at the rajah's court, shows just the same patient endurance and pluck. The account of the witch doctor in the thirteenth chapter is an admirably drawn picture of a whole village turning round on their would-be persecutor, who becomes such an object of dread that he overpasses his mark, is "boycotted," and perishes miserably. We cannot close without a remark on the chivalrous appreciation of woman the book discloses. The charms of youth and beauty call forth some pages which show the power that feminine grace and modesty possess over the heart of man in every clime. The conversation at the bathing-place in the second chapter proves the deep sympathy of the author with the trials and woes of his countrywomen.

The Rane. A Legend of the Indian Mutiny. By Gillean. (Cohen.) We hardly required the publishers to inform us that the anonymous author of this book himself took an active part in the suppression of the Indian Mutiny. We regret that he did not think fit to publish his own memoirs or autobiography. Such a work would have been equally interesting, and of some historic value. The author tells us in his preface that he "does not claim to himself any merit for originality of invention, a great number of the events recorded having really taken place, and some of them being well known historical facts." This is undoubtedly true. The evil genius of the plot, the Rane (*sic*) of Ranepore, is unquestionably the Rani of Jhansi, whom Sir Hugh Rose called "the best and bravest military leader of the rebels." Our author paints her in the blackest colours, allowing her no virtue but bravery. Even the Rani's treachery at Jhansi, where she is alleged to have caused the slaughter of the English garrison after giving them a written safe conduct, has been questioned; but our author is not one of the Rani's apologists. Whether he be too severe in this case or not, he has only availed himself of the license allowed to a historical novelist. His object was to write an interesting book, and in that he has succeeded. If the criticism be not too minute, we wonder at an Anglo-Indian of "Gillean's" experience making the Brahman Balnukind Shastri refer to Nirvana (p. 60). A Brahman no more believes in the Buddhist doctrine of Nirvana, than does a Jew in Purgatory. Again, is not "Gillean" wrong in finding any Gondes (*sic*) near Jhansi? No praise can be given to the author for his English, which is wooden and involved; but praise is his due for a story the interest of which never flags.

NOTES AND NEWS.

THE result of Mr. Froude's recent visit to the West Indies will shortly be published by Messrs. Longmans under the title of *The English in the West Indies*; or, the Bow of Ulysses. The volume will be illustrated with numerous sketches made by the author.

A LITTLE while before his death the late Sir Henry Taylor, author of "Philip van Artevelde," formed a selection from his correspondence for posthumous publication. The materials extend over a period of sixty years, from 1824 to 1884; and letters are included from statesmen as well as men of letters. Among the former are Lord Aberdeen, Lord Grey, and Mr. Gladstone; among the latter Wordsworth, Southey, Sara Coleridge, Caroline Norton, and Lord Tennyson. The volume is now being seen through the press by Prof. Dowden, of Dublin. It will be published by Messrs. Longmans early next year.

TOGETHER with the Life and Letters of Charles Darwin, which work will itself form three volumes, Mr. John Murray will issue new editions of *The Origin of Species* and of *The Descent of Man*, each printed in large type in two volumes.

MR. MURRAY also announces a translation of Virgil in English Verse by Lord Justice Bowen, consisting of the *Eclogues* and the first six books of the *Aeneid*.

MR. DAVID NUTT has in the press, to be published shortly, an English version of *Aucasin et Nicolette*, by Mr. Andrew Lang, illustrated by Mr. Jaccob Hood. The format, typography, and illustration will follow the best specimen of Elzevir workmanship. The edition will be a limited one.

IN the current number of the *Nineteenth Century* Sir West Ridgeway, writing on the Afghan frontier question, expresses the hope that some one will give his readers, whose appetite he desires to whet, a full history of the Boundary Commission. It would seem that Sir West has but to wish to have; for we learn that Messrs. Sampson Low will issue in November a new volume by Dr. Lansdell, entitled *Through Central Asia*, with an appendix on the diplomacy and delimitation of the Russo-Afghan frontier. The work will give a compendium, showing the course of events and the political correspondence that led to the appointment of the Commission, with a sketch of the manner, in which the matter is reviewed from a Russian, English, and general standpoint. The book will be copiously illustrated with engravings, and will also contain a map showing the frontier as officially determined, as well as the author's route.

MR. GIFFEN's address as president of Section F at the British Association meeting at Manchester, upon "The Recent Rate of Material Progress in England," will be published shortly, in a separate form, by Messrs. George Bell & Sons.

DR. SAMUEL SMILES's book for this winter will be entitled *Life and Labour*; or, Characteristics of Men of Culture and Genius.

THE next two volumes in the "Eminent Women" series will be *Madame de Staël*, by Bella Duffy; and *Hannah More*, by Charlotte M. Yonge.

A NEW work, entitled *William Wordsworth, the Story of his Life*, by Mr. J. M. Sutherland, is announced by Mr. Elliot Stock.

MESSRS. W. H. ALLEN & Co. will publish at an early date *The Romance of Life-Preservation*, by Mr. James Burnley. The work will cover a wide field, opening with the romance of the

sea, and concluding with the story of the Red Cross.

A COLLECTION of Crashaw's poems will be issued in a few days by Mr. J. R. Tutin, of Hull.

WE are informed that "Max O'Rell," accompanied by his wife, will sail for America in the *Germanic* on November 2, and give his first lecture in Chickering Hall, New York, on November 14.

MRS. SARAH K. BOLTON will publish immediately, in New York, a volume under the title of *Famous American Authors*. The sketches are made additionally interesting from Mrs. Bolton's personal knowledge of many of the persons described.

UPWARDS of a quarter of a million copies of the forthcoming issue of *Yule-Tide* have already been sold in advance of publication; and the publishers, Messrs. Cassell & Co., have been obliged to issue a notification that they cannot guarantee to supply any further orders unless they are immediately registered and accepted by them.

THE first working meeting of the west branch of the English Goethe Society took place on Wednesday last, October 19, at the house of Mr. H. S. Ashbee, in Bedford Square, when Goethe's play, "Die Geschwister," was read by the members.

THE Aristotelian Society has just published a small volume of *Proceedings*. It represents the work done during the eighth session, which terminated last June; and contains lengthy abstracts of the papers read, most of which were noticed in the ACADEMY at the time. The ninth session will open on Monday, November 7, with an address by the president, Mr. Shadworth Hodgson, on "The Unseen World." Other papers of interest are announced, among them being "Darwinism in relation to Design," by Mr. G. J. Romanes; "The Philosophical Importance of a true Theory of Identity," by Mr. Bernard Bosanquet; and "The Demarcations and Definitions of the Subject Sciences," by Dr. Bain.

A COLLECTION of the *Œuvres littéraires de Napoléon Bonaparte* is about to be published at Paris in three octavo volumes.

THE FORTHCOMING MAGAZINES.

MR. EDWARD EGGLESTON will furnish a novel to the coming volume of the *Century*, entitled "The Graysons: a Story of Illinois," based upon a trial in which Abraham Lincoln was a chief actor; and Mr. George W. Cable an Acadian story, entitled "Au Large," with the double meaning of the Acadian usage, "Out on the open prairie, and the larger application, "Out in the world abroad."

AMONG the contributors to the first part of the *Woman's World*, which, will be ready on October 26, will be Lady Archibald Campbell, the Countess of Portsmouth, Miss Thackeray, Violet Fane, Mrs. Bancroft, Mrs. Francis Jeune, Miss Amy Levy, and Mrs. Johnstone, besides the opening chapters of a new serial story by George Fleming, entitled "The Truth about Clement Ker."

ENGRAVINGS, from portraits never before published, of the late Mr. Grierson and of the late Dr. Wilson Fox will be given, with memoirs, in the November number of Mr. F. G. Heath's *Illustrations*. The memoir of Dr. Wilson Fox is written by Mr. Kinglake; that of Mr. Grierson by Mr. Heath himself. In the same number will be included (in the series of "The English Church and its Buildings" by the Rev. J. Donald Mackey) some account of Glastonbury Cathedral, with engravings from drawings by the author of the papers.

St. Nicholas for 1888 will have a series of papers on Australia, by Mr. Joseph O'Brien, a member of the editorial staff of a leading Australian journal.

ON Thursday next, October 27, *Pump Court* will appear as a weekly journal. The first number will contain a signed article by Lord Bramwell, on "Legal Fraud," and one by Mr. Poland on "Courts of Appeal in Criminal Cases"; a facsimile of the anonymous letter to Lord Monteagle, by means of which the Gunpowder plot was frustrated; and a full-page picture of Knebworth House, and a portrait of the Earl of Lytton.

ANOTHER new legal periodical is announced to appear on November 1, called the *Quarterly Review of Jurisprudence*, under the editorship of Mr. Pym Yeatman. According to the prospectus its main objects are "to uphold the honour of the bar, and to restore to our system of jurisprudence all that is venerable and still of worth, which, through modern vandalism, has been discarded; and, by drawing attention to the necessary reforms, to strengthen the hands of the bar committee, and of those willing to co-operate in this work."

UNIVERSITY JOTTINGS.

PROF. SEELEY is lecturing at Cambridge this term on "Europe during the Reign of Frederick the Great."

WE regret to hear that Prof. H. N. Moseley has been compelled by ill health to take a complete rest from his work at Oxford during this term. During his absence, Mr. Hatchett Jackson will be in charge of the anatomical department at the Museum.

MR. EDWARD GOSSE, the Clark lecturer at Trinity College, will deliver a course of six lectures at Cambridge during this term on "The Poetry of the Second Quarter of the Eighteenth Century," dealing, in particular, with Young, Blair, Thomson, Collins, and Gray.

MR. J. H. MIDDLETON, the Slade professor of fine art at Cambridge, will deliver during this term the second part of a course of lectures on "Mediaeval Art as applied to English Churches." Prof. Middleton is also undertaking class-work on "Greek Architecture" and "The Forum Romanum."

THE Disney professorship of archaeology at Cambridge is vacant by the appointment of Mr. Percy Gardner to the reconstituted professorship of archaeology at Oxford, to which Merton College now contributes as well as Lincoln. The electors are the heads of houses, and the day fixed for the election is November 30. We understand that an application has been addressed to the Rev. G. F. Browne, of St. Catherine's College, to induce him to offer himself as a candidate. It is greatly to be hoped that he will permit his enthusiasm for early English art to overcome his natural reluctance to add another to the many academical duties which he already discharges.

PROF. GARDNER was to deliver his inaugural lecture at Oxford on Wednesday of the present week.

IN connexion with the Teachers' Training Syndicate at Cambridge, Dr. James Ward is taking a class this term through Mr. Sully's *Handbook of Psychology*; while Mr. Sully is himself announced to lecture next year on "The History of Education."

AT Oxford, no less than three courses of lectures are to be given in connexion with the Association for the Education of Women: on "Mind, its Conditions and Functions" by Mr. W. L. Courtney; on "The Outlines of the History of Education," by Mrs. Scott, formerly

vice-principal of the Bishopsgate Training College; and on "Elementary Physiology," by Mr. Dixey, demonstrator of physiology at the Museum.

THE current number of the *Oxford Magazine* contains a portrait of the vice-chancellor, the Rev. Dr. Bellamy, of St. John's. It is reproduced from a photograph by the Collotype permanent process; and, while less ambitious, it is certainly more successful than the former portrait of the Dean of Christ Church.

At the meeting of the governors of the Owens College, Manchester, held last week, it was stated that the college had received during the past twelve months more than £32,000 in bequests or gifts. Of this, £21,000, from the estate of the late Sir J. Whitworth, will be devoted primarily to establishing a laboratory in the engineering department; and £10,000, left by the late Abel Heywood, to providing instruction for women and girls.

MESSRS. FIELD AND TUER'S ANNOUNCEMENTS.

"THE Grievances between Authors and Publishers": being the Report of the Conference of the Incorporated Society of Authors held in Willis's Rooms, in March, 1887, with additional matter and summary; "Beauty and the Beast," by Charles Lamb, with an Introduction by Andrew Lang, illustrated with eight steel plates engraved in facsimile from the original edition; "The Duties and Conduct of Nurses in Private Nursing," by Dr. William L. Richardson, with some notes on preventing the spread of infectious disease; "Silver Voice: a Fairy Tale, being the Adventures of Harry's Mother, Harry's Sweetheart, and Harry himself," with hand-coloured comical illustrations; "The Story of a Nursery Rhyme" (new edition), by C. B., with numerous whole-page illustrations by Edwin J. Ellis; *Forgotten Picture-books for Children*, being reprints of the coloured picture-books—from the original blocks, hand-coloured—(1) "Dame Wiggins of Lee," (2) "The Gaping Wide-mouthed Waddling Frog," and (3) "Deborah Dent and her Donkey"; "The Bairns' Annual: for 1887-8," edited by Alice Corkran, illustrated by Mrs. Mack (Lizzie Lawson); "Modern Men," by A. Modern Maid; "Tristram Shandy," by Laurence Sterne, with six unpublished illustrations in aquatint, printed direct from the original copper-plates, engraved in 1820, and an introductory note by John Oldcastle; "The Seasons," by James Thomson, with four illustrations and extra portrait printed direct from the original copper-plates, engraved in 1792, and an introductory note by John Oldcastle; "The Mother: the Woman clothed with the Sun," part the second; "The Henry Irving D. eam of Eugene Aram," by F. Drummond Niblett; "Our Sea Fish and Sea Food," by the Rev. E. W. L. Davies; "Sybil's Dutch Dolls," by F. S. Janet Burne, profusely illustrated; "Eight Tales of Fairy-land," by Louise Poirez, with "three times eight are twenty-four" illustrations by V. Gertrude Muntz.

ORIGINAL VERSE.

SCENTS AND FANCIES.

(To J. R. W. on the Upper Congo.)

ODOURS unlock the gates of memory:
What virtue was there in a bruised leaf—
One spray of blue-gum 'mid a careless sheaf
Of gathered garden-flowers—that thought should flee,
With that faint resinous scent across the sea,
To far-off scenes of childhood's joy and grief;
And snatch in fragments back from Time the thief
Days when Otago was the world to me?

Yet not the gates of memory alone,
For these, your letters—many a hoarded sheet
From lands that I have longed for, never known,
Where fierce and strong Earth's fiery pulses
beat—
Set me a-dreaming, with faint breaths of sweet
Strange spice o'er Ethiopian rivers blown.

A. WERNER.

OBITUARY.

MRS. G. L. CRAIK (MISS D. M. MULOCK).

A FEELING of sincere regret must have been felt throughout the country when the newspapers of Friday last announced the death of the author of *John Halifax, Gentleman*. Fame is a dubious term; and a great literary fame was what Mrs. Craik, better known as Miss Dinah Maria Mulock, never sought. She was content to know that her books were more widely read than are the productions of any other writer after Dickens; that she had cheered, amused, helped, and even materially changed the lives of innumerable readers in all parts of the world; and that for over thirty years she had continued to hold the first place in the school of novelists to which she belonged. Notwithstanding the lapse of time between the death of Jane Austen and the appearance of *The Ogilvies* and *Olive*, it could with justice be said that Miss Mulock had entered into the literary inheritance bequeathed to the worthiest claimant by her famous predecessor. Literary historians of the future will have little difficulty in classifying the women-writers who belong to one or other of the chief schools of fiction; and, beyond doubt, a large and important section will be grouped under the leading names of Jane Austen and the author of *John Halifax, Gentleman*—the foremost painters of domestic tragedy and comedy. Mrs. Craik will never occupy the literary rank wherein are Charlotte and Emily Brontë, George Sand, and George Eliot. It may be added that if she envied none of these their great reputations, neither had she the least desire to be classed with them. An intellectual gulf divided her from her great English contemporary, a moral gulf from the greatest woman-novelist of the world. The agnosticism of the one was as disagreeable to her as the social revolt of the other. If she could not love, she could, however, admire the author of *Silas Marner* and *Adam Bede*. As for the author of *Conuelo*—well, perhaps neither could have understood the other.

If in many ways it is helpful, it is also—as I have heard Mrs. Craik say herself—something of a handicap to a popular author to have made so great a mark by one book as thenceforth to find writer and work undissociable. It was doubtless pleasant for the young novelist when instantaneous success followed the publication of *John Halifax, Gentleman*. Reputation and prosperity are too exclusive visitors not to be welcomed with prodigality of pleasure. But, in course of time, she had to learn that critics have an evil habit of minimising the literary value of a book by comparing it with that by which celebrity was won—a comparison generally depreciatory to the newer production. And Mrs. Craik always considered that the critics and the public were wrong in ranking her most famous work as her best. *A Life for a Life*, she invariably maintained, was her highest reach in fiction—an opinion shared by many of her literary friends. But there is no doubt, however various opinions may be as to *John Halifax*, that a book read and loved by the great majority of "reading families" of the English-speaking races in all parts of the world must have qualities of an unusual kind. And it is by such books as *John Halifax, Gentleman*, *A Life for a Life*, *Agatha's Husband*,

and *The Woman's Kingdom* that Mrs. Craik will hereafter be remembered. It may safely be prophesied that, so long as the social views and individual ideals therein faithfully represented are those dominant among our middle classes, so long will Mrs. Craik hold her place.

It is curious to reflect that in 1849 were published three such different books as Miss Mulock's *The Ogilvies*, Mrs. Gaskell's *Ruth*, and Charlotte Brontë's *Jane Eyre*. Of these, only the last-named has survived the lapse of time, and won assured fame. *Olive*, *The Head of the Family*, and *Agatha's Husband* were Miss Mulock's next ventures; and it was not till after seven years' of authorship that she made her great hit with *John Halifax, Gentleman*. A goodly portion of this novel, if I remember aright, what its author told me, was written at an inn in the old town of Tewkesbury. When, in 1865, Miss Mulock was married to Mr. George Lillie Craik (one of the partners in the publishing firm of Messrs. Macmillan & Co.) she had cause to realise how strong a hold she had gained upon the gratitude of innumerable readers of her books. Among many letters and presents from strangers, what pleased her most was a gift from an anonymous donor of a gold penholder whereon was inscribed "John Halifax."

Mrs. Craik's later works are too numerous to particularise here. Among the best are *Christian's Mistake*, *A Noble Life*, and *The Woman's Kingdom*. The novel entitled *Young Mrs. Jardine* (1879) is an extreme example of her unfitness to deal satisfactorily with certain phases of life. In addition to her novels, she was also the author of several stories for girls, some volumes on social and domestic subjects, translations from the French, and innumerable magazine articles on a great variety of subjects. In the course of her busy life, Mrs. Craik also found time to write many charming verses, which her admirers can read to most advantage in *Thirty Years Poems, New and Old* (1881). If she failed to make any real mark as a poet, she succeeded in writing at least two lyrics which will outlast much more familiar poetry of the day—"Rothessay Bay," and those fine lines "Philip my King," written for her godson who afterwards was to become known as "the blind poet," the late Philip Bourke Marston.

Since 1869, Mrs. Craik (who, it may be added, was borne at Stoke-upon-Trent in 1826), resided at The Corner House, near Shortlands, in Kent—a house purchased and furnished, as she once told me, practically out of the proceeds of her most famous book. In the neighbourhood she was universally known and respected. Her good deeds only fell short of her good wishes. She will be greatly missed not only by all the neighbours and friends who were wont to find a genial welcome at "The Corner," but by many, near and far, who have known her true kindness of heart.

Of late Mrs. Craik had aged much in appearance, though her face had always a particularly youthful freshness. With the advent of October she complained of a lack of her usual energy; but her indisposition was apparently too slight to occasion any anxiety to herself or her family. On Wednesday afternoon (October 12), she did not feel well enough to leave her bedroom. Between four and five o'clock she was alarmed by a sudden weakness of the heart, and strove to cross the room to summon assistance—which arrived too late, though it could, in any case, have availed nothing. In less than a quarter of an hour she had quietly breathed her last.

Any writer of an obituary notice upon Mrs. Craik who had the honour and pleasure of friendship with the deceased lady must of necessity find himself circumscribed as to adequate expression. For Mrs. Craik had a

strong antipathy to the publication of private details. To compilers of "Celebrities" and other books of personal reference she was wont to reply that she had no information to give save the dates of her birth and marriage and those of the appearance of her books. It was also her hope, as I have heard her say more than once, that after her death little should be said in public about the woman—whatever of praise or blame should come to be uttered concerning the author. Under these circumstances, it is only due courtesy not to expatiate upon personal details.

The author of *John Halifax, Gentleman*, was buried on Saturday last at Keston Churchyard, about three miles from Bromley—a spot whose quiet beauty had led her to express the wish that she might ultimately be interred there. Mr. John Morley, Sir George Grove, Mr. and Mrs. Holman Hunt, and other eminent friends were present; and among the many wreaths from old acquaintances and unknown admirers was one from Mrs. Craik's well-loved comrade Mrs. Oliphant, and another from Lord Tennyson.

It may be added that in 1864 a pension of £60 a year was conferred upon Miss Mulock. It is understood that very little unpublished manuscript is available for use. One of her latest undertakings was *An Unknown Country*, a series of Irish sketches, with illustrations by Mr. F. Noel Paton, the son of one of her oldest and dearest friends, Sir Noel Paton.

W. S.

MAGAZINES AND REVIEWS.

WE must give a warm welcome, if somewhat late, to the rejuvenated magazine for girls issued by Messrs. Hatchards. The moral implied in the title of *Atalanta* seems rather forced; nor do we care for the stiff design on the cover by Mr. Walter Crane. But, when the contents have been unearthed from amid the massive envelope of advertisements—an introductory poem by Mr. Edwin Arnold; a story by Mrs. Molesworth in her best style; a new chapter from the life of Allan Quatermain; a poem by the late Philip Bourke Marston, worth all his stories together—these would alone make up a marvellous return for the outlay of sixpence. And the programme conveys proof that the future contents will not fall below the sample. Besides all this, there are abundant illustrations—of which we would particularly notice those in a new *genre* by Mr. Gordon Browne—which owe not a little of their effect to having been printed by the printers of the *English Illustrated Magazine*, though the new venture is less faithful than the old to the legitimate processes of wood-engraving.

The *Antiquary* of to-day fills the place occupied by the *Gentleman's Magazine* in the days of our grandfathers. It is not a dull archaeological compilation, but written for the most part by men who know the times they are living in, and are aware that historical science, like every other branch of knowledge, requires thought and selection as well as mere industry. The most important article in the number before us is that on "Olympia," by Mr. E. Gambier-Parry. The way lads are taught Greek in our public schools is calculated to stamp out any desire for knowledge as to the life of the Hellenic world. If it were not for this, we should find it difficult to account for the fact that the highest and widest culture that the world has seen appeals so little to the hearts and minds of those among us who pass for educated men. The dreams of the seventeenth and eighteenth centuries are yet indulged in; and simpatons may still be found who fancy that Latona represents a tradition of Eve, or is a type of the Blessed Virgin. The discovery of Olympia ought to have attracted more atten-

tion in this country than it has done. We trust that Mr. Gambier-Parry's brightly written paper will turn men's minds to the subject. Mr. Clinch's paper on "Hayes' Place," the birthplace of William Pitt, is useful. It contains a pretty little engraving of the house, which seems to be in general character what we may call middle Georgian. Mr. H. P. Malet gives us a second part of his article on "Bone Caves." It condenses lucidly the knowledge which at present exists on an obscure subject. Mr. C. A. Ward's memoir on John Felton the murderer—if indeed murder be the right name to give the act for which he suffered—will be useful to students of the history of the reign of Charles I. The manorial customs of West Sheen, Petersham, and Ham are printed, or rather as we gather, reprinted by Mr. Andrew Hibbert. It is important that all these old customs should be preserved from chance of destruction. These, however, contain little that is noteworthy, except the fact that the manorial tenants held their lands by the tenure known as "Borough English." The youngest son succeeded, and if there were no son, then the youngest daughter.

THE contents of the *Revista Contemporanea* for September deal chiefly with social, legal, and economical questions. S. Guardiola y Valera treats of the mission of woman and modern schools of sociology. Cristóbal Botella begins some chapters on socialism, tracing its history from early times; and Lorenzo D'Ayot sketches the position of the aristocracy in face of progress. Pérez y Oliva continues his valuable essay on the law of prizes at sea; and Gonzalez Janer advocates protection as a necessity in the present agricultural crisis. Of literary articles the most striking is García-Ramón's "Letter from Paris," criticising the novels of Fernan Caballero, and describing the enthusiasm which they awakened in the young on their first appearance. A paper on bull-fights, by C. Cambronero, gives, among other particulars, the cost of the bulls in the sixteenth and seventeenth centuries.

No. 4, tomo v., of the *Revista de Ciencias Históricas* opens with a vindication, by the editor, of Andobales and Mardonius from the charges of treachery and rebellion against the Romans attributed to them in Bofarull's History of Catalonia. Father J. Segura prints documents throwing light on the state of manners in Catalonia during mediæval times, especially as regards parental authority and conjugal morality; and J. Corolleu collects others to illustrate prices and the relations of the nobles with the king. Conde de la Viñaza continues his important additions to the Dictionary of Clean Bermudez, terminating the letter C.

FASCICULE XIV. of the *Archives Historiques de la Gascogne* consists of the "Sommaire description du Pais et Comté de Bigorre," for the first time printed entire and attributed to its real author, Guillaume Mauran, advocate at Tarbes, 1595-1640. The description of the country is interesting, and the history has the weight of contemporary authority for the religious wars of the early part of the reign of Henri IV. The text is enriched with full introduction, notes, facsimiles of signatures, and index, and forms an important complement to "Les Huguenots en Bigorre" in the same series.

CORRESPONDENCE.

THE CAPTURE OF SAMARIA BY THE ASSYRIANS.
Queen's College, Oxford: Oct. 15, 1887.

A kindly notice of a little book of mine has lately appeared in the *Literarische Centralblatt*—all the more appreciated by me from the fact that the initials at the end of the article disclose the name of one of the highest authorities in Germany upon Assyriological matters. But there is one suggestion put forward in it by Prof. "F. D." with which I find myself unable to agree. It relates to the capture of Samaria by the Assyrians.

Three years ago Mr. Pinches discovered an annalistic account of Babylonian history between the reign of Nebonassar and the accession of Salsdukhnos, written from a Babylonian point of view, which he has termed "The Babylonian Chronicle." He has published the text with a translation in the last volume of the *Journal of the Royal Asiatic Society* (xix. 4). Four lines are devoted to the reign of Shalmaneser IV. (727-722 B.C.), which Mr. Pinches translates as follows:

"On the 25th day of Tebet Shalmaneser in

Assyria sat on the throne. He destroyed Sabarahin. In the 5th year Shalmaneser died in the month Tebet. Shalmaneser had ruled the kingdom of Akkad and Assyria for five years."

Now, Prof. "F. D." very ingeniously proposes to see in Sabarahin the equivalent of Samaria. But three difficulties stand in the way. There is first the strange form of the name, which, in the Assyrian texts, is written 'Samerina. Secondly, the order of words seems to imply that the "breaking to pieces" of Sabarahin took place at the beginning rather than at the end of Shalmaneser's reign.* Thirdly, there is the express statement of Sargon: "[At the beginning of my reign] the city of [Samerina I besieged and captured; 27,280 of its inhabitants I carried away; I took possession of fifty chariots belonging to them; and the rest of their goods I seized."

If, then, Sabarahin is really meant for Samaria, the Babylonian chronicler must be transferring to a king of "Akkad" the honour of an achievement that properly belonged to a king of Assyria, unless—which is also possible—reference is made to the overthrow and imprisonment of Hoshea three years before the capture of his city. In any case we must continue to believe that Sargon and not Shalmaneser was the actual conqueror of Samaria.

A. H. SAYCE.

AN ISOLATED PEOPLE IN SWITZERLAND.

Oxford: Oct. 15, 1887.

Mrs. Knight, in her letter printed in to-day's ACADEMY, once more brings up the supposed singular position of the inhabitants of the Val d'Anniviers or Einfischthal in the Valois. The matter has been often discussed previously, and it has been conclusively shown that the supposed singularities are really non-existent. Herr G. Berndt, in his remarkable monograph on the valley ("Das Thal d'Anniviers und das Bassin de Sierre," *Ergänzungsheft* 68 to Petermann's *Mittheilungen*, published at Gotha in 1882) has minutely investigated the question. He states that there is no historical authority whatsoever for the invasion of the Alps by Huns, the story having probably arisen through a confusion with Ungari. These latter and the Saracens did often ravage what is now Western Switzerland in the ninth and tenth centuries; but they were simply bands of robbers, and did not settle anywhere. I may say that some years ago I had occasion to examine all the original authorities as to the Saracens in the Alps, and that the conclusion I arrived at was that, though they may possibly have settled in the Valley of Saes, there was no evidence for their permanent settling in any other alpine valley in the Valois (see *Alpine Journal* ix. 254-282, x. 269-274). Herr Berndt concludes from a review of the dialect, customs, and habits of the Anniviers people, as well as of their physical peculiarities, that they are the remains of an indigenous Celtic population, which has later been strongly affected by Romance influence. The dialect (of which he gives specimens), like that in Valois and Vaud generally, resembles Provençal. Many apparent singularities in their customs and manner of living disappear when other parts of the Valois or of Switzerland are compared with the Val d'Anniviers, or are found to be due to the rather secluded situation of the valley. They are now rapidly disappearing.

So far Herr Berndt. I may add that I believe that the whole, or nearly the whole, of the upper valley is only inhabited in summer, and that the legend of a separate origin is

* *Ikhtepi* means literally "he broke in pieces"—a very unsuitable expression to be used of a city upon which, immediately after its capture, Sargon imposed the tribute of "the former king" as well as an Assyrian governor.

common in other parts of Switzerland, and has no historical foundation in any—e.g., the Scandinavian origin of the men of Schwyz and Hasli, which is the subject of a well-known *Volkslied*.

W. A. B. COOLIDGE.

"CAVE IN."

Oxford: Oct. 15, 1887.

Mr. Wedgwood does not seem disposed to "cave in." He sees no reason at present to give up the connexion of the expression "cave in" with our English *calf* ("vitulus"). I cannot accept Mr. Wedgwood's etymology, because it unfortunately fails to account for the whole of the matter that has to be explained. We are asked to believe that the expression "cave in" is due to a metaphor taken from an interesting incident in country life—a cow dropping a calf. Such an operation is denoted in English by the verb *calve*, in Dutch by *kalfen* or *afkalfen*.

Would Mr. Wedgwood be kind enough to tell us what is the force of the preposition "in" in the expression "cave in," on the hypothesis that "cave in" is connected with the verb "to calve"? If Mr. Wedgwood be right, one would expect some such preposition as "off" or "out" rather than "in." I do not think that Mr. Wedgwood has made out his etymology; but, on the other hand, I am by no means certain now that our "cave in" is borrowed from the Dutch *inkalfen*, to fall in, or is connected with the Dutch words cited by De Vries.

It is quite possible that Mr. Wedgwood and I may both have been led astray by one of "the *idola* of the cavern": I mean in this instance, a misleading tendency—alas, too common among etymologists!—to ignore the obvious and simple explanation of a word for one that is strange or paradoxical. I think, if we will only wait patiently for part iv. of the *New English Dictionary*, we shall probably find evidence that will satisfy us that the expression "cave in" is connected, after all, with Latin *cauus* and the other "cave" words, and that a derivation, from the Lincolnshire *cauf* is quite out of the question, whether this word be a representative of *calf* ("vitulus"), or, on the other hand, represent the Dutch *kalf* (= *kalve* = English *callow*).

A. L. MAYHEW.

DANTE ON ALEXANDER AND DIONYSIUS.

Combe Vicarage, near Woodstock: Oct. 17, 1887.

With reference to Mr. Toynbee's able letter in the ACADEMY of last week—about the vexed question whether, in the words "Alessandro e Dionisio fero" (*Inf.* xii. 107), Dante meant by "Alessandro" Alexander the Great or Alexander of Pherae—I would call attention to these lines of Petrarch (*Trionfo d'Amore*):

"Que' duo, pien di paura e di sospetto,
L'un è Dionisio, e l'altro è Alessandro."

Here Alexander of Pherae is spoken of "simply as Alexander, without any further description."

J. HOSKYNs-ABRAHALL.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, Oct. 24, 8 p.m. Royal Academy: "The Joints of the Human Body," by Prof. John Marshall.
FRIDAY, Oct. 28, 8 p.m. Royal Academy: "The Muscles of the Human Body," I., by Prof. John Marshall.

SCIENCE.

The Languages of China before the Chinese. Researches on the Languages spoken by the pre-Chinese Races of China proper previously to the Chinese Occupation, pp. 148. By Terrien de Lacouperie. (David Nutt.)

THERE are very few men who have either the requisite knowledge or the power of research

to enable them to write such a work as that under review. The subject is an extremely intricate one and is hedged round with linguistic and historical difficulties which might well appal a less enthusiastic scholar than Dr. Terrien de Lacouperie. It has for some time been generally recognised that the Chinese arrived as immigrants into China from Western Asia; and all those who are acquainted with the classical literature of the country are aware also that they found the country populated by aboriginal peoples and immigrant tribes. But who these primitive populations were; what influence their languages and civilisations exercised on those of the Chinese; and what has become of them—are questions which have been little mooted, and which, until now, have never been seriously discussed.

Dr. Terrien de Lacouperie's researches have shown that the Chinese on entering China "began to spread individually or in groups according to their well-known practice of gradual occupation by slow infiltration." It is curious to observe that this practice is still characteristic of them; and that at the present day the same silent individual advance is being made by them into the more fertile districts of Mongolia and Manchuria. But at the time of which we speak the tide set southwards; and those tribes which were ready to acknowledge the supremacy of the highly cultured strangers were freely incorporated into the Chinese states, while those which attempted to resist the progress of the invaders were either coerced into submission or were driven southward. For many centuries the Chinese merely ruled over a small portion of China proper, and it has only been within the last hundred years that the most southern provinces may be said to have been subjugated by them.

We shall not attempt to follow Dr. Terrien de Lacouperie in his enumeration and records of the various tribes. It must suffice to say that he has something to tell us about some 400 pre-Chinese tribes, and that in some cases he is able to give us vocabularies from their languages. But the point on which it is more appropriate here to dwell is the effect produced on the Chinese language by the social contact which took place between the Chinese and the possessors of the soil. The languages spoken by these peoples differed widely in every respect—the one, Chinese, belonging to the Ugro-Altai group, and the others to the Indo-Pacific and Kuenlun group. As Dr. Terrien de Lacouperie says

"the phonetics, morphology, and sematology of the Chinese language bear, also, their testimony to the great influence of the native tongues. The phonetic impoverishment, and the introduction and growth of the tones as an equilibrium to make up deficiencies from wear and tear are results of the same influence. In the process of word-making the usual system of post-placing particles for specifying the conditions in space and time common to the Ugro-Altai linguistic alliance has been disturbed in Chinese, and most frequently a system of preplacing has been substituted for the older one. And, finally, in the department of sematology, we have to indicate, also as a native influence on the language of the Chinese, the habit of using numeral auxiliaries, or segregative particles, otherwise classifiers."

By a clever method of classification Dr.

Terrien de Lacouperie has succeeded in arranging the linguistic affinities of vocabularies and ideologies by numerical notation, so that by the use of a few figures it is possible to express the ideology of any language. For example, he expresses the modern formula of all the Chinese dialects by 1, 3, 6, 8, vi, by which is to be understood that the genitive precedes the noun, that the noun follows the adjective, that the object follows the verb, and the verb the subject. For purposes of comparative study this system is very convenient, and brings before the eye at once the points of agreement and disagreement between languages which one may desire to describe. Though, however, the above formula represents Chinese as it is now spoken, there are traces of older ideologies, which carry us back to a time before that admixture of races of which we have spoken. But there are also other and more palpable evidences of the plurality of ethnic elements in the former populations of the country. In the words for river we have, for instance, an obvious indication of separate linguistic derivations.

"In the whole basin of the Yellow river, or *Huang ho*, the latter term *ho* is applied to all, or nearly all, the rivers. . . . Coming down to the basin of the Yang-tze *kiang* and the south, we find another term, *kiang*, spread everywhere. . . . Northwestward we meet with a third word, *shui*, properly water, . . . which is apparently simply the Chinese transcription of the Tibetan *ts'hu*. The first two, *Ho* and *Kiang*, have now the accepted meaning of 'river' in Chinese; but they do not belong to the ground-stock of the Chinese language, which possessed but one word and symbol for 'a stream,' *ts'uen*, and none for 'river.' The same fact finds confirmation in the formation of the characters for *ho* and *kiang*, which is a late one, and made up of the mute ideogram determinative for 'water,' and a phonetic to suggest the sound. *Ho* is the representative of a word cognate to Mongol *ghol* 'river;' and *kiang*, formerly *kang*, *kung*, *kong*, is a survival of the same linguistic formation to which belongs the name of the Ganges."

But Dr. Terrien de Lacouperie does more than register the traces left by the primitive tribes in China, he follows them into their new homes and environments, and gives us an ethnological panorama of their migrations. That his record is incomplete he is the first to acknowledge; but those who understand the difficulties of his task will fully appreciate the success which he has achieved. We most cordially congratulate him on his present work, which is a monument of scholarly instinct and of patient research.

ROBERT K. DOUGLAS.

TWO BOOKS ON FUNGI.

An Elementary Text-Book of British Fungi. Illustrated.

The Fungus-Hunter's Guide, and Field Memorandum Book. With analytical keys to the orders and genera, and notes of important species. By W. Delisle Hay. (Sonnenschein.)

AUTHORS like Mr. Delisle Hay are the critic's despair. Within six months he has brought out these two books, which would appear, at the first glance, to fill distinct gaps in fungological literature. But the more one studies them, the more one fears that their acceptance by the public will increase the death-rate from fungus-poisoning. The author is as plausible

as the outcome of his work is mischievous. One cannot, without seeming malevolent, point out a tithe of the instances where he grievously errs; but it is a duty which one owes to society to assert that his statements should rarely be accepted unless they are confirmed by the knowledge of the reader. Further than this, a good-natured reviewer has little heart to go, when considering a Text-book and a Guide.

The worst of it is that the books both seem so learned and so nice that only a professed mycologist is likely to discover how they may lead to the sacrifice of human life. The present reviewer is an enthusiastic "toadstool-eater," but he would long ago have been among the lost majority if he had trusted to no better guides than Mr. Hay. The truth is that there is a vast number of fungi which may be eaten with impunity; but it is never safe to experiment upon a fresh one until the eater is perfectly certain that he knows, and moreover knows all about, the species on which he may be risking his life. And it is just here, in the accurate definition of species, that Mr. Hay most egregiously fails. "Blind leading the blind" should have been his motto. He does not even help us by following accurately the classification of the illustrious Fries, as every English botanist does. Still worse, he "does into English" all the names of the species which he enumerates. It is a sufficient burden to the memory to retain the scientific names of such an assemblage as even the higher fungi of Great Britain; but each name learnt is the key to all available knowledge. When, however, besides these, which are essential, we have also to remember such inventions as Archbane, Beelzebub's Cushion, Brazenface, Grisette, Snake-in-the-Grass, the Sickener's Sister, and so forth, which are utterly unnecessary, we lose all sense of gratitude to our new author. And yet, if we will not master these, his index is useless. Still this is nothing to saying that *Agaricus sinuatus* is wholesome, in the face of the fact that Mr. Worthington Smith and two of his friends nearly lost their lives through tasting it. The cases in which fungi are commended as edible by continental mycologists alone are too many to cite; but we hope that nobody, save some pest of society, will have these species cooked. Many kinds are noted as esculent which are no more eatable than Mrs. Hussey's well-known "saddle-flaps." *Ag. pilosus* is described, we presume, from imagination, for no one knows it! *Ag. lacrymabundus* is said to be "bowed with the weight of its guilt," but it is used in immense quantities in the manufacture of mushroom-catsup in Northamptonshire. *Polyporus tuberastrer*, like *Ag. caesareus*, never occurs in England; so why are they, with several other aliens, included at all? And did Mr. Hay ever really cultivate the former? The statements on pp. 132 and 194 do not quite tally. The species now known as *Russula decolorans* is not the *Ag. ruber* of Dr. Badham. It is not edible; it turns black when cut; and it never grows under beeches, but only under firs. *Cortinarius cinnamomeus* is not in the least like spice in either fragrance or flavour. The name simply denotes its colour, and connotes nothing else akin to cinnamon. But why multiply examples? Who would entrust his life to such an author, whose descriptions are often as inaccurate as they are misleading? It is worse than useless to try to popularise mycology without the profoundest knowledge; otherwise the public, once misled, will more than ever despise the delicacies which have but to be known to be appreciated. On the cultivation, chemistry, and cooking of fungi, Mr. Hay's remarks are, however, not to be despised. Only his imagination is for ever apt to run riot, and his notes on "Mushrooms dedicated to Saints" read like a joke. Poor Cecilia E. Berkeley, she is

actually canonised! But to find Judas Iscariot among the saints (on p. 228 of the text-book) surely passes everything. As to the fifty-nine plates in the larger book, they are evidently issued as padding. To not one quarter of them is any reference made in the text, and the majority are almost microscopic. However, they are all old friends, and have done good service in their day, even those that are represented (as on plates xv. and xxxi.) upside down.

After showing what the Text-book is, so far as our space will allow us, we need say little about the Guide. It has some useful blank leaves, but it has no index. The analytical keys can be hardly any good to anybody whose knowledge is not sufficient to do without them. There is a woodcut on almost every page (also old friends), but not one has a name attached to it, so they are useless. The descriptions are too brief and vague to be of any aid in diagnosis, nor are the species mentioned generally the commonest or the best marked.

Before Mr. Hay writes a third book on fungi, we hope that he will make the acquaintance of some one who is better qualified than he is himself to guide the British public along the fascinating path which he has this year strewn with such dangerous stumbling-blocks.

HENRY T. WHARTON.

OBITUARY.

ROBERT HUNT, F.R.S.

ROBERT HUNT—well known as an authority on statistics relating to mining and metallurgy, and still more widely known as a popular writer on physical science—died on Monday, October 17, in the eighty-first year of his age.

The son of a naval officer, he was born at Devonport, but at a very early age he came to London and at once commenced the study of medicine. In consequence of bad health, he returned to the West of England; and after a rather desultory career was appointed, in 1840, to the secretaryship of the Royal Cornwall Polytechnic Society at Falmouth. Here he carried on some valuable researches in experimental physics, including an enquiry into the electrical phenomena of mineral veins, and also embracing the important optical investigations which he afterwards published in his *Researches on Light*. Photography engaged his early attention; and he introduced certain improvements, which were duly recorded in the *Philosophical Magazine* and in the *Philosophical Transactions*, and which ultimately led to his election to the Fellowship of the Royal Society. Mr. Hunt was the author of an excellent *Manual of Photography*, and of certain works of a lighter character, such as his *Poetry of Science* and *Panthea*. From 1845 to 1883 he held the office of Keeper of Mining Records, and during the greater part of this period edited the annual volumes of *Mineral Statistics of the United Kingdom*. In the preparation of these statistical returns he travelled extensively through the mining districts of England and Wales, and by his general urbanity was markedly successful in procuring voluntary returns from the representatives of our mining and metallurgical industries. For a short time Mr. Hunt was lecturer on Mechanical Science and Experimental Physics at the Government School of Mines. After Dr. Ure's death, he took up the voluminous *Dictionary of Arts*, and brought out successively the fifth, sixth, and seventh editions. His large treatise on *British Mining* did not appear until 1883. During his busy life he was a constant contributor to the periodical literature of science, and for many years he enjoyed much popularity as a lecturer. Mr. Hunt was practically the founder of the Miners' Association of Cornwall and Devon,

and always took a deep interest in the welfare of the metal miners of our Western counties. Another direction in which his intellectual activity found scope was in the collection of Cornish folklore, on which he published an interesting volume. In connexion with the great Exhibition of 1851, and its successor of 1852, Mr. Hunt was extremely active. Indeed, few men have contrived to press into a single lifetime more intellectual work than was accomplished by the ability and industry of Robert Hunt.

CORRESPONDENCE.

LUCIAN HARL. 5694.

Queen's College, Oxford: Oct. 17, 1887.

Some points that I have lately observed in the Harleian Lucian may serve to confirm Maass's interesting theory (*Mélanges Graux*, p. 749 sq.) of its relation to the other MSS. possessed by Arethas of Patrae. In several places in the text (ff. 51 verso, 55 recto, 55 verso) lacunæ left by the scribe are filled up by the hand that wrote the scholia; and, assuming the writer to be Arethas, a specimen is incidentally obtained of his minuscule hand. At f. 99 verso the words τὸν μέγωνα are supplied by this writer, μέγωνα being abbreviated into a μ crossed by a ζ surmounted by an α: further in the scholion f. 92 verso the word ξσταί (wrongly read ἐστὶ by Maass, p. 759) occurs, also abbreviated. Neither of these abbreviations are common, except in mathematical MSS., and it is unlikely that an ordinary scholiast would have used them. On the other hand, they are appropriate from the pen of the possessor and annotator of the D'Orville Euclid, in which not only μέγων μέγωνα, &c., but ξσταί are frequently expressed by compendia. The learned commentator employed abbreviations, with which he was familiar in his Euclid, in a book not concerned with geometry. The later history of the MS. may receive light from a note pointed out to me by Mr. Walter Ashburner of Merton College. It appears to support the tradition given by Wanley (quoted in the *Catalogue of Ancient MSS.*, part i., p. 15) that the book at one time belonged to a monastery near Naples. On f. 57 rect., a late hand has: δ κατὰς κἀγαθὸς λουκιανὸς δ πάντα καλῶς ἐλέγξας καὶ πάντων τὰ ἤθη παιδεύσας ἄριστος μένει ἐν καλαβρία.

T. W. ALLEN.

PAINTED CUNEIFORM WRITING.

New York: Sept. 26, 1887.

Dr. C. Bezold describes, in the *ACADEMY* of August 13, an Assyrian tablet, of which he says: "It is, so far as I know, the first time that painted cuneiform writing has been discovered." In Layard's *Monuments of Nineveh*, second series, plates liv., lv., two fragments of brick or pottery are figured with painted inscriptions. One of these is described in Layard's *Babylon and Nineveh*, pp. 167, 168.

WILLIAM HAYES WARD.

SCIENCE NOTES.

MESSRS. HENRY SOTHERAN & Co. announce for publication, in December, a new work by Mr. Henry Seebohm, entitled *The Geographical Distribution of the Charadriidae*; or, the Plovers, Sandpipers, Snipes, and their Allies. In addition to a systematic account of each species, the work will form a practical lesson in evolution. For Mr. Seebohm has taken the family of the Charadriidae as a text from which he discourses upon the development of birds in general, upon the differentiation of species by the glacial epoch, migration, and other causes, and upon the neglect of sub-specific forms by British ornithologists. The book will be published in a quarto volume, containing about 500 pages of letterpress; and it will be

illustrated with some 200 woodcuts by Messrs. G. E. Lodge, J. G. Millais, and R. E. Holding. A limited number of copies will be additionally illustrated by the insertion of twenty-one plates, drawn on stone by Mr. J. G. Keulemans, and coloured by hand.

PHILOLOGY NOTES.

THE Cambridge University press announce immediately the first part of Mr. E. S. Roberts's long-promised work on Greek Epigraphy, dealing with the archaic inscriptions and the Greek alphabet.

THE forthcoming number of the *Babylonian and Oriental Record* (David Nutt) will contain the following articles: "New Phoenician and Israelitish Inscriptions," by Prof. A. H. Sayce; "Yemen Inscriptions: the Glaser collection" (concluded), by Prof. Hartwig Derembourg; "The Deities of the Indo-Scythian Coins," by Prof. C. de Harlez; "A so-called Hittite Seal from Tarsus," by Prof. E. Reville; "Akkadian Etymologies," by Mr. Theo. G. Pinches; "A Royal Tithe of Nabonidus," by Mr. W. St. Chad Boscawen.

AN excellent article that recently appeared in the *Red Dragon*, by Mr. Ivor James, on "The Welsh Language in the Sixteenth and Seventeenth Centuries," has since been reprinted by Messrs. Daniel Owen & Co., Cardiff, as a separate pamphlet. Mr. James attempts to show, and with a good deal of success, that by the time of the Civil Wars Welsh had been driven to the mountains, and that English was decidedly in the ascendant, which he ascribes to the influence of the castles and the Englishmen dependent on them. The Civil Wars changed all this. Welsh once more obtained the upper hand, and Eisteddfods began again to be held. He criticises Mr. Freeman's account of the English-speaking populations of Gower and Pembrokeshire.

FINE ART.

"British Museum Catalogue of Greek Coins." —*Peloponnesus*. By Percy Gardner. (Printed for the Trustees.)

THIS splendid series of publications, which still improves as it advances, has now brought us well-nigh to the end of European Greece. The present volume is the penultimate one of the ten which deal with the lands between the Tyrrhenian sea and the Aegean. It is, moreover, the last which will come from the hand of Prof. Gardner, who is now severing his connexion with the British Museum in order to occupy a new field of activity at Oxford.

It might have been expected that Peloponnesus, the citadel of Greek nationality and the home of so many of the earliest Hellenic traditions, would prove one of the most fruitful soils for the numismatist in the whole world. Its multitude of small cities and countless local cults promise a rich harvest for those who approach the study of coins from the point of view of the historian and the mythologist. Its prominence in the development of art holds out an equally enticing prospect to those who prize coins for their aesthetic value, or for the light which they throw on the rise and decay of the various artistic schools.

For those who approach Peloponnesian coins with these high expectations a sad disappointment is in store. In the whole peninsula but a single state supplies a series of coins of first-class interest; and even that state—the

great and wealthy religious centre of Southern Greece—only commences its issues after the Persian wars, when archaic art was drawing to its close. Nor is Elis exceptional in the lateness of its appearance as a striker of coins; not more than two or three other Peloponnesian towns can claim a higher antiquity for their pieces. Corinth, indeed, was one of the very first states to the west of the Aegean which saw the advantages of coined money; but Corinth, like Athens, was bound down by the exigencies of her vast trade to adhere to a single type for all her issues, and her πῶλοι with their prancing pegasus were well-nigh as stereotyped as the "owls" of her rival. Corinth, moreover, has been reserved by the British Museum authorities to appear in another volume in company with Athens and Aegina, and does not form part of Prof. Gardner's book.

Of the other Peloponnesian cities, Argos, Mantinea, Heraca, and Cleitor are the only places which seem to have struck coins before 480 B.C., and none of them produced types of any artistic or historical note. Argos, indeed, is one of the most disappointing states in Greece, as unsatisfactory in her coins as she habitually was in her politics. Excepting two very beautiful early fourth-century pieces—the didrachm with the head of Hera crowned, and the drachm with Diomedes carrying the Palladium—she never put forth any noteworthy coins in a monetary history extending over three hundred and fifty years. Her ancient king, Pheidon, though he made the Aeginetans strike money for him, does not seem to have started a mint of his own; and, when the state commenced coining, a hundred years later, it adopted two types—a half-wolf and a large letter A—which proved as fatal to artistic impulses as the cup of Corcyra or the shield of Thebes.

Down to the Persian wars, then, the issues of Peloponnesus are unimportant; and even afterwards, when the stimulating effect of the great victories was making itself felt all over Greece, we do not find, save at Elis, any very notable coins appearing. It is true that many states began to strike money immediately after 480 B.C.; but Peloponnesus was a poor country, and in very few cases were coins of any size produced. The hemidrachm is not a large enough piece to display a striking type with any adequacy, and hardly a state issued any higher denomination. In fact, the Peloponnesian coinage was for the most part intended only for small change, as the stater of Aegina circulated everywhere, and continued to be used for all large payments. Moreover, the southern half of the peninsula, from sea to sea, was in the hands of Sparta, whose conservatism opposed itself to the issue or use of coined money at all, while in Achaia, on the Northern coast, only two places, Aegae and Sicyon, were rich enough to establish a mint. Of the coins which did appear in the period 480-420 B.C., the long series of hemidrachms bearing the inscription ΑΡΚΑΔΙΚΟΝ deserve mention, as they vouch for the continued existence of an Arcadian league throughout the fifth century—a fact which we should not have suspected from our knowledge of Peloponnesian politics during that period. But the issues of Elis are of absolutely first-rate importance. They bridge over the period between the later archaic art and the master-

pieces of Pheidias and Polyeletus in the most perfect way. Three figures of a running, a standing, and a seated Niké, between the engraving of the first and the last of which not more than forty years can have elapsed, give us the history of fourth-century art in a nutshell. The first is hopelessly stiff, the last (the figure which was copied in our own century for the reverse of the Waterloo medal) is as beautiful a type as has ever been attained. It is simply astonishing to place them side by side, and reflect that only one generation intervened between them. Luckily that generation has left its coin also, and the development is made clear, if not explained. All the Elean didrachms from this period down to the time of Alexander the Great are noteworthy pieces. Two especially deserve mention as unapproachable in their own line—the one with the head of a Zeus of a very severe style, with short hair and beard, which Prof. Gardner attributes to about the year 420 B.C., and the noble piece with the crowned Hera which comes a few years later, and far surpasses any other representation of the goddess, notably the contemporary head at Argos which we have had occasion to mention in an earlier paragraph.

The only period in which the coinage of the Peloponnesus can be called rich is that comprised in the second and third quarters of the fourth century. The overthrow of the Spartan hegemony by Epaminondas appears to have had a more stimulating effect on the Peloponnesus than any other event before or after. It was immediately followed by the issue of didrachms of great beauty by the new Arcadian league, the recently established city of Messene, and the towns of Stymphalus and Pheneus; while many other places, such as Hermione, Cleitor, and Tegea, produced smaller coins of great merit. The Elean money continued as fine as ever, and some good pieces were also produced in the neighbouring islands of Zacynthus and Cephallenia. This impulse lasted down to the days of Alexander, when political causes closed most of the mints of the peninsula, or set them striking Alexandrine staters of the ordinary type. Even King Areus of Sparta, when he rose against the Macedonian, and broke the old national usage by issuing silver money, adopted the types of the oppressor and placed his name on staters bearing the well-known seated Zeus of Alexander.

The Macedonian supremacy killed monetary art in the Peloponnesus. When the cities gradually recovered their liberties in the third century, the coins which they began to issue are most deplorable objects. Even the Elean Zeus becomes a coarse, moody, matted-haired creature on these pieces; while the Heracles of Sparta and the Zeus on the league coins of Dyme are almost as badly designed as the heads on a contemporary piece of a Gaulish or Thracian tribe. The only interest attaching to the third-century Peloponnesian coinage is that which can be extracted from identifying the obscure mint-marks of the various towns of the Achaian League—a puzzle of no small difficulty, from which even Prof. Gardner retires without attaining complete success. For example, we cannot believe in his attribution of the coins with the trident and the fish respectively to Ceryneia and Lyrcia.

We may mention as minor points of note in this volume the wonderful strength which it shows the British Museum to possess in the coins of the West-Greek islands. No other collection in the world has such a fine series, for example, of Cephallenian money. Of attributions which will be new to many readers, that of the half-drachms, with a head of Pallas and a bunch of grapes, to the Messenian town of Corone is satisfactory. The old reading of KOP as Coreyra is evidently wrong. The idea that the coins with a portrait head, struck by an anonymous king at Sparta, belong to an earlier age than that of Antigonos Dason is also worthy of all consideration. We cannot terminate this review without expressing the regret which we feel when we reflect that no more Museum catalogues are to come from the able and untiring pen of its editor. C. OMAN.

CORRESPONDENCE.

THE AGE OF THE WALLS OF CHESTER.

Liverpool: Oct. 17, 1887.

Mr. Brock, in the *ACADEMY* for October 15, says that the interments, &c., on the slope of the hill at Chester, like those found at Newgate, in London, "indicate that the walls in both cases were erected to enclose an area once outside the original settlement." If he will refer to *Roman Cheshire*, p. 92, he will find I have said:

"Lincoln, I think, gives us the clue, and enables us to ascertain that the castrum proper was on the summit of the hill; while, at a much later period, a wall was probably built exterior to the western side, close to the bank of the estuary, which enclosed the suburban buildings and the private graveyards attached to them, as at Lincoln."

I have marked this later wall—which I think would, as at Lincoln, be only a *town* wall, much inferior in strength and thickness to that of the castrum—on the plan of Deva which accompanies the work, as starting from St. Martin's church, at the south-west angle of the original castrum, proceeding more or less down the street Blackfriars (formerly called Walls Street), the angle (or rounded corner) where it turns to the north being a little north by east of the hypocaust found in 1886, thence proceeding slightly inside the present western wall to near Bonewaldesthorpe's tower, at that point again making a right angle, and following more or less the track of the present north wall to Morgan's Mount, where it again joined that of the original castrum. But this later wall has, I believe, utterly perished, through many successive landslips on to the Roodeye. One portion of the present line of the western wall, and a large one after heavy repairs in 1608, fell down bodily in 1609; and the numerous large items for repairs to the walls which we find named in the *Calendarium Rotulorum Patentium*, especially between the reigns of Henry III. and Richard II. (*Roman Cheshire*, p. 99), make it almost impossible for any Roman work to be found in the present structure (on the west), which, in fact, does not keep the straight Roman line.

On September 22, I wrote to Sir James Picton, advising that excavations should be made in rear of the large stones on the Roodeye. My motive for this was that I feel sure Roman work will be found behind them, probably a waterside boundary wall belonging to the villa, or a pier, or landing-place, which may also have formed the abutment of a bridge which crossed the creek, in this respect being succeeded by the above-named large stones, which have clearly been brought from a Roman

building, from the fact of Roman mortar adhering to them. Sir James took up the project warmly, and excavations are being made. The base of a wall has been laid bare, but of its nature I have not as yet had any report. I hope it may prove Roman.

There seems, however, to be a disposition to depart from the original lines of this controversy, which were:—(1) The theory which both Mr. Shrubsole and myself hold—with some slight differences between us—and which was endorsed by the Archaeological Institute last year, that no Roman work remained in the walls above ground *in situ*. (2) My repeated statements, in *Roman Cheshire* and elsewhere, that Roman work probably does exist in the walls below ground *in situ*. (3) The question as to whether the fragment lately laid bare is Roman work or not.

With regard to No. 1, as the members of the Institute still adhere to their decision, it is merely a question between them with Mr. Shrubsole and myself, against Mr. Roach Smith and Mr. Brock, as to which is right concerning the wall above ground. No new light has been thrown on this, though I infer from Mr. Brock's letters that he does not think the wall above ground, at the site of the new excavation, to be of Roman date, in this agreeing with the Institute, &c. But, possibly my inference is incorrect. The Kaleyards Mr. Brock shelves for the present. The cornice and wall by the north gate no one denies to be composed of Roman stones, but Mr. Brock has not seen behind it. (On this, see my letter in the *Builder*, October 1.) The new excavation at the Roodeye will eventually form a separate subject for discussion.

Head No. 2. I still hold and believe that Roman work will be found *in situ*, in some places in the present walls, on the north and east sides, but not elsewhere, except at the back of the Roodeye stones, which are outside the area, and are no part of the city wall. It is quite possible that a wall may extend from the back of these Roodeye stones to the massive foundation which crosses Watergate Street, some distance inside the gateway; but neither of these are the walls proper as they now exist *above* ground, and it is chiefly on this point that the discussion has arisen.

Head No. 3. is that which is now being discussed. Mr. Brock admits that he never saw the wall of a Roman castrum in Britain built without mortar, but refers to several continental examples, in which, like this portion at Chester, the walls are built of Roman tombstones, cornices, and architectural fragments. It happens that the Roman origin of these continental examples has been disputed, as even Mr. Roach Smith admits (though he considers the opposition futile). I should therefore opine that this Chester fragment could only be put by Mr. Brock in the same category as the continental portions of the walls named. Sir Henry Dryden has a very pertinent remark (*ACADEMY*, October 8) on this portion when he says, "It is certain that the builders of this part of the wall began with sculptured stones"; and again, "it is certain that it (the wall) is not, at this part, *exactly* in the position of the *first* wall. Repairers do not pull up well-laid foundations." My hope was that the original Roman foundation, resembling that of the southern wall, would have been found in this north wall, though I hardly looked for it at this spot, as it is the well-known site of the breach. I cannot understand Mr. Brock's remarks:

"During the siege were the combatants likely to have devoted much time to the unearthing of Roman stones from the spot where their battery was erected? Supposing that some were found, would the builders, after the siege was over, have been likely to cross the ditch to fetch these small

stones, when, had stone been wanted to repair the walls, there were the suburbs lying in ruins closer at hand, as well, I fear, as many a goodly building battered to pieces within the walls."

On this it may be said that, when throwing up earthworks in a cemetery, Lady Barrow's Hey, the Royalists could not avoid unearthing any tombstone that might be in their way; next, that there was no occasion to "cross the ditch," for the cemetery was within the then existing (and present) walls, which fact Mr. Brock does not seem to know; finally, Mr. Brock has seen the tombstones. I leave him to say whether they are, generally, *small* stones.

Then, again, Mr. Brock says Chester was surrounded with cemeteries which have been built over, "including even the one specially referred to"; and then remarks on the paucity of Roman tombstones found in modern times within them. Mr. Brock does not know the facts. The cemetery "specially referred to," has not been built over, but is a green field of large extent in the north-west angle of the present city; and the paucity of Roman tombstones in the extra-mural cemeteries may possibly (though I doubt it) be accounted for by their presence in the disputed portions of the wall, especially if, as Mr. Brock suggests, the suburbs were handier for getting these large stones and rolling them into position than intra-mural spots.

Mr. Brock asks whether I can bring evidence of records as to the battery on the north and east sides. I have not studied the history of the siege extensively; but, from the standard works on the subject, Mr. Brock will find that it was only the north and east sides which appear to have been assaulted and battered. The language as to where breaches were made is vague, except in the case of one. This was between the Northgate and the Water Tower, and near Morgan's Mount. Though the besieged are said to have repaired it, the statement is made that they threw up intrenchments in Lady Barrow's Hey, evidently as an internal line of defence. But it will no doubt interest Mr. Brock much more to hear that the breach near the Phoenix Tower has always been more or less known. He will find that the then mayor (Mr. C. Brown) spoke of it at a meeting of the Chester Archaeological Society, December 3, 1883; and again it was treated of by the city surveyor, Mr. J. M. Jones, at another meeting of the same society, February 4, 1884, during discussions on the very question which is the cause of this correspondence.

The "ecclesiastical" stone has produced great differences of opinion. The Rev. J. C. Bruce and Mr. Blair refer it to the Roman period; the Rev. H. M. Scarth thinks it decidedly ecclesiastical, and many architects and antiquaries take the same view, while Mr. R. S. Ferguson, without speaking absolutely, thinks it is more like a mediæval-ecclesiastical stone than otherwise. But though, if mediæval, this stone would prove the walls to be of (at least) comparatively modern origin, it will not, if eventually decided to be Roman, help to fix the date of the walls, any more than the tombstones and cornices.

Finally, the position taken up by the Archaeological Institute last year, as to nothing Roman being above ground *in situ*, remains virtually unshaken, while no work positively or undoubtedly Roman has yet been found in the buried part of the walls. It is to be hoped that by perseverance genuine Roman work may be brought to light.

W. THOMPSON WATKIN.

Chester: Oct. 17, 1887.

Mr. Brock, in his last letter (ACADEMY, October 15), asks, "Who has said that where the pig of lead was found there was the wall?" and replies for himself, "Certainly not I."

Allow me, on my own behalf, to say, too, "Certainly not I," since I am fully aware that the pig of lead was found in one place, and the wall is in another. It is Mr. Brock who sets up a man of straw, and then indignantly knocks him down. The material point to remember is that Mr. Brock's wall and the Roman relics are both found on the Roodeye, the old bed of the river, with twenty-two feet of accumulated material since Roman times.

If Mr. Brock thinks that he has found the wall of the castrum in the oozy bed of the old river, of course he is quite welcome to the opinion. In Chester we prefer to think of the Roman wall as standing at a much higher level, and on a rock foundation—a more fitting position than the bed of the river with its twenty-two feet of silt.

Mr. Brock must excuse me correcting him upon another point. Sir Henry Dryden, in his letter (ACADEMY, October 8), says, "In the part recently opened, no mortar, Roman or mediæval, *no pottery*, no coins, no iron remains were found." To this Mr. Brock, in a post-script, refers (ACADEMY, October 15): "It may be of interest to Sir Henry Dryden to know that a vast quantity of fragments of Roman pottery were found in the excavations." Upon this I remark that in his statement Sir Henry is strictly correct, and Mr. Brock in error. The point involved here is that on the outside of Roman walls there is invariably found a quantity of Roman *débris*. The absence of this in the Chester walls, as stated by Sir Henry, is evidence of their non-Roman age. Not a handful has been found in all the excavations alongside the walls. On the other hand, on the outskirts of the city, a Roman rubbish heap has been opened, and yielded a cartload of Roman pottery. Mr. Brock, not too well posted up in our local archaeology, has mixed up two things—the walls and the rubbish heap—not connected in any way. This correction I feel to be needful, since accuracy in details of this sort is of the first importance.

GEORGE W. SHRUBSOLE.

GOMME'S "ROMANO-BRITISH REMAINS."

Lancing College: Oct. 17, 1887.

May I be allowed to say that Mr. Gomme's *Romano-British Remains*, noticed on p. 257 of the ACADEMY of last week, is not a complete collection of the passages relating to Roman antiquities in England which occur in the *Gentleman's Magazine* down to 1868. I have elsewhere criticised the book and need not write at length; but I may add that, though I think Mr. Gomme's two volumes defective as an index, I am by no means ungrateful for the trouble he has taken in a very laborious undertaking. I hope some time to print a list of the passages—they are not a few, I fancy—which do not appear in his collection.

F. HAVERFIELD.

NOTES ON ART AND ARCHAEOLOGY.

MR. A. S. MURRAY, keeper of Greek and Roman antiquities at the British Museum, will deliver this year the Rhind lectures on archaeology in connexion with the Society of Antiquaries in Scotland. The subject he has chosen is "The Archaeology of Greece"; and the lectures, six in number, beginning on Friday of the current week, will be abundantly illustrated with antique specimens, reproductions, and drawings.

MESSRS. DOWDESWELL will open their new galleries at 160, New Bond Street, on Monday next, October 24, with an exhibition of drawings by Mr. Charles Gregory, entitled, "Summer Time on the South Coast, from Rye

to Penzance"—views principally made at Bye, Corfe Castle, Lyme Regis, Beer, Branscombe, Polperrow, Helford, Newlyn, and round the Lizard.

Two other exhibitions will also open next week—that of the Nineteenth-Century Art Society, in the Conduit Street Galleries; and what promises to be a very interesting collection of water-colour drawings by members of "Het Hollandsche Teeken-Maatschappij" (the Dutch Water-Colour Society) in the Goupil Gallery, New Bond Street.

THE pages of *Punch* have rendered us all so familiar with the genius of Mr. Harry Furniss as a humorous draughtsman that there is little reason to do more than call attention to the exhibition of his original drawings now being held at the Gainsborough Gallery in Old Bond-street. Here are all the wonderful designs for *Punch's* "Essence of Parliament," with the immortal caricatures of Sir W. Vernon Harcourt, Mr. Gladstone, Mr. Chamberlain, &c., in every variety of attitude and character. Here, also, is his gallery of Parliamentary Portraits, from the wonderful last appearance of Lord Beaconsfield in the House of Commons to the still recurring phenomenon of Mr. O'Brien. As an illustrator, perhaps, he is less known; and his designs for Mr. Burnand's *Incomplete Angler* and *The Comic Blackstone* testify to his sympathy with the humour of others, while they display to the full his power as a master of "black and white."

THE STAGE.

STAGE NOTES.

THE town has got a new theatre, though it has not got a new piece. Mr. Walter Emden, one of the three recognised theatrical architects—the others, of course, are Mr. Phipps and Mr. Verity—has built for Mr. Edward Terry what seems to be a model playhouse in the Strand. The place is said to be comfortable from stalls to gallery, and the decoration pretty; but what is laid the greatest stress upon is the curious immunity from danger enjoyed by those who visit it. Mr. Bright once said that upon the whole one of the safest spots in England was a first-class railway carriage. He has lived to see the day when perhaps the very safest is a model theatre. Mr. Terry's new house is built, not of brick and wood, but of concrete and iron. There is an iron curtain. Where there is any wood, it is covered with non-inflammable paint. On the roof there is every convenience for the instant application of an immense shower bath. There are doorways through which half-a-dozen Daniel Lamberts might walk easily. The famous "New Zealander," we confidently trust, is never destined to see this temple of the drama in ruins. Surveying the scene from the corner chosen for him by Macaulay—it was a broken arch of London Bridge, was it not?—he is to behold this latest monument of London, rising intact when there is nothing else that is complete. The pleasure of seeing a new house, and the relief of being at last in a theatre where fire and panic may be defied, were supposed, we take it, to make it unnecessary to present a new piece this week. At all events the genial and sunny comedian, the quaint charm of whose performances must hereafter be a chief attraction, appeared only in the familiar "Churchwarden." But a new play by Mr. Pinero is promised before long.

THIS afternoon an interesting experiment will be made at the Princess's. Miss Grace Hawthorne, the lessee—who has not yet appeared at the theatre, but whose intention to

do so in "Théodora" has often been announced—comes out in a translation into English verse of M. François Coppée's "Le Passant." "Le Passant" in Paris, was, in more than one respect, rather an "epoch-making" production. To begin with, it introduced to the public the young poet, known before then only to a very few people of letters. Then it permitted to a valiant and serious artist, Mdlle. Agar, one of the most impressive of her performances. Of all the things tragic or melancholic that she did at the Odéon perhaps her Sylvia in "Le Passant" was the most touching and the most picturesque. Then, again, in the part of Zanetto, the young minstrel for whom the heroine is at least temporarily touched, it was possible for Mdlle. Sarah Bernhardt—then in her first youth—to reveal her grace and lightness, the delicacy of her artistic method, or of her artistic nature. All these things were nearly twenty years ago, and every one has changed a good deal since then. M. Coppée is an academician. Mdlle. Agar and Mdme. Sarah Bernhardt have entered the Français and have left it. To-day Miss Hawthorne, an artist who knows her business, is, as we understand, to play Sylvia; and Miss Mary Rorke, an actress essentially poetic, is to play Zanetto. We should be very sorry to guarantee for any translation of "Le Passant" a single month's run with the English public of the vulgar gallery or vulgarer stalls; but there must be a few people sure to be interested and willing to be delighted in an experiment so rare and so creditable.

PLANQUETTE, the composer of the immortal "Cloches," furnishes the music to "The Old Guard," which is to be brought out at the Avenue on Wednesday, with a fairly strong cast. The period of the piece, as the name suggests, is of the First Empire, so that a very pretty and somewhat bizarre spectacle may confidently be looked for. On the stage, and especially with light music, nothing in the world is so effective as the dress of 1804. A little of the eccentricity of the Directory remains in it; and that is corrected pleasantly, or chastened if you will, by the dignity which is of the Empire alone.

MUSIC.

THE NORWICH FESTIVAL.

On the Wednesday evening there was a miscellaneous concert. The programme was excellent of its kind; and with Mdme. Albani, Mr. E. Lloyd, Mr. Barton McGuckin, and other well-known names, as vocalists, there was a full hall and no lack of applause. Mr. Lloyd sang a new song by Gounod, "The Holy Vision," the music being in the composer's usual fervid style; and Miss Hild a Wilson sang a new scene of Mr. Prout's, entitled "The Song of Judith," which begins in a promising manner, but ends tamely. Both were much applauded. Mr. Randegger's fine orchestra gave no less than four overtures in the course of the evening.

The second novelty, on Thursday morning—Signor Mancinelli's sacred cantata, "Isaias"—attracted a large audience, and was listened to with considerable interest. In the work are reflected—and strongly at times—Gounod, Verdi, Wagner; but since, in addition, the individuality of the composer makes itself felt, such reflections are natural, nay, desirable. Signor Mancinelli has decidedly dramatic power, and a strong feeling for contrast. Though he dearly loves chromatic and augmented intervals, he writes, at times, in quite simple strains. Sometimes his orchestra makes "a horrid noise"; but sometimes it is soft and gentle.

"Isaias" has its weak as well as its strong points. Signor Mancinelli frequently sets at

naught the ordinary laws of harmony; his writing is unequal; passages of real power are followed by others comparatively weak; and he appears to have no deep knowledge of counterpoint—the foundation of all really great work. He has, however, much to say for himself; and when time and study have toned down his extravagances and strengthened his powers, it is not at all improbable that he may fully satisfy the promise given by "Isaias." With all its originality and striking effects, this cantata has not sufficient strength to be an epoch-making work.

The libretto, written in Latin, by Signor Albini, deals with the siege of Jerusalem by Sennacherib. The English text, from the pen of Mr. J. Bennett, while reflecting well the spirit of the words, does not at all times suit the music, for words of little moment occur more than once on accented portions of the bar. The cantata opens with a short but effective prelude, based on the theme of the maidens' prayer which follows, and on a second theme which plays an important part throughout the work. The prayer itself is melodious and dignified. After a short recitative and introductory chorus, the elders relate to King Hezekiah the unsatisfactory result of their interview with the Assyrian monarch. In this chorus for tenors and basses the music is vigorous and well suited to the situation. The form of the movement, too, with its well-contrasted sections and definite return to the opening theme, is highly satisfactory. Another short recitative leads to the prophecy of Isaias. This is a long movement, and contains some fine stirring passages; but the composer would do well to shorten it, for it has the spirit, yet not the strength, of Wagner's declamatory scenes. The section marked *Adagio religioso* indeed reminds one of Wagner's "Parsifal," with a touch of Gounod's "Nazareth." After a short chorus we have a very characteristic duet between Judith, the prophet's daughter, and Anna, sister to King Hezekiah. The music is flowing and original. The closing strain is tinged with oriental colour. The chorus and prayer with which the first part of the cantata concludes is one of the strongest numbers: the music is broadly conceived, and is worked up to an imposing climax. The story, taken from the Talmud, here represents the maidens, with Anna and Judith as leaders, passing out of the gates of Jerusalem as a new embassy to the foe. The people, struck with wonder, bid them godspeed. Part the second opens with a prelude quiet and dreamy. The king and the prophet at the foot of Mount Zion are engaged in earnest conversation. The music is appropriate, and the orchestration exceedingly effective. The maidens return, and sing in quaint strains of their deliverance from the Assyrians. Anna, in a very dramatic solo, tells of the insolence of the pagan monarch and his warriors, and how deep sleep suddenly fell upon all the camp, so that they were able to escape. Then comes a tone-picture of the destruction of Sennacherib's host. This is the least successful portion of the cantata. The composer had, in truth, a difficult task; but even if he could not give an adequate description of the terrible event, he ought to have given us an interesting piece of music. But it is sound with little sense. The orchestral effects, although they show a certain amount of cleverness, are tawdry. The movement reminds us of Liszt at his weakest. A weird solo for Sennacherib in 7-4 time (suggested possibly by Herod's air in Berlioz's "Enfance du Christ") leads to the final chorus of rejoicing. This second *finale* is powerful, though not equal, in our opinion, to that of the first part.

Mdme. Albani did full justice to the soprano music, and Miss Lena Little was highly satisfactory in the contralto part. The composer

was indeed lucky to have Mr. Barton McGuckin (Hezekiah), Mr. Alex Marsh (Sennacherib), and Mr. Barrington Foote (Isaias)—three vocalists capable not only of singing difficult and, to a great extent, thoughtless parts, but also of delivering them with intelligence and power. Mr. Foote, as the prophet, was the most heavily taxed, and acquitted himself admirably. Chorus and orchestra deserve much praise. At the close of the work Signor Mancinelli received an ovation. His cantata ought certainly to be heard in London.

The morning programme concluded with Cherubini's Fourth Mass in C, conducted by Mr. Randegger.

On Thursday evening Sir A. Sullivan's "Golden Legend" filled the hall. The concert commenced with Dr. Stanford's "Irish" symphony; but the performance was to some extent spoilt by late comers, for whom apparently the "Golden Legend" was everything, and an instrumental work by one of our best English composers, nothing. Dr. Stanford conducted, and was well received. The performance of the "Golden Legend" was, on the whole, satisfactory. The composer, in spite of severe indisposition, conducted. The soloists were Mdme. Albani, Miss L. Little, and Messrs. Lloyd, Santley, and Alec Marsh. The Norwich choir was at its best.

On Friday there was a performance of "The Messiah" in the morning, and of Berlioz's "Faust" in the evening.

This twenty-second Norwich Triennial Festival has, all things considered, been an artistic success. Of the two novelties, one has introduced to the musical public a composer who may one day accomplish great things. Signor Bottesini's oratorio, though less original than "Isaias," may find ready acceptance by small societies. The Norwich choir, among festival choirs, still stands low in the scale; but vigorous pruning and careful selection may improve it in the future. To Mr. Randegger all praise must be given for the care and patience shown by him at all times. The orchestra, too, with its excellent *chef d'attaque*, Mr. J. T. Carrodus, well deserves its share of commendation.

J. S. SHEDLOCK.

MUSIC NOTES.

MASTER J. HOFMANN appeared at the first Crystal Palace concert two weeks ago. Having frequently noticed his performances last season, it will be sufficient to say that, in Beethoven's concerto in C minor and in some short pianoforte solos, he played wonderfully, and excited the greatest enthusiasm. In the first movement of the concerto he showed a certain excitement which we had not before noticed. The little fellow seemed more anxious than when passing through the severe "Philharmonic" ordeal. The programme of the concert included a concert-overture, by Mr. G. J. Bennett, a well-written work and of considerable promise.

MASTER J. HOFMANN gave two recitals at St. James's Hall on Monday and Saturday, October 10 and 15. The hall was crowded on both occasions, and his playing was astonishing. In Beethoven's Sonata Pathétique and Chopin's Nocturne in E (Op. 62, No. 2) he could not do full justice either to the composer or to himself. Handel's "Blacksmith" variations, however, were given too much *à la Rubinstein*—too fast, and not always clear.

LAST Saturday afternoon, at the Crystal Palace, Herr Waldemar Meyer, an excellent violinist, played a Vieuxtemps concerto and some solos, and was well received.

SATURDAY, OCTOBER 29, 1887.

No. 808, *New Series*.

LITERATURE.

Myth, Ritual, and Religion. By Andrew Lang. In 2 vols. (Longmans.)

THE reader must not expect an impartial notice of this treatise from a reviewer long prejudiced in favour of its purpose. It aims at proving that a main origin of myth, involving no small share of the beliefs and rituals of the world, is to be sought in early stages of human knowledge, going back to rude and ancient savagery. Thoughts which among uncultured tribes were consistent with common opinion, and, indeed, were often childish attempts to account for the phenomena of earth and sky, and the ways of birds and beasts and men, were kept up and carried on into higher civilisation, till, their old simple sense forgotten, they passed into sacred traditions and mysteries. While enforcing this theory with all his might, Mr. Lang is anxious to show that he is propounding no new doctrine, but one which wise men have declared for ages. Confucius claimed to be, as he said, like "our old Pang," a transmitter and not a maker of wisdom; and even so Mr. Lang goes back for authority to the Fathers of the Church. Some passages of Eusebius of Caesarea in the *Evangelical Preparation* are certainly to the purpose, describing the early wandering beast-like life of men, and how they made divinities of the sun and stars, and worshipped the ghosts of the dead, till, in times of wider knowledge, the philosophers, though not daring to touch the time-honoured legends of their ancestors, devised for them physical and moral explanations. One wonders whether Eusebius himself was an old Pang, repeating the wisdom of some still earlier sage, and whether fifteen centuries later Fontenelle was doing the like in his clever essay *De l'Origine de Fables*, which Mr. Lang reminds the world of in an appendix on "Fontenelle's Forgotten Commonsense." The witty academician touches off point by point a whole scheme of rational mythology: the Greeks told such incredible and revolting legends because these were inherited from men of almost inconceivable savagery and ignorance; the incidents are monstrous, because these savages were in a state to see things which did not exist. Men of old were already curious about the causes of things, though their rude philosophy was easily satisfied with such explanations as that a river flows because there is somebody always pouring it out of a jug. Fontenelle knows of the supposed transformation of animals and the actual transformation of words as sources of myth, and even sweeps away with a neatly turned sentence the difficulty some students feel in treating the Iroquois and Kafirs as representatives of early men, notwithstanding

that they have as many ages behind them as we have. Nowadays there are more exponents of the development theory of myth, and the question is who shall prove it with the most convincing evidence. For instance, one of the makers of modern anthropology, Prof. Bastian of Berlin, took it up in an early book of travel (*Afrikanische Reisen*, 1859), where he scoffs at the modern student striking a lucifer to light his lamp, and spreading out his classics before him to trace Hephaistos into Pthah, and work out the comparison of Vesta, Behram, and Agni. This, Bastian argues, is beginning the study of fire-worship at the wrong end. We ought to get our minds back from this age of lucifer-matches to the times when fire-making, difficult even to some modern tribes, seemed an actual miracle, and the Fire himself a kindly deity guarded by his priests in his temple for the good of man.

No one sees more clearly than Mr. Lang the need of bringing his readers' minds to bear on myths from the point of view of ruder ages when myths were reason and even philosophy. To this end he collects (vol. i., p. 91) examples of black men resisting attempts to displace their native myths by white men's science. Thus

"Lient. Haggard, R.N., tells the writer that during an eclipse at Lamoo he ridiculed the native notion of driving away a beast which devours the moon, and explained the real cause of the phenomenon. But his native friend protested that 'he could not be expected to believe such a story.'"

Indeed, we see by the world-wide distribution of the eclipse-monster that he is to the minds of barbarians as easy to imagine as our physical astronomy is difficult. These children of nature can receive with childlike faith the most unpractical stories when founded on a real underlying idea. Mr. Lang (p. 170) mentions an Australian story of the jay who had many bags full of wind, and when he opened them he blew Pund-jel the Creator up into the sky. This Aeolus-myth of course comes from the fact, still delightful to children, that one can keep wind in a bag and let it out. So with the Brazilian myth of the Night-bringer (p. 127). There was endless day till the serpent sent night to his newly-married daughter. It was bottled up in a gourd, and the messengers were to keep it close till they arrived; but they were curious, and opened the gourd and let the night out prematurely. Of course they did, for such a bottle is always full of night till one pulls out the stopper. These stories may be said to be qualitatively rational. It is only quantitatively that they fail, and they serve as explanatory theories of the nature of wind and night. A good remark of Mr. Lang's (p. 49) touches on the reason why so many nations have legends telling what brought "death into the world and all our woe." He refers their origin to times when popular physiology had not yet learnt that men must die, even if not killed; and there still prevailed

"the notion that 'natural deaths' (as we call them) are always *unnatural*, that death is always caused by some hostile spirit or conjurer. From this opinion comes the myth that man is naturally not subject to death; that death was somehow introduced into the world by a mistake or misdeed is a corollary."

Mr. Lang seems less successful in his

attempt to distinguish between rational and irrational elements in mythology. Thus, in the religion of the Vedas, he takes as rational the idea of Indra, lord of Thunder, borne in his chariot; but the same Indra turning into a quail or a ram, getting drunk with *soma*, and otherwise misbehaving himself, seems to him irrational. But if he put the decision to a modern student of physics and physiology, he might probably hear the opinion that both the turning into a ram and the making thunder and lightning were difficult to imagine, but the drunkenness and debauchery a comparatively natural detail.

Most of the points here touched upon are preliminary to the main work of the book, which lies first in describing the lower mythologies, and then showing by a multitude of examples that the mythologies of the Hindus, Greeks, and Romans are of the same stuff, only less clear by lapse of time, and more artistically dressed. Of all modern writers on mythology Mr. Lang has taken up the strongest strategic position; for when he has settled the general analogy of myth-types he need only go so far as he can see his way in the myth-interpretation, which has lured on many a scholar to his harm. Prof. Tiele is quoted here as laying down for himself the rule, "I shall explain what I can, but I cannot explain everything." This sounds reasonable; but after reading his interpretation of the bringing-up of Zeus in Crete we wonder how there can be anything he cannot explain. It runs thus:

"In conformity with his nature, Zeus is fed with the honey of the bees that nest in the cave of Ida (the stars of night) and with the milk of the she-goat Amalthea (the moon), that is to say, with light."

Far from giving free rein to his fancy in this way, Mr. Lang is, for a mythologist, very cautious, and, in fact, keeps closer to Prof. Tiele's maxim than that learned scholar himself does. He is ready to devise or accept an explanation if it seems convincing, whether it be naturalistic or etymological, and he has even a word to say for euhemerism now that it is down. But with him the actual interpretation of a myth is secondary, and the proof that it has come on from lower culture is primary. He is not bound to tell the origin of Artemis, but wishes to make it clear that her connexion with the bear-myth of Callisto takes us back to a period when men's ideas as to transformation into beasts or constellations were like those current among Australian or Californian natives now, while the bear-dances of the Athenian girls kept up savagery in the age of Pericles. Demeter, whether as Earth-goddess or Harvest-goddess, is the same mother-earth as ruder tribes know and pray to still. To understand the story of Persephone, it is well to read the myth of the Maoris about the food of the dead, which the living cannot taste of and return to earth. But such a course of argument, to be followed properly, must be taken at large in the work itself. Considering how great a share of education is devoted in England to classical mythology, books ought to be welcome which give some notion of its real meaning. This one, to borrow a title from the author's favourite predecessor, will do service as a "Mythological Preparation." E. B. TYLOR.

Lady Hamilton and Lord Nelson. By John Cordy Jeaffreson. In 2 vols. (Hurst & Blackett.)

In his preface Mr. Jeaffreson claims a twofold purpose for this biography of Emma, Lady Hamilton. He has aimed, he tells us, at combining entertainment for readers in general with serious historical research for students who are more especially interested in the subject. As a whole, the result is highly satisfactory, since, without depriving his volumes of their more attractive character, the author is enabled to give us much new light on his heroine's character; and, at the same time, in dealing with controversies which have had their defenders and opponents during the last forty years or so, he has analysed and dissected the rival theories with skilful care. By access gained to a long series of letters containing, with all their laughable weak points in orthography, so much new and graphic detail about the life of Lady Hamilton, more particularly during the time that she lived at Naples, her latest biographer has earned the hearty thanks of all students. These documents belong to that striking collection of MSS. owned by Mr. Alfred Morrison, of Fonthill, Wiltshire. Some three or four years back Mr. Jeaffreson reported upon them officially for the Historical MSS. Commission; and to them he declares, on his credit as a record-expert, no sort of doubt of authenticity belongs. Only about half a dozen letters relating to Lady Hamilton were printed in his official account; now we have before us more than a score. With the help of these interesting fragments of autobiography we are glad to say that Lady Hamilton's character stands out in bolder relief than it has hitherto done, and is better able to bear the strong light brought upon it by that rigid examination which our critical schools of to-day demand.

From the very opening of her existence Lady Hamilton surprises us with mystery. Thus, all previous writers have assigned Emma Lyon's birth to Preston, in Lancashire, in reliance on her own statement to the Heralds' College and on Mr. Calton's copy of her death-register, which he found in the municipal records of Calais. But Mr. Jeaffreson now proves that these were altogether incorrect, when he prints a certificate of baptism of May 12, 1765, which she herself obtained from the parish register of Great Neston in Cheshire. In a township of that parish, Nesse by name, she was born on April 26 of some year in the earlier part of the sixth decade of last century. As yet, enquiry has been baffled in its effort to fix the precise year. Once, however, that the place of birth has been settled, we may hope that by the aid of local research further facts may be brought out as to the year of birth. Mr. Jeaffreson assumes 1763 as not unlikely; but in suggesting the possibility of a year or two earlier, he does not refer to the date of 1761, given in the opening pages of the Hamilton Memoirs. True, it is utterly without the support of any quoted authority; but even thus, is it not worth considering? As for our author's conjecture (ii. 137), by which he partly seeks to explain how it was that Emma thought of using Preston as her birthplace, viz., that she had an idea of connecting her family with that of the founder

of Harrow School, we must say that it seems far-fetched and unlikely in the extreme.

In dealing with Emma's early career, Mr. Jeaffreson doubts whether Capt. John Willett Payne, R.N., was really the father of her first child and the primary cause of her straying from the highway of womanly rectitude. His argument for this point of scepticism is not a convincing one, and we incline still to belief in the accepted version of the story, and would place it in 1780. But in the matter of Emma's having assisted that quack Dr. Graham, by personifying the Goddess of Health at his once famous lectures, our author gives us strong assurance for crediting the main fact while rejecting any innuendoes of indelicacy thrown round it by busybodies and scandal-mongers. Passing on to her life with Mr. Greville, we find that previous biographers have been led astray as to dates. "Instead of living with Mr. Greville for six or seven years, she lived with him for barely four years"—1782 to 1786; and this short period proved a happy one for her. Her many letters to her "dear Greville" attest this, written as they are in terms of true affection; and correspondence was kept up between them almost till the year of Greville's death. But to all her repeated manifestations of love, Greville returned a cold, calculating admiration too much akin to the pride of a connoisseur over one of his choice works of art. Mr. Jeaffreson writes, *apropos* of one of her letters from Parkgate, a bathing-place in Cheshire, where she spent several weeks in 1784:

"Possibly, some readers may concur with me in thinking the entire letter countenances a rather strong opinion that, if Mr. Greville had loved this beautiful young woman as much as he admired her, and had married her in 1784, she would have been a true wife to him till death parted them, and might perhaps have lived to be more highly honoured for her goodness than she ever was honoured for her beauty."

Most readers, we think, will agree with the author in the above opinion, when they have read through the story of the negotiations by which Emma Hart was handed over by Greville to his uncle Sir William Hamilton, and the repeated letters of pathetic appeal that she wrote from Naples to Greville, because he vouchsafed her only one or two vague communications. Her biographer points out to us that

"she had not the faintest suspicion, nor the faintest glimmer of a conception, of the real purpose for which she was being sent out of her native country to a far-distant land."

She had, indeed, known and liked her future husband in London in 1784, when she usually called him "Pliny," while he, in return, spoke of her to his nephew as "the fair tea-maker of Edgware Row." But she still loved Greville well, and several months passed before she realised what her future was intended to be. A specially indignant letter to her late protector (i. 167) requires the earnest attention of anyone who holds a righteously (as he thinks) strong unfavourable opinion of her character. Greville's repellent behaviour to her caused her affectionate nature to throw itself where he had designed it should do so. In 1787 Emma had transferred her affections wholly to her former "Pliny"; and four years later she

obtained the matrimonial position long sought for, but long denied.

Thenceforward Lady Hamilton's character changed. Her position as ambassador's wife, Queen Maria Caroline's attachment to her, the famed beauty and talents with which she was naturally endowed—all these acted on the warm temperament of a woman who had passed through ascending grades of society too quickly to be able to maintain a balance of judgment in matters of weight. She became an instrument of communication between the Queen of Naples and the British ambassador, and wrote to Greville in London asking for political news for Maria Caroline. Sir William's health had begun to fail, and she relieved him from much of the work of interpreting for British naval officers. Thus she came into contact with Capt. Horatio Nelson in 1793. Two years later she was transmitting secret intelligence of Spanish affairs to England; but Pettigrew's account of the part she took in announcing an open rupture between Spain and England is, perhaps, rather too loosely worded for full acceptance. She clearly intimated at that time how important she deemed her services had been to the British Government (i. 317); and this fact needs to be remembered, when we consider her claims in later years for a pension.

The much-debated question whether Lady Hamilton contributed to the annihilation of Brueys's fleet in Abukir Bay, by enabling Nelson's squadron to water and victual at Syracuse, is dealt with in detail by Mr. Jeaffreson. He has, indeed, added a supplementary chapter, in order to combat Prof. Laughton's views on the Syracuse question and on the Horatio controversy. Mr. Jeaffreson places before his readers a clear statement of the difficulties that surrounded the "Fountain of Arethusa" letter; and he contends, with reasoning both close and exhaustive, that letters from Naples to the governor of Syracuse probably *did* procure Nelson facilities in obtaining supplies, and that they *might* have included the queen's order mentioned by Pettigrew. He points out that Prof. Laughton's fiat of destructive criticism is hardly justified by searching examination of the internal and external evidence of the "Arethusa" letter. The "laurel and cypress" ending of this disputed letter was not only used by Nelson to Sir W. Hamilton in a letter a month earlier, but had been written by him in 1797 to Sir John Jervis just before the ill-fated night attack on Santa Cruz de Tenerife. The classical allusion, as Mr. Jeaffreson remarks, would be derived from Sir W. Hamilton; and the assured feeling of victory is in harmony with what we know of Nelson's character. At best, Mr. Laughton's flat contradictions and "palpable forgery" only amount to discrepancies which we cannot yet hope to explain, and to a suspicion of genuineness. Here we agree with Mr. Jeaffreson; and even those who differ from him will surely be grateful for so masterly a comparison of the documents bearing on this question.

Of events at Naples and Palermo during the critical year 1799, the author treats at length, disputing his ground almost step by step with Alison, James, Southey, Brenton, and other writers, in defence of Lord Nelson. On poor Southey Mr. Jeaffreson is over hard

pouring out the vials of his wrath in language "which o'erleaps itself." He will not hear of a word of slander against the hero of Trafalgar up to the time of what he calls "a grave and lamentable misadventure" that happened in 1800. The pack of lies and abuse which surrounded the names of Nelson and Lady Hamilton have been rightly exposed and disposed of. But in strongly denying accusations that Lord Nelson ever neglected duty for pleasant dalliance in the company of a woman who fascinated him as much as his character attracted her, we are liable to forget how more and more the dangerous mutual adoration was growing. Lord St. Vincent had written to Lady Hamilton herself in October 1798, warning her not to let the fascinating Neapolitan dames approach too near Nelson, "for [he added] he is made of flesh and blood, and cannot resist their temptations." This, perhaps, was playful compliment; but under the stream of gossip which circulated through the Mediterranean fleet lay that fact which broke the charm of Nelson's later years.

Mr. Jeaffreson attributes the "incident" that resulted in Horatia's birth to the Malta trip on board the *Foudroyant*, and speaks of it in plain language as Lord Nelson's "first error . . . a mere momentary frailty." Such a phrase will be open to question, when we consider the two other people who each in turn suffered for this "frailty." Poor Lady Nelson, with faults no doubt, deserves truer sympathy than is usually allowed her. Sir William Hamilton, too, in his last year or so of life, was far from happy, as our author proves by a curious document (ii. 252-3), the following extracts from which give some gist of its importance:

"I have no complaint to make, but I feel that the whole attention of my wife is given to Lord Nelson and his interest at Merton. I well know the purity of Lord Nelson's friendship for Emma and me. And I know how very uncomfortable it would make his Lordship, our best friend, if a separation should take place, and am therefore determined to do all in my power to prevent such an extremity, which would be more sensibly felt by our dear friend than by us. . . . I am fully determined not to have more of the silly altercations, that happen too often between us, and embitter the present moments exceedingly. If really we cannot live comfortably together, a wise and well-concerted separation is preferable; but I think, considering the probability of my not troubling any party long in this world, the best for all would be to bear those ills we have rather than fly to those we know not of. I have fairly stated what I have on my mind, there is no time for nonsense or trifling. I know and admire your talents, and many excellent qualities, but I am not blind to your defects, and I confess having many myself. Therefore let us bear and forbear,

"For God's Sake."

His own death shortly after fulfilled the separation which the aged diplomatist thus hinted at so sternly. He knew nothing of Horatia's birth, nor of Nelson's letter to Lady Hamilton of March 1, 1801, addressing her as "my own dear Wife, for such you are in the eyes and in the face of heaven"; and happier was it for him to die in ignorance of these matters. As for the array of arguments which Mr. Jeaffreson produces to disprove Prof. Laughton's view that Lord

Nelson's attachment to Emma Hamilton never amounted to adultery, we can only find space to say that the former takes up a position so strong that, without the springing of a mine of new documents, successful attack seems a long way off.

The last four chapters of this work display the sad picture of extravagant expenditure, increasing debts, detention within the rules of the King's Bench, flight to Calais, and the close of a career that calls for more pity than scorn. Mr. Jeaffreson tells us succinctly what Lady Hamilton's financial position was after the deaths of Sir William and Lord Nelson. He corrects Pettigrew's perverted account of Earl Nelson pocketing Nelson's last codicil written on the immortal October 21, and declares that Lady Hamilton did not deserve the pension she applied for; and that even if she had received it could not have been able to stave off her evil day of financial shipwreck. We have thus followed, under Mr. Jeaffreson's guidance, the rise, decline, and end of a singular character and career, and have seen its varying phases of light and darkness. His pages contain a strange mingling of virtue and its contrary, of womanly tenderness and proud yielding to flattery, celebrity, and self-assertion. After all, we can say with the author as he closes his biography, "she was, upon the whole, far more sinned against than sinning." It only remains for us to compliment Mr. Jeaffreson upon the reliable, painstaking, thorough way in which he has dealt with the story of Lady Hamilton, without offending the moral sense of his readers. GEORGE F. HOOPER.

Lotus and Jewel. By Edwin Arnold. (Trübner.)

THE twenty-one peoples who occupy the vast peninsula that we call "India" are so remote from us in every respect that it is sometimes hard to realise how much human nature we have in common with them. We owe, therefore, a grateful appreciation to a writer like Mr. Edwin Arnold, who devotes himself to showing the community of thought and feeling that exists between two countries which fortune has so strangely brought together.

The European in India, when he sallies forth in the cool of the morning to take his needful ride, passes through the streets already alive with the stir of early occupations. The chintz-stamper has brought out the cot on which he has passed the night, and begun to impress his simple patterns upon the cloth there stretched out. The rice-husker is at work with his pestle, and the confectioner has fastened his viscous wares upon a hook from which he is busily pulling threads of spun sugar. The money-dealer has got out his scales and his account-books stitched in dull crimson calico. The *ásán* is sounding from the roof of the mosque; and the Bráhman, in full canonicals of napkin and twine, is pouring water over the phallic emblems in front of his temple. Out in the fields the bullocks are patiently turning round the well, and the perfunctory boys are waving slings, with hoarse outcries, on *macháns* elevated above the crops in the fields. Through such a motley scene the Anglo-Indian saunters or scampers on his half-broken hack, thinking of the daily labour before him, hardly noticing

and not at all comprehending the manifold and ancient forms of life around. To understand that, indeed, requires both a knowledge of history and a sensitive intelligence. It is a fusion of old, and less old, with very little of modern civilisation; yet it is by no means savage. The simple, contented, habits are survivals from a distant past, before the Aryans had come down from Central Asia. The Hindu temple contains germs of the nature-worship of the first invaders; the mosque tells of Tartar conquest.

It would not be correct to say that Mr. Edwin Arnold's Indian poetry is steeped in such a colour. We trace the Bombay professor and the kindly, observant tourist; but we do not find either the accurate scholar or the man of prolonged and profound local knowledge. The scholarship, it may be surmised, is hardly up to the mark of Sir Monier Williams and the pandits of philology; while the social attitude is—to put it courteously—metropolitan. The Sanskrit slokes—even to a smatterer—appear diffusely and vaguely rendered; and false quantities are not absent. For example, the penultimate of "Draupadi" is scanned sometimes short, but also sometimes long; while the final syllable of "Yudishtiv" is always lengthened; as is also the *u* of Arjuna. Such a line as the following,

"Al hamdu wa al manat Lillahi,"

strikes one as not only poor prosody but bad Arabic.

Still, when all this hypercriticism has been recorded, it remains a pleasant duty to acknowledge that the book is full of charm. The first poem is an idyll, in the best manner of Mr. Browning, describing the meeting of a European visitor with a priest and a dancing-girl; and it is appropriately entitled "In an Indian Temple." The visitor applies to the priest for instruction in the meaning of the mystic "OM," (spelt "Om" by the author). In the midst of the lecture breaks in the dancer, Ganga, picturesquely described as

"A feather, blown
From peahen's neck at pairing-time."

This young lady—who is understood to be amiable and cheerful, though otherwise no better than she should be—plays upon the entire meeting the ceaseless fountain of her interruptions, many of which are models of lyric grace, and ends with a cry of "Salaam," never used (surely) at parting, least of all by Hindus. The next division of the book is called "A Casket of Gems"; and in this, by a pretty fancy, the poet supposes himself to be handing to a lady named "Fanny Maria Adelaide" the various jewels whose initial letters form those words. The folklore of the various stones is very agreeably blended with well-told stories; and, taken as a whole, this may be pronounced at once the most artistically wrought and the most originally conceived portion of the collection under notice. The verse is uniform but sweet, the quatrains of what may be called "English Elegiacs"—consecrated by Gray—are of sound workmanship and musical rhythm. Such a stanza as the following may be taken as a fair sample:

"Either the Universe is Chaos, Chance,
Or else the Universe is Order, Law;
If that—die! and let pass the drunken dance;
If this—live! and rejoice in love and awe."

To these pretty pieces succeed "Other Poems," all graceful, and some striking. The volume terminates with some translations from the Sanskrit, of which by far the most remarkable is the extract from the Mahábhárata, called by Mr. Arnold "A Queen's Revenge." If the first idyll was in the manner of Mr. Browning, the last will remind many readers of Lord Tennyson, whose quasi-dramatic detachment and echoes of Shaksperian blank verse are often most happily reproduced. Sometimes, however, the metre falters; and the best-intentioned reader would probably find the scansion of a few of the lines beyond his faculty. Take these examples:

"None might believe. Presently it befell."
 "Is Kichaka, not old Viráta."
 "To wear armlets and ear-rings, and to sit."
 "From under Kichaka, so that both fell."

It is a pity that such technical blots should have been let fall—evidently by mere carelessness—on these pretty pages. All the bad feelings, towards one another, of various races are traceable to ignorance. Mr. Arnold brings to the task of our instruction a lively fancy and a sympathetic mind; and the well-known literary skill which governs the use of these gifts only requires a little more use of the file. As it is, his Indian poetry is the only thing of the kind with which the English-speaking public will have anything to do; and both that public and Mr. Arnold himself may be respectfully congratulated on a fresh and most delightful opportunity of studying Indian thought and Indian feeling.

H. G. KEENE.

Mohammed Benani: a Story of To-day.
 (Sampson Low.)

IN a detached slip, intended, we presume, to temper the anonymity of its title-page, the reader is informed that this volume is "by an American gentleman resident in Tangiers, who lately went to Washington to expose the cruelties existing in Morocco under the protection of the American flag"; and, furthermore, that the Sultan "has, in consequence of these representations, demanded an entire abolition of the *protégé* system throughout his dominions."

To anyone familiar with the social history of the old Moorish town opposite Gibraltar, the first portion of this statement is altogether superfluous. For the best part of two years the events narrated in the book, under the thinnest guise of romance, have been the theme of endless squabbles and recriminations. They have parted old friends, and reconciled old enemies. They have filled the consular courts with suits more personal than important; and if gossip does not lie, some of the aftermath of the quarrels arising out of the incidents are likely before long to occupy tribunals more distinguished than that to which they have hitherto been confined. They have given rise to pamphlets, blue books, and even to the play of black-thorn shillalags! It requires, therefore, no great penetration to see that the author is Mr. Ion Perdicaris, who figures as Ivan Paulovitch; that Lazariah is Larache; Tingizirah, the "City preserved of the Lord"; and that El Makamah is the writer's beautiful residence of El Mínzah, which is so pleasantly remem-

bered by the many visitors to Morocco who have shared its graceful hospitality.

The first part of the scene is laid in Africa, the second in Russia. Russia is, of course, the United States, and Warsaw, Washington; while under the name of Count Mazenoff it is easy to recognise Colonel Matthews, the late Consul-general of the United States in Morocco, and Baron Jasperotti, his son Jasper; while M. Porteroff, the Under Secretary, is Governor Porter of the Department of State. It is also easy to fix upon Sir Richard Burvil, an Eastern traveller, Major Roville, Lieut. Werner, Commander Coffinski, Col. Maeder-mott, Sir James Drummond, M. Oreille, Eltomah, El Zenagi, and Frank Weston, and to determine the personalty of Mohammed Benani, the nominal hero of the novel. In reality, however, the actual heroes are Mr. Perdicaris and the American representative, Col. Matthews; and the story is a slender peg on which to hang their widely divergent views regarding the abuse of the *protégé* system. All the other characters are mere lay figures. They appear when wanted, and are propped up to speak their pieces in the interest of the *motif*, which seems to have been the sole object in writing this book. But they are not very interesting people, with their dialogues composed of bits of blue books, and their speeches which remind us of nothing so much as pamphlets chopped into chunks, or a leading article distributed among the party.

The abuses exposed in the volume are, however, so crying that they would appeal to any thinking man, even without the adventitious aid of being embodied in the pages of a novel. Whether the Sultan has been led by Mr. Perdicaris's interposition to demand their redress is not very clear. In truth, they have all along been a sore point with Muley Hassan; and the feeling is gathering in Tangier that the time has come when, in fair play to him, they might be abolished without any serious danger to European trade. By treaty every consular officer and diplomatist is entitled to so many native servants, who are not under the jurisdiction of the Moorish Government, while every merchant not a subject of Morocco can demand to have his "semsars" or agents travelling in the interior withdrawn in like manner from the native authority, which we fear means, in too many instances, the native extortioner. But within the last few years the system has grown into a gross abuse. Protections have been granted wholesale; and in too many instances the granting of these exemptions from the liabilities of a Moorish subject has been made the means of extracting money from the *protégés* by the petty vice-consuls, many of whom eagerly compete for their posts with this object in view. The result has been that the buyers do their best to make profit out of their purchases by oppressing their fellow countrymen less fortunately situated. Claims are manufactured and enforced by the consular Powers, through the hateful machinery which the Bashaws have always at their disposal, until "protection," which was originally intended to be a humane means of enabling commerce to be carried on without the interference of a barbarous government, has become

"a mechanism which grinds not grain, but human creatures between the upper and nether stones of Jewish and Moorish oppression—

awful mills to which the placid breeze of Consular support imparts continuous motion."

This scandal *Mohammed Benani* illustrates, often very forcibly, and generally without exaggeration, though we do not pin ourselves to vouching for every incident in the volume having occurred, or even being possible. There are a stag hunt, a boar hunt, and a mesmeric scene. There are a hero and heroine, a lover or two, and a villain. But they are for the most only "walking ladies and gentlemen," and are, we daresay, not intended to play a very leading part in this drama with a motive. At all events, their doings will not concern anyone who is not acquainted with the originals, or who does not, in the language of one of them, believe that the most lucrative business in Morocco is "running a legation." That Mr. Perdicaris has written this book with the best of intentions is unquestionable. That he has done well to expose an abominable system which has done much to disgrace European and American civilisation in Morocco, and retard the progress of the country, is equally undeniable. For this he deserves well of humanity, and is certain to obtain a hearing at a time when the daily papers are so busy with the affairs of Morocco. But that he has been well advised to chose a story as the proper medium for doing so is a point upon which his friends will not be so generally agreed.

ROBERT BROWN.

Gnosticism and Agnosticism, and other Sermons.
 By G. Salmon. (Macmillan.)

THE plan adopted by Dr. Salmon for at least the second time of naming a volume of sermons by the sensational title of one of the group is not to be commended. *Gnosticism and Agnosticism*, like the *Non-Miraculous Christianity* of his previous collection published a year since, cannot be regarded in any sense as describing the general contents of the volume. Doubtless "and other sermons" is added in both cases; but the leading title-giving discourse—the bell-wether of the flock, so to speak—proclaims itself in large capitals; while the other sermons are announced in type of a less imposing magnitude. This arrangement, however admirable as an advertisement, is calculated to induce a feeling of disappointment in the unwary buyer. He invests, e.g., in *Gnosticism and Agnosticism* in order to see how one of the leading questions of the day is treated by a well-known and esteemed author, and finds that the attractive title belongs only to a single sermon, and that the interest of the book is for him exhausted in its first twenty-three pages. He discovers, in other words, that all his particular big strawberries are merely a few on the top of the basket, and that the bulk does not correspond with the sample. The case would have been different if the "other sermons" as well had dealt with questions related to or suggested by the first; but, for the most part, they do not. They are discourses on ordinary subjects, doubtless all worth consideration, and some of them handled with greater ability than the leading sermon, but still without any direct relation to the ostensible theme of the volume.

Inasmuch, however, as Dr. Salmon has chosen to put his "Gnosticism and Agnos-

ticism" in the fore-front of his collection I cannot in courtesy do less than follow his example, and accept it as indicating the general tone of the book and the treatment bestowed by its learned author on religious questions of a similar kind. And first, I may say, taking the volume as a whole, that it is characterised by sterling qualities. All the sermons alike are marked by genuine feeling, and evident sincerity of purpose. They maintain an uniformly high tone, both spiritually and ethically. They are clear and impressive in style, and, accepting the author's standpoint, well reasoned in argument. Without being particularly striking, the illustrations are generally well chosen and happily applied. On the other hand, they are deficient in vigour and originality. They lack intellectual fibre and philosophic breadth. They are models of calm equable professorial dissertations rather than of creative power or true pulpit eloquence. They have little of the fire, spontaneity, and unctious for which we are accustomed to look in Irish preachers—the qualities, *e.g.*, which rendered Professor Archer Butler's Sermons models for all succeeding time.

Turning now to the leading sermon of the book, its title is evidently suggested by its polemic with the mode of thought known as Agnosticism. Whether, excepting for the sake of the alliteration, Dr. Salmon did wisely in choosing Gnosticism as its opposite may well be open to doubt, the term having long been exclusively employed to designate certain sects of the early Church. He would have done better to have chosen a term by which the lineal descendants of those seotaries—those who share their chief characteristics—are best known in the present day. Who these descendants are he himself intimates in his account of Gnosticism (p. 6):

"The adepts in this philosophy claimed to be *par excellence* Gnostics. They *knew* when simpler Christians must be content to *believe*."

In other words the present-day successors of the ancient Gnostics are Dogmatists—those who for whatever reason propound articles of Faith as conclusions of demonstrable and infallible knowledge, and who by their unwarrantable and arrogant omniscience are responsible for much of the Agnosticism that exists.

But leaving Dr. Salmon's nomenclature, his classification of thinkers into Gnostics and Agnostics is much too trenchant and arbitrary to meet the facts of the case. Like the division of mankind into good and evil, its exceeding simplicity is purchased at the expense of veracity. It ignores the various shades both of Gnosticism and Agnosticism. It says nothing of the qualified Dogmatism which is content to accept articles of faith on grounds of probability, or of emotional as distinct from intellectual conviction; nor, on the other hand, of the modified Agnosticism, which is purely a position of non-affirming, non-denying suspense. His polemic is waged against extreme forms of the two classes, especially against Agnosticism taken in the sense of Dogmatic Nescience. Of thinkers of the latter type—Atheists, Infidels, &c.—Dr. Salmon's criticism is at once obvious and unanswerable: *viz.*, that "Agnosticism is the most arrogant form of Gnosticism." He might have added that, in a world constituted as

ours is, the merely denying spirit—"der Geist der stets verneint"—is of all others the most unjustifiable; and Dr. Salmon hits a patent blot on much of our current philosophy and science when he thus calls attention to its dogmatic Negation. But his argument not only leaves untouched, it is absolutely untrue of Skepticism in the original sense of the term—*i.e.*, the attitude of devout, reverential enquiry, which is content with provisional, probable truth while carefully searching for further light. To take a special and illustrious example, his criticism would not apply to Coleridge's "Enquiring Spirit," even if that restless being had carried his inquisitiveness much further than he actually did.

But Dr. Salmon is not content with telling these extreme Agnostics that they are arrogantly dogmatic, he reasons with them in this wise; consider how much you lose by resigning your faith in this or that belief. But the effect of this plea, though perfectly justifiable, is neutralised by his own definition of legitimate knowledge, for he rightly holds that this must necessarily be partial, employing St. Paul's well-known definition. Dr. Salmon does not see that he thereby lays himself open to a twofold retort from his Agnostic adversary. The latter would at once object that a similar sacrifice is required of the believer, who is compelled to accept partial for complete knowledge, uncertainty for demonstration, faith in lieu of sight. Moreover, the Agnostic might with still greater force further retort, that however incomplete in theory theologians and scientists admit their knowledge to be, they continually act and argue as if it were the most unquestionable certitude in the universe.

Dr. Salmon stands on firmer ground when he admits that "the clouds that obscure the region of speculation do not descend [*sic*] upon the region of practice" He is probably not aware that this apt distinction is frequently insisted upon by the most determined Agnostics in the whole history of human thought—the Greek skeptics. Even Sextus Empeirikos, admitted (*Hyp.*, Book I. ch. xiii.) that skeptics acquiesced in phenomena, and led their lives like other people, for an entire freedom from action was an impossibility. Probably their modern successors would be just as unwilling as they were to ignore the practical exigencies and duties of daily life. Philosophers do not seem to be less keen than their critics in discerning the material limits of their speculations. Bishop Berkeley, *e.g.*, could never be induced to knock his head against a post in order to give a practical demonstration of his disbelief in the existence of matter. If, however, a man's practice be normal and usual, it seems hard to deny him freedom of speculation, the *libertas philosophandi*, even assuming that the latter did occasionally assume an extravagant or eccentric form.

Summing up this leading theme of the volume, I cannot say that Dr. Salmon's treatment of it, though not destitute of insight and ability, is wholly satisfactory. His prepossessions are too firmly enlisted on the side of dogma to allow his rendering adequate justice to Agnosticism. He does not realise, with the philosophic breadth or imaginative sympathy essential in such a case, the causes

which in every age of the world and in every stage of human progress must inevitably create some form of Agnosticism. More than all, he has never studied the various forms which Agnosticism has actually assumed in the history of philosophy.

I have treated Dr. Salmon's leading discourse at such length that the space at my disposal for the "other sermons" corresponds only too closely with their humbler position on the title-page. In reality, however, they are far from deserving any such subordination. Some of them are of exceptional interest. The fifth sermon, on "Pain and Disease," is a praiseworthy protest against the shallow sentimentalism which can see in pain only positive evil. Sermon vii., "Bowing in the House of Rimmon," is a dexterous handling of a difficult theme. The following extract from this sermon will serve to show the occasional felicity of the author's remarks: "In particular this may be said . . . that two persons at the same point may be judged very differently according to the direction in which their face is set. One may have reached it in the progress of struggling upwards for more light; the other fallen to it from shutting his eyes to the light before him. Naaman's bow in the house of Rimmon may be but the last remaining relic of an idolatry which he is in the process of forsaking altogether; in the case of an Israelitish visitor to Syria it might be the first sinful compliance in the catalogue of those by which his allegiance to his father's God was given up" (p. 173).

In the last sermon in the book, Dr. Salmon makes a good point by placing side by side Mr. Spurgeon's sermons and Mr. Cotter Morison's *Service of Man* on the subject of the forgiveness of sins.

JOHN OWEN.

NEW NOVELS.

The Missing Rubies. By Sarah Doudney. In 3 vols. (Bentley.)

A Modern Magician. By J. Fitzgerald Molloy. In 3 vols. (Ward & Downey.)

Mona's Choice. By Mrs. Alexander. In 3 vols. (White.)

Marras's Crucifix. By F. Marion Crawford. In 2 vols. (Macmillan.)

Frau Wilhelmine: Sketches of Berlin Life. By Dr. Julius Stinde. Translated from the German by Harriet F. Powell. (Bell.)

An Indian Wizard. By Arthur Lillie. (Simpkin & Marshall.)

Her Will and Her Way, and other Stories. By Mrs. Newman. (S. P. O. K.)

The City of Sarras. By U. Ashworth Taylor. (Blackwood.)

The Missing Rubies is a well-constructed story, pleasantly and readably told, and with a bright, cheerful, womanly heroine, naturally drawn. The main situation of the plot is that the orphan nephew of his mother's three surviving sisters, who lives with them, is suspected on strong circumstantial evidence with having disposed of a valuable ruby necklace left in his keeping by one of his aunts, the widow of a Russian nobleman, who had himself become possessed of it, in no very creditable fashion, among the spoils of a Polish patriot. This latter personage, Count Gliska, is one of the leading characters in the book; and he is cleverly grouped and contrasted with

another Pole of the moody and fierce type, excitable to the verge of insanity, and constantly brooding over the wrongs of his country, and the possibility of vengeance on her oppressors. The mystery of the rubies is ingeniously disentangled; and, as the whole setting of the story is honestly treated, the book, though an unpretending one and weak in special knowledge of Slavonic matters, is a sound piece of workmanship, and merits a word of sincere commendation.

A Modern Magician is but a feeble reflexion of Lord Lytton's *Zanoni*, as that was a simple idealisation of Cagliostro. The Benoni of the present story, precisely like Lord Lytton's hero, is one of those mysterious beings from the far East who has solved the secret of indefinitely prolonged existence, and, therewith, has acquired occult powers over the forces of nature. Like Zanoni, moreover, he is coupled with a yet mightier sage than himself, and Mr. Molloy's Amru is merely Lord Lytton's Mejnour. One variation from the original there is, in that Mr. Molloy works in the terminology of the Esoteric Buddhism imposture, which had not been invented when *Zanoni* was written. But while, if the dedication of the book be not intended to throw dust into the reader's eyes, Mr. Molloy would appear to accept for himself the genuineness of the alleged Tibetan marvels, he has not been at all so successful in creating an illusion as his predecessor in this field, and fails to impress the imagination with the possibility of all the marvels he recounts being around us in potential action even now. Nor does the supernatural part of the machinery fit in well with the society novel, of which it is a factor. Parts of that are vigorous, notably the situations where the reprobate of the story—a disreputable clergyman who has gone entirely to the bad—appears on the scene; and if Benoni had been simply cut out, with all his astral body and similar stage-properties, we should have had a better novel.

Mona's Choice, though a fairly readable tale, is not quite up to the level of former work by Mrs. Alexander. There are marks of haste in composition, especially the misnaming of several characters—a Miss Jocelyn or Craig, the heroine, appearing as Miss Clifford in the very first chapter; a Captain Lisle figuring once as Leslie, which is one of the names of another character; and one Watson being called Wells—and this probably accounts for the falling-off. It is, however, not marked enough to prevent a reader who is not too exacting from being able to pass a couple of hours comfortably with the book. Its plot is simple enough. A handsome man about town amuses himself with a poor and pretty girl on her introduction into society, so as to make her think that he cares seriously about her, as she begins to do about him; and then suddenly he awakens her from her dream by recommending her to accept the addresses of another gentleman whom she looks down on as a rough, awkward boy. He is a good fellow, however, and very rich, so she takes her adviser's counsel; but, as she is a frank and honest girl, lets her suitor know that she accepts him merely for a marriage of convenience, forced upon her by family necessities, so that she can give him only respect and duty, but not love. He is content with the

terms, and they are engaged. But some changes in her circumstances free her from the obligation to support her relations, and she breaks off the engagement; after which her first dangler, now a man of wealth and title, reappears on the scene, and renews his attentions. How he prospers, and how Mona Craig finally settles her affairs, readers must ascertain for themselves; and they will find the society portions of the story fluently and cleverly written.

Marzio's Crucifix is one of Mr. Marion Crawford's best pieces of work, being a very careful and subtle study of character. Marzio Pandolfi, his hero, is a worker in silver, whose artistic tastes and pecuniary interests both lead him to the production of church plate, chalices, monstrances, crucifixes, and the like; but who is a furious Italian anarchist in politics and religion, hating the Church and the clergy above all things, and especially hating his own clerical brother Paolo, an amiable, honest, and sensible man, who is, besides, his most important means of support, because procuring for him lucrative commissions to execute works of art. The crucifix which gives its name to the story is one of these works, and plays a certain part in the development of the plot. But, in truth, Marzio is himself the story, for the other characters and the incidents are mere foils and settings to bring out his idiosyncrasy into higher relief; and the union of artistic strength with moral weakness, of fierce passion with ingrained cowardice, is skilfully depicted, at the same time that even the obstinate wrong-headedness of the man does not lead the reader to dislike him, but only to realise him more thoroughly as a perfectly natural character.

This volume is the concluding part of the "Buchholz Family" series, and, like its precursors, is cast in autobiographical form. Dr. Stinde has escaped the usual fate of continuators, for he has succeeded in keeping Frau Buchholz quite up to the standard of his earlier portrait. She is the same fussy, meddling, underbred, touchy, conceited, and withal well-meaning and affectionate creature as before; and the distinctive setting of her figure this time is her experiences with two lady-helps whom she has undertaken to train, but neither of whom has much aptitude for the position. There is some humour in the situations which bring out their several peculiarities. But Herr Stinde's power lies much more in delineation of character than in the invention of ludicrous incident; and the innocent self-revelations of his heroine remain, as before, the real attraction of his book. How he, being a man, and a German man at that (if the Americanism may be ventured on), has contrived to draw a woman of her stamp so cleverly, with no blundering masculine touches to mar the presentment, remains a puzzle, even after study of his method. There are usually some flaws of the kind in the works of far greater masters of fiction than Herr Stinde, and a woman will put her finger unerringly on them. But, given the type to which Frau Buchholz belongs, if not too foreign for an English lady to criticise justly, it is very unlikely that any inconsistency should be detected. She is a humorous portrait. She is not a caricature.

An Indian Wizard is a shilling dreadful, and gives plenty of horrors for the money. It is so far on the same lines with *A Modern Magician* that it contains a character with supernaturally prolonged existence, and that it tells of necromantic spells exercised in the present day by Eastern sorcerers. But it differs in one salient particular—that Mr. Lillie's magic is the genuine article, the real traditional necromancy of India, and not the recent invention of a knot of impudent adventurers, who merely want to exploit a credulous public. Mr. Lillie has read a good deal about Brahminism and Buddhism, and has worked his reading into this story, so that it has a much greater air of reality about it than its competitor, and makes a correspondingly deeper impression upon an imaginative reader. And there is literary skill shown, besides, in the manner of winding up the story, so that the reader is left in doubt as to whether the whole thing actually happened, or was a sort of nightmare or delusion. There are some echoes of Southey's *Thalaba* noticeable, but they do not amount to direct borrowing.

Her Will and her Way is the longest, though not the first in order, of a group of wholesome stories of the type which used to appear in *Household Words* many years ago, exhibiting marks of Dickens's literary influence, but having a character of their own. These are good specimens of their school, though not calling for individual comment.

The City of Sarras (a name borrowed from the *Morte Arthur*) is a mystical romance, containing but a slight element of plot, as the characters are merely personified types and dispositions, while the incidents are allegorical. The marks of Fichte's influence are many, and it is possible to trace Novalis also. The writing is pure and elevated throughout, and sometimes graceful; but the method of treatment robs the story of human interest, and—like *Phantasmion*, a kindred book—it is too pale and bloodless for vitality. Besides, the scale is altogether too large for work of this particular kind, which needs compression, if it is to possess force and pith. Here there are 336 pages; and only a few congenial readers will persevere to the end, for the book must be caviare to the general, and to a good many of even the select or inner circle.

RICHARD F. LITTLEDALE.

SOME BOOKS ON EDUCATION.

The Ruling Principal of Method applied to Education. By Antonio Rosmini Serbati. Translated by Mrs. William Grey. (Boston, U.S.: Heath.) Messrs. Heath are most honourably distinguished among American publishers for the excellence of their paedagogic books, but they have hardly any on their list of greater interest than this treatise of Rosmini translated by Mrs. Grey. Rosmini himself is a peculiarly attractive person. A Liberal Catholic and a priest, he was attacked by all parties in turn, and by some of them relentlessly persecuted. His public life began under the harassing jealousy and surveillance of the Austrians, and to the end of his days he was the mark of Jesuit hatred. He met and worsted the patriots Mamiani and Vincenzo Gioberti, who both came over to his side. The Congregation of the Index prohibited his works; but

at a subsequent meeting, inspired by and presided over by Pius IX. himself, the censure was removed and high praise substituted. The work translated by Mrs. Grey is really but a fragment of a larger work which Rosmini did not live to complete; but it probably contains all that the author wished to set forth in regard to at least infant education. Basing his pedagogy on the sciences of

“anthropology and psychology, giving the knowledge of the human faculties to be educated and their modes of action; on idealogy and ethics, giving the objects, both proximate and ideal, by which the human faculties must be stimulated in order to be properly educated; on ontology and theology, giving the knowledge of the ends towards which the human faculties should harmoniously tend,”

it is clear that Rosmini might claim with good reason that his philosophical system was something more than a barren exercise. Few things strike one in reading his book more than the urgent sense he had of the importance of the goal of education—a sense which really gives his work a more inspiring quality than most formal treatises on pedagogy known to us. The periods into which he enquires he computes by the degrees of cognition successively attained in intellectual development. τὸ πρότερον ἐν συμφοῖς καὶ ῥάσιον ἀπὸ δὲ μελετᾶν, as he quotes approvingly from Plato. Mrs. Grey's translation rightly begins with a sketch of Rosmini's life, and a lucid introduction to his method. Book I. treats of the ruling principle of method, stating the law governing the progress of the human understanding. Since

“a thought is that which becomes the matter, or provides the matter, of another thought,” then “present to the mind of the child (and this applies to man in general), first, the objects which belong to the first order of cognitions [intellezioni]; then those which belong to the second order; then those which belong to the third, and so on successively.”

Book II. applies the ruling principle of method to the education of little children. Having demonstrated in the first section the necessity of classifying the cognitions of the human mind according to their order, successive sections explain the nature of the cognitions of five progressive orders and the development of faculties corresponding thereto. This brings the work down to the time when the child acquires the free use of reason. We are told in the preface that Rosmini left a memorandum showing that he had intended to treat of four following periods, and we may well lament that so rich a promise was only partially fulfilled. Yet the treatise here rendered into English by Mrs. Grey is of itself of high and enduring value. It is most instructive to observe how closely Froebel and Rosmini, working under circumstances so different, and unfluenced the one by the other, correspond in all the desiderata they note for infant education. Of Mrs. Grey's part of the work, it is sufficient to say that the translation reads like an original, and her notes are to the point.

Levana. By Jean Paul Richter. Selections translated by Susan Wood. (Sonnenschein.) It is very easy to overestimate the value of the study of technical psychology as a preparation for the teacher's task. To people who are lacking in tact and sympathy and imagination, the most excellent handbooks will be useless. But nothing can do better to smooth the way for the more formal study than the careful reading of such stimulating books as those in which writers like Rousseau and Locke and Richter have delivered themselves of educational theories and experiences. They help to put the teacher in the right position for sympathising with the mind and heart to be trained. It would be hard to find more

profitable reading in this kind than *Levana*. It is true that it is generally better to read a book, whole and un mutilated, than extracts from it, and there is an English translation of *Levana* ready to our hands; but many of us, it must be confessed, are not likely to have the time necessary for the assimilation of the original, and may be glad to receive even selections when they are so well translated as those before us. The editor, as we must call her, seems to have chosen with great discretion; and her little book, though it must needs want the coherence of an unabridged translation, abounds in good and wise reflections and advice. It is worth noting, too, that Richter himself called the subdivisions of his books “fragments”; and we cannot doubt that the editor has here treated them in the only way likely to secure them a general hearing, which they richly deserve. Richter's most curious suggestion is that special pains should be devoted to the cultivation of wit. He himself kept a “Bon-mot anthologie” of his pupils, from which quotations are made in *Levana*. He seems to have encouraged a sense of the grotesque by way of making the ideas of children mobile, capable of being detached, as it were, and used as refreshing rests in the treatment and illustration of subjects in matters quite dissimilar. The passage dealing with this is not the least interesting of an altogether interesting book. Perhaps the editor, when a second edition is required, will be able to be rather more explicit in the connecting passages and comments, which are apt, especially in the first part of her book, to be rather too abstruse for the general reader, for whom the book is meant and should be most useful.

The Home, the Kindergarten, and the Primary School. By Elizabeth P. Peabody. (Sonnenschein.) The writer of the eight lectures and “glimpses of psychology” in the book before us is well-known as an enthusiastic and self-sacrificing apostle of Froebelianism, and one to whom the cause of education in America owes very much. The lectures are well worthy of the author's other labours, and will give explanations of the kindergarten system very welcome to many who have had no opportunities of making themselves acquainted with it more formally. There is by no means any exhaustive treatment of the subject in the successive lectures, nor is the style always quite happy in a literary sense; but it would be very ungracious to find fault with Miss Peabody for such a small matter when she has attended to other points so well. She is particularly to be thanked for her alternate insistence on the duty of every mother to take rational pains with her children's up-bringing, and the necessity of the utmost vigilance lest the task seem easier than it is. If it is clearly understood that Miss Peabody's book consists merely of eight discursive lectures and is not a systematic treatise, it will be useful to many at present ignorant of the method and aims of Froebelianism; and it contains hints and information worthy of the notice of those to whom the subject is familiar.

A Short Sketch of the Life of Friedrich Fröbel. By Emily Shirreff. (Chapman & Hall.) This is a new edition of perhaps the best sketch available for ordinary readers of the life of the great educator whose work the author has done so much to make known in England. It incorporates some letters of Fröbel published, we are told, in the *Rheinische Blätter für Erziehung und Unterricht*, and very interesting they are. They were written in 1839 to his first wife, then ill at Berlin. Miss Shirreff rightly claims for them the interest attaching to records of a most earnest and simple nature, for they give us in colloquial form Fröbel's account of the progress of his work in Dresden at a very critical period.

An appendix contains a translation of the Baroness von Marenholtz Bülow's recollections, hardly of less interest than the rest of the book. We wonder what possessed the printer to date a letter on p. 71 “1887”?

Modern Gymnastic Exercises (Elementary). By A. Alexander. (George Philip & Son.) No one who has seen the excellent performances of Mr. Alexander's pupils at the Liverpool gymnasium can doubt that a book of exercises from his hand is worth having. The little manual before us consists of a series of exercises, ten in all, with dumb-bells, bar-bells, clubs, bars, and the rest. It is most commendably free from complicated directions. The author gives us the words of command, directions for pupils, and on the right-hand side of the page appropriate music—a very important part of the compilation, seeing that the exercises are so much more grateful and easy under the delicate constraint of musical rhythm. We wish Mr. Alexander had forbidden the exercise of children at hours when their meals are still undigested. Great harm is done by neglect of this precaution, and the warning is very much needed.

The Teacher's Manual of Drill. By Mary E. Hudson. (Griffith, Farran & Co.) It would be hard to decide between the merits of this book and Mr. Alexander's. Miss Hudson's is certainly the more elaborate and fuller; but Mr. Alexander's is profusely illustrated and has the music. For the ordinarily equipped school the former is the better, the latter requiring apparatus not usually found in any but specially fitted gymnasia. We cannot quite share the author's wish that “ere long our large schools will have the hours of play and recreation equally under supervision as the hours of study”; but gymnastics are good, and the more methodical and well-ordered the better. Miss Hudson's little book is handy and interesting, and should be “generally useful.” It is, moreover, very cheap.

NOTES AND NEWS.

THE results of M. du Chailu's Scandinavian researches will be published this winter by Mr. John Murray, in two volumes, with more than one thousand woodcuts. The book is entitled *The Viking Age: the Early History, Manners, and Customs of the Ancestors of the English-speaking Nations*, illustrated from the Antiquities discovered in Mounds, Cairns, and Bogs, as well as from the Ancient Sagas and Eddas.

THE Life of Bishop Colenso, by the Rev. Sir G. W. Cox, will be published by Mr. W. Ridgway, in December.

MESSRS. BUTTERWORTH have in the press a work by Mr. W. R. Fisher, which contains a history from the earliest times of Epping Forest. The book, which is illustrated with maps compiled by the author from ancient documents, includes an account of the disafforestations made by Henry III., Edward I., and Charles I., and of the attempts of the latter to enlarge the forest. It also describes the laws and courts of the forest; the duties of its ministers; the ancient regulations concerning the deer; the nature and origin of the rights of cutting wood and of pasture; and it concludes with a concise description of the circumstances which led to the purchase of the wastes by the Corporation of London, and their dedication to the use of the people.

MESSRS. LONGMANS, following the example of Messrs. Macmillan and other English publishers, have just opened a branch house in New York, and will henceforth place “New York” on the titlepage of their books.

THE two next volumes in the series of “Epochs of Church History,” published by

Messrs. Longmans, will be *The Arian Controversy*, by Mr. H. M. Gwatkins, of St. John's College, Cambridge; and *The Church and the Eastern Empire*, by the Rev. H. F. Tozer, of Exeter College, Oxford.

MESSRS. F. V. WHITE & Co. will publish early next month two new novels: *Love in Idleness*, by Iza Duffus Hardy; and *A Devout Lover*, by Mrs. H. Lovett Cameron.

MRS. C. HUNTER HODGSON'S new story, *A Day of Life*, will be published next week, by Messrs. Griffith, Farran, & Co. The scene is laid in Wiesbaden, in the old gambling days.

THE next volume in the series of "Great Writers" (Walter Scott) will be *Smollett*, written by Mr. David Hannay.

MESSRS. WYMAN & SONS announce a volume on *Peru*, containing information about its resources, including its gold and silver mines, useful to merchants and emigrants. The author is Mr. H. Guillaume, Consul-General for Peru, at Southampton.

MR. GEORGE COTTERELL has accepted the editorship of the *York Herald*, the leading Liberal Unionist organ in the north of England. Mr. Cotterell's new volume of poems, announced in the ACADEMY a short time ago, will not be published till the spring.

MR. QUARITCH'S trade-sale dinner was an event of some significance, from the fact that it was attended by bidders from India, America, and the provinces, while almost entirely neglected by the metropolitan booksellers. The result was also curious: not a single copy of the beautiful memorial edition of Bewick finding a purchaser, and the grand new catalogue (already subscribed for by many private collectors) being similarly neglected. The American edition of Edward Fitzgerald's works was, however, a considerable success, and proved how deeply the public mind has been impressed by the unique genius of the translator of Omar Khayyam.

THE first annual report of the council of the Scottish History Society was read at a general meeting held in Edinburgh on Tuesday last, October 25, Lord Rosebery in the chair. Two volumes—*Pococke's Tours in Scotland, 1747-60*, and *Cunningham's Diary, 1673-80*—will be issued to members in the course of the week. The publications now in the press for next year are—the *Gramiad*—a Latin epic describing Claverhouse's campaigns by an eye-witness, edited, with a translation, by Canon Murdoch; and the Registers of the Kirk Session of St. Andrew's, 1559-82, edited by Mr. Hay Fleming. Among other works in preparation there is announced an English version of John Major's *De Gestis Scotorum*, first printed in 1521, which will be edited by Mr. Archibald Constable and Mr. T. G. Law, the hon. secretary. The society is reported to be financially in a flourishing condition.

MESSRS. TILLOTSON & SON, of Bolton, who are, we believe, the inventors of the system of publishing novels in a syndicate of newspapers, have just issued their programme for 1888-9. The following is a list of the authors with whom they have entered into arrangements, in chronological order: Mr. Bret Harte, Mr. Wilkie Collins, J. Strange Winter, Mr. G. Manville Fenn, Mr. W. Clarke Russell, Mr. Rider Haggard, Mr. G. R. Sims, the author of "Mehalah," Mr. Hall Caine, Mr. J. Hatton, Mr. W. E. Norris, and Mr. Thomas Hardy. We have heard that Mr. R. D. Blackmore is almost the only novelist who declines to publish in this form.

IT is now about ten years since that indefatigable worker, Prof. Angelo de Gubernatis, published, in two volumes, his *Dizionario Biografico degli Scrittori Viventi*. He is now pre-

paring a new and greatly enlarged edition, under the title of "Dizionario Internazionale degli Scrittori Viventi," which he hopes to issue next year. He begs that all communications may be addressed to him—Villino Vidiyà, Florence.

THE bibliography of the historical and archaeological works issued by French learned societies, undertaken by the Ministère de l'Instruction Publique some years ago, is in progress. The first volume, compiled by MM. de Lasteyrie and E. Lefèvre-Pontalis, comprehending the societies of the departments Ain to Hérault, is nearly ready for publication. A complete summary of the work has lately been issued by the Comité des Travaux Historiques et Scientifiques under the title of *Bibliographie des Sociétés savantes de la France*, par E. Lefèvre-Pontalis.

THE second volume of the late Prof. Karl Müllenhoff's *Deutsche Altertumskunde* has just been published by the Weidmannsche Buchhandlung of Berlin. The first volume appeared so long ago as 1870, and was followed by the first part of the fifth volume in 1883. The second volume treats of the relations of the early Germanic tribes with the neighbouring nations, especially of the wars waged by the Cimbri and Teutones against the Romans. At the author's death, in February, 1884, the volume was nearly ready for press. Prof. Scherer was to be its editor, but he died prematurely in August, 1886, a short time after Dr. Pniower, whom he had entrusted with the last revision of the author's copy, had acquitted himself of his task. So the duty of seeing the book through the press devolved upon Prof. Max Roediger, from whose preface all students of old Germanic philology and history will be glad to learn that they need not despair of seeing Müllenhoff's grand work completed.

THE FORTHCOMING MAGAZINES.

A NEW illustrated magazine for book-lovers is announced by Mr. Elliot Stock, entitled *The Book-Worm*. The first number, which will be published on November 25, will contain introductory verses by Mr. Andrew Lang.

MR. ERNEST L. GRANGE, of Great Grimsby, and the Rev. J. Clare Hudson, of Horncastle, have together undertaken to edit a quarterly journal of *Lincolnshire Notes and Queries*, the first number of which will be published in January by Mr. W. K. Morton, of Horncastle.

MESSRS. WYMAN & SONS announce the publication, in November, of a new illustrated monthly magazine, entitled *Baby*, a magazine for mothers and those who have the care of children, being a guide to their management in health and disease.

THE new volume of *Good Words*, which begins with the January number, will have a novel by Mr. D. Christie Murray, entitled "The Weaker Vessel," besides contributions by Mr. Andrew Lang, Miss Jean Ingelow, Sir Charles Warren, and Capt. Markham.

THE *Century* for November will contain (among other articles) "The Last Appeal of the Russian Liberals," by Mr. George Kennan; "The Home and Haunts of Washington," by Mrs. Burton Harrison, illustrated by Mr. Joseph Pennell.

THE November number of *Murray's Magazine* will have another article by Dr. Axel Munthe, the author of *Letters from a Mourning City*, to be called "Monsieur Alfredo."

THE forthcoming number of the *Political Science Quarterly Review* (published in this country by Mr. Henry Froude), will contain papers on "Ferdinand Lassalle," by Lewis J. Huff; "England and the Colonies," by H. L.

Osgood; and "State Control of Industry in the Fourth Century," by W. Adams Brown.

AMONG the contents of the November number of *The Scottish Church* will be "Poetry of Plant Names," "Organs in the Ancient Scottish Church," a piece in verse entitled "A Parochial Tragedy," and the conclusion of the story, "A Vain Young Woman."

UNIVERSITY JOTTINGS.

DR. J. A. HORT, hitherto Hulsean Professor of Divinity at Cambridge, was on Wednesday last unanimously elected to the Lady Margaret Professorship of Divinity, vacant by the death of Dr. Swainson—which is, we believe, both the oldest and the best endowed of the Cambridge chairs of theology.

THE following dates have been fixed for the performance of the "Oedipus Tyrannus" of Sophocles at Cambridge: Tuesday, November 22, and each following evening of that week, at 8 p.m.; Wednesday, November 23, at 11.30 a.m.; and Saturday, November 26, at 2 p.m., thus making seven representations in all. The text and translation by Prof. Jebb will be used for the acting edition; and Mr. A. W. Verrall has written a verse translation of the choruses adapted to the music which has been written and will be conducted by Mr. C. V. Stanford. Mr. John O'Connor has painted the scenery and proscenium. Mr. J. W. Clark, the treasurer and secretary of the committee, will be responsible, as on former occasions, for the stage management. Applications for tickets should be addressed to him at 64 Park Street, Cambridge. We may add that Sir George Young has just published (Cambridge: Deighton, Bell & Co.) a translation of the "Oedipus Tyrannus," which he originally made some years ago, with blank verse for the dialogue and lyrics for the choric odes.

THE new honour school of modern European languages, and also the proposed amalgamation of the professorships of Poetry and English Literature, will again come up for discussion in Congregation at Oxford on Tuesday next, November 1.

MR. HUBERT HERKOMER, the Slade Professor of Fine Art at Oxford, proposes to lecture this term on "Etching," and to give a practical exhibition of the art.

AT the first meeting this term of the Cambridge Aniquarian Society, to be held on Monday next, October 31, the new president, Prof. A. Macalister, will deliver an inaugural address.

THREE new volumes of the publications of the Oxford Historical Society are just ready for issue to subscribers. Two of these are a continuation of the register of the university from 1571 to 1622, edited by the Rev. Andrew Clark, of Lincoln. An introduction will give a description of the complicated system of lectures, disputations, and dispensations, which then formed the regular course for a degree. One volume will contain lists of incorporations, privileged persons, distinguished visitors, &c.; the other the matriculations. The degrees are reserved for another volume. The third volume now ready consists of a collection of letters from two members of Queen's College in the latter half of the last century, edited by Mrs. A. J. Evans.

THE current number of the *Oxford Magazine* contains an obituary notice of Henry Musgrave Wilkins, Fellow of Merton, and well known by his *Manual of Latin Prose* and translation of the speeches of Thucydides. He died, in his college rooms, on September 7, at the age of sixty-four.

THE publication agency of the Johns Hopkins University, Baltimore, will issue immediately, in a limited edition, a facsimile of the text of *The Teaching of the Twelve*, with a commentary by Prof. J. Rendel Harris. The MS. has been reproduced by the Autotype Company, and printed at the Pitt Press. The price to subscribers is five dollars (£1).

THE Aberdare Hall for women, in University College, Cardiff, has begun its third session with almost the full number of students that can be accommodated in the present buildings. It is noteworthy that the majority of the students have come from girls' schools in England.

A TRANSLATION.

ON AN ANNIVERSARY OF THE BATTLE OF MENTANA.

Giosuè Carducci, "Nuove Poesie," 13.

WHEN sad Mentana's hour comes round with every year returning,
Amid the monumental slabs that keep its memory green,
The ghosts of those who fell arise, their hearts with anger burning,
With sorrowing eyes amid the tombs they stand distinctly seen.

No ghastly skeletons are they, but proper forms and stately;
The rosy twilight undulates around them like a veil,
From their far deeps the stars look down upon the brave sedately;
The clouds of heaven around their heads in wreaths of victory sail.

"Now when the mother mourns her sons on couch by memories haunted;
Now when the spouse weeps her lost love thro' nights of sleepless pain,
Again we seek the upper air with breasts pure and undaunted,
Once more to greet thee, Italy, to look on thee again.

"As in the muddy pathway before his queen and lady,
His silken mantle fine the knight laid down on bended knee,
Our lives we gave up freely, in thy service ever ready,
And yet thou livest unmindful of the sons who died for thee.

"On others, O, sweet Italy, bestow thy smiles, but never,
O, never, may the dead forget what they on earth loved best!
And Rome is ours, the champions of her name are we for ever,
We on her lofty Capitol shall triumph ere we rest."

The vision fades, as melts away a faint cloud in the heaven,
And as it fades a groan escapes Italian bosoms all,
Her brightness and her harmony lays down the golden even,
While the sad sound rolls sternly up the lofty Quirinal.

M. R. WELD.

OBITUARY.

EDWARD THRING.

IN the Rev. Edward Thring, Head Master of Uppingham, whose death took place on October 22, there has passed away a man of undeniable genius. It was a genius which manifested itself most conspicuously in the practical sphere of building up a great school, and organising within it a system of common life and discipline. But it had its manifestations too in the field of letters, upon a scale necessarily restricted by his busy, and often careworn, life, but of a highly characteristic order. His chief publications are: *Education and School* (1863), in which

he set forth his theory of a public school and of classical training; *Theory and Practice of Teaching*, more recently printed at the Cambridge University Press, which has run through three editions; *Thoughts on Life Science*, a venture in the field of religious philosophy; three volumes of Uppingham School Sermons; a Latin Gradual, before graduates began to abound; an English Grammar; several recent addresses on educational topics; and two volumes of verse, *School Songs*, and *Birth Lyrics*.

This is a fairly varied list; and there is in all the items one common quality, very indicative of genius, which strikes the reader first and last—the extraordinary interfusion of the writer's character and his style. To those who knew both, "the style is the man" seemed almost a weak description instead of a paradox. Name almost any of his personal qualities and you name a feature of his literary work. The abounding energy, which sometimes administered a kind of electric shock to strangers at first contact, makes itself felt in the emphasis and insistence of his writing; the earnestness which knew nothing too small or common to become its object gives a sometimes curiously impassioned treatment to homely subjects; the quick decisiveness of his temper reads itself off in the short, trenchant epigrammatic sentences; his absoluteness of view and his moral fearlessness, in their broad unreserve of statement; his chivalrous warmth of feeling runs over the page in a luxuriance of tropes; his strong animal spirits supply the good red blood of his healthy, if at times dogmatic, criticisms; and his sympathy with sound common life moulds the vigorous and humorous apophthegms which endeared his speech to plain men. It is almost a corollary to all this to admit that the style has faults: a tendency to overstatement, a want of modulation, a failure to estimate the amount of strain which a thought will bear, and generally a want of artistic finish. This last, again, is due in part to the constitution of his mind, which was strong in architectonic design, not supple in the management of details. Pliny the Younger would have called him a "barbarian" in literature.

"Invenire praeclare, enuntiare magnifice interdum etiam barbari solent; disponere apte, figurare varie nisi eruditis negatum est."—Letters iii. 13.3.

But largely also it is due, as we are led to guess from his sometimes expressed views on oratory, to a disbelief in the value of the artistic element in literature. Himself rapid in improvisation and intense in emotion, he held a doctrine of the inspiration of the moment which would be a dangerous precept for ordinary men.

And still the chief merit of his writings remains untold; and we have space only to say that to those who were disgusted with or themselves enervated by the over-refinement, the literary fastidiousness, the intellectual and moral irresoluteness of the time, his confident uncompromising voice seemed the right tonic of the age. His style might be rugged, quaint, unacademic, but to many ears of his contemporaries

"The thing became a trumpet, whence he blew Soul-animating strains—alas! too few."

J. H. S.

MAGAZINES AND REVIEWS.

THE current number of the *English Historical Review* (Longmans) maintains an exceptional standard of excellence in all its departments—articles, documents, and reviews. In particular, all the articles are "original," in the best sense of that term. We must be content to draw attention to two of them—by Prof. Bryce and

Mr. S. R. Gardiner. The former is a marvelously lucid piece of criticism, which demolishes for ever the authority of the common statements regarding the Slavonian descent of the Emperor Justinian. The latter, on the other hand, is conservative, maintaining the genuineness of the several documents which the Earl of Glamorgan declared to have been executed in his favour by Charles I. A third article, of more popular interest, examines the question of the employment of Indian auxiliaries in the American War—a question made famous by the impassioned rhetoric of Lord Chatham. The writer, who appears to be himself an American, points out that both sides alike did their best to obtain help from the Indians, though the Americans were the less successful; and that the real blame upon the English is that they used their allies in such a way that they were unable to restrain their savagery.

THE current number of *Mind* offers a sufficiently varied bill of fare. Nobody interested in things psychological or philosophical can fail to find something to his liking in a review which contains contributions from pens alike so able, and yet each so distinctive, as those of Prof. Bain, Prof. W. James, Dr. Maudsley, Mr. James Ward, and Mr. T. H. Bradley. The substantive articles are all good and worth reading, and these are supplemented by one or two excellent bits of "Discussion." Mr. Ward's reply to Mr. Bradley on the subtle point of the ultimate constituents of mind will delight anyone who likes the spectacle of a dialectic duel between two intellects trained in acute vision and in rapid and delicate movement. Nor should the reader fail to glance at the modest section of the review headed "Notes," where he will find recorded by the editor's pen a singularly curious instance of the temporary loss of memory resulting from an injury to the brain. Of the principal dishes it may suffice to say that Dr. Maudsley displays his customary pungency of manner and contempt for what, a little too flatteringly, he styles metaphysics, in his discourse on "The Physical Conditions of Consciousness"; Prof. W. James is as usual eager and brilliant, but perhaps just a shade too unmindful of the courtesy due to reputation, in recommending his new theory of space-perception; while Mr. J. M. Rigg, a newer name, proves himself an acute logician with no mean gift of utterance in a paper which criticises Mills' theory of causation, and contends for the necessity of hypothesis dealing with the ultra-phenomenal in all scientific induction.

THE original part of the October *Livre* contains two articles, the first of which is a little disappointing. It is by M. Drujon, and the subject is Peter Anthony Motteux. But on reading it, it turns out to be (and quite honestly pretends to be) nothing more than an adaptation of M. Van Laun's monograph, published in England some years ago. The second is by M. Victor Fournel, and is devoted to the tragic writers of France before Corneille, from Montchrétien to Mairat. The author, whose competence for the subject is well-known, devotes himself chiefly to the later parts of his matter, that is to say to the early contemporaries of Corneille rather than to his forerunners. There are two full-page illustrations—one a bookbinding, the other a well-executed chromolithograph from Mostaert's interesting "Kitchen Interior" in the Brussels Musée.

CORRESPONDENCE.

THE WORD "MORT" IN SHAKSPERE.

Cambridge: October 28, 1887.

When Leonatus is watching the conduct of Polixenes and Hermione, he begins to feel jealous, and breaks out:

"But to be paddling palms and pinching fingers,
 As now they are; and making practis'd smiles,
 As in a looking-glass; and then to sigh, as
 'twere

The *mort* o' the deer," &c.

"Winter's Tale," i. 2. 118.

The usual explanation of *mort* is not a little strange. Theobald has: "A lesson upon the horn at the death of the deer"; and even Dr. Schmidt has: "A flourish blown at the death of the deer." If this were right, no simile could be worse. We might as well liken the sound of weeping to the joyful shout of victory.

The fact is that *mort* just seems "death"; neither more nor less—"la mort, sans phrase." The sigh is that of the exhausted and dying deer; and the simile is natural and easy. The commentators wanted to air their learning, and Steevens quotes from Greene: "He that bloweth the *mort* before the death of the buck, may very well miss of his fees"; see this quotation, and another like it, duly entered in Nares. Again, Steevens refers us to the oldest copy of "Chevy Chase"—"The [they] blew a

mort upon the bent"; and so, indeed, the line appears in Percy's *Reliques*.

I regret to say I have fallen into the trap myself. I have so printed the line in my *Specimens of English*, part iii., p. 63, l. 16. But I honestly collated the text with the MS., and duly made a note that the MS. reading is *mot*. And *mot* happens to be quite right. The careful Cotgrave duly explains the French *mot* as "the note winded by a huntsman on his horn," and it is the true and usual word. We have Chaucer's authority for it in the *Book of the Duchess*, l. 376. In the "Treatise on Venery," by Twety, printed in *Reliquiae Antiquae*, i. 153, we read: "And whan the hert is take, ye shall blowe foure *motys*." It is clear that the phrase "to blow a mot" was turned into "to blow a *mort*" by that powerful corrupter of language, popular etymology; and we may allow that the change is highly ingenious, with just that ingenuity which the populace so unthinkingly admires.

Finally, the *Mort d'Arthure* simply means "the death of Arthur." Let us be thankful that it has not been explained to mean "a lesson upon the horn at the death of Arthur."

WALTER W. SKEAT.

ISIS—THAMES—OXFORD.

Oxford: Oct. 21, 1887.

It seems possible to illustrate and combine, though with some modifications, what has been recently suggested as to these names by correspondents of the ACADEMY.

Mr. Hall follows Leland in thinking that "Isis" and "Och" represent the Celtic "is" and "uch" (low and high), and this suits the circumstances well. The two streams belong, so to speak, to the same country-side, and are likely enough to have been distinguished in a primitive fashion by calling one "the high" as being nearer the downs, and the other "the low" (isa), as being farther from them. Other rivers running in pairs are not unfrequently distinguished from one another by names of similar origin: thus "Isara" (or Isa), the Oise, is contrasted with "Auxona," the Aisne. It is universally admitted that "Isara" is from *is*; as for "Auxona," it is clear, from the Spanish Uxama (Osma), and many like names, that *uch* was pronounced "uchs"; and the diphthong in the first syllable is, perhaps, due to the habit of writing "a-uch" for "uch" (Zeuss, *Gramm. Celt.*, p. 673). That the river really was "Auxona" rather than "Axona" may be inferred from the towns of "Auxena" and "Axuena" on its banks. In exactly the same way the Bavarian Iser contrasts with the Oenus (Inn). The latter name, in its Roman form, seems already to have been softened into a form like "Aisne"; indeed, that the first syllable had *a* is clear from the transliteration of "Oeniatina" ("the country of the Oeniates") into the modern "Engadine." So, again, we find that the two great branches of the Lower Rhine were called "Vacalis" and "Isala" (Waal and Yssel). The names are clearly from *uchel*, "high," and *isel*, "low." As to the former, Zeuss quotes at p. 100 an Armorican *veh* = the weaker form *uhel*; the existence of this, perhaps, shows why the name is also written "Vahalia." Sometimes it seems to have been thought enough to describe one of the two rivers in this way. Thus, the Provençal Isere (Isara) and the Rhone were considered, as Polybius and Livy tell us, to be the boundaries of the so-called "Insula" between them; but, so far as we know, the name "Rhodanus" was not superseded during its companionship with the Isere by any other meaning "high."

As to "Thames," authorities seem fairly agreed in supposing its first syllable to be a form (probably earlier) of the Welsh *taf* ("ex-

panded" or "an expanse"). But, then, the question rises, What is extended? Is it the river or the country on its banks? Are we to look in "Tamesis" for the sense "broad river" or for that of the plain? Ferguson and Mone are inclined to make it a shortened form of *taf-insg* (expanded water), and they quote "Tabuda" (the Scheldt) in defence of their position. It seems, however, more likely that "Tamesis" = *taf-isa*, the "low plain," the Thames valley being thus described from a Welshman's higher point of observation. In exactly the same way the Gauls of the Lower Danube called their river "Ister," that is, *is-tir*, the "low land." "Taf-is" would also account for the "Temes" on which Temesvar stands; its ancient name of "Tibiscus" differed only in being = *taf-isach*. *Ach* is the regular comparative suffix in Welsh, though *isach* is now disused. Compare, however, the Tirolese "Eisach," anciently "Isarus," and another river called "Isaca," on the low part of the Dorsetshire coast; there is no reason to alter this last to "Isca." The Brutian "Temesa" or "Tempsa," again, seems one of a small nest of Celtic names near the strait of Messina,* and the situation of the town on a low plain of some extent is in favour of its being cognate to "Thames." The uncompounded *taf*, plural *teifion*, seems to appear in the Galatian "Tavium," as well as in the Taff, Tay, and other rivers at home. With *taf-isa* is contrasted, as we might expect, *taf-uch*. Thus the "high-plain" of the river Olti, near Kars, which comes out so strikingly in Kiepert's map of Armenia, was the country of the "Taochi"; it is even now called "Taos," and the *f* is preserved in "Tawnskiar," a place on its banks. Indeed, the geography of the Galatic region of Asia is not a little helpful to our enquiry, seeing that in the river "Iris" and in "Themiscyra" we probably have "Isis" and "Thames" over again, the name of the town and district meaning "the coast (cwr) of the low plain (*tafisa* or *tumisa*)."

The question as to the meaning of "Oxford" is somewhat more difficult. To answer it satisfactorily, we must, of course, try to account for all the most authentic forms of the name. These are "Uxanaford," "Uxeneford," and "Orsnaforda." The last, as Mr. Hall tells us, having in its favour the strong evidence of Alfred's coinage, the others being respectively in the Saxon Chronicle and in Domesday Book. For the two first we must, doubtless, have recourse to *uch*, but this time as a preposition governing *an* or *en*, the definite article, and *fordh*, which means "a road," and is not in any Celtic language a synonym of *rhod* or *rith* ("a ford"). Hence "uchanfordh (or Uchenford)" means "On the Road"; the mode of naming being that which we have in "Strasburg" or "Chester-le-Street," and the omission of any word equivalent to "town" being like the use of "ad Pontes," "ad Fines," "ad Ansam," for the names of stations. Compare, also, "Anderida," explained by Zeuss as = *ind-rith* (the passage), and such modern names as "Ardrossan" ("at the ferry"—*dros* = *tros* = *trans*).

Of course the probability of this derivation will be strengthened if "Orsnaford(ae)" is found to have the same meaning. And this is, in fact, the case; for it differs from Uchanford only in writing *guor* (ἄνερ) in its common abridged form *or*, instead of its synonym *uch*. Zeuss (p. 629) shows by several quotations that the preposition in the form *for*, when com-

* Such are the very un-Italic sounding "Clampetia" (Welsh *clamp*, a mass or lump) and Cape Caenys (*caen-is*, the low head). Above all, we may surely trace the Welsh *chwyrfu* ("to whirl") and *chwyrfad* ("a whirl") in "Charybdia." The transliteration is in this last most instructive, and deserves a paper to itself.

bined with the article *na*, becomes *forena*; dropping the first letter of this, or of the corresponding *guorena*, we have the *Orsna* which is required.

There remains only the question proposed by Mr. J. G. Evans, why, if the name of Oxford was originally Celtic, it should have been newly translated (so early as the twelfth century) into the Welsh "Rhyd-uchain" (Zeuss "rytychen") "the ford of oxen." It might be enough to say that by that time "Oxenford" must have assumed status as a "Saxon word," and that its ever having expressed anything but what it now seemed to mean must almost necessarily have been forgotten. Hence the Welsh (or, rather, some Welshman of more or less influence) thought that, if expressed in his own language, the name should have *rhyd* instead of *ford*. And, moreover, "Uch(s)na" would come as fatally near in spelling to the Welsh *yctain* as "Oxen" did in sense. Besides this, the translator would get the elements of his compound in the right order, instead of beginning with the awkward plural. And, finally, he would prove, to the satisfaction of his own people, and in vindication of ancient British rights, that "Oxford," like many other Saxon names, was nothing but a verbal translation of a "Rytychen" originally Welsh. It is said that the actual London was recently "made Welsh again" (by waving a sword and other ceremonies) in order to make it possible to hold the last Eisteddfod there. The same spirit might lead Welshmen long ago to reconquer an Anglicised name.

CHARLES E. MOBERLY.

"CAVE IN."

London: Oct. 24, 1887.

Mr. Mayhew has changed his line of objection to our derivation. He no longer relies on De Vries, and only asks that I would "be kind enough" to tell him what is the force of the preposition *in* on the supposition that the expression had its origin in the figure of a cow dropping a calf. In that case, he says, one would expect some such preposition as *out* or *off* rather than *in*.

Well, I suppose that the force of the preposition *in* "calve in" is pretty much the same as in "cave in" (from the notion of the hollowing out of the bank) or "fall in." It seems to indicate motion towards the speaker. When Mr. Peacock's "bankers" saw signs of the cutting "calving in" upon them, they exclaimed, "Here is a calf a-coming," and they jumped out of the way of it. But Mr. Mayhew will find that the prepositions "out" and "off," which seem to him more appropriate for the expression, are, in fact, used in composition with the Dutch *walken* to signify the same thing. De Bo gives *witwalken* synonymous with *inkalven*, rendering them both by the French *s'écrouler*, "to fall crumbling down"; while Mr. Mayhew himself cites *afkalven*, "to break away, to fall away, used often of the falling away of embankments." The choice of the preposition would depend upon the point of view from which the speaker contemplated the phenomenon. It so happens that expressions corresponding to the Dutch *witwalken* and *afkalven* have not been developed in English.

The considerations which make us regard the form "calve in" as the original are, for one thing, that it is the earliest historically known to us, and is still in current use in Lincolnshire, where, as it appears from Mr. Peacock's anecdote, the figurative nature of the expression is distinctly understood. Then the correspondence with the Dutch *inkalven* shows that "calve in" cannot be a corruption of "cave in," to which there is no corresponding form in Dutch; while the corruption in the opposite direction, from "calve" to "cave," is easily understood.

H. WEDGWOOD.

THE ETYMOLOGY OF "EMBELIF."

Melbourne, Victoria: Sept. 10, 1887.

In a recent letter to the ACADEMY (October 8) I proposed an etymology for Chaucer's word *embelif*, which was based on the assumption that Old French *belic* or *belif* was derived from Latin *obliquus*.

This derivation is established almost beyond question by an analogous word *belongue* (presumably the feminine of *belong*) which occurs in the *Roman de la Rose*:

"Autre [miréor] font diverses ymages
Aparoir en divers estages,
Droites, *belongues*, et enverses,
Par composicions diverses."—vv. 18370-18373.

If it be admitted, as it assuredly must, that *belong* comes from Latin *oblongus*, there need be no further hesitation about accepting the derivation of *belic* from Latin *obliquus*.

PAGET TOYNBEE.

[See the note in the ACADEMY of October 8, where *belong*=*oblongus* is quoted.—ED.]

APPOINTMENTS FOR NEXT WEEK.

- MONDAY, Oct. 31, 8 p.m. Royal Academy: "The Muscles of the Human Body," II, by Prof. John Marshall.
TUESDAY, Nov. 1, 8 p.m. Biblical Archaeology: "The Tombs at Aswân, excavated by Sir F. W. Grenfell," by Mr. E. A. Wallis Budge; "A Papyrus in the British Museum recording an Egyptian Oracle," by Dr. W. Playte; "Histoire des deux Filles de l'Empereur Zénaa (in Coptio)," by Prof. Amélineau.
THURSDAY, Nov. 3, 8 p.m. Chemical: "The Atomic Weight of Gold," by Prof. Thorpe and Mr. A. P. Laurie; "The Interaction of Zinc and Sulphuric Acid," by Messrs. M. M. Pattison Muir and R. H. Adie; "Safely Taps," by Mr. W. A. Shenstone; "Guthrie's Compound of Amylene with Nitro Peroxide," by Dr. A. K. Miller; "The Dehydration of Metallic Hydroxides by Heat, with special Reference to the Polymerisation of the Oxides and to the Periodic Law," by Dr. Carnelley and Dr. J. Walker.
8 p.m. Luncheon "Sears on Steam of *Dummers robusta*," by Mr. S. G. Slack; "Pennantula of Margut Archipelago," by Prof. A. Milne Marshall; "Fossils of Northern India," by Messrs. J. G. Baker and O. B. Clarke.
8 p.m. Archaeological Institute: "The Work of the Egypt Exploration Fund in the Spring of 1887," by Mr. F. L. S. Griffith; "Antiquities in Brittany lately visited by the Archaeological Institute," by Mr. Herbert Jones.
FRIDAY, Nov. 4, 8 p.m. Royal Academy: "The Muscles of the Human Body," III, by Prof. John Marshall.
8 p.m. Geologists' Association: Presidential Address, "Fifty Years' Progress in British Geology," by Mr. F. W. Rudler.
8 p.m. Philological: "Notes on English Etymologies," by Prof. Skeat.

SCIENCE.

FICK'S RECONSTRUCTION OF HESIOD.

Hesiods Gedichte. By August Fick. (Göttingen: Vandenhoeck & Ruprecht.)

HOMER and Hesiod were the two names around which gathered the traditions of the earliest literature of cultivated Greece; and Prof. Fick's successful restoration of the original Homer would, therefore, have been incomplete without a restoration of the original Hesiod. If his view of the history of the Homeric text be correct, it follows that the Hesiodic text also must reveal the same history, when properly questioned. An examination of the Hesiodic poems ought not only to determine the origin and date of the various elements out of which they have arisen, but also to verify and illustrate the method employed by the critic.

The problems presented by the text of Hesiod are simpler than those presented by the text of Homer. They have accordingly yielded with greater facility to the magic wand of comparative philology, knowledge of the Greek dialects, and good commonsense, of which Prof. Fick is master. Without committing myself to the acceptance of all his conclusions, some of which seem a little

too fine-drawn, I must acknowledge that his arguments and results appear to me for the most part to be convincing. Though much, doubtless, remains to be done before all the details are finally settled, the broad lines have been drawn along which the future criticism of the Hesiodic poems must move. The genuine Hesiod has been separated from later accretions, and his original text has been restored.

Fick shows that the genuine "Theogony," the date of which may be placed at the earliest about 675 B.C., was composed in the sacred dialect of Delphi, while the genuine "Works" were written in the Aeolic of Kymê. With the latter have been bound up three originally different poems, "The Five Ages of the World," "The Poem on Justice and Wrong," and a sort of alphabetic list of agricultural aphorisms. Fick ingeniously endeavours to prove that the "Works" were composed after the "Theogony," and suggests that the order of the Hesiodic poems should be: (1) the "Poem on Justice," (2) the "Five Ages," (3) the "Theogony," and (4) the "Works." These have formed the nucleus of a large mass of post-Hesiodic matter—the two introductions to the "Theogony," the description of Hades "in the mixed epic dialect," and, therefore, later than 540 B.C., and the Peasants' Calendar in "Works and Days," (vv. 448-616), which is also later than that date. The whole was subsequently redacted with various additions and interpolations in the Ionic dialect, the redactor being, according to Fick, Kerkops of Miletos, an Orphic and Pythagorean. The same fate has thus befallen the Hesiodic poems as has befallen the *Iliad* and *Odyssey*, the original text of each having been Ionicised about the time of the Ionic revolt.

But Prof. Fick does not stop here. He believes he has made a discovery which will materially affect the future criticism of the epic poetry of Ancient Greece. This is the fact that the earlier compositions which enter into the Hesiodic poems all consist of a definite number of lines, the lines in each case being subdivided according to a fixed numerical system. Thus the genuine "Theogony" was divided into three songs or books, each of which contains 144 lines, subdivided again into four parts, the number of lines in each part being a multiple of 18. With great ingenuity and considerable success Fick has traced the existence of a similar numerical system throughout the compositions which form the pre-Ionic portion of the Hesiodic poems. Once convinced of the existence in Hesiod of this regular system of numerically corresponding lines, which answers to the regular system of measured feet in the lines themselves, he has transferred his researches to Homer, and has found the same system prevailing there also. By the rejection of interpolations and the assumption, now and then, of the loss of portions of the text, he points out that each of the older constituents of the Homeric poems—the "Mesis," the "Oitos," the old "Nostos," &c.—is based on a particular cipher, multiples of which determine the number of lines in the work itself as well as in its several parts. I confess that Fick's conclusions upon this point in regard to Homer seem to me to require more revision than his conclusions in

regard to Hesiod. To decide what is and what is not an interpolation is frequently a matter of individual taste, and the question sometimes arises why the critic should correct a linguistic error of the Ionicised text in one case and refuse to do so in another.

At the end of the volume Prof. Fick sums up the results he has arrived at as to the history of the Homeric poems. The invention of the hexameter and the division of a poem into a regular number of lines were due to the Pierians of Olympos, whose labours were inherited by the Aeolic school of Asia Minor. To the latter belong the "Menis" or "Akhilleis" (about 730 B.C.), the old "Nostos" of the *Odyssey* (about 710 B.C.), and the enlargement of the "Menis" (about 700 B.C.), as well as the "Little Iliad" (600 B.C.). A Kretan school had already come into existence, producing books xiv.—xvi. of the *Iliad*, as well as the "Tisis" and the "Telemachy," the latter pre-supposing a knowledge of the Aethiopia of Arktinos (660 B.C.). A poet of Myrina transferred the epic to Kypros, and there composed the "Oitos, or Doom of Troy" (about 680 B.C.), which was followed by the "Kypria" and the "Hymn to Aphroditê," and about 600 B.C. by the amalgamation of the "Menis" and "Oitos" into a single whole. The later "Nostos" appears to have arisen in Teos, where it absorbed the legend of the Argonauts; while the Dorians of Rhodes contributed their share to Homeric verse in the episode of Tlépolemos (*Il. v.*). After 540 B.C. the old epic was transferred to Ionia, and finally, about 504 B.C., the *Iliad* and *Odyssey* were thrown into their present shape by Kynaithos of Khios, and the poems of Hesiod by Kerkophos of Miletos. Our text, however, goes back, not to the original Ionic redaction, but to an Attic redaction, like the second "Nekyia" in the last book of the *Odyssey*. It was, in fact, written in the old Attic alphabet, and we need not be surprised, therefore, if it is full of Attic forms.

From these last words it will be seen that Prof. Fick has come to substantially the same conclusion as Dr. Paley. Both would refer the existing text of Homer to Attica, the only difference between them being that, whereas Fick ascribes the Attic recension to about 490 B.C., Paley would bring down the date some fifty years later. That he is justified in doing so he has shown by the evidence of Greek literature. Before the time of Plato there is no provable trace of acquaintance with our present text on the part of any Greek writer.

I have left myself but little space for any criticisms of my own. There is one point, however, on which Fick's conclusions need correction. This is where they depend on the date of the Kimmerian invasion of Lydia and Aeolis. Fick adopts the old chronology, and, accordingly, places the migration of Hesiod from Kymê about 690 B.C., and that of the author of the "Oitos" about 680 B.C. The Assyrian inscriptions, however, have shown that the Kimmerians could not have made their way to the western shores of Asia Minor before 670 B.C., so that if the migrations of Hesiod and the author of the "Oitos" were occasioned by the Kimmerian inroad the dates assigned to their migrations must be slightly changed.

There is yet another point to which I would draw attention. The cosmological system of the genuine "Theogony" is not only of Babylonian origin, but has been modified by Phoenicians in its passage to Greece. How such a cosmology could have become known at Delphi in the seventh century before our era, or how it could have been embodied in verse by an emigrant from Kymê whose muse was otherwise occupied by agriculture and shipbuilding, are questions which I must leave to others to answer.

A. H. SAYCE.

SOME BOOKS ON CHEMISTRY.

Exercises in Quantitative Chemical Analysis. By W. Dittmar. (Dublin: Hodge & Co.) Every page of this volume reveals the practical acquaintance of the author with the methods which he describes. The collection of examples is rather miscellaneous and very far from complete, while the arrangement or succession of the exercises is by no means systematic. But Prof. Dittmar's object has been to present a sufficient number and variety of typical examples for chemical drill in the quantitative laboratory rather than to produce an exhaustive treatise. There are two features of the work before us to which special attention should be called. We refer to the number of cases in which improved and new processes and apparatus have been introduced by the author; and to the very great care which he has taken, in many instances by means of original work, to secure correct data and formulae for the numerous calculations involved. We should add that a considerable part of the volume is devoted to gas-analysis, the apparatus employed in the several operations being fully illustrated by woodcuts. The only serious fault we have to find with Prof. Dittmar is his attribution to Bunsen (p. 34) of the pump invented by Dr. H. Sprengel. The time had gone by, we hoped, when this injustice was possible. A few odd words and expressions (such as "had the kindness of designing for him," p. 95; "in the heat," p. 109) are of no importance. The volume has been brought out in an admirable form and at a moderate price.

The Owens College Course of Practical Organic Chemistry. By J. B. Cohen. (Macmillan.) Dr. Cohen describes the preparation of eighty-seven organic bodies in this admirably planned series of laboratory lessons. The directions are clear and concise, while the illustrative woodcuts adequately represent the form and disposition of the apparatus required in the several operations. An introductory chapter gives the preparation of pure alcohol, ether, and benzene, and includes accounts of the method of fractional distillation and of the determination of boiling-points. Besides foot-notes, there are several pages of explanatory observations on the chief re-actions described in the body of the work. This course of lessons will be found very useful in laboratories where advanced organic chemistry is taught. We know of no volume of similar scope.

Agriculture in some of its Relations with Chemistry. By F. H. Storer. (Sampson Low.) We have here two goodly volumes, together extending to more than 1,000 pages, and mainly occupied with the applications of chemical science to the art of agriculture. The subjects discussed are treated in forty chapters, which contain the substance of the lectures which the author has been in the habit of delivering at the Bussey Institution of Harvard University, Massachusetts. There is some lack of system in the arrangement of the abundant material which Mr. Storer has here gathered together. And there is one most

important section of his subject which the author has ignored. He says practically nothing as to the composition and the rational employment in cattle-feeding of the various kinds of food produced on the farm. One looks in vain even for a single analysis of wheat, oats, maize, or clover. It is obvious that Mr. Storer's book, whatever may be its merits (and they are incontestable), will not by itself suffice for the needs of the student of agricultural chemistry.

Handwörterbuch der Chemie. Herausgegeben von Dr. A. Ladenburg. (Breslau: Trewendt.) The fifth volume of this important chemical dictionary (the work was commenced in 1882) is now nearly completed, and brings us as far as the letter I. The chief articles comprised in the 384 pages before us are "Harnsäuregruppe," "Harnstoff," "Harze," "Hexylverbindungen," "Hydrazine," "Indigogruppe," "Indium," "Jod," "Iridium," and "Isomerie." With the single exception of the paper on "Resins," the descriptions are eminently satisfactory, while due attention is given to theoretical considerations. If we may judge from the account of the manufacture, assay, and applications of indigo, the technological aspect of the substances described is regarded by Dr. Ladenburg as of secondary importance. The list of papers with which each article begins is a remarkable feature of the work. Thus, in the article on the "Uric Acid Group," with which this fifth volume opens, the bibliography includes no less than 439 separate and numbered references to the periodicals or other chemical works in which memoirs on the subject have appeared.

CORRESPONDENCE.

MR. A. SIDGWICK'S EDITION OF THE "EUMENIDES."

Bournemouth: Oct. 25, 1887.

It appears to me that the demand for small and low-priced manuals of classical texts is introducing the practice of compilation which it is not always easy to distinguish from plagiarism. An editor who takes the material of his notes, and most, or even many, of his references unacknowledged from larger works, which perhaps represent the labour of a life-time, makes a good show of scholarship; and those who use his books may not know to what extent he is shining in borrowed plumes. Now, without doubt, learning and scholarship and their results, once published, become common property, and every one has a legal right to make full use of them; still, I think that when an editor draws largely on the labours of another he should briefly acknowledge his obligations, and not conceal them, much less so do as up his notes as practically, and even ostentatiously, to ignore them.

These remarks are suggested by the school-edition of the *Eumenides* just issued by the Delegates of the Clarendon Press, bearing on its title the well-known name of Mr. A. Sidgwick, M.A., Fellow and Tutor of Corpus Christi College, Oxford. On reading his notes I felt that I was virtually reading my own commentary in a new dress, and I thought that some notice of this "indebtedness" would be given in the preface. But, no! All that the author does is to name six editions, one of them mine, which he has "studied most carefully," and of these six he gives the chief praise to Wecklein.

There is nothing in his text materially differing from mine, except that here and there he has adopted a reading which I had deliberately rejected. But I wish to point out, by one or two brief examples, the principle on which, as it seems to me, these notes are compiled.

On 467 my note is this (on $\pi\alpha\rho\delta\alpha\varsigma$ $\epsilon\upsilon$ $\sigma\omega\lambda$ $\kappa\alpha\tau\alpha\rho\alpha\chi\eta$): "However I may have fared, I shall be content—So *Antig.* 634, η $\sigma\omega\lambda$ $\mu\epsilon\upsilon$ $\eta\mu\epsilon\iota\varsigma$ $\kappa\alpha\tau\alpha$

ταχῆ δρῶντες φίλοι," &c. Mr. Sidgwick's note is, "idiomatic use for 'howsoever I fare.' So *Antig.* 634."

On 599 (πέπεισθι) I write: "A form of reduplicated aorist with a termination like ἄνωχθι, *Cho.* 759, κέκραχθι, *Acharn.* 335, and the Homeric κέκλυθι, τέτλαθι, δείδιθι." Mr. Sidgwick: "The form somewhat resembles the epic κέκλυθι, τέτλαθι, and κέκραχθι (*Ach.* 335)."

On 903 (νίκης μὴ κακῆς ἐπίσκοπα) my note is: "Such prayers as have for their aim a not dishonourable victory.—*Cho.* 126, *Ajac.* 976." Mr. Sidgwick: "Such as hath regard to no dishonourable victory. The word is similarly used *Cho.* 126, *Aias,* 976."

On 697 (περιστέλλουσι) I remark that the verb means "to wrap about one," "maintain," and that the poet is taking the middle part between the parties of Cimon and Pericles. Mr. Sidgwick translates accordingly, "wrapping round," "maintaining"; adding that "Aeschylus protests against the despot and anarchy."

No one who examines this manual can for a moment doubt that my notes have been rather largely drawn upon without acknowledgment. Indeed, I seem to see some disposition, as if to throw the student off his guard, to disparage my well-considered criticism of the text. Thus, in 631, where I now propose to read (in place of ἀπὸ and τὰ πλείστα) τὰπὸ στρατείας γὰρ νῦν ἡμποληκῶτα κἀλλισθ' ἄμ' αἰνοῖς εὐφροσιν δεδεγμένη, "receiving him with genial praises for having so excellently conducted (made his trade of) the affairs of the army," Mr. Sidgwick, rejecting my emendation ἄμ' αἰνοῖς for ἄμ' εἰνον (confirmed as it is by αἰνεῖν in *Agam.* 917), merely says that ἄμ' αἰνοῖς is "harsh in itself [!], and leaves ἡμποληκῶτα untranslatable."

In 220, where I retain τὸ μὴ γενέσθαι, with abundant references to prove that γίνεσθαι with an infinitive is perfectly good Greek and good sense too, he dogmatically asserts that τὸ μὴ γενέσθαι "must be wrong," and reads τίσεσθαι, which, he says, "it is not a great stretch to use for 'to get payment.'"

When an old hand at editing is told by a much younger scholar that "he must be wrong," he is apt to ask if the objector has considered the matter in all its bearings. However, my present object is merely to suggest, in a general way, that a somewhat extensive obligation to the notes of another should, in literary fairness and courtesy, be in some form specially acknowledged. I would not willingly do the least injustice to the independent thought shown in this work; but I think "appropriation" should have certain recognised limits.

F. A. PALEY.

SCIENCE NOTES.

At the annual meeting of the Mathematical Society, to be held on Wednesday, November 10, it is proposed to present to Prof. Sylvester the De Morgan Memorial Medal, which was awarded to him by the Council in June last. The retiring members of the Council are Prof. Cayley and Mr. J. M. Hill. Mr. A. Buchheim and Dr. J. Larmor have been nominated to fill the vacancies for the ensuing session.

The opening meeting of the new session of the Geologists' Association will be held on Friday next, November 4, at 8 p.m., in the library of University College, London, when the president, Mr. F. W. Rudler, will deliver an address on "Fifty Years' Progress in British Geology."

AMONG the papers in the November number of the *Journal* of the Anthropological Institute—which appears this quarter rather earlier than usual—may be specially mentioned Capt. Conder's communication on "Hittite Ethnology," and Mr. Gomme's paper on the

"Primitive Human Horde." Dr. George Harley compares the recuperative bodily power of man in a rude state with that in a highly civilised condition; Lord Ducie describes some curious "Hagstones"; Mr. Reed, of the British Museum, writes on some stone spinning tops from New Guinea; Lieut. Elton communicates interesting notes on the Solomon Islanders; and Mr. Wallach has something to say about the Guanchos.

PROF. LEPSIUS, of Darmstadt, has written the first part of a treatise, entitled, *Geologie von Deutschland*, which promises to be, when completed, a very convenient work of reference. It forms the introductory volume of a series of "Handbücher zur deutschen Landes und Volkskunde," to be published by the "Central-kommission für wissenschaftliche Landeskunde von Deutschland." Dr. Lepsius's instalment deals with the structure of the western part of Germany, and is accompanied by a neatly coloured geological map.

PHILOLOGY NOTES.

A NEW attempt at Oriental bibliography is to be made in Germany, in continuation of the *Bibliotheca Orientalis* of Friederici (1876 to 1883) and the *Literaturblatt für Orientalische Philologie* (which closed with last year). It will be under the general editorship of Prof. August Müller, of Königsberg, assisted by a numerous staff; and it will be published by Reuther, of Berlin.

The *Old Irish Glosses at Würzburg and Carlsruhe*, edited with a Translation and Glossarial Index by Whitley Stokes, is the title of a volume which has just been published by the London Philological Society (Trübner). This part, which consists of 352 pages octavo, contains only the glosses and translation; so the Glossarial Index is still to appear. The glosses are found, we are told, in four Latin MSS. of the ninth century; and those in three of them have already been published by Zimmer, but "so incompletely and inaccurately," so Mr. Stokes thinks, "as to render a revised edition desirable." Moreover, Zimmer's edition, unless we are mistaken, contains no translation.

THE China branch of the Royal Asiatic Society is doing most useful work, and its *Journal* (Trübner) invariably contains articles of importance and interest. The present number is no exception to this rule. It opens with an article on the family names of China, by Mr. Giles, in which the origin of each name is given so far as is possible. In some cases the record goes back to the time of Yü (2205-2197 B.C.) and many of the entries contain matter of great ethnological interest. The second article is on the "Manchu Relations with Tibet," by Mr. E. H. Parker. This is evidently a translation, though we are not told of what work it is a version. At all events it will be gratefully received by Mr. Robert Gordon and the geographers who follow him, since it states in the most unequivocal terms that the Yarusangpu is an upper portion of the Irrawaddy. A justly appreciative notice of the life and labours of the late Alexander Wylie follows, and is succeeded by some reviews; in one of which Mr. Giles, in the spirit of a lenient fellow-worker, criticises Dr. Legge's edition of Fahren's travels. The number concludes with a paper on Corea read before the society by Mr. Carles, and the council's report.

MEETINGS OF SOCIETIES.

CLIFTON SHAKSPERE SOCIETY.—(Saturday, Oct. 1.) JOHN TAYLOR, Esq., president, in the chair.—At this meeting, the first of the thirteenth session, Mr. Taylor, the outgoing president, gave an address on

"The Positive Evidence that Shakspeare wrote his own Plays." Mr. Taylor reviewed the contemporary allusions to Shakspeare, beginning with Greene and Chettle, and others, going on to Meres in 1598, and to many in the Reign of James I. With reference to the alleged authorship of Bacon, it was impossible to believe that the author of the *Novum Organon* could have written "The Merry Wives of Windsor." Bacon's genius was analytic; Shakspeare's was sympathetic. Commentators agree that the author of the plays was altogether ignorant of the Greek language. Bacon's writings are saturated with Greek learning. The classical errors of name and characteristic which exist in the plays would have been impossible to Bacon. The first collected edition of the plays was published seven years after Shakspeare's death by Heminge and Condell, his personal friends, whose expressions in the dedication are so genuine that they must be accepted as trustworthy, and the idea of fraud must be completely set aside. Much other contemporary evidence was brought forward, all regarding Shakspeare as the unquestioned author of the plays. The parallelisms by which Mrs. Henry Pott seeks to support the theory would be fatal to the cause, so weak and strained are they. Many of these were cited in detail, and the Warwickshire allusions in the plays brought forward.—Mrs. C. I. Spencer was elected president for the session, when the following are to be considered: "The Taming of the Shrew," "Every Man in His Humour," "The Merry Wives of Windsor," "Thomas, Lord Cromwell," "Much Ado about Nothing," "Antonio and Mellida," Poems and Sonnets, "Antonio's Revenge." The hon. secretary (9 Gordon Road, Clifton, Bristol) will be grateful for any magazine articles, newspaper scraps, or anything else to add to the society's library.

(Saturday, Oct. 22.)

Mrs. C. I. SPENCER, president, in the chair.—"The Taming of the Shrew" was the play for consideration. A paper by Miss Louisa Mary Davies was read, entitled "A Ten Minutes' Twitter on Two Tender Topics." Miss Davies thought Katharina had been unfairly dealt with by author and critic. Her temperament had been misjudged by the terms applied to her from the beginning. She suffered from contact with her sister's lymphatic mood. A superhuman meekness places ordinary mortals at a horrible disadvantage. No lady of birth and education could patiently submit to such a wooing as that with which Petruchio opens his suit; and the systematic course of insult, mockery, and starvation to which he afterwards subjects her would not in real life attain the result given in the play, for since the world began no man ever won his wife's loving submission by treating her like a dangerous wild beast.—Mr. P. A. Daniel's "Time Analysis" of the play was read, and also a part of Mr. Albert R. Frey's recent paper on "The Taming of a Shrew," and "The Taming of the Shrew."

HELLENIC SOCIETY.—(Thursday, Oct. 20.)

E. MAUNDE THOMPSON, Esq., vice-president, in the chair.—A paper was read by Mr. A. S. Murray on "Two Vases from Cyprus, now in the British Museum." These were recently found on the site of the ancient Marion and were clearly of Athenian manufacture. The first was an alabastros with female figures drawn in fine black lines on a creamy surface. It bore the signature of Pasiades, a painter not previously known. The second vase was an Athenian lekythos, with red figures on a black ground, but with accessories of white colour and gilding. The subject was Oedipus putting an end to the Sphinx, and the figures represented were Oedipus, the Sphinx, Athena, Apollo, Kastor, Polydeukes, and Aeneas—the three last named being subordinate and possibly typical of Oedipus's companions and helpmates. Mr. Murray fixed the date of the vase at about 370 B.C.—Mr. Cecil Smith urged the undertaking of further excavations in Cyprus, when such Athenian vases were beginning to be found there.—After further remarks by Mr. Watkiss Lloyd and Mr. Thacker Clarke, an abstract was read of a paper by Mr. E. L. Hicks, on a Thasian decree found last year by Mr. Bent. Mr. Hicks considered the decree to refer to the revolution at Thasos in 411 B.C. described by Thucydides

(viii, 64). The full text, with Mr. Hicks's restoration and commentary, will appear in the next number of the *Journal of Hellenic Studies*.—Mr. Bent gave an account of the finding of the stone.—Mr. Cope Whitehouse exhibited a fragment of an uncial MS. of Demosthenes found in the Fayoum, and dwelt upon the importance of investigating the district thoroughly before it was injured by irrigation works.

NEW SHAKSPEARE SOCIETY.—(Friday, Oct. 21.)

Dr. F. J. FURNIVALL, director, in the chair.—The chairman read a paper on "Henley-in-Arden, Stratford-on-Avon—Shakspeare's Country," being notes on his recent stay in Henley-in-Arden, and visits thence to Temple Grafton, Bidford, Febworth, Marston, Wixford, Stratford, and Kenilworth, where he was enabled, by the assistance of Dr. Atkinson, to get an idea of the place as it was before its destruction in the Civil Wars, and which the exhibition of contemporary prints, &c., helped the meeting to realise.—Mr. S. Lee (hon. treas.) read a paper by the Rev. H. C. Beeching, entitled "Notes on certain Criticisms on the 'Merchant of Venice,'" dealing first with the *a priori* criticisms of Gervinus, and his theory of the play as "the relation of man to property," which did not stand careful comparison with the facts, being subtle enough, but hopelessly wrong. Mr. Beeching then dealt with Prof. Dowden's theory of Antonio's melancholy, which he was quite unable to accept; and passed on to Mr. R. G. Moulton's study of Shakspeare's dramatic art in the play, where Mr. Moulton appeared to be in error in his account of the materials of the play—in speaking, for instance, of two stories, the "Cruel Jew," and the "Heiress and the Caskets," and placing them in apposition, whereas there was no story of the "Heiress and the Caskets"; and in his character of Antonio, and other points.

FINE ART.

GREAT SALE of PICTURES, at reduced prices (Engravings, Chromos, and Olographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—GEO. REES, 115, Strand, near Waterloo-bridge.

Dalmatia, the Quarnero, and Istria, with Cettigne in Montenegro and the Island of Grado. By T. G. Jackson. In 3 vols. (Oxford: Clarendon Press.)

MR. JACKSON has conferred a great boon upon all who are interested in early Christian architecture by the publication of these valuable and charming volumes. The districts into which his architectural investigations carried him are evidently not well adapted for the visit of an ordinary tourist; and readers who enjoy the fruit of the accomplished author's labour feel a reposeful and grateful sense of the discomforts which he has endured on their behalf and has described so pleasantly.

The history of the country on the east side of the Adriatic is, comparatively speaking, little known. Mr. Jackson has taken great pains to elucidate it by reference to original authorities. Nearly half of his first volume is devoted to the general history of Dalmatia, tracing it through the Romans, Byzantines, Huns, Venetians, Turks, and Austrians. In the earlier parts of the history he has fallen somewhat into the style of Gibbon, while "vanished Promona" and "Roman Narona" show that he has also sat at the feet of a more recent master. In addition to this general view of the history, which to some extent gives the impression of overcrowding, Mr. Jackson prefaces his visit to each place of importance by a little *résumé* of its story; and these parts of his book are interesting and useful, not infrequently having a direct

bearing on the architectural details which follow. In many cases the narrative has a special interest for the present generation, which has witnessed stirring events in those regions. Some readers will learn for the first time that the present gallant Prince of Montenegro represents a hereditary line (from uncle to nephew) of archiepiscopal princes, his uncle and predecessor being the first of the family to decline to take orders.

Everyone will naturally turn to Spalato first, for it seems to be allowed on all sides that under the hands of Diocletian's Greek architect the germs of the post-classical styles of architecture were laid there.

"The palace of Spalato marks the era when the old art died in giving birth to the new. The date of Diocletian's building is from 284 to 305. Of the architecture of the next five centuries Dalmatia has not a single perfect example remaining. In Istria and Friuli, however, the continuity of examples is better preserved, the irruptions of the barbarians having been less disastrously destructive there than on the eastern side of the Adriatic. At Parenzo still stands the magnificent basilica of Euphrasius, built between 535 and 543. At Grado the duomo of Elias was completed between 571 and 586, and we may still admire the wondrous pavements and grieve over the shattered capitals of the original building. The magnificent basilica of S. Maria di Canneto at Pola has unhappily disappeared, and its rich columns of marble and Oriental alabaster must be looked for at Venice, but at Trieste there are still some remains of early Byzantine architecture in the apse of the church of S. Giusto (i. 207).

So far as the Roman work at Spalato is concerned, Mr. Jackson does not profess to add much to the magnificent folio of Adam (published in 1764, when the modern name of Aspalathus was still spelled Spalatro); but on the Christianised temple of Jupiter in the palace, now the Duomo, we learn much that is of great interest. His view of the circular interior of this externally hexagonal temple, with its eight free pillars above and eight below supporting the two entablatures, is beautiful. Another plate is devoted to the pulpit of marble and limestone standing on six pillars, whose capitals Mr. Jackson knows "nothing in romanesque art to surpass in point of technical execution and ingenuity of design" (ii. 44). Though this ornament is purely romanesque, Mr. Jackson imagines it to be of the earlier part of the thirteenth century, from the analogy of the great doors, to which we shall refer later. The early work in Dalmatia is Byzantine, but

"with the Hungarian conquest the last thread which bound Dalmatia to the Byzantine empire was snapped. Dalmatian art took a fresh departure, especially in those cities which were most constantly subject to Hungarian rule. Its direction veered round from east to west, from Byzantine to romanesque, and in a great measure to that form of romanesque which prevailed north of the Alps rather than that of Italy. . . . The architecture of Hungary down to the Tartar invasion was governed by the example of the great romanesque churches of Austria and Carinthia just across the frontier. . . . A great period of rebuilding followed the re-establishment of law and order, but the artists were still foreigners. . . . not only from Germany, but also from France, where by this time gothic architecture was fully developed. The architecture of Hungary, after the middle

of the thirteenth century, was gothic" (ii. 153-55).

We have a useful warning against supposing romanesque in one country to be of the same date as romanesque in another:

"In France and England round-arched gave way to pointed architecture at the end of the twelfth century. In Germany the new ideas took root more slowly; but gothic architecture began to supersede romanesque about 1230 or 1240. In Italy churches arose between 1220 and 1300 at Assisi, Venice, . . . and Florence, in which Italian gothic reached its fullest development; but in Dalmatia we find the people contentedly working on at romanesque architecture through the whole of the thirteenth and well into the fourteenth century" (i. 217).

Mr. Jackson's treatment of the great campanile at Spalato, both in his plates and in the letterpress, is very valuable. Many of its ornaments are copied from those of Diocletian's work, in the midst of which it stands. The campanile is throughout thoroughly romanesque, and that, too, of an early type, though begun thirty years later than the angel choir at Lincoln, and barely finished when Brunelleschi commenced his dome at Florence. There is another lovely campanile at Arbe, "the city of campaniles." It is to be wished that it had entered into Mr. Jackson's plan to treat the general question of the romanesque campanile, with special reference to its early appearance in the British Isles and to the source of its appearance in Italy, &c.

The magnificent romanesque Duomo of Traù, finished throughout in one style between 1206 and 1251, receives like adequate treatment. The west doorway is beautiful beyond description; and though Mr. Jackson's plate gives rather the general charm than the marvellous details, it far excels other representations in one important particular—namely, the presentment of the great lion, on which Adam stands, on the south side, than which nothing could be finer. The exterior generally is very good—a usual contrast between Dalmatian and Italian churches. In connexion with this beautiful church Mr. Jackson gives a valuable description of the Hungarian church of Ják, which it greatly resembles. As in a large number of cases, Mr. Jackson is here on ground already occupied by Kitzelberger.

To turn to the remains of earlier periods, at Salona Mr. Jackson conducted a careful exploration of the great basilica, only recently excavated, 135 feet long from narthex to apse, with an unexplained apsidal building stretching forty-five feet beyond the apse, and an additional aisle and three large apsidal chapels on the north side. The enclosed choir in the nave was only eight and a half feet wide, and on the east of it the basilica was strangely cut in two by a solid wall three feet thick, pierced by five small doorways. In the apse is the sarcophagus of a chor-episcopus. Mr. Jackson remarks that this title and office are said not to be older than 450; the ordinary books state that the name is found for the first time in the canons of Ancyra, A.D. 314, and that the office had a considerably earlier origin. The ground within and around the site is full of sarcophagi. It is to be hoped that the makers worked in the spirit which Theodoric impressed upon the marble-cutter to whom he

gave the monopoly at Ravenna—"Do not let a relative be forced to the alternative of wasting his substance in funeral expenses or else throwing the body of his dear one into a well" (Hodgkin, *Cassiod.*, p. 207).

At Zara, among much else that is of great interest, we have the account of an investigation which may fairly be called an important discovery. S. Donato, a round church in connexion with the cathedral church of S. Anastasia at Zara, is said by Constantine Porphyrogenitus (about A.D. 950) to have had another church above it. The interior effect is much like that of the Holy Sepulchre Church, Cambridge. The piers are lighter and loftier, and the radius is greater by about seven feet; the circular ambulatory is about the same width in the two. The probable date of S. Donato is about 812. Mr. Jackson says:

"I penetrated a dense net-work of courts and houses to the south of the church, and by hunting in cellars and mounting to attics succeeded in tracing walls four feet thick forming a square building of the full height of the double-storied aisle. This building had no opening to the church on the ground floor except by [one doorway] . . . but on the upper floor it evidently opened to the gallery or triforium by two pairs of arches . . . This made a large addition [some forty-five feet long with an average breadth of twenty feet] to the area of the upper story, and rendered it worthy to be described as *another church over the first*" (i., 255).

It is pleasant to find Mr. Jackson decidedly in favour of the earlier date (about 543) of the great basilica of Euphrasius at Parenzo. It is complete in all its features—an octagonal baptistery, then an atrium, then the church, the north and south walls of the church and atrium running in a straight line 183 feet long. The interior width is about 58 feet. The columns of the atrium are of marble, taken from some classical building; but the capitals are Byzantine, and as like the capitals at S. Vitale in Ravenna as they could well be. The exterior of the great western wall and gable, above the roof of the ambulatory of the atrium, have been covered with glass mosaics, of which portions remain. Of the interior it must suffice to say that it is "inferior in size alone to the great Ravenna basilicas, in beauty of execution it is quite their equal." "The magnificent mosaic at the east may challenge comparison with those of S. Apollinare in Classe and S. Vitale." "Maes is said at" the high altar in the Duomo of Parenzo "from the eastern side, the priest standing behind it with his face towards the congregation, according to antique usage" (iii. 327). The same is true of the Duomo of Ravenna; but owing to the great size of the altar there the effect is that of the chapter having their own celebration in their own part of the church, using the east side of the great altar as a matter of convenience.

We must leave untouched the Duomo of Aquileja, with its vast width of 95 feet from aisle wall to aisle wall, and its vast length of 160 feet of nave arcade, a Gothic interior with arcades of pointed arches on the site of an ancient basilica, to say a few words on the *bonne bouche* of Mr. Jackson's book, the Duomo of Grado. This is a great basilica, about 120 feet long and 65 wide, of the type of S. Apollinare Nuovo at Ravenna and the

Euphrasian basilica at Parenzo. At Grado alone, of all the great basilicas, is sufficient of the old pavement left to show how glorious these pavements were. The colours and patterns will bear comparison with the most beautiful Roman mosaic pavements. And among the patterns are square spaces with inscriptions, one recording the restoration of the church (570-580), the others recording the donations of various portions of the pavement—the deputy Count Palatine gives 200 feet, four servants of Euphemia give 100 feet, and so on. Besides the Duomo, S. Maria delle Grazie is a beautiful little Byzantine church six bays long, abounding in fragments of mosaic pavements with inscriptions, knot-work slabs, &c.

Dalmatia can claim to possess at least two of the smallest churches in the world, including the smallest cathedral. Many persons will remember the surprise with which they saw for the first time the very small dimensions of the mausoleum of Galla Placidia; but still the distance between the extremities of the two arms of the cross is 40 feet. The round church at Cambridge is nearly 23 feet from core to core of the pillars, and 41 feet from wall to wall. The chancel of Bradford-on-Avon is 13 feet by 10, and the porch is 10 feet by 10½. The porch of Monkwearmouth is 11½ feet square. S. Croce, at Nona (about the same latitude as Ravenna), which used to be the cathedral, is a cruciform church with a central dome. The dome is about 9 feet across, the nave is 8 feet long, the arms and the chancel are rather shorter, total interior length 25 feet; the width of the nave is less than 9 feet. The church of S. Nicolo, a mile off, is still smaller. The chancel is 5 feet long, the nave and arms 4½ feet, total length 19½ feet; the doorway is 3 feet wide, and occupies nearly half the interior width; it is 5 feet 8½ inches high. But that these dimensions are too small for large sarcophagi we might have taken this to be a mausoleum. The ground plans of these and many other Dalmatian churches are not apsidal at the extremities, but square. The corners are rounded off inside by "squincies," and the curved wall thus formed carries a semi-dome.

Mr. Jackson's drawings of many of the beautiful examples of metal work in the treasures of the churches he visited are a notable feature of his book. The pastoral staff of Archbishop Valaresso at Zara (1460) and of Bishop Patrizio at Lesina (1520), the chalices at Zara and Mezzo, the crosses, lamps, and five-bread-platter, at Savina, the statuette and reliquary of S. Biagio at Ragusa, the ostensorio at Ossero—these and many others deserve more than a passing mention at our hands. The greatest works are probably the casket of St. Christopher at Arbe (twelfth century) and the ark of S. Simeone at Zara (1380). On the cover of the former Mr. Jackson shows a quadruped on each side of our Lord, instead of the lion and eagle of his letter-press. Eitelberger—as his way is—brings together in his drawing the best side of the casket and the best portion of the lid, which makes it difficult to compare his drawing with Mr. Jackson's; neither seems to support Mr. Jackson's remark that an arrow shot at St. Christopher has put out the eye of the king. The woodwork is another remark-

able feature of the churches and of the book alike. The great doors of Guvina at Spalato (1214) "are among the earliest as well as the finest specimens of mediæval woodwork in existence." Here, again, Eitelberger puts the best borders to the best panels. The great doors of S. Sabina at Rome are probably very much earlier than these, and the subjects are finer; and, speaking from a recollection of some years ago, the knotwork borders on the doors of St. Mary in the Capitol at Cologne are more varied and ingenious. Some of Mr. Jackson's drawings of woodwork are lovely—*e.g.*, the choir stalls at Zara. In his drawing of the choir stalls at Spalato he differs from Eitelberger in the pattern half hid by the seat, giving two concentric circumferences unbroken where Eitelberger makes the larger circumference break off and go to form the inner, as at Monasterboice in Ireland and in many Anglian examples. The divergence between the two artists comes to its height in the baldacchino at Arbe, where the two drawings are irreconcilable, even after full allowance for Eitelberger's habit. No doubt the later artist has corrected the earlier.

Certain remains of early work in the districts visited by Mr. Jackson make their appearance now and again in an isolated manner in his book. He does not draw attention to their remarkable interest as bearing on early work in the British Isles and in Rome. These are the sculptured slabs and fragments of marble posts covered with interlacing work, which he found in several of the earliest buildings. Yorkshire, Durham, and other northern counties are full of beautiful work of this kind; but a far closer parallel is to be found in Rome, where there are very many slabs or pieces of slabs and pillars, between which and the fragments shown by Mr. Jackson there is practically no difference at all. At S. Sabina there is a slab superior to anything Mr. Jackson shows; but, except in that respect, it might have been cut by the same artist. The south elbow of the patriarchal chair at Grado is the best piece of interlacing work shown; indeed, at first sight, it looks as if it had come out of the book of Durrow, or was a copy of a lovely little slab in the vestry at Monkwearmouth. In the Tabularium at Rome there is a fragment with the same clever pattern, except that the continuous lines which form semicircles and diameters travel a little more independently. A fragment at Spalato has the same pattern as a white marble post lying in the Forum below the temple of Faustina; and there is the same pattern on shafts at Leeds and Brompton. Eitelberger shows another Spalato slab, with a great circle of interlacing bands, symmetrical foliage in the spandrils, and a pentalpha within the circle. At S. Maria in Trastevere is a slab with the same foliage, the same great circle, and an approximation to the pentalpha; but in other respects it is far more elaborate. At Muggia Vecchia there is a post *in situ*, as part of a screen, cut into a spherical ball at the top. The same post, practically, is lying in the Forum in the Basilica Julia. Under one of the arches of the Colosseum, as risers of steps in the Colosseum and in the garden of St. Andrew's, built into the wall in the vestibule of the Santi Apostoli and in the atrium of the Quattro Santi Incoronati, in the cloisters of the Lateran

and of S. Lorenzo fuori le Mura, and especially—among many other places not named—in the vestibule and entrance of S. Maria in Trastevere, these slabs and posts are found in Rome. Taken in connexion with Mr. Jackson's Dalmatian fragments, and the abundant similar fragments at Torcello, Murano, &c., they show the uniformity with which the Western Christian churches of the sixth, seventh, and eighth centuries were equipped with this ornamentation, the origin of which is still a vexed question. They show, also, the closeness of the link between Northumbrian Anglia and Italian art. The Anglian work differs from the Italian and Dalmatian work in one important particular among others—its interlacements are not made up of isolated figures linked together, as in the southern work. The northern artist devoted himself to making his bands continuous; the southern artist linked together rhombuses with re-entering curvilinear sides, or Latin crosses with narrow limbs, or other more irregular symmetrical figures, and thus produced the effect of continuous interlacement. The explanation of the difference seems to be that the southern artist copied slavishly from classical work. Grado contains the problem in its chair and the solution in its pavement. In the pavement it was desired to have frequent variety of colour; and so, instead of making one long band do its own interlacing, they linked together rhombuses of blue, green, red, and black bands. The marble-cutter copied their patterns, made up of isolated figures; the Anglian put his soul into the work, and developed the ideas of endlessness and eternity.

In the amphitheatre at Pola Mr. Jackson found that the windows of the towers, of imperial Roman date, have curious stone traceries, pierced through upright slabs. This he believes to have been the origin of the pierced stone shutters which served as windows in the early Istrian and Dalmatian churches, e.g., Zara, S. Lorenzo in Pasenatico, and Grado. This last example (iii. 420) is as though one of the Ravenna perforated screens had been taken to fill a window. There can be no doubt that the bronze and marble screens of imperial Rome were the origin of the choir screens of which so many fragments remain, and similar screens were used for windows. Prof. Middleton took me, a few months ago, to see two—copies in marble of the horse-shoe bronze screen—yet *in situ* at S. Martino ai Monti and the Quattro Santi Inconronati. The same thing in bronze, with Latin crosses further "cancelling" the openings, still forms the window of the confessio at S. Apollinare in Classe. Built into the cloister wall at S. Lorenzo fuori is a large piece of elaborate interlacement, semicircular at the head and rectangular below, 4½ feet by 5½. Among the interlacements are six circular orifices—probably the openings for light in one of the seventh-century windows of the church. In Barnack Church (Northants) there is a pre-Norman window filled with a slab pierced to form the interlacement of two circles with a band. It is curious that Bede, in speaking of the glass at Monkwearmouth in 684, says it was used *ad cancellandas ecclesias fenestras*, the idea of "putting screens in the windows" being apparently familiar to him.

Mr. Jackson has taken great pains to repro-

duce accurately the inscriptions found in some of the churches, many of which are given by Eitelberger. For the most part he does not enter upon translation. It would be interesting to learn his view of the inscription of Handegis at Pola (857), where it is tempting to suggest *alec* for *aleo* (iii. 295, 813).

Mr. Jackson's architectural training renders him a delightful guide in the ornamentation of the capitals of pillars. One feature he thinks peculiar to Dalmatia—a half leaf, half roll. At Grandson, however, where so much that is startling is to be found, there are leaves with a spiral scroll at the head of one half.

G. F. BROWNE.

THE SCOTTISH SOCIETY OF PAINTERS IN WATER-COLOURS.

THE Scottish Society of Painters in Water-Colours has not invited contributions from the general art-public to its present exhibition at Glasgow, as was the case in some former years, but has confined its display exclusively to work by its own numbers. The society, however, includes all the best water-colour painters of the North; and, though among these Sir William Douglas, Mr. G. W. Johnstone, and Mr. A. Melville, are unrepresented on the present occasion, the exhibition is fairly illustrative of the condition of the art in Scotland. As usual in Glasgow exhibitions, the influence of foreign aims and foreign ways of art is abundantly visible. It appears in a somewhat exaggerated form in the two blottesque productions of Mr. J. Crawhall, and, with more fruitful results, in the contributions of Mr. J. Patterson. The most important work that the latter artist sends is a river-scene with a corner of grass starred with marguerites, and a clump of alder trees overlooking quiet water in which the sky is mirrored in deepest blue—a subject marked by style, inspired by a definitely artistic aim, and treated with an effective breadth of touch.

Mr. W. MacTaggart sends several of his free and spirited renderings of sea. The "Dulse Gatherers," seems a little black and opaque in its foreground passages; but another sea-piece, the "Bathers," rendering a sober effect of light, with tiny figures of children plunging in the water and bending to catch the shoreward sweep of the waves, is excellent for freedom of handling and sense of motion. The artist, however, is essentially a painter of high-pitched sunlight—as such unrivalled among Scottish artists. He is at his best in "A Sunny Shore," with the ripple and the softly shifting hues of its waves swallowed up towards the right in the white splendour of a space of intensest sunshine, and its "beached" margin of the sea" where a pair of children recline among the white sand and richly tinted rack. The president of the society, Mr. F. Powell, shows several of his warmly toned and scrupulously finished sea-pieces; and Mr. W. Hole attains a certain impressiveness (suggestive of Doré in the towering masts and outspread breadth of black sails) in his "Lost at Sea"—a subject which would have gained by greater attention to form, and greater truth of tone and lighting in the space of nearer water.

We can name no Scottish water-colour-painter whose work is fresher or more vigorous than that of Mr. Tom Scott, who exhibits an "Autumnal Landscape—Near Earlston"—one of those subjects of uncommon size and importance to which he has recently been devoting himself. It shows a stretch of south-country landscape—fields and running brook for foreground, with beyond a few cottages, with their hayricks and sheltering trees, gathered

at the base of a grassy hill that slopes upwards to the left. The leafage and herbage only touched and slightly mellowed by autumn and the effect is one of clearest atmosphere showing the details of the landscape and of the cloud-forms above with a precision that do not entirely escape a touch of hardness and rigidity. The same artist's "Road Bit Capri" is a pleasing example of the delicate yet crisp handling and the brilliant colouring of his smaller Italian subjects. Mr. R. Nisbet shows several quiet, well-considered little landscapes. Among Mr. D. Murray's drawings are various subjects sketched in Brittany and Mr. R. W. Allan attains telling contrast in the flickering points of light that play over his dark-clad groups of peasants pacing the broad square of Middleburgh or grouped beneath the shadows of the lofty west front of Rouen. The examples of still-life include several flower-pieces by Mr. R. Herdman precise in their rendering of form and effective in their brilliant colouring.

CORRESPONDENCE.

GOMME'S "ROMANO-BRITISH REMAINS."

Barnes, S.W.: Oct. 24, 1887.

I am sure we shall all be pleased to have Mr. Haverfield's list of omissions from my book; because this, together with my book, will supply a complete index of Roman remains recorded in the *Gentleman's Magazine* for 138 years, and this is surely a boon. But I cannot help suggesting that it would have been better for students if I could have seen the list before the second volume was printed off, so that I could then have included the omissions in my appendix, instead of waiting for a second edition. No one knows better than myself how almost impossible it is not to miss some of the paragraphs of two or three lines in the 240 volumes of the *Gentleman's Magazine*, and I venture to hope that my sins do not much exceed this limit. Mr. Haverfield was kind enough, a short time since, to send me a proof of his intended review, containing some specimens of my omissions. Some of these he will find in the appendix to vol. ii.; others are marked for my numismatic volume; and others, being reports of meetings of learned societies having their own special publications, are, of course, not included in my reprint.

Mr. Haverfield is kind enough to say a word of appreciation of my single-handed labour. May I add that, although I know full well my work is not perfect, yet I believe it presents a faithful summary of all the principal contents of the original. More than this I cannot hope to obtain without a degree of labour which would be out of all proportion to the results.

G. L. GOMME.

Liverpool: Oct. 25, 1887.

I can corroborate Mr. Haverfield's remarks upon these volumes. Though we are indebted to Mr. Gomme for the conception of the idea of republishing the extracts, I fear that they must be called practically useless from the large number of omissions. One or two I would like to mention, as they are of importance, and possibly a reference to the London journals of the day may throw some light upon them.

The first is a Roman tessellated pavement bearing an inscription found in Little St. Helen's, London, August 15, 1733 (*Gent. Mag.* 1733, p. 346). This is, so far as I can remember, the earliest antiquarian item of news given in the *Gentleman's Magazine*.

The second is an inscribed Roman sarcophagus with a skeleton and vase of coins, &c., found at Leyton, near Hackney (*Gent. Mag.* 1783, p. 899).

The third is an inscribed Roman vessel found in excavating for the foundations of Cambridge gaol in 1802 (*Gent. Mag.* Nov., 1802, pp. 1000-1001 and Pl. ii. Fig. 1). The remains of the inscription are given, but in the *Gentleman's Magazine* they are very unsatisfactory.
W. THOMPSON WATKIN.

"JACOB" AND "JOSEPH" IN THE INSCRIPTION OF THOTHMES III.

Paris: Oct. 26, 1887.

In reference to the articles published of late in the ACADEMY on the proposed identification of the names of *Iaakab-aar* and *Iasap-ar* (mentioned in the list of the vanquished nations of Thothmes III.) with the Biblical tribes or families of Jacob and Joseph, it may be well to refer readers of the ACADEMY to the opinion of the late Vicomte de Rougé on this subject. That eminent Egyptologist analysed the names of the second list in his excellent memoir, published in the *Revue Archéologique* of 1861, under the title of "Etude sur divers Monuments du règne de Toutmes III." The following are the passages which bear upon the two names in question:

"*Iasap-ar*. La finale *ar* nous est connue comme correspondant à אר. L'adoption de l'exception *p* pour א est ici forcée, car on reconnaît immédiatement le radical אשפן *habitare*—: d'où le nom parfaitement régulier אשפן *habitationis dei*, composé exactement comme אשפן (I, Paralip., 4, 17) *sedes patrie*. C'est un nom tout à fait analogue à celui de אשפן, Bethel" (p. 56, No. 77 of the separate extract).

"*Iaakab-aar*. La transcription hébraïque donne forcément אקבאל, nom au sujet duquel il serait facile de se livrer à des conjectures réduisantes; il est exactement composé comme Israël, et signifierait *Insidiator-dei* ou *Sequens asum*. Est-il permis de supposer que ce nom de localité conserve un souvenir d'un des établissements de Jacob en Palestine? C'est ce que je n'oserais décider; toutefois, il est à remarquer que la famille de Jacob ne devait pas être en Egypte depuis un temps bien considérable sous le règne de Toutmes III." (p. 59, No. 100).

M. de Rougé concludes by saying:

"Nous avons fait remarquer l'emploi du mot אשפן comme le nom de la Divinité. On voit qu'il était usité dans toute cette contrée (la Palestine) d'une manière générale et que son introduction ne peut en aucune façon être rapportée à la famille de Jacob ou d'Abraham."

P. J. DE HORRACK.

NOTES ON ART AND ARCHAEOLOGY.

MR. FULLEYLOVE has just returned from his summer's absence in Oxford, bringing with him some of the sketches and drawings which are to form the material of his second exhibition, to be held at the rooms of the Fine Art Society early next spring.

MR. HERBERT HARLAKENDEN GILCHRIST—who came back lately from America—has brought with him a work which must be destined to excite some degree of interest. It is the latest, and certainly not the least forcible, of the portraits of Walt Whitman. It shows the poet, ruddy and snow-white, seated in his chair and engaged, or next moment to be engaged, in the act of writing. Mr. Whitman, of course, gave the painter a series of sittings for this portrait, which we are sure his English admirers would like to see reproduced in popular form.

MESSRS. CASSELL & Co. will publish next week a new and enlarged edition of *Colour: an Elementary Manual for Students*, by Mr. A. H. Church, Professor of Chemistry at the Royal Academy of Arts.

THE season of winter exhibitions is now at its full. Next Monday no less than four will open: the sixth annual exhibition of the Society of Painter-Etchers, which now comes back to London (New Bond Street) after more than one visit to the provinces; a collection of water-colour drawings by Mr. Ernest George, at the Fine Art Society's; and the two exhibitions of Mr. McLean and Messrs. Tooth, side by side, in the Haymarket.

WE would also mention the exhibition of Messrs. Hollender and Cremetti, which opened a fortnight ago in the Hanover Gallery. It comprises examples of Meissonier, Delaroche, Corot, Diaz, Daubigny, and other foreign painters.

WE hear that Mr. Thibandean has sold his unique collection of M. Legros's etchings—which he had been twenty years in forming—to Mr. T. G. Arthur, of Barshaw, Paisley. When M. Legros gets his due—is recognised at his true value—this collection will become historic. At present it is only known to a few amateurs. Mr. Thibandean, it may be remembered, made, in conjunction with M. Poulet Malassis, a *Catalogue raisonné* of Legros's etchings about ten years ago. But Legros has etched a good deal since then, and Mr. Thibandean has not failed to possess himself of all he could. His collection contained, on the day of its sale, nearly six hundred impressions, being the different "states" of two hundred and fifty-four plates. Of these impressions, about a hundred and forty are unique, and there are only three plates by the austere engraver—this "belated Old Master," as Mr. Wedmore ventures to call him—which Mr. Thibandean has not possessed impressions. It will be interesting that we should mention what they are. One of them is the portrait of M. Sinet, who owns the only example of it. Another is a scene baptism in a church, which M. Legros recollects etching, but of which no specimen whatever is known. And the third is a study from the nude, executed before the pupils of the etching class at South Kensington, and to be found only at the British Museum Print Room, at South Kensington, and at the Dijon Museum. The best things by Legros in the Anderson-Rose, Burty, Malassis, and Valentin collections long ago passed into Mr. Thibandean's hands. Thus there will be an extraordinary accumulation at Paisley. And it is very worthy of note, that within a few miles of the finest possible collection of Legros, will be found likewise the finest possible collection of the other great French master-etcher, Charles Méryon. We refer to the Méryon collection of Mr. B. B. Macgeorge, of Glasgow, which consists of the Heywood and the Mdlle. Niel collections rolled into one, and of additions to these. It is not very fortunate for London, and it is certainly very discreditable to France, that collections of the works of the two French master-etchers, which it will hereafter be impossible to rival, should be found in a remote region of North Britain.

MR. HAVARD THOMAS's marble statue of the late Mr. Samuel Morley was unveiled at Bristol last Saturday. Not only is it a good likeness of one of the most philanthropic of politicians in his habit as he lived; it is also a work of art that reflects credit on one of the most studious and realistic of our younger sculptors.

THE STAGE.

"LE PASSANT" IN ENGLISH.

IT was a very bold, a very praiseworthy, and, perhaps, not a very remunerative experiment which Miss Grace Hawthorne made at the Princess's on Saturday afternoon. For "*Le Passant*"—the first piece of any importance by perhaps the most acceptable and graceful of living French poets—has exquisite versification and a plentiful absence of action; and on the English stage, the exquisite versification being necessarily withheld, the plentiful absence of action must needs be felt all the more. "*Le Passant*" deals, with the utmost delicacy of feeling and expression, with a subject difficult to treat at all on a stage not given to "psychological problems"—not given even to the appreciation of the thing that is perfectly said. The subject is the sudden love which a minstrel youth—himself light of heart when he arrives, though dangerously responsive before he departs—inspires in the breast of a splendid but meretricious Florentine, who has many lovers, and might have been a mistress of the most famous of the Medici. Sylvia, the courtesan of the Renaissance, is discovered in the garden of her villa—by San Miniato it may be, or even as far as Fiesole—in a moment of depression, when there appears to her this minstrel youth, all joyousness and carelessness; and his freshness fascinates and stirs her. The question is, Shall she exercise her wiles upon him? Shall she keep him as her lover, or send him blameless away? In poetry, nothing is, perhaps, quite so touching as renunciation. Unavoidable loss, however deep and fatal, does not appeal to us so strongly; and, by a true instinct—or by the real understanding of his art—M. Coppée settled that the decision should lie in Sylvia's hands, and that she should, of her own proper motion, send the lad away, and for ever. Nay more, he is told by her only to halt when one day, in some strange village, he shall see some girl as simple as himself, some girl "aux yeux de fiancée." A girl with "husband-loving eyes"—Mrs. Logan's unfortunate equivalent for the pretty phrase of the poet—may be seen one day. Meanwhile, the minstrel with mandolin and light step, but with heart a little touched already, sets out upon his travels; and the courtesan, with her "soul of goodness," turns wearily homewards, all the possibilities that had opened to her in an hour closed again, and the old path to be trod in the old way.

There is a certain limited and cultivated public for whom this theme, perfectly presented, would have an attraction. But about Saturday's performance—satisfactory as it was in some respects—there were disadvantages. The presentation, literary and dramatic, left something to be desired. We are not advocates of magnificence of scenery. It is now ridiculously overdone. Still, a certain appropriateness of decoration helps the effect extremely; and this Renaissance Garden would have been better if, without being realistic or gorgeous, it had had in it the elements of style and taste. Then, the versification. It was clear that Mrs. Logan had felt the beauty and the delicacy of the incident: not so clear that she had been able even to approximate, in the English she employed, to

the consummate charm of M. Coppée's verse. The interpretation by the two actresses—Miss Hawthorne, after all, as Zanetto; and Miss Mary Rorke as Sylvia—was not faultless; but it was much better than one generally meets on a stage so little accustomed as our own to the accents of delicate poetry and the interest of the most refined and reticent suggestion. We watched Miss Hawthorne with curiosity. It was a continuation of her *début*. She had impressed us in "The Lady of Lyons" several months ago, at the Prince of Wales's, as knowing her business thoroughly—as capable of very serious work. Nor do we unsay whatever we said then to that effect. But she seemed less at home in the part of the Minstrel Youth than in that of Pauline, and now and then wanted gaily. She was best where she was justifiably gravest. Without being perfectly satisfactory, hers was a praiseworthy performance, and a clever one. Greater finish it may have, we hope, hereafter. Miss Mary Rorke's Sylvia was very pleasant to behold. It was tender, distinguished, and refined. The poetic element, which belongs to this actress somewhat peculiarly, told, of course, with good effect. That was what we expected. A bad cold, veiling the voice and often destroying the intended subtlety of its inflections, was a drawback no one could have counted on. Let us see the piece again.

FREDERICK WEDMORE.

STAGE NOTES.

MONSIEUR COQUELIN duly appeared at the Royalty Theatre on Monday night, but only in M. Gondinet's "Un Parisien." "L'Aine" was produced too late to be noticed this week.

At the St. James's, when Mr. and Mrs. Kendal return early in December, the performance of "Lady Clancarty" will be resumed. Meanwhile the theatre is to be occupied by a company under the direction of Mr. C. M. Rae, whose "Witch" will, it is hoped, be found a sufficient attraction.

THE Dramatic Students intend to give, for their eighth performance, Dr. Westland Marston's comedy, "The Favourite of Fortune," which was first produced by Buckstone at the Haymarket in 1866. The proceeds will be given to the Westland Marston testimonial fund. Mr. Terry has lent his new theatre for the purpose of this performance, which will take place on Tuesday, November 8, at 2.30 p.m. We may add that the Dramatic Students have selected as their next piece "The Taming of the Shrew," which is very rarely seen on the stage.

MUSIC.

RECENT CONCERTS.

Mr. WALTER BACHE gave his tenth annual pianoforte recital at St. James's Hall last Saturday afternoon. It was the anniversary of Liszt's birthday, so the whole of the programme was devoted to his compositions. We have always admired Mr. Bache's perseverance and missionary zeal in his master's cause; but with the cause itself we have but little sympathy. However, it must be acknowledged that on the first anniversary after the death of his teacher and friend Mr. Bache could scarcely do less than give Liszt, and nothing but Liszt.

The first piece was suitable to the occasion—the mournful Rhapsodie Hongroise, No. 5, entitled "Héroïde-élégiaque." The rest of the programme consisted of ten numbers from the "Seconde Année de Pèlerinage." One of these describes the impression made upon the composer by Raphael's "Sposalizio" picture, another the effect produced by Michael Angelo's statue "Il Penseroso." Mr. Bache played his very best, and his refined and sympathetic rendering of the Rhapsodie made of it a true threnody. There was not a large audience. The worshippers of Liszt, in this country at any rate, are not legion.

The true London winter musical campaign commenced last Monday evening with the first Monday Popular Concert of the thirtieth season. M^{me}. Norman-Néruda was leading violinist; and in Spohr's "solo" quartette in A major (Op. 93) she proved that she has lost nothing in technique, in power, or in delicacy. The habitués of the Popular Concerts will be pleased at the announcement that she is to appear at every Monday and Saturday concert—one excepted—up to Christmas. Miss Liza Lehmann sang "Thou, O Lord" from M. Saint-Saens' Nineteenth Psalm, and, as at Norwich, obtained great success. The cello *obbligato* was given in an able manner by Mr. Howell, the violoncellist of the evening. The pianist was Master J. Hofmann; and it was a curious sight to see the little fellow—like another Siegfried, for he seemed not to know fear—bowing and smiling on the platform which in past years so many distinguished pianists have trod. If only his life be spared, he will one day rank among the highest. He played three short solos: Rameau's Gavotte with variations, Chopin's posthumous Valse in B minor, and Mendelssohn's Spinnlied. The first and last were dashed off with wonderful brilliancy and energy. The Valse was less successful. Master Hofmann tried to escape the encore; but the public, showing little discretion, insisted, and he gave a Romance by Rubenstein. In the second part of the programme he played, with his father, Schumann's beautiful Andante con Variazioni (Op. 46) for two pianofortes. One could admire the beauty of the boy's touch, the firmness of his tone, and the courage with which he attacked the difficult passages; but with his small hands, he certainly found the piece somewhat beyond his strength. It seemed, indeed, rather a pity to disturb the usual order of the programme, for surely Master Hofmann could have played with as much success, and greater ease, a pianoforte trio by Haydn or Mozart. M^{me}. Norman-Néruda was heard to advantage in Ries's Prelude, Romance, and Scherzo; and Miss Liza Lehmann charmed the audience by her graceful singing of an old German Volkslied, to which Brahms has written a delicate pianoforte accompaniment, and a Mädchenlied by Meyer-Hellmund. M. Ries played second violin, M. Hollander, viola, while Mr. Frantzen proved a skilful accompanist. St. James's Hall was very crowded on the occasion.

J. S. SHEDLOCK.

MUSIC NOTES.

THE Novello Oratorio Concerts commence on Thursday, November 10. There will, as usual, be six. The principal works announced are Dvorák's "Spectre's Bride," Mr. F. H. Cowen's "Ruth," Mr. J. F. Barnett's "Ancient Mariner," Sir A. Sullivan's "Golden Legend," Dr. Mackenzie's "Rose of Sharon," and Gounod's "Redemption." Dr. Mackenzie will only conduct at the last two concerts. The dates will be November 10, December 1 and 15, 1887; and February 22, March 13 and 28, 1888.

MACMILLAN & CO'S LIST.

GREEK LIFE and THOUGHT from the AGE of ALEXANDER to the ROMAN CONQUEST. By J. P. MAHAFFY, D.D., Professor of Ancient History in the University of Dublin. Author of "Social Life in Greece," "Rambles and Studies in Greece," &c. Crown 8vo, 12s. 6d. [Next week.]

RALPH WALDO EMERSON, The LIFE of. By J. L. CABOT, his Literary Executor. 2 vols., crown 8vo, 18s. The *World* says:—"Mr. Cabot has really done a good work. All who are interested in Emerson should read his book."

ELIZABETH GILBERT, and HER WORK for the BLIND, The LIFE of. By FRANCES MARTIN, Author of "Angelique Arnaud." With Portrait, crown 8vo, 6s.

MODERN GUIDES of ENGLISH THOUGHT in MATTERS of FAITH. ESSAYS on SOME of the. By RICHARD HOLT HUTTON. Globe 8vo, 6s.

A NEW HISTORY OF ENGLISH LITERATURE IN FOUR VOLUMES.

ELIZABETHAN LITERATURE. By GEORGE SAINTSBURY. Crown 8vo, 7s. 6d.

NEW NOVELS.

MARZIO'S CRUCIFIX. By F. MARION CRAWFORD, Author of "Mr. Isaacs," "Dr. Claudius," "Zoroaster," "A Roman Singer," &c. 2 vols., globe 8vo, 12s. The *Pall Mall Gazette* says:—"The workmanship of "Marzio's Crucifix," whether as a piece of narrative or as a study of character, is remarkably strong. It is certainly one of the ablest of Mr. Crawford's writings."

HITHERSEA MERE. By Lady AUGUSTA NOEL, Author of "Wandering Willie," "From Generation to Generation," "Owen Gwynne's Great Work," &c. 8 vols., crown 8vo, 81s. 6d.

The *Athenaeum* says:—"Lady Augusta Noel has the gift of romance. There is a quiet humour, too, in "Hithersea Mere" which adds to its charm."

The *Scottishman* says:—"The story, which is easily told, is of considerable interest."

ISMAY'S CHILDREN. By the Author of "Filters, Tatters and the Counsellor," "Hogan, M.P.," "The Hon. Miss Ferrard," 3 vols., crown 8vo, 31s. 6d.

The *St. James's Gazette* says:—"Read this work for an exposition of Irish life, Irish scenery, and characters, and you will find both entertainment and information."

THE NEW ANTIGONE: a Romance. 3 vols., crown 8vo, 81s. 6d. The *Pall Mall Gazette* says:—"Hippolyta Valence, the New Antigone, from whom the book takes its name, is a poetically conceived and strongly drawn character, quite as romantic as her surroundings."

A New Story by the Author of "John Inglesant." See **MACMILLAN'S MAGAZINE.**

No. 337, for NOVEMBER, price 1s. The Number contains:—

1. A TEACHER of the VIOLIN. By J. H. SHORTEHOUSE.
2. OMAR KHAYYAM. By H. G. KEENE.
3. THE STORY of ALICE AYRES. By Sir FRANCIS DOYLE.
4. IN A CHINESE THEATRE. By G. W. LAMPLUGH.
5. THE HISTORICAL NOVEL.
6. SAINT COLUMBANUS.
7. A DISCOURSE upon SERMONS. By A. EUBULE EVANS.
8. SOME UNPUBLISHED LETTERS of CLAYHOUSE.
9. M. LEMAITRE'S SERENUS, and Other Tales.

PROFUSELY ILLUSTRATED, PRICE 6d.; BY POST, 8d.

THE ENGLISH ILLUSTRATED MAGAZINE

For NOVEMBER, contains—

1. GIRLS COMING HOME with GOATS (ANACAPRI). Engraved by W. Biscombe Gardner from a Drawing by W. MacLaren. Frontispiece.
2. THE MEDIATION of RALPH HARDELOT. Chaps. 5-7. W. MINTO.
3. CAPRI. LINDA VILLARI. With Illustrations by W. MacLaren.
4. COACHING DAYS and COACHING WAYS. II. THE BATH ROAD. W. OUFAM TRISTRAM. With Illustrations by Herbert Bailton and Hugh Thomson.
5. THE STORY of JABL. Chaps. 4-7. By the Author of "Mehalah," "John Marling," &c.
6. ET CAETERA. H. D. TRAILL.

Ornamental Frontises, Headings, Initial Letters, and Tailpieces.

MACMILLAN & CO., LONDON.

SATURDAY, NOVEMBER 5, 1887.

No. 809, *New Series*.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

THREE CHURCH DICTIONARIES.

A Church Dictionary. By Walter Farquhar Hook, late Dean of Chichester. Fourteenth Edition, adapted to the Requirements of the Present Day. Edited by Walter Hook and W. R. W. Stephens. (John Murray.)

A Dictionary of the Church of England. By the Rev. Edward L. Cutts. (S.P.C.K.)

A Dictionary of Religion: an Encyclopaedia of Christian and other Religious Doctrines, Denominations, Sects, Heresies, Ecclesiastical Terms, History, Biography, &c. Edited by the Rev. William Benham. (Cassell.)

THE three works which stand at the head of this article—all intended for popular use, and not merely for the clergy—are a strong indication of the immensely increased interest which has been felt of late years in ecclesiastical subjects. The first, Hook's *Church Dictionary*, is itself in its various editions a kind of monument of the changes which have passed over the Church of England in the last forty-five years. It was first published in 1842. The earliest edition which I possess (the fifth, 1846) is a dumpy little duodecimo of some 900 pages. It was, we are told in the Preface, "intended by the writer to explain things relating to the Church to his poorer parishioners," and was written, so far as appears, wholly by Dr. Hook himself, in the midst of the manifold cares and occupations of the vicarage of Leeds. The book everywhere bears traces of the vigour and decision of its excellent author. His trumpet gives no uncertain sound. And, as was to be expected from its design, there is everywhere present a flavour of genial controversy. It is intended not merely to "explain things relating to the Church," but to vindicate the position taken by the High Churchmen of that day with regard to the Church of England. It filled the place for which it was intended extremely well, and remained for many years the only convenient and accessible book of reference on the matters of which it treated. It was not to be expected that the busy Vicar of Leeds could bestow upon it any deep research, nor did he claim to have done so. His articles are, he says, "abbreviated from works of established reputation and authority." This was all that could be expected from a very busy man in the year 1846.

Since those days "things relating to the Church" have received a good deal of attention; and an amount of research is now required from writers on ecclesiastical subjects, if they are to be received as authorities, which was scarcely thought of

fifty years ago. Hook's *Church Dictionary* has accordingly been more than once re-edited. The last edition is that issued in the present year by Mr. Walter Hook, the son, and Prebendary Stephens, the son-in-law, of the author, which differs considerably from the stout little book of 1846, not only in size and shape but in treatment. It is still decidedly Anglican, but it lacks Dr. Hook's heartiness—a quality which he could not help giving even to a dictionary.

The tendency to polemic, which was visible in the earlier editions of Dr. Hook's dictionary, appears sometimes rather oddly in its present shape. Thus, under "Advertisements of Queen Elizabeth," first Lord Grimthorpe states very clearly the lawyers' view of their legal force, and then Mr. Stephens states "the reasons why a large number of persons are unable to concur in the legal decisions referred to in the foregoing account." Surely, the natural thing in a dictionary would have been to state the principal historical facts relating to the Advertisements, and the decisions of the courts with regard to their legal force. The views of this or that party might be left to the Church periodicals. But if statements of opposing views are to be permitted, why was not Lord Grimthorpe allowed to crush Chancellor Espin on the subject of "Affinity," where the views of only one party are stated? It is not a little odd, in a book which does not profess to deal with the criticism of the text of the Gospels, to find an appendix of two pages devoted to a defence of the last twelve verses of St. Mark's Gospel. Against the article itself I say nothing; but, however magnificent, it is not dictionary. And, if such appendices are to be admitted at all, why is the passage of the adulteress, in St. John's Gospel, left undefended?

The articles on the Books of Scripture are generally so slight that it may well be doubted whether it was worth while to insert them. That on Isaiah, for instance, does not even mention the fact that critics of very high authority consider a large portion of the book to be of the period of the Exile. I should not have thought a string of texts, such as that under "God," for instance, appropriate to a Church dictionary; but it certainly would have been fitting to give, under this heading—what is *not* given—some account of the different conceptions of the Divine Nature found in such teachers as Clement of Alexandria and Tertullian. Biography is not attempted, except that under the heading of a party or sect some account of its leader is given. Thus under "Lutherans" we have a short account of Martin Luther, in which (by the way) "Alexander II." is an obvious misprint for "Alexander VI." (Borgia). It is curious that Erastus, who in England alone has given name to certain opinions, is generally misrepresented in English books. He is so here, under "Erastianism." He did not hold "that there was no authority over religion except the state," but—in opposition to the Presbyterians of his time in Heidelberg—that ecclesiastical censures are not the proper method of punishing *crimes*, which should be left to the civil magistrate; that persons might be repelled by the Church from Communion on the ground of *misbelief* he fully admitted.

Having said that I have not quite the same conception of a Church dictionary which the editors of the work before me hold, and that there are here and there mistakes of detail such as no editorial vigilance can prevent, I have to say further that, taken as a whole, it is an extremely useful book of reference, containing articles on many subjects which, so far as I know, are not treated in any other dictionary whatever.

It is not too much to say of Dr. Cutts's Dictionary that it is by far the best book of the kind which, so far as my knowledge extends, has ever been produced at so low a price as 7s. 6d. Its range is narrower than that of Hook's Dictionary. It is a dictionary of the *English* Church and not of the Church in general. On the other hand, it has—what Hook's has not—biographical articles, accounts of the several English dioceses under their proper heads, and illustrations, which in some instances add considerably to the value of the book. Where it covers the same ground as Hook's its vocabulary is smaller. There are no articles, for instance, on the books of Scripture, or on the terms in the Calendar of which explanations might be desired; there are no articles on "Letters Dimissory" or "Letters Testimonial," or on some other matters which might perhaps be thought to belong to a Dictionary of the English Church. But what is given is good and well-proportioned. The editor has not fallen into the mistake of inserting articles too short to be useful, or of allowing crotchets to be paraded at the expense of useful matter. Some of the articles are, in truth, more satisfactory than the corresponding ones in Hook. The article "Cathedral Chapter," for instance, in Cutts is better and fuller than "Chapter" in Hook, which last ought, however, to be regarded as supplementary to "Cathedral." Here and there the desire to edify appears in rather a ludicrous way. Under "Latitudinarianism" we have, not an account of the really able and influential school of "Latitude-men" in the seventeenth century, such as might have been expected; but a dissertation on Pope's famous lines—

"For forms and creeds let senseless bigots fight,
He can't be wrong, whose life is in the right!"—

in fact, a little sermon against *indifference*, as inappropriate as possible in a dictionary. Here Hook is decidedly superior, having a sensible little article enough, though Mr. Hook should not have quoted from the earliest edition of Maurice's *Moral and Metaphysical Philosophy* a sentence which he saw reason to change in the latest. A useful feature of Dr. Cutts's book is the classified table of subjects, which "arranges some of the articles in such an order that the student, reading them consecutively, may find something like connected essays on various subjects." Certainly, a student might have a much worse manual of English Church history than he would find in the articles relating to that subject in this book.

In the *Dictionary of Religion*, Mr. Benham takes a much wider range than either of the two books which I have just noticed. It takes for its province the whole history and institutions of the Church, and gives also short articles on the principal non-Christian systems. It treats, in fact, exactly the same

class of subjects as the great German Church-lexicons—of course on a much reduced scale. In some respects it reminds one of Bost's very useful *Dictionnaire d'Histoire Ecclesiastique*; but Mr. Benham includes some subjects which Bost does not. He has, for example, very good articles on "Evidences" and on "Evolution," on which Bost has nothing. Mr. Benham is to be congratulated on having produced a very creditable and very useful book. In fact, I do not know any work which is to be put into competition with it. I have rarely failed to find information on any matter for which I have consulted it, and information well and clearly put. The great defect is the almost total absence of references to authorities.

Nothing is more difficult than to compile a short dictionary of a great subject. It is difficult to determine what subject must be excluded; and in short articles it is most difficult to seize exactly the salient points of the subject. The writer should have wide knowledge, and yet not lose himself in details. As it is impossible to pass in review the whole of such a work, I will criticise, from the point of view of an old editor, what meets my eye at a single opening of the book (pp. 180, 181). The name "Buchlein" should have been given, with a cross-reference to "Fagius," whose German name, Buchlein, should have been given under the latter heading. So distinguished a missionary as Claudius Buchanan, and so distinguished a reformer as Bugenhagen, certainly deserved a few lines better than Charles Buck, who is given. It may be doubted whether it was wise to include non-Christian systems in a book of this size; but, if they were to be admitted at all, so important a system as Buddhism should have had more space allotted to it than is given here. Thirteen lines are given to "Bulgarian Church." We are told that thirty years ago American missionaries established schools among the Bulgarians; but the interesting struggle in the ninth century between the Eastern and the Western patriarch for the possession of Bulgaria is not noticed. Bishop Bull has a whole column. A well-known anecdote—the omission of which would have made room for Buchanan and Bugenhagen—is given at some length; but no account is given of the nature and scope of his *Defence of the Nicene Faith*, which gives him his title to appear in the dictionary at all. All this is only saying that my judgment differs somewhat from Mr. Benham's as to the articles to be inserted, and as to the proportions of some of them. What is given is good and sound matter; and the book is, I repeat, an extremely useful one, and—so far as I know—unique in English literature. S. CHEETHAM.

Prince Lucifer. By Alfred Austin. (Macmillan.)

THERE are many exceptionally fine passages in this poem. It abounds in quotable lines, and the lyrics scattered through it are gems. But regarded as a whole the poem is disappointing. It is in the form of a drama without being at all dramatic. There are various characters in it, but they are all mere names, and every name is only another sign of one personality. Adam, a gravedigger, talks in the same Socratic strain as Prince

Lucifer; and Eve, a simple shepherdess, and Elspeth, a village maiden, phrase their speeches with academical precision. The plot—such plot as there is—is of the most shadowy description. Prince Lucifer has relinquished a crown in order that he may live an untrammelled life among the hills. His castle in that airy situation is rightly called Tourbillon, for metaphorically it is altogether in the clouds. The prince is an idealist, who discards all the conventionalities, including the forms of religion and the bonds of wedded love. He one day rescues Eve, who has followed a stray lamb to a spot where she is herself in danger. She faints in his arms, but recovers quickly, and responds with surprising facility to his moods. He infects her with his philosophic doubts and idealisms, and presently we find them living together. Count Abdiel, another of the shadowy personages of the poem, has shared Prince Lucifer's solitude and his opinions; but when he is smitten by the charms of Elspeth he very promptly forgoes his objections to marriage, and weds her outright. A child is born to Eve and Prince Lucifer, and the child sickens. Eve thinks, in a dim half-hearted way, that the child's illness may be a retribution for her disregard of old observances; and she begs Prince Lucifer to relight the taper before a long-neglected image of the Virgin. The taper is set burning, but the child dies, and the mother's remorse is then a little deeper. She persuades Prince Lucifer to go through the ceremony of marriage with her, and their own nuptials and the child's funeral are two parts of one dismal office. The parents almost apologise to each other for the limitation which this external sign of union seems to put on their mutual love. After this, Prince Lucifer's old subjects—who had quarrelled with him when he wanted to do away with marriage and religion—resolve to offer him the crown again on his own terms; for they also by this time have discarded these conventionalities. But Prince Lucifer is now married; and Count Abdiel, who, though married, renounces his wife as promptly as he espoused her, steps in and ascends the throne in his stead.

Though this sketch of the plot is a mere outline, it is almost as full and lucid as the plot disclosed by the poem. It is therefore difficult to see with what object the poem was written. Mr. Austin can scarcely have intended to vindicate marriage and religion, for he certainly has not done that. In one of these two instances marriage is resorted to from motives of lust, and is afterwards renounced from motives of ambition. In the other the ceremony is undergone to satisfy scruples founded, not on shame and conviction, but on doubt and fear. But whatever the object of the poem, and whatever its structural defects, there is much in it for which all readers will be grateful. This pathetic ballad, for instance:

"The crab, the bullace, and the sloe,
They burgeon in the Spring;
And when the west wind melts the snow,
The redstarts build and sing.
But death's at work in rind and root,
And loves the green buds best;
And when the pairing music's mute,
He spares the empty nest.
Death! Death!
Death is master of lord and clown,
Close the coffin, and hammer it down.

"When nuts are brown and sere without,
And white and plump within,
And juicy gourds are passed about,
And trickle down the chin;
When comes the reaper with his scythe,
And reaps and nothing leaves,
O then it is that Death is blithe,
And saps among the sheaves.
Death! Death!
Lower the coffin and slip the cord;
Death is master of clown and lord.

"When logs about the house are stacked,
And next year's hose is knit,
And tales are told and jokes are cracked,
And faggots blaze and spit;
Death sits down in the ingle-nook,
Sits down and doth not speak:
But he puts his arm round the maid that's warm,
And she tingles in the cheek,
Death! Death!
Death is master of lord and clown;
Shovel the clay in, tread it down."

The movements of the plot are accompanied by a chorus, furnished by the mountains and a mountain-torrent—the Weisshorn, the Visp-Thal Torrent, and the Matterhorn—and these profound natural voices are the most living things in the poem. They impart more human interest to it than all the acts and speeches of the characters. Did ever mountain-stream attune itself to a pleasanter melody than this of the Visp-Thal Torrent, as it ran with Eve from Castle Tourbillon down to her flock in the valley?

"Not alone, not alone, little maiden, your heart
Down the mountain is going.
The edelweiss watches your feet, and the runnels
Are foaming and flowing.
The sentinel summits look down, and the stars
That you see not attend you;
And the pine-forests listen and brood, and
Rejoice in the fragrance they lend you.

"Not alone, not alone, little maiden, or upward
Or downward you ramble:
There is dew in the cup of the cistus, the
Blossoms are pink on the bramble.
The clouds as they sail in the sky spread a
Billowy carpet below you,
And the motionless mountains afar with their
Long shadows follow and know you."

To turn from the mountains to the men and women is not refreshing; but, regarding them also as voices only, they say some notably good things. When Adam, the gravedigger, talks in this wise, for instance, he is worth listening to:

"I toll the bell for burial, marriage, mass,
The self-same clapper and the same worn rope
Serve for all three. Time's the sole difference.

• • • • •
Birth, wedding, dissolution, are but stops
In the one tune whose cadence still is death.

Here, again, is a striking bit of wisdom in another vein:

"O thou sophist, Man!
Reason by reason proved unreasonable,
Continues reasoning still! Confronted close
What is this Reason? Like the peacock's tail,
Just useful for a flourish, nothing more;
And when 'tis down, the world goes on the
same."

Little sparkling touches that show a close familiarity with nature are not infrequent. Here is a very apt one. Count Abdiel has been protesting over-much his love for Elspeth, and she reproves his too-ready fervour in this fashion:

"When, like the cuckoo, love repeats its note,
And doubles all it says, one knows, full sure,
'Twill soon depart."

But here is another natural illustration, which is by no means apt :

“EVE.

O if we could be
Like to the high inviolate stars that keep
Aloof from contact, and for ever shine
As young and virginal as on the night
When first they dawned on space !

LUCIFER.

But, sweet, you know
That there are double stars whose motion is
To circle round each other, round and round.

EVE.

Yet do not even these some distance keep,
Lest they should perish of propinquity ?”

An astronomer, perhaps, but nobody else, would be likely to talk about the propinquity of the stars. Yet this learned and highly philosophical young woman was only a shepherdess. Blank verse in which plain speech is not employed has a tendency to become turgid, and Mr. Austin has yielded to this tendency much more frequently than can be excused in so accomplished a writer. Many an ordinary reader may be deterred from going beyond the beginning of this poem by a grandiose passage on the second page. The gravedigger, Adam, makes the sapient remark that “marriage is the half-way house to death, where heedless men make merry” ; and Prince Lucifer at once delivers a homily on the subject, which would surely have bewildered the poor gravedigger if he had not himself been a philosopher. This is the homily in monologue :

“Hardly there !

Save one be minded, in a moonish freak,
To dally with the coy and nimble wind,
Kiss the cold glacier, court the unmelting snow,
Fondle the sacred body of the pine,
Woo the escaping cataract, embrace
The monstrous avalanche, what business here
Hath the warm insurrection of the blood,
Or quest of pillowed softness ? Stair on stair
Of rugged steepness winding to the tower
Of spacious observation I behold,
But nowhere ledge or narrow shelf for love
To stretch its velvet body and prolong
Its languid gambols. Place alone is here
For austere thews, and boundings of the mind
Across the chasms of appalling thought,
Up to the crags of rimless speculation.
Love clings unto the valley, as beseeems
Its pampered homeliness. The mind delights
To commerce with the icy-sharpened peak,
And controvert the lightning.”

After this, it is not surprising that Adam considers Prince Lucifer “lost in the void altitude of his own thoughts.”

Prince Lucifer is not a work to make a poet's reputation ; but, nevertheless, no one but a poet could have written it.

GEORGE COTTERELL.

The Revolutionary Movement of 1848-9. By C. Edmund Maurice. (Bell.)

THIS is a well-informed, nay more, a valuable, work. One of the most interesting and striking episodes in the history of the present century is the reaction against the European settlement effected in 1814-15, which culminated in the Revolutions of 1848-9 ; and which, though sustained by mighty forces, was suddenly checked, and even stopped, until, under more happy auspices, it became in our day a successful movement, after a terrible ordeal of war and bloodshed. Mr. Maurice has traced with skill and care the

growth and progress of this eventful change up to the period of what seemed to be the catastrophe of the cause of freedom ; and he has clearly explained the great principles in conflict during these years on the continent. In these respects his book may be pronounced very good ; and, though his leanings are not doubtful, he is, on the whole, an impartial writer. His narrative, however, is not easy to follow. It might have been better arranged and digested, though the subject, no doubt, is extremely complex ; and it is overloaded with petty details, and somewhat deficient in breadth and outline.

Mr. Maurice has justly described Metternich as the master-spirit of the group of statesmen who remodelled the continent in 1814-15. That settlement was due to two main causes : the reaction in favour of arbitrary power, which grew out of the French Revolution ; and the precedents set by Napoleon I., unconsciously imitated by the kings, his conquerors, however violently they denounced his tyranny. The system perfected by the great Austrian minister—Mr. Maurice does not tell us that Metternich felt sincere regret at the fall of Napoleon, as that of a mighty ally in a common cause—rested on what he designated as the rights of sovereigns. But it was simply a system of despotic rule, without the slightest regard to popular sentiment ; and though it made an ostentatious show of legality, it was really one of combined force and cunning. Italy was held in bondage by Austrian princes, and other satellites of the House of Hapsburg ; the papacy became the tool of a new empire ; and the aspirations of the Italian race to unity and freedom, for years manifest, were steadily restrained and treated with contempt. Germany was meshed in the fetters of a feeble league, which practically obeyed commands from Vienna, and stifled the spirit of nationality born from the great German rising of 1813. The kings and princes of Germany were induced to break the pledges they had made to enlarge the rights, political and social, of their trusting subjects ; and the intellect of Germany, struggling for freedom, was restrained and perverted by all kinds of devices. In Hungary and Bohemia a deliberate attempt was made to destroy franchises that had been the growth of ages, and to lord it over Magyars, Czechs, and Slavonians, through a bureaucratic régime on the Danube. And the divine right of despotism was carried to such lengths that Alexander of Russia was actually led for a time to discourage the movement of Greek independence, and to acknowledge the legitimacy of Turkish rule. The Holy Alliance, as it was called, in a word, weighed heavily on the races of Europe, and kept them down in a state of vassalage ; and, if it was Napoleon's system that force was law, that of Metternich was that law was force, the policy of the Austrian being, however, masked by a show of respect for tradition and order, for which, in truth, he cared very little, and by a hypocritical reverence for religion and faith at heart despised by a Voltairian statesman.

The cardinal fact in the chequered history of the continent during the next thirty years is the reaction against this despotic system. Mr. Maurice has minutely described the characteristics of this great movement ; but his narrative ought to have been more clear

and graphic. From the mouth of the Rhine to the sea of Marmora, and from the Carpathians to the Mediterranean, there was a general impulse towards liberty exhibiting itself in many forms, but manifesting everywhere the same tendencies. The force, however, which upheld the movement was not the gospel of the rights of man—the exploded creed of the French revolution—it was the spirit of nationality combining races to seek unity and to demand freedom ; and, in fact, as Mr. Maurice truly remarks, French influence had nothing to do with the matter. The first triumph of the new principle was seen in the independence of Greece, which found an ally in the Czar Nicholas, the heir of the head of the Holy Alliance ; the second appeared in the revolt of Belgium, and its separation from the Dutch monarchy ; and, though the countenance given by England to the cause was not systematic and marked, she supported it through two of her great foreign ministers—George Canning and his successor Palmerston. In Italy nationality acquired strength through the questionable means of plots and conspiracies, but also through the writings of men of genius. It was fostered in Germany by commercial union, and by the teaching and culture of gifted minds. In Eastern Europe it was promoted by the passionate demands of the subject races of the House of Hapsburg for constitutional rights extinguished by cruel and fraudulent tyranny. Slowly, and by degrees, the system of Metternich, despite the heavy yoke he had laid on Italy, despite his intrigues and schemes in Germany, and despite his efforts to make Bohemia and Hungary purely Austrian provinces, began to lose authority and vital force. His satellites at Milan and Venice became unable to keep down the people ; some of his dependent princes forsook his cause ; his influence in Germany gradually declined ; and in the East, Magyar, Slavonian and Czech were banded equally in a common hatred of his arbitrary and bureaucratic despotism.

The France of Louis Philippe and Guizot had really been an ally of Metternich, and had done nothing to aid the movement against him. The French Revolution of 1848, however, overthrew the system of the Austrian Chancellor, already tottering and undermined, and like an avalanche changed the face of the landscape. Italy rose from the Alps to the shores of Sicily ; a National Assembly met at Frankfort intent on proclaiming German unity ; and from the Danube to the Carpathian lands, the subject races of Austria broke out into rebellion. The Revolution quickly reached Vienna, the centre of the tyranny that had enchained the Continent. The dynasty of the House of Hapsburg was saved only by a change of sovereigns ; and Metternich was driven in disgrace from power. An immense, violent, and far-reaching change seemed impending over a large part of Europe ; and it was thought not improbable, for several months, that republicanism, fashioning separate states, distinguished mainly by differences of race, would be the new order of a transformed continent. Mr. Maurice has very fully explained how these expectations were not fulfilled ; how the risings of nationalities were checked and quelled ; and how the counter-revolution

triumphed for a time. Princes proved false to the popular side; local jealousies weakened the movements of races; and diplomacy and statecraft increased these discords. The principal cause of the failure, however, was the extravagance of nationality, in certain instances, and the feuds between races that claimed to be nations. The Germans asserted a right to Bohemia, and to lord it over inferior Czechs; the Magyars claimed to be supreme in Hungary; the Serbs, the Croats, and other Slavs sought to establish a Slavonic power in the East; and furious civil wars and contests ensued, ending in a return to the old order of things. It should be observed, however, that amid this anarchy Italy instinctively turned to the House of Savoy, and Germany to the national state of Prussia, as the instruments through which they were to attain unity; and history has justified their faith in 1848. The contest was closed by the intervention of Russia, and, in some measure, by that of France; and the cause of nationality, which appeared defeated for many years after the fall of Rome, was destined at last to triumph through means very different from those of popular movements, through the far-sighted skill of Cavour, the cosmopolitan sympathies of Napoleon III., and the "blood and iron" policy of Prince Bismarck.

WILLIAM O'CONNOR MORRIS.

The South Isles of Aran, County Galway. By O. J. Burke. (Kegan Paul, Trench, & Co.)

THE flocks of tourists who frequent Venetian waters, and who from year to year return and rave, in language that may be styled "diluted Shelley-ism," of the life on the lagoons, their cool, soft air at eventide, and roseate hues of morning, might find effects nearer home, on sea and land, as fine as those they seem to have, for the first time, enjoyed abroad. In the bays and among the islands of our western coast of Ireland the sun at rise or setting can transfigure the rippling waters and transparent depths of the Atlantic and clothe them in hues of emerald, sapphire, and topaz, as clear and pure as those of the Adriatic or the Mediterranean; while in our more temperate climates, where the odour of the salted breeze is blended with that of the heather and honey-scented furze, one breathes a far diviner air than it has ever been my lot to taste in Southern Europe.

These thoughts have been borne in upon me while reading Mr. Burke's charming little book on the islands of Aran at the mouth of Galway Bay. Memory brings back the night when, many years ago, I first sailed into Kiltonan, the little harbour of Aranmor. A breeze had sprung up just after sunset, which bore us gently towards the west. The sun went down into the broad Atlantic, and the stars came out one by one, and twilight passed into night. Then, presently, through the darkness we saw a band of fires burning at regular intervals along the shore to right and left, each fire casting down its long reflection in the sea. The low dark island lay like a level bar against the glowing west, and the long columns of light in the water below were as fiery pillars supporting a purple cloud-land. These lights were from the fires of the kelp-burners round the coast; and their effect was not diminished when, as we entered the

bay, others shone out from the village windows which also were reflected and prolonged in the rippling water, while, as if to crown the magical effect of the scene, the phosphorescent sea threw back its flames at each stroke of the oars now called into play as our sails were furled. The memories of such a night as that, and of the days spent afterwards on the delightful island, only make me bid a warmer welcome to a work such as this of Mr. Burke, where, in simple language and condensed form, he gives so much that is of interest in its flora, geology, statistics, antiquities, as well as many curious facts regarding the islanders, their superstitions and primitive customs, among which latter none are more interesting than their memorials of the dead. Mr. Burke observes (p. 61):

"Their reverence for the dead, and their affection for their loved departed friends, impel them to erect, sometimes in long lines on the road side, square stone pillars, about 10 feet in height by 3 feet each side, all of the same measurements, surmounted each with a well-cut stone cross, and with inscriptions, such as the following: 'Sta viator—Stay traveller—O Lord have mercy on the soul of Mac Dara Ternan, who departed this life 25 June, 1842.'"

These roads lined with monuments, erected to the memory of the dead, who are generally interred in some distant churchyard, call to mind the Via Sacra of the Ancients outside their city walls.

English readers have known Mr. Oliver Burke as an author who, since 1868, has given many and useful contributions to Irish literature, whether in the form of history, topographical sketches, or anecdote. In 1867 his autumn rambles through Galway bore good fruit in his account of the Franciscan monastery of Ross, now misnamed Ross Abbey; and he is possessed of much of that taste for antiquarianism which is indispensable for the enjoyment of the remains in these western districts, once the homes of learning and religion. Such a taste has been fostered in Mr. Burke by the fact that in the course of his professional duties a considerable amount of research was often necessary; and the study of ancient patents and of other old-world documents naturally led him to inquire into the lives of the men by and through whom they had been executed. He has thus given us the history of the archbishops of Tuam from 1152 downwards—from the time when Henry II., at his court in Rouen, gave to Stephen de Riddel the seals of office in Ireland, and when, at the Council of Kells, the archiepiscopal dignity was conferred upon Edan O'Hoisin, whose name may yet be seen inscribed upon the old High Cross of Tuam. In the present work we have the fruits of Mr. Burke's autumn vacation of 1886, when he devoted his leisure time to collecting all possible information concerning what he calls the South Islands of Aran. Why "south" we cannot say, since we never heard of more than one Aran island to the north. He was on the Land Commission at this time; and the book contains much of interest and value connected with the character of the people and the condition of the island, their fisheries, the project of restoring their plantations, and the covering of their once thickly wooded surfaces with forest trees. The roots of oak and pine wood still found in the earth

tell of the great trees that grew in Aran many centuries ago; and that such still continued to flourish in these islands in 1618 is certain, as appears from an indenture of that date, when Henry Lynch did demise a moiety of the three islands to his executors "excepting thereout great trees." In his chapter on the fisheries of Aran we are glad to see the hearty tribute paid to the Baroness Burdett-Coutts—the one woman who has known how to use a great portion of her wealth for Ireland's good without degrading Ireland's people—by helping them to help themselves, by giving them the means of industry, by finding how they may be supplied with deep-sea fishing appliances and by giving them such, but not for charity.

Yet, having read this book, we ask, Will the day ever come when we can close any honest picture of Irish life without a sigh? Why is it that here we read that in these thickly peopled islands, covering an area of 11,288 acres, there is no hospital? Why is it that there is neither infirmary, nor midwife, nor jail, nor grand jury works—although, according to Mr. Burke, there is a grand jury cess of £34 12s. 2d. Why is it that no steamer plies between Aran and the mainland, and no communication, postal or otherwise, is regularly kept up with the inhabitants when the little Galway hookers cannot approach the shore? Added to these drawbacks, the Aran islander as a fisherman has little hope of bettering his condition. He is powerless to cope with those whose boats are built for deep-sea fishing. The manufacture of kelp is another source of livelihood now denied him. For whereas, in 1866, the seaweed was very valuable, and the kelp made on the islands realised £2,577, being £5 a ton, there is no kelp made now, owing to the fall in prices. And, added to all this, the gradual reduction of rents is in fact only hastening the doom that awaits all the peasantry of Ireland. Mr. Burke asks for the Aran islanders: "Would it be of material benefit to them to sweep from the landlord the last farthing of his rent and to grant the same to them?" To which we add, Will it prove a material benefit to the Irish poor when all of gentle birth and breeding are banished from the land, and the manor-house and lordly castle—at whose open doors, as we well remember in our youth, the sick, and maimed, and famine-stricken were wont to find relief and hospitality—are left desolate and roofless ruins, their lone and dismal walls haunted by the fox and night-owl, their gardens turned into a wilderness?

Mr. Burke gives various hints as to how capital, if forthcoming, might be wisely expended in this island. A steamer should be placed on the line between Galway and Aran. In the districts covered by sand, the *Pinus maritima* should be planted, "the interlacing of whose roots would do the twofold duty of fixing the sand and creating a soil enriched by the amount of nitrogen therein digested and deposited." And as the islanders' chief hope of subsistence would naturally spring from their fisheries, schools should be established to instruct the young in the natural history of the fish, and in the ways of science connected with the deep-sea fisheries, and in navigation and all its kindred branches, together with all the trades incident

to fishing, such as carpentering, ship building, nail making, sail, net, rope, and line making. There is not a single first-class fishing vessel attached to the islands; and if such were provided, a good harbour and pier should be erected, and telegraphic communication opened between the mainland and the island. All these suggestions coming from a Land Commissioner lately on the islands are deserving of respect, and ought not to pass unheeded. But such efforts for the amelioration of the people imply the existence of a cultivated intelligence, and an upper class possessing capital to inaugurate such changes. Would it were the ideal of every Irish patriot to bring the popular aspirations and sympathies of our people into harmony with such a class that so the work of raising the country from the abyss into which it has sunk might be accomplished! The so-called Nationalist claims to honour Thomas Davis; yet the freedom he spoke of in his ardent verse, and dreamed of for his country, was only to be wrought by "righteous men"—was that which, "coming from the right hand of God," needeth "a godlike train."

MARGARET STOKES.

Inductive Political Economy. By W. L. Sargant. Vol. I. (Simpkin, Marshall, & Co.)

Instruirs en intéressant is the device and design of this volume. Begin with real facts and actual cases, then bring in principles and definitions by way of reference. This method is applied to a variety of subjects of which we can only notice the most important.

The condition and treatment of the poor occupies a considerable part of the book. In the essay on "The Inequalities of Fortune" the writer, after adverting to the colossal fortunes of some English noblemen and American capitalists, adds:

"My sympathies are with the disinherited of the earth. I regard it as a scandal to humanity that one man, perhaps of less consequence in himself than an honest street-porter, should enjoy an income of £1,000 a day: an income as great as that of 2,000 curates or 8,000 labourers."

Mr. Sargant repudiates the paradox that it makes no difference to society whether a large fortune is spent by a few or many. The evil of inequality is not to be denied. The difficulty is to find a remedy. Mr. Sargant examines and rejects many popular panaceas. He is not much moved by "socialistic gabble." He justly observes that his negative criticism should not be discredited because he has nothing of his own to suggest. With his usual felicity of illustration, he tells us of a young physician who condemned the old practice of bleeding for pleurisy, because the patients so treated died. That he had no other treatment to recommend was no disproof of his argument. But Mr. Sargant does not altogether despair of a remedy. He thinks it might be possible to fix a legal limit to fortunes. To the objection that the law could not be carried out, he replies with an anecdote:

"A certain barrister with a seat in the House had made himself obnoxious to his party and had retired. Long afterwards it was announced that he had been made a judge; but, in a few days, we were told that his proposed appointment had been cancelled on account of the

earlier scandal. I asked a legal friend how it was that such a small offence was so long remembered, and he replied that another candidate for the judgeship had raked it up."

Private interest would enforce the execution of the proposed law. If anyone inherited £5,000 beyond the legal limit, that £5,000 would legally belong to somebody else, and that somebody else would not fail to press his claim.

The inequality of riches and the treatment of the poor are connected topics. Mr. Sargant defends the English poor law, and protests emphatically against Mr. Herbert Spencer's doctrine of non-intervention. "Mr. Herbert Spencer's Barbarism" is the subject and title of one chapter; his "philosophical vanity" is exposed in another part of the book. It is instructive—if the subject were not so serious, we should say amusing—to contrast the practical man, full of facts and overflowing with sympathy, and the rigid doctrinaire who is represented as "founding his advice not on experience and observation, but on a barren generality of a metaphysical kind."

A more technical part of social science is treated in the essay on "The Depression of Trade." Mr. Sargant plunges into statistics, and emerges with the conclusion that our exports in 1885, as compared with 1873, have dwindled to less than a half of what they should have grown to, account being had of the increase of population. They ought to have been £487,000,000, they actually were £213,000,000.

"The falling-off of our exports," says he, "is a sure indication of the depression of trade: we send fewer goods out and we bring fewer productions in. . . . I am aware that the quantities of goods we export have not fallen off so much as their value because prices have been seriously reduced; but there is no comfort in this, since the fall of prices has itself principally arisen from the depression of trade."

We should have liked a fuller discussion of this topic. The writer should have taken more pains to show that the unfavourable appearances presented by our export trade do not belong to the category of what in a former work he forcibly called the "lies of statistics." On the cognate subject of Free Trade it is interesting to know the opinion of Mr. Sargant. Citing the authority of Adam Smith, he advocates not protection, nor fair trade, but retaliation as a means of conquering free trade. Referring to a well-known *bon mot*, of which Macaulay was the subject, he says: "I have the happiness of being cocksure of one truth—that retaliation is necessary to free trade."

Another part of the work may be described as economical analysis. Seeking the definition of capital and other terms, the writer is led to draw many useful distinctions. It appears to us that these investigations would have been more instructive if the writer had not attached undue importance to the particular definitions which may have recommended themselves to his own use. He is unduly "cocksure" that he has seized the definition of capital. If he had realised that in the quest of definitions the hunt, rather than the quarry, should be our object, he would have led us a better chase. He would not have altogether lost sight of "social capital," as distinguished

by a more powerful analysis from "individual's capital."

However, it is not to be denied that, so far as he goes, Mr. Sargant is a good guide. He beguiles an arduous path with pleasant detours and new views—now the curious information that female domestics in England are as numerous as farm-labourers' wives; now the quaint remark that earth-worms are not capital. Faithful to his motto, he is always interesting and generally instructive.

F. Y. EDGEWORTH.

NEW NOVELS.

Hithersea Mere. By Lady Augusta Noel. In 3 vols. (Macmillan.)

From a Garret. By May Kendall. (Longmans.)

The Fiddler of Lugau. By the author of "The Atelier du Lys." (Hatchards.)

Hermosa; or, In the Valley of the Andes. By T. E. Martin. In 2 vols. (Sampson Low.)

The Lesters. By F. M. F. Skene. In 2 vols. (W. H. Allen.)

Eunice. By the author of "Christie Redfern." (Hodder & Stoughton.)

Mère Susanna. By Katherine S. Macquoid. (S.P.C.K.)

Beforehand. By L. T. Meade. (Routledge.)

THE life of a reviewer of fiction has its dreary stretches, and while traversing them he is wont to take gloomy, not to say pessimistic, views of the future of English imaginative literature. Bad novels are apt to follow close upon each other's heels, to face the critic not singly but in a terrible companionship; and the task of varying his epithets of sad deprecation is a very gloomy one. Happily, good novels have occasionally, though less frequently, the same aptitude; and I gratefully admit that this week the lines have fallen to me in pleasant places. Two such books as *Hithersea Mere* and *From a Garret* are in themselves sufficient to make one cheerful, and of the remaining six no fewer than four can be read with various degrees of pleasure. Surely for such a parcel of fiction some gratitude is due.

I learn from Lady Augusta Noel's title-page that she has written one or two novels; but *Hithersea Mere* is the first work of hers that I have chanced upon, and it has certainly made me wish to know its predecessors. It is a story of slow movement; but almost every page is so rich in quiet reposeful beauty that it never occurs to us to wish to hurry, because it is so pleasant to linger. At first we are impressed by the beauty only, as we are often impressed in a picture simply by the effect of lovely line and tender tone; but as we read on we feel that there is more than beauty in the book—that there is power as well, though not the power which startles and arrests the imagination, but that which slowly yet surely captivates it. What Lady Augusta Noel could do with a commandingly impressive *motif* I do not know, because I have no means of judging; but it is only the lack of such a *motif* which prevents *Hithersea Mere* from being not merely a good but a great novel. Had the author placed such

characters as John Mowbray and Hilary Marston in situations that would have exhibited their full potentialities of action and passion we might have had a book which would have bitten itself into the memory of the world; and even as it is, they will not soon be forgotten by any reader of *Hithersæ Mere*. Of John Mowbray—the narrow-thoughted, strong-willed, utterly unsympathetic but, at the same time, utterly unselfish clergyman—we see, indeed, comparatively little, and Lady Augusta Noel does not seem to have taken any special pains with the portrait; but he remains with us, just in the same way that a face, casually seen in a crowd, remains with us, we know not why. The portrait of Hilary—the child-woman with the frank, brave, boyish ways on the outside of her being, and inside the woman's heart which bears victoriously even the pain that kills—is a much more elaborate and carefully studied piece of work; but it is not over-elaborated or over-studied—the figure is never anything but intensely alive for us. The story of those sad later days, in which Hilary loses for ever the unconscious joy of living but finds her soul, is rich in that true human pathos which is not merely harrowing and, therefore, enervating, but bracing and strenuous. Equally living and real, though in every way subordinate to Hilary, are the brothers Heathcote—the fussy, good-natured, talkative Dick, and the blind sailor Geoffrey, with his violoncello and his tender gentle ways and his sad loyalty to the memory of the woman who had deserted him in that hour of supreme need when the world suddenly became dark to him. Rhona Somerville and Adrian Mowbray are, I think, a little less distinct in outline; but if we do not see them quite as clearly we apprehend them as truly, and it is this vital apprehension rather than clearly defined vision which is the chief essential of imaginative satisfaction. So much for Lady Augusta Noel's characters. A word or two must be given to their surroundings, which are painted with equal truth and beauty. The peculiar quality of the often desolate but never altogether unlovely flat country of eastern England is wonderfully rendered; and, though George Mason did not deal with this order of landscape, the general effect of the book is very similar to the general effect of most of his pictures. Mr. Quilter says of these pictures that

"they give us truly what is almost unknown in English painting—the combination of figure and landscape; not landscape with figures in it, not figures with landscape behind them, but the two in just relation and subordination to each other."

This is a true description of *Hithersæ Mere*. To say that it is a lovely book is to use an epithet which schoolgirls have vulgarised by all ignoble use; but it is the right epithet here.

I have not yet read *That Very Mab*, of which Miss May Kendall was part author; but I am told by competent judges that it was an exceedingly clever book. It is certain that there is something very much better than cleverness in the pages of *From a Garret*. The impression left by mere cleverness is too often that of sounding brass and tinkling cymbal, which irritates us and sets our teeth

on edge. In this book we listen to "the still sad music of humanity . . . of ample power to chasten and subdue." *From a Garret* is not a novel, but a series of sketches of life in East London, written with intense and penetrating human sympathy, and bearing witness everywhere either to intimate personal knowledge, or to that quick imaginative vision which is hardly less trustworthy. It is a book with a wonderful air of reality about it. The writer has got a grip of the heart of the actual, even if the gross palpable body of fact be wanting. If the Recluse to whom these sketches are attributed has not lived he ought to have lived; and so ought Racketts, and the Curate, and Roger, and the Scholar, and Sally, and the Man with a Career. Their stories are truer than *Whitaker's Almanack* and the tables of mortality, because they are nearer to the centre and core of things. This truthfulness is emphasised and, as it were, thrown into relief by the sketch of the pompous Alderman, who is a director of the tram company that employs Racketts. This, we feel at once, is not true in the same way, perhaps because the hand which painted his portrait could not possibly be guided by the vital sympathy that is essential to all-round, vital veracity. There is, however, no other such lapse. The story of the childhood of the Recluse is perfect—finely individualised, and yet so true to universal child nature that everyone will feel that he is reading bits from his own history. The literary reminiscences will bring back to all of us the happy time when a book was to us what it can never be again; and who is there that has not something in his experience answering to the incident of the little lad sitting up in bed and saying aloud that he hated God just to see if anything would happen? This outburst and the subsequent fear that he had committed the unpardonable sin are wonderfully true to the implicit faith, the spiritual temerity, and the keen, tormenting conscience of childhood; but, indeed, there is not in the whole sketch a single unreal sentence. And what shall I say of such stories as that of Roger's pathetic romance, or of the gratitude of the little neglected "marchioness" of a poor lodging-house to the one friend who had been kind to her? I have no space to speak of them as they deserve; but either of them, were there nothing else in the book worth reading, would make *From a Garret* a thing of price, and the latter—the story of Sally—is of quite unique beauty. The volume has other attractions than those of mere charming narrative. Miss May Kendall never sets herself to be didactic; but here and there we come across a bright, wise, fructifying sentence which we are not likely to forget, and there is a little discourse on two kinds of love which is a real word of illumination.

The author of "The Atelier du Lys" never disappoints us, and *The Fiddler of Lugau* is a very pretty, graceful, and interesting story. The period is the close of the last or the beginning of the present century when Napoleon was ravaging the continent; the place is a quaint, old-fashioned German town; and the principal characters are the four musicians—Göda, the Stadtpfeiffer; Nake, the organist of the Marienkirche; Herr van der Gheyn, who plays the carillon, and for whom there is no

music but that of his bells; and his nephew Felix van der Gheyn, whom he is training to be his successor, but whose heart beats only when the bow of the violin evokes melody and harmony from the magic strings. Felix is a worshipping disciple of Göda, who, though looked down upon by everybody, is the one man of genius in the little town—the one man who can create, and who, though the world of the actual presses heavily upon him, finds his true life in an ideal world of sound. But Herr van der Gheyn is jealous for his beloved bells, and the rupture between the uncle and the nephew arising from the discovery by the one of the errant love of the other is a fine tragic situation. Another such situation arises out of the envious malice which the empty-brained Nake, whose musical reputation is based on skilful theft, feels towards the simple-minded Göda; and the story from beginning to end is full of quick life and movement. Göda is a character who could have been conceived only by a writer endowed with true sympathetic comprehension of the nature of the creative artist.

Hermosa is an odd kind of literary mongrel. It is neither a novel proper nor a book of travels proper, but something between the two; and it succeeds in missing the interest of the one and the trustworthiness of the other. People who read for information will be irritated by their inability to say where the fact ends and the fiction begins; people who read for entertainment will resent the long passages of topographical and other details which smother the story. The writer gives at the heads of his chapters synopses of their contents. Here is one of them:

"The framework of the house—Building. Description of house—Difficulties of building up mud walls—Ignominious failure—The log house—Sowing—Hunting guanacos—Their habits—Another herd—A Puma—Habits of the *Felis concolor*—A ravine, a gorge, and a lake—Ducks, chinchillas, and hares—The boiling stream."

This is really terrible. Of course there may be eccentric people who read novels in order to acquaint themselves with the habits of the *Felis concolor*, and to them *Hermosa* may be commended; but let others beware.

Mrs. Henry Wood in her very young days succeeded in the feat of writing a tectotal novel that was interesting as a mere story; but F. M. F. Skene is not Mrs. Henry Wood. *The Lesters* is a very dull book, unnatural in manner, and so exaggerated in matter that even as a Broddingnagian temperance lecture it must surely be a failure.

Eunice is a very bright and pretty story, with a strong American flavour. There is, perhaps, a rather too decided tendency in the direction of goody-goodness, mainly manifested in the rather morbid anxiety which everybody feels for the condition of everybody else's soul; but there is a large audience who will not feel this feature to be objectionable, and there is certainly nothing else to object to. The characters are well individualised, and Mrs. Stone is really good.

Mère Susanne is the title of only one of half-a-dozen stories which Mrs. Macquoid has collected together. There is no need to say much about the book. Mrs. Macquoid's writing is always graceful and workmanlike;

and, though these sketches—for they are little more—are very slight, they provide very pleasant reading.

Beforehand does not belong to a high class of art; but it is an exceedingly good specimen of the class to which it does belong. It is, indeed, one of the best of the short stories that depend for their interest entirely upon ingenious plot-construction which has appeared since the death of Hugh Conway. The idea of a murder being seen beforehand in a vision may not be new, though I have no distinct recollection of any previous acquaintance with it; but it is utilised here with real skill and freshness.

J. A. NOBLE.

GIFT BOOKS.

Bonnie Prince Charlie. By E. A. Henty. (Blackie.) Mr. Henty is one of those few writers, either for boys or men, whose style improves the more they write. *Bonnie Prince Charlie* is a book for boys, very much as *Quentin Durward* is, and, it is to be hoped, always will be, a book for boys; that is to say it is a historical romance of the best quality. As its name indicates, it deals with Jacobite intrigues and the Jacobite rising in 1745. But Mr. Henty, with the help of Ronald Lealie, a sort of Scotch Japhet in search of a father, succeeds very skilfully in introducing into his story the old connexion between Scotland and France. Ronald's adventures on French ground are even better than his hair-breadth escapes in Scotland. Then Mr. Henty, by his portraits of Malcolm Anderson, a fighting (and occasionally drinking) Scotch soldier of the Balafré type, and his douce brother the bailie, has accomplished the task (a very difficult one for an Englishman) of reproducing old Scotch humour as illustrated by character. Mr. Henty has written many more sensational stories than *Bonnie Prince Charlie*, but never a more artistic one.

THE first glimpse of Miss Palgrave's *Pictorial Geography of the British Isles* (S. P. C. K.) provokes a longing for a map to accompany it. In truth it is designed to accompany a map, and a more useful adjunct to a geography lesson cannot be desired. It consists of about 150 woodcuts of the most notable headlands, mountains, bridges, cathedrals, and the like to be found in great Britain and Ireland. Some of these are charming, the Strid, for instance, and Glencoe. Happy is the child allowed to look at and be catechised on all these beautiful parts of its native land. The letter-press is even more carefully written and arranged. The aid of geology and physical geography is called in to enlarge the pupil's mind, and a keen appreciation of scenery as interpreted by our greatest poets is inculcated in every page. Statistics are judiciously introduced. Green, Ramsay, and Geikie are laid under contribution together with Tennyson, Wordsworth, and Macaulay. The study of geography should henceforth be a recreation instead of a toil, banishing the repulsive lists of towns and bays with which we were nauseated as children. Miss Palgrave has caught the modern mode of looking at a landscape, and manages to make our mountains and coasts, lakes and rivers, old castles and great industrial towns, at once picturesque and faithful representations of the wealth of beauty which England possesses in town and country alike.

The Fugitives: or, the Tyrant Queen of Madagascar, by R. M. Ballantyne (Nisbet), is a very clever and successful attempt to utilise for the purposes of juvenile fiction the persecutions of converts to Christianity in Madagascar in the beginning and middle of the present century.

There is plenty of adventure in the shape of imprisonment and combats with men and animals, and a negro and a sailor between them supply a comic element of the best quality. Mr. Ballantyne has carefully mastered his geography, and does not thrust his knowledge too offensively before his boy readers. He also introduces a mysterious and helpful stranger, who turns out to be the Moses of a band of the persecuted Malagasias, quite in the Jules Verne style. Everything considered, this is one of the best stories even Mr. Ballantyne has published.

Uncle Ivan, by M. Bramston (National Society's Depository), is a delightfully and simply told story, suited less for girls than for young ladies old enough to look upon a happy and romantic marriage as the consummation most devoutly to be wished for in life. Russian nihilism is very skilfully introduced into an English country home; and a spy is cleverly defeated by girls, aided by a Tory clergyman. Uncle Ivan, most amiable and domestic of uncles and conspirators, is, of course, the hero of the story; but the girl whom he marries is, if possible, even better drawn. Aunt Plummer is a very good example of the irritating, strict, and stupid relative, who is invariably, in fiction, left in charge of children, and invariably gets into difficulties.

Chivalric Days; Stories of Courtesy and Courage in the Olden Times. By E. S. Brooks. (Blackie.) It is somewhat early in the world's history to look for the word "chivalry" in the doings of Queen Nitocris (2500 B.C.), but noble purposes and bold deeds have existed in all ages. Mr. Brooks dwells on some of these in a series of historical novelettes for the edification of boys and girls. We should prefer a simpler narration, but certain boys and girls seem to exist who like the great characters of history to be brought before them in an *entourage* of imaginary pages, slaves and the like, with the customary garnishing of "Thou impudent churl!" "How now! no jokes with me!" and the rest of it. Such phrases, however, in the story of Nitocris as "at thirteen Nita was really quite a young lady"; Pharaoh was "bored"; and the calling a table spread for an evening meal (2500 B.C.) "a tea-table," jar on every cultivated ear. For the rest, several of the illustrations in this book are very pretty.

Walter Morris, by F. E. Reade (S. P. C. K.), is a story of a boy who is naturally rebellious of disposition, and, being too tightly reined in by an uncle, breaks loose, runs from home, to be, of course, finally brought back to religion and duty. It is above the average of stories of the kind, and is both well constructed and well written. Walter Morris and Jim, his companion in mischief and misfortune, are manifestly drawn from the life.

Stories of Old Renown. By Ascott R. Hope. (Blackie.) This is a collection of some "good old stories" not too much modernised to have lost their charm. The stories are excellently brief, and the little reader can begin a new tale before he is weary of the old one. The full-page illustrations, by Gordon Browne, are a little disappointing, but the sketches (with which the book is full) are distinctly humorous. We are only sorry to miss the charming women faces with which Gordon Browne has spoiled us in other books.

The War of the Axe; or, Adventures in South Africa. By J. Percy Groves. (Blackie.) A schoolboy story of the regular type carries the hero across the sea through the inevitable storm to the Cape. Hunting scenes and skirmishes with Kafirs succeed. Without any special purpose, this book is neither better nor worse than many another story of the same kind.

From the Bench to the Battle, by Lady Dunboyne (S. P. C. K.), relates the love-story of a youth who leaves the carpenter's bench and fights at Kassassin. The sentiment is too exalted for most youths who begin life as

carpenters' apprentices, and the offer of the prizes for plans of a town hall and law courts would not tempt many architects to compete. But the story will please little folk.

In *Hooks of Steel*, by Crona Temple (S. P. C. K.), we have a capital *mélange* of self-indulgence, self-sacrifice, yachting, Highland scenery and Highland pride. The main object of the story is to show the conversion of Mr. Montrose, a wealthy man—neither better nor worse than most wealthy men—from a lazy egotist to active altruism, with the help of a great misfortune and a few accidents besides. The best and most lifelike figures in the story, however, are Manus Ravie, his drunken and unscrupulous father Hector, and his magnanimous sweetheart Bell.

In *Cheviots Glens*, by Jane T. Stoddart (Edinburgh: Oliphant, Anderson, & Ferrier), is, apart from its gipsies and its clergymen, a readable story of border life, containing one or two really strong characters, and not devoid of humour. The love-making is skilfully managed; and Peter Thorsbrooke—a sort of Dandie Dinmont, who has given up head-breaking and litigation for politics and letters in newspapers airing his grievances—is as good a character as has recently figured in genuine Scotch fiction. Miss (?) Stoddart would probably do even better than she has done here were she to allow herself, or be allowed by circumstances or publishers, to write without an eye for religious or ethical effects.

Adam's Gorklake's Will, by C. E. M. (S. P. C. K.), is a good story for good people just emerging from their teens, rather than for good children in the ordinary sense of the word. As may well be understood, it is not so much the story of a will as the story of an attempt to upset a will. There is a worthy young man, Arthur Gorklake by name, who is for a time under a cloud, because he is believed to have obtained a competence by foul means; and there is a not less worthy man, Captain Hilton, who expected the competence, and for a time disbelieved, like other people, in Arthur's policy, because he did not understand his character. These two, and Carry, Arthur's sister, with her unfulfilled romance, are admirably sketched. This story is too long and too loosely put together; otherwise, it is deserving of high commendation.

Hawbrook Farm; or, Esther Gaunt's Wooing, by Laura M. Lane (S. P. C. K.), is an excellent story with an excellent moral. The plot is a slender thread which winds round the subjects of association farming. Naturally, a lady need not know much about that; but Esther "telling herself, as she walked home, that the solitariness of 'old maidism' was as nothing compared to the humiliation of winning a husband by stratagem," and in the intensity of her maidenly pride almost losing her lover, is a careful study, and one which the venerable Society does well to show to many country girls. We shall not tell the *dénouement*, but advise all whom it may concern to read the book for themselves.

In *Christ's Service, a Story for Soldiers*, by E. Garrett (S. P. C. K.), is, as may be gathered from its title, a touching recital of duty and affection spiritualised. The scene is laid first in England and then in Afghanistan; the sketches of Indian life are carefully drawn, and the book is in every way a worthy example of the excellent literature which the old Church Society is now so laudably circulating.

The Best Book. By the author of "Higher and Higher." (S. P. C. K.) This does not contain much of a story; but, after relating the fact of a Bible being presented to the Queen at her coronation, proceeds to press the study of the Bible upon the young. They are introduced to several historical episodes, which are pleasantly told, the Massacre of St. Bartholomew

and the like; while the structure of the English Bible is carefully explained.

THERE are as many startling incidents as ever in Rev. E. N. Hoare's *Foxholt, and the Light that burned There*. (S. P. C. K.) A runaway carriage, a desperate accident in an iron foundry, and a narrow escape from drowning on the Goodwin Sands, are surely enough for one story. But that story is well told; and the lesson that cheerfulness and uprightness are great blessings, though an old one, is none the worse for being inculcated afresh.

MISS ANNETTE LYSTER has produced a pretty tale in *Out in the Cold*. (S. P. C. K.) It shows how one good-natured, earnest child in a family can exercise a good influence on all with whom she comes in contact, unite angry brothers and sisters, and create happiness wherever she goes.

IN *Great Truths and Holy Lives*, by Elinor Lewis (S. P. C. K.), the deeper lessons of daily religion are earnestly insisted upon in a series of chapters addressed to young women's classes, mothers' meetings, and the like. These are plain and homely, but striking in their use of appropriate anecdotes and illustrations; and they seem exactly suited for the use of those for whom they are designed, avoiding alike the fatal errors of writing down to the poor and of writing over their comprehension.

It was a happy idea to publish the lives of half-a-dozen *Mission Heroes* (S. P. C. K.) in the form of tracts. These give the chief lessons taught by the noble lives of such men as Bishops Patteson, Cotton, and Selwyn. Their circulation will greatly benefit the cause of missions.

Aunt Hesba's Charge. By E. I. Lysaght. (Blackie.) This well-written book tells how a maiden aunt is softened by the influence of two Indian children, who are unexpectedly left upon her hands. Miss Lysaght's style is bright and pleasant.

A Tale of a Country Village, by S. E. Bryans (S. P. C. K.), is intended primarily for mothers' meetings. This would make a capital book for a village library.

Was he a Fool? By Julia Goddard. (S. P. C. K.) A pretty story of forgiveness of great wrongs, written in Miss Goddard's best manner. It is needless to recommend this little book.

WE have received the bound volume for 1887 of the monthly magazine, *Illustrations*, conducted by Mr. Francis George Heath. (W. Kent & Co.) The varied character of its contents is well shown by the index, which is thus classified: Amusement, Art, Biography, Economy, Invention, Literature, Science. Some of the articles are attractively fresh, both in subject and in treatment. The woodcuts, which number four hundred, are none the less effective for being rather rough. Altogether, we venture to congratulate Mr. Heath on his conduct of a magazine which, by its direct appeal to popular (though not vulgar) tastes, and by its low price, emphatically deserves to be supported.

NOTES AND NEWS.

THE first two volumes of Mr. W. L. Newman's long-expected work on the *Politics of Aristotle* will be published by the Clarendon Press before the end of the present month. The Introduction forms a volume by itself, while the second volume will contain two prefatory essays, besides the two first books of the text, with critical and explanatory notes. Probably two more volumes will be required to complete the work.

MESSRS. CASSILL & Co. announce for publication this month an illustrated edition of what we venture to describe as Mr. Rider Haggard's best work—*King Solomon's Mines*. The illustrations will consist of full-page drawings by Mr. Walter Paget.

FOR some time past it has been known that a new edition of *Chamber's Encyclopaedia* was in preparation. The original edition, begun in 1858 and completed in 1868, underwent repeated correction from time to time under the superintendence of the original editor, the late Dr. Andrew Findlater. But the new edition—which has been entrusted to Mr. David Patrick as general editor, with a large staff of permanent assistants—will be substantially a new work, though founded upon the same lines as the old. The greater part of the articles have been entirely rewritten, and all have been scrupulously verified and revised. While the total amount of space is not appreciably increased, many fresh articles have been added and others have been expanded in accordance with the change of times. Particular attention has been paid to both colonial and American subjects. Most of the latter have been entrusted to American writers; and special paragraphs have been added to many articles where the American point of view is of importance. The number of maps has been augmented. Most of the illustrations are entirely new, and those of plants have been specially engraved from photographs. The extent to which recourse has been had to acknowledged authorities may be inferred from the names appended to some of the articles in the first volume. "Addison" is written by Mr. W. J. Courthope. "Africa," by Prof. A. H. Keane; "Agriculture," by Prof. Wallace of Edinburgh; "Alphabet," by Canon Isaac Taylor; "Alps," by Prof. James Geikie; "Anthropology," by Mr. Grant Allen; "Archaeology," by Mr. Joseph Anderson; "Aristotle," by Mr. David Ritchie; "Art," by Prof. W. M. Conway; "Asia," by Prince Kropotkin; "Association of Ideas," by Dr. Bain; "Assyria," by Mr. W. St. Chad Boscawen; "Atlantic Ocean," by Mr. John Murray, of the *Challenger*; "Atom," by Prof. Tait; "Bacon," by Mr. Sidney L. Lee; and "Bacon," by Messrs. D. and T. Stevenson. In addition, other articles have been subjected to the revision of specialists—such as "Animal Worship," to Mr. E. B. Tylor; "Aryans," to Prof. Max Müller; and "Basques," to Prince L.-L. Bonaparte and Prof. Julien Vinson. The work will be issued by Messrs. Lippincott in Philadelphia, simultaneously with its appearance here. We understand that the first volume—corresponding with the first volume of the former edition, from A to BEL—will be published in March of next year, while the remaining volumes will follow one another speedily.

PROF. ANTONIO FAVARO, of Padua, has been charged by the Italian Government with the supervision of a new and complete edition of the works of Galileo. He would be glad to receive information of any letters or writings of the great astronomer which may be in England, in public or private libraries; and he has officially authorised Mr. A. W. Thibandean, of 18, Green Street, St. Martin's Place, W.C., to receive any communication and to defray any expenses incurred.

THE proposed statute for founding an honour school of modern languages at Oxford was rejected in Congregation on Tuesday last, the number of votes—which was exceptionally large—being equal (ninety-two) on either side. On Thursday next, November 10, the statute regulating the loan of MSS. and books from the Bodleian will again come up for discussion in Congregation.

MR. ELLIOT STOCK announces a print of a

little known chap-book which was widely read towards the end of the last century in Scotland, entitled *An Account of Mr. Maxwell, Laird of O'Cool*: his appearance after death to Mr. Ogilvie, a minister of the present establishment at Inverwick, three miles east from Dunbar.

MESSRS. WARD & DOWNEY will publish this month the following, each in three volumes: *A Prince of the Blood*, by Mr. James Payn; *One Maid's Mischief*, by Mr. G. Manville Fenn; *The Nun's Curse*, by Mrs. Riddell; and also *The Diamond Lens*, by Mr. Fitzjames O'Brien, and *Luck at the Diamond Field*, by Mr. Dalrymple J. Belgrave.

THE English Publishing Company will issue early next month a volume entitled, *My Tour Eastward*, by Mr. E. H. Riches. It will include an account of a cruise in the Mediterranean and visits paid to Egypt, Constantinople, &c.

MESSRS. D. LOTHROP & Co., of Boston, U.S., are about to issue an American edition of Mr. W. Canton's *A Lost Epic, and other Poems*, recently published by Messrs. Blackwood.

The Seal of the Snake: a Secret in Seven Coils, will be the title of Grant & Co.'s forthcoming Christmas number, which is the fourteenth in which Mr. R. E. Francillon has taken a prominent part.

Life in the Riviera is the title of a new journal which will make its appearance at Nice on Saturday, December 3, and will be published weekly during the winter season. It is devoted to social and political life and issued in connexion with *Life*, of London.

THE Queen has been pleased to become the patron of the Selden Society.

AT the opening meeting of the Royal Society of Literature for the current session, Mr. Mackenzie Bell will read a paper on "Crabbe and Beckford."

THE current number of the *Indian Magazine* (Kegan Paul, Trench & Co.) contains a report of the annual meeting of the Gujarat Vernacular Society, which was held at Ahmadabad last August. This society was founded so long ago as 1848, for the purpose of encouraging vernacular literature in Gujarathi—one of the two principal languages spoken in the Bombay presidency. The library of the society now numbers 1,026 volumes, of which 149 are school books and juvenile literature. In the past year, the society has circulated 1000 copies of a Gujarathi translation of Mr. Herbert Spencer's *Education*, and has arranged for translations of Mr. Smiles's *Character* and Sir W. W. Hunter's *Indian Empire*. During the ten years ending 1884, the total number of books in Gujarathi published in the Bombay presidency has been 2,367, of which 1,659 were original works, 251 translations, and 457 republications. Except in the last class, these figures compare favourably with those of Mahrathi publications, for the greater literary activity of the Maratha Brahmans is compensated for by the Gujarathi-speaking Parsis.

MAGAZINES AND REVIEWS.

THE *Expositor* for November offers a fair compromise between the critical and the popular standard of "exposition." As usual, it gives a wide extension to the range of exegesis. Hence Prof. Milligan can discourse in a more genial tone than one or two of his colleagues on the origin of the Christian ministry; and Dr. Taylor, with an academic "dryness" charming to scholars, on the "Didaché" and Justin Martyr. Prof. Beet, with a not misplaced seriousness, restates on exegetic

grounds the orthodox doctrine upon "Christ Crucified and Risen"; while on both sides the number is fenced in by curiously contrasting Old Testament articles. One bears the name of Dr. Ives Curtiss, of Chicago, and is a brief criticism, addressed to the popular ear, of modern recasts of the history of Israel, earnest, fair-minded, but wanting in subtlety and in humour; the other, that of Dr. A. B. Davidson, is a survey of the Book of Proverbs in the Revised Version, brimming over with a humour which is sometimes out of place, and may mislead the unwary student—notice, for instance, the concluding paradox, which we commend not to English but to German Bible students.

IN *Blackwood* this month the most remarkable paper is that on "Montrose and the Covenant of 1638." The writer's view of the political conduct of Montrose will strike most readers as novel, but his position is powerfully argued. An article, entitled "Captured Brides in Far Cathay," gives an interesting account of the survival of primitive marriage customs among the barbarous races of China, and of the traces of such customs in the traditions and language of the civilised Chinese. The book-notices in "The Old Saloon" are as usual good, and perhaps a little more lively than usual. The article might have been headed "Some Books of Personal Gossip." The volumes reviewed are the Thackeray letters, Mr. Ruskin's *Hortus Inclusus*, Dr. Wendell Holmes's *Hundred Days in Europe*, and—rather maliciously included in this group—Mr. R. L. Stevenson's *Underwoods*. Sir T. Martin contributes translations of Schiller's poem "The Ring of Polycrates" and "The Cranes of Ibycus." The number contains also, besides two political articles, a readable paper by Lord Lamington on "The Castle of Vincigliata"; and a story, intended to be tragic, entitled "The Dragon-tree of Telde."

IN MEMORIAM.

EDWARD THRING.

Loved father of the schoolboy multitude,
Friend of their short swift ages passed away,
Guide of their labour, champion of their play,
Who dared for zeal of noble masterhood
To stand alone, a rock above the flood
Of easy acquiescence, and gainsay
The dazzling bright ambitions of to-day
That tempt to learning's heights the scholar brood,
Thy presence fails for solace or command,
Thy soul is ours, thou great schoolmaster king;
Still father of thy children fatherless.
Unto thy voice of cheer the children press,
And hearts that honour truth in every land
Beat fast for names of Uppingham and Thring.

H. D. RAWNSLEY.

Uppingham: Oct. 27, 1887.

CORRESPONDENCE.

ANCIENT ETHNOLOGY.

Bromley, Kent: Oct. 31, 1887.

During the spring I made a series of casts at Thebes from the portraits of foreign races on the Egyptian monuments, the British Association assisting the work by a small grant. This series is now on view in the room of the Palestine Exploration Fund, in the Science Department at South Kensington; and it will remain there until the end of this year. It comprises about 150 casts, of nearly all the races known to the Egyptians. These are fully

labelled and arranged, and supply a mass of genuine material for ethnological observation.

For the convenience of study I have also taken a set of photographs from the casts, on a uniform scale, and in the best light for each separately. These plates, which belong to the British Association, I have put in the hands of Mr. Browning-Hogg, 75 High Street, Bromley, Kent. His charge for printing copies is 2s. 3d. per dozen, if a selection is made from a loose set; or 45s. for the whole set of 190, mounted on sheets of parchment paper with printed titles. He will print copies as they are required; and I hope that this series will help the scientific study of early races. The object in placing them thus at public disposal at cost price has been to assist students without incurring a heavy expense for publication.

W. M. FLINDERS PETRIE.

A HITTITE SYMBOL.

Oxford: Oct. 23, 1887.

I have recently received impressions of a remarkable haematite seal from Asia Minor, now for sale at Constantinople. The under-surface is engraved, the design bearing a striking likeness to that on a haematite seal found at Yüzghâd and now in the British Museum, of which an account has been given by Mr. Budge in the *Proceedings* of the Society of Biblical Archaeology for November 1886. In fact, the designs upon the two seals are identical except in the following respects. First of all, the new seal, though rather smaller than that from Yüzghâd, has inserted in the outer circle of figures four new figures between the solar disk and the picture of a tree, one of the figures being seated; making amends for this, however, by omitting a standing figure on the left-hand side of a representation of the Hittite boot, and on the opposite side of the latter substituting a rosette for a triangle. Secondly, the new seal has three circles of figures instead of only two, the intermediate circle consisting of rosettes alternating with a peculiar symbol about which I shall speak presently. In the centre or third circle the new seal has three hieroglyphs (one of them being the well-known Hittite glove) in place of the six which appear on the Yüzghâd seal. Putting the two seals side by side, it is impossible to resist the conviction that they belong to the same age and locality, if not to the same engraver.

Now the Louvre has lately acquired five Hittite or Asianic seals, discovered at Aidin, casts of which have been kindly forwarded to me by M. Heuzey. One of these is of the same shape as the two seals I have been describing and the under-surface ornamented with two circles of figures divided from one another by the rope-pattern. The figures in the outer circle remind one of those on the Yüzghâd seal; those in the centre consist of three Hittite hieroglyphs (one of them the glove and another a symbol which occurs in the central circle of the Yüzghâd seal), while at their side stand representations of a triangle and of the peculiar symbol I have mentioned before. Another of the seals from Aidin represents the same two symbols at the back of a deity, with a staff or battle-axe in the hand and "tip-tilted" boots on the feet, who stands on the back of a horse.

But it is not only Yüzghâd in Kappadokia and Aidin in Lydia that have furnished us with these two curious symbols; a magnificent haematite seal, obtained by Mr. Greville Chester last winter from Tarsos, presents us with them likewise. They seem to have been an engraver's mark, which characterised Hittite seals in Asia Minor, like the "swastika" on the early pottery of Cyprus. Their extension through Asia Minor testifies to the extension of Hittite influence, and will in future be a sure indication that the

object on which they occur is of Hittite origin.

The triangle is found not unfrequently in the Hittite inscriptions. The other symbol is also met with on two of M. Schlumberger's Hittite seals (*Proceedings of the Soc. of Bibl. Arch.*, Feb., 1884, Nos. 13, 14). A comparison of the different forms assumed by it enables me to explain its origin.

It is simply a picture of the knotted girdle worn round the waist. That this is the case will be obvious to anyone who will turn to plates 331 and 332 in Perrot and Chipiez's *Histoire de l'Art*, vol. iv., where sculptured figures from Eyuk are represented. The knotted girdles round the waists of the figures have precisely the same shape as the symbol whose origin we are in search of.

In one case, however, the knotted girdle takes the form of the *crux ansata*, the Egyptian symbol of life. I believe, therefore, that it gives us the clue to the origin of this mysterious symbol. It would have denoted the knotted girdle worn by the primitive Egyptian over the seat of life. Some of the figures in the tomb of Ti of the Fifth Dynasty wear no other article of clothing.

I will conclude this letter with a few words on the picture of the Hittite boot, which on the Yûghâd and "Constantinople" seals is placed on the apex of the ideograph which represents "a king," and has attached to it a short line denoting the end of a paragraph. The boot is frequently combined with a symbol which Mr. Boscawen has shown is a picture of the eyebrow, and, as has long been recognised, must in the inscriptions express the idea of superiority. At Boghaz Keui the priest who supports the winged solar disk on his head stands on the boot, suggesting the inference that the boot denotes what is below, or the earth. On one of M. Schlumberger's seals the "eyebrow" and the "boot" are written in front of a deity who stands on the back of an animal, in another they take his place. It is difficult not to believe that they here represent the ideas of "above and below," or "heaven and earth." The conclusion is confirmed by a passage in an inscription from Carchemish (Wright's *Empire of the Hittites*, pl. xi, fig. 4) where we have what I should read "he that is below and he that is above," the two hieroglyphs being coupled together by the ass's head. I may add that elsewhere the head of an ass seems to interchange with a circular hieroglyph which probably denotes the conjunction, as in one of the Carchemish texts (Wright, pl. x., l. 3), where the king is called, as I fancy, "the Carchemishian and the Hittite." A. H. SAYCE.

EARLY HEBREW MSS. OF THE OLD TESTAMENT.

Cambridge: Oct. 31, 1887.

Dr. W. Robertson Smith, Librarian to this University, has in his private collection a Hebrew MS. of the Old Testament of an age certainly earlier than 1142. This MS. is of considerable interest in more than one way, and especially as being the means of convincing the dullest understanding that the date (856) assigned to MS. Mm. 5.27 (No. xii. of my Catalogue), belonging to this library, is the correct one, and that, therefore, this MS. is older than the Babylonian Codex. Of course, to a real palaeographer, who (like a poet) must be born, there is no need of further corroboration than the MS. Mm. 5.27 itself affords. Still, if the two MSS. are compared, both being Sepharadic (but by no means necessarily Spanish), one sees the fallacy of the common assumption that handwritings differ only by countries and not by ages—an assumption held even by persons who are supposed to be good bibliographers.

S. M. SCHILLER-SZINESSEY.

INGULFUS REDIVIVUS.

London: Oct. 31, 1887.

"I need hardly, at this time of day," writes Mr. Freeman, "go about to disprove the genuineness of the so-called Ingulf" (*Norman Conquest*, iv. 600). Could he have supposed, when he thus wrote, that in the present year of grace that venerable imposture would still be quoted, with a fervent and childlike faith, not by compilers of local guides, but by officials of the Public Record Office and of the British Museum? It is to be feared that a fresh lease of life has been given to this moribund delusion by the treatise on Domesday Book (S.P.C.K.), which has just appeared from the pen of Mr. Walter de Gray Birch. The authority of Ingulf is appealed to persistently throughout that work without the suspicion of a doubt as to the genuineness of his supposed chronicle. We have here a startling illustration of the truth of Dr. Stubbs's words:

"The proved discovery of the forgery of Ingulf's *History of Crayland Abbey* was a fact that necessitated the revision of every standard book on early English history. It is more than forty years since that discovery, long ago suspected, was proved beyond the possibility of doubt. Yet to this day the Ingulfine leaven remains in our elementary books—nay, in more than elementary books, in standard works of history, from which it is impossible to eliminate it" (*Lectures on Mediaeval History*, p. 46).

I had occasion recently myself, in criticising the other appeal to Ingulf to which I have already referred, further to expose the forgery (*Anti-quary*, June, 1877); but in a book such as that of Mr. Birch, which is sure to be widely read, the prominent appeals to its authority are a far more serious matter. Nor can one see how the revival, in a pseudo-historical work, of a belief in that grotesquely impossible tale, which "is still swallowed," in Mr. Freeman's words, "by novelists and local antiquaries," tends to "the promotion of Christian knowledge."

J. H. ROUND.

LADY HAMILTON AND THE FOUNDER OF HARROW SCHOOL.

St. John's College, Cambridge: Oct. 31, 1887.

Mr. Cordy Jeaffreson's conjecture that Lady Hamilton attributed Preston in Lancashire as her birthplace, from her anxiety to connect her family with that of the founder of Harrow School, is undoubtedly inaccurate.

John Lyons was born and resided at the hamlet of Preston, *Middlesex*, close to Harrow. A. R. THOROLD WINCKLEY.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, Nov. 7, 8 p.m. Royal Institution: General Monthly Meeting.

8 p.m. Royal Academy: "Anatomy of the Face," by Prof. J. Marshall.

8 p.m. Aristotelian: "The Unseen World," by the President, Mr. Shadworth H. Hodgson.

TUESDAY, Nov. 8, 8 p.m. Civil Engineers: Presidential Address by Mr. G. B. Bruce, and Distribution of Medals, &c.

8 p.m. Colonial Institute: "The Colonial Conference of 1887," by Canon Dalton.

8.30 p.m. Anthropological Institute: Exhibition of Implements and Works of Art from the Lower Congo, by Sir Frederick Goldsmid and Mr. Delmar Morgan; "The Lower Congo: a Sociological Study," by Mr. R. C. Phillips.

WEDNESDAY, Nov. 9, 8 p.m. Geological: "The so-called 'Soapstone' of Fiji," by Mr. Henry B. Brady; "Some Results of Pressure and of Intrusive Granite in Stratified Palaeozoic Rocks near Morlaix, in Brittany," "The Obermittweide Conglomerate, its Composition and Alteration," and "A Part of the Huronian Series in the Neighbourhood of Sudbury (Canada)," by Prof. T. G. Bonney; "The Position of the Obermittweide Conglomerate," by Prof. T. M. Kenny Huxhes.

8 p.m. Microscopical: "Synopsis of the British Recent Foraminifera," by Mr. H. B. Brady; "Metamorphoses of Amoebae and Actinophrya," by Mr. C. R. Beaumont.

8 p.m. Shelley Society: "Prometheus Unbound" considered as a Poem," I., by Mr. W. M. Rossetti.

THURSDAY, Nov. 10, 8 p.m. Royal Academy: "Colour and Colours," by Prof. A. A. Churrah.

8 p.m. Mathematical: "The Differential Equations satisfied by Concomitants of Quantics," by Mr. A. R. Forsyth; "Pure Ternary Reciprocants and Functions allied to them," by Mr. E. B. Elliott; "The General Linear Differential Equation of the Second Order," by Sir J. Cockle; "The Stability of a Liquid Ellipsoid which is rotating about a Principal Axis under the Influence of its own Attraction," by Mr. A. B. Basset; "Geometry of the Quartic, and on Modular Equations," by Mr. R. Russell.

8 p.m. Telegraph Engineers: "Deep sea Sounding in connexion with Submarine Telegraphy," by Mr. E. Stallibrass.

FRIDAY, Nov. 11, 8 p.m. New Shakspeare Society: "Shakspeare's Alterations of History in his Historical Plays," by Mr. W. G. Stone.

SATURDAY, 8 p.m. Physical: "The Rotation of a Solid Copper Sphere and of Copper-wire Helices when freely suspended in a Magnetic Field," by Dr. R. C. Shettle; "A Geometrical Method of determining the Conditions of Maximum Efficiency in the Transmission of Power by Alternating Currents," by Mr. T. H. Blakeley.

SCIENCE.

THE WORLD-FABRIC ACCORDING TO THE RIG VEDA.

The Cosmology of the Rig-Veda. By H. W. Wallis. Published by the Hibbert Trustees. (Williams & Norgate.)

RELIGION, wrote St. James to the emigrant Jew, is to visit the fatherless and widows in their affliction, and to keep oneself unspotted from the world. "Religion," says Mr. Wallis, in the opening sentence of his book, "is the behaviour of man with respect to the natural forces and influences of the world which he regards as manifestations of super-human will." The antithesis represents, with antithetical half-completeness, the Christian and the Indian conception of that reflex tie which binds man, on the one hand, to his Maker, and on the other, to his fellow-men. The Christian idea tends to identify religion with morality; the Indian method results in the sublimation of religion into philosophy. This little treatise, the first-fruits of a studious life, now sadly cut short, serves as a reminder that the latter view is the more ancient one; and that the earliest aspirations of religious man were not to do righteousness or to show mercy to his neighbour, but to comprehend the divine nature, and to stand well with his God.

Mr. Wallis set before himself a definite and a limited task. He has accomplished it with conscientious scholarship. His object was to state the views of the composers of the Rig Vedic hymns regarding the creation and order of the universe, without attempting to discover the origin of those views, or to assign to them a chronological sequence. He simply reproduces the cosmological guesses of the Rishis, collated in well-considered groups. All he claims is to have given a presentment of the passages from which a complete picture of the cosmology of the Rig Veda might be drawn, and upon which the more elaborate superstructure of Hindu cosmology rests. Those who have had to study the development of religious thought in India will know how much this unpretending claim includes, and will appreciate the historical value of the work which Mr. Wallis has modestly performed.

The Rishis, or Vedic psalmists, represented themselves as the only true mediators between man and the gods. Sacrifice, conducted according to the ritual prescribed by them, was the only effective mediation. Their hymns disclose, indeed, a consciousness of rival mediators and rival gods,

But such rivals appear only as objects of religious hostility or contempt. It became the object of the Rishis to keep the sacred lore in their own families, and to magnify the value of sacrificial rites of which they were the hereditary custodians. The character and the individuality of the god seem not of so much importance as the accurate performance of the sacrifice. It thus came about that the ceremonies and formulæ of the ritual gradually overlaid the essential meaning of the offering, until they degenerated into the incantations of the Atharva Veda; while the sphere of activity assigned to each god became more indefinite and more confused. Mr. Wallis justly remarks that the deities of the Rig Veda differ from the gods of Greece and Scandinavia in the abstract and almost impersonal nature of their character and attributes. Instead of battle-stained Odin, or hammer-wielding Thor, or amorous Zeus, we behold a number of divine agents in the creation and maintenance of the universe. "They are," says Mr. Wallis, "little more than factors in the physical and moral order of the world, apart from which none, except perhaps Indra, has a self-interested existence." This states the case somewhat strongly, but it shows the importance of a careful cosmological study of the Veda such as Mr. Wallis has made. A collection of very human epithets as well as of cosmic attributes applied to the gods might, however, be got together from the Rig Veda.

The Rig Vedic hymns disclose three distinct lines of thought in regard to the creation of the world, yielding three separate views as to its construction. The simplest theory is that the building of the world was done very much as the building of a house, by architects and artificers. "What, indeed, was the wood? What, too, was that tree," asks a hymn, "from which they fashioned the heaven and the earth?" The space was laid out with the measuring-rod of Varuna. This measuring-rod was the sun; and hence the measurers of the earth are the solar deities, especially Vishnu, who "measured the regions of the earth, and made fast the dwelling-place on high, stepping forth, the Mighty Strider, in three steps." The edifice had three storeys, or flats (although the metaphor here becomes doubtful, the earth, the air, and the heavens; the measurement beginning from the front of the structure, or the East. "Indra measured out as it were a house with measures from the front." "The Dawn shone with brilliance and opened for us the doors"; the doors that "open high and wide with their frames." Mr. Wallis suggests that the roofing of the house is referred to negatively in the epithet of the sky as beamless or without rafters. The firmness of the edifice is marvelled at and praised. While the design and general structure are assigned to the greater deities, and especially to Indra as their representative, the woodwork and other details were done by artificer gods. *Tvashtar*, the carpenter god, and the *Ribhus* who made three Soma-cups to one of *Tvashtar's*, are duly honoured; but with an understanding that joinery is, after all, only for an artisan deity. As the first act of the Indian peasant on taking possession of a new house is to bring in sacred fire, so says Mr. Wallis, "the

first act of the gods after the formation of the world was to produce the celestial Agni." Such are the main ideas connected with the simplest or house-building theory of the construction of the world. In this, as in every branch of the enquiry, however, it is difficult to decide whether certain epithets were merely intended as poetical similes or to what extent they covered cosmic conceptions; in fact, how far the metaphor which to us is a figure of speech was with the Vedic psalmists a mode of thought.

The second Vedic theory of the creation, second in degree of complexity although not necessarily in sequence of time, takes as its basis the great natural or elemental operations which we see at work in producing animal and vegetable life. Its agents are not the measuring-god or the carpenter-god or the door-opening Dawn, but heat and moisture, fire, water, light. Its process is one of generation, not of handicraft. "The centre point of the theory of cosmological generation," says Mr. Wallis, "is the combination of the light with the waters, which presented itself to the eyes of the poets in the birth of the lightning from the rain-cloud, and in the exhalations which surround the light of the sun." Around this central point, however, four agencies in the work of creation grouped themselves: first, and naturally, the sun; second, the waters; third, the primordial substance or unit; fourth, desire. The sun is the main fructifying influence in the Rig Vedic hymns, alike for plants and trees and the human embryo. This ascription of all creative work, and indeed of terrestrial work generally, to the sun, forms an example of the narrow line which sometimes separates the guesses of primitive thinkers from the profoundest conclusions of modern science. The sun is accordingly elevated by the Rig Vedic psalmists from the Father-god to the one supreme God, with almost the plenary powers afterwards concentrated in *Brahmā*. It is the first-born of things, and finally the Unborn. "Though it is but one," says a hymn, "the poets address it in many ways. They call it Agni, Yama, *Mātariçvan*." "It is the life of all that moveth and standeth"; "but one in many forms"; "that alone in which all existing things abide." The next agency in the generation-theory of the world-fabric is the waters. The waters appear as the Mothers; the rivers, especially the Indus, being the most heavenly of Mothers. They brought forth whatever stands or moves. They are the wives and mothers of the world growing up together in one home. *Rudra*, or the storm-cloud, is the divine physician: the waters are his life-giving medicines. *Parjanya* is god of the rain-cloud, producing fruit in plants, mares, cows, and women. The light of the sun was the first germ, but the waters were the bearers and fructifiers of the germ. But whence came the germ? A hymn refers to a primordial substance or unit, "the one thing" (*akam*) "out of which," says Mr. Wallis, "the universe was developed." In the end, however, the theory of generation works round from the elemental agencies to a conscious agent, prompted by desire. Volition may thus be said to be the prime mover of the creative process. "So in the beginning arose Desire, which was the

seed of the mind. The wise found out by thought, searching in the heart, the parentage of the existent in the non-existent."

The third Vedic explanation of the world-fabric belongs to a still more complex region of speculation. It is evident that the weak point in both the house-building theory and the generation theory is the starting-point: how existence came out of non-existence, and the immaterial put on materiality. The Rig Vedic poets found a vague solution of the difficulty, or rather a dim escape from it, in the Law of Rita, or the *primateval*, all-compelling, and universal Spirit of Order. Compared to this, the gods sink into mere angels or heavenly ministrants, if not, indeed, into passive instruments of a necessity for being which preceded alike divine and human life. This Order of the Universe was too remote an abstraction to be realised as an object of human worship. But it showed itself to men in four great symbols: the unalterable alternation of day and night, the passage of the sun across the heavens, the unswerving downward motion of the rain from the sky, and of the streams along their courses. The Principle of Order seems to be conceived of as existing before the manifestation of any phenomena, although the process of formulating philosophical dicta out of poetical imagery can yield but doubtful results. Mr. Wallis thinks that the best illustration of the ideas connected with this Principle of Order is to be found in the character of the god *Varuna*. As a king, *Varuna* ordains all that happens on earth; as a legislator, he lays down the laws; while the soldier *Indra* punishes offenders against them. But as the policeman, especially the military policeman, is in India a more practically powerful official than the law giver, so *Indra* became more important than *Varuna*. The latter, moreover, was a god of peace, while the *Aryans* on the march into India needed a god of war. In this way, Mr. Wallis thinks, *Indra* became the favourite god of the Rig Veda. It is needful to remind the reader, however, that another explanation may be given for the rise of *Indra* to the supreme place.

Side by side with these three theories of creation in the Rig Veda runs a constant assertion of the potent and mysterious powers of Sacrifice. The personal interest of the composers of the Veda in making that assertion was explained at the beginning of this article. But apart from personal motives, there seems to have been a genuine conviction that Sacrifice continued as it were the work of creation; and that, if creation brought life into the world, Sacrifice conferred immortality. Prayer is the instrument by which the Rishis effect their works and beget children. Sacrifice seems to have been regarded first as a propitiation of the gods, and then as constituting a contract with them. The Rig Vedic psalmists held that continued existence after death, and the superhuman powers possessed by the Fathers, alike resulted from Sacrifice accurately performed. The effect of Sacrifice as a bestower of immortality is, indeed, complicated by the circumstance, says Mr. Wallis, that *Yama*, the king of the world hereafter, was not primarily a sacrificer. The superhuman powers of the Fathers obtained by Sacrifice,

and their association with the light, have led Roth to regard them as a race of higher beings between men and gods; while Weber conjectures that they were the priests of an earlier religion common to the Aryans of Persia and India. But even men may, according to the Rishis, earn by Sacrifice the friendship of the gods, and almost an equality with them. "The whole ritual of sacrifices, with all its appurtenances," says Mr. Wallis, "its priests and offerings, was bodily translated from the sphere of human action to the world of the gods." The *primaeva* sacrificer was also a creator.

It has been necessary to accept without comment Mr. Wallis's views of individual passages in order to present his general conclusions within a moderate space. But, even after granting this assumption, it is essential again to warn the student of the constant perils which attend the process of building up a theory of creation out of primitive and poetical epithets of the gods. Having entered this mild caveat, we cannot part from Mr. Wallis's excellent monograph without saying a few words regarding its author. Cambridge missed at the beginning of the present term a newly-elected Fellow of Caius, who, at the end of last term, had just entered on what promised to be a bright and useful career. Mr. H. W. Wallis had qualified himself, as few young Englishmen qualify themselves, for the vocation of a Sanskrit scholar. Mr. Wallis took his degree in 1883, being placed in the first class of the second part of the classical tripos, and was especially distinguished by the examiners for ancient philosophy and philology. He gave the following year to the study of theology and Hebrew, obtaining distinction in the Old and New Testament subjects, and the prize in Hebrew in the Theological Tripos of 1884. The next three years Mr. Wallis devoted to laying a thorough foundation in Sanskrit. After gaining the Hibbert Studentship he proceeded to Germany to attend the lectures of Prof. Kielhorn at Göttingen, and to study the Veda under the great modern Rishi, Prof. Roth, of Tübingen. On returning to Cambridge, he devoted a year to the Vedanta with Prof. Cowell. On June 18 he was elected a Fellow of Gonville and Caius College; on July 18 he died. Wherever he went he impressed those with whom he worked by his earnest and studious life. Prof. Kielhorn lamented in the ACADEMY "the loss which the University of Cambridge and English scholarship" have suffered by the death of one whom, even according to German standards, "certainly would have become a first-class Sanskrit scholar." We have reviewed his essay at some length, for, so far as we can learn, it will be the sole published result of a life of much labour and high promise. Short as that life was, it has served two purposes. To other English students, with generous aspirations and a willingness to work, it stands as a finger-post pointing the way to the heights of scholarship, although it cannot travel thither. To English scholars, and to the Indian historian, it has bequeathed a most admirable monograph on a subject which has never before been treated in the English tongue with such clearness, conciseness, and precision.

W. W. HUNTER.

TWO LOCAL FLORAS.

Flore Populaire de la Normandie. Par C. Joret.

(London: Nutt; Paris: Maisonneuve.)

The Flora of Cardiff. By J. Storrie. (Published by the Cardiff Naturalists' Society.)

LOCAL floras—accounts, that is to say, of the native plants of a given district—may be drawn up from two points of view, and these points are well illustrated by the two works at present before us. On the one hand, the object may be to put on record the popular names of the plants, so as to preserve the interesting matters which they embody. This study will not be without interest for the botanist, if only because (as A. de Candolle shows) the names may give useful hints about the history of species; but still it will chiefly attract folklorists and philologists. The former will trace in the names the legends or the supposed attributes of the plants; the latter will follow, with interest, the derivation of the names, and perhaps use them with other data to throw light on the origin of the population of the country. Thus, it is certainly curious, if one remembers the little map in Mr. Isaac Taylor's *Words and Places*, with its abundant indications of Saxon names in Normandy, to learn from Prof. Joret (p. 67) how few Norman plant-names are of Germanic origin. Plant-lists have been drawn up on this principle before now, both abroad and at home, as the *Dictionary of English Plant-Names*, of Messrs. Britten and Holland; but none which we have seen is more carefully done than that of M. Joret, who has added to a considerable list of printed authorities the results of personal enquiry and the contributions of a large staff of voluntary assistants. The value of his list to future students will be largely increased by the fact that he scrupulously assigns each name to the commune, canton, or *pays*, in which it is current; while he introduces his subject (pp. 7-82) and puts it, as it were, in its proper setting, by explaining the value of names and giving a very entertaining sketch of the history and literature of botany in so far as it is connected with mythology, magic, or even medicine, down to the recent publications of Signor A. de Gubernatis and Mr. Hilderic Friend.

But in the second place the object of a local flora may be more purely botanical, to trace and record the distribution of plants—a task of great usefulness at a time when many agencies are tending to destroy native species and introduce new ones in England and elsewhere. The Cardiff ballast-hills are rich in floral waifs and strays, some of which may presently take to this country and establish themselves, even as *Galinsoga parviflora*, the Peruvian waif, has done about Kew; or as *Mimulus luteus* is actually doing about Cardiff. It is interesting to find that *Capella Bursa-Pastoris* is "common everywhere" about Cardiff; for the present writer noticed its absence or great rarity along the coast from Swansea to St. David's in 1882; and interesting to learn from M. Joret that *Zostera nana* is not found in Normandy, for it is abundant on the neighbouring coasts of Jersey. Mr. Wallace's *Island Life* has shown, once for all, the importance of securing a careful register of all native forms of life, and we welcome enquirers who will go about the work as conscientiously as Mr. Storrie. But he has also done something for philologists, in giving the Welsh names for his species; and he has added a diagnosis of the plants, i.e., a means of identifying the flowers which a collector may have found.

CORRESPONDENCE.

MR. A. SIDGWICK'S EDITION OF THE
"EUMENIDES."

Oxford: Oct. 31, 1887.

Mr. Paley has written a letter to the ACADEMY of last week, in which he makes

certain complaints of my edition of Aeschylus *Eumenides*. I am exceedingly sorry that Mr. Paley, whose eminence as an English scholar and student of Aeschylus is undisputed, should consider that he has cause for complaint against me. I can only say I had no intention to give such cause.

If Mr. Paley's letter be read attentively, it will be seen that he brings really three complaints against me:

(1) That I have adopted his text, notes, and references without sufficient acknowledgment.

(2) That in other places I have differed from him.

(3) That by so differing I have tried to conceal my appropriation of his work.

To (3) I do not think it necessary to reply. It is an imputation of a very grave kind, which is not true, and for which there is and can be no evidence. I feel sure that Mr. Paley will, on reflection, regret having made it.

With respect to (2) he quotes two instances where he objects to my "disparaging his well-considered criticisms of the text." This simply means that I do not accept his emendation and give very briefly my reasons. There is no "disparagement" here, save in the sense in which all divergence of view is disparagement. In his first instance, the passage itself is a well-known *crux* (*Eum.* 631), which has been very variously emended; and, so far as I know, no one has accepted Mr. Paley's view. In the second instance, what he really complains of is that I say the MS. reading $\tau\delta\ \mu\eta\ \gamma\epsilon\gamma\epsilon\theta\alpha\iota$ (which he defends) "must be wrong," and do not notice or reply to his defence of it. One cannot in a school edition reply to everything; and the MS. reading is rejected as corrupt by Pauw, Schütz, Wakefield, Schwenk, *Wallsauer*, Schultze, Kirchhoff, Meineke, Hartung, Dindorf, Hermann, Wecklein, and Linwood. I can find no recent editor who approves it, except Drake and he takes it differently, and calls Mr. Paley's version "harsh and improbable." Further Mr. Paley, no doubt unintentionally, by the turn of his phrase gives a misleading colour to my words. He says—"When an old hand editing is told by a much younger scholar that he must be wrong, he is apt to ask," &c. Now I do not say Mr. Paley must be wrong; I do not refer to him. I say the *manuscripts* must be wrong. One sees that Mr. Paley's sentence is considerably shorn of its effect if accurately rewritten as follows: "When an old hand editing, who is almost alone in defending the MS. reading, is told by a much younger scholar in agreement with most editors, that the MS. must be wrong . . ." The disrespect to the elder scholar disappears.

But it is (1) which he chiefly complains of that I have not enough acknowledged my obligations to him. My answer is, that Mr. Paley has greatly overstated these obligations; and that I believed, and still believe, that he has sufficiently acknowledged those that owe.

Mr. Paley says that my notes are "his own commentary in a new dress." I can only reply, that these words grievously misstate the facts. My edition may be of little value; but it represents honest study of Aeschylus, reading and weighing a vast mass of comment and suggestion, and the best that I could bring to thought or knowledge. Mr. Paley, at the very end of his letter, seems to have some feeling for this, for he says: "I would not willingly do the least injustice to the independent thought shown in this work"; but it is obvious, if I am Mr. Paley in a new dress, there is no independent thought. I owe much to other editors, as all must, and not least to Mr. Paley as the foremost English editor; but my edition is in no sense based on any other, still less on any other editor's notes in a new dress.

I have given, in the preface, the names

to six editions chiefly studied, among which Mr. Paley's is one. I selected these as the six to which I owe most; and the mention of their names was intended to acknowledge, and to be understood as acknowledging, the debt. In my commentary, moreover, my principle has been to quote the name of the editor whenever I was mentioning or adopting any view or information in any way original or important, or any references which were at all out of the way, often when it was a mere case of an editor's authority on a reading. Mr. Paley's name occurs thus twenty-seven times in my notes, although in eighteen of these cases his suggestion is not adopted. On the other hand, I have treated as common property, and needing no such mention, those views, comments, or references, which were obvious, which were to be found in ordinary books of reference, or were such as a writer would not wish to claim. Of course, one may err in drawing the line; and if I have erred, that is my error. But this is a bona fide slip, or mistake of judgment, and a very different thing from what Mr. Paley complains of.

Let me take his examples (which, I presume, are the strongest he can find) successively. 467. πράξας πανταχῇ. This cannot be translated otherwise than "however I fare"; and the *Antigone* reference is one which for years has been familiar to me, is given in Liddell and Scott under πανταχῇ, and is the only such instance given.

599. πέπεισθι. The Epic instances are obvious, and would occur to anyone. The Attic κίεραχθι is, I admit, an example both rarer and more in point. I may have erred in not acknowledging this. But it is not a grave omission; and I find Drake gives κέκλυθι, ἄνωχθι, κέεραχθι as examples, with no mention of Mr. Paley.

903. Mr. Paley objects to my quoting his references; but they are both in Liddell and Scott, and of course in the Tragic Indices, which every editor has always by him. As to the translation, I have adopted the one word "dishonourable": ἐπίσκοπα I render, I venture to think, more accurately.

697. περιτέλλουσι. The meanings are both in Liddell and Scott; and the comment is not only not taken from Mr. Paley, but is not in agreement with his note. He says the poet takes the middle part between Cimon and Pericles; I say, "Aeschylus protests against the despot who was no longer formidable) and anarchy: i.e., he recommends oligarchy under the usual pretext of moderation." This remark arose out of Aeschylus's τὸ μὴτ' ἄναρχον μῆτε δεσποτούμενον. I do not agree with Mr. Paley that the poet recommended a middle course between Cimon and Pericles. Cimon was not a despot.

Lastly, Mr. Paley says my text does not differ materially from his own, implying thereby that I have taken it from him. There is no shadow of foundation for this. My judgment may be worth very little; but I have carefully considered every difficulty, done my best to master all the suggestions, and come to the best conclusion I could, assigning every emendation to its author by name. How far my text, as a whole, agrees with Mr. Paley's I have no idea; but of the corrections of MSS. adopted in my edition, there are 174, and only four of these were suggested by Mr. Paley—only two of them really first proposed by him. In all four I have named Mr. Paley.

I think I am justified in saying that Mr. Paley's complaints are unreasonable, and that his description of my work as a "compilation" is not easy to distinguish from plagiarism, is untrue and unfair. And I am doubly sorry that such an attack should come from a scholar whom I, like other students of Aeschylus, have always regarded with gratitude and respect, and from whom I have learnt much.

A. SIDGWICK.

SCIENCE NOTES.

OWING to the serious illness of Dr. A. de Wateville, it will be impossible to publish Part 39 of *Brain* in October, and the indulgence of subscribers to the periodical is requested. It has been decided that instead of publishing Part 39 very much after its proper date, it will be best to issue Parts 39 and 40 together in January, 1888.

The Shell Collector's Handbook for the Field, by J. W. Williams, editor of the *Naturalist's Monthly*, a volume giving instructions as to the collecting and preserving of British land and freshwater shells, and describing the habitat of each, will be published immediately by Messrs. Roper and Drowley.

THE last part of the *Transactions* of the Edinburgh Geological Society well sustains the reputation of this body. It opens with the inaugural address, delivered at the beginning of last session, by Mr. Ralph Richardson. The subject of the address is the "Antiquity of Man"; and its special value lies in the care with which all discoveries of fossil mammals in Scotland are recorded, and the localities depicted on a map. Prof. Claypole has a paper on "The Lake Age in Ohio," which forms an interesting contribution to the history of the glacial period in America.

CAPT. DUTTON, of the U.S. Geological Survey, has published a valuable report on the Zuñi plateau, in Western New Mexico. The principal rocks are of cretaceous age, and occur in far-stretching horizontal beds; but in ascending to the plateau these give place to Jura-Triassic rocks, which in turn are underlain by palaeozoic strata, and finally by crystalline rocks—probably of Archaean age, which form the central mass. Numerous cones of Tertiary volcanoes occur to the north-east of the Zuñi mountains, the principal being Mount Taylor, 11,389 feet high.

WE have also received Nos. 34 to 39 of the *Bulletin* of the United States Geological Survey, containing, as usual, much interesting matter. Mr. Lester Ward presents a preliminary sketch, amply illustrated, of the flora of the Laramie group; Dr. C. A. White discusses the relation of the Laramie molluscan fauna to that of the succeeding freshwater eocene and other groups; Mr. Warren Upham describes the old beaches and deltas of the extinct Lake Agassiz, which in glacial times occupied the basin of the Red River of the North; Mr. Dillen gives a petrological description of the peridotite of Elliott Co., Kentucky; while Dr. Barns explains some original experiments on the subsidence of fine solid particles in liquids—a subject of much importance to geologists in connexion with sedimentation; and finally, this physicist, in conjunction with Dr. Strouhal, continues the discussion of the physical properties of the iron-carburets, upon which papers have appeared in the earlier *Bulletins*.

WE are requested to say, in contradiction of a statement that has appeared in a monthly scientific journal, that the author of the *Students' Guide to the Microscope* (Roper & Drowley), who is content to style himself "A Queckett Club-man," is not Mr. T. Charters White.

PROF. DITTMAR'S *Exercises in Quantitative Chemical Analysis*, which was reviewed in the *ACADEMY* of last week, was ascribed to a wrong publisher. It is published by Messrs. Williams & Norgate; the printers are Messrs. Hodge & Co., of Glasgow.

PHILOLOGY NOTES.

PROF. T. W. RHYS DAVIDS has now entered upon his duties as the new secretary to the

Royal Asiatic Society, in succession to Sir Frederic Goldsmid.

DR. HENRY SWEET is giving a course of public lectures this term at Oxford on "The Elements of Phonetics." The subject of the first lecture, delivered on Thursday of this week, was "The Objects and Methods of Phonetic Study; the Organs of Speech and the main Divisions of Speech-Sounds."

PROF. TERRIEN DE LACOUPERIE has reprinted from the *Journal* of the Royal Asiatic Society a paper entitled "Formosa Notes on MSS. Languages, and Races," which may be obtained from Mr. David Nutt. The occasion of the paper was to describe nine Formosan MSS.—written in an old Pepohwan dialect, with Roman characters of Dutch origin and (in some cases) a Chinese translation—which had been sent home by Mr. Colborne Baber. But Prof. de Lacouperie has taken the opportunity to compile an exhaustive monograph about the peoples and languages of Formosa; while incidentally he throws some light upon the sources of information open to the famous impostor of Queen Anne's time, Psalmanazar.

MEETINGS OF SOCIETIES.

BROWNING SOCIETY.—(Friday, October 28.)

DR. F. J. FURNIVALL, president, in the chair.—The chairman congratulated the members of the society on the opening of its seventh session; and, speaking of the now widespread results of its labours, alluded to the fact that in America its papers are read and valued wherever the study of Browning's poems is looked on as one of the sources of culture. After intimating that the society hoped to produce "A Blot in the Scutcheon," early next year, Miss Alma Murray and Mr. Farren having promised their help, Dr. Furnivall announced that Mr. Revell and Dr. Berdoe would read short papers on extracts from poems of their own choosing.—Mr. Revell then briefly referred to the remoteness of thought in Browning's best poems, his preference of the abiding and eternal to the transient, his want of sympathy with the activities of our day, with scientific methods and results—a want of sympathy amounting to antipathy, and disqualifying him for the title of scientific poet. He instanced and read the poems "Tray," and "Prologue to the Dramatic Idylls," as proving this. Turning from this, Mr. Revell read "Rabbi Ben Ezra," as one of the poet's very best, containing a theory of life, theistic, religious, and therefore optimistic. No nobler contribution has been made to the higher life of the day, and its distinctive note is individualism, egoism. When a man has done all, he must reckon with himself.—Dr. Berdoe prefaced his paper by saying that he had no idea what Mr. Revell was going to read when he choose as his own subjects some lines of "La Saisiaz," and of "Fifine at the Fair," as illustrating two phases of Browning's view of life—the first a future state of reward by development, the second, present reward in the conflict of life itself. From "Pauline" to his last poem, Browning preaches a clear, definite gospel—ill tends to good; no factor in our life can be spared consistently with our development; the prize is in the process. Every poem illustrates this. Browning never ignores the most apparently insignificant fact in his characters. This is the method of science—to insist on the value of the little, overlooked forces that are always changing the face of the world.—Dr. Furnivall expressed the thanks of the society to Mr. Revell and Dr. Berdoe; and some remarks on the question raised by the papers as to Browning's scientific position were offered by different members.

FINE ART.

My Autobiography and Reminiscences. By W. P. Frith, R.A. In 2 vols. (Bentley.)

WITH genuine modesty Mr. Frith says, "If I may presume to be known as an artist, it is

as the painter of large compositions"; and there is, therefore, some sort of consistency in his taking two good-sized volumes for the memories of an uneventful life. Not that his story is without interest—for no autobiography, if it be honest and genuine, can be uninteresting; but success came to him so early in his career, and in such abundant measure, that we do not have those contrasts of light and shadow which are needed to make up an effective picture. Mr. Frith is fully satisfied with the appreciation that has been bestowed upon his work as an artist, and we think he has every reason to feel so. We are also confident that the same public which has found pleasure in looking upon his pictures will derive no small amount of entertainment from his pleasant contribution to the literature of gossip.

Whatever may be the case with poets, painters (or, at any rate, Royal Academicians) are sometimes made. It does not appear that Frith evinced in his early youth any special aptitude for drawing. He copied, indeed, when he was eleven years old, a drawing of Morland's, which an admiring relative bought for sixpence; but he frankly confesses that the performance was a wretched one, and that it was the love of lucre and not of art that impelled him to further efforts in the same line. What he says upon the subject of "early promise" is thoroughly sensible, and, like every page in the book, displays such a modest estimate of his own professional worth that it makes one value his judgment all the more:

"I know very well that I never was, nor under any circumstances could have become, a great artist; but I am a very successful one, and my advice is often asked by anxious parents, who produce specimens of their children's work, and place me in the really awful position of a kind of destiny over the future of their sons or daughters. Let me advise all artists who may find themselves elected arbiters of the fate of others to be as dumb as the ancient oracle when difficulties were presented. Except in the rarest and most exceptional cases, judgment from early specimens is absolutely impossible."

The writer then goes on to specify what is required to make a successful artist. Long and severe study from antique statues and from life; close attendance at lectures dealing with perspective, anatomy, composition, and arrangement; an eye for colour; aptness in the choice of subjects, and a degree of industry which is at all times rare, and which, we may add, is seldom favoured by the habits of young Bohemia. For one who succeeds as Mr. Frith has done, a hundred fail; and, perhaps, oftenest fail from the lack of that faculty for taking infinite pains which does duty for genius. If Mr. Frith was born anything, he was born an auctioneer; and there were moments in his early career as an artist when he would have gladly exchanged the brush for the hammer. But he stuck manfully to the profession his father had chosen for him; and, when the first drudgery was over, felt an enjoyment in the exercise of his skill which has grown with the skill itself. He had the advantage of a good teacher in Henry Sass (among whose pupils were Millais, Edward Lear and Jacob Bell—better known as a patron than as a practiser of art), and probably derived as much benefit from the

severity of the master's criticisms as from his instructions in art. Premature success, as Mr. Frith admits, turns the heads of young artists; and "single-picture painters"—men whose one grand achievement has never been followed by another—are by no means unknown in the profession.

Like others, Frith had to undergo the usual trials to which the Academy subjects exhibitors. His first efforts were condemned to the Architecture Room, or to that gloomy limbo of disappointed artists, the Octagon Room; but he emerged triumphant, and got his place among the "liners," and, in due time, was elected an Associate. The latter honour does not seem to have been highly appreciated by its dispensers, however much it may have been coveted by aspirants. It gave Frith a place at the Royal Academy banquet, and an opportunity of hearing a criticism from the lips of the Duke of Wellington:

"The picture he was studying was called 'Rain, Steam, and Speed'—a rather eccentric representation of a train in full speed on the Great Western Railway. Unperceived, I watched the Duke's puzzled expression as he read the quotation from the 'Fallacies of Hope.' He then looked steadily at the picture, and with a muttered 'Ah, poetry!' walked on."

The "Fallacies of Hope" was the title of a MS poem attributed to Turner, and to the general public it was as enigmatical as most of that artist's later pictures. Frith's first large composition was that now known as "An Old English Merry Making." The date of its exhibition is not given, and it is difficult to discover it from the pages of the autobiography, where one jumps back from 1850 to 1848 in a perplexing manner. It has been engraved by William Holl, and, we are told, received the warmest praise from Turner, whose praise was not indiscriminately given. This was followed by a still more popular picture—the "Coming of Age," which was begun in September, 1848, and finished in April, 1849. It took the fancy of the people; and certainly deserved recognition, if only on account of the evident care bestowed upon its composition. The background—the Elizabethan mansion from which the young heir descends—is made up of studies from Haver Castle and Heslington Hall, and the costumes are the fruit of much research in the Print Room of the British Museum.

Mr. Frith's reputation was now fully established. He could always reckon upon a good place and a good price for his pictures, and could despise the critics. "Ramegate Sands" (which, with his usual candour, Mr. Frith tells us was described by a brother artist as "a piece of vulgar Cockney business, unworthy of being represented even in an illustrated paper") was sold for a thousand guineas to a dealer who, for a consideration, transferred his purchase to the Queen. It follows, as a matter of course, that the next big picture from Mr. Frith's studio—the "Derby Day"—commanded a still bigger sum, and that Mr. Frith had the pleasure of experiencing that "nothing succeeds like success." In justice to the artist, it should be borne in mind that his expenses are necessarily large. Mr. Frith never paints figures

except from living models (being in respect the opposite to Maclise), and the trouble of finding the right people and the cost of hiring them is considerable. Perhaps the most interesting parts of Mr. Frith's book are those in which he tells us the histories—sad and humorous—of the men and women who figure in his most popular paintings. We have no doubt they found in him a sympathetic hearer as well as a liberal patron.

Mr. Frith's pages are, like his picture crowded with folk of high and low degree. He talks about them in a simple, unaffected way and thus is consistent with himself when he pleads with the profession for a return to nature. He does not hold that eccentricity is a proof of genius or audacity an evidence of power. What he describes as "the *bizarre*, French impressionist style of painting recently introduced into this country" will, in his opinion, be disastrous to English art. His advice and his censure will, doubtless, be lightly esteemed by those who regard him as a mere photographer; but no one can read his autobiography without concluding that his popularity (whatever be its worth) is merited, and that this exercise of his pen will increase it.

CHARLES J. ROBINSON.

ART EXHIBITIONS.

M. VERESCHAGIN cannot be congratulated on the success of his attempt to paint realistically the horrors of war. Callot, with the point of a needle and a few square inches of copper, could produce more effect than the Russian artist with an acre of canvas. Such huge scenes as "The Road of the War-Prisoners"—a long stretch of white road with portions of human clothing appearing through the snow at intervals—and "The Conquered," in which a priest is offering prayers on a field of battle covered with dimly seen bodies of men, are poor pictures and uninteresting without the information given in the catalogue, and even then they add little to the "thrill" of the literary description. The scene in which Skobelev is congratulating his troops after the battle of Shipka is very ineffective, despite the heaps of dead in the foreground; and the Emperor in Russia and his staff witnessing the assault on Plevna is the dullest of records. We have often seen such subjects as hangings, and crucifixions, and dead bodies surrounded by birds of prey, treated in a terrible and revolting manner; but it has been left for M. Vereschagin to show us how unexciting such scenes can be when treated in a thoroughly commonplace manner. Pictures need not have any "subject" in a literary sense, but they must have a "subject" in the sense in which artists use the term, and these large pictures of M. Vereschagin are all very poor "subjects" in the latter sense. In these pictures what feeling he has for colour seems to desert him. To see him at his best we must look at his smaller pictures of the East, such as the "Entrance to the Tomb of the Kings," the "Tomb of the Kings," "Entrance to the Grotto of the Mount of Tentation" and "Solomon's Wall," or "The Mosque in Futteypore Sikri." These are considerable, but by no means extraordinary technical skill.

At Messrs. Dowdeswell's new gallery at New Bond Street there is a sunny collection of drawings by Mr. Charles Gregory, of "Summer-time on the South-coast, from Penzance." The country and the season are well suited to display Mr. Gregory's skill in painting vivid colours in sunlight. The ri

coloured rocks, the red houses, the gaily blossoming trees, the ripe cornfields, the flowery gardens, supply him with an endless source of bright material for his foregrounds; and he can be tender in his melting distances of sky and sea. Few artists give us such a bright and cheerful view of the world as Mr. Gregory, or are able to present so distinctly what they see, whether landscape or figure.

CORRESPONDENCE.

GOMME'S "ROMANO-BRITISH REMAINS."

London: Oct. 31, 1887.

In the compilation of my collection from the old *Gentleman's Magazine* I have had to examine 240 volumes of some 500 to 700 pages each, and then to arrange and sort my extracts. That here and there I may have omitted or misplaced an item belonging to any one of the various subjects is, as I have stated, only too probable. That anything of real importance has been thus left unprinted is, I am almost sure, not the case. But I have sought to guard against even the imperfections arising from what I have hitherto ventured to think were unavoidable causes by stating in the preface to one of the previous volumes my intention of printing in an addenda volume a list of errata, in which I include, of course, all omissions of any importance.

In the meantime Mr. Thompson Watkin, a specialist on Roman remains in Britain, comes down upon one section of the series and offhandedly pronounces it "useless." I have been a student of the Roman period of British history for some years, and would venture to state that the omissions from this volume will not affect its usefulness to my fellow students, and in this I am supported by the ACADEMY reviewer. But even taking Mr. Watkin's own ground of criticism, if my volume draws out from Mr. Haverfield a list of my omissions we shall then have a complete index of Roman remains as recorded in the *Gentleman's Magazine*; and when these omissions are printed in my addenda volume, the work will be complete. Surely such a result, if not in perfect form, can hardly deserve the epithet useless.

It is so easy for Mr. Watkin to condemn my work. It would have been more satisfactory to have aided it by letting me have his list some months ago. Other correspondents have been more generous.

More than one leading literary journal in noticing previous volumes have expressed a flattering concern that I was diverting my energies from more original work in undertaking this enormous labour; but hitherto I have felt that I was doing some service to literary students of various subjects. If I had any reason to think that Mr. Watkin's onslaught met with anything like general adhesion I have a simple remedy in stopping the work.

G. L. GOMME.

Lancing College: Nov. 1, 1887.

I do not wish to fill the columns of the ACADEMY with a discussion as to the exact extent of the omissions in Mr. Gomme's *Romano-British Remains*. I shall be content if those who use the book understand that it is, as an index, undoubtedly imperfect. This view, may I add, is consistent with gratitude to Mr. Gomme for having done a work suggested in the *Gentleman's Magazine* in 1753, but never yet carried out—the selection of a volume of antiquities from the magazine.

The mosaic found in 1733 and mentioned by Mr. Thompson Watkin (*G.M.*, 1733.436) is noticed also in *Read's Weekly Journal* (Saturday, August 18, 1733); but I have sought in vain for further information than that contained in the *Gentleman's Magazine*.

I should like, however, to take this opportunity of calling attention to some Gallic inscriptions quoted in the *Gentleman's Magazine* (1731.487) from the *Daily Courant* (November 18 and 23, 1731). The original article in the *Courant*—four columns long—is "a memoir of M. Vergile de la Bastide, a gentleman of Languedoc," and contains some inscriptions found on the road from Beaucaire to Nîmes—the ancient Via Domitia (not Aurelia or Aureliana). The inscriptions are:

(1) TI. CAESAR | DIVI AVG F. AVG | PONTIF. MAX. | TRIB. POT. XXI | REFOECIT ET | RESTITVIT | xiii. "A square figure 25½ inches by 18, 6 foot above ground."

(2) IMP . . . | DIVI F. AVG . . . | IMP XIII . . . "Of a round make, 24 inches diameter."

(3) TI CAE . . . "A square stone."

(4) The same as (1), but with XIII. for XIIII. at the end (misquoted in the *G.M.*).

(5) TI. CLAVDIVS | DRVSI F. CAESAR | AVG. GERMANICVS | PONTIF. MAX. TRIB | POT. COS. DESIGN | IMP II REFOECIT. "Round, 9 foot long, 24 inches diameter."

I have been unable to discover if these inscriptions have been republished before. They are not in Wilmanns or Orelli, but the first may be a complete version of one given by Herzog (*Gallia Narb.*, No. 630, p. 139). A sixth inscription quoted in the article is identical with Herzog, No. 632, though the situations are slightly different.

F. HAVERFIELD.

NOTES ON ART AND ARCHAEOLOGY.

READERS of the late Sir Gardner Wilkinson's *Manners and Customs of the Ancient Egyptians* may remember his frequent allusions to antiquities in his possession, and, possibly, may have wondered what has become of them. It is not generally known that twenty years ago he gave this important collection, together with his large collection of Greek, Etruscan, and Roman antiquities, to Harrow School. They have fared badly there, having been packed away in the library in a case that was not air-tight in front, and rested against a damp wall behind. But, last year, a museum was built at Harrow for the school, and the collections were removed thither. Since then the Egyptian antiquities have been catalogued by Mr. Wallis Budge, of the British Museum, and the rest by Mr. Cecil Torr; and these printed catalogues can now be obtained from Mr. Wilbee, the bookseller at Harrow. Moreover, at Mr. Torr's request, the governors of the school voted a sum of money to purchase one new case, and to make a beginning of the repairing and mounting of the antiquities; and under Mr. Budge's direction all the Egyptian antiquities have already been repaired, mounted, numbered, and arranged for exhibition. But a further vote of money will be needed before the whole collections can be placed in a satisfactory state. The museum is open on Sundays from 12 to 1, on week-days from 12 to 1 and from 2 to 4, and generally at other times on application to the custodian.

THE exhibitions to open next week include the winter exhibition in oil colours of the Dudley Gallery Imperial Art Society in the Egyptian Hall, Piccadilly; and an exhibition of pictures from the salon of this year in Mr. W. W. Dierken's Continental Gallery, in New Bond Street; a sporting and coaching exhibition in the Burlington Gallery, Old Bond Street; and a collection of porcelain, metal-work, woodcarving, &c., brought by Mr. Litchfield from Scandinavia, at 28 and 30 Hanway Street, Oxford Street.

Mrs. TIRARD (Miss Helen Beloe) will give

two courses of lectures to ladies at the British Museum. The first will be upon "Life in Ancient Egypt," on Tuesday next, November 8, and the two following Tuesdays, at 11.30 a.m. The second will be on "The Tombs and Temples of Ancient Egypt," on Friday next, November 11, and the five following Fridays, at 2.30 p.m. Each lecture will be illustrated by diagrams, and afterwards by a visit to the Egyptian galleries. Applications for tickets should be made to Miss C. Goldsmid, 3 Observatory Avenue, Kensington. Half the proceeds of the first course of lectures will be given to the Egypt Exploration Fund.

THE STAGE.

M. COQUELIN AT THE ROYALTY.

M. COQUELIN, the particular star—or comet, rather—of Mr. Mayer's company, has already been too active in changing his parts, too multiform in his appearances, for any weekly paper to keep pace with him. "Un Parisien" has been succeeded by "L'Ainé," "L'Ainé" by "Don César de Bazan," and now "Don César" gives place to "The Grengoire" of M. de Banville, and the "Juif Polonais" of Erckmann-Chatrian. The object of all these changes is not only the pecuniary one of ensuring a full house; it is likewise the artistic object of proving the range of the performer who, within the last few years, in France, has crossed successfully the wide territory of art that divides a consummate comedian from a successful comic actor. Still, even to the success of M. Coquelin—even to his range—there may be limits; and the very effort to show us the extent of the ground he can cover discloses, perhaps, the whereabouts of the ground he can hardly occupy. The truth is, M. Coquelin, like almost every other actor, small or great, would but criticism oftener have the temerity to declare it, is controlled by the nature of his physique. A man is controlled in this way less positively than a woman—"make-up" can conceal his identity more effectually—yet he, too, must, in his measure, confess the limitations which physique imposes. Now, "Un Parisien" is a piece which a little taxes M. Coquelin's powers—not in the least his intellectual and emotional resources (these are tried much more elsewhere), but his powers of lending the required grace to the body and bearing of the individual he impersonates. The "Parisien," it is true, is not a Frenchman of the very bluest blood. The horizon of such an one would not be bounded by the cafés of Paris; "ses terres" would occupy him as much as his hotel of the Rue de Grenelle or of the Rue St. Dominique St. Germain. Still, the "Parisien" is a cultivated gentleman in his way; his manner charming, his carriage elegant. And this M. Coquelin does not, perhaps, quite perfectly realise. Alive the actor is, of course, to all the piece's intellectual requirements—his eye bright and keen; his mouth wonderfully expressive; and what an admirable way of launching his sentences; of making every word tell!

There is room for stronger emotion, and there are much stronger situations in "L'Ainé." On the other hand the piece is less witty. M. Delair has his own qualities, but he cannot have the qualities of M. Gondinet. He is more of a realist—very likely; and he is a realist in a different world. M. Delair, we understand, has not been a pure man of letters, and in "L'Ainé" he has put something of the experience that is supposed to be gained in what is called "practical" life. In so far as this is done with truth it is greatly in accord with the modern fashion: any real experience being held to be of the nature of a "document"—to be remembered, docketed, put by for future reference. But the actual story of "L'Ainé"—a story not free from repulsiveness,

though no doubt faultless in intention—required no experience of industrial or “practical” life for its invention. It is too late to tell it in detail. Suffice it to say that in *M. Coquelin* plays the part of a genuine lover, who loves under the burden of vices which he finds it difficult to throw off. The heroine is under obligations to him. He even stirs her feelings considerably. She consents to “save” him—and a woman does not generally “save” a man unless she has a tolerably enthusiastic regard for him too. At last, however, he is to be saved not at the cost of her sacrifice. She marries a more youthful and more blameless person. *M. Coquelin* has very strong scenes—a great variety of action and feeling. He finds, perhaps, just adequate, but certainly only just adequate support from the company.

The actor's love of a character, not so much comic as picturesque, romantic—shall we say Bohemian?—is evidenced by the choice of at least one part in his further performances—those of *Don César de Bazan* and of *Gringoire*. *Frederick Lemaître* was the great impersonator of *Don César*. *M. Coquelin* is ambitious to be the inheritor of many mantles. A fragment—and not so small a fragment either—of *Frederick Lemaître* has undoubtedly fallen upon him. And in “*Gringoire*,” as in “*L'Ainé*,” the eminent comedian of our day has taken care to secure to himself a mantle of his own. It will be a long time, we hope, before he will desire to bequeath that to anyone. We await, with extreme interest, his performance of *Mathias* in “*The Bells*.”

MUSIC.

“DON GIOVANNI.”

MOZART'S “*Don Giovanni*” was first heard at Prague on October 29, 1787. A hundred years have passed by, but the opera still retains its popularity. Some works improve by age; but in operatic music there have been such marked changes, both in character and in form, since the time of Mozart, that all the operas produced by his contemporaries, *Hiller*, *Hasse*, *Haydn*, and even *Gluck*, have become antiquated. The operas of the last-named have alone survived, but are seldom heard. “*Don Giovanni*” bears, it is true, marks of the eighteenth century; but its melodies are so fascinating, its dramatic power is so great, that in performance these marks almost escape notice. The idea, then, of celebrating the centenary of so remarkable a work was natural. And the most natural way of doing it was to give a performance of the opera. At Prague, where, as stated, it was produced, at Vienna, at Berlin, and at Paris this was, in fact, done last week. But in London there was nothing of the kind. At the Crystal Palace, however, an attempt was made to honour the day. “*Don Giovanni*” was given, not on the stage, but on the concert platform. We readily grant that there may have been insuperable difficulties in the way of getting together an efficient company. But in that case it would surely have been better to abandon the scheme. When “*Parsifal*” was performed a few years ago at the Albert Hall, in concert form, the true friends of Wagner had cause for dissatisfaction. Yet, at any rate, there was the excuse that this was the only way in which the London musical public could hear the work; for it is not given to all to go to Baireuth. “*Don Giovanni*” has been heard over and over again in London; only last season *Mr. Harris* gave it with an excellent cast at Drury Lane. Any opera must lose off the stage; none more so than Mozart's masterpiece. Every movement of the actors is reflected in the music, and much of the latter goes for nothing apart from the play. A concert-room performance gives, not a partial, but a false idea of the work. And then, again, at the Crystal Palace the artists engaged to sing the solo parts

had, we believe, but little knowledge of the boards, and were, therefore, unable to enter thoroughly into the spirit of the music. We refrain from giving the full list of names. Let it suffice to say that *Miss A. Marriott*, as *Donna Anna*, sang in her best manner, and that *Mr. John Probert's* pleasing voice was heard to advantage in “*Dalla sua pace*.” There was, of course, no fault to find with *Mr. Manns* and his excellent band.

The programme-book was not all that could be desired. It might surely have contained some music notes after the usual style of analysis. But there were no remarks about the music, although many a skilful point or characteristic piece of orchestration might have been pointed out. There was a short article on “*Don Giovanni*” of an historical nature, a very bad English translation of the Italian libretto, and an article reprinted from *The Daily Telegraph*. Of the first and last we would say one word. In discussing Mozart's choice of subject, the writer of the former manages to drag in the “*Ring des Nibelungen*” and “*Tristan*,” to show that we are not better than our fathers in the matter of stage stories. He is free to think what he likes of modern books, but ought not to have accused *Siegfried* and *Tristan* of crimes which *Wagner*, at any rate, never laid to their charge. Of the other writer we would merely remark that to institute a comparison between two such different scenes as the “*Supper*” in “*Don Giovanni*” and the “*Dungeon*” in “*Fidelio*” is somewhat unreasonable. The writer maintains that the former transcends the latter.

J. S. SHEDLOCK.

OBITUARY.

SIR GEORGE MACFARREN.

SIR GEORGE ALEXANDER MACFARREN, who died last Monday, was for more than half a century a prominent figure in the musical world. He was born in 1813, entered the Royal Academy in 1829, became one of its professors in 1834, and was appointed principal in 1876. During a long life, he produced much in various departments of musical literature, and neither the terrible calamity of blindness nor advancing age was allowed to interfere with his activity. Among the operas which he wrote, “*Robin Hood*” may be named as perhaps the most successful. Of his oratorios—from “*St. John the Baptist*,” produced in 1873, to “*David*,” produced at Leeds in 1882—one must acknowledge the skill displayed, but on many a page there is labour rather than inspiration. Of his part-songs, the settings of *Shakspeare* are deservedly admired. Of his cantatas, the “*Lady of the Lake*,” brought out in Glasgow in 1877, is the most widely known. He is also to be mentioned as a writer of instrumental music; a few chamber works of his have been given at the Popular Concerts, and a Symphony in E minor at the Crystal Palace in 1883.

Sir George, however, who has long stood at the head of English musicians, and who has won the respect due to his talent both at home and abroad, will be remembered by posterity less for his contributions to musical art, than for his works on theory. He was a man of clear intellect, if not of eloquent pen; and his *Rudiments of Harmony* (published in 1860), and his *Six Lectures on Harmony* (1867), have obtained for him a prominent place among theorists. For fifty years he was an ardent advocate of the system of harmony propounded by his former friend, *Alfred Day*. It is only two years ago that *Day's* treatise was reprinted with valuable notes and an exceedingly interesting appendix by Sir George. In all matters relating to the *Day* theory, he has always been the one sole authority. The briefest notice of the labours

of this energetic man would be incomplete without a reference to him as the friend and adviser of the gifted *Sir Sterndale Bennett*. Besides his duties at the Royal Academy, he was also connected with Cambridge University as professor.

Sir George Macfarren was a strong conservative. His admiration for *Bach* and *Handel* and for *Mozart* and *Beethoven*, knew no bounds; but this reverence for the old masters, though perfectly legitimate and highly laudable in itself, became so strong as to prevent him from fully understanding the aims of some modern men of note. His conduct—especially with regard to *Wagner*—was marked by anything but a catholic spirit.

While it is our duty to point out what we consider the shortcomings of a public character, it is, at the same time, our privilege to record that Sir George Macfarren was ever actuated by the best motives, and that it was probably true love for his art which sometimes led him to speak in a harsh and unsympathetic way about men whose names stand high in the esteem of many accomplished musicians. Sir George Macfarren leaves behind him, to mourn his loss, his wife, *Lady Natalia Macfarren*, an accomplished musician and talented writer.

JENNY LIND.

WE regret to announce the death, after a long illness, of *Mdme. Lind-Goldschmidt*, the world-renowned vocalist. She was born at Stockholm in 1820, and first appeared in public in 1838. From that time until 1849 she sang at the opera houses of Germany and England with the most brilliant success. Everyone, as *Chorley* said, “went mad about the Swedish nightingale.” And, to quote the same writer, her inspired singing in *Mendelssohn's* “*Elijah*” in 1848 will “stamp her name in the Golden Book of singers.” In the same year she went to America, where she was engaged by *Barnum*. In 1852 she married the pianist and composer, *Mr. Otto Goldschmidt*. Since that time she has only sung occasionally at oratorios and concerts, so that the rising generation can only judge of her wonderful voice and vocalisation by the enthusiastic descriptions of many men famous in literature and art. *Mdme. Lind-Goldschmidt* took great interest in the Bach choir, assisting at the rehearsals, and appearing in the choir at the concerts.

MUSIC NOTES.

THE first concert of the Hackney Choral Association took place at Shoreditch Town Hall. The first London performance of *Mr. Prout's* new cantata, “*The Red Cross Knight*,” drew a large audience. As the work was noticed on the occasion of its production at Huddersfield, it will suffice to say that the solo parts were sustained by *Miss C. Leighton*, *Miss Hilda Wilson*, and *Messrs. Percy, Watkin Mills, and Pierpoint*; that the choir on the whole sang well; and that *Mr. Prout* was enthusiastically received both by choir and audience. The favourable verdict of the Huddersfield public has thus been fully endorsed by the members and friends of the Hackney Association.

MISS MATHILDE WURM gave a pianoforte recital at Prince's last Tuesday evening. The programme commenced with *Rubinstein's* showy sonata in D for piano and violoncello, in which the lady was ably supported by *Signor Piatii*. *Miss Wurm* also played with considerable taste and feeling *Schumann's* charming “*Papillons*,” and, with neat technique, *Beethoven's* C minor variations. Occasionally, however, in the loud passages, the tone was somewhat harsh. *Miss Sophie Löwe* was the vocalist. The concert was well attended.

SATURDAY, NOVEMBER 12, 1887.

No. 810, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscripts.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

Christianity, Islam, and the Negro Race. By E. W. Blyden. (Whittingham.)

DR. BLYDEN has given us a very interesting and remarkable volume. I say volume, and not book, as the work is a collection of articles and addresses written or delivered by the author at various times. From a literary point of view this is somewhat to be regretted, as it involves the repetition of the same sentiment and statements again and again, and produces a want of unity and orderly sequence. But it has also its advantages in impressing upon the reader the main facts and lessons which Dr. Blyden desires to convey.

Dr. Blyden "is of the purest Negro parentage," and was for some years Minister for the Liberian Republic in this country; consequently, what he has to tell us about Africa and the Negro ought to come with special weight. Two facts are more particularly brought into relief by him: first of all, that Islam is carrying on a vast and civilising propaganda in Nigritia; and, secondly, that if Central Africa is to be colonised it must be with civilised Negroes. From his insistence upon the last fact we may gather that Dr. Blyden is an enthusiastic advocate of the claims of Liberia; and the volume concludes with an eloquent appeal to the United States to restore to Africa the descendants of those who were torn from their homes in the days of the slave-trade. A country which has so largely benefited by the national crime of the past ought to make a national compensation for it in the present. The resources of Central Africa can never be brought into the markets of the world except through the help of the Negro. None but the Nigritian race has hitherto proved itself capable of withstanding the deadly climate of the country, or, at all events, of the coastlands, through which alone the interior can be approached. It is only in Africa, moreover, on his native soil, that the Negro can be expected to develop freely and naturally. Elsewhere he must be content to be an imitator of the white man, depressed by a feeling of inferiority, and subjected to alien conditions and an uncongenial climate. The solution of the African difficulty in America and of the European difficulty in Africa is alike, according to Dr. Blyden, to transplant to Africa the Negroes of America.

I confess that in this part of his argument Dr. Blyden's views do not seem to me to be quite clear. On the one hand, we are told that Nigritia must be civilised by Negroes who have come under the influence of European culture; on the other hand, this European culture is pronounced to be unsuited to the Negro, who usually imitates instead of

assimilating it, and the Negro is urged to develop, like the Mohammedan tribes of the interior, a culture and civilisation of his own. Does Dr. Blyden wish his brethren in Liberia to forsake the civilisation they have brought with them from America, and start from the level of the Foulah and Mandingo? If so, not only does his own practise contradict such a teaching, but also a good deal that he says in the volume before us. I suppose that what he really means is that, while absorbing all that is best in the civilisation of the foreigner, his countrymen should develop it in the way demanded by their racial characteristics and the climatic conditions that surround them. This is, no doubt, theoretically sound advice; but in these days of rapid intercommunication and democratic levelling it is advice that is extremely hard to put into practice, even in the case of populations which have behind them a long and cultured past.

The portion of Dr. Blyden's volume which deals with the relations of Islam to the Negro is that which will prove of most interest to readers who do not belong to the Negro race. Here he speaks with the authority of one who is a Negro himself, and who has had more experience both of the Christian white and of the Mohammedan black than almost anyone else. Islam, he points out, is advancing with such enormous strides in Africa, not because it appeals to the sensuous side of human nature, but because it is a great civilising power, whose adherents are religious enthusiasts, whose practice and teaching alike draw no distinction between the white man and the black, and whose creed is simple and clear. Mohammedanism appeals to the iconoclastic instincts of the Negro race. Its missionaries bring with them no pictures to enforce the lesson that "God is white and the devil is black." Wherever it goes the school and the language of the Korán go too. Arabic literature is widely read and studied, even boys learning with enthusiasm the school-tasks which open for them the road to heaven. It is true that the faith of Islam may at times be spread by the sword of the fanatic, and that the Arab slave-hunter may accompany the Arab missionary; but when once the Pagan defenders of a Falaba have been massacred, the survivors accept readily the gospel of Mohammed, which becomes among them a power for good. While Islam has advanced in Nigritia, as in Northern Africa, Christianity has receded. The Christian missionary cannot contend with the malaria of the climate; the dogmas he preaches have been moulded by Aryan minds, and find no response in the Negro breast; and the religion he professes is bound up with the memories of rum and slavery. It was a slavery, too, unlike that of Oriental lands, where the slave of to-day may be the master to-morrow; but a slavery exercised by that most cruel, because most unsympathetic, of masters, the Anglo-Saxon race. It is not surprising that Dr. Blyden's own sympathies are evidently enlisted on the side of a creed which places the convert on a footing of social equality with his teachers, and sees in the Negro Bilál one of its most honoured founders. If such is the feeling of an educated Christian like himself, we may understand how strong must be the attraction of Islam to the Pagans of the interior who

have never been affected by European modes of thought.

In reading Dr. Blyden's work it is difficult to realise that it is not written by a member of the English race. The style is pleasant and clear, and the author's command of language would be envied by many. The whole tone of thought and reasoning is English, and it is only when Dr. Blyden shows a possibly over-great sensitiveness to the references to the Negro in European literature that we are reminded of his parentage and nationality. There is one point, however, on which I hope that he will modify his statements in a future edition of his book. He has identified Africa too much with the Negro. The Egyptian is no more Nigritian than the Berber of the north or the Kaffir of the south; and the ethnologist must distinguish from the Negro the Nubian of to-day, the Ethiopian of the past. Doubtless, individual Egyptians and individual Nubians have from time to time intermarried with individual Negroes; but so, also, have individual Europeans. The racial types remain distinct. A. H. SAYCE.

Dreams to Sell. By May Kendall. (Longmans.)

It is not difficult to distinguish in the crowd of modern verses those which are marked by literary gift; and it requires no great boldness in the present democracy to predict for such as are so marked a considerable measure of popularity. Collectors, therefore, of early editions may like to have their attention drawn to this little volume of poems. We already knew, from *That Very Mab*, that Miss Kendall had no lack of wits, or of wit; but in that first book of hers there was too little order. To read it required effort. It was like following a will-o'-the-wisp through marshy country; and it was not given to everyone to reach the end. In the present volume the cleverness and the wit have more justice done them, owing to the restraints of verse. To give one example: how very much more satisfactory than many pages of invective is the one line about the pure botanist in "Education's Martyr":

"Primroses by the river's brim
Dioctyledons were to him,
And they were nothing more."

A critic once said of Mr. Lang that his poetry would outlive Mr. Browning's, because, though the latter was commonly credited with having thrown light upon modern problems, it was, in fact, Mr. Lang who had done so. "In his day the theory of Evolution was propounded, and Mr. Lang's ballade of Primitive Man shows how a gentleman took it." In the same way I hope we may prophesy a reasonable immortality for Miss Kendall's poetry; for this volume of hers certainly shows how the theory of evolution is "taken" by a lady. It is part of Miss Kendall's humour to make fun out of what is usually called evolution. The largest section of her book is the one headed "Science"; and this, together with that devoted to "The Church," contains all the humorous pieces. The reader will make his own choice among them. The ichthyosaurus is certain to be a favourite. Here may be quoted two fragments which seem to the present reviewer

typical of Miss Kendall's muse. One is from "Nirvana" (p. 26):

"They say each individual soul
Will in a general soul be blended,
And that the universal whole
Is certain to be something splendid."

The other is from "The Lower Life" (p. 24):

"As onward yet life's currents roll,
The gaining of a higher goal
Increases sorrow;
And what we win at its own cost
We win; and that we lose is lost,
Nor can we borrow.

"If we have freedom, we lose peace.
If self-renunciation, cease
To care for pleasure.
If we have truth—important prize!
We wholly must away with lies,
Or in a measure."

Of the dreams dreamed "in Church" the most attractive is that of the "Bluecoat Boy about the Squire's Daughter"; those called "Church Echoes," in the manner of Mr. Stevenson's baby poetry, are written, we venture to judge, from a too small induction of instances, for no vicar's daughters that we have ever come across would think as they are here made to think, or be regarded by the village children as they are here said to be regarded. Parsons have many foibles, which may easily be made amusing for the laity; but one must protest against the latest fashion in literature of all kinds, which is simply to caricature them.

But, besides these merry dreams, Miss Kendal has sad dreams to sell; and few dreams could be sadder than many of them. The buyer, we think, will find that for the most part they are sad, not for wantonness, which is the privilege of youth, but because they are about sad things. *Sunt lacrimae rerum.* The one we should buy first, if we had not already bought it as a merry dream, would be "The Legend of the Crossing Sweeper," a parody (in no profane sense, but as the word is used in the Moravian hymn-book) of Rossetti's "Blessed Damosel"; then, perhaps, next, "Insufficiency" and "Lost Souls," and "The Ship of Dreams and Ship of Death" and the "Ballad of the Cadger"—a very nightmare of a dream. And we must not forget "The Jester," the poem with which the book opens—a poem which has a sharper outline, and so makes a more permanent impression than some of the others. In style it is not unlike the early poems of Mr. Bridges. It may be quoted here:

"I AM THY POOL."

(*Moriturus Regem Salutat.*)

"SMILE ONCE MORE, my king, my friend!
Smile once more at me!
Let me only, to the end,
Your brave jester be.

"All the merriment I know
There's a hand arresting:
With an easy heart I'd go,
Could I leave my jesting.

"See, I'm just as strange and quaint,
And my mood's as wild.
Oh! why is your laughter faint?
Smile as once you smiled.

"Every smile I won from you
Was an instant's peace:
While the world's work you went through,
You had this release.

"What you gave me I know best,
I can never tell;
I had nothing but a jest,
Say I jested well.

"Smile once more, my king, my friend!
Smile once more at me;
Could I only to the end,
Your brave jester be."

Considering that this is a first book, it is wonderfully free from that emotion which is remembered poetry. Of course it is possible to trace influences, and it is interesting to do so. We learn something about an artist, from knowing who are his masters. Mr. Browning has not been without effect upon "The Last Performance" and "A True Knight" and one or two more; "Evensong" is a delightful little poem, but it could hardly have been written but for Miss Christina Rossetti; "A Board School Pastoral" is in the same way after Mr. Dobson, and a charming pastoral it is. It is a pleasure to find a new writer choosing such models as these, and putting good work into her poems; for it is far safer for the poet to forget that poetry is an inspiration than to forget that it is an art.

The volume is introduced by some graceful stanzas on the "marah-myrtle and marsh-asphodel" of the Northern muse, bearing a well-known signature; and the same initials are appended with Miss Kendall's to a poem which sets forth how in heaven we may meet Henry VIII. perhaps, but certainly not Cinderella. But who is responsible in that poem for the form "Goliath"—"M. K." or "A. L." or the printer? Or is it a solitary Miltonism? In conclusion, while thanking Miss Kendall for her book, we may express the assurance that she will have more dreams to sell before long, and we shall hope to be then among the buyers.

H. C. BERCHING.

England under the Angevin Kings. By Kate Norgate. In 2 vols. (Macmillan.)

STARTING with a sketch of England under Henry I., and introducing, as tributary streams, accounts of the "Beginnings of Anjou," and of the relations between Anjou and Blois, and Anjou and Normandy, Miss Norgate leads her readers down the river of time as far as what she terms the "Fall of the Angevins." By this, it appears, we are to understand the day at the end of the year 1205 on which John sailed back to England, leaving as lost the fair realms beyond seas which his fathers had won and had ruled.

Certainly these volumes form a faithful analysis of all the chronicles bearing on the period; and, when we consider the sheer bulk of the materials, it is not surprising that the work should have needed, as Miss Norgate intimates, the labour of eleven years. Only those who have wrestled with what the late Dr. Giles was pleased to call his editions of the correspondence of John of Salisbury, Gilbert Foliot, and Peter of Blois can have the smallest idea of the difficulties and pitfalls which a single editor can, if he chooses, place in the way of a student—and Miss Norgate has had to cope with many editors. There are perhaps not three or four men living who have read the *Metalogicus* and the *Polyoraticus* of the first-named author; there are fewer who have added to that lugubrious task the perusal of the lively, but lengthy, writings of Gerald de Barri, and have thrown in the weighty chronicles of William of Malmesbury, Henry of Huntingdon, William of Newburgh, Gervase of

Canterbury, Roger Hoveden, Robert of Torigni, and Benedict of Peterborough together with the lucubrations of thirty or forty minor writers in England, France, and Germany.

If, after stating this, it is necessary for me to add that the results of all this honest toil appear scarcely more than readable, even to an enthusiastic student of the period, I do not do so without feeling how sad it is that patience in the worker so often begets impatience in the reader.

The task Miss Norgate set herself needed to be carried out by a partnership. Had she been able to associate with herself another lady of slightly diverse abilities the result might have been a brilliant success. Had she been content to set aside her task, completed so far as it now stands, while finding health and courage for another three years of toil in a somewhat different direction, she would have returned to her MS. with a new power of revision, and a store of facts fresh from unworked mines.

It is sufficiently clear that, like her adviser, Dr. Freeman, she is not capable of reading charters and other ancient MSS.; and yet until many associations like the Pipe Roll Society have completed their labours, it will remain essential to the historian to be able to search cartularies and early records. Not only is this the case, but there is a second point of view gained by collating a MS. which is not obtainable by a student whose eyes never stray from printed texts. The sight, for example, of the original MS. of the later part of Robert of Torigni's chronicle is a revelation to a student who has relied on the work even of such faithful editors as Bethmann and Delisle. He sees at a glance the amusingly lax method of compilation, and the genially hopeful manner in which the busy abbot has left such mere trifles as dates to the hand of the most light-hearted of monks. He thenceforward reckons by a new scale of weights when valuing the chronological testimony of the chronicle.

The result of pursuing no paths but those which some at least have traversed before, and the mental effects of having so doubtfully valuable a possession as a band of revised "masters," are disappointingly obvious in these volumes. Not only does Miss Norgate present us with no new views, but she passionately rejects the humblest offers of new light. We thus get, as regards the main subject, the old story, though we are bound to say that here and there occur clever solutions of isolated difficulties. In historical questions professors of the orthodox school are at present in almost as absurd a position on the one hand as wild theorists are on the other. The patient toil of a multitude of workers among records at home and abroad is disintegrating the old foundations; and we must firmly reply "Not yet" to all who ask us to accept aught but a provisional creed.

The reign of Stephen, for example, is left by Miss Norgate almost as completely without illumination and illustration as it is by her "masters." Of topographical inquiries she has certainly seen the advantage, because Dr. Freeman happily had done so before her; but it is by tracing genealogies and by noting the distribution of the possessions of great nobles, by search for signs of legal and

fiscal machinery, and, above all, by criticism of charters that the fullest light will ultimately come. Some day, perhaps, a worker will uncover a treasure in the Vatican library or in the archives—the register of Anselm, or even Lanfranc, lurking under a blundered title; but till then we must labour at what we have.

Miss Norgate has honestly obtained all facts at first hand. Upon that she must be warmly congratulated; but she is too prone to trust such men as Becket's biographers, and she should have submitted her proof-sheets to some competent antiquary, as well as to some careful student of the period. She might thus have avoided little errors which mar these really creditable volumes. Orthographical innovations like "feudataries," and statements like that on p. 283, where Robert of Gloucester is called the "eldest son" of Henry I., may be smiled at; but to quote Robert of Torigni and the *eighth book* of "William of Jumièges" in the same notes—i. 270, note 2, and 374, note 1—as separate authorities, suggests insufficient critical acquaintance with materials. Miss Norgate should also learn that a pole with a hook at the end has enabled many a clown to drag a knight from his horse. Her idea that young Henry of Scotland (i. 302) rode so close to a hostile castle that he was lifted bodily from his steed by a hook and rope, and was thus almost drawn up into the fortress, is very comical.

Her contempt for numismatics is well illustrated by her reiteration of the assertion that Stephen debased his coinage; but she need not have turned so completely against her most trusted authorities as she does by saying, on p. 369 of her first volume, that Henry Fitz Empress became Duke of Normandy in 1148. On faith of the story of Foliot's consecration she sets aside Huntingdon, Gervase, and Newburgh, who place the event in 1151; and, in the second place, she ignores Robert of Torigni, who gives the clearest possible account of the matter, and says that it occurred in 1150—seemingly late in the year. Had she known of the Salisbury charter, dated in 1149, in which Henry calls himself *ducis Normannorum filius*, she would not have treated the business in so high-handed a fashion, for she would have seen that the author of the *Historia Pontificalis*, writing after 1161, was merely deceived by his memory when he slipped in the words *qui modo rex est*, and thus transferred to Henry a narrative which assuredly relates to his father.

What Miss Norgate can mean by including the Earl of Northampton among those who in 1140 were "simply watching the political tide," it is hard to imagine. Charters alone would suggest the idea that Earl Simon was a most devoted adherent of the king; but when we see Stephen, about Easter, 1142, dismiss his army at York and lie sick for many weeks at Northampton, we believe that there was real friendship between the earl and his master.

The account of Henry II. in these volumes is just what might have been feared from what has been said above. Miss Norgate adopts the absurdly high estimate of this monarch which one of her masters has endeavoured to force upon his readers. Some day a writer will be found daring enough to

assert that Becket, Richard de Luci, Ranulph de Glanville, and Thomas Bruno were the brains of the government, and the true sources of all that is admirable in the reign. Some day the amazing ineptitudes of the hero of the Toulouse *fiasco* will be portrayed in their true colours. Then, perhaps, due laurels will rest on the heroes of Fornham St. Geneviève and Alnwick, who saved England in 1173-4, and among them on the author of the treatise *De Legibus Angliæ*.

But we must not quarrel too seriously with Miss Norgate for not being a lawyer, or for following the lead of personal friends. Her volumes will form a necessary part of every historical library.

RICHARD HOWLETT.

The Anglo-Indian Codes. Edited by Whitley Stokes. Vol. I. Substantive Law. (Oxford: Clarendon Press.)

WHEN the Praetor's Edict in imperial Rome came to be modified and tempered by the broader principles of the *Jus Gentium*—the ancient common law being thus equitably adapted to the requirements of extended conquest, and the wants of new citizens—there were laid the foundations of a dominion which has outlived the life of nations and the decay of material empire. The *Jus Honorarium*, sprung from the union of the *Jus Civile* and the *Jus Gentium*, at this moment forms no inconsiderable portion of the legal codes of many countries in modern Europe, while its influence is discoverable in the existing system of almost every civilised nation. So it may well happen that the work of law reform which England is carrying on in the largest of her foreign dependencies will not only react to the bearing of good fruit at home, but will exercise a powerful and beneficial influence on the destinies of future nations that will arise and exist when the British Empire shall have yielded to the universal law of decline and decay. This reflection has been strongly forced upon us by an examination of Mr. Whitley Stokes's first volume of *The Anglo-Indian Codes*.

Most persons who take any interest in such matters are aware that the work of codification has been carried on, now for many years, in India. The duty of providing for this vast country good and suitable laws, and a proper system of administering them, was recognised from the time of our first acquisition of territorial sovereignty. In 1793 a code of Regulations was enacted by the Government of the East India Company for Bengal. Similar codes followed for Madras and Bombay. During the forty years from 1793 to 1833 a large number of new or amending Regulations were passed, as experience supplied information of the wants and the requirements of the many and different races which inhabit the extensive territories known under the single geographical designation of "India."

In 1833, when the Company lost its commercial monopoly, but was allowed to retain for a time the government of the country in trust for the Crown, provision was made for the appointment of commissioners, who should inquire fully into the jurisdictions, powers, and rules of the then existing courts of justice, and into the forms of judicial pro-

cedure, and into the nature and operation of all laws, civil or criminal, written or customary, in force in any part of the country, and to which any of the inhabitants, Europeans or others, were subject. Successive commissions laboured at the task thus undertaken. It was not, however, intended that the code or codes should be mere digests of existing usages and regulations. They were, further, to comprise all the reforms which the commissioners thought to be desirable. And here we discern what has been meant by "codification" in India—not merely the reduction to form, shape, and system of existing laws, which were manifold and different, often diverse, contradictory and inconsistent with the great principles of the *Jus Gentium*—but the amendment of what had been found injurious in practice; the supplementing of what was logically incomplete; the substitution of sound principle consistent with the experience of civilised humanity for what was unsound with reference to the same standard. During the progress of the work three rules of guidance were laid down:—first, that as little change as possible be made in the substance of existing law; secondly, that no additions be made to that law which are not necessary or clearly expedient; and, thirdly, that interference with contracts fairly made and usages long established is *prima facie* undesirable. Opinions have differed as to how far in particular cases these principles have been adhered to or departed from; and occasionally the legal element in the Indian Legislature has been charged with providing measures which were either not required by, or were repugnant to, the native community. The value of such criticisms depended, of course, on the knowledge and experience of those by whom they were made; and fortunately they were, as a rule, made in *bona fide* honesty, not for the purposes of political strategy. Whenever, and by whomsoever, made, they were calmly considered, and the decision, whether accepting or rejecting them, was impartially made. We will not say it was always right; but we believe that it has been so in the great majority of instances; and legislative wisdom cannot be expected to be infallible in India any more than in England.

The criminal law was first taken in hand; and the Penal Code, enacted in 1861—twenty-six years ago—was the first instalment of labours the importance of which it is scarcely possible to overrate. During the years that followed other portions of law were codified and enacted by the Indian Legislature. Mr. Whitley Stokes's first volume contains the codes, or bodies, of substantive law which have been so treated; and it comprises the Penal Code, the Succession Act, the General Clauses Act, the Contract Act, the Negotiable Instruments Act, the Transfer of Property Act, the Trusts Act, the Easements Act, and the Specific Relief Act. The next volume is to contain the codes relating to adjective law, or procedure.

In the volume now before us Mr. Stokes has not only collected these codes or enacted portions of substantive law; but he has also, in a general introduction to the work and in a special introduction to each code, supplied a vast amount of information, useful, if not

necessary, to a complete understanding of the text of the law. He has further, in footnotes to the sections of each Act, given numerous explanations and references to decided cases of the English and Indian courts, the value of which will be appreciated in a high degree by judges, magistrates, and legal practitioners engaged in administering these codes. Not only to these, but to the student and to all interested in jurisprudence, we can recommend this volume, every page of which shows the labour of a skilled master.

It has often been said that the most able and distinguished of our Indian administrators are unknown—sometimes even by name—to the British public. We may not therefore be giving useless information when we mention that Mr. Whitley Stokes was for many years Secretary to the Government of India in the Legislative Department, and for five years before his retirement held the office of Legal Member of Council. It therefore fell to him to draft many, and pass through the legislature some, of the codes which he has now edited. In language similar to that which has been used of the Earl of Chatham, it may therefore be said that to this work of one so pre-eminently engaged in these concerns, *quorum pars magna fuit*, we cannot but look for lights of no ordinary character.

C. D. FIELD.

Russia Political and Social. By L. Tikhomirov. Translated from the French by Edward Aveling. In 2 vols. (Sonnen-schein.)

STEPNIAK has given to the English public a series of volumes graphically describing the revolutionary movement in Russia, its organisation and methods, and the measures towards its repression adopted by the government. These volumes have been of the greatest service in helping us to understand the country, and especially to get at a knowledge of what is called Nihilism. But a complete description of the various forces that go to make up society, and an analysis of the attitude of the government towards each of these, was wanting. This M. Tikhomirov has supplied. In the present book, students of Russia will better be able to understand the reason of her industrial stagnation, and of the dissatisfaction that is felt by all classes with the government. But it is to be regretted that the language in which this information is clothed is not so lucid and readable as might have been desired. This, however, is not the fault of M. Tikhomirov; it is the misfortune of his translator, of whom better things were to be expected.

M. Tikhomirov's ambition was to supersede the exhaustive work of M. Leroi Beaulieu; but in this he has scarcely succeeded. He has certainly corrected many of the mistakes to which his French predecessor, as a foreigner, was liable; but he is not so minute, nor so thorough. For him generalities suffice, and he is often content to lay down his *ipse dixit* where M. Leroi Beaulieu laboured to give facts and references; and if some of those were not to be trusted, that was clearly not M. Beaulieu's fault.

In the first volume M. Tikhomirov gives a short review of the ethnographical distribution

of the people; and here, at the very outset, he disappoints us. At the present moment the question of the Germans in Russia is of the greatest interest. The Russification of the Baltic Provinces under M. Michel de Kapoustine forms a subject worthy of a chapter to itself. But the whole of this important subject is treated in a very unsatisfactory manner; and yet the influence of German thought, German enterprise, and German officials and agriculturists has been of the greatest significance. The mere fact alone that most of the large estates were managed by German agents for upwards of a generation, that most of the professors at universities were at one time, not long distant, either Germans themselves, or educated in Germany, and that even now the majority of the industrial enterprises in the country are in the hands of Germans, shows the enormous influence of the Teutonic race to Russia. When we add to this that most of the commercial business is still carried on by Germans, and that in the days of Alexander II. the principal officials of the higher class were recruited from the Baltic Provinces, we feel that one short chapter on the Germans is barely adequate. From the days when Rurik—himself a Scandinavian adventurer—was invited by the Russians to rule over them because disorder reigned in their midst, and their enemies were too strong for them, to the time when Gen. Todleben twice saved his country—at Sevastopol and at Plevna—the Teutons may almost be said to have been the natural leaders of the Russians. That these Russians are now determined to emancipate themselves from this Teutonic yoke involves a great national uprising. It means the successful propaganda of Pan Slavism, until at length we see a Pan Slavist emperor ruling a united Pan Slavist country, by the aid of a Pan Slavist press. When the dreams of Pan Slavism are borne in mind, this fact becomes of enormous importance; and it explains the changes that the revolutionary movement has been obliged to undergo to bring it into sympathy with the people.

But M. Tikhomirov is himself a member of the revolutionary party, and has therefore but little sympathy for aught else. The chapters dealing with the condition of the agricultural classes, the treatment of peasants by the government, the condition of education and the cruel tyranny exercised over the students at universities are most luminous. A very interesting chapter is that in which the relations of the professors to the students are dwelt on, and the difficult position of the former is explained. But here, also, an omission is made by which the professors do not gain. M. Tikhomirov forgets to point out that all aspirants to an academical course in Russia used at one time to be sent to Paris or to some German university. At these centres of learning and freethought Russian scholars were imbued with Western ideas and encouraged to discuss the wildest theories; but the moment they again set foot on Russian soil they felt the yoke of autocratic rule, and their dissatisfaction was proportionate to the extent of the change. That the professors became either advanced liberals or the most reactionary of toadies was the inevitable result. Debarred from giving scope to their

political views, they were compelled to conceal them behind theories of art, philosophy, literary criticism, schools of philology, &c. This is one reason why every university has become a breeding ground for revolutionists; for every branch of science was treated from a controversial point of view, and it was here that students received their political bias. If the revolutionary movement succeeds, much of the glory of the victory will belong to the professors, who have nobly taught their pupils to believe fearlessly in the ultimate triumph of liberal ideas.

M. Tikhomirov is anxious to show that the revolutionary party is not Nihilist in the sense in which that word is commonly understood. Indeed, he accuses Tourguéniev of saddling the party with that nickname; and he states besides that this great student of Russian life did not know what Nihilism really meant, and described what did not exist. Here M. Tikhomirov is clearly wrong. Tourguéniev's Nihilists are studied from life, and most of them are actual portraits. I myself have met in Russia men that might have sat for Bazarov. That the Russian revolutionary party is a Nihilist party will appear conclusively when their tenets are recapitulated. They are materialists (or monists, to use an English scientific phrase); they are communists so far as land is concerned, and socialists as to industries; and their views of marriage are similar to those of Shelley; woman is placed on an equality with man, and class distinctions are abolished; they believe in no existing institution. What wonder that old-fashioned people should call men with such views Nihilists? If the revolutionary party, for the purposes of their propaganda, have found it advisable to drop for the present these controversial matters, and to confine themselves to more purely political agitation, this does not alter the fact that they are social reformers as well.

I have dwelt at some length on the omissions of M. Tikhomirov because I believe his book, on the whole, to be most accurate. It will give English readers a new insight into Russian questions, and will probably have a great influence in forming public opinion. As a text book on Russia it is perhaps the best available. It abounds with instructive suggestions, of which I can quote only one. Speaking of the artificial development of manufactures, the author blames the government for neglecting agriculture, which must be the staple industry of the country for years to come, in favour of the manufactures which cannot compete against foreign wares even in their own country. No one who is studying Russia should omit to read this book, and no one will regret having done so.

E. A. BRAYLEY HODGETTS.

NEW NOVELS.

Raphael Ben Isaac: a Tale of A.D. 20. By John Bradshaw. In 2 vols. (Sampson Low.)

Her Two Millions: a Story of a Fortune. By William Westall. In 3 vols. (Ward & Downey.)

Her Brother's Keeper. By Mrs. J. K. Spender. In 3 vols. (Spencer Blackett.)

A False Position. By G. M. Robins. In 3 vols. (Bentley.)

Gabrielle; or, *Worth the Winning.* By Mrs. John Bradshaw. (W. H. Allen.)

Sukie's Boy. By Sarah Tytler. With four illustrations. (Hodder & Stoughton.)

Daphne's Decision; or, *Which shall it be?* A Story for Children. By Emma Marshall. (Nisbet.)

Lucy Carter: a Love-story of Middle-Class Life. By Thos. L. Junior. (Sonnenschein.)

It is evident that Mr. Bradshaw has brought to bear upon his subject not only the results of a course of somewhat unusual study, but also a genuine acquaintance with the actual scenery and topography of that part of Palestine in which the action is laid. As a consequence, the background of the story, so to speak, is eminently picturesque, and shows a keen appreciation of nature; while the course of the plot gives scope for some vivid studies both of Jewish life in the early years of the Christian era, and of the Greek civilisation which distinguished the population of such cities as Caesarea, in which place a large part of the action takes place. In fact, the author has had a narrow escape of writing a satisfactory quasi-historical romance; and, even as it is, much of the contents may be read with pleasure. But there is a sense of want of continuity, and the book is rather a series of episodes than a consistent narrative; also we feel the history to be incomplete. Did the hero, after all his many doubtings and searches after truth, rest content to reconcile himself with the synagogue, and settle down in the faith of his forefathers? If not, his restoration to his father's arms can only have been illusory. But perhaps after all he returned to the tents of Aretas, married the pretty Reumah, and turned Sabaeen. A young man of so flaccid a spiritual temperament might find little difficulty in reconciling himself to one more system, at any rate for a time. The story is that of a young Jew of good family, living at Capernaum, who, disgusted with the casuistry and empty formalism of his Pharisee instructors, and revolted by Sadducean atheism, sets about to find a more excellent way. At last, moved by his natural tenderness of heart, he breaks the Sabbath to aid a fellow-creature, is denounced by a jealous rival for the affections of the fair Mariamne, and cast out from the congregation. Upon this, fleeing to Caesarea, he is soon drawn into the vortex of Greek dissipation; but, being ruined by a sudden reverse of fortune, and hearing at the same time of his half-forgotten love, he flees to the wilderness in a fit of remorse, becomes herdsman to the Nabathean Aretas, and at last returns to his own folk, only just in time to close the eyes of his mistress. As has been said, there are passages worth reading. The scene in the amphitheatre, where Pilate's wife saves the Jews, is good; so is the pantomime of Adonis—although this might have been worked up as to detail—and there is some power in the shipwreck of the *Ulysses*. Mariamne, the heroine, is rather colourless; and there is much improbability in her asserted prescience as to the true nature of the Messiah's advent. True, the author attempts to account for this

by supernatural means; but the visions are feeble, and remind one irresistibly of the old days at the Polytechnic, and the dissolving views with explanatory chorus. The other characters, excepting the bandit Zadok, are mere shadows.

The search for a long-lost heir to untold wealth cannot be called a new subject in fiction; but Mr. Westall has contrived to make the theme as exciting and full of interest as if we had never met with it before. And this chiefly because his hero and heroine are so natural, such fine types of humanity, and appeal so strongly to the reader's sympathies, both in triumph and trial. Vera Hardy, the young girl upon whom untold wealth unexpectedly devolves, is the only child of an English enthusiast who, marrying an Italian girl, takes up the cause of her nation, enlists under Garibaldi, and gets killed in the course of the first three chapters, leaving his little daughter to the care of her *bonnes*, with papers proving her identity, and strict injunctions that she is at once to be taken to her grandfather in England. When the action is resumed, after a lapse of ten years, the child has disappeared, old Hardy the millionaire is dead; and we are transported to a small Yorkshire town to be introduced to all his poor relations, who are preparing, under the direction of Lawyer Ferret, to put in their claim for the property. Their meeting in the tavern, over which "Saintly Sam" presides, is almost Hogarthian in description, as is the subsequent taproom gathering, in which the quidnuncs of Calder are described with a dry humour almost above praise—witness Bob Rogers the plasterer, who beat his tipsy wife not for running away, but for coming back again. Here we are first introduced to the hero, Arthur Balmaine, editor of the local paper, and as true a gentleman by nature as by birth and breeding, notwithstanding his poverty. Arthur is on the eve of starting for Geneva to take a berth on the *Helvetic News*; and a friendly lawyer's clerk proposes to him that he should try and hunt up the missing heiress, with an eye, of course, to mutual pecuniary advantage. While rejecting any idea of reward, he accepts the mission, partly from a sense of chivalry, and partly from curiosity. So we are transported to Geneva. And now come in some very clever, if rather cynical, sketches of journalistic life. The staff of editors and contributors under Mr. Gibson's sway, as well as that lazy gentleman himself, and the two slightly unscrupulous proprietors, are well drawn, but we cannot but think somewhat too caustically. Corfe, the well-born *vaurien*, is the best study. Be it understood that he is not a good-natured vagabond, but a thoroughly heartless and cold-blooded scoundrel, with no other object in view but his own advancement. To further this lofty end he murders his wife—a poor loving girl—by pushing her down a *moulin* on the Mer de Glace, so that he may be free to marry the heiress, whom he has by this time discovered in her Swiss retreat. Here, it may be remarked that the author seems, in the course of his plot, to have changed his mind. His reference to the story in "Our Mountains" points to some idea of bringing Esther forward at the last to confront her would-be assassin. If we are right, the change of front was for the better, as the

villain is left to fill up the measure of his enormities, and to die like the hound he was at the hands of his fellow-rebels. We do not propose to describe the intricacies of the plot. Suffice it to say that Arthur's search was at last crowned with success, and that, in the long run, right triumphed all down the line. Arthur and Vera are capably drawn; and not the least admirable of the portraits is that of the amiable old visionary, M. Senarcens, who was always looking forward to a kind of socialistic millennium. There is real pathos in the good man's awakening to the truth, when he finds the realisation of all his fine theories in the stern fact of Paris under the Commune. At the last, we leave the hero and heroine full of sublime schemes for the amelioration of their kind by the means of co-operative stores, and so forth. Far be it from us to sneer at any well-meant endeavours to raise the physical and moral condition of the poor; but, unluckily, it is open to question whether they would have dealt at the said stores as soon as they found that they were cheap and did not give credit, any more than they would have taken in a newspaper which refused them their literary garbage. By-the-bye, it is worth noting that Vera, when she first comes into her fortune, is represented as undertaking a course of "alumming." Are we to have a cycle of novels in which the heroine goes through this phase of moral dram-drinking?

A physiological and psychological problem which has of late years started into prominence is the doctrine of heredity—that is to say, the transmission of moral tendencies from one generation to another, and, more particularly, from parents to their immediate children. It has struck us more than once that all those who uphold this theory—for which there is undoubtedly much to be said—insist almost exclusively upon the transmission of *evil* qualities. There seems to be no idea that this finer mental faculties, for instance, are likely to be inherited; and, as a matter of fact, how often does a man of genius, or even a talented man, bequeath his powers to his offspring? Without entering into the sombre question whether this is to be considered as evidence of the innate depravity of the human race, we may state that Mrs. Spender's very interesting and readable novel turns mainly upon this theory, as exemplified in the person of Raymond Campion, the weak son of a gifted but dissipated father. The lad is left by a rather venomous and revengeful old grandmother in the moral custody of his sister Ursula, whom old Mrs. Maclurcan—the very embodiment of all the worst features in the Scots character—has left as her heiress. It must be allowed that Miss Campion had, to speak in homely phrase, her hands full, but she showed herself nobly equal to the occasion. It is no exaggeration to say that Ursula is as fine a study of a good and noble woman as has appeared in fiction of late years—*tant soi peu Bohémienne* by reason of her bringing up, yet with all the delicate purity that a man associates with the idea of his mother and sisters; impatient of cut-and-dried conventionities, and the thousand and one commandments of Mrs. Grundy—withal a most gracious gentlewoman; a sceptic—by no fault of her own, poor girl—yet always striving after the highest truth, and really carrying out Chris-

tian doctrines more fully than many smug professors. She is an entirely good and loveable woman, whom nobody but a good and loveable woman could have presented. Her experiences as mistress of St. Agatha's Priory are humorous in the highest degree, because there is just the necessary touch of pathos in the conceit. Raymond is less successful as a dramatic sketch—not because he is badly drawn, but because his utter want of moral stamina removes him to so great an extent from our sympathy. One would have been so sorry for the wretched boy, and done all in one's power for him, but what heart-breaking work it would have been! Here we must pause to remark that his university career is described as one would have expected a lady to describe it. Oxford must have altered sorely for the worse of late years, if such a scene as that of Harding's wine could be possible in any known college. There is considerable knowledge of human nature shown in the episode where Raymond joins the Salvation Army—is that also to become a factor in the fictional problem?—and equally true is his revulsion at the essential sham and vulgarity of the whole business, and his frantic lapse into debauchery. The house was swept and garnished, and the natural consequence ensued. Mrs. Spender seems to be a strong believer in mesmerism, and we are not disposed to quarrel with her therefor. Some of her most ingenious and telling situations are brought about through the intervention of Phillotti, who was, probably, a queer mixture of truth and quackery. One of the best figures is that of Fielding, the man of high mental endowments, who devotes himself to the service of his fellow men at the East End of London—not merely playing at charity, but practising charity in its truest sense. The book is a good one throughout, and has the charm of ending happily.

That it is a rather risky experiment to contract a loveless marriage as a matter of reciprocal convenience is a proposition which few would be disposed to deny. However, this was the arrangement made by Lady May Errol, and, ostensibly, by Mr. Fleetwood; and the consequences narrowly escaped being disastrous. We say "ostensibly" advisedly; because there is some evidence that the middle-aged lawyer was really in love with his pretty wife, in spite of his cold exterior, in which case one wonders why on earth he could not tell her so like an honest man. He speaks of his marriage as being "an experiment"; but we fail to see in what the experiment can have consisted, unless it were to see how nearly he could crush the life out of a young high-spirited girl without breaking her heart. Possibly the author meant to imply that Edred Fleetwood, having lost faith in the sex through Kate Gravenor's treachery, wanted to discover the converse of Lady Clare's inquiry—viz., whether there was any truth in woman; but for our own part we do not admire moral vivisection, and think that he came off much better than he deserved. We are not condemning the book. In many respects it is a good one. The style is good, and even elegant, the characters are natural and well individualised, and the love story, both of May and of Zoe, is interesting throughout, while there are some shrewd

remarks in the course of the text, without a suspicion of preaching. But the one grave blemish is the absurd point upon which the whole plot turns—viz., May's denial to her husband of her previous acquaintance with his nephew Guy. Why should she tell a lie about it? Why should either of them want to keep it secret? There was neither sin nor shame in the fact that he had proposed to her and she had refused him—her motives for so doing have nothing to do with the question—and she no longer even fancied herself in love with him. One might have supposed that the bond of secrecy was entered into upon Zoe's account, only that Guy had no idea of her hopeless passion for himself—so it is quite unintelligible. Making allowance for this, there is little but praise to be given to the book. Mr. Robins can write with genuine power and pathos—witness the scene in the railway carriage where the ice is broken for the first time, Guy and May's adventure at Braithdale Rocks, or, best of all, Cyprian Holt's death.

Mrs. John Bradshaw has written a simple and pretty story, which will recommend itself to people who can enjoy something else besides sensation. It is merely the record of a young and lonely girl's life. For, although Gabrielle is a foundling, the mystery connected with her birth is a mere *secret de Polichinelle* from a very early stage of the action; and the interest is derived simply from one's sympathy with her troubles and love story, and from some rather clever character studies among the other actors in the little comedy. The eccentric, selfish Miss Evans is particularly good, and her outspoken nephew, Gwyn Eliot, almost equally so. *Gabrielle* is decidedly worth reading.

Miss Tytler gives her readers one of those homely, simple stories which no one writes better. There is a wealth of quiet pathos in the portraiture of Sukie Cope, the plain, loving-hearted old maid, always prone to consider others before herself, and spending her life from youth to age for her family, most of the members of which took her self-sacrifice as very much a matter of course. Naturally the main point in the story, as foreshadowed in the title, is her adoption of the runaway scapegrace brother's child, in whose ultimate well-being her love finds its reward. The tale is, as might be expected, of a semi-religious character; but there is not, on the whole, a superabundance of moralising, and there is a good deal of individuality in the several characters—notably in that of old Miles, the conceited, pragmatist, yet worthy head of the little household.

Daphne's Decision is described as a "story for children"; and, doubtless, there are many families in which the tale will be considered the ideal thing to put into the hands of young people—although, judging from our own experience, we should say that *Robinson Crusoe* or the *Water-babies* would be both better for them and more to their taste. It is simply an account of the way in which a disagreeable, over-indulged child was brought to mend her ways. Daphne is sufficiently odious, and her cousins rather more than sufficiently angelic; and there is a slight attempt at sensation in the running down of the yacht, which practically comes to nothing. It is rather

absurd to mix up assumed names of places with real ones; and fancy a gentleman in the present day travelling about the country with a "trunk"!

It is not the pleasantest of tasks to have to wade through such a book as Mr. Junior's. He calls it "a love-story of middle-class life," and it is as dull and tedious as lower middle-class life generally is. The heroine is an objectionable young person of infidel tendencies, but beautiful of course, who, thinking that the world is out of joint, sets to work to set it right by what used to be familiarly called, a year or two ago, "alumming"; that is to say, she goes to live at the East End of London, and to assist in the management of a *crèche*, under the superintendence of a very Low Church parson, who promptly falls in love with her, much to the disgust of his acidulated maiden sister. However, Lucy has bestowed her heart upon a model young doctor, Harry Burr, who turns out to be her stepfather's illegitimate son, and whom she ultimately marries—about as unpleasant a situation as could well be imagined. Previous to this, the stepfather in question has, for no conceivable reason, blown out his brains on the Underground Railway. It can hardly have been from remorse, as he had managed to live pretty comfortably for a good many years after Polly Nye's disappearance. There is a good deal of irrelevant matter in the book, notably a puff for the Salvation Army, and a superabundance of quasi-religious talk. As for the creed of Mr. Francois, the parson, it is about as hideous a travesty of Christianity as could well be imagined. The style of the book leaves almost everything to be desired. Some idea of it may be formed from the fact that good, vulgar Mrs. Killick, the knacker's widow, is invariably spoken of as "the lady."

B. MONTGOMERIE RANKING.

GIFT-BOOKS.

Johnny Nut and the Golden Goose. Done into English by Andrew Lang. From the French of Charles Daulin. Illustrated by Am. Lynen. (Longmans.) Some three years ago Mr. Lang "curbed his liberal hand, subservient proudly" to tell a fairy story to fit a set of charming pictures by an artist whom he described in an introductory ballad as "Dicky Doyle." He has here chosen—out of his unrivalled storehouse of folklore—a Flemish variant of Grimm's "Golden Goose"; and we may be sure that the humour of the original has not suffered in the process of adaptation. The illustrations, we conjecture, have been drawn for this particular edition. They show sound draughtsmanship, a bright fancy, and the genuine illustrator's gift of expanding mere allusions in the text. But we cannot rank them with the immortal creations of "Dicky Doyle's" pencil. The book has been produced in a form so luxurious that we may not predict for it a wide popularity.

MR. LANG has likewise found time to write a characteristic preface to a reprint of the metrical version of "Beauty and the Beast," which has been commonly attributed—though with little authority—to Charles Lamb. This reprint, which is published by Messrs. Field & Tuer, differs from that issued a year or two ago in not being confined to a prohibitively small number of copies, and also in giving fresh engravings of the original copper-plates. Our grandfathers, after all, were not so badly off

in the matter of illustrated books for the young.

The Clipper of the Clouds. By Jules Verne. Illustrated. (Sampson Low.) As it is impossible to find anything new to say about the wonder-books which M. Jules Verne produces with such regularity, we are satisfied with the reflexion that he stands in no need of advertisement. Even to those who do not read the *Boys' Own Paper*, the title of his latest book will sufficiently reveal the subject—adventures in what he styles an "aeronef." In rapidity of incident and vivacity of dialogue, the master-hand shows no sign of weakness; while the pictures, by the usual French artist, seem to us rather better than before. Despite the many rivals whom he has himself taught, M. Jules Verne still deservedly maintains his hold upon a world-wide audience.

The Count of the Saxon Shore; or, The Villa in Vectis. A Tale of the Departure of the Romans from Britain. By Alfred J. Church, with the collaboration of Ruth Putnam. (Seeley.) This is an interesting and ingeniously constructed story, the scene of which is laid chiefly at the well-known Roman villa near Brading. One of the characters is the poet Claudian, whose compliance with a request to recite a passage from his own poems affords Prof. Church the opportunity of introducing a pleasing translation from the description of the tapestry in the *Raptus Proserpinae*. On the score of historical accuracy there is little fault to be found; but the author should not have called his young Saxon by the name of Cedric. The name is a pure figment, for one thing; but, even if it were genuine, the use of it in fiction is an infringement of Sir Walter's proprietary rights. We do not like the Turkey-rhubarb-coloured pictures.

Caedwalla; or, The Saxons in the Isle of Wight. A Tale. By Frank Cowper. (Seeley.) Curiously enough, the Brading Villa figures in this story as well as in the one just noticed. The period referred to is two centuries and a half later than that of Prof. Church's tale. Mr. Cowper seems to have tried to read up the history; but his attempts at local colour are rather grotesque. The word *ealdorman* is persistently spelt "eorldoman." Until we saw this we had no adequate idea of the amount of ignorance which it is possible to condense into a single word. On the first page a personage is introduced who answers to the nickname "Biggun," which had been bestowed on him (so the author explains in other words) because he was such a big 'un. Another of the characters is a gentleman called Stuff, whose name might, not quite inappropriately, be substituted for that of Caedwalla in the title-page. In the preface Mr. Cowper says that

"as the story has been written for young people, sentiment has been entirely omitted, the ideas of the author differing from those of other writers, who make their youthful heroes and heroines suffer the sentimental pangs of a Juliet and a Romeo"; a remark which is more commendable for its good sense than for its literary form. The illustrations are by the author himself, and though a trifle amateurish, have decided merits; and the cover is uncommonly pretty.

It is by no means an empty compliment to compare Mr. E. F. Moore's *Tre, Poi, and Pen*, (S.P.C.K.), with Mr. Stevenson's maritime stories. This is one of the best boys' books we have seen this year. The story of a manly Cornish youth's adventures is capitally told, and the incidents succeed each other in a probable manner. In the character of an old boy we read it from cover to cover with the greatest satisfaction; and a generation which knows nothing of naval warfare will read of Nelson's ships of war and victories with delight.

ONE of the most novel gift books of the season is Mrs. L. W. Champney's *The Bubbling Teapot; a Wonder Story*. (Blackie.) An intelligent girl is supposed to suffer a series of transformations into a girl of Brittany, of Spain, of Japan, of China, and other countries. This gives an opening to describe domestic life and manners in these lands of which Mrs. Champney has skillfully availed herself and carefully worked out in detail. The account of child life in Lapland is especially good. Of course, the machinery of the transformation is, as in other books of the kind, unreal and alien to real life; but, after this stumble on the threshold, the reader may peruse the successive transformations (which amount to twenty-four) with both interest and instruction. Mr. Satterlee's illustrations are meritorious and do illustrate the text. It is a pleasure to recommend so painstaking a book.

MRS. SAXBY (a name to be honoured in the Shetland Isles) has written another excellent volume, *The Lads of Lunda*. (Nisbet.) These lads are sons of the minister and the laird, who hunt otters, drive whales ashore, fight an eagle at her nest, and have wonderful boating escapes in the voes round the Isles of Lunda. Much that is fascinating to boys is to be found in the long Shetland winter and the wild fowl which frequent the shores; and Mrs. Saxby has made the best of her opportunity. Not many boys will read these pleasant pages without an intense longing to visit the Shetlands.

Harry Milvaine; or, The Wanderings of a Wayward Boy, by Dr. Gordon Stables (Hodder & Stoughton), is nicely printed and got up. The beginning of the story is somewhat childish, but the reader cannot complain of want of excitement in the succeeding chapters. There is a good account of chasing slave dhows off Zanzibar; and the adventures among savages, lions, and pythons in Central Africa would not discredit Mr. Rider Haggard's heroes. We are no admirers of Dr. Stables's style, and are puzzled how water rats can be said "to squeeze their eyes to clear their sight." "A governess to learn you your lessons" would not command our confidence. "To enter the Church again," it may be pointed out to the author is not synonymous with taking Holy orders, nor is the last book in the Bible called the "Revelations." While cordially agreeing, too, with him in his denunciation of the cruelties practised when killing young seals, "the tyranny that crushes the poor that the rich may live luxuriously" sounds vague and indefinite.

For the Temple: a Tale of the Fall of Jerusalem. By G. A. Henty. (Blackie.) This is the latest addition to Mr. Henty's now rather numerous series of stories based on historical events. Though not devoid of interest, the story lacks the fire and movement one might have anticipated from a recast of Josephus. But the book deserves commendation as a presentation of historical matter in a familiar and attractive form.

Aboard the Atalanta. By Henry Firth. (Blackie.) Bating the improbability of its main plot, this is a spirited story. The *Atalanta* is a blockade runner in the late American War, and it need not be added that the story is indebted to this circumstance for its most exciting and marvellous incidents. Boys with a seafaring spirit will devour it with avidity.

Miss Con; or, All those Girls. By Agnes Gibberne. (Nisbet.) We have here the somewhat ancient story of the inexperienced, but conscientious young lady, who goes as governess to a large family of children, and endures various persecutions and vexations, but emerges victorious over all trials, and successfully turns

from the error of their ways all the objectionable characters among her pupils. Miss Gibberne adds to the excitement by introducing a nursery governess who is bitterly jealous of the heroine; but this does not materially alter the plot, which the author has again contrived to make interesting. She can describe the separate members of an English family clearly, without confusing their characters, and she has the power of telling a story. *Miss Con* is, consequently, a pleasant and readable book. The heroine is, perhaps, just a shade too perfect; but the moral of her self-reliance and good sense is a very bracing one, which can do nothing but good to those for whom the book is written.

Kathleen. By Cecilia Selby Lowndes. (S.P.C.K.) The character of Kathleen Lennard in this story is carefully and sympathetically described, and her weak but affectionate father is well drawn. The life at the old house in the opening chapters interests us, and the style throughout is easy and spirited. But the story has absolutely no plot after Mr. Lennard's death. It goes on for the purpose, apparently, of showing how Kathleen's faults of pride and self-will are gradually cured; but the demonstration lacks the reality of the opening chapters, and the narrative becomes disconnected and episodic. The illustrations are good.

The Christmas Present. By A. Eubule-Evans. (S.P.C.K.) This pleasantly written story describes how two bachelors, on the verge of an abyss of selfishness and self-indulgence, are providentially saved by the unexpected present of a little girl of seven. A mild, but very genuine, humour adds to the interest of the happily conceived plot, and makes the book very readable. The tale is presumably for children, but the moral needs rather to be impressed upon uncles and guardians. The illustrations, by J. Nash, are of more than average merit.

The Old Violin; or, Charity Hope's Own Story, by E. C. Kenyon (Nisbet), is a story of trust that brings its reward in due time. The violin is stolen during a fire, and suspicion fastens on a foundling who has been kindly treated by its owner. Charity Hope, however, is firmly convinced of his innocence, and the event proves her right. The tone of the story is excellent.

MR. F. LANGBRIDGE has put together a powerful, but somewhat painful, story in *Rider's Leap* (Hatchards). It contains a good deal of revenge and fighting, chiefly with fists. Revenge is never a pleasant motive for a book; and it is possible, even in a story, to have too much of boxing.

Nell's Bondage. By the author of "Clary's Confirmation." (S.P.C.K.) This is a short story, interesting and well-written, suitable for elder girls in a Sunday-school. The "bondage" is the bondage of sin; and the author shows clearly that when Nell considers herself most free she is in reality fast bound by the fetters of falsehood. How the chain becomes loosened, and Nell recovers her true freedom and realises that only "the truth shall make you free," we learn gradually; and at the close of the book we leave her happily married.

Stories for Sunday Scholars. By the author of "Helpful Sam." (S.P.C.K.) These stories are decidedly above the average of such collections. They are brightly written, with the morals perhaps a little too much on the surface, but are sure to interest both boys and girls. The two best are "Daystar" and the "Word that could not be recalled"; the former being an exciting tale of Red Indians, and the latter a useful lesson on the duty of forgiveness. The illustrations are unusually good, and the binding pretty and attractive.

His Adopted Daughter. By Agnes Giberne. (Shaw.) This is a well-intended, and, on the whole, pleasingly told story of a foundling. The two chief characters in the book—George Rutherford and Joan Brooke—are interesting, and their relations are presented in a pathetic and natural manner. But we cannot say that the author has succeeded in depicting successfully the combination of manliness with religion which she has attempted in her portrait of George Rutherford.

A Steadfast Purpose, by Miss Sitwell (S.P.C.K.) seems to us considerably above the average of gift-books. It is a well-conceived and fairly-developed story intended to illustrate the motto on the title-page:

"They fail, and they alone, who have not striven." The tone of the book is decidedly strong and manly, and calculated to exercise a bracing effect on its readers.

The Goldmakers. By Esmé Stuart. (S.P.C.K.) The moral of this story is that the "goldmaking" of duty and unselfishness is in the long run more prosperous than that of greed and self-seeking. But the author might have insisted a little more strongly on the spiritual nature of the reward which most appropriately follows ethical and spiritual effort. That virtue and disinterestedness are recompensed with gold is unfortunately too exceptional in mundane matters to become a motive of general human conduct. The story is, however, interesting, and the incidents are natural.

For Half-a-crown, by the same author (National Society's Depository), derives its title from the sum paid for the heroine, the daughter of an Italian organ-grinder. The subsequent history of this strange investment in flesh and blood is well told, and the story abounds in both incident and pathos. We can conscientiously recommend the book.

Winning his Laurels, by F. M. Holmes (Nisbet), is emphatically a schoolboy's book, describing the trials of two brothers at St. Baglan's. The author manifests an intimate knowledge of boy-nature, as well as of the customs, usages, slang, &c., of our public schools. The hero of the book—and a true boy-hero he is—is Reggie Linburn, and the history of his "winning his laurels" is well told. The defect of such delineations is not unfrequently the evolving of a premature self-consciousness; but "Reggie" is wholly free from any such drawbacks. We can heartily commend the book. No worthier present could be made to a schoolboy.

Nellie Graham. By Ella Stone. (Nisbet.) The heroine of this story is termed both by the author and herself "a commonplace woman"; and the book seems intended to show what noble work may be effected by a young lady wholly destitute of personal beauty or strikingly mental superiority. The story is charged with variety and interest, and the character-sketching rises far above the level of ordinary story-books. The illustrations are, however, inferior.

If the editor of *Harper's Young People* (Sampson Low) would only contrive that the serial tales should be begun and completed in a volume, the yearly issue of that periodical would have a fair claim to be the best of all the "annuals" for boys and girls. The volume for 1887 includes one story without a beginning, and another without a conclusion; but even apart from the fiction, the amount of excellent matter which it contains is astonishing. The illustrations, perhaps, show a slight falling-off in quality when compared with those of former volumes; in all other respects this magazine seems to grow better every year.

NOTES AND NEWS.

MESSRS. CHAPMAN & HALL will issue, in a few days, their "Victoria Edition" of *The Pickwick Papers*, which they not unjustly claim to be the most popular book published during the Victorian era. The text has been taken from the latest edition revised by Dickens. The original drawings, together with some unpublished ones by Buss, Phiz, and Leech, have been reproduced in facsimile. The preface, by Mr. C. Plumtre Johnson, gives a short history of the work, derived from authentic materials, some of which have not hitherto been used. The edition will be limited to 2,000 copies.

THE new volume of the "Badminton Library," on *Athletics and Football*, to be published by Messrs. Longmans before the end of this month, will have an introduction by the Attorney-General, Sir Richard Webster. The illustrations are from drawings by Mr. Stanley Berkeley, and from instantaneous photographs.

M. RENAN'S *History of the People of Israel* is being translated into English by Mr. C. B. Pitman, and will be published shortly by Messrs. Chapman & Hall.

WE understand that Prof. Mahaffy's little book on *The Art of Conversation*, to be published next week by Messrs. Macmillan, is a serious attempt to analyse and explain the conditions of good talking, based somewhat upon the example of Aristotle's *Rhetoric*.

MR. SAMUEL BUTLER, in consequence of hospitality shown him at Varallo, has intermitted his philosophical work; and, with the beginning of the new year, he will send to press a book of which the title is *Ex Voto*, an Account of the Sacro Monte, or New Jerusalem at Varallo-Sesia.

DR. J. H. STODDART has been compelled by temporarily weak health to retire from the editorship of the *Glasgow Herald*, the duties of which post he has discharged with marked success for twelve years. He is succeeded by Mr. Charles Russell, who, during the same period, has been assistant editor. We understand that Dr. Stoddart, who has already published two volumes of poetry—*The Village Life* and *The Seven Sagas of Man*—intends to devote himself henceforth to literature.

MESSRS. SWAN SONNENSCHN & Co. will shortly publish the following three-volume volumes:—*Nadia*; or, *Out of the Beaten Track*, translated from the Russian of Olsheffsky by the Baroness Langenan, and dedicated by special permission to the Princess of Wales; and *Lost Identities*, by M. L. Tyler; also Mr. George Moore's *Confessions of a Young Man*, which has been running through *Time*.

UNDER the title of *The Islanders* Mr. Elliot Stock announces a poem, in ten cantos, founded on the Legend of Glaucus.

MR. SPENCER BLACKETT (successor to J. & R. Maxwell) will publish, on November 22, an English edition of *Le Figaro Illustré*.

WE learn from the *Australian Literary News* that Mr. Ernest Favenc is engaged upon a history of Australian exploration from the date of the first settlement, now just one hundred years ago. The work will be based, to a large extent, upon official documents at Sydney, Melbourne, and elsewhere, which have not before been published.

THE first meeting of the one hundred and thirty-fourth session of the Society of Arts will be held on Wednesday next, November 16, when the opening address will be delivered by Sir Douglas Galton, Chairman of the Council. Previous to Christmas there will be four ordinary meetings, in addition to the opening meeting. During the session there will be six courses of Cantor lectures:—"The Elements of

Architectural Design," by Mr. H. H. Statham; "Yeast, its Morphology and Culture," by Mr. A. Gordon Salomon; "The Modern Microscope" (being a continuation of the recent course on the "Microscope"), by Mr. John Mayall, Jun.; "Alloys," by Prof. W. Chandler Roberts-Austen; "Milk Supply and Butter and Cheese Making," by Mr. Richard Bannister; "The Decoration and Illustration of Books," by Mr. Walter Crane. Two juvenile lectures on "The Application of Electricity to Lighting and Working," by Mr. W. H. Preece, will be given during the Christmas holidays.

UNIVERSITY JOTTINGS.

MR. GEORGE GABRIELS STOKES, president of the Royal Society, and Leucasian professor of mathematics, has consented to come forward as a representative in Parliament for the University of Cambridge, to fill the vacancy caused by the death of the late A. J. B. Beresford-Hope. We quote from his address the following passages as being of general academical interest:

"With respect to the university, it has been found that a statute made by the late commissioners, of whom I was one, is likely to press very heavily upon the resources of the colleges. I believe that the statute was framed on the hypothesis that the agricultural depression which had then commenced was due to temporary causes; and as there seems to be no present prospect of substantial improvement, I think it reasonable that the severity of the pressure upon the colleges should be relaxed.

"Should you do me the honour of electing me, it will be my endeavour to reconcile as best may be my duties towards the university as one of its professors with those of your representative. The former would prevent me from giving that constant attendance in the House which might otherwise be expected; but when measures of importance were at stake, especially such as might affect the university, I should feel it to be my duty to be present."

MR. F. T. PALGRAVE, the professor of poetry at Oxford, will deliver a course of lectures on "The Renaissance Movement in English Poetry between Henry VIII. and Charles II.," beginning on Thursday next, November 11. Meanwhile, the statute for amalgamating his chair with the Merton professorship of English language and literature, is to come on for discussion in congregation on the previous Tuesday.

ON the recommendation of the special board for classics at Cambridge, a grant of £150 has been made from the Worts Travelling Scholars Fund to Mr. H. B. Smith, of Trinity College, for the purpose of archaeological research in Cyprus. It is understood that Dr. F. H. H. Guillemard, author of *The Cruise of the "Marchesa,"* will accompany Mr. Smith, and that Oxford will send a third member of the party. We may add that Prof. Sayce also intends to spend some portion of the coming winter in Cyprus.

THE general board of studies at Cambridge has approved Mr. A. W. Verrall, fellow of Trinity College, and editor of the *Medea*, for the degree of Doctor in Letters.

AT a meeting of the court of the Victoria University, held at Manchester last week, the application of the Yorkshire College, Leeds, to be admitted as a college of the university, was approved. The Yorkshire College was originally founded in 1874, and incorporated in its present form in 1878. It possesses a funded capital of about £150,000, of which £93,000 represents buildings, &c. It receives an annual grant of £1,500 from the Clothworkers's Company, while last year the students' fees yielded more than £6,000. The principal is Mr. N. Bodington, of Lincoln College, Oxford, who is also professor of classical literature and

philosophy. The professor of modern literature and history is Mr. Cyril Ransome.

MR. JOSEPH FOSTER, of 21, Boundary Road, N.W., has issued to subscribers the first volume of his *Alumni Oxonienses*, being an alphabetical list of the members of the university of Oxford between the years 1715 and 1886. The basis of the work is Col. Chester's famous transcript of the Matriculation Register from 1564 to 1869, a copy of which was acquired by Mr. Foster after Col. Chester's lamented death. For reasons which Mr. Foster does not state, he has commenced the present work from 1715, and not from 1564; but, on the other hand, he has continued it down to 1886. He has arranged all the names—with the single exception of the Prince of Wales—in alphabetical order. To the entries in the Matriculation Register he has added the degrees and (often) academical distinctions, and more especially the calls to the bar, elections to the House of Commons, and ecclesiastical preferments. For the present century he has taken the deaths of clergymen and their livings from the *Gentleman's Magazine*; while for persons still living he has added yet more copious notes of identification from his own unrivalled storehouse. This first volume goes down to the end of the letter D, and includes about 16,000 entries. Upon the extraordinary value of this great undertaking for biographical and genealogical purposes it is unnecessary to dwell. We must content ourselves with calling attention to the rapidity with which it has been passed through the press, and to the low price at which it is issued—one guinea a volume. A single criticism may be added. The Matriculation Register gives the place of birth; this, Mr. Foster—doubtless for the sake of conciseness—records as if it were the place of residence of the father, which is by no means necessarily the same thing.

"PROF. NAPIER," a correspondent writes, "is in no way discouraged by the classical-tutors' bias against his Modern Languages School. Time and the tide are with him, and are bound to overwhelm the reactionaries who oppose all reasonable innovations because they are new-fangled things. Education has so often been perverted, that it needs to be brought back to its true meaning and function. Every rational improvement is a 'scaregoose' (to use Dr. Garnett's admirable word) for a time, till the old-fashioned mind gets to see that no harm is in the novel idea."

ORIGINAL VERSE.

DESIDERIUM.

Is this the same heaven that I gaze upon?
It seems the sun hath emptied the whole sky,
Leaving the beautiful world so silently,
Without farewell, with all its glory flown.
The balm of the melodious breezes blown
From the pure hills, and thro' the evening dew
The shining of the sad, seraphic blue,
These linger with me yet, linger alone.
Is there no light but what heaven keeps so far?
Is it in vain, unhappy heart, to mourn?
Peace, peace. Night comes, and brings her lonely star,
Lonely as I, but not as I forlorn,
So tranquil even in its bright unrest,
Passionless Hesper in the perfect west.

R. L. BINYON.

OBITUARY.

IDRIS VYCHAN.

MANCHESTER has lost a notable citizen by the death of Mr. John Jones, who, while little known to the English public, was immensely popular with his Welsh compatriots under his bardic name of "Idris Vychan." He was

born at Dolgelly in 1825, and lived for a short time in London; but the last thirty years of his life were spent in Manchester, where he died on November 3, 1887. His Welsh essay on penillion singing gained a prize at the Eisteddfod of Rhuddlan in 1850. It is the classical work on this remarkable form of Celtic music and poetry, and was issued by the Cymmrodorion Society in 1884. At the Chester Eisteddfod of 1866 he gained the first prize for a History of Dolgelly, which has twice been published. Idris Vychan was present at most of the Eisteddfodau and similar gatherings, and gave an example of his skill as a penillion singer when the Prince of Wales and his family visited the London Eisteddfod. He was the author of several other archaeological essays. The Welsh people are wise in making as the ideal of their masses—and of their classes also, it may be hoped—something besides money. Idris Vychan was a shoemaker, as well as a musician and bard. On his grave he desired to have inscribed this verse of his own:

"Ce's ddigon o ogoniant—gan y bobl
A gwên byd a'i sorriant:
O fewn y bedd, y dŵn bant,
Mwy i Idris nis Medrant."

of which the general sense may be roughly given thus:

"I have had my fill of the people's praise,
Of sorrows and joys a plentiful store;
In the deep grave where content I am lying
These things will matter to Idris no more."

Idris Vychan is buried at Ardwick Cemetery; and his grave adjoins that of another distinguished Welshman, Ernest Jones, the Chartist.
W. E. A. A.

We have also to record the death of Mr. Alfred Domett, C.M.G., at one time premier of New Zealand, whose name will live in English literature—not, perhaps, by his own verses—but as the hero of Mr. Browning's grand poem, beginning "What's become of Waring?" He died in London, on November 2, in his seventy-seventh year.

MAGAZINES AND REVIEWS.

The best paper in the present number of the *Antiquary* is, to our thinking, the one on Yester Castle, contributed by Mr. Philip Champion de Crespigny. The history of this feudal stronghold is a very interesting one, and will be told some day, we trust, at full length, with the documents relating to it given in full. The life-history of a building may be made as interesting as the biography of a man. Mr. H. B. Wheatly contributes an article entitled "On the Date of the Suppression of the Letter S in French Orthography." This seems but a dull subject, but as treated by Mr. Wheatly it is not so. He tells us many facts regarding the changes which the French language has undergone that will be new to most of his readers. Mr. Stapleton continues his series of papers on Nottinghamshire crosses. Here he deals with those in the Hundred of Bassettlaw only. We much wish that his example were followed, and that a complete catalogue of English crosses were forthcoming. Every student of our old records knows that before the Reformation crosses were very common all over the land. Not only was there a cross in almost every churchyard—commonly on the south side—but they were to be found in the market-place, in the village green, and by the roadside. They are often mentioned as boundaries in charters and surveys. The memory of many crosses that have perished has been preserved to our own time by field-names, such as "White Cross." Mr. Brailsford's account of "Three Northumbrian Strongholds" seems accurate, but is too highly condensed to be of much value.

CORRESPONDENCE.

THE FIRST MAYOR OF LONDON.

London: Nov. 7, 1887.

I had occasion some months ago, in a paper bearing the above title (*Antiquary*, March, 1887, p. 107), to criticise the latest theories advanced by Mr. Loftie and others on the origin of Henry fitz "Ailwin." My present object is to call attention to the extreme obscurity which still surrounds a matter of so great interest and importance as the commencement of the mayoralty of London.

Almost all the statements on the subject can be traced to the well-known opening passage of the *Cronica Maiorum et Vicecomitum Londoniae*:

"Eodem anno [1189] factus est Henricus filius Eylwini de Londone-stane Maior Londoniorum; qui fuit primus Maior in civitate."

It is further held, on the same authority, that he held office for five and twenty years, though this is incompatible with the fact that he died, some say in 1212, and some in 1213. Mr. Loftie says that "he died before October, 1212," after "twenty-five years of office" ("Historic Towns": *London*, p. 55).

Now, on turning to independent record evidence, it is strange how few entries we find relating to the mayoralty of Henry, though their number has been largely increased by the appearance of Mr. Maxwell Lyte's most valuable Report on the archives of St. Paul's. I hope that this communication may elicit further references; but, in the meanwhile, it is now possible to divide those which I have as yet collected into distinct classes:—(1) Those in which his name appears as Henry fitz Ailwin simply; (2) those in which he is styled Mayor of London. It is important to observe that in the former class his name appears low down in any list of witnesses, while in the latter it figures at the head, or almost at the head, of the list. My contention is that these classes belong respectively to the periods before and after his elevation to the office of mayor.

To the former class belong the two documents of which Palgrave has appended facsimiles to his *Rotuli Curiae Regis*, a charter, temp. Henry II., among the Duchy of Lancaster Records (Box A, 163), and two of the St. Paul's records calendared by Mr. Lyte (App. to 9th Report Hist. MSS., I., 25, 26). To the latter belong five of those in Mr. Lyte's Calendar (*Ibid*, pp. 8, 10, 20, 22, 27), one charter in the British Museum, and two or three entries in the *Rotuli Curiae Regis*.

Mr. Loftie, with Mr. Lyte's Report before him, writes as follows:

"A deed among the archives of St. Paul's mentions 'Henry, Mayor of the City of London,' in 1193, and it is very probable that further examination will reveal an earlier date than this. It is, however, certain so far that the mayoralty was in existence four years after the received date of 1189. . . . The preponderance of authority in favour of the first year of Richard I. as the date of the establishment of a new form of government in London is very great; but, as the mayor does not appear upon the page of history before 1194. . . . it has been usual for the modern school of scientific historians to fix upon 1191 as the year, and the deposition of Longchamp as the occasion. The mayor was appointed one of the treasurers of Richard's ransom in 1194; but is mentioned, as we have seen, at least a year earlier in a document at St. Paul's" (pp. 39, 41).

Now I venture to think that this supposed earliest mention of the mayor originates in an error of Mr. Maxwell Lyte. He gives the document in question as "dated in the year in which William fitz Ysabel and William fitz Aluph were sheriffs [A.D. 1193]." But he will find that these are the names of the sheriffs for 6th Ric. I. (31st Report of Deputy-Keeper, p. 308), i.e., from September, 1194, to September, 1195. This then disposes of the date "1193." But, conversely, the first mention of the mayor on "the page of history," as Mr. Loftie terms it (i.e., Hoveden's Chronicle), belongs not, as he says, to 1194, but to April, 1193 (Reg. Hov. III., 212). This, therefore, "holds the field" as the earliest contemporary allusion to the existence of a Mayor of London.

As to the date to be assigned to the actual institution of the office, Mr. Loftie leans to the old one of 1189, though his "very great preponderance of authority" in its favour consists of nothing but the single chronicle from which I quoted at the outset. He holds that

"When Richard, in the beginning of his reign, showered charters on the English boroughs in order to obtain money for his great expedition, it is more than probable that London was not left out. The charter raising the portreeve to the rank of mayor, if there was such a charter, has been lost" (p. 39).

The same hypothesis of a "lost charter" was advanced with great confidence by Mr. Coote, who was convinced that the mayoralty originated in the grant of a *communa*, 1191. "This," as Mr. Loftie reminds us, is also "the opinion of Bishop Stubbs"; and he is good enough to add that, "until an earlier mention of Henry of London Stone as mayor has been found in a contemporary document, the bishop's view is entitled to a place in any book purporting to deal with London history" (p. 43).

The actual words of the Bishop of Chester are that "the mayoralty of London dates from the earliest years of Richard I., probably from the foundation of that *communa* which was confirmed on the occasion of William Longchamp's downfall" (*Select Charters*); and that, "immediately after the confirmation of the *communa*, we find Henry, the son of Alwyn, Mayor of London" (*Constitutional History*). Now this "confirmation" took place on October 10, 1191; and the fact would seem to have been overlooked that the "final concord" given (in facsimile *ut supra*) by Palgrave is dated November 30 (St. Andrew), 1191. To this, on many grounds, interesting document Henry fitz Ailwin is a witness, but not as mayor. And his name stands only twelfth among those of the lay-witnesses. Palgrave merely observes, "Henry fitz Ailwin is the mayor." But, if my canon be correct, he was not mayor at the time, and, consequently, the mayoralty does not date from the "confirmation" of the *communa*.

If this conclusion be accepted, we narrow down to about seventeen months the period within which the mayor makes his first appearance.

How long the first mayor continued to hold office is a point as difficult to decide positively as that of the date when he began. There would seem to be only one other reference to him as mayor in the St. Paul's archives of which the date (viz., 1204) is absolutely certain; but another is assigned by Mr. Lyte to "about 1197," and a third to "before A.D. 1222," meaning thereby, I presume, 1212. A date can, however, be fixed for the charter in the British Museum. In the official Calendar it is assigned by a singularly unlucky shot to the "eleventh century"; but the deed is known to me personally elsewhere, and belongs to 1197. The references to the Mayor of London in the *Rotuli Curiae Regis* are in 1194, 1198, and 1199. There are also record references to

Henry, Mayor of London, in the rolls of 3 John (1201-2), and to a Mayor of London in 1205, 1206, 1207, and 1212. Any further reference to Henry fitz Ailwin, of which the date can be determined, would be peculiarly welcome. Till they are forthcoming we have nothing but tradition to prove that Henry fitz Ailwin continued to hold office till his death in 1212 (Loftie) or 1213 (Stubbs).

J. H. ROUND.

INGULFUS REDIVIVUS.

London: Nov. 5, 1887.

Mr. Round complains that in my little book on *Domesday Book* "the authority of Ingulf is appealed to persistently throughout, without the suspicion of a doubt as to the genuineness of his supposed chronicle." Mr. Round has studied the bibliography of these things too closely to be unaware that I edited Ingulf's *Chronicle* from the unique MS. in the British Museum in 1883, and then discussed the question of its authenticity to some extent. The special passage to which he evidently refers, by mentioning "officials of the Public Record Office and of the British Museum," is an epitome by me of a paper read last year before the Domesday Book Commemoration by Mr. H. Hall of the Record Office, wherein he criticises, *inter alia*, the statements made by Ingulf, and rejects them, or most of them. In the few other places where Ingulf is mentioned in my book no theories are set forth as dependent on his chronicle. For example, in mentioning Ivo Tailleboise, I say: "In the Chronicle of Ingulf that chronicler gives a long and circumstantial account of his [Ivo's] quarrels with the abbey of Croyland" (p. 98). In another place I state that Ingulf says a certain person was alive in his day (p. 113), and so forth. I think I have referred five times in all to this "venerable imposture," as Mr. Round will have it called, and in no case does anything important turn on the reference.

But there is another aspect in Mr. Round's communication to the ACADEMY which does really seriously affect the character of his criticism. Last year this gentleman set himself vigorously to work to denounce the very man whose writings he is now seeking to use as a handle to criticise others. "Is Mr. Freeman accurate?" was the somewhat startling question Mr. Round imposed on himself to reply to in the shape of three separate articles printed in the *Antiquary*, and answered it trenchantly and circumstantially in the negative. If Mr. Freeman's inaccuracy in what he has written about some Domesday matters is so serious as to "render it needful that he should rewrite a portion of his work" (*Antiquary*, December 1886, p. 251), will Mr. Round undertake to say that Mr. Freeman is not also inaccurate in his views about Ingulf's credibility? I am sorry to say I know nothing of Dr. Stubbs's authorities, on which the passage quoted by Mr. Round is founded. Possibly it rests upon what Mr. Freeman has written. If so, then Birch, quoting the "venerable impostor," Ingulf, is paralleled by Dr. Stubbs and Mr. Round relying on the inaccurate Freeman; but as Freeman, notwithstanding his inaccuracy, may be quoted when you want to say something smart, therefore Ingulf may be quoted provided you do not rely too much on him, *q.e.d.*

WALTER DE GRAY BIRCH.

A HITTITE SYMBOL.

London: Nov. 7, 1887.

Though I am somewhat reluctant to trouble your readers with an additional communication on the subject which I discussed in the ACADEMY of August 13, I am almost compelled to do so by the appearance of Prof. Sayce's

letter under the heading "A Hittite Symbol" in last week's number. I am glad to hear that other seals have been found in Asia presenting points of analogy with the Yuzgat seal which the British Museum obtained last autumn, and with the seal which Mr. Chester more recently brought from Tarsus.

I may say that the "Hittite symbol" on the Tarsus seal has for a body a sort of oblong figure placed horizontally and some three or four times as long as it is high. The upper side is not a straight line, but has two depressions. From the centre of the lower side of this oblong figure proceeds a pair of divergent legs, which clearly terminate in turned-up toes, or "Hittite boots." Above an elevation in the centre of the upper side of the oblong is in one case the head, consisting of a circle with apparently aural appendages. In two other cases on the Tarsus seal, possibly in three, the head is capped, so as to be nearly covered, by a cap shaped as an equilateral triangle. My position is that this curious symbol is, in all probability, a modification of the equilateral triangle, which was regarded in the East as sacred and as representing the primordial principle of things. Modified as in this curious symbol, the primordial principle of human life or human nature may be intended. I was led to these conclusions after noticing that on a stele of Lilybaeum, which bears a Phoenician inscription, and which is represented in the *Corp. Inscr. Sem.* and by Perrot and Chipiez, the equilateral triangle appears as an object of worship, it having, moreover, at the apex a circular head with arms or a body projecting in both directions. That a somewhat similar modification of the equilateral triangle should have on the seal a sacred or mystic significance can scarcely seem wonderful. Moreover, there is the capping with the equilateral triangle to which I have adverted, and which, as it seems to me, points towards the view which I have indicated.* Certainly it connects the figure with the equilateral triangle.

Prof. Sayce observes that "the triangle is found not unfrequently in the Hittite inscriptions." Excluding the seals, and taking into account simply the equilateral triangle, I should say that it occurs very rarely. I do not recollect that it occurs more than once, but this instance is very significant and instructive. In the last line but one of the longest Hamath inscription there is a representation of the moon with the head of a cow upon and within it, denoting obviously Ashtoreth as a moon-goddess; and close beneath is the sacred triangle. This fact, while otherwise interesting, is important with regard to the origin and significance of the curious symbol now under discussion.

According to Prof. Sayce this symbol is "a

picture of the knotted girdle worn round the waist," as "will be obvious to any one" who will inspect certain figures in Perrot and Chipiez. I have examined these figures; and I fail to see that such a view of the matter is in any degree probable. There is a distant and superficial resemblance, no doubt, in some respects, but in others there is no approach to likeness. Moreover, in Prof. Sayce's view, the really important part of the girdle would be that which passes round the body, while the symbol would represent merely the knot and the loose ends—though, by the way, on the figures referred to in Perrot and Chipiez the ends appear to be not loose but connected or continuous. But to pass by other and, as it seems to me, insuperable difficulties, what could possibly be the meaning of a picture of a knotted girdle having a cap in the shape of an equilateral triangle put on it? Prof. Sayce speaks of the Hittite symbol as being a symbol of life, as though this had not been previously suggested on other, and, as I venture to think, much more probable grounds.* But that the same symbol should be at once a symbol of life and a mere "engraver's mark" used commonly by Hittite artists is not easy to understand. Certainly it is not an "engraver's mark" on the Tarsus seal.

I may add that it would be desirable that casts from the new seals at the Louvre should be sent to the British Museum for exhibition, if that has not been already done.

THOMAS TYLER.

EARLY HEBREW MSS. OF THE OLD TESTAMENT.

Oxford: Nov. 6, 1887.

At last we have Dr. Schiller-Szinessy's excursus on the famous Cambridge MS. of the Old Testament, dated as is believed A.D. 856. I doubt, however, if his arguments will be convincing. They are: (1) That if we compare with the Cambridge MS. the MS. in the possession of Dr. Robertson Smith, which is of a date certainly earlier than 1142 (has it a date, or is there a calendar or an entry of an owner of that date? Dr. Schiller-Szinessy's always writes kabbalistically) we shall be convinced that the date 856 for the former is the right one. Well, that may be the case, although I cannot see what comparison can do for two MSS. distant in date by 300 years. But supposing it to be the case, is Dr. Schiller-Szinessy prepared to pay the travelling expenses of somebody at Berlin, or even further off, in order to enlighten himself on the subject, even if we could suppose that Dr. R. Smith would freely allow the comparison of the two MSS.

Dr. Schiller-Szinessy alludes to himself as a born palaeographer (although twenty years ago, that is at the age of forty-five, he had seen no other MSS. except the scrolls of the Pentateuch and of Esther, which are used in the synagogues; but there were poets who began late in life, and as Dr. Schiller-Szinessy compares these to palaeographers, some of them also might spring up late in life), and as such he expects to be believed blindfold. Well, people will be wicked and incredulous. Indeed, "dullest intelligences," like those of the late Drs. Kennicott and Zuntz, Dr. W. Wright (who did not insert a specimen of the Cambridge "earliest Hebrew MS.," according to the born palaeographers, in his series of Oriental palaeography), Dr. Weekes, Dr. Steinschneider and myself ("who are supposed to be good bibliographers"—at all events, too much honour for me), do not believe in palaeographical inspiration, and think that the Cambridge MS. belongs to the beginning of the thirteenth century. One more expression is to be questioned in Dr. Schiller-

* See ACADEMY, August 13, and *Babylonian Record*, August, 1887.

Szinessy's short excursus. He says Sepharadic is by no means necessarily Spanish, then what does it mean in connection with Ashkenazic, which the Doctor uses for the German school of writing? Sepharad in rabbinical literature means Spain, and consequently Sepharadic means the Spanish school. A. NEUBAUER.

"MORT," "AMORT."

London: Oct. 31, 1887.

The expression "amort," as used formerly in Suffolk and Norfolk, is, I presume, one with "mort" in its signification, only used adjectively—meaning a dejected, unanimated look, akin to death. I have frequently heard my mother (an East-Anglian) say, to any friend who seemed sad or depressed, "You look all amort!" E. M. EDMONDS.

APPOINTMENTS FOR NEXT WEEK.

- MONDAY, Nov. 14, 8 p.m. Royal Academy: "Composition and Classification of Pigments," by Prof. A. H. Church.
8.30 p.m. Geographical: "Explorations in Siam," by Mr. J. M. Carthy.
- TUESDAY, Nov. 15, 8 p.m. Civil Engineers: "Accidents in Mines," II., by Sir F. A. Abel.
8.30 p.m. Zoological: "A List of the Reptiles and Batrachians collected by Mr. H. H. Johnston on the Rio del Rey, West Africa," by Mr. G. A. Boulenger; "Three Species of Shells from the Rio del Rey," by Mr. Edgar A. Smith; "Two small Collections of African Lepidoptera recently received from Mr. H. H. Johnston," by Mr. A. G. Butler; "A New Species of *Hyla* from Port Hamilton, Corea, living in the Society's Gardens," by Mr. G. A. Boulenger.
- WEDNESDAY, Nov. 16, 8 p.m. Society of Arts: Inaugural Address by the Chairman of the Council, Sir Douglas Galton.
- THURSDAY, Nov. 17, 8 p.m. Royal Academy: "Tests for the Genuineness and Purity of Pigments," by Prof. A. H. Church.
8 p.m. Linnean: "Certain Factors of Variation in Plants and Animals," by Mr. P. Geddes; "Copepoda of the Canaries," by Mr. T. O. Thompson.
8 p.m. Chemical: "Ballot for the Election of Fellows;" "The Halogen substituted Derivatives of Benzalalonic Acid," by Mr. O. M. Stuart.
8.30 p.m. Historical: "Hugh Elliott at Berlin, 1777," by Mr. Oscar Browning.
- FRIDAY, Nov. 18, 7.30 p.m. Civil Engineers: Students' Meeting, "Boiler Experiments and Fuel-Economy," by Mr. John Holliday.
8 p.m. Philological: "Neuter Stems in the Celtic Languages," by Mr. Whitley Stokes.

SCIENCE.

TWO BOOKS ON CAESAR.

Lexicon zu den Schriften Caesars und seiner Fortsetzer. By H. Merguet. (Jena: Fischer.)

Caesar's Gallie War. By Bond and Walpole. (Macmillan).

It is a singular and somewhat lamentable fact that at the present time three new lexicons to Caesar are in the field. Dr. Merguet, compiler of the well-known lexicon to Cicero's *Orations*, has just finished a similar lexicon to Caesar and his continuators; while two other works, one by Mausel, the other by Menge and Preuss, are well on their way to completion. The spectacle of several men doing the same thing is never a satisfactory one; in the present case it is the very reverse. Hardly anything is so sorely needed by students of Latin as a series of special lexica, one for each author; and it is most unfortunate that three (or more exactly, four) lexicographers should have all chanced on the same subject at once.

Of the three, Dr. Merguet has finished first. His lexicon—a well-printed quarto of more than 1,100 pages—resembles his lexicon to Cicero both in plan and in appearance, and the quotations are sorted on the same "grammatical" system. For example, the passages where the word *legio* occurs (there are

* On a seal represented by Perrot and Chipiez, vol. iv., figs. 383, 384, there is figured what is no doubt essentially the same symbol; but from the nature of the representation I am unable to determine certainly the precise form of the head. Together with it there is represented a star, or possibly the sun, corresponding most likely to what, on another seal, Prof. Sayce speaks of as "rosettes." But on the impression from a seal which M. Surlin-Dorigny was unable to obtain at Aidin (figured at the end of chap. v. of Perrot and Chipiez) there is clearly the same symbol capped with the equilateral triangle. I may add that on the Indo-Scythian coins lately discussed by Dr. Aurel Stein (*Babylonian Record*, August) there is a remarkable symbol, which, a distinguished scholar and archaeologist has suggested to me, is related to the symbol under discussion. Here again we have divergent legs with a horizontal stroke above; but instead of the head we have a comb-like figure with a horizontal stroke and four perpendicular strokes above it. The intention pretty clearly is to symbolise fire tending upward, as would be suitable on these coins.

fifteen columns of them) are divided up according as *legio* is used: i. as subject, ii. after verbs, iii. after adjectives (*duo e legionibus*, &c.), iv. after substantives, v. with prepositions, &c. Similarly *possum* falls under three heads: i. absolute and elliptical, ii. with infinitive, iii. with accusative (*nihil posse*, &c.). The text from which the quotations are taken is that of Nipperdey, "mit Hinzufügung der Varianten." The work includes not only the genuine writings of Caesar, but also the additions of Hirtius and the other continuers.

As it stands, the book seems to have two grave faults. The first concerns the text and variants. Nipperdey's text is not a recent one, and a good deal has been done for Caesar since he died. Since, however, Dr. Merguet preferred to adopt it as the basis of his work, he ought to have freely cited various readings, conjectures, &c., so that the reader might know how far to trust any particular passage, or word, or spelling. But he has not done this. He is very chary of "Varianten," and when he inserts them, never inserts the authority for them (see, e.g., *calidus*). In this point, he is certainly inferior to his rival Meusel. The second fault of the book is the grammatical arrangement, which, though uniform, is not scientific, and not always useful. For instance, one can elicit from the book that Caesar does not use *copia* in the singular to mean "troops," while his continuers do. But to find this out one has to search some columns of quotations. In Meusel's lexicon, the words are divided according to the meanings (as in Gerber and Greef's *Latinslexicon*), and such an inquiry is a light matter.

It is, of course, unfair to contrast Dr. Merguet's work with Meusel's before the latter is complete; but it is impossible not to confess that the latter will in all probability be the better of the two. Not that anyone should be ungrateful to Dr. Merguet for his laborious undertaking. A great deal can be learnt from his book, especially about that *elegantia*, or choiceness of diction, for which Caesar was famous in antiquity. Thus Caesar used *flumen*, but not *fluvius* or *amnis*; *silva*, but not *nemus*; *doleo*, but not *lugeo maereo* or *gemo*; *incolo* often, but *habito* only once; *vagor* often, *erro* three times; *sequor* often, as against *comitor* once and *comes* twice. Similarly we find only one example of *igitur*, and none of *nempe*, *ostentum*, *nimirum*, and some other such words. Of course this can be worked out from any complete vocabulary. But Dr. Merguet has one advantage over his rivals: his is the only lexicon which includes both Caesar and his continuers. Menge and Preuss have published a special lexicon to the latter; but it is far more useful to have the whole arranged in one volume.

Messrs. Bond and Walpole say in their preface that their *Gallio War* "is based on and for the most part paraphrased from" the edition of Kraner and Dittenberger, while they "have consulted most of the best editions" and other recent authorities. Practically, the work is a simple translation of Kraner, with occasional abridgements and the omission of book viii. as not Caesar's. There are few additions. The most important one which I have found is a note (ii. 24.2), containing the obsolete etymology "*porta decumana*, from the

10th cohort." As a translation the book is certainly bad. Indeed there are passages in it which do not testify to even a moderate acquaintance with German or Latin. One does not object to such renderings as "excite" for *voraussetzen*, or "later on" for *ferner* (pp. xxiv., lxxx.), for they may possibly be the result of paraphrase. But some protest is necessary when a perfectly correct sentence in Kraner (p. 5) appears thus: "A colony was conducted by Narbo Martius to protect the coast route to Spain, and that Province was after him called Gallia Narbonensis" (Introd., p. xi.). To make the matter worse, Messrs. Bond and Walpole have given a perfectly correct account later on (p. 396). Again Kraner (p. 60) says "plutei dienten . . . zum Schutz von Mauern (*B. G.* vii. 47) Türmen (vii. 25) und Schiffen (*B. C.* iii. 24)." Messrs. Bond and Walpole render: "plutei . . . were used against walls (vii. 47), towers (vii. 25), and also against ships (*B. C.* iii. 24)." Had they verified their references, they would have found that the "st" is a misprint of Kraner's for vii. 41, and that all three passages distinctly refer to the protection of walls, &c. Kraner says (p. 11) of Caesar in 59 B.C. "Die Ritter gewann er durch Erlassung eines Drittels ihrer Pachtgelder," referring to the Asiatic taxes. In the translation it appears (p. xvi.): "The equites were won over by a remission of some dues from their estates"—a terrible perversion of both German and history. On iv. 3.3 Kraner explains *captus* as "geistige Fähigkeit" (like George the translators call it "conception." Kraner says that the *antesignani* "nicht eine besondere Waffengattung bildeten, am allerwenigsten Leichtbewaffnete waren." The translation runs "not a particular kind of arm, but a light armed body." Errors such as these are numerous, and they entirely destroy the value of the book. If space allowed, it would be easy to add a quantity of less serious mistranslations (*unter*, 1.37.3, *obwohl*, iv. 22.4, &c.), and of mistakes in Latin; and it would be necessary to complain that the volume contains a great number of misprints and some unverified quotations. One serious misprint occurs on p. xxiv., where in the footnote "in Britain" should be "with." Where so much is faulty it is a small evil that the English is often quite as slovenly as in the passage about Narbo quoted above from p. xi.

Obviously, the book needs a very thorough overhauling, if it is to be a credit to either publisher or editor. And if it is revised, I venture to think the revisers should not stop at correcting mistakes. The book is, as I said above, merely a translation of Kraner, and it is difficult to suppose that such a work is really wanted. Everyone who would be likely to use Kraner would, in all probability, be familiar with German. On the other hand, Kraner's edition, excellent though it be, is not complete. The introduction on the Roman army is valuable, and the notes, so far as "pure scholarship" is concerned, are admirable in matter and in manner. So far the edition is certainly a "standard" one. But there are a quantity of questions, mostly of antiquarian interest, where the German scholar is less complete. For example, there is a geographical difficulty in iv. 15.2, *confluentem Mosae et Rheni*. Are we to suppose that

Rhenus means the Waal? Would it not be better to adopt the suggestion of Bergk (*Rheinland*, p. 7), unnoticed by Kraner, and omit *et Rheni*? Or, turning to book v., which more immediately interests Englishmen, what shall one make of the curious statement (v. 14.4), *uicinas habent domi duodenique inter se communes*? Does it refer to polyandry? Again, how comes Caesar to say that the beech and the fir did not grow in Britain (v. 12.5)? Or, once more, Caesar says that British tin was found in *mediterraneis regionibus* (v. 12.5). Kraner gives no farther explanation than "in d. heutigem Cornwall," without a word to show why Cornwall should be called "inland." The reason, of course, is that the tin came *overland* to Kent, and thence across the straits of Dover and through France to Massilia and the south. Kraner, however, seems to believe the obsolete idea that the Cassiterides were off Cornwall, and that the Phoenicians sailed thither across the Bay of Biscay. These and such like questions would be well worth the attention of any editors of a commentary "based on Kraner." But I cannot think a mere translation of much value, whether it be good or (as in the present case) indifferent.

Messrs. Bond and Walpole have also edited book vii. for Macmillan's series of "Elementary Classics." The edition is only an adaptation of the one just reviewed, and what has been said of the one applies to the other. I must add that the notes seem to me not "adapted" to suit a fourth form boy. The plan of Gergovia, too, is unsuited to a boy's intelligence. F. HAVERFIELD.

SOME POPULAR SCIENTIFIC BOOKS.

Fresh Woods and Pastures New. By the author of "An Amateur Angler's Days in Dove Dale." (Sampson Low.) This much-quoted line does not often introduce more pleasant writing than the sixteen letters which form the "Amateur Angler's" little volume. He has improved somewhat as a fisherman, but very much as a writer. The book may be divided into two idyls—one treating of a Herefordshire farm on the Lugg, the other of a suburban garden; and the rustic sights and creatures of both localities are sketched with much kindness and fidelity to nature in a light and graceful style that cannot fail to secure the reader's sympathy. Without any pretence to be a scientific naturalist, he discourses now on peacocks and swallows, now on the waifs and strays of feline life which infest a town garden, with an apt quotation or two felicitously culled from Gilbert White or Walton, or a few lines from the poets with which his mind is evidently well furnished. There is a good chapter on the May-fly, in which Aristotle, Pictet, and McLachlan are laid under contribution; but we owe to a preference of the author's own thoughts and fancies over the more accurate statements of science. "An Afternoon with Rabbits" and "An Evening with Hornets" display the "Amateur Angler" at his best, with a considerable spice of observation, a fair share of descriptive power, and plenty of the lighter graces which interest the leisurely reader, and tempt him to put aside the book to be read again. A true love of country sights and sounds, some sense of the humorous, and much delight in children and their ways, vouch for the geniality of the writer. The delicate workmanship of these little essays is sure to be appreciated, and bids us wish for the author (whose personality is thinly veiled) life and strength in order that he may

give us more charming etchings of field and riverside beauty. It is curious to read that he never met anyone who had eaten the green plover or lapwing. This bird is little inferior as a dainty to its kinsman the golden plover. He is astonished too at an old peahen partially assuming the plumage of the male. This phenomenon is well known among gallinaceous birds. It may be kindly suggested that the plural of chrysalis is "chrysalides" (or more accurately "chrysalides"), certainly not "chrysales"; and the amusing misprint—

"Oh, cuckoo! shall I call the bird,
Or but a wandering voice?"

ought to be corrected in the next edition.

Our Sea-Fish and Sea-Food. By Rev. E. W. L. Davies. (Field & Tuer.) Extreme attention is at present being paid to the breeding and habits of sea-fish, both by the National Fish Culture Association at Delaford Park, and by the directors of the Marine Observatory at Lochbuie in Mull. The importance of the subject fully justifies these investigations. The author of this little book prints in a handy form a good many useful statistics on sea-fish and fishing; and, being evidently an enthusiast, he gives a useful summary of all that is at present known of the life-history of those sea-fishes which are most important to the commerce of the country. It is just the book for the seaside, and pleasantly summarises the information given in the more systematic works on sea-fish. Unfortunately it is not easy to find facts in it, inasmuch as it possesses neither table of contents nor index, an omission which should at once be supplied. Cod's head soup, which the author vouches to be excellent, will be a new idea to most people. It is certainly better than manuring the fields with cods' heads, as we have seen. Mr. Davies should remember that in the face of the constantly augmenting knowledge of the Salmonidae, it is scarcely correct to quote from Mr. Russel (not Russell) as a "recent" authority. His book on the salmon was published in 1864. And it is not the stormy petrel, but the fulmar petrel—a very different bird—which is used by the inhabitants of the Orkneys with a cotton wick drawn through its body as a lamp.

THE three lectures on health, food, and education, delivered by Prof. H. G. Seeley at the Working Men's Institute, Sevenoaks, in 1884, have just been issued by the S. P. C. K., under the somewhat affected title *Factors in Life*. They are full of plain commonsense information. The two former especially might be read with much profit in every coffee tavern and workshop in the kingdom. The book may likewise be recommended to the upper classes in girls' schools. How many of the future mothers of the race grow up without the least knowledge of the chemistry of food and digestion, of the physiological aspects of sleep and exercise, of the need of moral and mental discipline! Prof. Seeley elucidates these in a pleasant and attractive style.

On the Drainage of Lands, Towns, and Buildings. By G. D. Dempsey. Revised, with large additions, by D. K. Clark. (Crosby Lockwood & Co.) The proprietor, or estate agent, will here find what may be termed country draining in all its varieties fully described with figures; while the city surveyor, or architect, has everything connected with the drainage of a town or a house in it ready to his needs in this comprehensive little volume. Mr. Dempsey's book on drainage (which has for some time been out of print) is recast and brought up to modern practice by Mr. Clark. Every here and there, however, the tables of rainfall might have been enlarged with advantage, as at p. 131, where the rainfall at Greenwich stops at the year 1869. Even the unprofessional reader will

find much worth knowing in the excellent account of the main drainage of London. We have never seen a more useful manual on its own subject.

CORRESPONDENCE.

ETRUSCAN DIVINITY-NAMES.

Barton-on-Humber: Oct. 29, 1887.

From the numerals we may pass on to divinity-names, beginning with the head of the Pantheon, the sky-god Tina or Tina. The following list illustrates this name; and, as the connexion between the Chinese Tien and Tengri, &c. is historical, and thus independent of purely linguistic inference, we are supplied with an historical instance of how *ng* becomes *n*. Similarly, in Samoied, *ng* at times = *n* (vide Castrén, *Finnische Mythologie*, 13). *G*, too, is not found in Etruscan; and we are thus justified in regarding Tin-a, Tin-ia, as a late form of Ting-iar, and this as an abbreviation of an original Ting-ira (= Dingira, Tangara, &c.):

- | | | |
|----------|--------------------------|--|
| Sumerian | — <i>d-i-ng-i</i> | } = "to create." |
| Akkadian | — <i>d-i-m-e</i> | |
| Sumerian | — <i>d-i-ng-i-r-a</i> | } = a "creator," |
| | — <i>d-i-ng-i-r</i> | |
| Akkadian | — <i>d-i-m-e-r</i> | hence a "god." |
| Sumerian | — <i>g-i-ng-i-r-i</i> | }= "goddess." |
| | — <i>g-i-ng-i-r-a</i> | = the goddess Istar. |
| Yakute | — <i>t-a-ng-a-ra</i> | |
| Mongol | — <i>t-e-ng-ri</i> | } = "sky"—"sky- |
| Hunnish | — <i>t-a-ng-li</i> | |
| Chinese | — <i>t-ie-n</i> | |
| Turkish | — <i>t-a-ng-ry</i> | |
| Finnic | — <i>t-ie</i> (-Jumala). | |

| Etruscan | — T-I-N-A | } = <i>T-i-ng-ia-r(-a)</i> =
Dingira. |
| | — T-I-N-IA | |

The *is* in *Is-tar* (a male-female, non-Semitic divinity, the meaning of whose name has not been discovered) and *Is-ten* recalls a well-known Turanian god-word, the Kamacintzi *esch*, Arintzi *eisch*, "god" (Strahlenberg), and Yenissei-Ostiak *es* ("heaven"); for, as Castrén observes, "allen altaischen Völkern am meisten den himmlischen Gott *Es* verehren" (*Finn. Myth.* 228). He gives *asa* and *zyt* as S. Siberian forms (*ibid.*, 186). The words *aisaru*, *aiseras* ("In *aiseras* sehe ich den Genitiv von *aisera*, 'dea,' "Deecke), occur in the Etruscan inscriptions; and the classical writers supply us with the following instances, showing the Etruscan use of the word: *Aloap* (Dionys. Hal.); *Aesar* = "god" (Sueton. *Augustus*, 97; *Aisoi* - *θελ* *ὄρει* *Τυφφηνῶν* (Hésyoh.). It is generally agreed that *-ar* is an Et. plural-form (*cf.* Ostiak *är*, "many"); hence *ais-ar* = *ais-oi*. *Ar* also occurs in Buriat as a plural-form. The *tar* in *Is-tar* reminds us of the numerous Finnic divinity-names with this ending.

The Ak. *An*, *In* ("Divine-one"), *Ana* ("sky-god"), *Votiak in* ("sky"), *in-mar* ("god"), *Taugy ña*, *Yurak* and *Yenissei ä*, may be compared with the Et. *Ani* (*Avvios* is an Et. king in Plutarch), *Ianis*, Latin *Janus*, the unanthropomorphic divinity of Velathri (Volaterrae), &c. With *Ana* and the allied words, *Finn* and *Lenormant* connect the Zyrianian *Jen* ("god"), which appears in Strahlenberg as *Jahn*; but Castrén seems to be right in regarding *jen* as an abraded variant of the great Turanian god-name *Jum-a-la*. The Eskuara (Basque) *Yin-koa*, *Jin-koa* ("god") is singularly similar. The North-Asian divinity *Tiermes*, *Turm*, *Torm*, *Torum* (*Thorum* in Strahlenberg), reappears in the Et. *Thurms*, *Turms*, or *Turm*, who, through name-similarity, was not unnaturally identified with the Greek *Hermés*. *Thurms* is not an Et. transliteration of *Hermés*, for the Greek aspirate does not become *t* or *θ* in Et., e.g., *Ετρῶν* = Et. *Eotur*, &c.

The Ak. *ekhi* is rendered by the As. *ummu*

("mother"), and must be the same word for "mother" which appears in the three Buriat dialects as *eke*, *ike*, and *exe*, in Surgut (Ostiak) as *anki*, and which Strahlenberg gives as *oeks* ("the mother"). The name reappears in the Lapp mother-goddess *Sar-Akka*, "dea partus" (*cf.* Lapp *akk*, "prægnans"; *akka*, "uxor"), and again in the famous Et.-Rom. mythic personage *Acca Larentia*, said to have been a beautiful courtesan (perhaps a hint at Turanian women-customs), or the nurse of Romulus and Remus, and mother of twelve sons, probably the twelve cities of the Etruscan confederation. The Ak. *rak*, *rakki* ("woman") and the Et. mirror-goddess *Recua* are apparently connected forms.

Nothing can be made on the Aryan side of the god *Summanus*. The suggested Latin etymologies of the name are obviously afterthoughts. Strahlenberg gives *Sumans* ("i.e., Sacred") as a name of the Yakute divinity *Tangara* (*vide sup.*); and, as *Tangara* is identical with *Tina*, we can understand why *Summanus* was considered the equal or even the superior (*vide* Augustin, *De Civ. Dei*, iv. 23) of Jupiter, and his name derived from *sumnus*. We find *Taman* as "numen priscorum Lapponum" (Lindahl, in *voc.*), and *Suannon* is an epithet (*Kalevala*, xxxvi. 237) of the hero *Wainämöinen*. The Ak. *'Sumun* = As. *Samu* ("heaven").

No Turanian god-name is more widespread than the Finnic *Juma-la* (lit. "Thunder-place" = sky and sky-god), Lapp *Jumel*, *Jumal*, or *Ibmel*, Zyrianian *Jen* (*vide sup.*), which Castrén has shown identical with the Samoied *Num*, Ostiak-Sam. *Nome*. Strahlenberg gives the forms "Samojedes *Numi*, Morduinii *Jumis*, Permecki *Jahn*, Tomskoi Ostiaks and Kanskoi *Num*, Oby Ostiaks *Nopp*" ("God"), "Taugi *Noae* and Samoiedi-Manzela *Nae*" ("Heaven"). "Tangubti, who belong to the Dalai-Lame, and have one religion with the Kalmucks and Mungals"—*Namm* ("God"). This historical testimony replies to Prof. Max Müller's doubts (*Lects. Sci. Rel.*, 2nd edit., p. 138) respecting the connexion between *Nam* (as he gives it) and *Num*. Sky, storm, and thunder are necessarily linked ideas; and this group of variant names divides itself into those commencing (1) with an *i*- or *y*-sound, or (2) with an *n*. Both variants appear in Akkadian. Thus Lenormant compares Ak. *imi* ("tempest," "region céleste") with the "Fin. *jymj*, Tcher. *juma*, Mord. *jom*, Zyr. *iy*" ("thunder"), and the Ak. *nim*, *num*, *nu* (*cf. sup.* *Noae*, *Nae*), is rendered by the As. *saku* ("top"), *elamu* ("highland," Elam); while the variant and derivative *enim*, *enum* = As. *samu* ("heaven"). In Ostiak the word occurs as *nim*, *nöm* ("the upper"), *nämen*, *nömen* ("over," "above"). On the Etruscan side we find the divinities called *Noven-stiles*, heaven-gods and thunderbolt-hurlers; and I would here only add to the remarks of Canon Taylor (*Etruscan Researches*, 143, 154) on this name, that *numen* may be an Etruscan as well as a Latin word, and that the legendary king of Rome, favourite of the gods and establisher of religion, is called *Numa*.

We find in Finnic mythology a mysterious personage, connected with the moon (*vide* Castrén, *Finn. Myth.*, 65, 316), the meaning of whose name is said to be doubtful, called *Kave*, *Kapo*, *Kebe*, *Kaba* (Toheremiss), &c. "Die Gottheit, die von andern mit diesem Epithet beehrt wird, ist die Tochter der Luft," for the Finnic male lunar divinity is *Kuu* (*cf.* the Ak. moon-god *Aku*, "the Exalted"). Etruscan mirror-names are often Greek, and perhaps occasionally Semitic, and, therefore, specially dubious; but we know from Strabo (v. iv. 2) that the Etruscans had a goddess named *Kupra* (= *Kupa-ra*) who was supposed to be the analogue of Juno (the Samian *Heré* is lunar), and to whom the new or increasing moon was

sacred ("Ihr war der Neumond heilig." K. O. Müller, *Die Etrusker*, edit. 1877, ii. 46). It is singular to find on the Ak. side, "gub (kup), As. nazuzu, to fix, to wax of the moon" (Sayce, *As. Gram.*, 18). *Gubbara* (cf. *Dingira*) would mean "the Waxing-one"—the Moon.

ROBERT BROWN, JUN.

MEETINGS OF SOCIETIES.

CAMBRIDGE ANTIQUARIAN SOCIETY.—(Monday, October 31.)

PROF. A. MACALISTER, president, in the chair.—Prof. Hughes, after commenting upon ancient earthworks between the Solway and the Tyne, summed up his views as follows: The wall was the road for the Romans in time of danger. They did not need another road outside except for trade and ordinary traffic in time of peace, and then it was unnecessary to enclose it. An examination of the run of the "Vallum" shows, when once the question has been raised, how unlikely it is that the Romans could have constructed it when they built their wall. It is often for many miles too near the Roman Wall to leave any room worth mentioning between the two for grazing cattle; and, a still stronger argument, the "Wall" and "Vallum" are for many miles so far apart as to have rendered it impossible to man the "Vallum" without dangerously weakening the wall on the north. Between Appletree and Wall Bowers the Roman wall cuts off the end of one of the lines of the "Vallum." If a Pict's Wall with its many lines of fosse and vallum existed before the Roman Wall, it is easy to see how this might happen. The fosse and vallum cut off by the wall was a British covered line of advance from the higher ground to the entrenchment, lower down the hill. On the hypothesis that the "Vallum" was constructed by the Romans with an interval between it and the "Wall" to protect their roadway and their cattle, here was an obstacle to both. It would not be a likely place for them to build a hedge to limit the straying of the cattle, that might have been done more easily a little further on; but it was a longer line to construct and in a less convenient part for the purpose suggested. That the Romans modified a pre-existing earthwork, rendered it less dangerous to themselves, and utilised the fosse to rest their camps upon, is likely. They may for some reason have excavated the basalt blocks which lie beside the vallum about a mile east of Procolitia, a source of wonderment. The rock was, however, already cut up by joints; and the removal of the blocks by the British would not be such a marvel as the construction of cromlechs, menhirs, and chambered tombs. It may be felt to be a difficulty in the way of accepting the view here advocated that the great barrier between the Danube and the Rhine (the *Limes Imperii* or Pfahlgraben, Teufelsmauer, Schwein-graben) which is generally attributed to the Romans, is like the vallum, not like the *murus* of North Britain. But, seeing that there are important differences between the various portions of that earthwork, perhaps a similar line of inquiry might suggest a doubt as to whether parts, at any rate, of those works may not have been adopted rather than constructed by the Romans. We want also more knowledge of the barrier between the Forth and Clyde (Vallum Antonini, Graham's Dyke). The historical mention of fixing a Limes can hardly be considered evidence of the construction of a wall, whereas the occupation of an old line of defensive works and the building of forts along it would be a natural and probable course for the Romans to have pursued. But, on the whole, it would appear (1) that the distribution of the Roman camps suggests that there was a system of defensive works held by the British approximately along the line of the "Vallum"; (2) that the "Vallum" must have been a source of danger not of strength to the Roman "Wall"; (3) that in character the "Vallum" resembles British rather than Roman work; (4) that the position and arrangement of the lines of the "Vallum" are inconsistent with the hypothesis that it was constructed at the same time as the Roman "Wall"; (5) that the "Vallum" should be regarded as the Pict's Wall, afterwards enclosed within the lines of the Roman Wall.—Prof. Clark agreed with Prof. Hughes that there were numerous instances of Roman

fortifications based on older earthworks. With regard, however, to the works of which Prof. Hughes spoke, he considered that they rather appeared to have been subsidiary, from the first, to the Roman wall.

UNIVERSITY COLLEGE LITERARY SOCIETY.—(Monday, October 31.)

MISS MARY PAUL, vice-president, in the chair.—A paper was read by the president, Mr. T. G. Foster, on "The Beginnings of the English Drama." The English drama conveniently falls into three stages: (1) The beginnings of the English drama, with two subdivisions—(a) the preparation for the regular drama, (b) the beginning of the regular drama; (2) the growth and perfection of the drama; (3) the decay of the regular drama. 1. The first stage, with its two divisions, is almost entirely ignored in the study of the English drama. After tracing the Mystery Plays back to their origin in church festivals and services, Mr. Foster proceeded to show, by quotations and illustrations, the extent to which the elements of the regular drama may be found in them. "Some of the plays in each series are distinctly comic, others tragic; there are also passages, and now and again whole plays, to be found that might be called satiric; in many, in fact, in the majority, we find touches of realism." The Moralities were a development from the Miracles, and grew slowly, at first, probably, helped by the desire for variety, and afterwards by the taste for allegory, which spread from Italy and France to England. In them distinct advance is made in dramatic construction. Many contain well-developed plots, whereas the Mysteries consisted of a narration of events. The very dullness of these plays suggested the introduction of characters other than personified abstractions. Real personages were gradually introduced, the transition tendency being marked by such plays as Bale's "King Johan" and "Hycke Scornor." John Heywood was the first to take the all-important step of writing plays—known as Interludes—which were entirely free from the personified abstractions of the morals. 2. The shortcomings of the Moralities were made more plain by the knowledge of Italian and classical drama which spread over Europe generally at the time of the Renaissance. The first English comedy is based on the "Miles Gloriosus" of Plautus; and "Gorboduc," the first English tragedy, on the "Thebais" of Seneca. Thus it was classical influence which gave our drama form and shape, and showed the need of a well-elaborated plot. During the twenty years that elapsed between Sackville's "Gorboduc" and Marlowe's "Tamburlaine," the national spirit was growing and preparing the way for a national literature and a national drama. Lyly, Greene, and Lodge were the chief dramatists; but their great service to the drama was in the production of the Elizabethan novel, in which good stories were produced, though they wanted the finish and vigour found in the work of true artists. To Lyly we are indebted for establishing the use of prose in dramatic compositions. Thus, at the commencement of Shakspeare's career, the various forms of dramatic art that have existed in England were already established.

GEOLOGISTS' ASSOCIATION.—(Friday, Nov. 4)

F. W. RUDLER, Esq., president, in the chair.—The president opened the session with an address on "Fifty Years' Progress in British Geology." He drew a picture of the state of geology in 1837, and contrasted it with that in 1887; dwelt upon the controversy between the catastrophists and uniformitarians; sketched the history of palaeozoic geology; referred to speculations on the origin of the drift; and discussed the antiquity of man. The principal controversies of recent years have ranged round the Archaean rocks and the glacial drift. Attention was directed to the debt which geology owes to engineering, and especially to the development of the railway system, and to artesian borings. The Sub-Wealden Exploration was explained, and a jubilee boring suggested. Deep-sea Exploration was touched upon. Turning to petrology, its low condition in 1837 was pointed out, and the introduction of microscopic methods was dwelt upon. The history of palaeontology was traced, and the work of the

Palaeontographical Society commended. ~~Imp~~ ~~ments in the geological collections of the Br~~ ~~Museum were noticed; and the history of~~ ~~Museum of Practical Geology and of the Geolo~~ ~~Survey was traced. In conclusion, reference~~ ~~made to the projected meeting of the Internati~~ ~~Geological Congress in London next year—a~~ ~~coinciding with the hundredth anniversary of~~ ~~foundation of British Geology—the publica~~ ~~Hutton's Theory of the Earth, in 1785.~~

FINE ART.

GREAT SALE OF PICTURES, at reduced prices (Engravers, Chromo-lithographers, and Otagraphs, handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents. GEO. REES, 115, Strand, near Waterloo-bridge.

THE LEGEND OF SAINT VERONICA IN CHRISTIAN ART.

Die Fronica. Ein Beitrag zur Geschichte des Christusbildes in Mittelalter von Karl Pearson. (Strassburg: Karl J. Trübner.)

THIS volume is a valuable contribution towards the history of Christian iconography. In it the author traces the origin and development of one of the most beautiful of the many stories connected with the life of our Lord—a story which has exerted an influence throughout Christendom, and has inspired some of the loveliest works of art bequeathed to us by the great artists of the middle ages, and, among other devotional poems, the well-known "Salve Sancta Facies." Mr. Pearson has arranged his matter under six heads: (1) the evolution of the story; (2) the various versions and translations of the Salutation of the Holy Face; (3) the office in its honour; (4) the indulgences attached to the Salutation; (5) remarks on the representations of Christ in pictorial art; and (6) a chronological list of those connected with Saint Veronica.

The main points, in which all versions of the story agree, are that a woman, a follower of Christ, named *Beronika*, was in possession of a likeness of our Lord painted, or in some other way represented, on a cloth or kerchief; that she came or was brought to Rome, and that there, by means of this kerchief, she cured the Emperor Tiberius or Vespasian of a grievous illness. It is further related that she was the woman who had been healed by our Lord of an issue of blood (Matthew ix.), that she became the wife of Zacheus, known after his conversion as S. Amator; that with him and S. Martial she went to Gaul and evangelised Aquitaine, where her festival was kept, as also by the church of Milan, on February 4.

The earliest known mention of a sweat-cloth occurs in the fifth chapter of Venerable Bede's little book *De locis sanctis*, entitled "De Sudario Capitis Domini et alio maiore linteo a Sancta Maria confecto." This, however, does not contain any allusion to S. Veronica. The primitive version of her legend occurs in a MS. of the eighth century, now in the Vatican Library. Here she is said to have herself painted, or caused to be painted, the portrait of Christ after he had cured her of her ailment. An English MS. of the eleventh century in the University Library at Cambridge gives a somewhat different version, the cloth being described as a part of Our Lord's garment, and as having a twofold miraculous character: (1) of appearing, when exhibited to the emperor, to

Nov. 12, 1887.—No. 810.]

bear Our Lord's likeness; (2) of healing his malady. In several twelfth- and thirteenth-century German versions of the legend the portrait is said to have been miraculously imprinted on the cloth by Christ. Towards the end of the twelfth century we find Veronica represented as asking S. Luke to paint her a portrait of Christ, and as being greatly distressed at the failure of his attempts. But Our Lord takes pity on her; and when, before partaking of a meal she prepares for Him, He washes His face, the cloth with which He wipes it receives a miraculous portrait of His features, with glorious bright eyes and black beard. The later version of the story is not met with until the end of the fourteenth century—I am inclined to think not until the second quarter of the fifteenth. This represents Veronica coming forth from her house when Our Lord passed by on his way to Calvary, compassionately offering Him a cloth to wipe His face, and receiving it back with the sacred image impressed upon it. In these later representations the face of Christ is a sorrowful suffering face, generally with the Crown of Thorns. Mr. Pearson thinks that this version probably arose from the fact that besides the ikons of the earlier type, there was in S. Peter's—now "over a great statue of S. Veronica in the sacristy"—another of an entirely different character, with the features of a dead man and with closed eyes; that this in the twelfth, or at least in the thirteenth, century was known as the "Sudarium Salvatoris nostri," "vera effigies Salvatoris," or "vera icon"; and that probably owing to the close resemblance of this last designation to the Latinised form "Veronica," this unique representation, though having no connexion with the story of S. Veronica, came to be mixed up with it.

I cannot help thinking that Mr. Pearson has been misled by Heaphy. The Vernacle at S. Peter's (translated thither from the church of S. Mary ad Martyres, where the coffer in which it was originally kept is still preserved) is now in one of the upper chapels of the four great pillars which support the cupola. It has for centuries been covered not only with a thick plate of rock crystal, but also, in great part, by a metal plate inserted under the crystal and hiding all but the face itself. This Vernacle is, with other sacred relics, shown ten times in the year by two canons in the balcony to the faithful kneeling in the nave below. These relics are never shown at any other time, nor is any one allowed to approach them except by a special indult granted by the Holy Father. Such an indult has, I believe, been only granted once in modern times—in December, 1854, when the bishops, then gathered together in Rome, were allowed to approach the Vernacle. M. Barbier de Montault thus described what he saw during the few minutes he gazed on it:

"Une lame de métal couvre l'intérieur et ne laisse dégagée que la figure dont elle dessine les contours. A ces contours, franchement accusés, l'on soupçonne de longs cheveux qui retombent sur les épaules, et une barbe courte qui se bifurque en deux mèches peu fournies. Le reste des traits est si vaguement dessiné, ou plutôt si complètement effacé, qu'il m'a fallu la meilleure volonté du monde pour apercevoir la traces des yeux ou du nez."

The copies or so-called facsimiles of this

Vernacle, given or sold to pilgrims, are apparently printed from an engraving of the eighteenth century. The certificate attached to them does not guarantee the exactness of the copy, but attests that they have touched the reliquary in which the original is preserved. I prefer to believe that the "Salve Sancta Facies," composed more than six centuries ago in honour of this Vernacle, and the copies of it made in mediæval times,* are far more reliable evidence of the appearance presented by this cloth than the eighteenth-century so-called facsimile. Perhaps some day competent archaeologists will be allowed to examine these and other relics, and the matter will be cleared up. All that can be safely asserted at present is that it is certain that when, under the influence of the Franciscans, the corporal sufferings of our Lord were brought into greater prominence, an impetus was given to the introduction, both in dramatic and pictorial art, of such a scene as this in our Lord's painful progress to Calvary, which, although without any historical or traditional authority whatever, has ended by becoming the sixth in that series of representations of Our Lord's Passion known as the "Stations of the Cross," to be seen in every Catholic church throughout Christendom.

The salutation, "Ave Facies Præclara," relates to the later presentment of the ikon. Mr. Pearson gives an account of all the various readings he has met with, of this, as well as of the earlier, "Salve Sancta Facies," as also of German, Netherlandish, and French translations, followed by a number of extracts from passion-plays and other MSS. and inventories where Vernacles are mentioned.

The third part gives an account of offices in honour of the Holy Face, commencing with that instituted in 1216 by Pope Innocent, the earliest mention of which occurs in the *Chronica Maiora* of Matthew of Paris. From him we learn that the popes had long been in the habit of carrying in procession from S. Peter's to the Hospital of the Holy Ghost "effigiem vultus Dominici quæ Veronica dicitur"; and it is certain, both from the miniature accompanying the text in the MS. at Corpus Christi College, Cambridge, as also from the words of the Collect, that this Holy Face was of the earlier type, from which we may conclude that the cloth with the later type of suffering face was not then looked on as the sweat-cloth of S. Veronica. Of later offices, and the indulgences attached to them, Mr. Pearson gives a full account. It is however to be regretted that he does not appear to have examined either the MS. or early printed editions of the liturgical books of Cahors, Bazas, Soulac, and other churches of Aquitaine. He might also have usefully consulted the missals of other churches. Another very serious defect in this book, as, alas! in so many others, is the omission of an index. No one but the author can possibly remember what representations are described in the book *de visu*, or what MSS. are quoted. An

* As late as the fifteenth century the demand for these was so great that artists were engaged exclusively in making copies of it, not only at Rome, but also at Köln, Bruges and Antwerp, and doubtless in many other localities. Martinielli gives the epitaph of the wife of one John von Dumen, in *Romana curia veronicarum pictoris*, who died in 1526.

index would stimulate many to note other examples. I have often thought that it would be a very good thing to insert in books of this class a few blank pages for notes.

The volume ends with a descriptive list of about two hundred representations of the Vernacle, twenty-two of the most remarkable of which are reproduced in autotype. As to these, I should wish to remark that the inclined head on plate ii. is evidently a study from a figure of Christ on the cross; that plate vi. should be described as a drawing *after*—certainly not *by*—Roger van der Weyden. It may also be worth pointing out that Vernacles constantly occur on the margin of the canon in missals of the fourteenth, fifteenth, and sixteenth centuries.

I cannot help regretting that Mr. Pearson should have issued this treatise in German, and I sincerely hope that he may later on give us an enlarged English edition.

W. H. JAMES WEALE.

DUTCH WATER-COLOURS.

THE artists in water-colour of Holland are now almost as well known in England as our own, and there is not much that is new to be said about the work of such men as Israels, Artz, and Bosboom. The present collection at Messrs. Bousod & Valadon's is a good one, and contains a very fine drawing by C. Bisschop of a young Frieslander warned by his pretty young wife not to wake the baby that sleeps in the gaily carved and painted cradle. In breadth and colour, combined with finish in a large sense, it is remarkable; for the Dutch water-colour painter, as a rule, seems to prefer a very sketchy treatment, and to be content with a somewhat sloppy and confused effect. A picture by Mme. B. Bisschop, "New Playmates," follows with success her husband's style. By I. Israels there are several examples, but this *doyen* of modern Dutch art is sometimes provokingly slight and unnecessarily obscure. "Washing Baby" is the most important and the finest in colour of his drawings, and the feeling of it is excellent; but the baby is modelled in a vague and unsatisfactory manner. "The Little Reader" and "Reading the Bible" are also good examples of his art. By his follower, A. Neuhuys, there is a charming drawing of "Mother and Child"; and "The Frugal Meal," by D. A. C. Artz, is as good as any of the numerous interiors with figures in which the school delights. The skill of A. Mauve in painting the light on the level woolly backs of sheep we see twice again repeated here; and Mesdag's clear grey skies and moving water, the several gifts and styles of the members of the Maris family, and the masterly if somewhat unsubstantial interiors of Bosboom, appeal as successfully as ever to our admiration. But there is nothing to call for any special notice in the work of the artists we know best. The brilliant portraits (in pastel) of Mme. Thérèse Schwartz afford a pleasant contrast to the water-colours by their cheerful colour and finished execution; and a charming drawing of "Twilight," by E. Van der Meer, should not be missed. Admirable also are the lions and tigers of Jan van Essen, and the interior of a farmhouse by T. Ottermans.

OBITUARY.

THE death of Mr. George William Reid, long the Keeper of the Prints and Drawings at the British Museum, cannot pass unnoticed, so much esteemed was he as a man, and so admirable and peculiar were his services to the

public. Mr. Reid was about seventy years old. He was first in the Museum during the keepership of Mr. Josi, we believe; and he continued in it, of course, during the keepership of Mr. Carpenter. He had an immense knowledge, and a fine eye; he was, in truth, a real *connoisseur* in the matters that chiefly engaged him. And his sympathies were wide. Never sparing himself in his work for the British Museum, Mr. Reid yet found time, long before his retirement, to prepare that voluminous catalogue *raisonné* of the etched work of Cruikshank which the collector knows and values. More lately, Mr. Reid—though in somewhat broken health—was engaged in cataloguing many of the art possessions at Chatsworth. It is reported that he has left behind him a private collection of prints and drawings not altogether unworthy of having been the property of a distinguished and lifelong student of art. But of this we have no certain knowledge.

CORRESPONDENCE.

THE AGE OF THE WALLS OF CHESTER.

London: Oct. 29, 1887.

Mr. Shrubsole's reply renders me scant justice. He charged me with error relative to the position of the Roodeye wall, and to prove it he stated the discovery of a pig of lead. I then pointed out that the lead was found in one position, the wall being in another. As if to justify himself, he now (ACADEMY, October 22) says that he knew this. Why, then, did he say I was in error, when there is really not the slightest error on my part? Why did he introduce the pig of lead at all? There is the wall on what was the bank of the stream, and our excavations show that it goes down thirteen feet and more below the present level. It is built solidly in mortar, except some few of the courses. In this mortar, pounded brick has been found. Such is the wall. Your readers may judge of the unhappy way in which plain evidences have been ignored when I again refer to the fact that, notwithstanding the wall was known to go down deep, for Mr. Watkin has told us so, yet your other correspondent was content to describe it as stated in my last. When I examined the wall with this description in my hand, prior to deciding upon the excavations, it seemed impossible that the mass of masonry above ground could have deceived anyone as to its nature. Yet the statement I quote is still uncontradicted by both your correspondents.

It will interest your readers to know that, thanks to the liberality of a well-known inhabitant of Chester, further excavations are now in progress at the Roodeye wall, the intention being to reopen the face now buried to so great a depth by that remarkable phenomenon, the silting-up of the Roodeye. That its face was once visible is beyond the shadow of doubt, since it is composed of coursed and evenly dressed masonry. The works have already revealed a massive backing, actually thirteen feet thick, of hard concrete and wall. The appearance of what was then visible of the wall led me to state my belief that it was of immense strength, but what is revealed far exceeds my conception. I am sorry that Mr. Watkin's views have not been altered by the detection of the facing of this wall; and that so late as last week (ACADEMY, October 22) he indulges in conjectures which have already proved to be unfounded.

Mr. Watkin refers to three "heads," as he calls them. He may, of course, divide his subjects as he pleases, but a simple proposition embodies the whole of the differences between your two correspondents and myself. I say that the unmortared masonry and the Roodeye wall are Roman works *in situ*. The

remainder of the walls is modern work of varying mediæval dates to our own time. This is readily proved by the existence of the Roman walls on the lines marked out by the position of the two Roman gates. The unmortared work has too marks of Roman masons. The huge mass of material is laid in courses, which could hardly have been possible had it been brought, as is suggested, from Roman foundations in the seventeenth century or later, even if so large a mass could have been found, which is hardly possible. The Roman work appears only at the base of the wall and never elsewhere. The latter would be the case if built when suggested by your correspondent. There is uniformity of design at all points where it has been examined, showing similarity of date. Lastly, while no mediæval or later buildings can be shown to have been erected without mortar, it is never found in our oldest, namely, ancient British works; and there is some evidence that unmortared works were executed by the Romans in England, while they are common on the Continent.

Some time since, Mr. Watkin challenged me to show the wall of any Roman camp in England built without mortar. I could not then do so. Thanks to a local friend I can now do something like it. It relates to one of the principal gates of a large Roman castrum, and, fortunately for my argument, it actually relates to Chester. Stukeley thus describes the arches of East Gate as he saw them in 1725.

"It is admirable that these vast arches, made of so large dimensions, and laid without mortar, can stand at all when their proper buttment is destroyed" (*Iter Boreale*, p. 31).

Stukeley speaks also of a roughly moulded cornice over the crown of the arches, agreeing in this respect with the cornice next to North Gate. Here, then, is evidence of the use of masonry without mortar in Roman times, actually at Chester, and in line with the unmortared masonry of huge stones which I say is Roman, both works being thus connected by similarity of construction.

On the other hand, shortly, I have elsewhere, in the *Builder*, shown that your two correspondents, to prove the case against me, have to account for the entire removal of the Roman walls and also their foundations, since the work, such as I have described it, commences at the present foundations; for the Kaleyards wall being built *without mortar*, as they say, *temp. Edwardian*; for part of the north wall being built in Parliamentary times *without mortar*; for another part, again *without mortar, temp. Queen Anne*. I have shown that the actual masonry, which one of your correspondents acknowledges to be Roman, but removed in seventeenth-century times from elsewhere, now in the small length specified of the north wall (leaving out enough for what is perhaps his breach) contains enough Roman stone to build a tower as high as that of the Cathedral, and fourteen feet square, solid. I have asked him also to explain why the base of the wall is built *without mortar* where the massive stones occur, and the upper part *with mortar*. I have stated what was the probable cost of the small length of wall, and that the £1000 and upwards known to have been spent *temp. Queen Anne* is as nothing compared to the outlay on the whole length of the walls (nearly two miles in circuit) if your correspondent is correct. I have, further, asked him to prove this outlay by the production of the bill, or some documentary evidence of so heavy a work, which, if it were ever incurred, must exist among the well-kept store of the Municipal Records. In the *Builder* (p. 617) I am given the last word. I do not wish for it if your correspondents can give me any clear replies to any of these matters. E. P. LOFTUS BROCK.

P.S.—I acknowledge that the large number

of pieces of pottery mentioned in my last was not found in our excavations. They met with at the same time, but elsewhere regret that I mentioned them.

"ABRAHAM, JOSEPH, AND MOSES IN EGYPT"
Bryn Mawr, Pennsylvania: Oct. 21, 1887.

Will you allow me to correct two errors Miss Edwards's review of my book (*Abraham, Joseph, and Moses in Egypt*) in the ACADEMY of August 20.

She writes: (1) p. 125, "Dr. Kellogg follows Mr. Lund's lead in identifying Khoo-en-At with the Pharaoh of Joseph," whereas in a third lecture I try to show that Joseph's Pharaoh was either Thothmes III. or Amenophis III.

(2) Miss Edwards writes, "Not having Mr. Lund's paper at hand, I do not feel sure what he does or does not go farther than that gentleman, when he hints that the Ka-em-ha of Tell-el-Amarna bas-relief might possibly be identified with Joseph himself," whereas, p. 80, I say expressly, "There is one reason that would utterly forbid the identification"; and again, "It would seem to be necessary to disallow any identification of Khaemba with Joseph." ALFRED H. KELLOGG.

"JACOB" AND "JOSEPH" IN THE INSCRIPTIONS OF THOTHMES III.

Paris: Nov. 3, 1887.

I notice in the ACADEMY of October 29 a letter wherein the opinion of M. de Rougé, who saw only geographical localities, is quoted against my identification of the Jakob-El and Joseph-El, in the lists of Karnak, as the Beth Jacob and the Beth Joseph of the Bible. I not only reproduced the opinion of M. de Rougé (*Rev. Egypt.*, iv., p. 95, cf. 146), but I also quoted the formal declarations of the Egyptians themselves as to what these lists were. From the Egyptian evidence it results that these two names (as well as others) may perfectly well have been tribal. According to Biblical history they were so.

The theory that the lists of Karnak contain the names of cities, taken by the King Thothmes III. during his expedition against the revolted principalities or tribes of Syria, is not only wholly gratuitous, but is in direct contradiction with the titles of the monuments.

The termination El, so far from being an objection, is rather an argument in favour of the identification proposed by me, for it is precisely under the protection of this God, El, that we should expect to find the Biblical tribes of Jacob and Joseph. WILLIAM N. GROFF.

NOTES ON ART AND ARCHAEOLOGY.

MR. R. PHENE SPIERS, Master of the Architectural School at the Royal Academy, has prepared a work on *Architectural Drawing*, which will be published in a few days by Messrs. Cassell & Co. The book will be illustrated with nine coloured and fifteen plain plates.

THE fine collection of modern French and Dutch pictures which was one of the features of the Edinburgh International Exhibition of last year is to have a memorial in the shape of a catalogue illustrated by etchings and accompanied by notices of the chief painters by Mr. W. E. Henley. The specimen pages and etchings which have been sent to us augur well for the beauty and permanent value of the volume. The etchings of Mr. Hole after Corot, Diaz, Dupré, Bosboom, J. and M. Maris, and others are remarkable for their sympathetic rendering of various artists. The theory that these artists, together with Delacroix and Monticelli, all belong to one school—"the

greatest of the nineteenth century"—is apparently to be the theme of the letterpress.

MR. R. DUNTHORNE, of Vigo Street, will shortly publish two new prints: an etching by Mr. Macbeth, after his own painting, "A Fen Lode," which was exhibited at the Academy in 1886; and a mezzotint by Mr. Frank Short, from the painting by Mr. Alfred Parsons, entitled "In a Cider Country."

MESSRS. H. GREVEL & Co. have just published—in time for winter migrants—an English translation of Prof. Maspero's *L'Archéologie égyptienne*, the French original of which was reviewed in the ACADEMY of May 21 last. The translator is Miss Amelia B. Edwards, who possesses the rare combination of a nervous and picturesque style with first-hand knowledge of the subject matter. We still have to regret the absence of an index, as well as a list of the illustrations, which number close on 300. The translator has added a few annotations of her own; while at the end are appended a number of valuable notes by Mr. W. M. Flinders Petrie, chiefly dealing with technical matters of architectural construction. There is no other book, we venture to say, that can compare with this in helping us to reconstruct the life of ancient Egypt out of its material remain.

MR. RUSKIN has written in reference to the new volume of the *Magazine of Art*:

"The really best thing in the book is Turner's 'Ulysses,' marvellously like the picture and a fine legitimate bit of woodwork. I may say further that very few of Turner's large oil subjects were engraved anything like so well, even in his own time."

THE STAGE

"HEART OF HEARTS" AT THE VAUDEVILLE.

MR. BUCHANAN'S "Sophia"—having enjoyed an extraordinary popularity and won the admiration of so well-known and approved a theatrical critic as Mr. Gladstone—is succeeded at the Vaudeville to-night by "Heart of Hearts," of which we saw the initial performance at a *matinée* last week.

"Heart of Hearts" is by Mr. Henry A. Jones, who, whatever may be the irregularities and the uncertainty of his work, is recognised as quite among the most original of contemporary stage writers. Real observation of life, and real thought upon it in the study, are qualities which Mr. Jones brings to bear upon his dramatic efforts; and the trace of them lies continually below the witty dialogue which Mr. Jones is not alone in the capacity to supply. Furthermore, Mr. Jones, in his best work—and we place, for our own part, "Heart of Hearts" on a level with "Saints and Sinners"—shows himself as possessed of thorough knowledge of stage effect and as exercising judiciously all the ordinary and useful functions of the playwright. It is reported—not, as I believe, untruly—that "Heart of Hearts," when read to one or two literary people, did not please them quite as much as they had hoped; and the deduction drawn from this is that the exceptionally complete performance at the Vaudeville has secured for the play a favour it could by no means have counted on enjoying. But that is not a fair deduction. What the incident—unless perchance it be apocryphal—really shows is that Mr. Jones, much better than most of us, understands what it is that is requisite for stage effect. We are familiar

with the man of letters who is no sagacious playwright. We are yet more familiar—alas!—with the accepted playwright who is no man of letters—who never in one line betrays the literary instinct. In Mr. Jones—and, of course, I do not say in Mr. Jones alone—we have a writer who reconciles the claims of original writing and of stage effect. He is literary in the right place.

If you pull "Heart of Hearts" to pieces—dissect or analyse with strictness—you will find, unquestionably, improbabilities; but you will find nothing dull. For me the only really difficult moment—the moment of incredulosity and revolt—is that in which it is disclosed with suddenness that Wilhelmina has married the ex-groom. We feel that she has been so good as to do this in order that the dramatist may be supplied with an effective weapon wherewith to defend the interests of the ex-groom's niece, who is betrothed—much against the wishes of the young man's family—to the master of Avonthorpe Priory. Of course, there are women who fancy grooms; but they are generally women of a wide experience—tired already of husbands and of friends who are not grooms. Now Wilhelmina was a blameless spinster until she married the good-hearted but common and unattractive servant portrayed by Mr. Thorne with admirable skill. Still, let us pass this improbability by. Nothing is unlikely about these people except their marriage. There is a great deal of human nature in them, and most of their human nature permits to Mr. Thorne and to Miss Larkin opportunities for the very best of their stage effects. Mr. Thorne's are the most varied. He is, indeed, supplied with a part which affords the rare possibility of being thoroughly sympathetic at bottom, and on the surface effectively vulgar.

What strikes one first in "Heart of Hearts" is that the people are life-like. The story is interesting, and interesting from the beginning. The dialogue is terse and crisp; the good things are in their place, and their place is a large one. What strikes one later on is that the author is one of the few dramatic writers who take any account whatever of the tendencies of the day—of the things that are uppermost, though it may not be the things that are most important, in men's thoughts. The question of the relation of classes—raised only from the comic side by the marriage of Wilhelmina and the groom—is raised from the serious side by the betrothal of Harold to Lucy Robins, by the disapproval that occurrence meets with from Harold's mother, and the profound satisfaction with which it is greeted by the family doctor. The ordinary motives of romance and of farce being pretty well exhausted, it is time that an English dramatist addressed himself seriously to disputed questions of the day. We do not want a tract in the guise of a drama, but we do want dramas which do not stand wholly aloof from the graver interests of contemporary life; and both in "Saints and Sinners" and in "Heart of Hearts," Mr. Jones shows his inclination to do his part towards supplying them. To be in touch with the time—to be distinctly of their own generation—has been one of the chief characteristics of the better French

dramatists—of Augier and Dumas; and Mr. Jones need not be accused of partisanship in politics because he remembers that he is writing in 1887, and not in 1831.

Undoubtedly the piece profits much—though it does not gain everything—by an interpretation in regard to which we can scarcely say an unfavourable word, so distinguished is it for completeness, for uniformity of care and skill. Lady Clarissa—Harold's mother—is not a woman of altogether modern type; accordingly, she need not have an altogether contemporary manner. Were that exacted of her, we should begin to find fault with something in her behaviour to Lucy, as Miss Leclercq represents it. But the pride, the indecision, the fondness, the womanliness, take them *en bloc*, they do make something that is real: something, even, that is engaging. Real, too, if a little over-emphasised, is the spiteful Miss Latimer, played with courageous disagreeableness by Miss Gertrude Warden. To Miss Larkin, with her familiar and excessive modesty, her sentimentality, her spasm, the kind of praise she always earns has already been given. Miss Kate Rorke, as Lucy, is seen to singular advantage. One expects from this now favourite representative of the heroine of romance an appearance that is elegant and a performance that is more than painstaking; but one may possibly have been unprepared for the large measure of art and feeling displayed by Miss Kate Rorke in Lucy. The part gives many opportunities, and Miss Kate Rorke is strongest, and has occasion to be strongest, in the second act; but her expression as she enters, in the first, strikes that note of absorption in the situation and the character which is maintained without a break to the end. Mr. Thorne, with his admirable alternations of humour and earnestness, has had our tribute above. Mr. Leonard Boyne is manly and agreeable as the lover. Mr. Frederick Thorne is a country doctor—simple of manner, shrewd of judgment. Mr. Gilbert Farquhar is at least entertaining as a courtly and affected guest. And Mr. Royce Carleton is Lucy's unworthy, but not unappreciative, parent. The whole production is one which a large public—and among them the best students of the stage—will justifiably enjoy.

FREDERICK WEDMORE.

MUSIC.

RECENT CONCERTS.

LAST Saturday the Crystal Palace concert commenced with the "Dead March," in memory of Sir George Macfarren, whose remains were, on that afternoon, being consigned to their last resting-place. The programme contained an interesting novelty—a concert overture entitled "Land of the Mountain and the Flood," by Mr. Hamish MacCunn, one of the late scholars of the Royal College of Music. It is a work of considerable promise. The composer seems, like Mendelssohn, to have been impressed by the romantic scenery of Scotland, his native land, and he has endeavoured to record those impressions in tones. Mr. MacCunn possesses imagination, and his college training enables him to express his ideas in a clear and, at times, forcible manner. The overture, admirably played, was received with unusual enthusiasm, and the composer had to mount the platform and bow his thanks. Beeth-

oven's Violin Concerto was performed by M. César Thompson, professor at the Conservatoire at Liège. He is a good sound player; but there was a lack of mental strength in his rendering of Beethoven's master-piece, and at times a certain straining after effect which robbed the music of its majesty. We fancy M. Thompson would have been heard to better advantage in Max Bruch's G minor concerto, which, we believe, he was first announced to play. The programme included Mendelssohn's "Italian" Symphony, Dvorák's "Scherzo Capriccioso," and some songs sung by Miss Belle Cole.

Master Josef Hoffmann gave a pianoforte recital at St. James's Hall on Monday afternoon. The interest in this youthful prodigy has by no means diminished. Some days before the concert every seat in the hall was sold. He is on the eve of departure for America, and there is no knowing when he will return, or whether he will return at all. How many prodigies have appeared for a season, and then vanished for ever! Little Hoffmann played Mozart's plaintive Rondo in A minor with rare delicacy and beauty of tone. This was followed by a "Hoffmann" selection including "Reminiscences of Beethoven, Schumann and Chopin," composed, it is stated, at the age of seven years. If not very wonderful, they serve to show a musical organisation. An improvisation, too, on a theme from one of Dussek's sonatas was more calculated to astonish the public than to interest musicians. The programme included some Chopin pieces. The little boy also played, with his father, Saint-Saens's clever variations for two pianos on a Beethoven theme, and an arrangement of Weber's "Invitation." A good afternoon's work for a child of ten; and we can only repeat our hopes that the excitement and strain connected with such performances may not be hurtful to him in later life.

Mdlle. Janotha, after an absence of several years, reappeared at the Popular Concerts last Saturday afternoon, playing Schumann's "Carnaval." She appeared again on the following Monday, choosing for her solo Mendelssohn's "Variations Sérieuses." Some of them were effectively rendered, but most were given with exaggerated sentiment. For an encore Mdlle. Janotha played a modern piece which suited her well, but was scarcely the right style of music for these classical concerts. Mdlle. Janotha took part besides in Schumann's Pianoforte Quartett in E flat; and, though she interpreted it in an intelligent and able manner, there were jerky moments, and the tone was by no means so subdued and dreamy as one could have wished. She was ably supported by Mdlme. Norman-Néruda, M. Hollander, and Signor Piatti. Mdlme. Néruda played as solo Corelli's Sonata in D. Mr. Herbert Thorndike sang in an expressive manner a charmingly simple song of Haydn's, entitled "The Dream," and in the second part of the programme two songs of M. V. White. The Hoffmann recital in the afternoon, the wet weather, and the not very attractive programme, may suffice to account for the moderate attendance.

J. S. SHEDLOCK.

MUSIC NOTES.

THE cantata, "Narcissus," on which Mr. H. F. Jones and Mr. S. Butler have been for some time engaged, is being engraved, and will be published in vocal score by Messrs. Weekes & Co. during the spring of 1888.

DELICIOUS PRESERVE.—The most attractive of all preserves is NONELLA MARRALADE, made from the celebrated Kent Morella Cherry. The stones being extracted, double weight of fruit is given. Sold in 1 lb. pots by grocers, &c. Makers—THOMAS GRANT & SONS, Maidstone and 46, Gresham-street, E.C.

NOW READY.

PHILIP MOLESWORTH, and other Poems

By MRS. FREDERICK PRIDEAUX,

Author of "Claudia" and "The Nine Days' Queen."

Crown 8vo, cloth, 6s.

"The whole of this little idyll ('Ancestry') is very charmingly painted."—*Spectator*.
"It is only the autobiography of a plain English gentleman, but told so naturally, with such human touches and occasional flashes of wit, as to make it better worth studying than half the prose novels of to-day..... Mrs. Prideaux may be congratulated on possessing a true sense of humour: the 'Drama in Camera Obscura' is as funny as anything we have read for some time."—*Graphic*.

NEW NOVEL AT ALL THE LIBRARIES.

MOHAMMED BENANI:

A Story of To-day.

1 vol., demy 8vo, cloth, 10s. 6d.

".....It would be hard to say whether the fact or the fiction is more effectively presented. The story is well told, and keeps the attention fixed throughout."—*Athenaeum*.
".....The story runs a spirited course, while each incident in itself seems perfectly possible. The picture of the polyglot society of Tangier has some vivid and humorous touches."—*St. James's Gazette*.
"The book is full of interest. The author possesses a charming style, and never allows his story to drag."—*Literary World*.
".....It deserves a hearty reception."—*Literary World*.
Scotmas.

LONDON: SAMPSON LOW, MARSTON, SEARLE, & RIVINGTON,
ST. DUNSTON'S HOUSE, FETTER LANE.

MRS. SPENDER'S NEW NOVEL.

Now ready, at all Libraries, in 3 vols.

HER BROTHER'S KEEPER.

By Mrs. JOHN KENT SPENDER,

Author of "Mr. Nobody," "Trust Me," &c.

"This story is as good as anything this clever author has produced, and should win many readers."—*Scotmas*.
"There is much that is worthy in this story, which is bright and cheerful."—*Daily Telegraph*.
"Mrs. Spender is a clever and experienced novelist, who may always be trusted not to produce indifferent work."—*Morning Post*.

LONDON: SPENCER BLACKETT (Successor to J. & B. MAXWELL), 35, ST. BRIDE STREET.

AT ALL THE LIBRARIES, AND OF ALL BOOKSELLERS.

In crown 8vo, handsome cloth, price 5s.

TWO NORTH-COUNTRY MAIDS:

AN EVERY-DAY STORY.

By MABEL WETHERAL.

"Simple and unpretentious realism is the most notable feature of 'Two North-Country Maids.' There is power of realising the lights and shades of feminine character, and the effects of one strong nature upon others that are weaker."—*Academy*.

"Dainty simplicity and charm."—*Literary World*.

"Drawn by one apparently to the manner born."—*Morning Post*.

The History of the Second Queen's Royal Regiment, now the Queen's (Royal West Surrey) Regiment. By Lieut.-Col. John Davis. Vol. I.—The English Occupation of Tangiers from 1661 to 1684. (Bentley.)

At a period when a plenitude of nonsense is appearing in print regarding Morocco and the Moors, this laborious contribution to Anglo-African history deserves more attention than, we fear, it will obtain. For, under the modest guise of a history of the regiment the militia battalion of which he commands, Col. Davis has written for the first time an admirable version of the strange tale of how for twenty-three years the English held Tangier, or as he prefers to call it (*more Britannico*), "Tangiers."

On the marriage of Charles II. with Catherine of Braganza, Tangier, which for nearly two centuries had been a fief of Portugal, came to Great Britain with Bombay and a great many pieces of eight as the dowry of the young queen. The Tangier Regiment was raised to garrison the new possession; and there it remained fighting, drinking, and dying until in 1684 we evacuated the place. Then, commanded by the redoubtable Col. Kirk, the last governor of Tangier, the "Lambs" returned home and did doughty deeds at Sedgemoor—and, under the successive names of the "Queen Dowager's," the "Royal," the "Princess of Wales's Own," the "Queen's Own," the "Queen's Second Regiment of Foot," and its present title on many another hard fought field. But with these services we have no concern. Col. Davis reserves them for his next three volumes, the present being occupied solely with their proceedings in Tangier.

Hitherto, our sources of information regarding this episode in Carolinian history have been rather meagre. Pepys, Teonge, and half-a-dozen contemporary pamphlets have formed the principal sources of the inspiration of former historians. Col. Davis has, however, not only consulted the greater part of the printed documents (two pamphlets only having escaped him); but he appears to have diligently ransacked the Tangiers papers in the Public Record Office, and he has been still more fortunate in gaining access to the private correspondence of Lord Dartmouth, who played so great a part in the affairs of which this volume treats. He has also reproduced in autotype several of the pictures which Stoop painted at the time, the unpublished plans of the city and fortifications which are preserved in the Queen's library at Windsor, and several of the now rare engravings of Hollar, who, it is well known, was sent to make drawings for the Tangiers Committee. The result is a treatise which

contains ample materials for arriving at an opinion regarding the events of the twenty-three years over which its 322 pages extend. Minutes and orders, rolls of officers and lists of ships, detailed accounts of the "establishment," estimates of the contractors for building the Mole and other public works—all are given with the utmost care, and connected with a narrative of current events.

Col. Davis has consequently not aimed at a book for popular reading, and has preferred to let the world judge for itself rather than make their opinions for them by a few sweeping generalisation, the fallacy of which is hidden in a froth of agreeable verbiage. Possibly, however, when his work goes into a second edition (a distinction which it well deserves at the hands of those who can appreciate a solid piece of research) he may think proper to relegate some of the statistical matter to the appendix, and condense the rest in order to make room for the Tangier reminiscences, which are sure to pour in upon him when old family papers are searched for the purpose. Indeed, the chief fault we can find in Col. Davis's book is that he vouchsafes so few particulars regarding the social life of "Tingis Britannica," with its civil and military administrations, its mayor and corporation, and its all-abounding profligacy. A more extended table of contents, or even an index, would also have been a useful aid to the miner after his wealth of facts; and, had he thought fit to enter with some fulness into contemporary Marroquin history and to reproduce Ogilby's plan of Tangier and compare it with the modern town, he might have still further added to the value of his volume. These are, however, trifles, and hardly detract from the merits of as honest a labour of love as has ever come before us. Amid such a plethora of details, comment less bulky than the book itself is difficult to make. Any single chapter—any page, indeed—contains the materials for a long review. Yet it is seldom that Col. Davis is in error, though probably here and there the civilian might wish for something of more human interest than the roster of forgotten heroes. This, however, is unreasonable. The author is a soldier, and his book is pre-eminently a military history; and if the unwarlike student tires of those ditches and curtains, and ravelins and demi-lunes, and horn-works and palisades, in which the soul of Uncle Toby took delight, that is no fault of Col. Davis. He is recounting the tale of the Tangier Regiment, not writing a history of Tangier town.

We do not gather from his pages whether the author has any special knowledge of Tangier. At all events, he does not endeavour to trace the site of the English forts, which were blown up when the place was evacuated. About two years ago, at my request, Capt. Warren, of the Royal Navy, attempted to do so with a copy of Ogilby's plan before him, and came to the conclusion that almost every trace of them had vanished. The sites of some, indeed, are built over, the Spanish minister's house now covering the locality of Fort Charles. The Moors used the stones for reconstructing their houses, though the quarry out of which the material for the Mole was hewn can still be seen. The remains of the old Mole still shows its

back above water at low tides; and the last time I disembarked at Tangier we had to land on it. Forty years ago a rusty English rapier was dug out of the sand hard by; and the "Emjahadeen," or Warriors' Field, above the river Boubana, where a battle was fought between the Moors and the English, is still dotted with the tombs of the faithful who fell. But in vain do we try to find a single grave of an English soldier. The garrison in 1674-5 cost £57,200, and the entire expense of Tangier during our occupation was £1,600,000, or more than that of all the rest of the English army. From a roll on p. 108 we learn that the pay of a lieutenant-colonel was 7s. per diem, that of a captain 8s., and that of a major only 5s. The "manister" (chaplain) was paid 10s. per diem, the "phisitian" 15s., and the "chirurgion" 4s., while 3d. a day was the sole emolument of a private soldier. Among the list of officers we recognise the names of some men who afterwards rose into fame. Strange enough, that of John Churchill does not appear, though it is almost certain that in his youth Marlborough served in Tangier. The frivolous reader may also feel that there is a lack of propriety in that of Rittmeister Dugald Dalgetty being absent, and we fail to notice any reference to the fact that one of the first public employments offered to Wren was to design the defences of Tangier. Peculation was rife, and abuses of every description rampant. The profligacy of the place was a scandal even to Mr. Pepys, who superintended the evacuation; and a will is extant in which the Recorder left an annuity to his servant, on the condition that he never married a woman of Tangier, or one who had ever been there. "It is a place of the world," writes that severe moralist the President of the Royal Society, and Secretary of the Admiralty to Charles II., "I would last send a young man to." Discipline was lax, duels common, riot frequent, and drunkenness scarcely regarded as a vice; mutinies were not infrequent, desertions to the enemy a sore trouble, and squabbles between the civil and military without end. When Sir Palmes Fairborne took command he relieved the guard at seven o'clock in the morning instead of in the afternoon, "in order to prevent the soldiers getting drunk before parade," and so heavily was the men's pay in arrears that constant troubles were caused by their selling their clothes. Yet "Kirk's Lambs" fought doughtily; and in spite of the hot summer, the monotony of their lives, their poor pay, their bad food, and their dissolute lives, carried themselves like the tipsy Paladins they were. All this Col. Davis affords us ample facts to prove.

Regarding the cause of the evacuation of Tangier he seems to follow Macaulay, who attributes this to the unhealthiness of the place and to the fear that it was becoming a nest of Popish soldiers. The invalids who hurry to this African sanatorium in winter may smile at the first reason, while the second rests on no better basis than a bigoted speech or two in Parliament. In reality, the place disappointed the government, since the Moors made it hard to hold, and the profits from it were *nil*. It was a hot-bed of corruption, a sink for money which the king wanted for other purposes. Bitterly though several far-sighted politicians regretted the step, the

majority wished nothing better than to get clear of a town which added little to our power, and the possession of which, instead of increasing our trade with Barbary, actually diminished it by one half. The evacuation of Tangier led to the capture of Gibraltar, though there are strategists who still affirm that with the Moorish town in the hands of an enemy the Spanish fortress could not be held. On this and a score of other particulars it would be easy to enlarge, did space permit. One point, however, may be touched upon, and that is the condition in which we left Tangier. The usual idea is—and Col. Davis seems to have adopted it—that only the Mole and the forts were blown up by mines, one of which exploded after the Moors poured into the place, killing several of them. In reality, the place was to all intents and purposes destroyed, and the inhabitants compensated for their losses. Lord Dartmouth's instructions were to that effect; and, indeed, from the position of the forts, it is quite impossible that any other result could have followed. Part of the south-eastern wall may, perhaps, date from the period of our occupation, and it is certain that some portions of the prison are of Portuguese origin. It is also not unlikely that the current tradition as to the shoeing "soko" close to the landward gate being the old Outer Guard may be well founded. But, if a view of the town as it existed during our occupation is compared with modern Tangier, it will be seen that the place has been transformed. The main streets are the same; but not a building from old times has been left. In a view of Hollar's which, with some other Tangier documents, came to me from the late Charles Kirkpatrick Sharpe, the famous virtuoso, the houses all have high pitched roofs; and in a Dutch water-colour sketch of the same date, which passed into my library from that of the late Heer Posthumus, of Amsterdam, the place looks far more Portuguese than Moorish, while it must be remembered that we erected a cathedral and a host of other buildings. And here we may ask what has become of the church plate which was sent to "Godsherge [?] Chapel, Portsmouth, lately rebuilt by his majesty"? Did it ever reach that goal, or was it, like so much other public property, annexed? What befel Tangier after we evacuated it? For a long period its history is dim, though we know from a narrative before me that in 1745 it had again become a nest of piracy, Gibraltar notwithstanding, Capt. Veale and his crew being in that year sold into slavery.

These particulars are all worth extracting; and I cannot conceive a more useful pastime for an intellectual visitor to Tangier than the study of the modern town with Col. Davis's book in hand. It may prove almost as entertaining as limning the place from M. Bruzard's terrace, and quite as instructive as bawling after a boar on the Plains of Awara.

ROBERT BROWN.

The Sentence: a Drama. By Augusta Webster. (Fisher Unwin.)

By such of her previous works as the bright and breezy *Disguises* and the intense and high-pitched *In a Day*, Mrs. Webster has already achieved a foremost place among the

poetical dramatists of our time, and her reputation will not lose by the issue of the present volume. The scene of this drama is laid in Rome, in the early days of Caligula's rule; and this emperor is one of its main characters. Its subject is the loves of Stello, a Roman knight, and Aeonina, a Roman widow; the death of Laelia, the wife of Stello; and the vengeance, terribly elaborate in its circumstantial completeness, wrought by Caligula upon the guilty pair.

The play opens in the house of Stello, who, years before, had wedded the loving Laelia, and raised his fortunes through the influence of her powerful house. But his affections have proved errant, have fixed themselves with hopeless intensity upon the stately and ambitious Aeonina, who will yield to nothing short of legalised love. Stello, disclosing to his kinsman Niger his plan to put away his wife, and wed her, after the corrupt fashion of the time, to the young and rich Metellus, is met by the other's prompt rejoinder that the thing would be fatal—death to her and ruin to himself; and then follow scenes of passionate fondness between the lovers, grown wild with studied concealment, though their self-conscious bearing and the pale cheeks and moist eyes of the uncomplaining Laelia disclose their secret to the wife's jealous friends.

The second act carries us to Baiae, where Stello and Laelia are guests in Aeonina's villa. Here the lovers continue their stolen meetings, watched all the while by the emperor, who had been Laelia's companion in childhood, and who still retains for her a pure regard, to whom she is as

"a pleasant tenderness

One comes, in fire of noon too, by a rill,
A favourite shelter where the pine scent's fresh,
No memories in it but of cool sweet stillness:
My sense of her makes that in my throbbing life.
I am calmer, Memnon, surer of myself,
Because this kindness from the untroubled times,
This link of me to me, can hold within me."

A curt command to come to Baiae reaches the wife's mother and brothers from the emperor, who has proclaimed her husband's perfidy to Laelia, and offered to set her beside him upon the imperial throne and to visit Stello with the direst punishment—suggestions which she repels with horror. Then comes a tragic scene where the lovers, being met in a sequestered spot, are surprised by Laelia; and, driven to extremity and sick of suppression and concealment, they both proclaim their love, and disclose that they have that very moment been plotting her death by poison. Overwhelmed by their words, which render doubt and charity no longer possible, Laelia rushes from them and flings herself from a cliff into the sea; and, when a popular tumult follows her death, and her friends incite the fisherfolk to seize the lovers as her murderers, Caligula appears and quells the uproar, affirming that he had himself seen the woman fall from the rock, by misadventure, as she stretched beyond its verge to pluck a flower.

But the truth of Laelia's suicide is well-known to the emperor. He bides his time, and matures the vengeance which falls in the final scene upon the guilty pair as they sit at their wedding feast. On the very eve of the marriage, he tempts Aeonina through that old love of power which used to

"thrill her woman's heart" and was once its dominant passion. He pledges himself—but in phrases subtly misleading—to make her his imperial partner; and, as she yields, he half-wins, half-terrifies her into poisoning the bridegroom that she may secure her own perfidious safety. The drowsy potion does its work. Seized with sudden faintness Stello quits the banquet-hall, only to fall fainting in the adjacent colonnade; and his bride follows and bends over him, soothing him that he may at least die in peace. At this point Caligula joins them, appearing like a very mocking fiend to reveal the woman's treachery; and—as the poisoned man, frantic at her confession of perfidy and crime, rushes upon her—he holds ready the dagger with which she stabs her dying lover. Then tearing aside the curtain he discloses the pair to the terrified wedding-guests, and proclaims their shame:

"They carried their loves

(The baseness of it!) to Baiae, to Aeonina's;
And Laelia with them—trusting cheated guest:
There closed her in slow snaky coils, till they
stung.

They did not kill her, no; though that they
planned:

They found a safer way, drove her to madness,
Set horror and grief to scare her to her death,
Then, having her dead, they thought their
secret safe.

But, no, I, Caesar, knew. I heard, saw,
sentenced:

And, lo the lovers now!"

The drama, of whose plot this is a rough and, necessarily, an inadequate sketch, is wrought out with both subtlety and vigour. It possesses concentration, that prime dramatic virtue. Though its pages show passages quotable enough in isolation for peculiar force or felicity, these are no "fair divided excellences," but "each part with each hath private amity," and all parts of the work have a united bearing. Its rills of dialogue never linger idly in windings of mere aimless poetic beauty, but flow with direct and ever-deepening force of general impression into the main tide of the story. Its chief characters stand clear in outline to our perception, projected with telling relief against the histrionic canvas. Stello, who is enfeebled by guilt, the spice of goodness that remains in him present merely for his torture and to make him weak as a quivering leaf, who halts, momentarily at least, between pity and love that must be pitiless, is contrasted with the self-contained and resolute figure of the slim Aeonina with "her perfectness, her soft imperious calm," "her marble smile," who speeds with surer footstep towards her chosen goal, and whose overmastering love of power, her earliest and her strongest love, works in the end her ruin. The character of Laelia is a slighter, but still a sufficient and sympathetic study. The emperor, who appears as a kind of demented, but omnipotent *Deus ex machina* of the play, drunk with "the accident of empire," revolting even when he is avenging crime, can hardly be accepted as the historical Caligula; but the character, as the dramatist paints it, is not an altogether incredible or unimaginable one, and its strangest traits are suggested by authentically recorded facts. Certainly the figure serves an excellent scenic use in the drama, its presence and action rendering possible the singular spectacular completeness of the *dénouement* in the final scene.

The diction of the play is, for the most part, clear, flowing, and forcible; though perhaps the piece contains no passages of such sustained eloquence as Klydona's address to the gods at p. 39 of the author's volume of 1882, or her speech to Myron at its 65th page. The present book, it may be noticed in passing, has a few harsh lines, over-syllabled or under-syllabled, like that terrible one, the last at p. 6; and a few passages needlessly elliptical in their construction, which in any future edition of the drama should without fail be revised and recast.

J. M. Gray.

Essays on Some Modern Guides of English Thought in Matters of Faith. By Richard Holt Hutton. (Macmillan.)

FIVE "modern guides" are considered in the present volume. Their lives and writings are discussed in more or less detail; but, as the title partly indicates, the author's particular object is to consider their relation to the Christian ideal. Carlyle, Newman, Matthew Arnold, and George Eliot are good representatives of various phases of modern thought; while in Frederick Denison Maurice Mr. Hutton finds the near approach to his ideal Christian teacher. No man holds opinions more definitely than Mr. Hutton, but he takes broad views and readily perceives even alight and distant tendencies to his standard of perfection. The thinkers named are assuredly, in many ways, very far apart; but points of resemblance and a certain similarity of aim, however much their paths diverge, may be discovered in them all. This Mr. Hutton, with characteristic tolerance, does not fail to see.

If, from his particular point of view, he does less than justice to any of these teachers, it is to Mr. Matthew Arnold. No doubt Mr. Arnold has an irritating way with him. He seldom says an unpleasant thing pleasantly, and not infrequently he says pleasant things unpleasantly. This is especially the case when he discusses religion. It is, therefore, not surprising that, on a subject which Mr. Hutton has so deeply at heart and about which he himself always writes with such absolute sincerity and earnestness, Mr. Arnold's flippant manner should vex him. I say flippant manner, because I am well assured that on this subject of religion Mr. Arnold, as well as Mr. Hutton, is profoundly in earnest. This is sufficiently evident in his poetry; but in *Literature and Dogma* the truth may easily be missed, and, if it is missed, Mr. Arnold is very likely to be misapprehended in the way, as I think, Mr. Hutton has misapprehended him. "I heartily admit that much of Mr. Arnold's spirit is distinctively Christian," writes Mr. Hutton; but, later on, after quoting from *Literature and Dogma*, he makes some comments to which I take exception. This is the quotation:

"The breaking of the sway of what is commonly called *one's self*, ceasing our concern with it and leaving it to perish, is not, he [Jesus Christ] said, being thwarted or crossed, but *living*. And the proof of this is that it has the characters of life in the highest degree—the sense of going right, hitting the mark, succeeding. That is, it has the characters of *happiness*; and happiness is, for Israel, the

same thing as having the eternal with us, seeing the salvation of God."

Mr. Hutton comments thus:

"Now, surely it is hardly justifiable for Mr. Arnold in describing the 'Secret of Jesus' to substitute for the words of Jesus words of his own so very different in tone and meaning from those in which that secret was first disclosed. Where does our Lord even say that the evidence of spiritual life is in the consciousness of *hitting the mark, of succeeding*? If we are to take our Lord's secret, let us take it in His own language, not in Mr. Arnold's. Turn then to His own language and what do we find? We find 'Blessed are the pure in heart for they shall see God.' Does that mean the same thing as 'Blessed are the pure in heart for they shall hit the mark, they shall succeed?' Again, 'Blessed are the peacemakers for they shall be called the children of God.' Does that mean the same as 'Blessed are the peacemakers for they shall attain true success?' 'Blessed are ye when men shall revile you and persecute you and shall say all manner of evil against you, falsely, for my sake. Rejoice and be exceeding glad, for great is your reward in heaven.' Does that promise mean the same as 'the more you are persecuted and maligned, the greater is your reward on earth, no matter whether there be any world beyond this or not?' Yet that is what Mr. Arnold tries to make it mean in order to reconcile his interpretation of the 'Secret of Jesus' with the actual words of Jesus."

This is a travesty. "It is hardly justifiable," says Mr. Hutton, "for Mr. Arnold to substitute for the words of Jesus words of his own so very different in tone and meaning"; but Mr. Hutton himself, immediately after, does much the same thing with Mr. Arnold. The very section of *Literature and Dogma* from which the quotation is made is full of passages which show in what sense "success" and "hitting the mark" are used by Mr. Arnold. Will not Mr. Hutton admit that when Jesus said, "He that loveth his life shall lose it, and he that hateth his life in this world shall keep it unto life eternal," he was affirming that *true success* lies in self-renunciation? And, whether Mr. Arnold's "tone" (which, when he talks of "hitting the mark," is slangy) be approved or not, is not the following a fair indication of what he means by success?—

"Never, certainly, was the joy which in self-renouncement underlies the pain, so brought out, as when Jesus boldly called the suppression of our first impulses and current thoughts: life, real life, eternal life. So that Jesus not only saw this great necessary truth of there being, as Aristotle says, in human nature a part to rule and a part to be ruled; he saw it so thoroughly, that he saw through the suffering at its surface, to the joy at its centre, filled it with promise and hope, and made it infinitely attractive. As Israel, therefore, is the people of righteousness; because, though others have perceived the importance of righteousness, Israel, above everyone, perceived the *happiness* of it, so self-renouncement, the main factor in conduct or righteousness, is 'the secret of Jesus,' because, though others have seen that it was necessary, Jesus, above everyone, saw that it was *peace, joy, life*" (*Literature and Dogma*, pp. 207-8).

Mr. Hutton values Matthew Arnold the poet far more highly than he values Matthew Arnold the interpreter of Christianity. In passing from the one to the other he says he is passing from "a writer whose curious

earnestness and ability in attempting the impossible will soon, I believe, be a mere curiosity of literature to one of the most considerable of English poets, whose place will probably be above any poet of the eighteenth century excepting Burns." Then follows a fine piece of literary criticism. Mr. Hutton's conclusion is that, though the poet and the thinker in Mr. Arnold are "absolutely at one in their conscious teaching, the poet in him helps us to rebel against the thinker, and to encourage us to believe that the 'stream of tendency,' which bears him up with such elastic and patient strength is not blind, is not cold, and is not dumb." I must confess that my reading of Mr. Arnold did not give me the impression that the "Eternal, not ourselves," was blind or cold or dumb. Doubtless much depends on the circumstance under which the first acquaintance with *Literature and Dogma* is made.

The essay on Newman commences with a fine and instructive comparison between "the two great Oxford thinkers"—Newman, "far and away the most characteristic and influential Oxonian of the second quarter of this century"; and Arnold, "the most characteristic and influential Oxonian of its third quarter." Of Newman Mr. Hutton speaks with warm appreciation. He combats the notion that "his life has been a continuous struggle against scepticism." He holds rather that "the Roman Catholic in Newman is as deep as his *thought*, the High Churchman as deep as his *temperament*, and the Christian as deep as his *character*." Certainly I agree with Mr. Hutton that Newman's life was not a continuous struggle against scepticism, for I think the words Newman applied to Thomas Scott should be applied to himself—"he followed truth wherever it led him." He was a seeker after truth. Using the word in its proper sense he was a free-thinker—a fearless inquirer into doctrines and ideas. Nor did he cease to think for himself in 1846. His submission to the Roman Church meant only that for questions too high or deep for his solution he had found an authority he could trust. But for all questions not too high and deep, he was entitled, if he was not in duty bound, to seek a solution. "I am the last man to say," wrote Newman, "that the claims of conscience are not paramount." In answering Mr. Gladstone's pamphlet on the Vatican decrees, he has stated clearly the duty of Catholics to the Church and to conscience. He, at least, has not smothered his conscience. True, he says, "unless a man is able to say to himself, as in the presence of God, that he must not and dare not act upon the papal injunction, he is bound to obey it, and would commit a great sin in disobeying it." Yet, if he is able to thus declare the impossibility of obedience, he is as much bound to disobey as, otherwise, he would be bound to obey:

"If the Pope told the English bishops to order their priests to stir themselves energetically in favour of teetotalism, and a particular priest was fully persuaded that abstinence from wine, &c., was practically a Gnostic error, and, therefore, felt he could not so exert himself without sin . . . that priest . . . would commit a sin *hic et nunc* if he obeyed the Pope, whether he was right or wrong in his opinion."

So recently as 1884, in his article on "Inspiration" in the *Nineteenth Century*,

Newman inquired, "What is of obligation for a Catholic to believe concerning the inspiration of the canonical Scriptures?" and the conclusion he reached was that, while two great councils of the Church have decided that the Scriptures are inspired, and inspired throughout, "they are not so inspired by an immediately Divine act, but through the instrumentality of inspired men"; and this being so "they have a human side which manifests itself in language, style, tone of thought, character, intellectual peculiarities, and such infirmities, not sinful, as belong to our nature, and which in unimportant matters may issue in what, in doctrinal definitions, is called an *obiter dictum*." Surely all this reveals the free-thinker!

Of the other portions of the volume I have not left myself space to write. The essay on Carlyle is suggestive and interesting; that on "George Eliot as author" is a critical study in Mr. Hutton's best style; and the concluding essay on Maurice is a nobly sympathetic tribute to a thinker and teacher who, manifestly, has done much to influence Mr. Hutton's own thought and teaching. Few persons, I think, have understood Mr. Maurice so well as Mr. Hutton understands him.

WALTER LEWIN.

William Laud, sometime Archbishop of Canterbury: a Study. By Arthur Christopher Benson. (Kegan Paul, Trench & Co.)

It is impossible to read Mr. Benson's work without feeling that, unsatisfactory as his present venture is, he might write a much better book if he would only give himself the necessary trouble. When he is sure of his facts, he knows what to do with them; and, as might be expected, this is especially the case when he has to deal with Laud in his relations with Lambeth. Unfortunately Mr. Benson has not laid the foundations of his knowledge deep enough to enable them to bear the superstructure which he has built upon them. We look with suspicion upon a writer who makes a special point of the attack of the House of Commons upon Montague, and yet does not know the title of Montague's *New Gag for an Old Goose*, or of the book which it was intended to answer, and who is hopelessly muddled over the events of Montague's life. The suspicion deepens when we find Mr. Benson expressing an opinion that there is a deep mystery in a certain passage in a letter of Laud to Wentworth, which would be easily intelligible if Mr. Benson had been sufficiently acquainted with Laud's proceedings to bear in mind his quarrel with Windebank over the soap monopoly.

Perhaps, however, the most fatal passage in the book is the following:

"The next act of Chillingworth's life was a stirring one; he became convinced by the arguments of the Jesuit Fisher, whom Laud afterwards condescended to refute in a lengthy and nearly unreadable folio, that there was a want of continuity about the Protestant Church."

From this passage it may be gathered, in the first place, that Mr. Benson confuses the publication by Laud of his conference with Fisher, which took place in 1639, with the

actual refutation at the conference, which took place in 1622; and, in the second place, that he has either not read the book at all, or has read it to very little purpose. Now it is not too much to say that, however distasteful to the modern mind the conference with Fisher may be, a knowledge of it is indispensable to the formation of a sound judgment of Laud's theological and ecclesiastical position. Mr. Wakeman, for instance, in the little work which he has recently published on *The Church and the Puritans*, devotes four whole pages to an examination of its principles, and by so doing has been able to form an estimate of Laud's life and character which, though it is no doubt open to criticism, is at all events solidly built up.

It is a pity to have to say all this. There are plenty of writers in the world who could never, by any possibility, produce good work. Mr. Benson could do it, if he would not approach a difficult task in so light-hearted a fashion.

SAMUEL R. GARDINER.

Educational Ends. By Sophie Bryant, D.Sc. (Longmans.)

Writers of books on the theory of education are liable to two opposite errors: the best are peculiarly prone to treat the subject as if it were an isolated field of human activity cultivable by the sole aid of a precise psychology; and the worst seem sometimes to think that a great deal of enthusiasm can effectually fill the place of intelligent and systematic observation. Mrs. Bryant's fascinating book errs in neither of these respects. Much was expected from the author's reputation and experience, and truly she has made a most notable contribution to current educational literature. The idea that inspires her throughout is not merely that the theory of education has an interest for all who educate, but that the ends of education are universal ends from the pursuit of which no reasonable and moral creature can be excused.

Everyone knows that the besetting educational sin of our time is to make education consist of the acquisition of so many facts, with little regard to the proper adjustment of the person to be educated to action and knowledge in general. No doubt the reason for this lies largely in the fact that this is a testing generation; and that we have found a tolerably satisfactory means of testing the one, while our best efforts give us no system of three, or even four, days' examination which shall enable us to distribute certificates and rewards for the other. The latter has to work itself out in the lifetime of the individual; for, though a man may be tested fairly for his academical degree, we are forbidden to call him happy—or wise—till he dies.

Mrs. Bryant sets forth the "educational end" in its unity to be the production of that "type of character in which truth is the outcome of all thought and good of all action." We are therefore invited to follow her into an inquiry into the process of the development of standard character to serve as an ideal end. As she admits, her scheme must needs include all the questions of psychology—and more. It includes of necessity some inquiry into the nature of essential goodness and truthness of character. Her book, there-

fore, falls naturally into two parts: the first dealing with ethical development, and the second with logical development; the one showing how ideal goodness, and the other how ideal wisdom, are built up, or, rather, grow. Thus the good and the wise, essentially one, are for practical purposes to be considered apart; and the separation which is supposed for the purposes of investigation is shown, when the threads are gathered up, to be impossible.

All this discussion, which might be made very technical, and might easily discourage the reader untrained in philosophical formulas, is treated by Mrs. Bryant with such lucidity and spirit as should make her book no less acceptable to the lay person than to those who regard the theory of education as a speculative problem of high technical importance. Her book is thus a compendium of practical philosophy. We begin with an examination of the educational ends in general, and this opens with a necessary caution. The educator must bring *insight*, like any other artist, to his work; perception of his purpose as a series of processes; and knowledge of his materials. Then we have to make the most and the best of the given person by stimulating and feeding him, so that all his energies may be directed to an ideal end accepted as right. The ethical question, of course, comes first. Self and the world are to be reconciled by the transformation of others' claims into personal ideas of an end to be gained; and duty thus becomes freedom. Self and duty are gradually adjusted into virtue, to which end the question for the educator is "How can discipline be applied to one character by the will of another, such discipline as shall bring with it the conviction of duty?" True discipline must produce self-identification with the law. Now the principle of growth, as reflected in self-consciousness, is a certain longing for the new in life; intellectually an expectation, emotionally a desire, volitionally a purpose after new life. It is the educator's business to see that this longing has the right, not the wrong, food. Freedom must have an aim; "life faints without an object in life."

We are directed thus to social rather than personal ends; and we are to aim at, though not acquiesce in, a state of realised character, having before us always the idea of divine perfection. Virtue then can be defined as the characteristic of persons who are finding their perfection by the unwavering pursuit of those objects which further the perfection of the community; this is the good will, the growing point of life and character. Social virtue is shown to be the object and measure of moral devotion; the perfect community is necessary to the perfect character—a community of equal sacrifices and opportunities, equal efforts, and equal services.

On the intellectual side of the perfect character we begin, of course, with the unity of momentary consciousness—perception, the starting-point of intellectual life. For the educator the first sensibility to encourage is that of attention, the first mark of an intellect that is good; for the disposition to take passes at a certain point into the ability to find. The characteristic danger here is excess or defect of emotion, errors in feeling; hence the necessity for moderation in the number of claims made; no "cram" is tolerable, moral

or mental. The arrangement of experience is the next great division of Mrs. Bryant's subject; and then she treats of the permanent basis of experience, with a warning against the honey-combing of minds. Chapter vii., the subject of which is the sound intellect set on truth, summarises results and sets forth the intellectual excellences which are the immediate aims of education.

Within the limits of a notice necessarily short it would be impossible to do justice to a book which, though written with remarkable fluency and interest, covers its ground so completely. The author makes due acknowledgment to previous writers, from whom she in no point seriously dissents; but her indebtedness to them does not deprive her of the merit of having thought out everything for herself from the beginning. Her book is full of encouragement and wise warnings for all who teach; and for those who do not it is useful as a summary of practical philosophy from the hands of a writer who is peculiarly well acquainted with philosophical theory, and has had practical experience of the best kind.

P. A. BARNETT.

Half a Century; or, Changes in Men and Manners. By Alex. J. Shand. (Blackwood.)

THIS is an unusually pleasant volume. The type is clear, the paper good, and the matter entertaining. Retrospects have in this Jubilee year been almost done to death; but Mr. Shand's book has not been made to order, nor is it a mere glorification of the age we live in. It is a contrast between things as they are and things as they were fifty years ago, drawn by a skilful hand, which has been occupied with its subject for a reasonable period. Some of the articles have appeared in the *Saturday Review*, and, in their present form, are certainly worthy of republication. "The rest," says Mr. Shand, "are new, if not original."

It is difficult within the limits at our command to do justice to the varied contents of the volume. When one looks at them, it is not surprising to find how large a space London occupies; for it is there that change has been busiest, and has had most material upon which to operate. Where London ends and where it begins no man can say. Its expansion is its most marvellous characteristic, and it is within the last half-century that it has been chiefly manifested. Suburban villages grow bigger and bigger, and urban boundaries are pushed outwards until the lines of limitation are lost, and the less is absorbed in the greater. London of to-day has swallowed up Kensington and Chelsea, and "merry" Islington and remote Hackney; but London of tomorrow will annex—if it has not already annexed—Norwood and Fulham and Hampstead, and even Croydon and Bromley. Little less bewildering are the changes that have taken place in "London proper." The Board of Works is ever at work.

"Diruit, aedificat, mutat quadrata rotundis."

The old historic sites have changed their features. Northumberland House has been improved off the face of the earth. The India House in Leadenhall Street is a memory of

the past. Even the Temple, though still tenanted by conservative lawyers, has gone through the inevitable process of reconstruction. The thief of fifty years ago would have some difficulty in finding his way to his old quarters in Seven Dials. And as the outward aspects of London life have changed so also have its sources of pleasure. Recreation of every sort is provided in almost every quarter. Fifty years ago "it may be said that the only entertainments for the working classes in London were the churches, the public-houses, and the gin-palaces." All of these, indeed, have increased (though not in equal ratio); but in addition to them we have theatres, circuses, concert halls, exhibitions, and galleries in such numbers as to perplex the pleasure seeker. Excursion trains, moreover, and suburban railways have brought the seashore, the down, and the forest so near London that the citizen (even if he be not a cyclist) can get relaxation and refreshment with trifling expenditure of time and money.

As to country life, that, too—Mr. Shand maintains—has expanded, and thereby lost much of its former dulness. Intercourse sharpens the wits, and the daily post and the frequent parcel of books and magazines destroy the old sense of isolation.

"The Lake poets had huddled themselves together like the sheep in their Cumberland snow-drifts, and they cramped the genius that might have done greater things in voluntary sequestration from the society of their contemporaries."

But, we think, they had one enjoyment which nowadays it is hard to purchase, namely, leisure for thought. Without desiring to revert to days in which the occasional visit of a pedlar or tax-gatherer alone broke the monotony of life, the country-folk may think that their reduced incomes would benefit by London being less accessible, and the temptations to spend money somewhat fewer.

For what Mr. Shand has to say about "The Old and the New Farmers," "The Old and the New Labourers," "The Old and the New Sportsmen," and other contrasts of men, manners, and places, we must refer our readers to the book itself, in which the chapters on Ireland are not the least interesting and valuable.

CHARLES J. ROBINSON.

NEW NOVELS.

One that Wins: the Story of a Holiday in Italy. By the author of "Whom Nature Leadeth" In 2 vols. (Fisher Unwin.)

In Exchange for a Soul. By Mary Linskill. In 3 vols. (Chatto & Windus.)

A Siege Baby; &c. By John Strange Winter. In 2 vols. (White.)

The Cossacks. By Count Tolstoi. (Vizetelly.)

A Village Tragedy. By Margaret L. Woods. (Bentley.)

Girl - Neighbours. By Sarah Tytler. (Blackie.)

Papa, Mamma, and Baby. By Gustave Droz. (Vizetelly.)

SOME three or four years ago novel readers had the opportunity of enjoying a new and very original story by an unknown author. *Whom Nature Leadeth* was a tanta-

lising book. Its pages were enlivened with genuine humour of the lighter kind, yet the reader felt each chapter to be a step downward towards an undescribed, unmentioned, yet inevitable, pit of darkness. At the conclusion one realised that the author must be wont to breakfast among the clouds, lunch on the commonplace earth, and spend the rest of the day in the gloomiest spot on the hither side of Hades. This Protean faculty gave a special charm to the story; but to the thoughtful and discriminating reader (for, if read at all, the book could not but allure the most indifferent mind from its cherished apathy) it probably occurred that the author's experience of life must have been vicarious or intuitive rather than individual. "Experience" and "life," it is true, are words of exasperating vagueness; both are weapons wherewith the elderly and foolish delight to destroy upstart and dangerous opinions, using them as the peasant whirls his flail in his threshing-floor—only that, unlike him, they winnow away the grain so that their precious chaff may be preserved. There are, however, conceptions of life, there are interpretations of experience, which bear the mark of immaturity amid the semblance of worldly wisdom as conspicuously as the leopard displays his spots. But in *One that Wins*, the new book by the author of *Whom Nature Leadeth*, there is nothing of this crudeness. To many the author will doubtless still seem worthy to be classed with the young dame described in *Lilliput Lovée* as "high-fantastical"; but the barbed shafts and the little gaily plumed arrows are no longer shot vehemently from behind a blank wall, but by an archer on a high ground delighting in perspicuity of judgment and certainty of aim. *One that Wins* is, notwithstanding its uninviting title, a brilliantly written and charming novel. There is a crispness and a delicacy in the style which would recommend even a less interesting, a less fascinating story. It is meant otherwise than disparagingly to say that, with the single exception of Oenone Evelyn, all the personages are more or less familiar acquaintances. We most of us know a Launcelot Sumner, we all know a Joe Hazzlit, a Sylvia, a Nelly Erskine, and a Mr. Erskine—and, above all, we all know a Mrs. Erskine. In reading this book, therefore, we are for the time being living in a world we well know. Every page is a corner round which we may stumble on some friend; every chapter a Regent Street or a Strand, wherein we are certain to encounter one or other of the individuals who please, interest, or bore us. Oenone is the most fascinating personage in the story. Beautiful, an artist of rare genius, unhappy, and with a "history," she wins the admiration of all men, and the love of those who dally too long with the magic of her glamour. Launcelot Sumner, the "hero" of the tale, loves her; and though she will have naught to say to his suit, she finds when it is too late that all the passion of her nature is thrall to him. Sumner, at first unwittingly, then defiantly, and finally with all his heart, loves another woman. In the ensuing conflict of the passions of distraught men and women lies the central idea of the author—the evolution of the higher life from the cruelty of circumstance and the

thralldom of irresponsible evil. It is the story of an idea as well as of "a holiday in Italy." In the end, all is well; though readers of the Mrs. Erskine type will infallibly scent impropriety in the absolute union in love of Mr. and Mrs. Launcelot Sumner and Oenone Evelyn. *One that Wins* cannot fail of popularity, if for nothing else than its humour and delicious irony. Some will see in it nothing more; others will welcome it as a striking and powerful story. Yet I cannot but think that the author of this novel and of *Whom Nature Leadeth* has but skirmished with his, or her, literary possibilities. Such redundancy of promise ought to result in a speedy harvest of rare quality.

There is always a satisfaction in turning from a work of promise, however brilliant, to one of definite accomplishment. In her new story Miss Linskill has foreseen everything, known absolutely all she had to say; and, in consequence, her narrative is well-rounded and complete. I have not read all Miss Linskill's books, but I am aware that the two which I know—*Between the Heather and the Northern Sea* and *The Haven under the Hill*—are considered her best. *In Exchange for a Soul* has much in common with those novels, but it has a dramatic force and artistic grip superior to anything therein. If the author were to select a general title for her stories she might appropriately adopt "Within Sound of the Sea." Of the sea, and northern life by the sea, she always writes well, and with strong human and natural insight. The novel under review deals throughout with the redemption of strong souls who, more or less unconsciously, continually walk by the verge of precipices. Love—sometimes love daring and militant, sometimes love baffled and blind—rescues sullen Hartas Theyn from evil and sloth, and by dark ways and bitter brings him to true manhood; love refines and ennoble the fisher-girl Barbara Burdas; love overcomes, separates, dares, fills the world with joy for Thorhilda Theyn and Damian Aldenmede. The author has never done anything to equal the redemption of Hartas Theyn; and though Thorhilda is a fine woman, she is commonplace and conventional compared with Barbara Burdas. Miss Linskill may or may not write a better story than *In Exchange for a Soul*, but if she give her readers one as good they will have reason to congratulate themselves. There is one point, however, on which, speaking critically, a protest should be made. There is a growing tendency to preach, literally to preach, in novels. Now a good sermon is all very well in its way, just as a lecture on the ichthyosaurus is excellent in its way; but persons interested in theological oratory and scientific disquisitions may be trusted to seek elsewhere than in novels for their delectation. Miss Linskill might be taken for a parson in disguise, so liberal is she with scriptural quotations, such largesse does she give of pulpit eloquence. Again, the dramatic church-scene, with the impressive preacher, the repentant sinner, and so forth, has been grievously overdone of late. Miss Linskill has not exactly imitated "Maxwell Gray"—the circumstances of her church-scene are different; yet I doubt if the last chapter in the second volume of *In Exchange for a Soul* would have been written but for a

certain famous scene in *The Silence of Dean Maitland*.

The two slim and widely-leaded volumes, by the popular author of *Boots's Baby*, comprise a baker's dozen of short, very short stories. They are excellent reading if, say, a couple be enjoyed at a sitting; but, as they are all turned out from very similar moulds, they are apt to become monotonous to the remorseless reader who peruses one after the other, from the Indian Mutiny tale, which gives its title to the collection, to "Like a Green Bay Tree," which comes in an unfatigued thirteenth and last. Of their kind they are capital stories, all full of military go, with quite the appropriate seasoning of military vulgarity. Admirable as light magazine articles, they were hardly, however, save for the benefit of the author's pocket, worth reprinting in volume form.

If for nothing else than the high and frequently expressed opinion of Russia's greatest novelist on its merits, English readers should welcome the admirable translation of Tolstoi's famous romance, *The Cossacks*. Whether or not one may wish to endorse the dictum of Tourgénéff, it is impossible not to admit, at least, that few more remarkable Russian tales have been written. No publishers have done better service of recent years than Messrs. Vizetelly & Co. with their excellent translations from Gogol, Lermontoff, Dostoiévsky, and Tolstoi—whereby a new world has been opened to English readers. It is a strange world, in truth; curious and remote in Gogol, savage and picturesque in Lermontoff, sombre and mean and terribly depressing in Dostoiévsky, brilliant, wearisome, fascinating, repellent, in Tolstoi. *The Cossacks* is a powerful tale of incident and character, less subtle than *Anna Karénina*, on a less ambitious scale than *War and Peace*; but in point of finish and realistic force, perhaps superior to either. The value of the volume is greatly enhanced by the famous and terribly realistic "Recollections of Sebastopol."

I have just spoken of the realism of the great Russian novelist; but nowhere in any book by Tolstoi, nor even in any by Dostoiévsky, is there realism more hopelessly depressing, because dealing with familiar facts, than in *A Village Tragedy*. There is no glimmer of romance, no faintest flash of the beauty of the world, in this sombre story, where every line is alive with truth. One feels that the Siberian mines where Dostoiévsky spent wretched years would be preferable to the mental stagnation and spiritual decay and death in this Oxfordshire village. No one could read this story with pleasure, few perhaps even with interest, powerfully and ably written as it is. But those who do read it are not likely thenceforth to speak of agricultural England as Arcadia.

Miss Sarah Tytler always writes pleasantly, but it seems to me as if in *Girl-Neighbours* she had written down too much. Girls nowadays do not like to be treated like nursery children. Her story, it is needless to say, is absolutely proper in sentiment and expression, and will doubtless be appreciated by very young and unsophisticated damsels.

Papa, Mamma, and Baby, on the other hand—a translation of Gustave Droz' famous

"parent's treasure"—is hardly a book for the aforesaid damsels. The English rendering is fairly good, though it has little of the brilliant—what shall I say?—touch-and-go-ness of the original. The phosphorescent lake is here, but not the illusive and momentary marsh-fires. The book has reached its 130th French edition. I shall be curious to see if it reach a second here.

WILLIAM SHARP.

CLASSICAL SCHOOL BOOKS.

The Knights of Aristophanes. Edited by W. W. Merry. (Clarendon Press.) This is a school edition, of the most approved modern style, consisting of two volumes in different coloured bindings, the first containing a short introduction and the text, the second, the Rector of Lincoln's notes on the whole play. Eton, we believe, first set the example of this practically useful plan, of a recognisable distinction between the lesson-book and the preparation-book. In no other way, perhaps, can the bad effect of good notes—viz., torpid preparation with astute glimpses during lesson-time—be met. As all readers, or, at any rate, all Oxonian readers, will expect, no element of the Aristophanic humour escapes the glance of Dr. Merry. Aristophanes has suffered more than any other writer by pedantic editing: by the determination that all his views shall be proved sound, all his jokes just, all his self-praise thoroughly deserved. The multifarious erudition and real though elephantine humour of Mitchell is terribly defaced by his *parti pris*. Cleon must be a corrupt bullying snob, Euripides an immoral radical, Pericles a cold, yet daring and bellicose innovator. Why? Because, like the little judge, Aristophanes had "got it down in his notes," and Mr. Mitchell had read them. The Rector of Lincoln, of course, brushes all this away. He sees at a glance that Aristophanes is *Punch*: not devoid of serious intent, he has not the least idea of consistently serious portraiture. What a comedy he would have written, could he have foreseen them, on the people who mistake him for a historian! Dr. Merry's little introduction is capital—just the thing to carry a clever boy into the heart of the *Knights*, without burdening him with disputable matter. With the notes in Part II. we have only one quarrel—that some of them seem superfluous. Take, e.g., those on ll. 93, 98, 204, 218, 325, 509, 564, 603, 679, 714, 770, 845, 1,001. All these notes, and several others, strike us as sound but unnecessary: walking is not best taught by the removal of such very tiny sticks and stones from the path. On the other hand, what pleasant lightness of touch is there in the note upon l. 79, with its pun upon *Αἰθραῖς* and *Κλαυθῆν*! Mindful of Oxford walks and rides, and reading-parties in Cornwall, Dr. Merry Anglicises the first jest as "Begbroke" or "Cadgwith," and lispes the second into "Thiev-enton." Is there not some alip in the note on l. 83? Roscher's explanation of the fable of Themistocles's death seems a mere repetition of it. Should we read "milk" for "blood"? Perhaps, on l. 255, a little more explanation of the term "Heliasts," is due to studious youth; on l. 1,189, one familiar derivation of *Τριτογενής* seems to be ignored; l. 1,312 might, perhaps, have been well illustrated from the comic compound *Θηροειδής*. But, on the whole, here is a school edition of this capital comedy, devoid at once of pedantry and prudery, and full of appreciation of the most brilliant buffoonery the world has ever seen; and it is compiled by the head of a college! Times change, but not always for the worse.

The Eumenides of Aeschylus. By Arthur Sidgwick. (Clarendon Press.) Mr. Sidgwick

thus completes his edition of the Aeschylean Trilogy. His *Eumenides*, though published in two parts, like Dr. Merry's *Knights*, is uniform in scale with his *Agamemnon* and *Choephoroi*. The three together form a scholarly commentary, of the shorter and less laborious kind, on that great monument of Greek dramatic genius. Notes on this scale can hardly exhibit original research, nor much controversial argument. Tact and literary judgment and judicious compilation are sufficient; but probably no one knows, till they try, how much must be read before even a little can be written on these subjects. The indebtedness of this commentary to that of Paley and others is clear at a glance. The ethics of such borrowing, and the question of what is full acknowledgment, having already become subjects of controversy in the ACADEMY, we leave the matter with one reflection. Notes which, like Mr. Sidgwick's, aim at being compendious and decisive, *ad hoc*, for those in whose interest they are written, are exceedingly apt to drop unconsciously into a peremptory tone, which excoiates "the true mystics," who know, what Mr. Sidgwick too knows quite well, that the knot cannot really be cut so abruptly. *E.g.*, the MSS. reading of l. 220, τὸ μὴ γενέσθαι, which Mr. Sidgwick says "must be wrong," is too lightly dispatched by such a phrase, unaccompanied by a disquisition; yet the disquisition would be out of place in notes of this kind, while constant admissions that such points are doubtful are wearisome to everybody and discouraging to studious youth. What is needed is a somewhat milder way of expressing a preference. The same criticism applies to the note on l. 286, which Mr. Sidgwick, with other authorities, regards as a maxim spuriously inserted in the text. It may be so; but to say that Aeschylus could not have said (l. 283) that Orestes was cleansed by sacrifice, and then abruptly (l. 286) "Time cleanses all," is not only imperious, and therefore unpersuasive, but ignores at once the Greek hunger for a proverb, and the closely parallel phrase quoted by Paley from the *Sept. cont. Theb.*, l. 679. The fault is not common with Mr. Sidgwick, and when it occurs startles us the more. On the literary side all the notes are excellent. The comment on ll. 336-340 is, we think, quite original and quite undeniable. The "intentional use of mild terms" and the irony resulting therefrom, throw quite a new light, not to say glare, on a passage that hitherto has seemed unaccountably prosaic. Excellent, also, is the note on l. 170. We cannot agree that τῆς ἐμῆς περὶ ψυχῆς (l. 114) is "rather strange in the mouth of a ghost." This ghost is no unreal shadow, but Clytemnestra's very self, alive and shrieking under the sting of scorn and delayed revenge. Cannot a disembodied life cry out "in anguish of its soul"? Mr. Sidgwick declines to give a final opinion on ll. 631-5. We agree with him in suspecting τέρατα; but, we think, if εὐφροσιν is to stand, Paley's ἐμ' αἰνοῖς (for ἐμεινόν) is almost irresistible. The Introduction is excellent; the mean between too much and too little is hit exactly. The brief account of the MSS., and the editions, and the Scholia, represents a good practical minimum of essential facts. One more criticism we would venture to make. Why is Mr. Sidgwick so sparing of poetical illustration? Nothing elucidates poetry we are learning to know so well as poetry we already know. Why not, *e.g.*, illustrate ἀναίματον (l. 302), and its implied view of the underworld, by the scene of bloodless ghosts swarming round the trench in *Od. xi.*? Why not clear up, for a beginner, the full thought of ll. 131-2, by Tennyson's lines:

"That was mine, my dream, I knew it—
Of and belonging to me, as the dog
With inward yelp and restless forefoot plies
His function of the woodland"?

Poets do help us out so well with their brethren!

Greek Passages, adapted for Practice in Unseen Translation. By F. D. MORICE. (Rivingtons.) No exception can be taken, we think, to the quadruple division of these extracts into (i.) narrative; (ii.) poetical and dramatic; (iii.) descriptive, colloquial, and philosophical; (iv.) rhetorical. That is the right order, unless, possibly, iii. and iv. should be transposed. Nor do we deprecate the attempt, precarious as Mr. Morice himself (Pref., p. v.) allows it to be, at graduating each of the four sets of passages in order of difficulty. It is worth trying; but the truth is, difficulty in these matters is a very relative term indeed, depending more on a boy's personal taste, previous practice, and chance acquaintance with a subject-matter, than on such things as constitute "difficulties" to a teacher's eye. Like most of such collections, it is intended to do double duty—as a reservoir of unseen passages for paper work, and for *viva voce* use. The editor's well-known *Stories in Attic Greek* may, he thinks, lay the foundation, while these passages continue the structure. But we demur resolutely to the amount of "adaptation" which Mr. Morice has thought necessary. What he calls "tampering with the masterpieces of Greek literature, rewriting lines of Aeschylus, and chopping up Demosthenic periods and Platonic arguments," he thinks an audacious, but necessary, evil. We think it audacious and evil, but not necessary, except, perhaps, in the most rudimentary stage. Omissions are doubtless necessary—so, perhaps, is a casual minute alteration. But the perpetual intrusion of the modern hand into a fine passage is detestable. Take, *e.g.*, passage 60, part ii., p. 44—the scene of Orestes' acquittal, from the *Eumenides*. Aeschylus wrote:

ἴσον γὰρ ἐστὶ τὰρίθμημα τῶν πάλων.

Mr. Morice will have

ἴσος γὰρ ἀριθμὸς ἐστὶ τῶν πάλων, ἴσος.

The cadence and dignity of the line is wrecked, and all, we suppose, to avoid the very simple crasis τὰρίθμημα. Can anything be more inept? Four lines below, Ἀργεῖος ἀνὴρ ἀδῆς becomes φηγάς μὲν οὐκ ἐστ' ἀνὴρ, and so forth. Sometimes the alterations are ingenious enough; but our point is that, good or bad, they are monstrously too numerous. As usually happens in such cases, the punctuation goes astray, especially in the poetical passages. There is much to be said for inserting, as Mr. Morice does, the note of exclamation—for beginners; but we should not affix it to a mere proverb, as on p. 43, passage 59, l. 7.

Mr. E. A. UPCOTT's edition of Cicero's *Catilinarian Speeches* (Oxford: Clarendon Press) seems well adapted for school use. The notes contain very little which is not to be found in the well-known edition by Karl Halm; but to some schoolmasters and to many schoolboys it will perhaps seem to be an advantage that they are cut down to about one-fifth of the length. The introduction is clear and accurate; and a running analysis will help the student, without sparing him the necessary work with dictionary and grammar. Some will regard it as a merit that in the whole of the notes there are only two references to grammars or other authorities. It is, at any rate, a feature which saves much trouble alike to the compiler and to the user of the notes. The translations given are not too plentiful, and are usually very accurate. To say that "dixisse would be more usual" for *dicere* after *meministi* is to treat an interesting idiom somewhat too carelessly. And any one reading of "the southwestern slope of the Apennines" would hardly have his thoughts carried to Faesulae.

Thucydides I. By O. D. MORRIS. *Thucydides VII.* By O. F. SMITH. (Boston, U.S.: Ginn.)

These two well-printed books belong to the American "College Series of Greek Authors"—a series which may be compared, in object and idea at least, to Messrs. Macmillan's red "School Class Books." Like nearly all the College Series, these two editions of Thucydides are "based on" a German edition, that of Classen, and this is our chief quarrel with them. It is, no doubt, convenient to have a translation of Classen's commentary, executed by scholars—and Prof. Morris undoubtedly was a scholar—but we want something more; and though we do get a little in these books, we do not get half enough. Perhaps we are unreasonable. Archaeologists say that the art of a country is always imitative in its infancy. American scholarship is not yet full grown. And, indeed, we have no cause to throw stones. Not a few of the "School Class Books" alluded to above are even less original translations of German *Schulausgaben* than the two books before us. Only we are sorry to see the Americans going on our own bad track.

NOTES AND NEWS.

MR. W. NOEL SAINSBURY, of the Public Record Office, editor of the Calendar of Colonial State Papers, has been appointed Assistant Keeper of the Public Records.

PROF. SAYCE and Mr. Francis Percival will leave England next week for Cyprus, where they intend to spend a month in archaeological researches.

CANON ISAAC TAYLOR will read a paper before the Anthropological Institute on Tuesday next upon "The Primitive Seat of the Aryans," supporting generally the views maintained by Prof. Sayce at the recent meeting of the British Association. Later in the week Canon Taylor will sail for Egypt, where he has been advised to spend the winter.

PROF. J. MCK. CATTELL's paper on "The Psychological Laboratory at Leipzig," to be read before the Aristotelian Society on Monday next, November 21, will contain an account of the aim of experimental psychology, and of the researches which are being carried on in the Leipzig laboratory. The paper will be published in the January number of *Mind*.

THE anniversary meeting of the Royal Scottish Geographical Society will be held in Edinburgh on Wednesday next, November 24 when Sir Charles Bernard, late Chief Commissioner of Burma, will deliver an address. Sir Charles will also deliver addresses later on at Glasgow and Dundee; and at Aberdeen an address will be delivered by the Earl of Aberdeen on "A Tour round the World."

MR. J. A. FROUDE will deliver an address at the annual meeting of the Liberty and Property Defence League, to be held at the Westminster Palace Hotel, on Friday next, November 25, at 2.45 p.m.

THE first meeting of the session of the Royal Statistical Society has been postponed to Tuesday, December 6, to suit the convenience of the president, Mr. G. J. Goschen, who will then deliver his inaugural address.

PROF. A. S. NAPIER is preparing for the Early English Text Society an edition of all the Anglo-Saxon Homilies hitherto unprinted.

PROF. KLUGE, of Strassburg, has been for some time engaged on a second edition of his well-known German Etymological Dictionary. The first part will be published soon.

PROF. TEN BRINK's new work on *Beowulf* is looked for with very great interest in Germany, though many of his admirers regret that it has taken him off his continuation of his *History of Early English Literature*, and of his *Chaucer-Studien*.

DR. HOLTHAUSEN has sent to press, for the Early English Text Society, his edition of the unique Stowe MS. 2.40, *Vices and Virtues*: the Confessions of a Guilty Soul, with Reasons descriptive of the Virtues. The dialect is early Kentish, and its date about A.D. 1200. The second part of Prof. Kölbinger's edition of *Bevis of Hampton*; and the fourth and last part of Mr. Sidney L. Lee's edition of Lord Berners's Englished *Huon of Burdeaux*, will be issued shortly by the society. The latter volume will include Mr. W. A. Clouston's notes on the sources and analogues of the mythological stories mentioned in this romance.

MR. ERNEST RHYS, the editor of the "Camelot Classics," will shortly start on a lecturing tour in the United States. Among the subjects he proposes to discuss are "Walt Whitman in England" and "The New Poetry." The latter will be an argument for poetry appealing directly to the people rather than to an audience of literary culture; and it will be based upon the example of the old ballad writers and the Elizabethan playwrights.

THE volume of translations from Heine's prose works, published in 1879, under the title *Heine's Wit, Wisdom, and Pathos*—a book that was mainly the cause of drawing attention to an author till then little known in England otherwise than as a poet—has been long out of print. A new edition is now in the press, and will shortly be published by Mr. Gardner (of Paisley and London). The book has undergone careful revision at the hands of the translator, Mr. J. Snodgrass.

THE author of "Caterina" and "Lauderdale" has written a new novel entitled *Countess Irene*, the scene of which is laid in Austria, chiefly in Vienna. It will be published, in three volumes, about Christmas by Messrs. Blackwood & Sons.

MR. A. R. FREY, of the Astor Library, New York, will publish shortly, with Messrs. Whitaker & Co., a work on sobriquets and nicknames, giving their explanations and derivations.

A SECOND edition of the Rev. F. T. Vine's *Caesar in Kent* is announced by Mr. Elliot Stock as nearly ready for publication. The work has been revised throughout, and will be illustrated with new maps.

A THIRD and cheaper edition of Outram's *Legal Lyrics* will shortly be published, under the editorship of Mr. J. H. Stodart, till recently the editor of the *Glasgow Herald*, and himself a poet.

MESSRS. FREDERICK W. WILSON & BROTHER, of Glasgow, will publish next month, in a limited edition, Mr. John Davidson's new work, entitled *Smith: a Tragedy*. The volume, an Elzevir 8vo, is being printed on hand-made paper.

MESSRS. I. PITMAN & SONS will publish next week *The Phonographic Christmas Annual*, edited by Mr. J. Herbert Ford, editor of the *Reporters' Journal*. It contains a facsimile of some reporting notes taken at the trial of Warren Hastings, facsimile signatures of the best known phonographers, portraits of many shorthand authors, besides reprints of many curious articles connected with the art.

THE only Christmas annual produced exclusively by Irish authors is *Round the Christmas Fire*, edited by Mr. John Shaw, and published by Mr. J. S. Lytle, of Belfast.

A TRANSLATION of the *Oedipus Tyrannus*, by Sir George Young, has been published (Deighton & Bell) in view of the intended performance of the play next week at Cambridge. It is earnestly to be hoped that no copies of this will find their way into the theatre. When there are such fine renderings as those by Morshead

and Campbell and Whitelaw, it would be a pity that the unlettered public should be misled by one which is neither scholarly nor felicitous in expression. The book is full of mis-translations, and there are errors of taste even more calamitous. Athens is called daughter of "Jove," the *χρῆσις* is rendered "I, Senator," "thou" and "you" are mixed up—in fact, nothing more un-Sophoclean, more unpolished in style and diction could be imagined.

THE FORTHCOMING MAGAZINES.

LORD BALFOUR OF BURLEIGH will contribute a defence of "The Church of Scotland," against the renewed proposals for its disestablishment, to the next number of the *Contemporary Review*.

The December number of *Atalanta* will contain the first of two articles by Mr. Walter Besant on "The Writing of Novels."

The December number of the *English Illustrated Magazine* will, as usual, be a double number—i.e., besides the serials, it will give an extra amount both of text and illustrations. In addition to a poem by Mr. George Meredith, the more important articles will be "The Sea of Galilee," by Mr. Lawrence Oliphant; "Ornithology at South Kensington," by Mr. R. Bowdler Sharpe; and "What Players are They?" by Mr. Fitzgerald Molloy—each abundantly illustrated. There will be no less than three full-page plates—all woodcuts, among which Mr. O. Lacour's rendering of Rembrandt's portrait of himself in the National Gallery forms the frontispiece.

A PORTRAIT by Margaret Thomas, and a memoir by Mr. Kinglake, of the late Richard Jefferies, with a complete list of his works, will be published in the December number of Mr. F. G. Heath's *Illustrations*. It is not generally known that the three first books of the accomplished author of "The Gamekeeper at Home," were published in 1873, and were respectively entitled "A Memoir of the Goddard family of North Wilts," "A Handbook of Reporting, Editing, and Authorship," and "Jack Brass, Emperor of England."

THE December number of *Scribner's*, completing the first volume of this magazine, will be a special Christmas number, with a cover printed in gold. Among the contents will be some half dozen short stories, including one by Mr. Bret Harte, entitled "A Drift from Redwood Camp"; a ballad on "Ticonderoga," by Mr. R. L. Stevenson, illustrated by Mr. William Hole; and a set of drawings of scenes in Florence associated with "Romola," by Mr. E. H. Blashfield and his wife.

Good Words for its next year's volume is arranging a very attractive programme. Mr. Christie Murray, Miss Linskill, and the author of "Marah," will provide the fiction; popular science papers are promised from Sir John Lubbock, Mr. Grant Allen, Prof. Thorpe, and Prof. Henry Drummond; in travel Mr. E. Whymper will give his adventures in "The Ascent of Cotopaxi" and Capt. Markham his trip "Through Hudson's Strait and Bay to Winnipeg." The Bishop of Rochester will write on "Children," Andrew Lang on "Thackeray, Dickens, and other Novelists," Miss Jean Ingelow on "The Culture of the Senses," Sir Charles Warren on "Lebanon and its Temples," and Canon Prothero on "John Wesley." Mr. Underwood will continue his papers on American authors, and the Dean of Gloucester will write a short series entitled "Dreamland and History." For pictures Mr. Du Maurier and Mr. Small are to illustrate the stories; while Mr. Furniss, Mr. Watson Nicol, Mr. G. L. Seymour, and Mr. Charles Whymper, will contribute "sets" of illustrations.

THE principal contents of the *Century* for December will be: "Prison Life of the Russian Revolutionists," by George Kennan; "Notes on Parisian Newspapers," by Brande Matthews, with illustrations by Jeannot; "The Acting of Irving's Faust," by Joseph and Elizabeth B. Pennell; "Durham Cathedral," illustrated by Joseph Pennell; and "Twilight," by Walt Whitman.

THE December *St. Nicholas*, which is also the Christmas number, will contain the first part of a new story, "Sara Crewe," by Mr. Hodgson Burnett; "The Clocks of Ronsaine: a Christmas Story," by T. R. Stockton; "The Bear that had a Bank Account," by H. H. Boyesen.

The Scottish Church, while maintaining its original character and purpose, will, with the December part, change its name to *The Scots Magazine*—an old title revived—and as such will appeal to a larger public.

THE new serial stories which the editor of *Cassell's Magazine* has arranged to appear in the new volume are, "Monica; or, Stronger than Death," by Evelyn Everett Green, and "By Misadventure," by Frank Bassett. Both will be commenced in the December part.

THE *Quiver* Christmas Annual will be published on November 25, under the title of "The Golden Bow."

A NEW theatrical monthly, entitled the *Playgoers' Magazine*, will be published on December 1, by Mr. Spencer Blackett. It is edited by Mr. Paul Vedder, author of the "Playgoers' Pocket Book."

ORIGINAL VERSE.

THE OPIUM SMOKER.

I AM engulfed, and drown deliciously.
Soft music like a perfume, and sweet light
Golden with audible odours exquisite,
Swathe me with ceremonies for eternity.
Time is no more. I pause and yet I flee.
A million ages wrap me round with night.
I drain a million ages of delight.
I hold the future in my memory.
Also I have this garret which I rent,
This bed of straw, and this that was a chair,
This worn-out body like a tattered tent,
This crust, of which the rats have eaten part,
This pipe of opium; rage, remorse, despair;
This soul at pawn and this delicious heart.

ARTHUR SYMON.

OBITUARY.

MR. F. S. HAYDON.

THE death (by his own hand in a paroxysm of frenzy) of Mr. Frank Scott Haydon, which occurred on October 29, has deprived the Public Record Office of one of its ablest scholars and the small circle of legal antiquaries of a distinguished figure.

The eldest son of the well-known artist, Benjamin Haydon, he was born in 1822, and received his second name in honour of his godfather, Sir Walter. He graduated at Jesus College, Cambridge, where he became a good classic and an excellent mathematician. Owing to his conscientious objections to the received theology, he abandoned his original intention of taking orders. Left without resources by his father's suicide—the disastrous sequel of a ruined career—in 1846, he was nominated by Sir Robert Peel to a clerkship in the Customs; but, the duties of that post proving uncongenial, he was soon transferred by his considerate patron to the Public Record Office. Here he remained till his death, and gradually rose to the rank of Assistant-Keeper. Trained successively under such accomplished experts as Joseph Hunter and Thomas Duffus Hardy, he quickly acquired

a mastery of the refinements of antiquarian scholarship scarcely inferior to their own. Between 1858 and 1863 he edited for the *Rolls Series of Chronicles and Memorials the Eclogium Historiarum*—a work embodying some important contemporary evidence respecting the campaigns of the Black Prince. Mr. Haydon's elaborately careful analysis of the several codices of this chronicle (in the preface to vol. i.), and the philosophical breadth of his criticism, here and there relieved by a touch of pungent sarcasm (in the preface to vol. iii.), are eminently characteristic of him. He was recently engaged in editing for the same series a valuable *Lexicon of Mediaeval Geography*, from a MS. of the fourteenth century; but this volume has been left incomplete by his death. His latest departmental duty was the preparation of a Calendar of the Patent Rolls for the reign of Edward I., which will be found in the Deputy Keeper's Report, vols. xlii. to xlvii. Among the many scholarly works which this department has produced, I know of none more able and illustrative than his introductory observations upon the legal bearing of these records.

In his best days Mr. Haydon was a charming companion—his intellectual gifts and graces, which included a fine vein of humorous cynicism and a retentive memory of discursive reading and anecdote, being enhanced by the attractions of his kindly disposition, well-bred courtesy, and strikingly handsome person. Though too young to have known the eminent men with whom his father was intimate, his reminiscences of what he had heard from him respecting them were abundant, and he was always ready to impart them. His copies of Tom Taylor's biography of his father and of the revised memoirs compiled by his brother, the late Mr. Frederick Wordsworth Haydon, were enriched with numerous annotations which can scarcely fail to be of literary interest. Outside the range of scholarship, I am not aware that he contributed much to literature beyond some articles to the *Saturday Review*.

For some years past symptoms of his mental disorder were painfully apparent, in the form of violently excitable moods, a morbid taste for repulsive themes, and strange lapses of memory. These aberrations estranged many of his acquaintances, but did not obscure his better nature from those more intimate with him. There was no trace of disorder in his work; and, as I learn from one of his colleagues, it was always possible to quiet his most turbulent outbursts and restore for a time his mental balance by proposing a mathematical problem for his solution. So thin are the partitions between wit and madness! Almost my last conversation with him, a few months since, related to a case of mental aberration (happily transient) in which we were both interested. Its peculiarities elicited not only his thoughtful reflection and counsel, but more than one act of sympathetic and helpful kindness towards the sufferer. His mind was for the moment thoroughly rational, and he seemed to have no premonition of his own imminent collapse. Few events impress one more deeply with the pathos of human tragedy than the wreck of a nature so generously endowed as his. H. G. H.

CORRESPONDENCE.

MR. MAURICE'S "THE REVOLUTIONARY MOVEMENT OF 1848-9."

London: Nov. 8, 1887.

Allow me to say, as one who personally remembers the revolutionary movement of 1848-9, that I have found Mr. C. Edmund Maurice's book, much to my regret, full of extraordinary errors and inaccuracies. It is with great and easily conceivable reluctance that I enter this protest, having, as stated by the author, "lent him pamphlets not otherwise accessible," as well as, I may add, works quoted among his sources, the use of which ought to have prevented him from falling into the serious mistakes he has committed.

I will not discuss such cardinal errors of the work as the alleged "absence of French initiative in the European Revolution of 1848," or the curious assertion that the movements, outside France, were simply the outcome of the "principle of nationality." As a German, whose patriotism is perhaps not doubtful, I must yet say that Mr. Maurice is on this point, which forms the pivot of his views, entirely wrong. Nor will I dwell on the "hysteron proteron" on the very title-page of his book. There he speaks of "Austria-Hungary," at a time when that designation did not even exist. Austria, on this side of the March (including, of course, Bohemia), was, down to 1866, an integral part of the German Confederacy, as much as Prussia, Bavaria, or Saxe-Weimar—even as she had been an integral part, for many centuries past of our older Empire, to which Austria furnished a succession of Kaisers. These simple facts of history one would never suspect from Mr. Maurice's work.

I will confine myself to a few corrections. After having mentioned one of the best known representatives of the German Revolution as "a leader in the [Baden] Chamber of Deputies, named Hecker," the author refers to "another Baden representative, named Izstein [sic]," who, "by an accidental circumstance," namely, through his expulsion from Berlin, "attracted a large amount of attention." Now, who could recognise, under this slighting garb and this mis-spelt name, Adam von Itzstein, the Nestor of Constitutionalists, "perhaps the greatest Parliamentary capacity of Germany, one of the few of whom the whole Fatherland has a right to be proud"—as one of the most accessible sources, Brockhaus's *Conversations-Lexicon*, has called him? Who could believe that this deputy, "named Izstein," whom I had the honour of knowing, was the man whose portrait is the first in the work on the *German Revolution*, by Zimmermann, the well-known historian, who describes Adam von Itzstein, as "a *Freiherr* in the noblest acceptance of the word," as the very centre of the patriotic movement, at whose country-seat every year deputies from all parts of Germany met to resolve upon the details of the political campaign in the various parliaments and in the press? These details are given in the very first pages of Zimmermann's book, which Mr. Maurice had from my hand, and which is mentioned among his sources.

Of Hecker, whose name once was the most celebrated among the German masses, Mr. Maurice asserts that he first entered the Chamber of Deputies in 1847. Now, for about four years earlier, Hecker had played in that Chamber a most prominent part from the first day of his entry, which I remember most vividly. Then Mr. Maurice says: "Struve seems to have been one of the first to give expression to the aspirations of the Baden people." But Gustav von Struve began his career after Hecker, and down to 1848 he remained, comparatively, a moderate Liberal as regards his aims, though he worked for them with the most self-sacrificing courage. It was

some weeks after the revolution had begun, that "Struve" dropped even his nobiliary title. Then, it is true, he girded the sword and resolutely went forth, with Hecker, to battle for the new cause he had espoused. As to his having been "ignominiously" defeated in September 1848, that is, to put it mildly, not the fact. The very general who gained the victory over the rising bore testimony, in his bulletin, to the bravery displayed by his enemies.

Of this September rising, Mr. Maurice says that, "for some unknown reason," the leadership was offered to Struve, rather than to Hecker. The reason is by no means unknown. Months before, Hecker had lost all hope; and, moreover, he had emigrated to the Wild West of America.

Again, Mr. Maurice alleges that in the manifestoes of the leaders of the September rising there was no allusion to the Schleswig-Holstein question. Now, in the very first manifesto, printed in Struve's own book (quoted by Mr. Maurice as one of his sources), the overthrow of the popular insurrection at Frankfort is alluded to, which originated in the armistice of Malmö—that is, in the Schleswig-Holstein question. And it was to the tune of the famous Schleswig-Holstein song that the men of the September movement marched to battle at Staufen.

In speaking of the Provisional Parliament at Frankfort, Mr. Maurice reports that Struve presented his (and Hecker's) Democratic programme "on behalf of the Committee of Seven." Now, the Committee of Seven—one of the most frequent political terms in the early part of the German Revolution—was composed of the antagonists of the Democratic party: namely, of Welcker, Heinrich von Gagern, and other prominent moderate Constitutionalists. Yet, Mr. Maurice makes Struve, the Republican leader, speak in their name.

To a man who only became known in 1849, Mr. Maurice erroneously attributes the revival of the demand for a German Parliament in 1847. The most important German revolutionary rising of 1849 (May to end of July), which was begun, for the first time in German history, by a whole princely army; during which a number of pitched battles were fought between the Democratic forces and the Royal armies, the latter forming an aggregate of about 80,000 men, the larger portion of whom were led by the then Crown Prince of Prussia (now the Emperor William); and which ended with a series of courts-martial prolonged over three months, when a member of the German Parliament, W. A. von Trützschler, as well as many officers, among them the Governor of Rastatt, were shot, and such wholesale imprisonments and proscriptions took place that the number of exiles from Baden exceeded by far anything of that kind which had ever happened in large countries like France or Poland—to these historical events Mr. Maurice devotes *eight lines*, without any detail, but with two erroneous statements contained even in that very limited space.

After this it is not to be wondered at that men of such eminence as Mittermaier, the renowned legist and President of the Provisional Parliament at Frankfort; Herr von Vincke, the distinguished Prussian leader; Uhland, the patriotic poet and Liberal statesman; and other great intellectual forces of deliverance, such as Anastasius Grün (Count Auersperg), Herwegh, Kinkel, Freiligrath, all of whom powerfully contributed to the German movement, and two of whom risked their lives, or paid with their personal freedom for their principles, should not be so much as mentioned in this "History of the Revolutionary Movement." Nor can we wonder that, though the author professes, on the title-page,

to give "some examination of the previous thirty-three years," he should pass over the important history of the many "secret associations" of Germany (as given, for instance, in Ilse's book); or that, in 1848, he should omit mentioning the flight of Prince William (the present Emperor) to England, and his compulsory stay there for several months, though afterwards speaking vaguely of the prince's "return," without saying from where. But is this writing history?

Even the name of Schafarik, one of the best-known Slavonian philologists—and Mr. Maurice is exceedingly pro-Slav—is mis-spelt. To Bohemia he assigns as large a place all through the book as if that country were even greater in extent than in "A Winter's Tale." He speaks of that "German national arrogance" which went so far as "to treat Bohemia as a part of Germany." He does not appear to know that, already, in our oldest ground-law of the thirteenth century, Bohemia is constitutionally mentioned as one of the countries whose ruler took part in the election of a King of the Germans, and that Bohemia remained a part of Germany until 1866. Is it arrogance on the part of Englishmen to treat the Principality of Wales or the Scottish Highlands as a part of their country? Is it arrogance on the part of the French to treat the Bretagne so?

As to Mr. Maurice's opinion that the Czech movement in Bohemia represented the cause of freedom, it is too well-known that, on the contrary, it largely contributed to the downfall of that cause, and that its leaders gloated over the execution of Robert Blum. At present they are mostly the allies of the feudal and clerical party in Austria.

But I must stop. These few cursory indications may suffice. As one of the survivors of the movement of 1848-49, I have had to perform a painful duty, considering personal relations. But painful as it is, I am bound to say that the work in question is in only too many respects a most misleading one.

KARL BLIND.

INGULFUS REDIVIVUS.

London: Nov. 14, 1887.

No one could wish to be hard on so amiable and industrious an antiquary as Mr. Walter de Gray Birch; and I purposely abstained, in my former letter, from pointing out his worst mistakes. It was, however, absolutely necessary to enter at once a vigorous protest against this unfortunate attempt to give the "Ingulf" delusion a fresh lease of life through the medium of a popular work.

Mr. Birch now urges, in extenuation, that he thinks he has "referred five times in all to this 'venerable imposture'"; but I find it referred to on at least ten different pages of his "little book." I was well aware that he had edited "Ingulf." Indeed, he refers to that edition more than once in the present book. But I was informed at the British Museum that no copy of the work was there available, nor have I been able to consult it elsewhere. It is, however, most interesting to learn that Mr. Birch has there gone into the question of the authenticity of the chronicle, for we thus learn that, when he quotes from it in his *Domesday Book*, he does so after due investigation. Let us therefore turn, not to that "peeress," as Mr. Birch politely terms her, to whose "remarkable ride through the town" of Coventry he so discreetly alludes, but to that other "peeress," the Countess Lucy, an infallible touchstone as of yore. As we might expect, in Mr. Birch's pages she goes through her old performance with the same ease as ever:

"Lucy, the countess, . . . married, after the death of her first husband Ivo, Roger, son of Gerold Romara [*sic*], in the time of Henry I., and

had one son, William. She married a third time Ralph, Earl of Chester, in the reign of King Stephen, and by this marriage had a second son Ranulf, afterwards Earl of Chester" (p. 99).

Now, as her father "Algar," according to Mr. Birch (p. 103), "died in A.D. 1059," it follows that the countess, on his own showing, may have been, when her second son was born, some eighty years of age. Of course, to Mr. Birch's mind there may be nothing anomalous in this; but most people will be tempted to exclaim in the words of *Punch's* undergraduate: "My good man, if you believe that, you'll believe anything."

This is the "grotesquely impossible tale" of which I spoke in my former letter, and which is referred to by Mr. Freeman as "still swallowed by novelists and local antiquaries." I need hardly add that my own contention that Mr. Freeman is by no means always accurate can have nothing in the world to do with this matter, and is merely imported by Mr. Birch to darken the issue. That issue is simply whether such a ridiculous concoction as the above should be gravely quoted in Mr. Birch's book without a word of warning as to its true character.

As to Mr. Birch's amazing suggestion that Dr. Stubbs's rejection of this spurious chronicle is "perhaps" based only on Mr. Freeman's *ipse dixit*, I must inform him that it is based on internal evidence, by which, to all who have eyes to see, its spuriousness is "proved," in the Bishop's words, "beyond the possibility of doubt."

J. H. ROUSA.

PYTHAGOREAN HITTITES.

Oxford: Nov. 12, 1887.

I write a few lines before quitting England to express my regret at being so little acquainted with "the primordial principle of things" as to be unable to follow Mr. Tyler into that mysterious region of nature. Before setting out there himself, however, he had better make sure of his facts. The innocent-looking triangle which appears among the Hittite hieroglyphs, and which, it seems, is full of such mystical meaning, is not found on the seals and at Hamath only, as he supposes. Even among the published inscriptions he will find it also at Jerablus (*J. iii. 3*) and at Merash (*lion-front 2*), in neither case, I am sorry to say, accompanied by "the head of a cow."

As for the other symbol, Mr. Tyler would have done wisely to have waited for the publication of the seals which I have described in the *ACADEMY*. He would then have learned, firstly, that it is not always associated with the triangle, and, secondly, that the "pair of divergent legs which clearly terminate in turned-up toes" are creatures of the imagination. It is true that a pair of legs such as Mr. Tyler speaks of does occur among the Hittite characters, but it bears no resemblance to the symbol in question. Perhaps, however, we cannot expect Mr. Tyler to be very accurate about Hittite hieroglyphs when we find him asserting that "Prof. Sayce speaks of the Hittite symbol as being a symbol of life." Where and when have I ever said such a thing?

A. H. SAYCE.

DR. SOUTH AND A MAXIM OF ROCHEFOUCAULD.

London: Nov. 14, 1887.

Mr. John Morley's recent lecture on "Aphorisms" reminds me that there is a curious identity, which I have never seen noticed, between a passage in Dr. South's writings and one of Rochefoucauld's maxims. Dr. John Owen, Vice-Chancellor of Oxford, a renegade Anglican clergyman, opposed South's admission to the degree of Master of Arts; and having learned that he continued to use the

urgency, threatened him with expulsion, saying that "he could do no less in gratitude to his blindness the Protector, and his other friends, who had thought him worthy of the dignities then stood possessed of." South replied,

Gratitude among friends is like credit among tradesmen. It keeps business up and maintains correspondence; and we pay not so much out of principle that we ought to discharge our debts, as to secure ourselves a place to be trusted another time."

Now this clever retort is word for word identical with Maxim cccxiii in Rochefoucauld:

Il est de la reconnaissance comme de la bonne foi des marchands; elle entretient le commerce; nous ne payons pas parce qu'il est juste de nous acquitter, mais pour trouver plus facilement des gens qui nous prêtent."

Who was the thief? The passage from South is quoted in the memoir prefixed to Bohn's edition of his Sermons (1859), and must have been written before 1657 when he took his master's degree. As far as I can make out, the first edition of Rochefoucauld's *Maxims* was published in 1665. EVAN DANIEL.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, Nov. 21, 8 p.m. Royal Academy: "Causes affecting the Stability of Pigments," by Prof. A. H. Church.

8 p.m. Aristotelian: "The Psychological Laboratory at Leipzig," by Prof. J. M. Ostell.

TUESDAY, Nov. 22, 8 p.m. Civil Engineers: Discussion, "Accidents in Mines," II., by Sir F. A. Abel.

8.30 p.m. Anthropological: "The Primitive Seat of the Aryans," by Canon Isaac Taylor.

WEDNESDAY, Nov. 23, 8 p.m. Society of Arts: "The Mercurial Air-Pump," by Prof. Sylvanus P. Thompson.

8 p.m. Geological: "A New Wealden Iguanodont and other Dinosaurs," by Mr. R. Lydekker; "The Cae-Gwynn Cave," and "The Drifts of North Wales," by Prof. T. M. Kenny Hughes.

8 p.m. Microscopical: *Conversazione*.

THURSDAY, Nov. 24, 8 p.m. Royal Academy: "Trials of the Permanency of Pigments," by Prof. A. H. Church.

8 p.m. Telegraph Engineers: "Some Instruments for the Measurement of Electromotive Force and Electrical Power," by Dr. J. A. Fleming and Mr. C. H. Gillingham; "Portable Voltmeters for Measuring Alternating Potential Differences," by Prof. W. E. Ayrton and Prof. John Perry.

SAURDAY, Nov. 26, 8 p.m. Physical: "The Analogies of Influence Machines and Dynamos," by Prof. S. P. Thompson; "Effect produced on the Thermo-electrical Properties of Iron when under Stress or Strain by raising the Temperature to Bright Red," by Mr. E. Tomlinson; "Optical Properties of Phenyl-thiocarbimide," by Mr. H. E. Madan.

SCIENCE.

The Gospel according to Saint Matthew in Anglo-Saxon, Northumbrian, and Old Mercian Versions. A New Edition. By the Rev. Walter W. Skeat. (Cambridge: University Press.)

By the publication of the present volume Prof. Skeat has brought to its conclusion a work planned more than a half a century ago by the late J. M. Kemble. Fully fifty-four years (not fifty, as Prof. Skeat states on p. ix.) have now elapsed since Kemble first conceived the idea of printing in one volume all the existing MSS. of the West Saxon version of the Gospels, together with the two interlinear glosses preserved respectively in the Durham Book (or Lindisfarne MS.) and the Rushworth MS.—the former in the Northumbrian, the latter partly in the Mercian and partly in the Northumbrian dialect, and of thus making accessible in a compact form all that is now extant of the earliest English renderings of the Gospels.

In an anonymous pamphlet directed against Kemble, which appeared in March, 1835, under the title of *The Anglo-Saxon Meteor*, we find the earliest allusion to this project.

In a letter there printed, dated Oxford, August 2, 1834, a certain "I. J." writes:

"I am vexed to hear that through Kemble and his friends, or rather through the influence of Trinity College, the Pitt Press has been induced to undertake the printing of the Anglo-Saxon Gospels, loaded with accents, quite at variance with the MSS. Can this rumour be true?"

The rumour was true. The project must have assumed a definite shape, and the execution of it have been undertaken by the Pitt Press fully a year earlier. As an examination of the records of the Press, kindly made by the secretary to the syndics, shows, the printing had been actually commenced before the end of 1833, the first charge made by the compositors on account of this work being dated November 29, 1833.

Some cause or other—the controversy in the *Gentleman's Magazine* for 1834 at once suggests itself—led to the suspension of the undertaking, and at the time of Kemble's death in 1857 only about five-sixths of the first volume had actually been printed. This first volume, which contains St. Matthew, was completed a year later by the Rev. C. Hardwick. The task of editing the remaining three Gospels then devolved on Prof. Skeat, and they appeared in the years 1871, 1874, and 1878.

It needed but a very cursory examination of St. Matthew, as edited by Kemble and Hardwick, to make it evident that the texts there given were altogether unreliable, and that they fell far short of the standard of accuracy attained to in the subsequent volumes. A new edition was generally felt to be necessary; and students of English have every reason to be grateful to Prof. Skeat for the scholarly and accurate way in which he has performed his laborious task. Thanks to him we now possess a reliable edition of all the existing MSS. of the Old English Gospels.

In his Preface Prof. Skeat enumerates some of the chief points of difference between his own and Kemble's edition; and to these we may add a few figures derived from a careful comparison of the two, which will serve to show how exceedingly inaccurate the latter was. According to the method of editing in vogue thirty years ago Kemble took no account whatever of the usage of the MSS. with regard to capitals, punctuation, contractions, the signs *ð* and *þ*, &c., in all which points Prof. Skeat has faithfully followed the MSS. But besides such deviations from the originals as these, the older edition was disfigured by many inaccuracies and misreadings, which greatly diminished its value for philological purposes. Decidedly the most unsatisfactory portion of the book was the Lindisfarne version, which, as one of our few specimens of Old Northumbrian, was the most important part of the work. The actual errors in the English gloss alone, without taking into account the numerous inaccuracies in the Latin text, do not fall far short of an average of one to every verse, yielding for the entire gospel (exclusive of the very incorrectly printed prefaces, &c.) a total of almost a thousand errors, which have been corrected in the new edition—a number more than sufficient to justify a reprint. The reproduction of the Rushworth gloss was slightly better than that of the Lindisfarne

version, and contained on an average only about half as many misreadings. In the West Saxon Corpus MS. and the twelfth-century Hatton MS. we found the fewest errors. In fact, it is obvious that greater care was bestowed on this part of the work, which is decidedly more accurate than the rest, although far from being satisfactory.

In his prefaces to Mark and Luke Prof. Skeat has shown that of the two twelfth-century MSS. the older, the Royal MS., was transcribed from the West Saxon MS. now in the Bodleian; and that the slightly younger Hatton MS. was, in its turn, copied from the Royal MS. He also pointed out the locality of the latter, which, according to Wanley, formerly belonged to the Abbey of St. Augustine's, Canterbury. But he has omitted to call attention to the interesting fact that, as was shown by Reimann (*Die Sprache der mittelenglischen Evangelien*, Berlin, 1883), both these MSS., the Hatton as well as the Royal, are, on the evidence of the language, the work of Kentish scribes; and that, in the points in which they differ from their West Saxon original, they exhibit the peculiarities of the Kentish dialect. They are, in fact, Kentish transcripts of a West Saxon original, and are of great importance as specimens of the speech of Kent in the twelfth century.

A. S. NAPIER.

DR. SWEET'S LECTURES ON PHONETICS.

DR. HENRY SWEET gave the first of his series of lectures on "Phonetics" at Oxford in the Taylorian Institute on November 3. He pointed out that all study of phonetics must be based on a practical command of the elementary sounds, which, again, must be based on the learner's own vernacular sounds. The first stage is to recognise and isolate the separate sounds; the second is to analyse their formation; the third is to deduce new sounds from those already familiar. He then gave an account of the organs of speech, with exercises to develop the learner's command of their actions.

In his second lecture he explained the principles of the Visible Speech alphabet, explained the vowel positions, and gave examples of whispered and breathed vowels from French, Russian, Portuguese, and other languages.

In his third lecture, Dr. Sweet described the nine fundamental vowel positions, drawing them on the blackboard. He explained the distinction between narrow and wide vowels, as in the French and English sound of short *i*, and then pronounced the thirty-six elementary vowels, with examples from a variety of languages, concluding with an account of the acoustic qualities of vowels, showing that a classification of the vowels by pitch was impracticable, this test being too delicate.

In his fourth lecture Dr. Sweet gave an account of the nasal vowels, drawing his illustrations from Portuguese and French, and of vowels modified by raising the point of the tongue, such as may be heard in the dialects of the West of England. He then went over the front vowels, dwelling especially on the intermediate and abnormally rounded vowels, and, finally, went through the chief elementary consonants.

CORRESPONDENCE.

THE HITTITES.

Plymouth: Nov. 11, 1887.

Your insertion of my letter of October 3 encourages me to inform you of the progress of my studies of the Hittite language since the publication of *Altaic Hieroglyphs*.

It is very desirable for a student to receive the criticism of scholars and to avoid controversy while awaiting their advice; and I have to thank Canon Taylor, M. G. Bertin, Mr. Pinches, and Prof. Sayce, for much valuable guidance during the last six months, especially in pointing out reliable sources of information.

I have now succeeded in verifying my results by comparative study of living Tartar languages; and, although I am supported by Lenormant and Delitzsch and by our best Akkadian scholar in England as to the important words on the bilingual, the existence of which Prof. Sayce denies, it now becomes a matter of comparative indifference whether these words are known in Akkadian or not. I have further extended to some forty cases my comparisons of Hittite with Egyptian and Cuneiform, and have increased my Cypriote comparisons from twenty-one to about sixty. I find that the comparison with the Egyptian and Cuneiform stops short at the pictorial, and does not extend to the ideographic stage, although the sounds are often the same; thus agreeing with the previous determinations of M. G. Bertin, as to the general relationship of these systems. Since Canon Taylor (and I believe, other scholars also) now admit the Hittites to have been Tartars, it is clear that my principles must be correct, however, open to criticism the details may prove. The affinities of Akkadian to Medic were long since determined by Lenormant, who holds that the Medic is nearer to the Turko-Tartaric than to the Finnic languages—a conclusion at which I also arrive by studying 800 Akkadian words, and especially the numerals, which are usually regarded as of special philological importance. From the Egyptian texts of Rameses II. and Thothmes III., I have recovered about seventy Hittite words—forty geographical and thirty personal—verifying their meaning by comparison with Turko-Tartar, Turkish and Finnic, or Ugric words.

My researches have also a bearing on the history of the alphabet.

This work is now in course of preparation, though delayed by my duties on the Ordnance Survey. I venture to think it will leave little ground for hesitation as to the general correctness of my results.

C. R. CONDER.

THE OLD-IRISH GLOSSES AT WÜRZBURG AND CARLSRUHE.

London: Nov. 12, 1887.

I believe that all the members of the Philological Societies of London and Cambridge, for which I have lately edited these glosses, regularly read the ACADEMY. Will you, therefore, allow me to ask, by means of your journal, those gentlemen, as well as all other possessors of my edition, to make the following corrections in their respective copies:

- P. 17, l. 1 of gloss, for ¹⁰, read ⁸.
- P. 23, gl. 4 d 26, read *écen tanniccside*.
- P. 28, gl. 5 c 19, the scribe's "(o)pperabatur" is a blunder of his for "offerebatur," "operiebatur," or "opperiebatur"—probably for the first.
- P. 37, gl. 7 a 14, read *iein* Indeam.
- P. 173, gl. 29 d 9, for *accur*, read *acc[ub]ur* (Ascoli).
- P. 239, l. 12, for What, read that *quod facit alius* is.
- P. 243, ll. 3, 4, for excess established itself, read it was completely established.
- P. 247, l. 20, for It, read us (*ónni*, usually *uanni*, "a nobis").
- P. 249, ll. 32, 33, for besides He came not of necessity, read it is not necessary: besides He hath come.
- P. 250, l. 23, for believed, read would believe.
- P. 252, ll. 26, 27, for he . . . deservingness, read to boast of his deservingness helpeth no one there.

- P. 252, l. 35, for disposition read hidden meaning.
- P. 261, l. 21, for of, read to.
- P. 273, l. 2, for they, read ye.
- P. 277, l. 13, for from which I deem it desirable, read Since I have a desire.
- P. 281, l. 24, for His own body which receives every seed, read its own body which every seed receives.
- P. 316, ll. 22, 25, 26, for "He," "His," "Him," read he, his, him (the allusion being to Antichrist).
- P. 328, l. 91, for no . . . read no pleasure (lit. desire).
- P. 332, l. 7, for utter, read follow.
- P. 345, l. 6, read *motus*.

For most of the above corrections I am indebted to the Rev. Thomas Olden. Prof. d'Arbois de Jubainville has referred me to the following passage in Dom Calmet's commentary on 2 Thess. ii. 7, which to some extent explains the gloss in the Würzburg Codex Paulinus, 26 a 12 (p. 150 of my edition):

"D'autres en plus grand nombre & mieux fondcz, ont crú que les hérétiques sont des Ante-Christes, qu'ils sont des suppôts, & des ministres de cet homme de péché, que commencent dès-à-présent le mystère d'iniquité dans l'Eglise de JESUS-CHRIST, par les erreurs qu'ils y répandent, par le scandale qu'ils y causent, par l'apostasie de plusieurs, qu'ils attirent dans leur parti. Les Pères appellent communément les hérétiques précurseurs de l'Ante-Christ."

WHITLEY STOKES.

SCIENCE NOTES.

THE course of lectures on "Heredity and Nurture," proposed to be given at the South Kensington Museum by Mr. Francis Galton, on behalf of the Anthropological Institute, has been unavoidably postponed.

DR. A. W. HOFMANN, of Berlin, who was for many years lecturer on Chemistry at the Royal School of Mines in this country, will complete the seventieth year of his age on April 8, 1888. The Council of the German Chemical Society have united with the representative chemists of other countries in organising a scheme for an international testimonial, to be presented to Prof. Hofmann on that occasion. A committee for the United Kingdom has been formed, with Sir F. Abel as chairman, and Mr. J. Spiller as hon. secretary.

PHILOLOGY NOTES.

THE current part of the *Journal* of the Royal Asiatic Society (Trübner), which has appeared with commendable punctuality, contains papers by Prof. Terrien de Lacouperie, Dr. J. W. Redhouse, Mr. Frederic Pincott, Mr. G. Bertin, and Mr. Theo G. Pinches, besides the "Notes of the Quarter" which have now become such a valuable feature. We also have here printed for the first time the report of a committee of the society appointed last year to consider the best means for the promotion of Oriental studies in England, and for rendering the work of the society more popular. Under the first head, the committee recommend that letters be addressed to the University of Oxford, suggesting the carrying out of the scheme proposed in 1877 for advancing the study of Arabic, Syriac, Persian, and Aethiopic, and of the languages and antiquities of Assyria and Egypt; and to the colleges at Oxford and Cambridge, urging the setting apart of fellowships for Oriental scholars, and of scholarships and exhibitions for promising students. Under the second head, the recommendations of the committee include the institution by the society of conversaciones, at which Orientalists of eminence should be invited to deliver popular lectures; and the foundation of a gold

medal to be awarded annually by the society in recognition of recent services in Oriental research.

MEETINGS OF SOCIETIES.

CAMBRIDGE PHILOLOGICAL SOCIETY.—(Thursday Oct. 20.)

DR. JACKSON, President, in the chair.—The President read a paper on "Some Passages in the *Nicomachean Ethics*," of which the following is an abstract.—I. 6 § 1=1096 a 16, *ἡμεῖς γὰρ ἑταίρους διόντες προτιμῶν τὴν ἀλήθειαν*. The thought which this phrase has made familiar seems to have been a traditional commonplace of the Platonic school, descending perhaps from Socrates himself and at any rate recalling his teaching. Compare besides Aristotle, *Metaphysics* A 8. 1073 b 18; Plato, *Charmides* 166 d; *Republic* 595 c, 601 d; *Phaedo* 91 c; *Philebus* 14 b; *Sophist* 246 d.—L. 1 § 7, 8=1097 b 15, *τοιοῦτον δὲ τὴν εὐδαιμονίαν οἰόμεθα εἶναι*. *ἔτι δὲ πάντων αἰρετωτάτην μὴ συναρθεῖναι εἶναι*. Both here, and in vii. 13 § 2=1153 b 9, *ἵως δὲ καὶ ἀναγκαῖον . . . αἰρετωτάτην εἶναι*, the sense seems to demand the substitution of *αἰρετώτερον* for *αἰρετωτάτην*.—ii. 7 § 1=1107 a 29, *ἐν γὰρ τοῖς τετράτοις πράξεις λόγοις οἱ μὲν καθόλου κενώτεροι εἰσιν, οἱ δ' ἐπὶ μέρους ἀληθινότεροι*. The editors almost without exception prefer *κενώτεροι*, the reading of O and the Latin version, to *κονώτεροι*, the reading of K^b L^b M^b. What is wanted is, however, not unqualified praise of *οἱ ἐπὶ μέρους λόγοι* and unqualified condemnation of *οἱ καθόλου*, but such a recognition of the merits of both as will justify the application of the general statement to particular instances. This consideration seems to me decisive in favour of *κονώτεροι*.—ii. 7 § 14=1108 a 31, *ἡ γὰρ αἰδώς ἀρετῆ μὲν οὐκ ἔστιν, ἐπαινεῖται δὲ καὶ ὁ αἰδήμων*. Williams translates—"Shame, for instance, is not a virtue, and yet he who shows a proper shame is praised"; and to all appearance the commentators, with the one exception of the paraphrast, interpret in this way. But, (1) when the sentence is thus read, punctuated, and understood, the *καὶ* which stands before *ὁ αἰδήμων* is absolutely meaningless. And, (2) the implication that *αἰδώς* is not praised—which implication is the sole justification of the anacoluthic introduction of a new subject—is unknown, not only to the paraphrast, who writes *τῶν ἐπαινουμένων δὲ ἔστιν ὁ γὰρ αἰδήμων ἐπαινεῖται*, but also to Alexander Aphrodisiensis, who in his *ἡθολογία καὶ λόσεις*, iv. 21=p. 270 Spengel, plainly affirms that Aristotle in this place alleged *αἰδώς* to be praisedworthily: *ἀλλ' ἐκεῖ μὲν ἐπαινετὸν αὐτὸ τὰθος εἶπεν, ἐπαινετὸν δὲ καὶ*. Hence, we should either read *ἡ γὰρ αἰδώς ἀρετῆ μὲν οὐκ ἔστιν, ἐπαινεῖται δὲ <ἐπαινεῖται δὲ> καὶ ὁ αἰδήμων*, or, at any rate, place a comma after *ἐπαινεῖται δὲ*, and mentally supply *ἐπαινεῖται* with the three concluding words.—v. 7 § 1=1134 b 21, *ὅλον τὸ μᾶς λυτροῦσθαι, ἡ τὸ ἀγαθύνειν ἀλλὰ μὴ δύο πρόβατα*. In my edition of book v. I expressed a doubt about the words *ἀλλὰ μὴ δύο πρόβατα*. It seemed to me that, in contrasting the sacrifice prescribed with the sacrifice not prescribed, the author would oppose, not *ἀγαθὰ δύο πρόβατα*, but *ἀγλας* to *πρόβατα*, or *μῖαν ἀγλα* to *δύο πρόβατα*. Why should the sacrifice which was not prescribed be more precisely defined than that which was prescribed? I observe, however, that Aristophanes, in the *Birds*, 1625, *πρόβατον δυοῖν τιμὴν ἀνολεῖ τῷ θεῷ*, makes the sacrifice of *δύο πρόβατα* typical. It would appear then that, in the passage before us, a sacrifice prescribed in some special case, is contrasted with the sacrifice which was customary and familiar.—vi. 5 §§ 4, 6=1140 b 4 and 20, *λείπεται ἔρα αὐτῆν [sc. τὴν φρόνησιν] εἶναι ἔξιν ἀληθῆ μετὰ λόγου πρακτικῆν περὶ τὰ ἀθρώπων ἀγαθὰ καὶ κακά*. . . . *ἔστ' ἀνάγκη τὴν φρόνησιν εἶναι εἶναι μετὰ λόγου ἀληθῆ περὶ τὰ ἀθρώπινα ἀγαθὰ πρακτικῆν*. In spite of the etymology in § 8, it is difficult to believe that Eudemus ever spoke of a *ἔξιν* as *ἀληθῆς*. Now, in § 8, M^b, the Latin version, and Eustratius, read, not *ἀληθῆ*, but *ἀληθούς*. In § 4, however, MSS., version, and scholiast agree in giving *ἀληθῆ*. Under these circumstances it is worth while to point out that Alexander Aphrodisiensis, who, on *Metaphysics* 981 b 25, Bonitz 7, 27. 8, 5, has a series of careful quotations from the early chapters of this book, reads, in § 4, *ἔξιν μετ' ἀληθούς λόγου πρακτικῆν περὶ τὰ ἀθρώπων ἀγαθὰ ἢ κακά*.

(Thursday, Nov. 5.)

DR. FENNELLS read a paper on Caesars (*B. G.*, iv. 17), and showed a model of one set of piles (namely, one pair of upper piles, and one pair of lower piles) with the superincumbent beam or beams. The *fibulae* were four stout pieces of wood about six feet long fastened across the horizontal beam, one under each end of the beam, and the two others above the beam at such a distance from each end that, when the underneath cross-pieces rested on the piles, the piles pressed upon the cross-pieces above the beam. There were no other fastenings connecting the piles with the cross-beam. The effect of the stream on this construction, the firmness of which depended on the attachment of the four cross-pieces to the horizontal beam, was to press the cross-pieces at the upper end and the top cross-piece at the lower end more tightly against the beam, while if the upper pile were pushed forward the lower cross-pieces would slip down the lower piles and compensate by this re-adjustment for the yielding. The pressure of the wooden surfaces on each other would cause sufficient depression of the parts in contact to hold together at their proper distance the two piles of each pair. The reader thought that not more than one set of four piles was mentioned by Caesars until the words *haec directa materia iniecta* where the pronoun *haec* meant the several sets of four piles with their superincumbent beams; he therefore observed upon the plural *bipedalibus trabibus*, which seemed to mean beams making up a breadth of two feet. The *subiacea* at the lower side of the bridge could not be sloping piles, as the language of Caesars proved; but were upright beams arranged *oblique*, at an angle with the direction of the stream. The phrase *pro ariste* suggested that the *ariste* of a bridge was the projecting base of a pier which met the force of the stream. As the immobility of the whole structure ultimately depended on the immobility of the top of the lower pair of piles, the *subiacea* were added to prevent these piles being forced towards the vertical ever so little. In the discussion Dr. Fennell accepted the president's suggestion that *cum omni opere coniunctae* merely meant that the *subiacea* were placed close to each pair of the lower piles.

PHILOLOGICAL SOCIETY.—(Friday, November 4.)

DR. R. F. WEYMOUTH, in the chair.—Prof. W. W. Skeat read a paper on "Some English Etymologies." The word "bat" has been found in Anglo-Saxon in the form *batt*; see *Engl. Studien*, xi. 65. "Cozier," a cobbler ("Twelfth Night"), is the Old-French *coziers*, *cozior* (Godefroy), from the stem of *com-s*, p. p. of *condre*, "to sew." "Cut" may be Scandinavian; compare Old-Swedish *kotta*, Swedish dialect *kuta*, "to cut." On "decoy," see the article by O. Stoffel, in *Engl. Studien*, x. 181. He thinks the prefix *de* may be the Dutch article, and shows that *kooi* "a cage," is a true Dutch word. "Dismal" appears first in the phrase "in the dismal," later "in the dismal days," meaning at an unlucky season; I resolve it into the Old-French nom. pl. *dis mal*, i. e., *dis mali*; the old etymology from *dis malus* is, after all, not far wrong. With "dog" compare the place-name "Doggithorn," i. e., "dog-thorn," in a charter dated 960; Birch, *Cart. Anglo-Saxon.*, iii. 113. "Dowle" (in "The Tempest") is a down-feather of a bird, from the Old-French *douille*, *doille*, *doille* "soft," "pliant," Latin *duotilis*; compare French *doillet* "downy." It occurs in Middle-English in "The Ploughman's Tale," near the end. "Earnest" a pledge, Middle-English *ernes*, also appears as Middle-English *erles*, *arles*; for the etymology see "Arles" in Murray. "Entice" is from Old-French *enticier*, answering to Low Latin **in-titiars* "to set a fire-brand to," from Latin *titiu*; see "Attice" in Murray. "Feon" or "Pheon," a broad arrow-head, is Middle-English *feon*, Old-French *foene*, the same as Old-French *foine* an "eel-spear." The same Old-French *foine* (in Godefroy) accounts for Middle-English *foinen*, "to thrust," as if with such a spear. The Middle-English *foinen* is also spelt *foemen* and *funen*. In "flotsom" and "jeteom" the suffix is French; the old forms are "flotson" and "gete-son," in the Black-Book of the Admiralty, i. 82, 96, 170, answering to Low-Latin **flotationem*, and Latin *isolationem*, respectively. "Gorce" a wear

(a law-term), is from Old-French *gort*, Latin acc. *gurgitem*; see *gour* in Littré. "Horse-courser" was formerly "horse-coser"; compare Middle-English *cosyr* "glossing," Latin *mango*, in Wright's *Vocabularies*; the Anglo-French *cosour* occurs as early as 1310; and *cos*, *cos* "to barter," occurs in Scotch. "Cosour" is from the Latin *coactor* "a broker" (Lewis and Short). With "larboard" compare Middle High-German *lorc*, *luro*, *luro*, the left hand or side; and French *course*, short for *course*, in Cotgrave. "Obaidian" is a mistake for *obaidian*; see Lewis and Short. "Pail" is the Anglo-Saxon *paegel*; see *Anglia*, viii. 450; *Engl. Studien*, x. 180. "Pamphlet" appears as "pamphlet" in Ooclevis; also as "paunflet," probably from the Italian *Pamfilo*, *Pamfilo* a personal name. "Parget" is Middle-English *perjetle*; Low-Latin *periacular*, which has been found and would give a French **parjeter*. In the phrase "go to pot," the pot meant is the cooking-pot, as was shown. "Purse" appears as Anglo-Saxon *purs*, *Engl. Studien*, xi. 65; from Latin *bursa*, not from French *bourse*. "Rivelled" is Anglo-Saxon *rifeled* "wrinkled"; same reference. "Souze," to plunge down upon, as a hawk, is a term of falconry; it was originally "source," properly used only of the hawk's upward rush. It is the same word as "source," and distinct from "souze," to pickle. "Staniel" is Anglo-Saxon *stān-gella*, lit. "yeller from the rock"; see Sweet, *Old English Texts*. "Steward" is Anglo-Saxon *stigweard*, a form now found—viz., in Birch, *Cart. Saxon*, iii. 75. The bird "whimbal" has its name from "whimming" or "whining"; the *b* is excrement, the *er* is frequentative, and the *el* agential.—In the discussion, Mr. H. Wedgwood, while agreeing that "decoy" was from the Dutch *kooi*, dissented from the view that *de* represented the Dutch article. The word as first adopted in English was *koye*, and the prefix *de* was probably a later English addition. He would regard "decoy" as a reduction of "duck-koye."—Dr. Furnivall urged the members to undertake more systematic reading and collection of extracts for the Philological Society's dictionary. There was a great need of early quotations, especially in the arts and technical subjects.

ARISTOTELIAN SOCIETY.—(Monday, November 7.)

SHADWORTH H. HODGSON, Esq., president, in the chair. The president delivered the annual address, on "The Unseen World." The subject of the unseen world contains those questions which are usually called metaphysical, on the erroneous understanding that metaphysic means ontology, the supposed science of absolute causes. But these questions really belong to the last and most dependent rubric of analytical philosophy—its constructive branch, which contains deductions from the analyses of the preceding rubrics. Both the speculative and the practical lines of enquiry are pre-supposed, and their results must be united, in order to gain a true conception of what lies beyond the reach of positive knowledge verifiable by observation, which Beyond is the thing meant by the *unseen world*. Speculative knowledge alone tells us nothing of the content of the unseen world. Two things only it tells us: first, that the universe is *infinite*, that is, cannot by any possibility be conceived either as indefinite or as finite, but that a finite universe, however indefinite the limits of its known position may be, is an unthinkable contradiction; secondly, that the known portion of the universe, being finite, though its precise limit is unknown, must be conceived as conditioned upon the existence of parts beyond it, parts belonging to the unseen. We know, therefore, that there is some real and really operative agency, which conditions the existence of the visible world. Here it is that practical knowledge comes in to tell us in what way we must conceive the nature or content of this unseen but real condition. Man is a material and dependent being. The only positively conceivable or positively verifiable real condition in the seen world is matter. With this all causation in the seen world begins, with this all our knowledge of causation in the seen world ends. What, then, is the character of the action of matter in its highest known development, that is to say, in the human cerebral system? We know it solely by the conscious action, and the conscious purposes or ends of

action, which depend upon its functioning. A true conception of *ethic*, a true knowledge of the criteria which guide conscious choice between alternatives, will, therefore, be of the utmost importance in showing us the real character of that material agency, which springs from hidden causes beyond matter *a parte ante*, which issues in hidden effects beyond matter *a parte post*, and of which we ourselves are the conscious vehicles or agents. The key to ethic lies in distinguishing between feelings which are desirable or undesirable as states of consciousness simply, and feelings which are desirable or undesirable from the degree of pleasure or pain which they give to the individual experiencing them. *Kind* of desirability or the reverse is perceived in common by all men; *degrees* of the same is peculiar to individuals. It is only the former class of feelings which are *de jure* as opposed to *de facto*; it is only the desirable among this class which are *de jure* as opposed to *de injuria*. The difference in feeling which is expressed by this distinction is the source of the peculiar character attaching to the conceptions of right and wrong, moral good and moral evil, as opposed to the prudential and the compulsory. These conceptions plainly enter into the idea which we form of the unseen agency in the universe; and together with those feelings and qualities which, under their guidance, man has come to prize the most highly, such, for instance as justice and love, all of which are known as feelings and qualities belonging to persons or conscious agents, are our only means of laying hold in thought upon the real character or nature of the Unseen Power. It follows that our only idea of the nature, as distinguished from the existence, of that Unseen Power is derived from a practical and not a speculative source. We have no speculative guarantee for our belief that the Unseen and Infinite Power is such as we must conceive it to be from the nature of our own conscious action. At the same time, there is no speculative ground for the negative of that belief. Our knowledge of it is not demonstration, but faith. In other words, we have demonstration that faith, in the religious sense, is reasonable, although, and partly because, we have no demonstration of the objects to which that faith is directed. Faith in the Unseen and Infinite Power is therefore the conclusion to which we are led as the final result of philosophy.

FINE ART.

Pictures from Holland: Drawn with Pen and Pencil. By Richard Lovett. (The Religious Tract Society.)

MR. LOVETT does well to recommend a visit to Holland. In spite of the dearness of its best hotels and the badness of its worst it has so many natural and artistic charms, such a richness of historical interest, such wonders of engineering skill, so much natural individuality in its people, that he must be hard to please who does not enjoy his first visit and does not wish to renew it. Mr. Lovett has done his best to present to his readers as perfect a picture of the country as something over two hundred pages can afford. The book is a collection of engravings accompanied by an account of the most interesting parts of the country. This account is partly narrative of the author's own experience, partly intelligent compilation from other sources of information; and it reminds us, as a whole, of one of those "moving panoramas," which, with the aid of a well-instructed lecturer, did so much to amuse and instruct our youth.

After some general remarks about Holland and the Hollanders, Mr. Lovett begins his real work with Amsterdam. About five-and-twenty pictures illustrate this "Venice of the North." We see Montalbans Town, and St. Anthony's Gate, the Weeper's Tower and the palace, undertakers and servant girls, charity

girls and diamond cutters, Rembrandt and the Duke of Alva; and we learn something of the Dam and the Grachten, of Bossu (the admiral) and Van Campen (the architect), of the Orphanage in the Kalverstraat and the pictures in the Rijks Museum, of the Vondels Park and the Zoological Museum.

The next chapter is devoted to a trip to Marken *via* Edam and Volendam; and it is one of the most interesting in the book, as it contains the nearest approach to personal adventure. It is also charmingly illustrated with pictures of the fine men and women of Marken in their curious costumes, of Volendamers and the Islanders of Urk. Some of these we have seen before; but Mr. Lovett's skating trip from Kwadijk to Monnickendam, and thence to Purmerend, is a novelty. The latter part of the excursion is thus described:

"So quiet and old world was the place [Monnickendam] in appearance that we almost expected to see the monks from whom the town took its name, 'the town or dam of the monks,' appear from the church. Hardly a human being was in view, and a welcome sense of peace and rest stole over us as we looked out on the fair scene. The peal of bells—for this, like almost every tower in Holland, was well furnished in this respect—broke in upon our meditations, warning us that the day was passing. We had to catch a boat in the far-away distance, and we were not absolutely certain of our road. In a few minutes we were out of the town, and at the first convenient spot betook ourselves again to our skates. Our experience can easily be imagined. Suppose, for example, that over a moderately flat English landscape all the hedges and fences were replaced by lanes of water, varying from six to five-and-twenty feet in width, suppose these all frozen smooth and hard, and the journey to be undertaken from six to ten miles in length, and you have our trip from Monnickendam to Purmerend. Probably we did not follow the most direct route. Now and then we had to risk the passage of a wide canal; occasionally a stretch of road or grass intervened, too short to warrant taking off our skates, but quite long enough to convince us that it is pleasanter to skate 500 yards than to walk fifty on the narrow steel. Nevertheless, we had a splendid afternoon, and reached Purmerend in good time for the boat."

And now we must leave the reader to perform by himself the rest of the journeys—to Alkmaar and Hoorn, to Leyden and Haarlem, to Dort and Bergen-op-Zoom. At all these places and many more, he will find much to amuse and interest; and if he never goes to Holland he will, with Mr. Lovett's help, be able to form a pretty good notion of what it is like.

In conclusion we would point out that the title-page of this useful and pleasant book is, perhaps, likely to mislead. The pictures drawn by pen are Mr. Lovett's; but the illustrations include reproductions of pictures—ancient and modern—by other hands, and some of the architectural scenes appear to have been taken from photographs. Mixed up with these miscellaneous cuts are some facsimiles of bright little sketches taken evidently, with pure and dexterous touch, from nature direct. Perhaps we are not wrong in attributing these to Mr. Lovett; but they are unsigned, and it is not our fault if we are unable to give to the author his fair meed of praise as an artist.

COSMO MONKHOUSE.

PAINTER ETCHERS.

THE Society of Painter Etchers, which does not every year hold an exhibition in London, invites us this autumn to see a considerable collection of work in a large but not well-lighted room in New Bond Street. It is there found that the society is itself more comprehensive than its name, for some of the most interesting things which it exhibits this year are not etchings at all, but mezzotints; and even line-engraving, so long as it is original line engraving, and not the labour of the copyist, may find a place—the only place it does find is that accorded to Mr. Sherborn's exquisitely designed book-plates. These book plates are for the libraries of Lord Bath, Mr. Anderson Rose, and Mr. Thibaudeau. They alone represent original line-engraving, and they witness to Mr. Sherborn's taste in ornament and to his fine dexterity.

There are a fair number of original mezzotints, and one is glad to see them. It seems, indeed, that it is in that particular field that original engraving, by the most artistic men, is likely to be cultivated; that is, perhaps, to be the new fashion. And mezzotint, it is evident, calls into play quite other faculties than those which can best be exercised in etching—it is adapted for other effects. Shall we be pardoned for reminding its practitioners, however, since our sympathies with it are at least sincere, that in the great days of its production it was used hardly at all as a vehicle for original labour? It was recognised by all the great men—by those who preceded as well as those who followed McArdell, Raphael Smith, and Valentine Green—as curiously fitted to reproduce the effects of many a famous painter in oil; as capable of suggesting, in a way that line-engraving never attempted to do, a painter's touch, his very brush-work; as rendering textures—perhaps not so much the textures of natural things, the field, the tree, the river—but the textures of artificial things, cut jewels, and satins, muslins, figured silks, velvets, and braids, in a way that etching cannot cope with. There is no harm whatever in the application of the method to original art, but let it be understood that the application is comparatively a fresh one. And let it be recognised, too, that only to a certain range of subjects will the method lend itself. It may lend itself to original portraiture; it may lend itself to a certain order of landscape. At the "Painter Etchers," among other things, there is a portrait, nicely wrought, by Mr. Gerald Robinson, of Mr. Seymour Haden—friend and supporter of etching and mezzotint alike; and there are some striking landscapes of showery and windy weather by Mr. Finnie. Other good works there are, too, which the visitor may discover.

Though the etchings proper still form the bulk of the show, some of them, it must be confessed, are either more or less slight and commonplace efforts upon familiar lines, or—what is worse—instances of the laborious misapplication of the methods of this art. If an etching betrays no new individuality—has neither character in its conception nor curious skill in its *technique*—it can hardly ask to be singled out for praise, however wholesome be its methods, however righteous its manner. But all individuality is not to be denied to Mr. Sickert and Mr. Toovey because these artists have obviously profited especially by an intimate knowledge of Mr. Whistler's work. And in the same way Mr. Frank Short and Mr. Strang need not be deprived of commendation because in several of the plates of the one there seems a trace of the inspiration of Mr. Seymour Haden, and in the *Pilgrim's Progress* of the other more than a trace of the inspiration of M. Legros, and of those old masters of draughtsmanship whose work M. Legros has himself

felt so profoundly. Indeed, Mr. Sickert's plates and Mr. Toovey's, Mr. Short's and Mr. Strang's, are quite among the most interesting in the gallery. Then there are Mr. Percy Thomas's and Mr. May's, Mr. Watson's and Mr. Pennell's, in the good method likewise: not one of them charging the art with the task of conveying what other arts may convey with greater effect—all of them using the art within the lines proper to it—and doing this, I fear, at some loss of popularity, which is bestowed too seldom on the happy record of impression, too often on the effort of paraded and wholly obvious labour.

FREDERICK WEDMORE.

CORRESPONDENCE.

CLEPSYDRAS IN EGYPT.

Sandridge, near St. Albans: Nov. 6, 1887.

In a passing visit to Tell El Yahudiyeh in the middle of last May, I bought for the Egypt Exploration Fund a fragment of a large basalt vessel, with a scene sculptured on the outside of a king offering to the god Khonsu. The word *unnut*, "hours," remained of a line of inscription round the edge. The royal cartouches accompanying the scene were unfortunately left blank. Inside a series of silver (?) pins were let into the stone at regular intervals from near the edge downwards. This strongly suggested the notion of a clepsydra.

The fragment was detained in Egypt a long time; but since its arrival I have found that it actually fits another piece that has long been in the British Museum, and my guess is entirely confirmed.

In the Egyptian southern gallery there are portions of two of these vessels labelled by Dr. Birch "clepsydra or calendar." One of them has a long history, and was published by Dr. Birch, in 1850, in the *Archaeological Journal*. He then came to the conclusion that it was a mere calendar, not a clepsydra.

The other was obtained years ago in two parts which fit together—one of them coming direct from Tell El Yahudiyeh, the other from the Arabs of Saqqarah. This is the one to which the new fragment belongs. Some of the cartouches are fortunately filled in with the name of Alexander the Great. The inscription near the base is explanatory " . . . the rising (?) of the stars is shown upon it even when their shining is not visible, in order that none of the times appointed for holy rites may be violated. . . ." It was therefore a time-keeper for the temple.

The inner side of this specimen cannot be easily reached. The other specimen has the name of Philip Arrhidaeus. On the inside are two scale marks, each of twelve pins, ending in the symbols of life and purity. Dr. Birch seems to have been puzzled by the two scales being of unequal length; but, as a matter of fact, there must have been in the complete vessel twelve such scales, one for each month, corresponding to the twelve deities figured in compartments on the outside. Thus, the varying hours of the day throughout the year could be ascertained with considerable accuracy. Opposite scales served for day and night, the average night of the sixth month, for instance, being of the same length as the average day of the twelfth month. Allowing four inches between the scales, the diameter of the vessel would be roughly sixteen inches.

The pressure of the water would cause a more rapid flow when the clepsydra was full than when it was nearly empty. The sides of the vessel have therefore been curved inwards towards the base, so as to reduce the bulk of water at the lower part of the scale, the scale divisions being themselves left uniform. Changes of temperature, causing expansion of the water and variation in its elasticity, would,

no doubt, be avoided sufficiently by keeping the vessel in a cool place and drawing the water from a deep well.

It is unfortunate that no part of the base remains; but from Aristotle's problem (xvi. 8), it is likely that the clepsidra in ordinary use was pierced with several holes at the bottom, since, when the tube at the top was stopped, the water could still expel the air and flow in from beneath if the vessel was held slanting. Several minute holes would, no doubt, be easier to regulate than a single larger one.

In the inscription on the later specimen Philip Arrhidaeus is said to be the friend of the goddess *Khemer*, the great sorceress (*urt heqan*). Brugsch has shown that *merekh* is probably the name of the clepsidra. The goddess *Khemer* (spelt with the same signs as *merekh*) is, therefore, likely to be the marvellous invention deified.

Both the specimens date from the Macedonian period. Probably the temples throughout Egypt were supplied with the Greek astronomical novelty by Alexander and Ptolemy Soter, the Satrap of Arrhidaeus, and new ones were seldom required before the native religion, with its magnificent apparatus, died out.

I hope to go into the subject more thoroughly next summer; but I think the above notes are sufficient to establish the claim of these basalt bowls to be examples of the temple water-clocks of Egypt.

F. LL. GRIFFITH.

NOTES ON ART AND ARCHAEOLOGY.

ON November 28, 29, and 30, a sale will be held at the Hôtel Drouot in Paris of the paintings, lithographs, and *objets d'art* from the studio of the late Emile Vernier, the distinguished French painter of coast scenery and scenes from fishing life, who died last summer. They will be on view on Wednesday and Thursday of next week at the gallery of Georges Petit, 12 Rue Godot de Mauroi, and on Sunday, November 27, at the Hôtel Drouot. Many of the freshest and most beautiful views were taken on the English coast at St. Ives in Cornwall, and in Normandy and Brittany, and have a special interest for English people. M. André Theuriet, in describing Vernier's work, writes that

"he excelled in representing the movement, the attitude, and the physiognomy of seafaring people, of seaweed gatherers, shrimpers, sailors, pilchard and sardine fishers, and fisherwomen. He was passionately devoted to the sea, noted its most delicate harmonies and shades, and its wild and dramatic aspects. He seized on its smallest details, its familiar and characteristic traits. This was at the root of the originality and individuality of his work."

Vernier's lithographs after Corot, Rousseau, Daubigny, and Millet are well known in this country; and a rare proof of the "Angelus" of Millet is included in the sale.

It is proposed to issue, in a limited edition, a Pictorial Record of the Royal Jubilee Exhibition, which recently closed at Manchester. The editor of the undertaking is Mr. J. H. Nodal; and the descriptive chapters will be written by Mr. Walter Tomlinson, assisted by specialists. The illustrations, which are intended to form the chief feature of the work, will include a photogravure of "Old Manchester"; four engraved plates of pictures by Mr. F. Madox Browne, E. Burne Jones, Briton Riviere, and Val Prinsep; examples of the sculptures, carefully engraved on wood by hand; and about thirty pen and ink sketches of various portions of the exhibition by Mr. Hal Hurst. The book will be printed by Messrs. G. Falkner & Sons, and published by Mr. Cornish, of Manchester.

MR. T. MATESDORF is delivering a course of six lectures on "Raphael" at the Stainway Hall, on Wednesdays at 8.30 p.m. Each lecture is illustrated with reproductions of some of Raphael's best-known pictures, in the dimensions of the originals, shown by lime light.

THE exhibitions to open next week are a collection of paintings on the Seine and Marne, by Mr. E. Aubrey Hunt, at the Goupil Gallery, in New Bond Street; and a collection of drawings in black and white at Mr. Mendoza's, in King Street, St. James's.

THE fashion for collecting "watch cocks" would appear to be exhausted. A fine collection of eight hundred of these pretty things, carefully arranged, fetched only 39 francs at a recent sale at the Hôtel Drouot.

THE "Meyer" Madonna of Holbein at Darmstadt, belonging to the Grand Duke of Hesse, and now generally admitted to be the original work, has hitherto, from its bad condition, suffered in comparison with its well-known rival in the Museum at Dresden. The old varnish and repaints have now been removed successfully, and the work is now said to be revealed in all its picturesque beauty.

THE STAGE.

STAGE NOTES.

M. COQUELIN has gone. His later performances permitted us to compare him with Mr. Beerbohm Tree in "Gringoire," with Mr. Irving in "Le Juif Polonais"; and in each of these performances he manages—to put it broadly—to impress with lighter touches, to restrain himself within the limits of more delicate effects, than do either of his admirable English artistic comrades. But it does not follow at all that his performances are better because of these self-imposed limitations, since the limitations may be imposed unduly—may be imposed in pieces which are better without them. In each case, what M. Coquelin deliberately decides to do he does completely; and all that we could question would be his power of judgment, not his power of execution. Thus, by the mere perfection of the *débit*—of the giving forth—of the words of his part he atones in "Gringoire" for a monotony of attitude in itself, perhaps, hardly defensible. Again, in "Le Juif Polonais," his entire mastery of his method—a method not wholly, after all, a thing of choice; a method dictated, as we implied the other day, in part by his exact measurement of his temperament's capacities—permits him an air of reality which is not to be gainsaid, even though it is at variance with the more imaginative, and, as we dare to think, the finer reality of Mr. Irving in the same part. M. Coquelin's impersonation of the Polish Jew is, save in the most powerful scenes, excellent and deep genre-painting. Quite truly has it been said that it recalls Balzac—his ruthless and unerring dissection. But Mr. Irving's study of a stricken conscience is, at bottom, greater than the French comedian's study of almost undisturbed bourgeois prosperity. In London, in "Le Juif Polonais," the cleverness of M. Coquelin was not denied. But more than cleverness—or cleverness applied differently—was needed to secure him a triumph.

AND now M^{me}. Chaumont is with us again. It is with the old repertory, and we have long ago delivered ourselves of everything we were called upon to say in regard to her. She is the Meissonnier of the stage. Perfect precision, extreme minuteness, efforts that rarely lift themselves [to emotion or lower themselves to the effects of common farce—

these were the little lady's characteristics half a score of years ago, and these are her characteristics to-day. The exact like of her we have not got upon the English stage, though Mrs. Bancroft has had, at her very best, moments and passages which M^{me}. Chaumont need hardly have scorned to own.

The very successful performance of Dr. Westland Marston's "Favourite of Fortune," by the Dramatic Students this week, we can only notice in our next Saturday's issue.

MUSIC.

RECENT CONCERTS.

THE first Novello Oratorio concert took place on Thursday, November 10. The programme however, contained no oratorio. Of Dr. Mackenzie's "Jubilee Ode" we have already spoken once or twice; and repeated hearing only confirms our first impression. It is a clever *pièce d'occasion*, but nothing more. Dvořák's "Spectre's Bride" has not been heard for some time in London. When produced at Birmingham in 1885, it proved a brilliant success. The story is weird and the treatment of it fantastic, but the composer at all times keeps within musical limits; hence the charm, the strength, the attractiveness of the work. But at this concert we cannot say that our imagination was vividly stirred. And yet there was an excellent chorus, a good orchestra, an experienced conductor, and M^{me}. Albani and Mr. Santley, who formed part of the original cast. The tenor music was carefully rendered by Mr. Harper Kearton. Mr. Randegger was not always correct in the matter of *tempi*; and he did not give to the music the many shades of colour, the many varieties of movement, by which the composer obtains such singular and successful effects. For this we do not blame Mr. Randegger. It really needs a Dvořák to conduct the "Spectre's Bride." The Novello chorus sang well, though not always with sufficient delicacy.

The Crystal Palace concert last Saturday was devoted to Berlioz's "Symphonie Fantastique" and the sequel, "Lelio." When the Berlioz fever was at its height, some few years ago, this work attracted an immense audience; but on Saturday the attendance was only moderate. The "Symphonie Fantastique," with its lively *Bal* movement, its dainty *Scène aux champs*, its characteristic *Marche au Supplice*, and its weird *Sabbat* finale, contains some of Berlioz's best music, and some of his most curious orchestral effects. When the work was given in 1881, we spoke at some length respecting the character and meaning of these various movements, so that there is no need to enter now into detail. Still less with regard to "Lelio," the so-called sequel. Here, again, we meet with much that is *bizarre* in the matter of orchestration; but, from a musical point of view, it is far below the "Symphonie Fantastique." The "Lelio" soliloquies had points that made when the piece was produced in 1832. Some concerned the composer's enemies, some the lady who had won his heart. But now the anger and despair of Lelio *alias* Berlioz are of little interest to the general public. Mr. Manns, in giving both works together, certainly respects the composer's intentions; but composers are not always the best judges. "Lelio" does not add to the interest of the symphony; rather, we think, the reverse. Mr. Lloyd sang the tenor solos in his best manner; Mr. F. King sang the famous "Brigand" song in an artistic manner, but not with sufficient strength. The reciter was Mr. J. Fernandez. The "Fantastique," with the exception of the mistake of the bell-player in the last movement, was magnificently interpreted. The performance of the orchestra under Mr. Manns' direc-

tion was remarkable not only for strength and brilliancy, but also at certain times for delicacy. Berlioz was fond of loud crashing sounds, but he could produce also effects of the lightest, softest kind. The Crystal Palace choir was heard to great advantage in the "Lelio" choruses.

Master Josef Hoffmann gave his "farewell" recital on Monday afternoon at St. James's Hall. There was the same crowd, and the same enthusiasm as on the previous Monday. The youthful pianist played a Beethoven sonata, an important "Chopin" selection, a new Gavotte composed expressly for him by F. Berger, and duets with his father. So now we have seen, for a time, the last of J. Hoffmann.

Mdlla. Janotha was again the pianist at the Popular Concerts on Monday evening. She played Chopin's "Barcarolle" (Op. 60)—perhaps not with all the requisite warmth and poetry, but in much better and purer style than the Mendelssohn variations the week before. She was much applauded, and gave for an encore Chopin's "Berceuse." Mdme. Norman Néruda was leading violinist; and Miss Margaret Hall, who was very successful, the vocalist.

The first concert of the second season of the London Symphony Concerts took place on Tuesday evening. There was an interesting programme; but the attendance, though good, was not very large. This is indeed strange, seeing that in London proper the only chance of hearing an overture or symphony, this side of Christmas, is by going to Mr. Henschel's concerts. The programme of the first evening included two novelties. Mr. Santley sang splendidly a very trying *Scena* and *Aria* from Glinka's second opera "Russlan and Ludmila." The production last season of that composer's "Life for the Czar" no doubt led Mr. Henschel to choose his music. The two melodies for strings by Grieg, though mere trifles, are exceedingly charming. The themes of these pieces were originally set to two poems, and afterwards arranged for strings by the composer himself. Mr. Henschel will do well to give them again. The orchestral playing under Mr. Henschel's direction was lacking at times in delicacy, and his *tempi* in Beethoven's C minor Symphony and "Tannhäuser" Overture were open to criticism. With regard to the playing, one naturally expects improvement as the season progresses and rehearsals increase. One word about the programme-books. Last year we complained about them for containing no music type. The first book this time has none, and the price is raised from sixpence to a shilling.

The Royal College of Music gave a concert at Alexandra House on November 10, in memory of Sir George A. Macfarren. The composer's string Quartet in G (M.S. 1878), and the pianoforte Quintet in G minor were performed—and with one exception, Mr. J. Reynolds, by students of the college. Miss A. Roberts sang the two pleasing songs, "Pack Clouds Away" and "The Widow Bird." The programme concluded with Beethoven's Quartet in F minor (Op. 95).

Mdme. Adelina Patti gave a grand evening concert at the Albert Hall last Wednesday. In spite of the foggy weather there was a large attendance, and the *prima donna* was received with the usual enthusiasm. The programme contained well-known popular songs; and, besides Mdme. Patti, there were Miss Hamlin, Miss F. Harrison, and Mdme. Trebelli. Messrs. Lloyd, Piercy, and Santley also helped to render the concert attractive. Part-songs and madrigals were well sung by the London Vocal Union.

J. S. SHEDLOCK.

DELICIOUS PRESERVE.—The most attractive of all preserves is MORILLA MARMALADE, made from the celebrated Kent Morella Cherry. The stones being extracted, double weight of fruit is given. 8, 10, and 11 lb. pots by grocery, &c. Makers—THOMAS GRANT & SONS, Maidstone and 45, Gresham-street, E.C.

BEYOND THE SEAS:

A ROMANCE.

By OSWALD CRAWFURD.

Author of "The World we Live in," "Portugal, Old and New," &c.

Third Edition. Crown 8vo, 3s. 6d.

[This day.]

From the *Graphic* of September 24th:—"Mr. Oswald Crawford's 'Beyond the Seas' is a novel to linger over with enjoyment.....Mr. Crawford can paint a battle-piece as few men can. He sees the details, and with a severely simple touch makes others feel them. His account of the night-attack of the Moors by the light of a blazing vessel deserves to take a classical place in literature, and may be recommended as a subject to ambitious painters of war.....The vigorous masculine interest of the story fairly carries the reader away."

From the *Spectator* of September 3rd:—"The story of Ralph, Lord St. Keyne, told in the mode of the time, with its mingled stateliness, sententiousness, and quaintness, with touches of a rather grim humour bringing out the character of the narrator, passes away from England to return no more after its first eventful pages, and has only one woman in it, dimly seen until the end; only one pure strain of love, an undertone until it swells into the final harmony of faith, peril, courage, and constancy.....The story, as a romance of war and adventure, leaves nothing to be desired; it is animated, full, lofty in tone, and realistic in detail.....Amid various experiences and crowding adventures, the strange, dreamy, valorous, poetical, chivalrous character of Lord St. Keyne develops itself with effect and takes hold of the reader."

CHAPMAN & HALL, LIMITED, HENRIETTA STREET, W.C.

CHRISTMAS DOUBLE NUMBER,

With Upwards of Seventy Illustrations.

The English Illustrated Magazine

For DECEMBER, PRICE 1s. contains:—

FOURTEEN FULL PAGE ILLUSTRATIONS BY

SIR FREDERICK LEIGHTON, P.R.A.,
SIR JOSHUA REYNOLDS,
ZOFFANY,

REMBRANDT,
VELASQUEZ,

LITERATURE.

THE HISTORY OF OXFORD.

A History of the University of Oxford: from the Earliest Times to the Year 1530. By H. C. Maxwell Lyte. (Macmillan.)

"Historic Towns"—*Oxford.* By C. W. Boase. (Longmans.)

THE important volume in which Mr. Maxwell Lyte deals with the early developments of the University of Oxford must be regarded as an instalment of the larger work for which he is known to have been collecting information since the appearance of his *History of Eton College*.

The Deputy Keeper of the Records has peculiar facilities for gathering together all that can be known about the first organisation, under royal and ecclesiastical authority, of the Guild of Learning which grew into an institution of national importance. He can trace by means of a succession of charters the growth of those extraordinary privileges by which the university authorities were enabled to gain such absolute local powers as made them supreme in all matters affecting the welfare of their students; and from the state papers and the correspondence of diplomatists he will be able to show, as fully for the latter part of the history as he has now shown for the earlier period, what important national and literary movements have originated at Oxford, and "how closely the affairs of the university have been connected with those of the state." Mr. Maxwell Lyte describes the authorities upon which the present volume is based as consisting partly of original records and partly of MSS. preserved in the great public libraries, with the addition, of course, of Antony Wood's great work, and a number of other chronicles and histories. He has rejected the greater part of Wood's abstracts as unsatisfactory, and has preferred to resort to the original authorities, or to such collections of transcripts as are to be found in the library of the Society of Antiquaries and at the British Museum, and to "Bryan Twyne's voluminous collection, preserved among the archives of the University," from which Wood seems to have taken most of his information for the earlier portion of his annals. The work is not intended as a contribution to the general history of the mediæval universities. Such a work requires a close and familiar knowledge of the life and growth of the university of Paris, the prototype of all these institutions, and of the several universities of Bologna, and requires also, perhaps, the power of estimating how much was borrowed in one direction from the religious and trading guilds, and how much of the peculiar character of the university was reflected from the similar in-

stitutions existing in ancient times in Rhodes or at Athens or Tarsus. Mr. Maxwell Lyte prefers in his present work to localise his subject, to indicate briefly the origin of the institution with which he deals, and then "to trace its relations towards the authorities claiming civil or ecclesiastical jurisdiction in Oxford in the Middle Ages"; and he therefore records at length, in a manner which will make the work valuable as a contribution to our domestic history, "the successive incidents of the protracted struggle between the clerks and the townsmen," ending, as all know, in the complete subjugation of the city by the terrible weapons of interdict and excommunication, assisted by the direct interventions of the royal prerogative. The details of the municipal history and topography of the city are not neglected; but they cannot, consistently with the plan of the work, be treated with minute detail.

For these matters the reader is referred to Mr. Boase's valuable sketch of the History of Oxford, published in the series of works on "Historic Towns" edited by Mr. Freeman and Mr. W. Hunt. The city and the university were so closely connected that "their annals almost blend into one"; and the reader of the larger work will certainly find it advantageous to use the slighter chronicle as a supplement or valuable source of illustration for that part of the thousand years' history with which both writers are equally concerned. Their argument for a great part of the way covers the same ground, and each has taken the same point of departure. A well-known passage in Mr. J. R. Green's History supplies the text, which is illustrated in both works with great clearness by means of examples chosen on the one side mainly from the university archives, and on the other from the annals and records of the city.

"The University of Oxford," said Mr. Green, "is so far from being older than the city, that Oxford had already seen five centuries of borough life before a student appeared within its streets. The university found it a busy, prosperous borough, and reduced it to a cluster of lodging houses. It found it among the first of English municipalities, and so utterly crushed its freedom that the recovery of some of the commonest rights of self-government has only been brought about by recent legislation."

Mr Green proceeded to show that the struggle was one which left its mark not only on the beaten municipality, but also on the constitution and character of "the conquering university" itself.

Another text on which the authors of both works before us have enlarged may be found in that passage wherein Dean Stanley described the turbulence of the mediæval university in those days when nation against nation, clerks against monks, the university against the Bishop of Lincoln—by whose license it was supposed to have originated—were continually set in hostile array; and when, instead of town and gown scuffles of the harmless modern kind, there were battles and massacres in the streets, and long-protracted struggles, such as that contest which culminated in the fatal riot of St. Scholastica's Day. This last battle, from which many of the university privileges take date, took place in A.D. 1354. It is described

as the most bloodthirsty conflict that ever took place between the clerks and the laymen of Oxford. It began in a brawl at a tavern, and ended in an organised attack by the townsmen, with armed bands of rustics from the neighbouring villages, upon the inns and colleges of the university. The victory of the town was speedily avenged by an interdict from the Bishop of Lincoln; and on the king's intervention, when the civil discord was appeased, the city found itself shorn of its powers once more, and deprived in favour of the university of most of its remaining privileges.

Oxford was certainly a place of importance before the first beginnings of the university were established there. Its natural advantages of position caused it to be selected early in the tenth century as a stronghold of the Mercian frontier; and the town (which may have begun as a cluster of houses round St. Frideswide's nunnery), grew and flourished under the protection of Aethelred's castle. It seems to have suffered greatly in the wars of the Norman Conquest, but to have recovered its prosperity as soon as the first strain of oppression was relaxed. No exact date can be fixed for the establishment of the university. Mr. Maxwell Lyte goes so far as to say that "it did not spring into being in any particular year, or at the bidding of any particular founder." He considers that its development must have been spontaneous, "not recognised by prince or prelate," rising in an obscure association of teachers and students, banded into an exclusive society like those of merchants and craftsmen, and growing without official assistance into the large and important body which was afterwards incorporated and loaded with privileges. Some doubt is admissible on a subject which is confessed to be obscure; and it seems safer to suppose that Oxford became a place of study, according to a well-known legal doctrine, by virtue of an episcopal licence to teach, a national centre of education by the royal favour, and a body that could grant degrees recognised throughout Europe by the authority of the king and the pope. No doubt, as soon as the teachers got together, they would form themselves into fellowships, or societies for mutual protection, even without the authority to constitute a guild; but their franchise of teaching must have been yielded to them in fact, as well as in theory, by the royal and ecclesiastical powers which, as time went on, sustained and enlarged their rights. Every school was subordinate to the ecclesiastical authority, except "free schools," which owed their existence to the king; and, though the university was more than an aggregate of schools, the teachers who were trained there, and who taught the students in their turn, could not at first have held their place without the leave of the bishop and his chancellor, whom they afterwards became strong enough to resist. There is no record of any teaching in the Oxford schools before the year 1133, when Robert Pullein began his course of lectures on the Bible. A few years afterwards, Vacarius made his celebrated attempt to set up a school of civil law in Oxford which should rival the university at Bologna, until King Stephen, with an unusual regard for legality, forbade the prosecution of a study which

might undermine the ancient laws of the realm. Edmund Rich, the saintly Archbishop, is the first person who is definitely recorded to have taken an Oxford degree. About the year 1221 the Mendicant Friars, who had already gained a footing among the students of Paris, began to establish themselves at Oxford, where they soon attained a position of great honour and influence. It was not until the middle of the thirteenth century that the collegiate system began with the foundation of University, Balliol, and Merton Colleges; and Mr. Maxwell Lyte shows that at least three more centuries elapsed before it became predominant. Through most of the mediæval period the students lived in licensed inns and lodgings, or in halls which were much the same as boarding houses. It was not till the reign of Henry V. that clerks were forbidden to lodge in the houses of laymen, and the halls succumbed only gradually to the increasing power of the incorporated colleges. Mr. Maxwell Lyte has given some account of the foundation of each college, with abstracts of the original statutes; but he warns the reader that the history of the university is distinct from that of the affiliated houses, and that the chapters relating to these later foundations must be regarded as little more than appendices to the more important part of the work.

CHARLES ELTON.

The Deemster: a Romance. By Hall Caine. In 3 vols. (Chatto.)

THIS book would be welcome if only on the ground that it is well worthy of the author of *The Shadow of a Crime*. In shifting his scene of action from the hills of Cumberland to the Isle of Man, Mr. Hall Caine has left behind him none of his three great gifts of imagination, pathos, and humour; and he has found a people even more distinct than "Cum'shire folk," with characters as well suited to exhibit human passion in its simplicity, and a dialect as rich and racy as any in the North of England. In addition, he has found a story of intense terror mixed with intense pathos. Readers of *Fo'c's'le Yarns* will not be surprised at the attraction of the Isle of Man and its people to the writer of romance, and will be glad that the field has been entered by so capable an author as Mr. Hall Caine.

It is to be hoped that the Deemster himself is not a character common in the island, for he is the incarnation of all that is most mean and despicable in human nature. Selfish, cruel, crafty, and cowardly, he is the evil genius of the piece, and is drawn, perhaps, more thoroughly and carefully than any other of the characters. It is he who manages to draw to himself in his father's lifetime all his father's property, and turns his defrauded brother out of doors; it is he who buys his wife of her father, the arch-deacon, and breaks her heart with his infidelity in the first years of their married life; it is he who cultivates the evil in his nephew Dan, and invents the lie which brings about the death of his own son Ewan. All through the book, from the beginning to the well-deserved misery of his death, he acts as a subtle malign influence, poisoning the air. Little he gets by it except his barren position

of power and the hatred of all. Utterly without religion, but superstitious to extreme, his time is spent in doing ill-deeds and striving to bribe Providence to avert punishment. One of the least adroit and most ridiculous of villains, the evil he tries to do is always rebounding on his own head; and the devil himself must have laughed when, after haranguing the people and the bishop, his brother, as to the ill-deeds of the bishop's son, and declaring that he will not lift a finger against the man who killed him, he turns round to find that the corpse which was the subject of his oration was not that of his nephew, but of his own son Ewan.

The fact that the evil done by the Deemster is not generally the exact injury contemplated by him, but the casual action of a spirit of evil emanating from his infernal disposition, is characteristic of the book. It is not by themselves only and their passions that the fates of the principal characters are determined; and it is this which distinguishes *The Deemster* from what are usually called "romances." The term serves to distinguish it from the novel or picture of modern life and manners; but, despite its narrative-form, the spiritual grandeur of its conception and the tremendous character of the forces engaged raise it to the region of tragic drama. Among these forces the passions of the characters no doubt play the greatest part; but above, beyond, and around these are the unseen, if not supernatural, powers of accident. It is not without the aid of a network of circumstance woven by superstition and misconception, and a thousand other impalpable devils, that the noble natures of Dan and Ewan are brought into collision, and dragged down to death and hell. What Mr. Hall Caine calls the "perfidy of circumstance" is the great motor of the drama, and dreams and presages, second sight and curses, superstitious terrors and evil thoughts, all of them giving wings as it were to diverse spirits of evil, which make a havoc of noble characters and lives of fair promise, perform for him much the same office as the loves and hatreds of the gods with their emissaries of fates and furies, dreams and omens, for the poets and dramatists of Greece. It is this that raises *The Deemster* into the rank of highest art, and makes it not so much a romantic story of a few human individuals as a tragic poem of human life and fate.

Yet the manner is that of a simple tale. The characters are not complex. They speak plain, unconventional, unpoetical English, often the "homespun" of Manx. Of analysis of character there is little. The narrative, if singularly vivid and abounding in remarkable incident, is told without strain. "Fine" as the writing is, in the best artistic sense, there is not a word of what is usually called "fine writing." To use an epithet once in favour with critics, the method of presenting the facts to the reader is "objective." Everything is described as if seen. The characters are left mainly to reveal themselves by their deeds and the speech born of occasion. The reader is a spectator, not a confidant. In describing the childhood of Dan and Ewan and Mona the author employs anecdote mainly to distinguish character; and even with regard to the Deemster, the most subtle of all the characters, we learn more

by watching his deeds and listening to his words than by explanation of the author.

Mr. Hall Caine, however, makes us know his men and women as well as if he told us all about them. Their presence, their gestures, the greater motives of their being are clear to us. It is no minute and detailed portraiture, but it is complete so far as is needed to distinguish one soul from another. In force Dan Mylrea, the bishop's ungovernable son, stands out clear from the rest—*being of* intemperate will and passion beyond control, but noble and honest withal, capable of falling deeper and rising higher than ordinary mortals; a scapegrace and prodigal on a grand scale. Gifted with the splendid health, enormous strength, and generous nature which made him a hero to his inferiors, with the worst part of his nature encouraged by his uncle the Deemster, and the best part of it but weakly attracted by the saintly example of his father, the bishop, he spends a youth of riot, and instead of entering the Church becomes the proprietor of a fishing smack. After drinking away with his men the year's earnings of the boat, he pays his crew with a bill on which he forges the name of his cousin, "the pazon," as security. Ewan saves him from disgrace by acknowledging the signature, but his father casts him off; and Ewan, while permitting him to live in his house, withdraws his friendship and forbids him from intercourse with his sister Mona. Now the love between Ewan and Dan had "surpassed the love of women," and Mona had been his dearest play-fellow. So was Dan cut off from all the good influences of his life. "They are taking the wrong way with me," said Dan.

Dan does not improve. He ruins his father by mismanaging his farm, commits numerous excesses, and the relations between himself and Ewan become more and more strained. One day a vile story is told to Ewan by his father, the Deemster; and, maddened by the belief that Dan has seduced Mona, he seeks him with a murderous heart. Pride and passion forbidding explanation, they fight like devils, and Ewan reels and falls over the cliff. Far from this being the end of the story, the events that follow are even more original, striking, and terrible, and reveal more completely the genius of the author. The truly tragic scene between Dan and Mona, in which Mona declares her love for the slayer of her brother; the attempt of Dan and his crew to bury the body at sea, when it slips its weights and sails away to land; the return of the boat, the surrender of Dan and his terrible expiation under the sentence of his father; and the final scenes of the sweating sickness and the part Dan played therein, are all grandly conceived and grandly executed.

No doubt much fault might be found with the book. While calling itself a romance, it aims at such an appearance of literal truth that we cannot help asking ourselves if Gilchrist Mylrea was really the Bishop of Man at the beginning of last century, and was brother to the Deemster; and our confidence in its realistic veracity, on the one hand, and our acceptance of the romantic illusion, on the other, are both weakened. The book is too full of extraordinary incidents. The curse of Mrs. Kerruish is fulfilled so fully and literally, the second-sight of Kerry is so

terribly accurate, the story proceeds by such a constant succession of marvels, that it is only the singular skill with which they are introduced and the convincing manner with which they are described that prevent faith from halting. But, after all, these are small things compared with the undeniable grandeur and beauty of this work of art.

COSMO MONKHOUSE.

The Solomon Islands and their Natives. By H. B. Guppy. (Sonnenschein.)

The Solomon Islands: their Geology, General Features, and Suitability for Colonization. (Same author and publishers.)

THESE two books, both excellent in their way, jointly constitute the first serious contribution to a comprehensive study of the physical features, natural history, and anthropology of the Solomon Islands—the largest, and, on the whole, the most important of all the West Pacific insular groups. They are the result of Dr. Guppy's fortunate appointment as surgeon to H.M.S. *Lark*, when commissioned in 1881 to execute a hydrographic survey of that archipelago. Although the selection was made mainly on the wise suggestion of the late Sir Frederick Evans that a person should be chosen possessed of some capacity for scientific observation, the Government, in its usual shortsighted parsimonious way, sent this brilliant young naturalist to explore practically new ground without providing him with any funds for the purpose. The public may therefore well feel thankful that he was able and willing to do so much solid work at his own expense, or, rather, by generously devoting to this purpose the whole of his not too liberal pay as a naval surgeon. Even the promise of £150 from the Royal Society for the exploration of Guadalcanar came to nothing—a serious illness having prevented him from carrying out that portion of the programme.

Surprise is often felt that such comparatively small areas as these South Sea Islands, apparently of such easy access from all sides, should still remain so little known, refusing to yield their secrets to the enterprise which is elsewhere rapidly dispersing the last clouds of mystery in vast continental regions. But we begin to understand the formidable nature of the difficulties of Polynesian exploration when we are told that merely to cross the islet of Santa Anna, only two and a-half miles long, occupied no less than five hours, the path lying the whole way through an impenetrable undergrowth of primeval forest, at many points almost completely blocking the way. These difficulties have seldom been described more vividly than in the subjoined passage, which may at the same time serve as a fair specimen of the author's vigorous style:

"Bush walking, where there is no native track, is a very tedious process, and requires the constant use of the compass. In districts of coral limestone such traverses are equally trying to the soles of one's boots and to the measure of one's temper. After being provokingly entangled in a thicket for some minutes, the persevering traveller walks briskly along through a comparatively clear space, when a creeper suddenly trips his feet, and over he goes to the ground. Picking himself up, he no sooner starts again when he finds his face in the middle of a strong web, which some

huge-bodied spider has been laboriously constructing. However, he struggles along until coming to the fallen trunk of some giant of the forest which obstructs his path, he with all confidence plants his foot firmly on it, and sinks knee-deep into rotten wood. With resignation he lifts his foot out of the mess, and proceeds on his way, when he feels an uncomfortable sensation inside his helmet, in which he finds his old friend the spider, with body as big as a filbert, quite at its ease. Going down a steep slope, he clasps a stout-looking areca-palm to prevent himself falling, when down comes the rotten palm, and the long-suffering traveller finds himself once more on the ground. To these inconveniences must be added the peculiarly oppressive heat of a tropical forest, the continual perspiration, and the frequent difficulty of getting water."

When to all this were further added the treachery, or, at least, the uncertain temper, of savage head-hunting tribes, the limited time available for these land excursions, and the lack of adequate means for securing the co-operation of friendly natives, the reader will not be surprised to find that, during the three years the expedition lasted, only a small part of the whole Archipelago was explored. Some of the larger islands, such as Bougainville and Guadalcanar, were not visited at all, while accurate observations were confined mainly to the northern part of San Christoval, to Fauro (Faro), Piedu and Sumbo (Narovo), of the prevailing volcanic formation, and to Choiseul, Ugi, Treasury, Santa Anna, and Shortland, of the more restricted limestone formation. This fact of the limited extent of his operations must necessarily be taken into consideration in estimating the value of Dr. Guppy's broad generalisations, especially when his inductions threaten to revolutionise current views regarding the physical constitution of the Pacific islands, and, in particular, Darwin's famous theory on the origin of coral reefs and atolls. This theory has recently given rise to some animated controversy between the Duke of Argyll, on the one hand, and Profs. Huxley and Bonney, on the other, the former having used certain ambiguous expressions, apparently imputing a "conspiracy of silence" to the champions of the Darwinian hypothesis, which imputation the latter have warmly resented on behalf of men of science generally. Darwin's view, associating coral structure with subsidence, was first seriously attacked, in 1880, by Dr. John Murray, of the *Challenger* expedition, who, on the contrary, connected it with the reverse process of upheaval. In the present connexion the point of interest is that Dr. Guppy finds that, so far as examined by him, the Solomon group is an area, not of subsidence, but of upheaval, thus, so far, lending support to Dr. Murray's views. Of great upheaval, to the extent of perhaps 2000 feet above sea level, there appears to be superabundant evidence, as, for instance, in Treasury Island, where the sedimentary rocks are of marine origin, levelled up, in some instances, from oceanic depths of "perhaps from 1500 to 1800 fathoms; but, in others, deposited in comparatively shallow water." Hence the conclusion that

"the structural history of the formation of Treasury Island lends powerful support to Dr. Murray's theory of coral reefs. Here a submarine volcanic peak has been brought up to within the depths at which reef corals thrive,

partly by the constant piling up of sediment, but mainly by the upheaving movements."

It is further stated that this tremendous upheaval is of comparatively late date, having occurred, in fact, "in recent and probably sub-recent times," language elsewhere more precisely defined by the expression, "Post-Tertiary times." Hence the far-reaching consequence that these insular groups are not fragments of a vanished continent, as generally supposed, but that, on the contrary, they have

"always retained their insular condition, situated, as they are, in a region of upheaval, and separated, as they are, from each other and from the Australian continent by depths of from 1000 to 2000 fathoms."

It is odd that the present depths of the surrounding waters should be urged as an argument against the western Pacific Islands having at any time formed part of the Australian mainland, seeing that Dr. Guppy himself levels up the oceanic bed many thousand feet on the strength of the character of the sedimentary formations occurring in parts of the Solomon Archipelago. If there can have been upheaval to this extent in quite recent times, why not also subsidence in remoter geological epochs? It is noteworthy that a particular species of crocodile (*C. porosus*) widely spread over south-eastern Asia, the Eastern Archipelago, and North Australia, also abounds in the Solomon Islands. No doubt this saurian is here "equally at home in salt and fresh water." But it will scarcely be suggested that it has reached these islands by swimming across the many hundred miles of marine waters separating them from Australia or New Guinea. Is not, therefore, the presence of the crocodile a much stronger argument in favour of a former connexion with the western mainland, than that in favour of continuous isolation based on the somewhat doubtful age of the submarine calcareous formations in some parts of the archipelago?

Great and intelligent attention has been paid by Dr. Guppy to the anthropology of the Solomon Islands. But although accurate measurements were taken of a few natives at several points, and careful observations recorded on their general physical characters and mental qualities, the results can in no way be regarded as exhaustive. Indeed, the Bushmen in the interior of the larger islands, representing the true aborigines, were scarcely seen at all, and nowhere examined. Consequently the remarks here made refer exclusively to the coast tribes, which throughout Melanesia are everywhere intermingled with Eastern Polynesians, if not also Malayan intruders. They are essentially mixed populations, among whom the dark or Papuan element largely predominates, but who mostly speak Malayo-Polynesian dialects imposed upon them by the conquering brown Polynesian invaders from the East. Hence the intricate character of the numerous problems connected with Oceanic ethnology, problems which can never be satisfactorily solved until we get a thorough diagnosis of the true autochthonous black elements, whether they be the Kai-Colos of Viti-Levu (Fiji group), the Karons, Koiari, and others of New Guinea, and these "Bushmen" of the Solomon group.

So far as it goes, the account given of the coast tribes is valuable, because based entirely on the author's personal observations. They are described as considerably below the average height, ranging from about 5 feet to 5 feet 8 inches, of very dark brown complexion, but lighter in the eastern than in the western islands, with bushy frizzled black hair, short straight nose occasionally arched in a regular curve and much depressed at the root, receding chin and mesocephalic head, that is, intermediate between the round and long-shaped skull. But amid great diversity, sometimes approaching the pure Papuan, at others betraying Polynesian and even Malayan affinities, two very distinctly marked types were found to prevail in several places, one a taller, darker, more robust and more round-headed, the other a shorter, less vigorous, lighter coloured, and more long-headed race. Some valuable details are given regarding the "mop-headed" style of hair so characteristic of the Papuan peoples, with, however, an unfortunate reference to the South American Cafusos, who represent no native type, being simply half-caste Negroes and Brazilian Indians.

Intellectually, these Melanesians are placed in many respects on a much higher level than most other Negro or Negroid peoples. Yet abundant evidence is here given of their head-hunting and cannibalistic propensities. The case is even mentioned of a native missionary, son of a "most accomplished head-hunter in San Christoval," who had been selected by Bishop Selwyn, and trained at the Norfolk Island establishment, but who, nevertheless, again took to the old heathenish ways, and appears even to have accompanied his father on a head-hunting foray during the author's stay in the Archipelago. The natives generally bear a notoriously bad name for treachery and rooted hostility to the whites; and it redounds not a little to Dr. Guppy's credit that by the display of a little tact and kindly feeling he was usually able to secure the goodwill and confidence of the communities visited by the expedition. In one instance, after the exchange of presents, a mutually friendly feeling was established, with the result that

"in a few days I was rambling all over the island [Treasure], usually accompanied by a lively gathering of men and boys. An intimacy was established with the natives, which lasted until we bade farewell to the group in the following year; and the return of the *Lark* from her cruises was always a cause of rejoicing among the natives. The men of the ship were known by name to most of the people of the island; while Mr. Isabell, our leading stoker, made a deep impression upon them by his readiness to employ his mechanical skill for their various wants, so much so that Mule [the local chief] offered, if he would remain, to make him a chief with the usual perquisites as to the number of his wives. For my own part, I reaped the full benefit of our amical relations with the natives; and for the proof of this statement, I must refer the reader to the remarks on my intercourse with them, and to my observations on the geology, botany, and other characteristics of the island." Yet the Treasury natives had hitherto enjoyed the reputation of being "the most treacherous and blood-thirsty of any known savages," so that the explorer expected his acquaintance with the island would not extend beyond the deck of H.M.S. *Lark*.

These handsome volumes are beautifully printed, enriched with several excellent geological maps and ethnological illustrations, and provided with tolerably copious indexes.

A. H. KRANE.

Canute the Great and The Cup of Water.
By Michael Field. (Bell.)

THE first of these plays does not appear to the present writer to deserve the extremely high praise that has elsewhere been lavished upon it; nevertheless, it is a very notable effort to present, dramatically, a noble subject. Has Canute been made the hero of an English drama before Michael Field took him in hand? Perhaps, when one does not know the answer to a question, the best way is to ask it of others; in any case, the presentment of Canute here is Michael Field's own. It is in the manner, and not without the mannerism, of the author of "Brutus Ultor," on which play, and still more on "Callirrhö," I personally think "Canute the Great" shows a marked advance, while "The Cup of Water" is incomparably weaker.

On the whole, perhaps, a drama should not have a preface. But if it is to have one at all, let it be such as that prefixed to "Canute the Great." In a couple of pages the author tells us not only the local origin of this drama—born where the North Sea and the reed-beds of the Broads sigh their secrets to each other—but the idea of Canute and his career that arose out of "the features and traditions of this Danish kingdom." One excerpt must be made, for it contains the pith of the strongest part of the play.

"When . . . a vigorous, aggressive, and undisciplined people comes to realise its barbarism through contact with the civilisation it has defaced, it wrestles with an intolerable shame. In the evolutionary struggle the survivor is himself a tragic figure. Every sunrise brings him into sharper antagonism with the beliefs and habits that beset, while they revolt, him. He is alienated from his gods, his forefathers, his very dreams. His hopes are not founded on experience, nor his ideals on memory. Causes such as these invest the person of Canute with singular and mournful majesty. Centuries of fierce pagan blood in his veins, he set himself to the task of becoming a great Christian governor and lawgiver to men."

This is a noble and truly tragic conception, but the zeal of it has gone near to eat up the author. Compared to Canute, Emma is but a scheming and unscrupulous politician deeply in love, and Edric is a daub. Is it not of the essence of drama that the secondary characters shall have their own perfect, though subordinate, interest? And can this be said of any secondary character here? Some will perhaps find such a character in Emma. To me the cultured heroine appears to be not only an inferior nature to Canute's—which was intended—but an altogether inferior piece of drawing—which was not intended. One, and only one, among the secondary characters, seems to me drawn with the full force of Michael Field's imagination—this is Gunhild, the Scandinavian prophetess, who is, as it were, the very voice of the North, calling Canute back from his new task, new learning, new civilisation. Coming before Canute with her "brooding face and windy sea of hair," she bids him

hearken to the prophecy that speaks doom on his apostasy:

"Hearken! I wandered out
Among the brake-fern and the upright flags,
And snatching brambles, when the sun was gone,
And the west yellow underneath the night.
A fir-bough rolled its mass athwart my way,
With a black fowl thereon. All eve I stood
And gathered in your fate. You raise your hands
To other gods, you speak another tongue,
You learn strange things on which is Odin's seal
That men should know them not, you cast the
billows
Behind your back, and leap upon the horse,
You love no more the North that fashioned you,
The ancestors whose blood is in your heart:
These things you have forgotten. . . . At thy
birth
Sang Urd of foregone things, of thy wild race
Of rocks and fir trees that for ages past
Stood in thy native bounds, of creeping seal
That call thy countrymen to journey forth
Among strange people; and her song went on
As flesh was woven for thee in the womb;
It cannot be forgotten, for she sang
Beginnings.

"CANUTE.

"O grey-headed tyrannies
Of yore, I will escape you.

"GUNHILD.

"Verily
They have requital. Thou wilt get a child:
Will it not draw from the deep parts of life;
Will it not take of thee that disposition,
Old as the hills, and as the waterfall
Whose foam alone was ever seen by man?
Thou wilt produce a being of thy past,
And all thy change avail not. . . . I go;
But wrathful leave behind me what was told
When the crow bent from the swirled plume of
fir,
And held me like a statue."

Is it not a perfect embodiment of an oracle—almost as impressive as, and far less laboured than, the somewhat similar character of Guanhumara in "Les Burgraves"?

Compared to this, the sketch of Edric, the double-dyed traitor of the play, is wanting in imaginative force. He is Iago without his intellect, Edmund without his skill in subservience and his hidden scorn for "the excellent foppery of the world"; a compound of brutal candour and soulless intrigue, he is perhaps possible, but it is surely impossible that either Canute or somebody else would not have strangled him before the third act. Here is his sketch of Edith his wife:

"Unearthly creature! she will win forgiveness
Of my vile sin before it is committed;
While Edmund lies at peace upon his bed
She will have prayed me guiltless of his murder.
She was revolted when I married her
By my dull lewdness; in our wedded hours,
As I unfolded to her my atrocious
And unimagined culpability,
She grew the guardian angel of my spirit;
And now, asleep or waking, I am certain
Of pardon for my most appalling crimes,
And trusting to her saintly vigilance
Can close my eyes and fall asleep without
A *pater-noster*."

It is like the complacent self-revelations of Firmilian—but then Firmilian was a paquinade.

There is a fault which was abundantly apparent in "Callirrhö," and is not absent from this volume. Dramatic poetry, which is really in large measure the expression in words of motives and thoughts which usually operate in silence, cannot afford to be squeamish. A resolute freedom—which is as far from a putrid naturalism as heaven from earth—is necessary. But Michael Field, when confronted with this necessity, seems

apt to slip into a crudity of expression which is neither literary nor natural. There is a middle course, between the squeamish and the crude, to which the pen of genius can certainly attain. Perhaps, too, the temptation to represent men and women over-much in the attitude of partial dissembling, with themselves or others, has unduly fascinated the author. Common as dissembling is, it is not the master-passion of human nature. It is possible therefore to give it too much prominence.

It is easy to find fault; perhaps it would have been easier still to speak nothing but praise of a work that contains such a masterly conception of Canute himself. Finer and more concentrated power of drawing is not, perhaps, to be found among living dramatists. It is original, too—at least I can see nothing but the necessary and legitimate influence of the Elizabethan dramatists anywhere, unless there be, in Act v., a touch of reminiscence, in the interview between Canute and Emma, of the great scene between Sebald and Ottima in "Pippa Passes." Some lines shine with a quite Shakesperian lustre.

"There is great beauty still upon his face;
It hath not been beloved. Infirmity
Sows sorer rancour in men's hearts than crime.

"There's music in her; she has listened much,
Pored o'er the lustrous missals, learnt how soft
One speaks to God, with silky filaments
Woven weird pictures of the fates of men.
Her smile is not a new-born thing, 'tis old
And mellow as the uncut timeless jewel.

"How simply they laid down their lives!
An Englishman sleeps soundly in his death,
As fearing no ill vision.

"All the night
Is one blue home of stars, and I am certain
Of a sweet sudden that my boys are safe
In the far country, and will live at peace.

"I grew a girl,
When, from the walls of London, I looked down
On his young, glittering, tempestuous face,
And blushed, and gave him all the terms he
sought,
To win one smile."

These are surely sparks from a genuine poetic fire.

"The Cup of Water" will, I think, be read with disappointment after "Canute." It is based upon the tale on which Rossetti projected a ballad—how the king and the earl both loved the maiden they met in the forest, and she loved the king, but by his desire wedded the earl. It is as though one should turn to a tragedy in three acts the graceful story "How Lisa loved the King," changing its resignation and pathos to tragic sorrow. Its defect, dramatically, is that, of the four leading persons represented in it, not one seems to have any character at all. They all act on impulse, all get in one another's way, all play at being magnanimous. Millicent, the wife of Almund the King, carries her indulgence to the point of connivance in her husband's infidelity. None of them, save poor Cara the wood-maiden, seem to have any fidelity of heart or resolution of soul. But there are beautiful touches and scraps of poetry—

"Her childhood is all gone;
Adorably a girl, she shrinks and flushes
The wild-wood red of yonder whortle-blooms.
Ah! I have kindled love with just a touch,
And stung the bud with light.

"Thus God
Severs, without the olemissy of death.

"It is true.
Oh what is hell but truth—a fiery candour!

"They were the dearest eyes
In all the world, but when they looked so dumb,
When nothing happened in them, and they grew
A prison for the tears, I could but pray
To fall in battle and forget the pain."

But, on the whole, "The Cup of Water" must have been more pleasure to write than it is to read, or it would not have been put side by side with "Canute the Great."

E. D. A. MORSEHEAD.

Thomas à Kempis. Notes of a Visit to the Scenes in which his Life was spent, with some Account of the Examination of his Relics. By Francis Richard Cruise, M.D. (Kegan Paul, Trench & Co.)

THIS work has been written by a loving and reverent hand, and by one who regards Thomas à Kempis as the undoubted author of the *De Imitatione Christi*. It is written from a Roman Catholic standpoint, though the peculiar tenets of that Church are not distinctively introduced. The reason, or rather plea, for writing this new work is given in the preface, where the author states that it is not his intention "to underrate the erudite works of the Rev. S. Kettlewell," yet adds:

"I deeply respect his earnest religious spirit, his appreciation of Thomas à Kempis, and his painstaking research; but I cannot help feeling that the strong Anglican bias which he manifests throughout must render his writings distasteful to Catholic readers."

In the work itself Dr. Cruise goes over much the same ground as that which has been well traversed before, bringing in, of course, fresh additional information from more recent works—since the literature respecting *The Imitation* has not diminished on the Continent of late years. Beginning with some beautiful reflections upon the great work of Thomas à Kempis, the author proceeds to give an account of the revival of spiritual life in a small community of Christians in which à Kempis was trained and lived, about a hundred years before the Reformation began. There are a few sketches of "the Brothers of Common Life," and the formation of the congregation connected with them. Then, after a brief history of the life of Thomas à Kempis himself, he enters upon the controversy respecting the authorship of the *De Imitatione Christi*, giving ample proof that à Kempis was the real author of it. And finally, he concludes with a few "notes of a visit" to the places where the celebrated author had lived. All this is very carefully done, and the value of the book is greatly enhanced by the illustrations or pretty vignettes which are to be found towards the end.

But does not Dr. Cruise fail to comprehend what "the strong Anglican bias," as he terms it, is? For on speaking of being separated from it "by an abyss which can never be spanned," he refers his readers to a criticism in the first of the Appendices in confirmation of what he considers to be "the peculiar views put forward by the Rev. S. Kettlewell and others." From which it is

pretty evident that both writers want to be enlightened as to what the views of a true Anglo-Catholic are; for they regard him as one who denies "the Real Presence" in the Holy Eucharist. But then this is not so, for he holds the doctrine of "the Real Presence," though he rejects the doctrine of Transubstantiation which the Roman Catholics hold, and the doctrine of Consubstantiation which the Lutherans hold, and esteems the Holy Eucharist as something more than a mere commemoration of the death of Christ, as it is held by many Protestant sects. The Anglo-Catholic believes in Apostolical Succession through the episcopate, which most of the Protestant dissenters do not; but he holds that the pope has no authority in the Church to interfere with the succession in the English Church, and that he breaks the laws of the Catholic Church as laid down, more especially in the canons of Nicaea and Ephesus, by introducing a foreign succession into both England and Ireland, and thus causing a sad division in the Church. The Anglo-Catholic regards it as the duty of Christians to belong to the Church of the country in which they live if it be lineally handed down from the Apostles, which Protestant dissenters do not; but he does not hold with the Roman Catholics that articles of faith should be required of them which are not in Holy Scripture, or not agreeable to the same, and he cannot accept the Papacy as the divinely appointed institution of Christ and His Apostles. The Anglo-Catholic considers it to be necessary to adhere to the original basis of Church communion as founded by Christ and His Apostles, as received by the Primitive Christians, and as acknowledged and defined by the first four General Councils of the Church, which Gregory the Great—who sent Augustine over to this country—regarded as equally sacred and binding upon Christians as the four Gospels. The Anglo-Catholic believes that it will only be by a return of the Christians of every denomination to this divine basis that a reunion of Christendom will be eventually brought about; and that, so long as the English Church abides by this basis, she at least is not answerable for "an abyss which can never be spanned."

In his Preface Dr. Cruise thinks it "a little grotesque" to attempt "to establish a parallel between the lives of Gerard Groot and John Wyclif, and in the effort to represent Thomas à Kempis as a potential precursor of Martin Luther, and his so-called Reformation!" But a brief reference to the facts of history will, it may be thought, satisfy reasonable men that there is, after all, some little truth in both these views which are made a ground of complaint. For first, both Gerard Groot and John Wyclif, though living in different countries, and without having any apparent connexion with each other though in the same age, equally laboured to revive the spiritual life in the church of the country to which they severally belonged, while it was in a comparatively moribund state. Both equally endeavoured to disseminate the light of divine truth among the people by preaching the word of God at a time when the laity were forbidden to read the Bible for themselves. Both of them adopted much the same means for extending their work, by training

and employing poor scholars or clerics to spread abroad the glad news of gospel life and salvation. Neither of them would leave the Church, while both of them protested against its corruptions; and both of these men fell under the ban of the pope. It is for others to judge, then, whether or no there was not some sort of parallelism between these two eminent men in the first dawn of the Reformation. And then as to à Kempis being a precursor of Luther and the Reformation he brought about on the Continent, it must be kept in mind that, though their views might differ on some points, the great German reformer would never have been able to bring about the Reformation which he did, had it not been for the leaven which had been working—the desire for a new and better life, which had become deeply engrafted into the hearts of the German people by the reading of *The Imitation of Christ* and books of a similar character by other like-minded authors.

There was, indeed, a singular charm in the chief work of à Kempis, which took a wonderful hold upon the people, more particularly of Northern Europe, from the very first, which spread to England, for the mother of our Henry VII. had the larger portion of *The Imitation* translated into English. The secret of its popularity seemed to lie in this, that it taught men how to lay hold of Christ, and to live after his example; how to find comfort and joy in their religion amid the trials and tribulations of life, and attain a brighter hope of everlasting life to rest upon. There may be a few expressions which savour of the conventional life, and of the age in which it was written; but, upon the whole, it gave a bright reflex of what the life of Christ in man should be. The congregation of Christians, whose spiritual life it depicts, was as a tender plant that budded, and showed signs of new growth that promised well, while all else in the Church around seemed dry and barren. It was as the first streak of light before the dawn of day after a dark and dreary night; and men welcomed it as the harbinger of awakening life in the Church. *The Imitation* is not exactly a commentary on the Scriptures, for as such it would probably have been forbidden; but it gives a lively picture of what a Christian should be who is guided by the word of God, and sets himself seriously in the way of following Christ. Therefore, even to this day, it finds a welcome in the hearts of all earnest and devout-minded men, of whatever denomination they may be. It was alike the companion book, next to the Bible, which the devout and intrepid General Gordon delighted to peruse in his solitary life at Khartum; and of the excellent John Wesley, when, like a second Gerard Groot, he went travelling from place to place to win souls for Christ. Thomas à Kempis does not seem to have had much liking for the papacy, or much belief in its authority; for only two or three times does he mention the pope in the many works he wrote, and in one of these places he does not speak of him, or the use of his power, with much respect. And it is a singular fact that so notable and devout a man as à Kempis has not been either canonised or beatified by any pope since his day. A Catholic doubtless he was, but more of the

type of the Anglo-Catholic than some think him.

A good index is added to the book, with a map of Holland, and two photographic likenesses from paintings of Thomas à Kempis; while the type and "get up" of it is everything to be desired. S. KITTLEWELL.

NEW NOVELS.

April Hopes. By William D. Howells. (Edinburgh: David Douglas.)

A Double Wedding. By the author of "St. Olave's." In 3 vols. (Hurst & Blackett.)

George Stalden. By Edmund Lawrence. In 2 vols. (Remington.)

Sweet is True Love. By Katharine King. In 2 vols. (Hurst & Blackett.)

Under the Stars and Under the Crescent. By Edwin de Leon. In 2 vols. (Sampson Low.)

The Sport of Circumstances. By Louis E. Armstrong. (Sonnenschein.)

Miss Willowburn's Offer. By Sarah Doudney. (Blackie.)

A New Exodus. By Catherine Ray. (Nisbet.)

April Hopes is as dreary and cleverly written a story as Mr. Howells has ever published. Most even of his later books have had in them a little of that optimism which makes English readers generally regard *The Lady of the Aroostook* as his most enjoyable work. But in *April Hopes* Mr. Howells gives full swing to his peculiarly dry and attenuated American cynicism. There is not in it a single man or woman worth remembering. The folk who appear in its pages—and they are bewilderingly numerous—have no time to be happy; they have only time to be introspective and analytical. "They're the nicest kind of people," no doubt, that Boston, or Cambridge, or any of the other seats of "intellectuality" in the United States, can give us—to borrow the description that Dan Mavering, Mr. Howells's apology for a hero, gives of the father and mother of his apology for a heroine. Yet somehow one wishes that the whole of them could be precipitated from middle-class competence into poverty; then, perhaps, they would show whether they have any characters of their own, and not mere substitutes for characters supplied by Boston society, or Harvard Class-Days, or Hygeia Hotels. It may be doubted if there ever figured before in any work of fiction such an intolerable pair of lovers as poor, soft, good-natured Dan Mavering, and Alice Pasmer with her capriciousness, her morbid self-examination, her unreal self-depreciation, her blue-china ideals. After their engagement has been broken about a score of times, Mr. Howells is cruel enough to marry them in the last chapter. It is, therefore, to be hoped that, in a sequel to *April Hopes*, he will be kind enough to reduce them to keeping boarders in New York. In that case, they may find from others what true pleasure and true pain are, and even overcome the great difficulty in life, which, as Mr. Howells says, in his pretty way, "is to bring experience to the level of expectation, to match our real emotions in view of any great occasion with the ideal emotions

which we have taught ourselves that we ought to feel."

Carlyle, according to one of the stories, mostly false, which have been circulated about him since his death, finally demolished a novelist whom he had been flaying alive, and who had pleaded that "his types were human at any rate," by exclaiming "Then heaven deliver me from such humanity!" On praying—as the first duty that ought to be performed after reading *April Hopes*—to be delivered from the humanity that is to be found in it, one may, or rather must, allow that it is mercilessly realistic, and that Mr. Howells has packed into it more sentences and more characters that are clever without being "smart" than in any of his previous works. One is positively grateful for being introduced to the elder Mavering, professor though he is, because he confesses to "the increased liking a man feels for a woman when she owns to an appetite." Then there is one girl of genuine character in *April Hopes*—of sufficient character to decline to marry Dan Mavering—a Miss Anderson, "who claimed a collateral Dutch ancestry by the Van Hook, tucked in between her non-committal family name and the Julia given her in christening," and whose face would have been uninteresting "if it had not been for the caprice of her nose in suddenly changing from the ordinary American regularity, after getting over its bridge, and turning out distinctively *retroussé*." Altogether, *April Hopes* should be treated very much like an ice-pudding. With a view to thorough appreciation, not to say digestion, the more slowly it is taken the better.

The new work by the author of *St. Olave's* is realistic somewhat as *April Hopes* is realistic—that is to say, the lives of a number of people, whose characters give the impression of having been made to order, are represented in panoramic fashion. It is an excellent story of its author's kind, being a careful study of a thoroughly clericalised rural society. The "double wedding" of the heroine's sister to the Rev. Rowland Berrithorne, and of the adventuress, Seline Consett, to the hero, Michael Forrester, does not bring the plot to a conclusion. It rather brings us to the most interesting stage in it. We feel much more sympathy with Berrithorne after misfortune has fallen upon him and his wife, and with Forrester after the death of his wife—who has won him by means of a lie—than before their marriages. Seline Forrester is a minute study of a weak, frivolous, woman, who is not thoroughly bad; and the story of the weak Berrithorne's deterioration and reformation is told with skill. Lady Matilda, the malicious and dangerous gossip, and motherly Mrs. Dumble, will take their place among the best portraits in this author's gallery.

George Stalden professes not to be a historical novel, but to be a personal memorial of the time of the American War of Independence, and to be only "edited" by Mr. Edmund Lawrence. Whether it is the one or the other, it is clearly and simply written. Arnold, André, Rodney, Clinton, and other characters of the period, British and American, look lifelike in its pages; and a number of domestic scenes are carefully and prettily

spots met with in all glaciated countries. I have met with few other "living" beliefs about them, but am glad now that I am better informed.

The volume is such a conglomeration of anachronisms, errors, and unlucky patchwork, that it is not safe to lean any weight on its evidence. At the same time, I agree with all that the writer says in praise of Aran and its inhabitants. To the naturalist or archaeologist there is no place in the kingdom so full of fresh, true, and unhackneyed interest, for no place of anything like the interest in this country is nearly so difficult to arrive at. For this reason it seems to me a vast pity that Mr. Burke should not have consulted some friend before publishing a volume which lays itself open to censure from the merest schoolboy's education, and which, by ignoring the real points of noteworthiness and promulgating silly errors instead, defeats the object aimed at. It is a pity in more respects than one. Ireland receives flying visits from distinguished inhabitants of the sister isle nowadays, who publish their impressions as fast as a dog can trot; and grave and numerous are the misrepresentations so put forth. A late lady-author fell into this modern fashion, and it is unfortunate that the last writing of the author of *John Halifax* should be so far from accurate in its statements. But it is a much more unfortunate circumstance to find a native, one to the manner born, airing his ignorance in such a childish fashion. Men of science in England have continually reproached us Irish for our lack of systematic study of our own most interesting products. Surely they have cause when they read the statement of a barrister-at-law and a B.A. of Trinity College, Dublin, that the sea-anemone is a marine plant, and the duck and teal breed on the cliffs of Aran.

H. C. HART.

INGULFUS REDIVIVUS.

London: Nov. 21, 1887.

It is a relief to know that Mr. Round has at length pointed out the "worst mistakes" in my book. May I say in reply:

(1) No argument therein respecting Domesday Book hangs on Ingulf. He is referred to for what he is worth, and the reference-note is given for obvious reasons.

(2) I cannot enter into his troubles connected with the Museum library.

(3) In applying the word "peeress" to a countess of the Norman period, I fear I have used the term in a more extended signification than usual. It is, however, a trivial slip, scarcely worth noting. I see that the word "peerage" is similarly used by Nicolas in his well-known work, entitled "A Synopsis of the Peerage of England, exhibiting . . . every Title of Peerage which has existed in this Country since the Conquest." Among Nicolas's "peers" are some noble personages quite as remote as Godiva.

(4) The passage which Mr. Round calls my "worst mistake" rests on good authority—an authority of three separate and independent chronicles, which have none of the Ingulfine taint in them; unless, indeed, Mr. Round has already relegated these also to the limbo of delusion and imposture. In order to show that I have not exceeded the strict signification of the words, I transcribe the paragraph in dispute side by side with the original Latin from which it is derived:

"Lucy, the countess . . . married, after the death of her first husband, Ivo, Roger, son of Gerold Romara [here Mr. Round writes *sis* as if there were something wrong in me] in the

time of Henry I., and had one son William. She married, a third time, Ralph Earl of Chester, in the reign of King Stephen, and by this marriage had a second son, Ranulf, Earl of Chester" (p. 99).

filio Geroldi Romara, peperit filium nomine Willielmum postea comitem de terris paternis et Lincoln. comitatus; nupta etiam tertio viro, tempore regis Stephani, id est Ranulfo comiti Cestriae, peperit filium Ranulfum postea comitem Cestriae."

As Mr. Round knows all that is to be learned of Lucy the countess, I need not tell him that this occurs at the end of a MS. of Florence of Worcester. Let him also compare equally reputable evidence from another MS.—no doubt familiar to him—the *Registrum de Spalding*:

"Defuncto vero Yvone, eadem domina Lucia successiva sumpit sibi alios viros; scilicet Rogerum filium Geroldi, et comitem Cestriae Ranulphum. Mortuis quoque domino rege Willielmo et maritis dominae Luciae supradictis, ipsa in viduitate sua donavit," &c.

I have no wish to follow Mr. Round into the labyrinth of his physiological paradoxes; but, in support of the fact that "Algar" was her father, I will ask him to examine this passage from a third, and equally irreproachable, MS.:

"Yvo, maritus Luciae comitissae, donationes, quas Toraldus avunculus ejusdem Luciae, filiae Algari comitis Leicestriae, monachis Spaldyngiae dederat, evidenter fecit confirmari."—*Ann. of Peterborough*.

The difficulties of the date of Algar and the story of Lucy have long been felt in English history. Can Mr. Round smooth them away? If so, he will deserve everybody's gratitude.

WALTER DE GRAY BIRCH.

Frenchay Rectory, Bristol: Nov. 21, 1887.

Mr. Round understates Mr. W. de Gray Birch's fondness for Ingulph. Mr. Birch quotes or refers to his authority eighteen times, only once suggesting that any doubt has ever been cast on the genuineness or credibility of Ingulph, and then implying that such doubt is misplaced (p. 121). The reference seems to be always to Mr. Birch's own edition of Ingulph's Chronicle, which I do not possess, and which I have endeavoured in vain to see at the British Museum, the London Library, and other places.

There are two other passages which have excited my bump of antiquarian or historical curiosity—viz.:

"Wherever a substantial building was found to be in existence, as at St. Pancras Church, Canterbury, for example, it was taken possession of for the benefit of the new religion" (p. 6).

"A copy of the Epistolae of St. Jerome, which at one time belonged to Thomas Wolsey, the unfortunate Archbishop of Canterbury" (p. 70).

The whole book seems to be written by one who knows a great deal about the subject, but who does not care or has not time to be accurate for the benefit of such Christian ignoramuses as would read books published by the S.P.C.K. But the mere fact that Mr. Birch was putting forth a popular account of the Domesday Book, for people who would presumably take his statements and references for granted, should surely have made him specially careful not to impose upon their ignorance or credulity.

F. E. WARREN.

A HITTITE SYMBOL.

London: Nov. 19, 1887.

I am accused by Prof. Sayce of not "making sure" of my "facts" with regard to the "innocent-looking triangle"—i.e., the equilateral triangle; for I intimated distinctly that I was "taking into account simply the equilateral triangle." I am informed that I shall find it not merely on the seals and "at Hamath," but also "at Jerablus," and "at Merash," refer-

ence being given to two places in published representations of inscriptions from the two last-named ancient sites. But Prof. Sayce is "sorry" that in these places it is not "accompanied by 'the head of a cow.'" Now, if all this were true, it would be quite consistent with my statement as to the equilateral triangle "occurring but very rarely." And I did not, of course, think of saying that this triangle is found only with an emblem of the cow-headed Ashtoreth.* The discussion was concerned, indeed, with its occurrence in connexion with a totally different symbol. But as to the two places in the inscriptions to which Prof. Sayce refers, the fact is that the equilateral triangle occurs at neither the one nor the other. On the Merash inscription there is a triangular object with what looks at first sight like a tolerably thick tail or handle. But clearly this is not the triangle we are seeking. And on the third line of the Jerablus inscription there are objects in the shape of isosceles triangles, or approximating thereto, but there is no equilateral triangle.

With respect to the legs of the Hittite symbol, what I said had reference to the seals represented by Perrot and Chipiez, and to the Tarsus seal, especially to the latter, of which I examined with great care an excellent impression. Certainly on this impression the Hittite symbol had a "pair of divergent legs which clearly terminate in turned-up toes." What modification of this symbol there may be on seals which I have not seen, it is, of course, impossible for me to say. I should not by any means expect to find the symbol "always associated" with the equilateral triangle.

Prof. Sayce wants me to tell him when and where he has spoken of the "Hittite symbol as being a symbol of life." If this be not the sense conveyed in his letter to the ACADEMY of November 5 (p. 304, lines 10 to 25), I fail altogether to discern what is intended, or why a comparison should be made with the *ankh*, "the Egyptian symbol of life"—a comparison which, by the way, had been previously suggested by Mr. Pinches. THOMAS TYLER.

[As Prof. Sayce has already left England, it may be as well to reprint in full what he wrote in the ACADEMY of November 5 about "the symbol of life":

"In one case, however, the [Hittite] knotted girdle takes the form of the *crux ansata*, the Egyptian symbol of life. I believe, therefore, that it gives us the clue to the origin of this mysterious symbol. It would have denoted the knotted girdle worn by the primitive Egyptian over the seat of life. Some of the figures in the tomb of Ti of the Fifth Dynasty wear no other article of clothing."

Prof. Sayce's argument clearly was, not that the Hittite girdle was a symbol of life, but that the Egyptian emblem of life was originally a girdle.—Ed. ACADEMY.]

AN EARLY ENGLISH DEED.

London: Nov. 8, 1837.

As the first of Mr. Furnivall's "Fifty earliest English Wills in the Court of Probate, London," is dated 1387, it may be worth while to note the existence of an English document of similar character, but of considerably earlier date. This is the foundation by "Simond Potyn," of St. Katherine's "Spitall," Rochester (1316), which is, "Dated in the feast of Christmas in the yere of our lorde Jhesu Christ MCCCXVI reigninge our lorde Kinge Edwarde

* That an emblem of Ashtoreth should be found on a Hamathite inscription is in accordance with the Semitic name of the city *Hamath*. And the people, also, who sculptured the inscriptions found at Jerablus and Merash were probably in the main Semites. With regard to the Hamath and Jerablus inscriptions I have maintained this position for several years.

called of Carnarvan, the sonne of Kynde Edwarde the first after the conquest." It is printed in that unindexed work, Thorpe's *Registrum Roffense* (pp. 546-7), from the original "in archivis civitatis Roffensis."

J. H. ROUND.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, Nov. 26. 5 p.m. London Institution: "The Evolution of Reptiles," by Prof. H. G. Seeley.
8 p.m. Royal Academy: "The Chemistry of some selected Palettes," by Prof. A. H. Church.
8 p.m. Society of Arts: Cantor Lecture, "The Elements of Architectural Design," I., by Mr. H. H. Statham.
8.30 p.m. Geographical: "A Journey round Chinese Turkestan and along the Northern Frontier of Tibet," by Mr. A. D. Carey.
TUESDAY, Nov. 27. 8 p.m. Civil Engineers: Discussion, "Accidents in Mines," II., by Sir Frederick A. Abel.
WEDNESDAY, Nov. 28. 8 p.m. Society of Arts: "Economic Illumination from Waste Oils," by Mr. J. B. Hannay.
THURSDAY, Dec. 1. 8 p.m. London Institution: "How Plants protect themselves," by Mr. W. Gardiner.
8 p.m. Linnean: "Ants, Bees, and Wasps," II., by Sir John Lubbock; "Myriopoda of Mergul Archipelago," by Mr. E. J. Pocock.
8 p.m. Chemical: "The supposed Third Nitroethane," by Prof. Dunstan and Mr. T. S. Dymond; "Researches on the Laws of Substitution in the Naphthalene Series," by Prof. H. E. Armstrong.
FRIDAY, Dec. 2. 7.30 p.m. Civil Engineers: Students' Meeting, "The Classification of Continuous Railway Brakes," by Mr. A. Wharton Metcalfe.
8 p.m. Philological: "English Etymologies—Cess-pool, &c.," by Mr. H. Bradley.
8 p.m. Geologists' Association.

SCIENCE.

Plautinische Studien. By P. Langen.
(Berlin: Calvary.)

In this book Langen addresses himself in the first instance to the question of interpolations in the text of Plautus, entering the field against the critics and editors who assume that the comedies in their traditional form contain extensive additions by later revisers. His defence of the text is based upon a severe criticism of some features in the art of Plautus. "We have no right to form an *a priori* notion of the excellence of the Plautine comedies and then proceed to reject summarily as un-Plautine whatever in our eyes detracts from that excellence." That this is a self-evident proposition Langen is perfectly aware; but he justly maintains that its bearing has been insufficiently appreciated by certain modern critics who have never asked whether the diffuseness at which they take offence in particular passages is not in reality a general characteristic of the workmanship of the poet. The book may, therefore, be called a study in textual criticism from the literary point of view. On the other hand, it is no part of the problem, as Langen conceives it, to call attention to the merits of Plautus, or to balance merits against demerits. He is, therefore, careful to warn the reader not to expect any general verdict of a literary character. His purpose is served if he succeeds in proving the constant recurrence of a certain class of defects.

His main contention Langen appears to me to have established conclusively. His searching criticism of all the comedies proves—what every reader must have more or less distinctly felt—that Plautus habitually works out his themes with a prolixity which seriously impairs the effectiveness of his humour, and must have been a standing difficulty to the ancient actor; and further, that he is careless in the construction of his plays, and often indifferent to consistency in the delineation of

character. It appears, therefore, in the highest degree rash to excise whole passages merely because they are unnecessary to the development of the plot, or contain repetitions of a thought already sufficiently expressed. It is satisfactory to find that cautious editors like Brix are moving in a conservative direction. His fourth edition of the *Captivi* removes the ban from many lines which were still suspected in his third.

The view as to general faults of construction in Plautus which Langen adopts is, of course, not new. It is as old as Horace (*cf.* "Securus cadat an recto stat fabula talo"). What Horace's verdict on the question of prolixity would have been, had it been distinctly put to him, it is, perhaps, difficult to say. The line

"Plautus ad exemplar Siculi properare Epi-
charm!"

is very obscure. It is explained by Prof. Sellar (who elsewhere recognises the prolixity with which themes are hammered out in the "Cantica") as referring to the "extreme vivacity and rapidity of gesture, dialogue, declamation, and recitative by which his scenes were characterised." May not the idea be the same as that in

"Quam non adstricto percurrat pulpita socco,"

and refer to the "running scenes" which were so characteristic of Plautus, and which seem to have fallen into partial disfavour by the time of Terence? (See Hautontim. *Prol.* 28 ff.). Whatever be its interpretation, we may say, with Cato, "aliud est properare, aliud festinare." And of Plautus it is not true that "ad eventum festinat" (Orelli)—at any rate, if the words are used to convey praise. The recognition scene of the *Menaschmi* has been often quoted as an example of a *déroulement* absurdly deferred. The discovery is practically made as soon as the twin brothers are brought face to face. Langen's castigation of this scene is a curious commentary on the hasty remark of Orelli (upon the line of Horace above quoted)—"Nunquam in rebus minutis movando retardat spectatorem."

An instance of faulty construction is contained in the *Captivi*. The general scheme of the play is for the action to take place on one day—indeed, during the time that the parasite, Ergasilus, is waiting for his dinner (*cf.* iv. 2.3). But the latter part of the play is wholly unintelligible except on the assumption of a lapse of some considerable time; for between the end of the second and beginning of the fourth act the captive Philocrotis completes a journey from Aetolia to Elis and back again, and between the third and the fifth acts his slave Tyndarus suffers protracted punishment in the stone quarries (*cf.* v. 4.1 ff.). It is this *inconsistency* which differentiates the treatment of time in the *Captivi* from that in the *Agamemnon* of Aeschylus. The defence of Brix, that "the measure of empirical time has no absolute validity for the idealising drama," has always seemed to me without force, except as a reply to sticklers for the unity of time. How Lessing, who to some extent felt the difficulty above mentioned, could call the *Captivi* "the most perfect play ever put upon the boards" it is difficult to see. A fault of construction of the opposite kind is to be found in the *Menas-*

chmi. The slave Messenio is told in the second act to take his master's luggage to an inn; but he does not succeed in executing this commission and returning until Act v. (986), although no suggestion is offered that he has been delayed.

In the delineation of the twin *Menaschmi* we have also an example of "psychological inconsistency." Such thievishness as they both show would have been more in place in the description of a pair of rascally slaves. Again, it is unnatural that the Epidamnian brother should never have made any inquiry as to his family, though he knew the name of his father and mother, and shows attachment to his brother when they meet (*cf.* 1132). It is a fault of construction in the *Rudens* that the shipwrecked girls do not recognise the temple of Venus, which must have been quite near to their home. In the *Trinummus* Langen shows well that we must choose between the alternatives of either saying that the poet never troubled himself to ask how Stasimus came into possession of a talent of money, or admitting that this honest slave (*cf.* 617 ff., 1070 ff.) stole it from his master.

In such criticism as this Langen is at his best, and it is impossible to deny that he makes many effective and humorous points against Plautus. It is plain that Plautus had none of the spirit which animated an artist like Goethe, and which shows itself in the scrupulous *Motivierung* of even trivial incidents (*cf.* his suggestion to Schiller to add two lines to "Wallenstein's Lager" in order to explain how the peasant came into possession of the dice).

But sometimes Langen's attack seems to admit of an answer in defence of Plautus. His critic appears not to allow enough for stage convention and the *roba di scena* which plays so large a part in pieces of a humorous character all the world over, and especially in Italy. Thus, in the *Aulularia* Langen objects to Euclio's utterance of grief and rage after his discovery that he has been robbed. The robbery, says Langen, was discovered in the grove of Silvanus, some distance from the town. Euclio had time to cool down before he reached his house. But surely the poet is justified in allowing him to utter the first emotions of despair to the audience. We may, if we like, think of Euclio rushing along the road crying out for his lost treasure, as Shylock does in the "Merchant of Venice." Langen admits that we ought to take no offence at the ordinary employment of an open street as the scene of action, even though we have evidence enough that in real life the ancients would have thought a street an unsuitable place for secret communications, money transactions (*Aimaria*), ladies' toilettes (*Mostellaria*, *cf.* *Mercator*, 1005). Why not then extend the license of the stage a little further? In the *Captivi* is there not something more subtle and pathetic than Langen thinks in the description of Hegio as believing in the general truth of the captives' statements, and making inquiries afterwards when one of them had escaped? Logically, no doubt, he ought to have reversed the procedure. But, psychologically, is it not an ordinary case of shutting the door after the horse has been stolen? In making inquiries Hegio, of course, expected only confirmation of the story in its main outlines, not evidence

that he had been deceived. In *Aulularia*, ii. 1 Langen objects to the sudden conversion, in the course of twenty lines, of an old man to the idea of marriage. But are we not intended to understand that the thought of marrying Euclio's daughter had been long simmering in the mind of Megaronides, and that his sister suspected it? This would explain her sarcasms about the general badness of women early in the scene, which Langen regards as so out of place in one who was recommending matrimony. In cases like this we ought to give the poet the benefit of the doubt. In any case the conversion is hardly so startling as some other stage conversions of a similar character. The reader is involuntarily reminded of the scene in "Richard III.," in which the Duke of Gloucester persuades Lady Anne, who knew that he had murdered her husband, to accept his hand. In *Menaechmi*, 708 ff., is there not something very feminine in the sudden outburst of violence on the part of the wronged wife, when Menaechmus returns her the robe, the outward and visible sign of his faithlessness? In the same play Langen complains that Plautus gave no thought to the question of costumes; the Syracusan Menaechmus has just arrived, and must, therefore, be wearing his travelling dress; the other Menaechmus is dressed like an ordinary citizen. If the reader will tolerate another reference to Shakspeare—between whom and Plautus a strong resemblance is found by Mommsen—I would say that exactly the same criticism applies to the "Comedy of Errors." Stage convention allows the brothers (and slaves in the latter play) to appear in identical dresses, and no questions must be asked. In his criticism of the *Mostellaria*, p. 171, Langen hardly allows enough for the difficulties of a man who has to lie in a hurry.

The third part of the book contains a discussion of a number of passages in which Langen suspects corruption of the text. Space forbids me to enter into details; suffice it for the moment to say that the author everywhere shows that sound sense and thorough scholarship which characterised his former work (*Beiträge zur Kritik und Erklärung des Plautus*, 1880), and gives proof that he is not one of those who will fight *πρὸς καὶ λάξ* for anything that stands in the MSS.

E. A. SONNENSCHNEIN.

SOME BOTANICAL PUBLICATIONS.

Lectures on Bacteria. By A. de Bary. Translated by H. E. F. Garnsey; revised by Prof. J. B. Balfour. (Oxford: Clarendon Press.) The Delegates of the Clarendon Press have done well in publishing, in a handy and convenient form, an authorised translation of Prof. de Bary's lectures on bacteria delivered in the University of Strassburg. Although going over much the same ground as the chapters on bacteria in his larger work—*The Comparative Anatomy and Biology of the Fungi, Mycetozoa, and Bacteria*—issued by the same English publishers, it is yet a distinct work; and students of this branch of science will be very glad to have it as a separate publication. The literature of bacteriology has now, in truth, become somewhat appalling. Not only has the bacteriologist to make himself acquainted with all that has been written on the life-history of the various forms, and their

power of mutual transmutation, but also with their pathogenic effects (or otherwise) on man and on other animals, and with the results of their culture in different nutrient substances. On the life-history of bacteria Prof. de Bary is the highest living authority; and on this branch of the subject the reader will here find an adequate account of all the phenomena that can be regarded as substantiated up to the present time, as well as chapters on the causal connexion of parasitic bacteria with infectious diseases in warm-blooded animals, and with the diseases of insects and of plants. To this is appended an excellent "conspectus of literature," accompanied by notes by the author.

Cohn's Beiträge zur Biologie der Pflanzen. The fifth vol. of this very valuable publication commences a new series, with a larger page, so as to give more effective plates. The first Heft (244 pages) is entirely occupied with an important paper, by Herr F. Schwarz, on the morphological and chemical composition of protoplasm, illustrated by eight plates. The cell-nucleus he regards as composed of the following five substances, viz.: (1) chromatin, the portion most sensitive to staining re-agents, and occurring in the form of larger or smaller granules or globules, the "nucleo-microsomes" of Strasburger; (2) pyrenin and amphipyrenin, which constitute, respectively, the body and the membrane of the nucleus; these differ widely in their re-actions from chromatin, and also from one another, the former taking up staining re-agents much more readily than the latter; and (3) linin and paralinin, the former being the substance of the nuclear threads, the "nucleo-hyaloplasm" of Strasburger, the latter that of the intermediate matrix or "nuclear sap." A large portion of the paper is occupied by details of the chemical re-actions of these various substances most valuable to histologists. The chlorophyll-bodies are regarded by Herr Schwarz as having a fibrillar structure; the fibrillae do not, however, form a network, but lie side by side, filling up the entire mass of the chlorophyll-body. The fibrillae, composed of a substance which he calls chloroplastin, are not uniform in colour, but contain globular bodies of a deeper green than the rest, the vacuoles or "grana" of Meyer; between the fibrillae is a colourless substance, the metaxin. These two components of the chlorophyll-bodies can be separated by the action of water, in which the fibrillae swell up strongly, but are entirely insoluble, while the metaxin is finally completely dissolved. They may also be distinguished by other chemical re-actions.

THE last published part (No. 20) of Schenk's "Handbuch der Botanik," in the *Encyclopaedie des Naturwissenschaften*, consists of a further instalment of Zimmermann's "Morphology and Physiology of the Vegetable Cell." The chief subjects discussed are the formation of chromatophores and starch-grains, and of other bodies included in the term "cell-contents," the structure and mode of formation of the cell-wall, and the theories of swelling and osmose. With regard to the rival theories as to the mode of formation of the cell-wall, whether by intus-susception or by "apposition," the author takes a medium course, holding that the two modes may each take place under different conditions, or even both at the same time.

CORRESPONDENCE.

EKOTIBHĀVA.

Oxford: Nov. 11, 1887.

The discussion on the correct spelling, the etymological origin, and the technical meaning of this Buddhist word, which was opened in the ACADEMY some time ago, is still carried on with undiminished vigour in the Indian papers.

In the *Proceedings* of the Asiatic Society of Bengal for July, 1887, Dr. Rajendralala Mitra replies to Mr. Growse's letter, published in the ACADEMY. Mr. Growse had very ingeniously suggested that *ekoti* might be the result of Prākritic tendencies which are clearly perceptible in the Sanskrit of the Lalita-vistara, particularly in the Gāthā portions, and that *ekoti* represented an original *eka-koti* in which the initial *k* of *koti* was elided. Dr. Rajendralala Mitra doubts whether such Prākritic tendencies could safely be admitted, and whether, even then, *eka-oti* could possibly be contracted into *ekoti*.

In the mean time, I received a new and very interesting suggestion from Mr. Sarat Chandra Dās, who wrote to me from Darjiling on July 25. He told me that he had been commissioned by Sir Alfred Croft, Director of Public Instruction, Bengal, to compile a list of Buddhist Sanskrit words with their equivalents in Tibetan and English. This is a work which I had strongly recommended to several of my correspondents in India, and for which no one was so fit as Mr. Sarat Chandra Dās. He has studied Buddhism in Lhasa, and possesses a valuable collection of Tibetan translations of Sanskrit texts. From what I have seen of these Tibetan translations of Sanskrit originals, they seem to me far more trustworthy than Chinese translations. The translators have evidently studied Buddhism under competent teachers, and they are able to render the spirit of the originals with far greater accuracy than their Chinese rivals. It is a great pity that the study of Tibetan is so little encouraged in our universities. Much might be gained from a study of Tibetan translations of Buddhist texts. The explanation which Mr. Sarat Chandra Dās gives of *Ekotibhāva*, according to Tibetan authorities, though hardly applicable to Pāli and Sanskrit texts, seems to me to deserve serious attention.

F. MAX MÜLLER.

Darjiling: July 25, 1887.

In his address the president of the Asiatic Society of Bengal made mention of the work I have in hand, i.e., the compilation of a list of Buddhist philosophical and technical terms in Sanskrit, and their equivalents in Tibetan and English. When I commenced this work in October last I had doubts as to its usefulness; but the importance attached to one such term as "Ekotibhāva" by the attempts of Max Müller, Morris, Schiefner, and Dr. Mitra to explain it in the ACADEMY and elsewhere, has encouraged me to push on my work with vigour. I have therefore ventured to write a short note on the etymology and meaning of the term "Ekotibhāva" with a view to explain an important fact connected with the doctrine of incarnation which prevails in Tibet and Mongolia.

I have brought with me from Lhasa some very old Sanskrit and Tibetan dictionaries. One of them, called "Mahā-vyutpatti"—in Tibetan, "Lopon manpon mdsod pañi bye bragtu rtogs byad ohenmo, i.e., "the great critical work prepared by many Pandits and Lochavas" (Tibetan interpreters)—is a MS. written in the Deva-nāgarī characters of the eighth or ninth century A.D., and the rest are in Tibetan. The term "Ekotibhāva" occurs in all of them written with dental *t* and a long *i*, in consequence of which its etymology becomes very simple. It is derived from *Eka* + *uta* + *bhāva*. *Uta* comes from *VE* and the affix

* The term "Ekotibhāva" with long *i* occurs incidentally in Prof. Max Müller's note published in the ACADEMY, April 3, 1886, in the following passage: "Schiefner's explanation, too, which Dr. Morris does not mention, namely, that 'Ekotibhāva' represents 'Ekāvalī or Ekāvalī-bhāva,' is not convincing."

hta. The verb *ve* means to sew or unite; hence the compound means something sewn or united together. The Tibetan version of this term is "Rgyud+gchig-tu+gyur-pa, i.e., Rgyud gchig-tu+gyur-pa," "Rgyud gyur-pa" = sewn or united together, *gchig* = one, and *tu* means "into." The compound word, therefore, means formed into one string or line. In Csoma's translation of a Sanskrit-Tibetan vocabulary "Ekotibhāva" or "Rgyud gchig-tu gyur-pa" is rendered as "union [with the supreme spirit]."

Ekotibhāva with a short *i*, i.e., "Ekotibhāva,"† does not seem to me quite correct. In the first place it does not directly give the meaning of the term in accordance with the rules of Sanskrit grammar, and does not tally with the explanation given by the Indian savants who translated the Buddhist sacred books into Tibetan under the auspices of Kings Thi-srong, Ralpachan, &c. In the second place, it does not occur in any of the books I have consulted.

It is more natural that after *uta* the suffix *Kvi* should be inserted, implying the occurrence of something not existing before (*abhutad-bhāva*), rather than that the last component part be joined with *uti*, meaning an act of sewing or uniting. But in order that the compound word may give the intended signification in consonance with the rules of grammar, the components should be "Eka+uta+bhāva."

A learned Lama of Tibet has kindly sent me a note on this term, the purport of which I give as follows:

"Rgyud gchig-tu gyur-pa (Ekotibhāva) means the continued connexion of one with another without break or division. A soul (*vijñāna* or *Rnam Sé*) existing from eternity has undergone numberless transmigrations. In all its births it has run through an unbroken line of existence until it is cut short by Nirvāsa."

All living beings have this kind of continuous existence. A soul undergoing transmigrations may be compared to a string or wreath of flowers, its different embodiment being the individual flowers which drop off one by one after each death. Bodhisattvas and saints alone can know the circumstances of their former births, which ordinary mortals cannot. Some of the grand Lamas of Tibet are the acknowledged incarnations of Bodhisattvas. When the fresh embodiment of a Bodhisattva is announced, a committee of the living Bodhisattvas (grand Lamas) is formed to identify his spirit with that of the Lama whose incarnation he professes to be. At the time of identification the claimant (generally a child of three or four) is required to prove by signs that his spirit is one and the same with the spirit of the Lama whose incarnation he declares himself to be. This identity of the claimant with the spirit of a Lama is called Ekotibhāva, and it forms one of the cardinal doctrines of Tibetan Buddhism.

SARAT CHANDRA DĀS.

The same communication from the Pandit has, likewise, been sent to us by Prof. Rhys Davids, the secretary of the Royal Asiatic Society, who appends the following letter:

London: Oct. 23, 1887.

I have received from Pandit Sarat Chandra Dās, the author of the well-known articles in the *Journal* of the Bengal Asiatic Society, the following letter, which will be of interest to

* Rgyud means "string, extraction, connexion, nature," &c. Gyur-pa means "formed, become, changed," &c.

† The word Eka+uta+bhāva, when compounded together, must, according to the rules of Sanskrit grammar, be "Ekotibhāva." I quote the rules: (1) "Abhūtadbhāva kribhvaastiyoge kartari Kviā; (2) Aśya Kvaū; Kaśikā, v, 4, 50.

those who read the letters you published in the ACADEMY on April 3, 1886, and May 7, 1887. It is clear that in Tibet they have put a new meaning—quite contradictory to the Buddhism of the Pāli Pitakas—into an ambiguous and misunderstood expression.

T. W. RHYS DAVIDS.

THE GLASER INSCRIPTIONS FROM YEMEN.

Corpus Christi College, Cambridge: Nov. 7, 1887.

In the copies which were made by M. Glaser of the Yemen inscriptions secured by him in 1885, and published by Prof. Derenbourg in the September and October numbers of the *Babylonian and Oriental Record*, it is interesting to notice the single vertical line which invariably occurs between each word. It is probable we have a trace of this in the two points which are met with in a similar position in Ethiopia, just as the one point still found in Samaritan is doubtless to be connected with its use in inscriptions of Mesha and Siloam, although in the former a vertical line is found to about every nine words. These two inscriptions also resemble the Yemen inscriptions in another particular, namely, that words are frequently divided at the end of the line, while it is doubtful if this ever takes place in the inscriptions of Yehomelek or Esmunazar.

G. W. COLLINS.

SCIENCE NOTES.

MR. J. G. GOODCHILD, of the Geological Survey, has reprinted from the *Transactions* of the Cumberland and Westmoreland Association a paper on "Ice Work in Edenside." This paper reproduces, in an amplified form, the arguments which he laid before the Geological Society thirteen years ago; and which, though received with coolness at the time, have since been admitted by many geologists. He believes that floating ice had not even the smallest share in any of the phenomena presented by the Edenside drifts. At the same time he holds that there is no proof that any polar ice-cap ever swept over the district in question; in fact, in the North of England there existed large areas which were never glaciated by ice of extraneous origin. Another point on which Mr. Goodchild insists is that the ice-sheet melted as it stood with comparative rapidity. He sees no proof of a succession of interglacial warm periods, nor does he recognise any proof of a submergence during the ice-age.

PHILOLOGY NOTES.

THE first number has reached us of a new periodical devoted to African philology, entitled the *Zeitschrift für afrikantische Sprachen*. Edited by C. G. Büttner. (Berlin: Asher.) It is an indication of the important place Africa is beginning to assume in European studies, and of the light that is being poured upon "the dark continent." The specimen of the journal before us is full of interesting matter for the folklorist, as well as for the philologist. The text of some songs in Old Swahili by the late Dr. Krapf is followed by an article on the grammar of the Bokundu (of the Cameroons), several curious examples of Negro folklore by the Rev. J. G. Christaller, songs of the Sotho by Dr. Endermann, and short vocabularies of two Bantu languages spoken in the Kilimanjaro district. The journal promises to be helpful to the missionary as well as to the philologist.

SEÑORS BAROJA & SONS, of San Sebastian, have brought out a new edition of Larramendi's *El Imposible Veneido*, Arte de la Lengua Bascongada, the first Basque grammar attempted, 1729.

MEETINGS OF SOCIETIES.

NEW SHAKSPERE SOCIETY.—(Friday, Nov. 11.)

S. L. LEE, Esq., hon. treasurer, in the chair.—Paper on "Shakspere's Alteration of History in the Historical Plays," by Mr. W. G. Stone, was read by the hon. secretary. Mr. Stone, after touching on the sources for the historical plays other than Holinshed's chronicles, and showing that the sources were sometimes paraphrased, or even reproduced with almost literal fidelity, that mistakes were left uncorrected, and misprints copied, dwelt upon Shakspere's disregard of chronology and contempt for unity of time, in spite of which, however, the action of the plays faithfully interpreted the historical sources at the writer's command, "King John" being the chief exception to this. In characterisation, fidelity to the sources was sometimes observed, in other cases much was embellished or invented—as in the case of Bolingbroke, whose appearance as both demagogue and dissembler was due to Shakspere's invention; and of Richard III., who, according to More, was capable of a fine outburst of remorseful penitence on the eve of the battle of Bosworth Field. Mr. Stone then dealt with the play serialism.—The chairman, while finding it difficult, from the extent of ground covered, to criticise particulars, thought that the need had been shown for a general introduction to the historical plays, with, perhaps, more generalisation.—Dr. Furnivall, criticising from a dramatic point of view, welcomed the departure of the dramatist from the facts of history, and could wish there were more such departures. He noticed particularly Shakspere's use of comedy in these plays: how the "Cade" bits were developed in "II. Henry VI.," then dropped in "III. Henry VI.," the complete absence of comedy in "Richard II.," and Shakspere's cutting out of the comic scene in "The Troublesome Raigne" without substituting any comic scene in its place, which, however, might be owing to want of room for any such scene.—The Rev. W. A. Harrison and other members continued the discussion, the general opinion being that the dramatist's close adherence to historical facts was owing to the periods dealt with being modern history to his audience, who would have resented alteration in facts with which they were familiar.

EDINBURGH MATHEMATICAL SOCIETY.—(Friday, Nov. 11.)

W. J. MACDONALD, Esq., vice-president, in the chair.—Dr. Thom, as retiring president, delivered an address, in which he discussed mathematical teaching in secondary schools and universities.—Dr. J. S. Mackay contributed a paper on the properties of the figure consisting of a triangle and the squares described on its sides.—Mr. Archibald C. Elliott gave a new proof of a theorem regarding the potential of a magnetic shell.—Office-bearers for the session were elected as follows: president, Mr. W. J. Macdonald; vice-president, Mr. George A. Gibson, of Glasgow; secretary, Mr. A. Y. Fraser; treasurer, Mr. John Alison; committee, Messrs. R. E. Allardice, Archibald C. Elliott, F. Grant Ogilvie, William Peddie, Dr. George Thom, of Dollar, and the Rev. John Wilson.

FINE ART.

GREAT SALE OF PICTURES, at reduced prices (Engravings, Chromos, and Olographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—Geo. REES, 115, Strand, near Waterloo-bridge.

MR. AUBREY HUNT'S PICTURES.

MR. AUBREY HUNT'S pictures—now at the Goupil Gallery in Bond Street—will please, if they have not pleased already, the most discerning of the lovers of art now in London; and, in fact, it is not possible for anyone who has any hold whatever on the principles of art—for anyone who approaches pictorial work with fine and cultivated instinct—to be insensible to the charm of Mr. Aubrey Hunt's productions. Are they going to be quite the fashion? That remains to be seen. They are individual enough to be, at all events; for even to mere fashion this amount of credit must be accorded—it

must be admitted that even mere fashion does not generally gush over the imitative. Some better informed students of Mr. Aubrey Hunt's work may object to it on the ground that, though it is not in the slightest degree imitative, it betrays the potent influence of a certain school. But the French training—which may conceivably be harmful to the English beginner whose own individuality is not strong enough to assert itself—can do no injury to an artist of the initiative of Mr. Aubrey Hunt—an artist "de tempérament," as the French say, whose American nature, moreover, has perfect affinity with the French methods.

Mr. Hunt's training has been so extremely thorough that there is little that finds him at fault. He is a draughtsman of the figure, as his pictures of "The Musician" and of "Summer Holidays" sufficiently attest. The slender-legged child, dressed closely in black, against a blackish background, is posed with ease and grace. The face is sensitive, and of appropriate expression. The lady in the second picture has also her attractiveness, though there is something about this picture—not quite readily defined—with which we are not wholly pleased. Perhaps at bottom it is a question of colour—a want of harmony for once obtruding itself. Putting in his figures generally with great success, Mr. Hunt is also, quite clearly, a good draughtsman of naval architecture. We will not say that his drawing of boats has quite the subtlety of Mr. Whistler's—certainly it has not quite his subtlety of elegance; but it has, probably, at least as much actual knowledge. Yet it is neither his drawing of the figure, nor his drawing of shipping, that constitutes any considerable part of Mr. Hunt's strength. It is rather his general harmony and gaiety of colour; his delight in movement, especially of the movement of the skies. Flowing water—the shallow waters of a flat French shore—he obviously enjoys; but what he may be supposed to enjoy most is the suggestion of an infinite world of cloud-land, forming and reforming at all moments. There is always atmosphere and weather in his work. The skies he paints the best have a luminous, not a gorgeous, pageantry. Much of his painting is, therefore, in a high key of colour—a very treble of the keyboard, rippling and light. His touch is as vivacious as are the effects he is concerned to pourtray. And his labours are accomplished with a deliberate and a well-planned brevity.

Having said as much as this, we do not know that there is any cogent reason why we should proceed to particularise this or that canvas, or to attempt to form or to express pronounced preferences where the general level of attainment is so high. Yet it may possibly encourage the visitor to the leisurely survey of the whole collection if we direct him, to begin with, to some two or three pictures, other than the couple which have incidentally been named. One of them may be "Rolling Clouds" (No. 7)—an effect perceived,

it is reported, within a walk of London. Another shall be No. 6—"Summer Skies," a work of peculiar refinement of vision and transcript. "Summer Afternoon" (No. 21) is permissibly warmer and brighter. "The Mouth of the Seine" (No. 39) is more forcible. "Ligny-sur-Marne" has tone and gravity. And in No. 46—"Gathering Seaweed"—we are again in presence of a strange refinement of effect, an easy elegance of handling. Altogether it is a very interesting show; a show of possibly unexpected variety, and distinctly refreshing. For though there may be slightness here, and a fragmentary view of nature there, that is quite the exception. And there is no intrusion whatever of that which, in our picture exhibitions, is, indeed, too much with us—the academical, the mediocre, the commonplace.

CORRESPONDENCE.

THE OGHAMS ON THE KIRK MICHAEL CROSS.
Kinnaird Castle, Brechin, N.B.: November, 1887.

Having been favoured by the Rev. Ernest B. Savage, of St. Thomas's Parsonage, Isle of Mann, with an excellent facsimile drawing, by himself and Mr. J. M. Nicholson, of the Oghams lately discovered by the former on the Rune-inscribed cross at Kirk Michael, I noticed in those rough scorings such evident likenesses to the Northern Oghams, for some while familiar to me, that I have ventured to attempt a reading of this remarkable Manx inscription.

The Oghams referred to are inscribed on a level space to the left of the longer Runic legend on the cross. The scores, scratched rather than cut, group themselves along an indicated stem-line; and, viewed according to their present position, they apparently read downwards, like the similar inscription on the Aberdeenshire Newton Stone. Notwithstanding their leaning towards Northern types, these Oghams differ considerably from all other examples. They bear, however, some resemblance to the inscription, also a "scratch," which occurs on a slab found at Burrian in Orkney, within the walls of an ancient fortress. The peculiarities of these Scottish or Orcadian Oghams—most of which follow a stem-line traced on the flat—chiefly consist in the use of scores instead of points for vowels; of angled, waved, barred, and otherwise eccentric scores and groups; of bound groups; of short subordinate scores; of arbitrary slantings and unexact positions; of faint delineations of scores, or parts of them, in otherwise firmly cut groups. Such Oghams are impossible to read without modifications on the forms of the Irish Ballymote lists, whether those of the common type, or those of the fanciful unused varieties. The northern Oghamists—mostly, no doubt, of later date than the Irish and Welsh inscribers—may have borrowed some forms from the manuscript writers; at all events, it is needless to force them to exact conformity with

rules belonging to an earlier practice, recorded (perhaps imperfectly) in a fourteenth-century transcription of more ancient documents—Claiming, therefore, some freedom for conjecture, I hope to establish as probable, or reasonable, the version of the Kirk Michael Oghams which is now submitted.*

Translation.—MUUCOMALL AFI UA MULLGUC. Mucomael, son (grandson? or descendant?) of O'Maelguc.

Analysis of the Oghams.—Nos. 1, 2. M, U. Might be E, but the first score, though not slanted, is much longer than the rest. For the binders in this and following groups, cf. bound groups at Burrian (Orkney) and at Lunnasting and Conningsburgh (Shetland). Nos. 6, 7. M, A. Could hardly be B, A; cf. Scoonie (Fife), Nos. 7, 8—as read upwards. No. 9. L. The inward slant seems to connect this with the preceding group. Nos. 10, 11. A, F. No other reading seems possible. The A is the common Northern angled A. No. 12. I. Would be more sloped if R; cf. waved I in Bressay, in. B (Shetland). No. 15. M. Could hardly be A; it is longer b low than No. 10. M takes strange forms; cf. Burrian, No. 20, and Lunnasting, No. 19. No. 16. U, perhaps A, O. Nos. 17, 18. L, L. Not s, the division into two groups being strongly marked by the differing length of digit in each pair. No. 19. G. There is a long interval between this and No. 18; but the sudden bend in the stem-line suggests some reason for a blank. The space, however, may have been occupied by scores. Examination of the stone might decide the question. No. 20. U. Might be read A, H, A; but the partial obliteration of the middle score of a U seems more likely. No. 21. C. Partly effaced; T, H, or T, A, are possible alternatives.†

Analysis of the Words.—MUUCOMALL, Mucomael. A compound proper name of that common type where the syllable Mal or Mael is added or prefixed to another significant word. From the Welsh inscriptions, cf. Briamail, Broh-mail, Broho-maglus; Maelagnus, Magalagnus, Mael-donnac, &c. In the Irish Annals, Mael seems hardly to occur as a suffix, while as a prefix it is extremely common (O'Donovan, *Four Masters*, see index). From the Irish Ogham Inscriptions, cf. Meolagnus, Maelcinbir, Ma(ea)ludaig, Ma(ea)lmairea (Br. 204, 243, 290). In Scotland similar names were frequent, e.g., Maol-colum (Malcolm), Maelmuire, Mael-beathe. Both in Welsh and Gaelic Mael or Maol signifies a servitor or attendant, more especially the tonsured servant, or the votary, of a holy person. But in the early compound names the syllable Mal more often represented Maglo or Mál, "a noble, a prince, a king" (Rhys, 369). There are Welsh examples in which Mael sometimes precedes and sometimes follows, such as Mael-derw and Derfael, Mael-gad and Cad-fael, Mael-gwn and Cyn-fael (Pughe, *Welsh Dict.* ii. 317)—the last pair representing Maglocunus and Cuno-maglus in softened forms.

* It will be understood that the diagram is merely illustrative, and gives but little idea of the original Ogham forms.

† For the Northern inscriptions, all references to details relate to my own paper—"The Ogham Inscriptions of Scotland"—in the *Proceedings of the Society of Antiquaries of Scotland*, 1885, pp. 180-207; also to my papers in the same, 1883 and 1886. For the Irish inscriptions I have chiefly used—Brash, *The Ogham Inscribed Monuments of the Gaedhil* (1879); and for the Welsh—Rhys, *Lectures on Welsh Philology* (1879), and—Westwood, *Lapidarium Wallias* (1876-1879). The abbreviations Br., Rhys, and Wd. will be understood to signify those three works.

MUUCO, the prefix in the present case, is likewise a common word, variously spelt (*moco, mucoi, &c.*), and possibly of various meanings. Generally it may be regarded as the nominative or genitive of a word akin to Mac, a son, and viewed as denoting a grandson or other descendant (Rhys, 407-412). Sometimes, perhaps, it may represent a proper name; sometimes, according to certain writers, a priestly designation, either as from the Latin *Magus*, or from *Mucaidhe*, a swine-herd, used typically for a religious teacher (like the modern Shepherd), or even as signifying a literal swine-herd or swine-owner—anciently no mean title, see the story of Marbhan Mucaidhe, brother to Guaire, King of Connaught (Br. 139). Moc or Muc was a frequent element in ancient ecclesiastical names, e.g., Mochonnoc, hospitaller to St. Patrick, A.D. 448; Mochta, saint and bishop at the same period; Abbot Mochaoi (A.D. 496); St. Mochua (A.D. 637), and many others (O'Donovan, *Four Masters*); but the syllable Mo (my), as a term of affection or respect, was often prefixed to the names of saints, which may, in some cases, account for the form (Bishop Forbes, *Kalendars of Scottish Saints*). Mochanus, Mocado, Moco-onis are Gaulish forms of similar type (Br. 139). The word occurs in the Port Erin Manx Oghams lately deciphered by Prof. Rhys—"Bivainas Maqi Mucoi Cunava" (see letter in the ACADEMY, July 10, 1886).

AFI, son (?) This uncertain term forms the key-word of several difficult Ogham inscriptions. Its general meaning appears to be grandson, but it may sometimes signify nephew, or descendant. "The word Awwi or Awi occurs in Irish Ogam in the sense of grandson, Old Irish áue" (Rhys, 280), equivalent to the Gaelic Ogha, pronounced Oha. Comparison of the inscriptions in which the word occurs has led me to think that it may sometimes denote the relationship of son. Its likeness to the Welsh Ab, Ap, Mab, Map, a son, is more apparent under the spelling Affi or Afi. Prof. Rhys decides in favour of w or v, as against the F rendering of the corresponding group in the Ballymote key. I cannot however, help doubting whether, especially in Irish and Scottish examples, the F may not be sometimes better. In this paper I propose, as a matter of convenience, to use F and Q, rather than w and v, as being the more commonly accepted Ogham renderings. The strange stuse of this F group is found among the Northern inscriptions, where its sound can hardly be either F or w—e.g., Nahthfddadd, for the known name Natdad or Naddod (Bressay, B); Nuuffhri, for the genitive of an uncertain proper name—perhaps Nur or Nuri (Golspie). Ip, Ipe, Ivi, are apparently forms of Afi, and with it seem to bear affinity to Maqi or Mac, which, it may be noted, frequently took the form of Ic, in Ulster and in Scotland, for the nominative as well as the genitive case (Stuart, *Sc. St. Scot.* ii. 71).

Among the Irish Ogham legends several are probably unreadable without the recognition of Afi, Ipi, &c., as terms of relationship, and several more or less doubtfully admit of or require their use. Different versions of these have been offered by antiquaries; but in citing them I propose to use Mr. Brash's copies, as best known to me, and as taken directly from the original by a skilled observer. The legends may be read as follows—it being understood that the divisions into words are mine, though the transliterations are borrowed from Mr. Brash:—(1) Usman . . . nsil (E)fi Dutt . . . as—Br. 131; (2) Ape Fritti—Br. 201; (3) . . . lmaiaq Api Maqqi Muc(oi) . . . —Br. 205; (4) Lugudeccas Maqi Caqo, Mage Cafu, Maqi Ofoolat, Ibi Gaousgt—Br. 247; (5) Fanlit Afi Cacos, Af Colgaccos Obada—Br. 298; (6) Maqqi Iar Ipi Maqqi Moccoe Doffinias—Br. 201; (7) Api Logdo Maqi Maqa . . . —Br.

187; (8) Ufanos Afe Isahattos—Br. 312; (9) Gosuctias Mosac Map Eini—Br. 190.*

In Wales there are two Ogham examples of the words under consideration. That at Tral-long (Wd. 61, pl. xxxvi.) is accompanied by a Roman legend, apparently relating to the same family, the former reading:—Cunocenni filius Cunoceni hic jacit; the latter, as it seems to me:—Cunacenn Afi (or Ipi) Ilfeto—Cunacenn, son (?) of Ilfet (=Ailluat, cf. Irish Ailluattan—Br. 152). The other example, at Llanwinio, likewise occurs on a bilingually inscribed stone (Wd. 91, pl. xlvii.). The Roman legend may be read: Bivadi Fili Bodibeve—(Stone) of Bud (or Budi), son of Bodibeu; the Ogham (with the cross turned downward, and the scores, from that position, read up the right and then up the left—as in the Brodie inscription) seems to be:—Befi Afi Boddib . . . —(Stone) of Beu (?), grandson (?) of Boddib[eu]. Bod or Bud is a common element in ancient Celtic names. It seems to appear in the unique circular Ogham at Logie Elphinstone, which I have read as

* (1) Unreadable through damage. The x in Efi is probably i. (2) The Son (?) of Feret or Ouret. Mr. Brash reads Aaeaf Ritti, without translating. In this legend, and in Nos. 3, 6, 7, 9, the Ogham sign X is read as F, as on the "Turpilli" stone (Br. 330; Wd. 73). (3) . . . (Stone) of . . . lmaiaq, Son (?) of the Son of Muco . . . : Mr. Brash gives no translation. (4) (Stone) of Lugud, Son of Cacu, Son of Cafu, Son of Ofoolat (cf. Welsh *Odeleu*), Descendant (?) of Guasacht (see after, under *Gosuctias*). Regarding such forms as Cacu and Cafu it seems to be uncertain whether their last syllable is part of the name, or a sign of the genitive (or dative?). Cacu is akin to Guc (see after), and Cafu appears elsewhere in "Mage Cafeq (Br. 254). Onwards from the word Cafu, Mr. Brash thus divides and renders: "Maqi Of. Dola ti bi gao usg t"; "Son of Of. (My) grief, he was wounded in water." Another translator suggests: "Contracted in sickness, in water" (Br. 248, 9), a version equally remote from the spirit of Ogham legends. (5) Fanlet (Finlaith?—also cf. Fanon), Son(?) of Cacu, Son (?) of Colgac Obada (Ua Fadda) cf. "Ofaddalos MacAoni," also Gaelic *Feadhach* and Gaulish *Fadia*, *Fadius* (Br. 228). Mr. Brash accepts from another writer the singular reading: "Fan li ta fca Cosaf, colgac cos obada"; "Beneath this flag is placed Cosaf, the fiery and fleet-footed." (6) (Stone) of the son of Iar (cf. Ir. Iarnon, &c.), son of the Priest (?) Dobhan (Dobunus). Mr. Brash gives no translation. (7) With the Bishop of Limerick, Mr. Brash reads: "Aplogdo" (Stone) of Apilogdus; cf. Abell, Abilogus. This version may probably be right; on my division the translation would run: Son (?) of Lugud, son of the Daughter (?) of . . . ; cf. "Tria Maqa Meolagui" (Br. 204), where Tria might be feminine. (cf. *Trea, fem.; Mart. Don.*) But Maqamay be merely a variant of Maqi, son. (8) (Stone) of Ufan, son (?) of Isahatt (?). The (perhaps Gaulish) name Isahatt is hard to identify; but Mr. Brash's copy, taken from the original with special care (p. 310), seems to demand it. Under the alternative "Sahattos," of Sahatt, the preceding word would show the unlikely form of Afei. This legend Mr. Brash takes as recording the names of four men, viz., Aujan, Safai, Sah, and Att, who are supposed to be referred to in the Roman capitals on the same stone, IVVEREDRVVIDES, which he, and others, read as IVVERE DRVVIDES, "Four true Druids." Might not the words be simply IVVERE DRVVIDES, the verb being found in *jubeo*, or (with the h and v transmutation) in *jubeo*? Either, I believe, would give a warrantable meaning. Prof. Rhys's copy slightly differs from that before me, and he reads: "Uwanos Awi Ewacattos" (p. 209). He has accepted the version IVVERE, which, however, seems to be erroneous (Br. 310, 312, and pl. xl.). (9) Mr. Brash doubts the possibility of translation. I would suggest: (Stone) of Guasacht Mos (or Mosac), son of Eini (cf. Aini, Eighneach). Mos or Mosac may perhaps be an epithet (Mús or Mús, pleasant, agreeable, handsome [?])—O'Brien, *Ir. Diet.* "Gosuctias," by itself, occurs on another Ogham stone (Br. 198)—cf. "Guasacht, the son of Maelchu, *Mart. Don.* (Br. 190).

"Athath Bhoto"—meaning, perhaps, The Grave (?) of Bod or Bodo.*

In Scotland there is no Ogham example of Afi. Ip almost certainly occurs in the Newtoll Oghams (see forward, under UA), for IX would be meaningless as IEA; and Ipe is distinct from the Roman-letter inscription at St. Vigeans Ap, for Mac, was used in South Scotland till the thirteenth century (e.g., *Macrath ap Molegan*), and is believed to survive in the Gallo-way prefix A, as in Ahannay, Aaloanes, more usually seen as Hannay and Sloans (Stewart, *Sc. St. Scot.*, ii., 72).

UA. Descendant. This word, so common in its modern spelling o (e.g., O'Brien, O'Connor), does not apparently exist in two-letter form in any of the Irish, Welsh, or English Ogham legends. It seems, however, to occur in Scotland in two instances: (1) In the Newtoll Oghams—Aiddai Qunn Forre²² Ip Ua Iosii⁺ (2) In the Oghams on the "Lang Steen" at Aquhollie, in Kincardineshire—F(a)dh Donn Ui Te(n) . . . In both cases these are my own readings, taken with the greatest care from the original inscriptions on the stones.† The

* Mr. Brash gives, as his final reading of the Trallog Ogham: "Cunacenna Filffeto," "Cunacena, a skilled bard," deriving Filffeto from *fil*, a bard, and *ffeth*, knowledge (Br. 344). He shows that the Roman inscriber reversed the monument before engraving it, his legend running towards the cross, which occupies the stone's natural base. The Ogham would thus appear to be the older inscription (see Wd. 63). Prof. Rhys reads the Ogham as "Cunacenniwl Ilweto"—taking the first word as equivalent to "Cunacenn filius Cunaceni," and Ilweto as an epithet in the genitive, perhaps meaning "much speaking" or "much spoken of" (Rhys, 364).

The Rev. D. Haigh, apparently with Mr. Brash's concurrence, read the Oghams at Llanwinio: "Aff Boci B[adi] Biff[e]," and viewed Afi as equalling Maqi maqi (Br. 347). Prof. Rhys, in his latest version, reads the Latin legend: "Bladi filii Bodebeve," expressing doubt as to the first word, which has generally been viewed as "Biadi." His version of the Oghams is as follows: "Awwi Bocci . . . Beww," "Nepotis Bocibeve . . ." with the remark that he would be inclined to read "Beww[i] Awwi Bocib[ewwi]—the arrangement propose—but that it is "not usual to begin with the right edge," though "that," he adds, "is probably not a sufficient reason for not doing so here" (Rhys, 281).

† The main inscription on the Newton stone has been the subject of much controversy. For reasons too long to state, I doubt if it has yet been rightly transliterated, even in the recent version of an eminent antiquary as the Bishop of Limerick. Though I have elsewhere made known my own version—founded on study of the original—I desire to submit it again here, in the hope of possibly rendering some aid to scholars in arriving at a true decipherment. The lettering seems to be debased Greek (partly minuscule), with a few Irish-Roman forms; several of the peculiar characters occur in the Greek *Pater-noster* in the "Book of Armagh," and others, more doubtfully, in the alphabet on the Kilmalkedar stone. Noting the chief points of uncertainty, my transliteration is as follows:—

AITAI FURYRINGIN SYOL-O-UOSE
A A K N N G E G
UROhN-ELISI MAQQI LOGOY-PATR
N E F N N

‡ The only certain way. Photographs, though aids in the study of the originals, are seldom sufficient when used alone, may convey wrong impressions, may even falsify if taken from chalking scores. Casts of all sorts are often erroneous; for example, the fine plaster cast of the Newton stone in the Antiquarian Museum at Edinburgh (or much referred to) omits two of the Ogham score through a flaw where portions join. This is a solitary case. I have seen paper casts that were quite untrustworthy from imperfections and tan perings.

Aquhollie Oghams (unknown till read by me last year; see remarks by Prof. Rhys near end of his letter in the *ACADEMY*, July 10, 1886) are remarkable as furnishing the only specimens in Scotland of vowels indicated by points, instead of by scores across the stem-line. From this, and from its position on a large unhewn boulder, I should suppose it to be the oldest Ogham legend in Scotland, the only one at all similar being that on the likewise unhewn stone at Newton—but there the vowels are scores in the usual Northern mode. On both these monuments the surface is rather worn where Ua or Ui occurs, but the existence of the word can hardly be doubted. In the present example Ua seems fairly evident.

MULLGUC. Mael-Guc. There is some uncertainty in the reading, owing to the long blank between Mull and Guc, which may have held scores now effaced. Taking the existing scores, the word appears as above—a compound name resembling that which heads the inscription, though, in this case, the syllable Mael precedes the conjoined word. The difference between Mall and Mull in Muco-mall and Mull-guc may have had no significance, the vowels being interchangeable; yet, perhaps, it may have designedly marked a variation of meaning, Mall representing the prince or noble, and Mull the devotee. The name Guc occurs in the Irish Ogham inscriptions, in "Cunnetan Maqi Guc" (Br. 254), and probably in "Alatoceli Maqi G(u)qi" (Br. 190), also, perhaps, in "Caqo Mage Cafu" &c. (Br. 247), and in "Saffi-qegi Maqi Ddattac" (Br. 287). It likewise appears on the Fardell stone in Devonshire, in "Saffa-qquci Maqi Qici" (Br. 349). Saffa-qquci here and Saffi-qegi above may serve as illustrations of the capriciousness of Ogham spelling. "Cuqg or Cuic is a recognisable proper name . . . common in many districts of Ireland to the present day in the forms of Mac Quig, Mac Keag, and Quigly" (Br. 349).

In the *Manx Note Book* (p. 117) Mr. A. W. Moore suggests that the common Manx name Kay, Kee, Kew, Quay, &c., is a contraction of Mac-Caoch, "the dim-sighted man's son." Might Guc be another form of the same appellation? In the *Annals of the Four Masters*, among hundreds of names beginning with Mael, we find—Mael-caeich (died A.D. 665), and Mael-cach (died A.D. 779). The name Ua Mael-gaeithe (slain A.D. 1131) offers a combination similar to the Ua Mull-guc of the legend before us. Names formed like Mull-guc are common in the Isle of Man. On the cross that bears the present Oghams we find in the Runic inscription Mal-Lumcun and Mal-Muru, and Mal-Brieti heads the inscription on another cross at Kirk Michael (Vigfusson and Savage, *The Manx Runic Inscriptions Re-read*).

SOUTHESK.

NOTES ON ART AND ARCHAEOLOGY.

THE members of the Royal Institute of Painters in Water-Colour, with some invited guests, are to dine together on Monday evening. The Institute, we may further note, has commenced what, in the present state of things, will be rather a useful system—that of having two "private views," exclusive of the first or "press" view. Thus, during the present week, Thursday is appointed for art critics and journalists to have their earliest sight of the exhibition; Friday is appointed for a "special private view," at which known purchasers may really have an opportunity of seeing what may be acquired; and Saturday is fixed for the regular "private view"—in other words, for the desired crush of the season.

At the exhibition of the newly honoured "Royal Society of British Artists," an evening reception is to be the first function. The exhibi-

tion itself, we hear, will be found to be not quite so limited in quantity or character as was the last show. Among contributions from foreigners, we hear of at least one work by M. Alfred Stevens, who has now given in his adhesion to this Royal Society, and of a portrait of Mrs. Mortimer Menpes in evening dress, by M. Roussel, the refinement of whose work has been already apparent. Furthermore, a certain number of etchings are, for the first time, to appear in this exhibition. The society, it may well be recollected, numbers among its members and exhibitors several engaging etchers, besides the master of the craft who is its energetic president.

MR. SELWYN IMAGE—thoughtful as a writer and original as a pictorial artist—will deliver four lectures on Art, at Willis's Rooms, the first on Saturday, December 10, being on "Literature in its Connexion with the Pictorial and Plastic Arts" and on "Literary Art Criticism."

THE Chester authorities have kindly sent the sculptured stone found in the city wall, on which so much controversy has arisen, for exhibition at the Society of Antiquaries, before whom Mr. W. de G. Birch, will read a paper at an early date. Fellows of the Society and their friends will thus have an opportunity of inspecting the stone for a short time while it is in London. Our readers will remember that Mr. Thompson Watkin maintains that the sculpture is mediæval, whereas Mr. Birch claims a Roman origin for it.

"Down to the Land's End" will be the subject of fifty illustrations in the Christmas number of the *British Architect*, to be published on December 16. These illustrations will be reproduced from pen and ink sketches made on the spot by Mr. T. Raffles Davison, and will comprise some twenty churches, old and new, examples of domestic architecture, &c. The descriptive letter-press will be contributed by Mr. J. D. Sedding.

MESSRS. BUSH & REID have chosen Mr. Herbert Schmalz's poetical picture of "Widowed" from this year's Academy for reproduction by photogravure. The plate is a very successful one, and we are not sure that the impressive design and fine feeling of the picture are not rather emphasised than diminished by translation to black and white. A plate after the same artist's "Morning Prayer," and another after Moscheles's portrait of Rubinstein, are among the recent publications of the firm.

MISS AMELIA B. EDWARDS has now returned home to Westbury-on-Trym, after a short holiday—great part of which was characteristically devoted to lecturing on Ancient Egypt in some of the large towns of Lancashire and Cheshire. Her lecture at Stockport, on Tuesday of last week, was particularly successful, the audience exceeding two thousand; but in all cases she was enthusiastically received. She has yet an engagement to keep at Tamworth.

An exhibition at Paris of the works of M. Puvis de Chavannes is being organised.

THE STAGE.

THE "DRAMATIC STUDENTS" AT TERRY'S THEATRE.

NOTHING but an overflowing audience was wanted at Terry's Theatre, one day last week, to complete or emphasise the success of the revival of Dr. Westland Marston's "Favourite of Fortune." Had it been possible to have given the performance in the evening, instead of in the afternoon, the attendance would

have been larger. Had it been possible to repeat the performance when its distinct attractiveness had been bruited about, a large public would have gathered to see the admirable play. But neither of these things could be; and the "Dramatic Students," who include—as I have had the pleasure of telling them before—many of the best gifted of the rising actors and actresses of the day, must rest satisfied with having acted very well, upon the whole, a piece which it was quite ridiculous should go any longer unseen, and, so, with having performed a reasonable service alike to playgoers and to a distinguished man of letters. Dr. Westland Marston is certain to have expressed very graciously to the "Students" his sense of the serious character of their efforts—serious because the piece, being so literary, does not act itself like a melodrama, but requires, at all points, a delicate and elaborate expression. And it may now only be hoped that those playgoers who have the interests of the stage at heart will, for their parts, acknowledge as freely what the "Students" are doing. The "Students," of course, teach themselves while they amuse us; but, in view of the pieces which they have thus far performed, it must be recognised that they give us opportunities of enjoying what somehow, it seems, can be enjoyed in no other way.

One used to hear that the "Favourite of Fortune"—a play of Dr. Marston's, which, after all, is only about a score of years old—would, were it performed, be found to have aged very much; and from the silliness of the talk about it in some quarters, one might—if one had not had access to the words—have gone expecting to hear dialogue as antiquated as Sedaine's, as "precieux" as that of Marivaux. As a matter of fact the dialogue is excellent. Of course, the tone of conversation varies a little every few years, and the amount of age which this implies—that amount and no more—is no doubt noticeable in Dr. Marston's comedy. We do not say things half as wittily now; our wit, when we have it, has not the elegance and the finish. We speak with a little more directness, crispness—or is it "bluntness" that I shall say? And anyone sensible of this must find a tendency to years in the dialogue of Thackeray and Trollope—a tendency to years, still more marked, in a shorter time, in the dialogue of George Eliot in *Daniel Deronda*. The truer trace of the "Favourite of Fortune's" belonging, in a sense, to another generation—of its having had its origin then—lies in the, at least, occasional absence of striking situations. In it and in that other generation, "curtain" may follow upon a pretty sentiment or an elaborate retort, where now, perchance, it can only follow on an unexpected tableau—on one heroine, at the very least, prostrate on the floor. This being so, it would be ridiculous to recommend the "Favourite of Fortune" for revival at the Adelphi or at the Princess's. Under the last regrettable régime at the Haymarket, it would have been strangely out of keeping; but it is at least possible to look forward to seeing it again wherever genuine entertainment is associated with literary taste. Had we the counterpart of the Théâtre Français, this play would have a place in the repertory; and it would have a place by reason of its literary qualities, its

delicate character-drawing, and its elegant vivacity of action.

Of course, when one knows that the "Students" are working under every conceivable difficulty, one goes to their performance with the best intentions of making allowances—of judging the subaltern with a less severe precision than would have to be exercised were one judging the general. But, as a rule, there is singularly little necessity for this attitude of indulgence—for this amiable mood; because, as I find it, the acting rarely wants smoothness, though it sometimes wants force. That it should want force here and there is, of course, particularly excusable where a young woman "Student"—of whom the needful breadth and vigour may never before have been demanded—is suddenly cast for a strong comedy part, such as might be played with the greatest effect by Miss Larkin say, or Mrs. John Wood. This was a little bit the case with Miss Roche, who played one of the amply middle-aged women at Terry's Theatre last week. It might have been the case with Miss Webster, since she also is young; but, fortunately, it was not, and Miss Webster gave us a representation of a husband-hunting mother, at once entertaining, forcible and dignified. Her raiment, and her entirely matronly fashion of wearing it—and of moving—were, indeed, admirable. Miss Cudmore and Miss Dearing played the minor young women of the piece with a measure of skill and appreciation; and, as the real heroine, Miss Maud Millett, was almost as good as it is possible to be in the representation of a lady whose charm is, perhaps, her greatest characteristic, and whose emotions are generally of the lighter kind. She gave unqualified pleasure. The three chief men's parts were played by Mr. Hayden Coffin, Mr. Lugg, and Mr. Sant Matthews. Some judges thought that Mr. Hayden Coffin wanted intensity. To me he had great reality. I found no want of feeling, but rather a well judged simplicity, with an entire absence of conventional effects. Mr. Lugg, as Tom Sutherland—the other young man, who, according to the mode of the day, was but superficially cynical—was least engaging in his earlier scenes. One liked him better as time passed, though one may never have waxed positively enthusiastic. Fox Bromley, the polite, dry villain of the piece, was played by Mr. Sant Matthews. If he reminded me of Mr. Hare, I cannot say that that was a fault, since certainly it was only of Mr. Hare at Mr. Hare's very best. Mr. Sant Matthew's own conception was worked out in quite a finished way. Mr. Mark Ambient, the honorary secretary of the society, did not appear. He contented himself with furnishing us with an interesting narrative of the previous fortunes of the piece in London and the provinces. Mr. Charles Wyndham first, and then Mr. Charrington, had rehearsed the "Students" admirably.

FREDERICK WEDMORE.

MUSIC.

THE "OEDIPUS TYRANNUS" AT CAMBRIDGE.

Two years ago Dr. Stanford wrote incidental music to the "Eumenides;" and we now find

him illustrating the "Oedipus Tyrannus," one of the greatest, and at the same time one of the most sombre, of Greek plays. The story of the ill-fated Theban king seems at first sight to teach that man is but a plaything in the hands of the all-powerful gods, who at pleasure exalt him and then cast him into the lowest depths of shame and misery. But in the noble choruses of the Grecian poet a more rational doctrine is taught. Arrogance and impiety seem to be the causes which helped to bring about the ruin both of Oedipus and Jocasta—the gods were stern, but just.

Dr. Stanford, though he may have felt inspired by the grandeur of the verses, must have found it difficult to write music befitting them; but we certainly think that he has never before shown such grasp of his theme, and at the same time such freedom. The music seems to have come to him, rather than to have been sought. He commences with a Prelude, in overture form, in which there are two motives, that express—the one, the misery; the other, the might of the Theban king. The music throughout is solemn and dignified; both in matter and manner it recalls "Tristan," especially the orchestral introduction to the third act of that music-drama. In the chorus in which prayers are offered to Apollo, Athene, and Artemis for deliverance from the plague which is devastating the land, the composer has wedded the words to some excellent music. And not the least noteworthy feature of it is the gradual working-up to a very powerful climax. The orchestra, with its ever-changing rhythm is exceedingly effective. We next have a chorus in C minor. The citizens, by the judgment of their hearts, refuse to adjudge Oedipus guilty of crime. The movements of the Furies are graphically depicted in the orchestra, and the change in key and character of the music near the close is in accordance with the spirit of the words. Motives from the overture are skilfully introduced. The Entr'acte, judging from what follows, is intended for Jocasta, as the Prelude was for Oedipus. It is a short movement, very Brahms-like in style. The chorus at the close of the second act is a fine piece of writing. The praises of the mighty father of Olympus are sung in broad and bold strains; while the references to ill-starred pride and unholy deeds are accompanied by the restless theme of the Entr'acte, and in the coda of the movement appear the Oedipus motives. The close of the next chorus is very dramatic. The citizens, hoping that all will yet end well, sing cheerfully; but the arrival of the herdsman who brings to light the dreadful secret enters, while the *cor anglais* in the orchestra gives out the opening theme of the Prelude. The chorus in fitting tones bewail the event. The close of this movement is very striking. In the final number the chorus, in dirge-like and dignified strains, point the moral of the tale—that "no one of mortal race can be called happy until he hath crossed life's border free from pain."

The first performance of the play, in the original Greek, took place at the Cambridge Theatre on Tuesday evening. Mr. J. H. G. Randolph (Trinity) played the part of King Oedipus with much dignity. His entry, however, into the palace in the last act, when the truth of the oracle is fully revealed, was somewhat boisterous. For the rest, passion, despair, and solicitude for his children were well expressed. The difficult rôle of Jocasta was taken by Mr. C. Platts (Trinity). His enunciation was remarkably soft and clear, and his acting showed qualities of a high order. Mr. F. T. Miller (Gonville and Caius) as Creon, Mr. H. Head (Trinity) as Teiresias, were more or less satisfactory. A word of commendation is due to Mr. R. R. Otley (Trinity) for his quiet yet forcible behaviour

as leader of the chorus. Mr. J. W. C. was responsible for the stage arrangements and with so small a stage he managed wonderfully well. The scene—the front of the palace of Oedipus and the space before it—was effectively presented.

The choral singing was a little coarse, but the earnestness of the Theban Elders atone for any shortcomings. The orchestra, under the direction of Dr. Stanford, with Mr. A. Burnett as leader, was good, though not sufficiently numerous to do full justice to the music.

J. S. SKELLOCK.

RECENT CONCERTS.

SIR GEORGE GROVE naturally took care that the anniversary of Schubert's death should not pass unnoticed at the Crystal Palace, so last Saturday's concert was mainly devoted to the composer's music. Herr Franz Néruda, the excellent callo player, whose name is so often seen on the programmes of Mr. C. Hallé's recitals, was engaged for that day; and as Schubert wrote neither concerto nor solos for his instrument, he selected a Concertstück of his own, and some "Popper" solos. The first is a piece of music written evidently to show off his executive skill; and, as such, it was entirely successful.

The concert commenced with an overture in E minor by Schubert, which has only lately been published. The autograph bears the date "Februar, 1819," but nothing is known of the circumstances under which the work was written. It is scored for full orchestra with three trombones. The hand of the composer can be traced throughout; but, though it contains many interesting passages, and prefigures at times the great Symphony in C—the work for which Schubert seemed constantly gathering his strength—it is not by any means one of his strongest or most fascinating productions. The form of the movement is by no means satisfactory; the middle portion is out of proportion to the opening and closing sections, and the coda is not impressive. A selection from the delightful "Rosamunde" music, and the Grand Symphony in C—No. 10, as Sir G. Grove will still have it—completed the instrumental part of the programme; and it is scarcely necessary to add that full justice was done to them by Mr. Manns and his band. Mrs. Henschel was the vocalist, and sang in her best manner some of Schubert's finest songs. Her voice, at times, may show weakness, but excellent training and artistic taste help one to forget this. Mr. Henschel, who accompanied his wife, contributed greatly, by his delicate playing and effective gradations of tone, to the success of "Die Junge Nonne."

Mdlle. Janotha was again the pianist at the Popular Concert on Monday. She played Beethoven's Sonata in D minor. Some passages in the first and last movements were rendered with unnecessary exaggeration, but on the whole she gave an intelligent reading of the work. We could not, however, agree with her *tempo*. The opening Allegro was too fast, the Adagio much too fast, and the Allegretto a little too fast. She was encored, and played the well-worn Spinnlied of Mendelssohn. The programme included Brahms' beautiful Sextet in G, which was admirably performed by Mdlle. Norman-Néruda, and Messrs. Ries, Straus, Gibson, Howell, and Piatti. Mrs. Henschel sang "Lieder," by Schumann, Brahms, and Bizet, and was well received. There was but a moderate attendance.

DELICIOUS PRESERVE.—The most attractive of all preserves is NO BELLA MARMALADE, made from the celebrated Kent Morella Cherry. The stones being extracted, double weight of fruit is given. Sold in 1 lb. pots by grocers, &c. Makers—THOMAS GLANT & SONS, Maidstone and 46, Gresham-street, E.C.

SATURDAY, DECEMBER 3, 1887.

No. 813, *New Series*.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscripts.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

A History of Elizabethan Literature. By George Saintsbury. (Macmillan.)

MR. SAINTSBURY is one of the most catholic, as he is among the most refined, of living English critics. It would be hard to name anyone of equal eminence who in the same degree may be said to combine the divergent critical standpoints represented by Mr. Swinburne and by Mr. Courthope. His style, indeed, is as far as possible from emulating Mr. Swinburne's stormily splendid prose; but its familiar and conversational ease conceals an instinctive sense for poetry not less exquisite and not less sure than his, while, on the other hand, his sympathy with the wayward audacities of romantic genius does not prevent his doing equally effective justice (by example as well as by precept) to the precision, point, and lucidity of the poets of Queen Anne. This range of perception is certainly in part due to his scarcely rivalled familiarity with two great literatures, one of which has its peculiar glory in poetry, the other in prose. His taste in poetry is thoroughly English; his taste in prose is as distinctly French; and no one has insisted more strenuously on the radical difference of these literary forms, or bestowed more vigorous anathemas on such as irreligiously tamper with the dividing *termini*. Nor could anyone who combined less signally these two modes of critical insight have executed with the same brilliant success the *Short History of French Literature* which is in everyone's hands, and the remarkable volume before us.

At the same time, there are certain directions in which Mr. Saintsbury's critical standpoint has always seemed to us defective. As we have begun by mentioning names, we may define these roughly as the direction of Mr. Arnold, and the direction of M. Taine. Of the famous "criticism of life" formula, he offers an emendation, of which we can only say here that it seems to ignore the individual and original element in the highest poetic expression which Mr. Arnold's formula seized upon and exaggerated. And it is precisely this individual, or, in the largest sense, critical, element in poetry, to which Mr. Saintsbury, in our view, does not give its due place. Felicitous expression may redeem it, no doubt; but still it requires redemption, and is liable (in his own phrase) to have "marks taken off," or at least rather grudgingly allowed, where it is prominent. The thought which strives in solitary effort to interpret "this unintelligible world" counts for much less at his tribunal than that which merely gives utterance with the easy felicity of genius to its common and familiar matter, its simple joys and sorrows, and leaves its

unintelligibility to whomsoever it may concern. He has a tenderness for the cavalier poet, whose exquisite song wanders idly up and down the gamut of a somewhat unspiritual passion, seeking no outlet, and who is too "reverent" to ask momentous questions. It may be that the disposition to ask such questions in verse has begotten a good deal of prose in the wrong place, just as the disposition to express passion in that way has produced verse with nothing but passion to recommend it. Neither is poetry in itself; but both are elements of poetry. For the so-called "didactic poet," who torments a sermon into blank verse, we have nothing to say; but the just condemnation of platitudes in rhythm sometimes allies itself with an impatience by no means just of all poetry which expresses anything more universal than personal emotion. We do not assert that Mr. Saintsbury betrays this impatience; but we think that it has impaired in some degree, where such poetry is concerned, his accustomed delicate sympathy.

We should hardly have dwelt upon this characteristic (as we regard it) of Mr. Saintsbury's criticism of the poets were it not that it throws a certain light upon a second characteristic, which no reader can overlook. Certainly, what is called with a shade of irony aesthetic criticism has no more uncompromising living advocate; and he displays all the gifts and graces proper to his method in a profusion which must have tempted many a pagan suckled in the "product of the circumstances" creed to mutter his "Almost thou persuadest me." For the "scientific" treatment of poetry Mr. Saintsbury's scorn is as undisguised as for the poetry which praises science. His book is as unlike M. Taine's as the work of two men equally competent and dealing with the same subject can well be. The luminous, if inevitably one-sided, sketches of manners by which M. Taine attempts to exhibit the "circumstances" in the very act of evolving their "product" altogether fall away, and with them that "typical" method of describing literature which in his hands is so charming and so perilous. Mr. Saintsbury's formula is rather "the wind bloweth where it listeth"—a formula the reverse, no doubt, of final, but which has the advantage, from the scholarly point of view, of compelling the most patient and indefatigable search through all the by-ways of literature for the signs of that wandering and incalculable inspiration. While M. Taine's book accordingly is a gallery of judiciously chosen and highly elaborated portraits, Mr. Saintsbury's is a vast fresco crowded with heads, of which few are completely finished, while hardly one, though it were only a Nabbes or a Davies of Hereford, lacks its vivid and individualising touch. Nevertheless, while M. Taine's book is a somewhat premature, and therefore crude, application of his method, and Mr. Saintsbury's a singularly ripe example of his, we hold that it is the former which shows us the more excellent way. Fully to "know the causes of things" may be as much beyond our power in the history of literature as in other history; but it remains the business of the literary historian to keep aiming in the direction of this impossible mark. To bring intelligible order

into the chaos of facts is the ideal which, though never reached, continually regulates his action; and the moment when he cries "All is flux" is the moment of his intellectual suicide. With the literary critic, no doubt, the case is different. Where the ultimate problem is to find an adequate answer in every case for the question, "Is this book good or bad?" literary history becomes, on any theory, a merely ancillary study, and even that rather as a storehouse of examples for comparison than as a body of continuous and related facts. Mr. Saintsbury is decidedly a critic first and a historian afterwards. His book, though remarkable from every point of view, is more remarkable as a kind of class-list of Elizabethan literature than as a scientific account of its growth. From cover to cover it is full of accomplishment; but its narrative is rather less accomplished than its criticism. Now and then the mask of the historian is thrown off altogether, and the reviewer emerges undisguised. Such a passage is that in which Mr. Saintsbury achieves the feat of saying in half a dozen pages a good thing of each of Beaumont and Fletcher's fifty odd plays. Admirable as this is, it is, essentially, not a history of Beaumont and Fletcher's dramatic work, but a review of "The Dramatic Works of Beaumont and Fletcher, in 10 vols, octavo, London"; cavillers being somewhat temporarily warned off at the outset by an intimation that "the received collection has quite sufficient idiosyncrasy of its own as a whole to make it superfluous for any one, except as a matter of amusement, to try to split it up." Surely this agnosticism is a little overdone, and will be accepted by the general reader as a guarantee, *foi de Saintsbury*, that he may safely neglect, as nature prompts him, the most competent attempt to bring order into the wilderness. We shall not insist on the perhaps premature but not wholly futile labours of Messrs. Fleay, Rolfe, and Macaulay; for the writer of a book intended to be a storehouse of facts and of first-hand criticism upon them, necessarily passes lightly over all individual convictions other than his own. But there are enough definite and undisputed data to supply at least the elements of a chronological arrangement. Apart from the year of licensing or of printing, which Mr. Saintsbury properly refuses to accept as a criterion of the date of composition, we know the years in which a large proportion were first acted; and the death of Burbadge enables us to lay down with certainty a group composed earlier, and with probability a group composed later, than 1619. A third group is fixed (like "Wit without Money," 1614) by unmistakable allusions; a fourth (like "The Spanish Curate," 1622-1625) by undoubted sources.

There is one place, indeed, in which Mr. Saintsbury's indifference to the arts of exegesis betrays him into something like injustice. We were under the impression that our debt to German criticism of Shakspeare was acknowledged. Mr. Saintsbury indignantly repudiates it, and expresses his wonder that it should ever have been charged to our account. After referring to Jonson, Milton, Dryden, Pope, Johnson, and Coleridge, he concludes that

"it must be a curious reckoning which, in the

face of such a catena as this, . . . maintains that England wanted Germans to teach her how to admire the writer whom Germans have done more to mystify and distort than even his own countrymen."

We do not think that Mr. Saintsbury's instances, though doubtless the best that were to be had, by any means prove his case. In which of the six shall we find any profound appreciation of Shakspeare? In Milton, who loved him, but, if we may judge from his own practice, in spite of his method? In Dryden, who "improved" "The Tempest" and "Antony and Cleopatra," and called his later works his "Dotages"? In Pope, who excuses his buffooneries and his unnatural situations, since he "had no other aim in his writings than to procure a subsistence"? In Johnson, who at least understood Shakspeare far less well than his contemporary Lessing? In two of them perhaps alone: Ben Jonson, his contemporary and friend; and Coleridge, who, if he is "the acknowledged founder of modern appreciation," obtained no small part of his qualifications from Lessing and Jean Paul, to say nothing of Schlegel. The rather petulant assertion that in Dryden's time no German had yet "written tolerable literature" we simply pass by.

It is fortunate that the period of the literature which it has fallen to Mr. Saintsbury to treat is one in which his admirable qualities have full play, while what we venture to consider the defects of his method are comparatively unobtrusive. For the historian of the wonderful century from 1550 to 1660 the eye and ear for poetry is the first requisite, and the second, and the third; while, putting Bacon and Hobbes apart, the purely stylistic estimate of philosophy habitual with Mr. Saintsbury does relatively little damage. The subject is lucidly arranged in twelve compact chapters, which are devoted, in nearly equal proportions, though without any show of formal distribution, to the writers of drama, lyric verse, and prose. Every one who has tried knows how hard it is to group the literature of a fervid and versatile age in such a way as to emphasise distinctions of style without obliterating or obscuring personality, the development of special branches without losing sight of the movement of the entire mass. Mr. Saintsbury's scheme compounds very happily among these various claimants, and only now and then leads to such slight apparent anomalies as that by which the Marprelate pamphleteers are classed as "later," and Hooker's crushing reply to them as "early" Elizabethan prose.

Special interest will be felt by scholars in the chapters in which the mass of literature made accessible by the abundant editing of recent years is brought, in many cases for the first time, under the review of a criticism at once competent and disinterested. The forgotten romances and pamphlets, the dramas, the songs and sonnet-cycles, of Elizabeth and James's time, which may now be read by all in the small type of one editor, or between the ample margins of another, owe the renewal of their youth to others; and Mr. Saintsbury pays at the very outset a warm and well-merited tribute to the single-handed labours of Prof. Arber. But the work of giving a connected account of

this vast material, uncoloured by the eidolon of happy discovery or of specific research, has been reserved for himself. In the first group, we only refer to the concise yet full account of Greene's romances, and to the narrative of the Marprelate controversy, told in a style the easy urbanity of which happily sets off the ferocious humours of Martin, without disguising the conviction, in which we entirely agree, that he had no case.

The serious meeting-place of critics, however, is naturally to be sought elsewhere. Mr. Saintsbury is of those who, with whatever deductions in detail, hardly know how to speak highly enough of the Elizabethan drama as a whole. The pages on Shakspeare, few as they necessarily are, are among the finest that he has written, so fine that one willingly condones the profound disdain for theories which has allowed him to occupy them exclusively with that in Shakspeare which precedes all theory, and to which all theory must return. Of Shakspeare's fellows, too, Mr. Saintsbury's view tends decidedly, on the whole, to confirm the enthusiast in his enthusiasm, and to give the disparager pause. He fully accepts the remarkable rehabilitation of Middleton, and in a less degree of Dekker; and, while rejecting the claim of Ford to belong to the first rank of poets, he pleads for a higher recognition of Massinger. In the case of Tourneur alone does Mr. Saintsbury, as he says, "come a long way behind Mr. Swinburne" in his admiration of our dramatists. Such differences of opinion commonly resolve themselves into some form of the old critical dispute for precedence between purple patches and continuous homespun, a dispute in which, among critics of the Elizabethan drama, the purple patches have on the whole had decidedly the best of it. Mr. Saintsbury cannot be accused of disparaging them, but it is characteristic of his point of view in criticism that he is not of those whose motto is "In poetry the unsurpassable—or nothing"; and that, while Massinger's massive and sustained merit conciliates him, he cannot condone the riotous incoherence which enwraps the sublimities of Tourneur. We incline to think, on the other hand, that Dekker owes his elevation to a somewhat too unqualified regard for a few admirable fragments in his very motley garb, his charming songs, things in which those happy moments that fall alike on the journeyman of literature and on the great artist availed to produce a result more perfect than any sustained work that issued, or could issue, from an imagination so crude and so ill-organised as his.

Of the chapters which deal with lyrics, we must pass over all but the last, and of the last all but the concluding pages, which contain Mr. Saintsbury's "Apology for the Caroline Poets." It is a striking piece of criticism, which appears to us perfectly sound so far as it deprecates the disposition to treat as literary decay whatever succeeds literary maturity. It is less easy to accept his generous estimate of their position in universal literature, on the ground both of their admitted exquisiteness of form, and of the fact that their frank animal affection is accompanied by the "fine rapture, the passing but transforming madness which brings merely physical passion *sub specie aeternitatis*." Now we can read "the most audacious expres-

sion of this style," Carew's "The Rapture, with admiration for the imaginative force which can find a poetical and moving symbol for every detail of actions otherwise in describable. But when all is said, the brutal accent is perceptible from beginning to end; and the poetry with all its earthy splendour is, in our view, divided by a perfectly distinct line from that, for instance, of the marriage-scene in the "Revolt of Islam," where passion is, indeed, "transformed and eternalised" in rapture. Carew's type is rather Propertius. Obviously, to "blend physical passion with metaphysical," and to express the one by aid of a brilliant symbolism borrowed from the other, are two quite distinct things; and we think the latter a more nearly just account of Carew's poem than the former. The whole "apology" seems to suggest that between the love of "seraphim" and that of "cattle," the only alternative available for high poetry is that which, while distinct from physical passion, yet readily and instinctively "blends" with it. The poet of the *Vita Nuova* thought otherwise of love; and, to our mind, all the "raptures" of the Caroline singers, full of genius and dainty incalculable charm as they are, fall a long way short, as poetry, of his brief and pregnant words:

"qual soffrissi di starla a vedere
Diverria nobil cosa o al morir,"

words which, of the whole poetic generation, the author of "Comus" would, perhaps, alone have entirely understood.

Towards Milton himself (who, as belonging essentially to the pre-Restoration era, is discussed in the present volume) Mr. Saintsbury's attitude is, in both senses of the word, perceptibly cavalier. His treatment cannot be called unfair, and few men have given Milton higher praise; but it is the treatment accorded to a distinguished enemy by a chivalrous assailant, who admires him almost to intoxication, but cannot quite forgive him for being on the wrong side. "If poetry could be taught by reading it, then indeed the critic's advice to a poet might be limited to this: Give your days and nights to the reading of "Comus"—is a dictum to which the most devout Miltonian could only object that it attaches an even too high relative value to what, with all its splendour of poetry, still belongs to the imperfect genus of the Mask. But with the early poems Mr. Saintsbury's unqualified admiration ends; and he neither has nor affects to have any sympathy with the glorious Devil who abandoned his natural pre-eminence in the heaven of Caroline poetry to rule in the fiery abyss of Puritan politics. We have no special liking for Milton's theology, nor are we in the least disposed to compare the "Smectymnus" to "Comus," or the ribaldry with which he pursued Charles's memory to the melodious tear by which he immortalised that of Edward King. No doubt there we have at many points ugliness for beauty. But the man who refused to linger on Parnassus's steep when his country was plunged in civil war was not insensible to the poetry of action; nor, had he done otherwise, is it easy to suppose that he could, later, have imagined imperishable types of a kind of sublimity beside which even the sublime maidenliness of "Comus" seems pale—the sublimity of heroic

achievement and heroic suffering. Moreover, the true teaching of *es irrt der Mensch so lang er strebt* is not that struggle avails nothing, at that, directed upon a great end, it atones for the errors to which it inevitably leads.

We trust that the reader will not have mistaken our sense of the very great merits of Mr. Saintsbury's book. If it does not make this wonderful epoch more intelligible than before, it makes it seem even more wonderful. It tends entirely to confirm, in full detail, the enthusiastic verdict upon it towards which modern criticism has on the whole strongly set, notwithstanding the equally evident bent of that criticism towards an Alexandrian standard of form which Elizabethan literature now grossly violates and now ravishingly transcends. His parting assertion of that which distinguishes this literature—"the diffusion throughout the whole work of the time of a *visida vis*, of flashes of beauty in prose and verse, which hardly any other period can show"—may sound hackneyed and obvious; but it is an assertion which not half a dozen men living have Mr. Saintsbury's right to make, and which no other book yet written goes anything like so near as his to justify.

C. H. HERFORD.

Neuer Commentar über die Genesis. Von Franz Delitzsch. (Leipzig: Dörffling und Franke.)

THIRTY-FIVE years have elapsed since Prof. Delitzsch's commentary on Genesis first appeared; fifteen years since its fourth edition was published in 1872. Ever in the van of historical and philological research, the venerable author now comes forward with another fresh edition, in which he incorporates what fifteen years have achieved for the illustration and criticism of the text of Genesis. For, since 1872, many discoveries of archaeological interest have been made—notably, the tablets recounting the legends of the Creation and the Deluge, as they were current in Babylonia; and the higher criticism of the Book of Genesis, as of the Pentateuch generally, has been materially advanced by the studies of Wellhausen, published in 1876-7, and by the renewed examination of the question, especially that of Dillmann in his recently completed commentary, which Wellhausen's studies provoked. In the introduction to the present volume, Prof. Delitzsch states the results to which his own re-examination of this subject has led him. These results are not entirely new. They had been indicated before in the series of papers in the *Lutherische Zeitschrift für kirchliche Wissenschaft und kirchliches Leben* for 1880, in which Prof. Delitzsch reviewed the more salient features of Wellhausen's theory; but they are here succinctly restated, so far as was necessary in an introduction to Genesis.

Prof. Delitzsch has uniformly, since 1852, recognised the composite structure of the Pentateuch; but, in the Introduction to his edition of 1872, he was still of opinion that the character and mutual relations of the different sources were compatible with the supposition that the Decalogue and "The Book of the Covenant" (Ex. xx.-xxiii.), together with Deuteronomy, were the work of Moses himself, and that the rest of the Pentateuch had for its author one of Moses's immediate suc-

cessors. Closer and more systematic study has satisfied him that this position is not tenable. He holds, indeed, that the *basis* of the several codes (Ex. xx.-xxiii., Deut., and the Priests' Code) incorporated in the Pentateuch is Mosaic; but he considers that the form in which these codes are presented in the Pentateuch, at least in the case of Deuteronomy and the Priests' Code, is of much later origin. The Decalogue and laws forming "The Book of the Covenant" are the most ancient portions of the Pentateuch narrative, and preserve the distinctive type of the Mosaic style "in its relatively oldest and purest form." Of this type, the style of Deuteronomy is a development and expansion. The historical truth of the statement, in Deut. xxxi. 9, 24, that Moses "wrote" the Deuteromic law is insisted upon; but the reference is held to be not to the book of Deuteronomy, as we possess it, but to *the code of laws* which underlies it, and which it is the object of the book to develop and enforce. The *substance* of Deuteronomy, both in its historical and legal parts, is ancient, and rests upon a traditional substratum. But it owes its present form to a man of prophetic spirit, who recast it, accommodating it to the requirements of his own age, in the time of Hezekiah. The writer in Deuteronomy "neither is, nor claims to be, Moses; for he introduces him as speaking (i. 1-5; iv. 44-49), and incorporates in his speeches much of historical and antiquarian detail (ii. 10-12, 20-23, &c.)." He writes, however, on the lines of a pre-existing legislation, and in a spirit of genuine sympathy with the aims and personality of Moses himself. The Priests' Code (embodying the more distinctly ceremonial legislation) assumed its present shape under different conditions. In its *principles* originating with Moses, its form—which is singularly unlike that of all other parts of the Pentateuch—is that which it acquired in the hands of the priests, probably through the influence of some particular priest, at a much later date (though prior to the date at which Deuteronomy was composed). It thus took shape gradually, and, as we have it, is the result of a progressive development—the last stages of which may belong even to the period after the Exile. The book of Joshua, finally, is connected intimately with the Pentateuch, and discloses, when analysed, precisely the same composite structure.

The phenomena presented by the Pentateuch are complicated—far more complicated than those who have not made the subject a special study imagine to be the case. It cannot be doubted that the solution is to be sought in the direction here indicated by Prof. Delitzsch. The historical traditions of the ancient Hebrews were committed to writing at different times and by different hands; and the narratives embodying them are superposed, stratum upon stratum, in the Pentateuch and Book of Joshua, as we know them. The laws incorporated in Deuteronomy and the Priests' Code are not, of course, what they are often represented as being—the "inventions" of the respective authors: they are in their origin ancient, and the differences which the several codes exhibit are due to the modifications which were gradually introduced into them in the course of history.

It is the office of criticism to separate, where possible, these strata from one another; to define, at least approximately, the process by which they assumed their present condition; and to formulate a theory which shall embrace the observed facts, and explain, as the traditional theory does not explain, the phenomena alluded to above. Prof. Delitzsch's *general* view of the structure of the Pentateuch approximates to that of Wellhausen; but he differs from that scholar in his theological position, and in the postulates under which he conducts his analysis; he differs from him also in seeking to vindicate the Mosaic origin of the Pentateuchal legislation, wherever this is possible. The point of view from which he approaches the subject may be judged from the following extract:

"Thora and Pentateuch are not identical ideas. Only in late post-Exilic times, after the threefold division of the canon into law, prophets, and hagiographa was established, did they come to be identified. This is a fact of supreme importance. When duly weighed, it will be found capable of allaying conscientious questionings in regard to the criticism of the Pentateuch, and of disarming many inveterate prejudices. . . . For, if it be true that the Pentateuch contains the Thora [law], but is not itself the Thora, it is self-evident that the 'Book of the Law,' which Moses, according to Deut. xxxi. 9 wrote, cannot be the Pentateuch, or even Deuteronomy in its present shape; and there is the less difficulty in holding that the Pentateuch, like all the other historical books of the Bible, is composed of documentary sources differing alike in character and age, which critical analysis may be still able, with greater or less certainty, to distinguish and separate from one another" (pp. 33-4).

We wish that space permitted us to transcribe the whole of the pages that follow (pp. 35-8), in which, with weighty words, Prof. Delitzsch vindicates the right of criticism to analyse the records of the Old Testament, and, while repudiating the spirit in which it has been exercised by particular critics, shows that the methods of criticism are in themselves perfectly consistent with the regard due to a record of revelation; and, indeed, that it is the duty of the Christian scholar to apply them for himself, and thereby "to snatch the weapon from his adversaries":

"God is a God of truth! The love of truth, submission to the yoke of truth, abandonment of traditional views which will not endure the test of truth, is a sacred duty, an element of the genuine fear of God. 'Will ye be God's partisans?' exclaims Job (xiii. 8) indignantly to his friends, who assume towards him the part of advocates for God, while they distort the facts on which the issue rests in *maiolem Dei gloriam*."

With a judicious appreciation of the facts and issues involved, Prof. Delitzsch points out the path that lies between the two extremes of the old and the new; and he shows how it may be followed without either disrespect to the inspired writers, or derogation from Christian truth. In this country, alas! the Old Testament is so rarely studied with the requisite system and scholarship that the relations of its several parts to one another remain commonly unnoticed; and the necessity of distinguishing them, which is at once the foundation and the justification of criticism, is not recognised. May this assertion of the claims of criticism, made by a theologian and

a Hebraist of Prof. Delitzsch's eminence, have the effect of convincing students in England of the importance of the subject!

The body of the commentary is not substantially altered. In saying this we are, of course, very far from meaning to imply that it is a simple reprint of the last edition; on the contrary, every page shows marks of the care that has been bestowed upon it, and in matters of archaeological and philological interest additions and improvements are everywhere conspicuous. Thus, the notes on ch. ii. include a critical sketch of recent theories on the site of Paradise; the introduction to the section vi. 9—ix. 29 contains a much fuller discussion than in the previous edition of the traditions respecting the flood, and of the relation to one another of the two divergent narratives that have been combined in the Book of Genesis. Prefixed to chap. xii., and similarly to chap. xiv., is a sound and moderate estimate of modern speculation respecting the historical character of the narratives in question. The minuteness and precision of the philological notes, in their improved form, is especially praiseworthy. The supposed "archaisms," which have for long been popularly imagined to characterise the language of the Pentateuch are thus—with one exception, the epicene *na'ar*—now rightly abandoned (p. 27 f.) as resting upon no foundation in fact. A brief but clear view of the composition of the text is prefixed to each section of the commentary, and the different sources are more fully and exactly characterised than was attempted in the edition of 1872. The analysis is not so minute as that of Dillmann, though Prof. Delitzsch has evidently a well-founded admiration for the work of his Berlin colleague (*cf.* p. 248); but, as he gracefully remarks (p. 437), his own eye is not gifted with the same delicate vision, and he prefers accordingly, even where agreeing with him in the main, to leave various minor points undetermined. The use of the volume, it may be noticed in conclusion, is much facilitated by improved typographical arrangements.

We congratulate Prof. Delitzsch on this new edition of his commentary on Genesis, and trust that it may appear before long in an English dress. By it, not less than by his other commentaries, he has earned the gratitude of every lover of Biblical science; and we shall be surprised if, in the future, many do not acknowledge that they have found in it a welcome help and guide.

S. R. DRIVER.

"Great Writers."—*Life of Shelley.* By William Sharp. (Walter Scott.)

MR. WILLIAM SHARP, as was to be expected, writes of Shelley with affection and sympathy. He does not profess to do more than give a simple narrative of his life, avoiding the temptations to digress into controversy or criticism. But even so apparently modest a task required the nicest discernment, as well as full knowledge and appreciation of the remarkable character the story of whose short career was to be told. These qualifications Mr. Sharp possesses in ample measure, and the result is that his account of Shelley is at once fascinating and just.

I confess that I am a little disposed to demur to some conclusions very aphoristically expressed in the following sentences, which occur in an early page of the memoir:

"The moment we seek to identify a poet with his poetry we are in danger of illusion. A man is not the less a man because he sings more subtly sweet than a siren. There is a distinction between a Voice and a Soul. A nightingale's twilight plaint in the beechwood is not the less wonderful if we learn that a happy family of glowworms has known ruin in order to sustain the musician in his high conceit of song. What then can it really matter to those of a later generation if this poet occasionally imbibed more than was good for him, if that poet infringed a majority of the commandments?"

It is always difficult to put into a short sentence the whole matter of an argument, and every one of these pithy observations—especially taken in reference to Shelley—is open to dispute. It seems to me that in Shelley's case there is a very close connexion between the poet and his poetry. His poetry was the natural outcome of his singularly perturbed and beautiful life; and I cannot see that in him there was a distinction between the voice and the soul. If he was not altogether soul—as in a sense it would seem he must have been—he always spoke from the soul and with the whole power of it. The parallel which Mr. Sharp seems to suggest between the domestic ruin inflicted on a family of glowworms, in order that a nightingale might sing the better, and some similar cause and effect—the unhappy fate of Harriet Westbrook of course occurs to one's mind—in Shelley's experience, does at first sight appear to be an apt one. But it will not bear examination, for the nightingale, by his own act, works ruin on the glowworms, while Shelley never, by act, or thought, or speech, brought ruin upon anyone. Perhaps I ought not to suppose that Mr. Sharp intends such a parallel. It is entirely my own construction of language which he possibly uses only as a general illustration, though even in that case he must expect his illustration to be applied in the circumstances directly in view. Mr. Sharp's next suggestion, that it cannot matter to a later generation whether or not a poet infringed a majority of the commandments, is certainly an unhappy one. The main argument of this book absolutely confutes it. We are of a later generation to Shelley, yet we are profoundly concerned to know that his life was pure, and that the rare spiritual qualities of his poetry were in keeping with those of his actual nature. True and great poetry would cease to be the divine thing it is if it were an excrescence or emanation, given off in virtue of some mere talent for producing it, and not necessarily coming out of a man's inner life and spirit. A vicious man may still be a poet, but his lower tendencies will inevitably affect and cramp his higher ones, and his verse will suffer.

But this is rather beside the question, and chiefly so inasmuch as Mr. Sharp's story of Shelley's life altogether establishes his personal purity and the identity of the spirit in his life with the spirit in his song. Prof. Edward Dowden's *Life of Shelley*—to which Mr. Sharp is necessarily indebted, as he several times says—has happily rendered

clear some mysterious and painful circumstances as to which it had been difficult hitherto to absolve Shelley from blame. Full absolution it may not be right even now to give him; but it is certain that, instead of being the active cause of misery—in the case of Harriet Westbrook—ending in complete ruin, he did all that a high-minded man could according to his light, and accepted suffering and sacrifice so long as these seemed to offer remedy or relief. These distressing incidents Mr. Sharp tells with the utmost tenderness and the most perfect fairness. It is a record, one could imagine, which neither of the parties would wish to have altered by a single word. The same thing, indeed, may be said of Mr. Sharp's whole account of Shelley's life from beginning to end. Where there were adverse interests or feelings, he is just to both. His own instincts respond to Shelley's, but he presents in a fair light every opposite view that could occur. He gives only an outline, for the scope of his book admits of no more; but it is faithfully drawn. It is another fit memorial of a beautiful soul, of whom it is always well to recount what we know.

Mr. Sharp tells us that his object in writing this new biography was to induce the further study of Shelley, and that object will certainly be attained by the book; but, apart from that purpose, it is a worthy addition, to be cherished for its own sake, to our already rich collection of Shelley literature.

GEORGE COTTELL.

TWO BOOKS ON PRIVATEERING.

Studies in Naval History. Biographies. By John Knox Laughton. (Longmans.)

The Corsairs of France. By C. B. Norman. (Sampson Low.)

SINCE more than half the bulk of Prof. Laughton's new book deals with the interesting subject of privateers and privateering we have not gone out of our way in linking it to Mr. Norman's larger volume. But there is a better reason for so doing, in that both writers, though working on different lines of historical study, state practical conclusions which must be drawn from the records of the past, in identical terms and with similar warnings. Privateering is no more scotched and dead by virtue of the diplomatic declaration of 1856 than the great sea serpent has been laid low by scientific scepticism. "The name, at least, is abolished," Prof. Laughton writes: "the reality, in its more important characteristics, will, I do not doubt, revive on the first pinch." We may apply to privateers Coleridge's remark in defence of Drake and his doings, "No man is a pirate unless his contemporaries agree to call him so." And so to-day, "No ship is a privateer unless we are agreed to call her such." This agreement will not be found among international lawyers, we may be sure; but the practical question remains unaltered, and waits to be solved by the hard logic of experience.

Both writers under notice cover the same ground in dealing with four of the best known French privateers, or "corsairs," as Mr. Norman prefers to call them. This literal rendering causes no difficulty in the case of

such names as Jean Bart, Du Guay Trouin, Thurot, and Surcouf; but when applied to lesser heroes a slight ambiguity is possible. Prof. Laughton's articles are more pointedly critical than those of Mr. Norman, the former hesitating to admit, or even to credit, such traditional episodes as that of Jean Bart lashing his son to the mainmast to accustom him to the "music" of two vessels pounding each other. Mr. Norman, however, tells the story without doubting it, and even gives us a picture of the dramatic situation. Each author has much material drawn from original research—in Prof. Laughton's case, as is well known, at the Record Office, and in Mr. Norman's at the Bibliothèque Nationale; and thus the two books will be found to supplement each other. We should, of course, prefer Prof. Laughton's guidance on points of tactics, or on the details of an engagement; but Mr. Norman can claim authority for many features of "local colour" that add interest to his biographies.

There is one debatable question on which Mr. Norman lays emphatic stress, without producing, as it seems to us, sufficient authority for his conclusions. He insists more than once in his book on the utterly preponderating loss inflicted on English commerce during the great French wars. He gives, in his appendix, a roll of English merchant vessels captured 1793-1815, with a total loss of 10,871 vessels, but does not state where it was taken from; and on p. 377 he tells us that from February, 1793 to the end of 1795 not less than 3,000 British craft of all sizes and rigs were lost by capture. These figures we not only find difficulty in comparing between themselves, but we are unable to do more than contrast them with the tables of losses quoted by Col. Malleon in his *Final French Struggles in India* as "taken from the official documents," and with the English return of prizes taken 1793-1812. The latter, signed by the Registrar-General of Shipping, is, we take it, of sufficient authority, and can be found in the *Naval Chronicle*, xxix. 453. In it the total number of prizes admitted to registry during the period mentioned is declared to have been over 48,000 vessels, with an average annual tonnage of fully 300,000 tons. Such a total, we must remember, includes French, Spanish, Dutch, and Danish vessels, besides those of one or two lesser nationalities. But even then, with due allowance made, we doubt whether Mr. Norman can claim so great a balance on one side, when the wider extent and larger amount of British merchant shipping is remembered. In differing thus with Mr. Norman, we do not, however, wish to blink the important lessons that must be drawn from the cruises of Surcouf and his brotherhood. They have been urged in recent years by many writers, and not in vain, let us trust.

In Prof. Laughton's work, two of the most interesting essays are those on the English privateers Fortunatus Wright and George Walker, whose names will be familiar to but few. Their exploits were worth recording; and their careers, when compared with those of Jean Bart and Du Guay Trouin, lead Prof. Laughton to make some practical observations on the gulf that has been fixed and is maintained between the royal navy and the merchant service.

"But if this gulf is itself an evil, why should it be maintained? I believe that it is an evil, and that it might be done away with—not by any violent or radical innovation, but rather by a judicious return to the practice of the past. The exclusiveness, which I deplore, is itself the innovation; a thing but of yesterday—of yesterday, that is, as compared to the age of our navy."

This idea of strengthening our naval establishment, with the cogent reasoning which supports it, we recommend to the notice of all loyal reformers of things that are not as they might be.

Prof. Laughton has further given us, in his study of Paul Jones, "the Pirate," an authoritative outline of that celebrity's professional career and moral character, based on criticism that is a model for clearness and moderation. Of his remaining essays, perhaps, that on the battle of Lissa, which, in some of its features, recalls the old Roman victory at Ecnomus, hardly does justice to Tegethoff's memory in saying that he is to Germans "not so much the victor of Lissa, as the bringer home of Maximilian's body." No less than three monuments stand to his memory in Austria, as the hero of Lissa and Heligoland. The four chapters on French naval history proper take a wide range in time but have a certain completeness about them. From Jean de Vienne, Admiral of France, an energetic opponent of Edward III.'s navy, when it was in an enfeebled condition, we pass to Colbert and the brilliant period of naval policy that he inaugurated. Then from Du Quesne, that curious old-fashioned type of naval officer, whose biography has been written by M. Jal with such learned accuracy, to the Bailli de Suffren is a long march; but it leads us to, probably, the highest flight of naval genius in the pre-revolutionary navy. Prof. Laughton's chapter on Suffren, in its original and anonymous form, was long considered to be the only satisfactory English account of that distinguished flag-officer, and its authorship was rightly guessed by some readers. It has undergone revision since then, and forms a valuable lesson on naval tactics.

Such a contribution to permanent history as Prof. Laughton here places before us deserves the warmest welcome, and we hope that it may prove to be one of the foundation stones on which a real history of the British navy may before long be built. Mr. Norman's book, with its map of coaling stations and ocean "crossings" and the comments thereon, illustrates a vital question of the day from the pages of history with much felicity of purpose. Its future lease of life, perhaps, does not promise equality with that of its companion. More than that, who can say?

GEORGE F. HOOPER.

NEW NOVELS.

- No Quarter!* By Capt. Mayne Reid. In 3 vols. (Sonnenschein.)
The Maid and the Monk. By Walter Stanhope. In 3 vols. (Sampson Low.)
Love in Idleness. By Iza Duffus Hardy. In 3 vols. (White.)
The Twin Soul. In 2 vols. (Ward & Downey.)

I. D. B. By W. T. E. (Chapman & Hall.)
Squire of Calder. By Harold Francis. (London Literary Society.)

Country Luck. By John Habberton. (Chatto & Windus.)

Cyril Danoley: or, the Blue Hill. By Miranda. (Elliot Stock.)

Doonan: a Tale of Sorrow and of Joy. By Melville Gray. (Sonnenschein.)

IN *No Quarter!* the late Capt. Mayne Reid forsook the style which made him the hero of schoolboys, and has left us a rattling historical novel after the G. P. R. James and Harrison Ainsworth type. It takes us back to the days of the Cavaliers and the Roundheads, and is marked by many episodes of an exciting and entertaining character. Sir Richard Walwyn and Eustace Trevor are the heroes of the Parliamentary army, though the latter had once been known as a handsome courtier in the *entourage* of Charles I., and one whom Queen Henrietta had even deigned to honour with tender smiles. Walwyn and Trevor fall in love with two charming and beautiful maidens, the daughters of one Ambrose Powell, a gentleman with a good estate in the Forest of Dean, and a stern opponent of King Charles. The Powell family is thrown upon troubled times; and, while the head of it is in danger politically, his daughters Sabrina and Vaga are also in danger from the dishonourable intentions of Prince Rupert and an officer of the Cavaliers. Fortune favours the brave, however; and when matters have come to a most desperate pass, the persecuted maidens are signally delivered by their affianced lovers, Walwyn and Trevor. Scattered through the novel are descriptions of the sieges of Bristol, Monmouth, Gloucester, and other places, so that the interest is thoroughly kept alive, whether it be of a romantic or a historical character. Sir Walter Scott has given us a flattering, perhaps too flattering, picture of the Cavaliers. Capt. Mayne Reid now drags them down from their pedestal, and exalts the Parliamentarians in their place. He is, indeed, most uncompromising in his utterances; and when some of the Conservative journals get hold of this story I fear they will give him "no quarter." He is very angry that Lord Beaconsfield and his associates were not impeached in 1880, instead of being allowed to "walk out of office and away, with a free jaunty step and air of bold effrontery, blazoned with decorations," &c. In another place he speaks of the "alimy Imperialism" of the "Jew of Hughenden," and describes "the Jingo cur" of to-day as a falling-off from "the Cavalier wolf of the Great War-time." Again, he regards the whole history of Toryism, from its commencement up to the latest chapter and verse, as "a record of sympathy with the wronger and unpitying regardlessness for the wronged—an exhibition of all the ferocity known to the human heart, with all its falsehood and meanness." Politics are not meant for fiction. Yet there was a refreshing independence of thought in Capt. Mayne Reid. Apart from polemics, this novel may be enjoyed for its racy delineations of character and scenery.

A second historical novel greets us in *The*

Maid and the Monk. Mr. Stanhope transports us exactly a century further back than Capt. Mayne Reid; and instead of being in the days of the tyrannical Charles we find ourselves in those of the imperious Henry, the eighth of his name. The chief characters here are Elizabeth Barton, the maid of Kent; Aveline More, daughter of the great Chancellor, Sir Thomas More; Dan Theodulph, the licentious head of a monastery; and Richard Plantagenet, the alleged descendant of Richard III., and the last of his race. The orgies of the monks of the sixteenth century are powerfully described, and Henry is credited with sharing in them himself. The maid of Kent first comes before us in 1533, when, according to the author, she was twenty-five years of age, though how that can be, seeing she was born in 1510, does not clearly appear. Queen Catherine upheld the inspiration of this hysterical woman, Archbishop Warham believed in her, and Wolsey and More were not untouched by her. Together with her associates—Dr. Bocking, of Canterbury, and Masters—she made a great sensation for a season; and these volumes trace her chequered career down to the time when she was tried and convicted of heresy, and condemned to the stake. History records that she was actually burnt in consequence of her denunciations of the king and his repressive ecclesiastical measures; but the last glimpse of her in this work depicts her as having been rescued from the flames by the gallant Plantagenet, and borne to a place of safety. Of course there are some love passages. The Maid of Kent has fallen a victim to the sensual passion of Dan Theodulph, who meets with a fearful retribution for his numerous crimes. Plantagenet loves Aveline More, and finally marries her, though he has inspired the Maid of Kent with the purest affection of her life. The hard facts of history are departed from in many instances, but license is allowed to the romancist; and if Mr. Stanhope has not been entirely successful in bringing before us vividly a past age and people, he has written a novel which manifests considerable ability, and is at the same time very attractive reading.

Miss Hardy's novels are invariably entertaining, and *Love in Idleness* is no exception to the rule. It is the story of a winter in Florida—a country which has evidently become a second England almost to the writer; and the sketches of scenery scattered through these volumes are very real and graphic. The description of the famous orange groves of Florida towards the close of the second volume could not well be excelled, and it was not possible to have written it at all save after a personal experience of the country. As regards the *dramatis personae* of her narrative, Miss Hardy has endeavoured to depict in them one of the innumerable little "British colonies" in Florida, and considerable interest attaches to their love episodes and their fortunes generally. The widely different natures of the two heroines, Violet Preston and Rosemary Heath, are well distinguished, and there is something touching in the chequered existence and tragic death of Max Randolph. The author may be congratulated upon having produced a very good novel.

The Twin Soul is a psychological and realistic romance, and relates the strange

experiences of Mr. Rameses. This extraordinary being suggests reminiscences of Zanoni, *et hoc genus omne*. He has a lofty contempt for all such "fussy nationalities" as France, Russia, England, and America, who think "they are playing mightier parts on the world's great stage than ever were played before"; but he is quite convinced that, as in the case of Egypt and Assyria, they will perish and leave behind them as little mark "as the soap bubbles that children toss into the sunshine." Mr. Rameses's particular eccentricity is "the twin soul." He believes that everything is made in pairs; and, after poking about the world for a good while, he discovers his own affinity upon the summit of Ben Ledi, in the Scottish Highlands. This very singular being is an Oriental lady, clad in a long loose garment of pale amber, bound at the waist with a sash of golden fringe. She wore a turban on her head, had a mass of raven-black hair, and long dark eyelashes concealing the brightness of her "twin orbs." She is named Niona; and her particular business upon the top of Ben Ledi is "to kindle a fire direct from the sun's rays, on the mountain top, in honour of the antique religion of Asia." But if anyone except the great Mr. Rameses had found her, he would have deemed her to be qualifying for a lunatic asylum. Mr. Rameses tells us that he was a priest in the Temple of Isis, upon whose portico was written, "I am all that is, all that ever was, and all that ever shall be; no mortal has ever lifted my veil." We are getting just a little surfeited with this kind of mystery, and are tempted to parody Madame Roland, "O, Rider Haggard, what enormities are committed in thy name!" Mr. Rameses is represented as a marvel of universal knowledge. He knows all religious systems, from Buddhism to Christianity; is familiar with all the poets, from Homer to Wordsworth; has the history of all the nations at his fingers' ends, from the Egyptians and Phoenicians to the Yankees, &c. That being the case, it is strange that this "Enquire-within-upon-everything" kind of being should make three quotations from Wordsworth, and that they should all be wrong, spoiling one of the finest passages in the "Ode on the Intimations of Immortality," and the last line of the sonnet written on Westminster Bridge. It is rather singular, too, that he should speak of the followers of Zoroaster more than once as "Zoroastrians." Yet these things are trivial compared with what follows. If Mr. Rameses passionately loves anything it is music. What, then, will be thought of this passage?—

"Beethoven, especially, awakens feelings, memories, and mysteries in me which I cannot describe or account for, and which seem to me to speak a language without words—*Lieder ohne Worte* as he [?] expresses it." Seriously, though there are some clever things in this work; yet, as a whole, it is crude and ill-digested.

I. D. B.—the initials are those of Illicit Diamond Buying—is concerned with the adventures of Solomon Davis at the Diamond Fields of South Africa, and elsewhere. The English scenes reveal singular depths of villainy, while the South African are sanguinary to a degree; and both, as it seems

to me, are conceived in a spirit of vagary.

One does not expect much in the way of literary style when the very first sentence in a story begins, "In the neighbourhood of Albert Square, Clapham—not in the square itself, but *sufficiently nearly so*," &c. Nor do the chances improve, when on p. 2 we read of "a sort of melancholy, barrel-organ-y, tradesmen's cart-ish, milk-hoi air," &c. We are quoting from the *Squire of Calder*; and our impressions are not brightened when we proceed a few pages further and find as a specimen of the author's joking powers, "God bless my soul." The defect is that, notwithstanding the ingenious personation of a supposed squire by a young lady, the *Squire of Calder* consists of 35 pages of trivialities, devoted to the somewhat numerous love affairs of Rosalie Mere, viz her ultimate melancholy fate, which is that of the bitter bitten.

Mr. Habberton has given us a thoroughly fresh and healthy story of American life in *Country Luck*, which it is a real pleasure to read. Alike as regards style and grip of character it might be read with advantage by the author of the preceding work. There is something rational and true to the life about every person in it, but more especially, perhaps, about the women folk.

Cyril Danoley is very short, but it is readable enough. Some will, no doubt, think there is a little too much of the religious element in it for a work of fiction; but it may possibly find a market on that account. There is nothing to distinguish it from the literary point of view. It has one well-sketched character—a lonely rich man who has lost his wife and child under sad circumstances.

"Love perfected through suffering" might be taken as the motto of *Doonan*. The story is interesting; but its most striking incident—curiously enough, is that which is also the most noticeable in the play of "Hoodlum Blind." Is this another of those undesignated coincidences of which we have recently had so many in literature?

G. BARNETT SMITH.

GIFT BOOKS.

Little Peter. By Lucas Malet. (Kegan Paul, Trench & Co.) Among the crowd of ingenious, interesting, foolish, dull, pretty, or otherwise mildly pleasing or irritating books produced at this season for children, it is only here and there that we find one that is really beautiful—like this. The author calls it "a Christmas morality for children of any age"; and years will not have brought wisdom to anyone from whom they have taken the power of enjoying this very simple and sweet story. The full beauty of it will scarcely be apprehended by the very young. They will not see how clearly all the characters are drawn, from Master Lepage to Cincinnatus the cat. They will not (we hope) realise the wretchedness of John Paqualin, the poor mishapen charcoal burner. They will not understand in its depth the beauty of little Peter's last dream; but things are for children of a larger growth; but they will love little Peter and Cincinnatus and John Paqualin and M^{de}me. Lepage, and have a wholesome contempt of the conceit and stupidity of the rest. Moreover, they will like the pictures,

which are as truly sympathetic "illustrations" as we have seen for many a long day.

A Little Step-daughter. By the author of "The Atelier du Lys." (Hatchards.) It is a pleasure to meet with a story written for young people which proceeds from a hand that has charmed so many readers of more advanced years. As usual with this writer, her scene is laid in the South of France—a land with which she is intimately acquainted. The local colour is strong, and the characters are well defined. The period in which the events are supposed to have occurred is that of the Regency, and the condition of the peasantry and their relations to the Seigneurs form the background of the tale. The Little Step-daughter herself is a winning child; and the story of her adventures, like all good tales for children, will be read with interest by old as well as young.

Margery Merton's Girlhood, by Alice Corkran (Blackie), is a book written especially for girls, probably with a view of weaning them from the habit of reading novels. The scene is laid in France, though the heroine is an English girl. One of the characters, Josephine, a clever French girl, is exhibited as a solemn warning against maliciousness and lying. The most amusing part of the book, to an older reader, is the transparent effort to keep love-making out of the book, though there is a young man who appears as a saving genius at two critical moments of Margery's life, and who will evidently express his feelings towards her an hour or two after the last scene closes.

Prentice Hugh. By Frances Mary Peard. (National Society.) Miss Peard need not be nervous about her anachronisms. No one in reading a book of this kind will take the trouble to search them out; and the exact dates at which certain portions of the Cathedral at Exeter were executed, and what was the name of the bishop at the time, are matters of the smallest moment to her readers. These will be principally confined to the young, who will think Hugh a nice boy and laugh at his monkey, will be carried back to unknown times (the more unknown the better) by the antiquated language, will hang breathless on the account of the shipwreck, and rejoice at Hugh's triumph over the rascally Roger who stole his design for the corbel. We are doubtful whether Miss Peard knows exactly what a corbel is; but we are quite sure she can write a capital story, full of lively incident, pure in sentiment, in a true sense religious, safely to be recommended to the strictest parent or guardian.

King Diddle. By H. C. Davidson. Drawings by E. A. Lemann. (Bristol: Arrowsmith; London: Simpkin, Marshall & Co.) A pretty little fairy story, telling what wonderful things were seen by Hugh, aged six, and Amy, aged five, when they got up out of bed one night and went to explore the old lumber room, which had long been the object of their wondering curiosity. Children of about the same age will read it or hear it read with delight. The dainty little coloured pictures deserve especial praise.

Sybil's Dutch Dolls. By F. S. Janet Burne. (Field & Tuer.) Miss Burne is to be congratulated on the originality of her story. A little girl who has bought five hundred farthing dolls—wealthy little girl!—sees in her dreams her purchased treasures dressed in various attire, and converses with them. Some of them travel on the personally conducted principle, and go through various amusing adventures. There are numerous clever illustrations of the dressed figures; and even without the story the book would be invaluable to a girl who wished to amuse herself by planning costumes for the inhabitants of her dolls' house.

New Fairy Tales from Brentano. Told in English by Kate Frailligath Krocke, and pictured by T. Carruthers Gould. (Fisher Unwin.) We do not think the tales in this second volume are quite equal—so far, at least, as their suitability to English taste is concerned—to those in the former one. Mrs. Krocke says in her preface that "Gockel, Hinkel, and Gackeleia" is "one of the most charming fairy tales ever written." If this be true of the original, we fear its beauty has suffered in the translation. Nor can we see the fun of "the exquisite mercantile fooling" of "The Story of Brokering," some of which reminds us of the anecdote "Sh'apprends à être fif." The last story, "Father Rhine and the Miller," is better; but then Mrs. Krocke, instead of translating, has really rewritten it in an adapted and greatly abridged form. The result suggests that she would be more successful in writing English stories of her own, in general imitation of German models, than in attempting to find English equivalents for Brentano's far-fetched German witticisms. Mr. Gould's coloured illustrations are always either humorous or pretty, and generally both.

Wonderful Stories, by Dr. Macaulay (Hodder & Stoughton), is a collection of narratives of travel and adventure, told in a style suitable for boys who are old enough to appreciate subjects of real interest. They are drawn from various original sources, and owe their interest to the truthfulness with which the writer has restricted himself to the telling of what actually happened, instead of attempting to startle his young readers with fireworks of the Mayne Reid order. Some of the stories are well known already—such as that of the "First Voyage of Columbus"; but others we have not seen before—as the account of the extraordinary adventures of Hendrik Portenger, who was shipwrecked in the Red Sea in 1801.

Three more Tales. By A. M. F. Paget. (Masters.) We learn from the preface that this book is a sequel to an earlier volume by the author, entitled *Tales for me to Read to myself*, which was intended for children only able to read very easy words. These new tales are meant for readers just a little more advanced, the common words of two and three syllables being sometimes used. The necessity for simplicity of diction has not prevented the writer from giving evidence of considerable literary power; and the stories, though they may be read and enjoyed by most children of seven or eight, are extremely likely to get read through by any grown person who may happen to take them up.

Tom's Adventures in Search of Shadowland. By Herbert S. Sweetland. (Fisher Unwin.) This is a well-written fairy tale, with a little more fancy and humour than are usually to be found in such compositions. We have submitted it to the judgment of some tiny critics, who think the story capital, but do not like the pictures. The frontispiece, however, is not bad.

The Stories of Wasa and Menzikoff (Blackie) are two well-told historical tales. The conception of the giant Bao, with his blunted moral perceptions and his devotion to his master Gustavus, is novel and good. The second story exhibits the debasement of character produced in a great man, who had been raised from a low condition by the Tzar, Peter the Great, through ambition and fear.

The Kitten Pilgrims. By R. M. Ballantyne. (Nisbet.) The author and artist is certainly good at kittens, as has been sufficiently proved before the appearance of this volume; and there is plenty of skill and ingenuity in the book, both in the way of writing and drawing. Monkey Fun, Greedy Toad, and Stork

Ignorance, are all very clever. Yet is it not cleverness nearly all thrown away? The notion of a Kitten Pilgrim's Progress is scarcely a happy one; and, though the author has succeeded better than could have been expected, nothing can prevent it from being a poor burlesque of one of the most reverend books in the English language.

A Golden Age. By Ismay Thorn. (Hatchards.) Pol is certainly a nice little boy, and mispronounces his words very prettily, and Mr. Gordon Browne's pictures are nice; but there is not much more to say about *A Golden Age*. Mr. Polwynth is a sentimental old gentleman who is very kind to his little godson and gives him everything he asks for, and tells him the story of his own life of unreturned love and self-denial. Then there are two other children whose Christian names begin with Tre and Pen, so that we have the Cornish trio of Tre, Pol, and Pen (for the second time this winter season), which of course is very clever; and the three children form a secret society called the Cornish Brotherhood, which is very mysterious and not a little silly; and finally, after a good struggle to keep something like a story going with the aid of scrapes and other incidents of ordinary childhood, the book winds up with the death of Mr. Polwynth and the enrichment of Pol and his father with Mr. Polwynth's money—a truly British ending. Ismay Thorn has done better before, and we hope will do better again.

The Cost of a Mistake. By Sarah Pitt. (Cassell.) We are not at all sure whether Will Ireland suffered much from the mistake. He had indeed to give up his cherished desire of going to college and entering the Church, and it is not pleasant to live for some years under the suspicion of stealing a hundred pounds; but his vocation for a doctor's life seems to have been evident, and his character is cleared completely before he has finished his studies under the good Dr. Angus of Edinburgh. On the whole, this story is a good one—not very brilliant, but by no means dull; and in the course of it we come in contact with a good many queer persons whose peculiarities are described with no little humour.

The Story of Spenser's Faerie Queene. Edited by J. E. Rabbeth. (Bell.) "To paraphrase Wordsworth's words or characters," said Mr. Shorthouse, in an address to the Wordsworth Society, "is unspeakably painful; nay, more it is useless. It will convey no adequate idea to the man who is ignorant of Wordsworth's poetry." All this is doubly true of Spenser, and yet this is what Mr. Rabbeth has done. It is hard to see for whom his book was intended. If for old people, then surely they ought to read the original poem; if for children, then why give them a volume of unmanageable form with all the poetry volatilisèd? The size is demy octavo, and the number of pages is 490. The Invocation is gone, and we have instead, Upton's antiquarian notes. The preface is merely a *réchauffé* (indeed, little more was possible) of Dr. Todd's and Dean Church's work.

The Dawn of Day volume for 1887 (S. P. C. K.) is as excellent a collection as ever of instruction on many subjects, of short tales, and anecdotes. It is superfluous to recommend this useful magazine for Sunday School and parochial purposes.

SEVERAL Christmas numbers lie upon our table. The most expensive, and undoubtedly the finest example of colour-printing, is *Le Figaro Illustré*, of which an English edition is issued by Mr. Spencer Blackett. Besides the plates reproduced by the Goupil process of chromotypogravure, which stands unrivalled for softness and variety of tint, there are articles

by M. Alexandre Dumas fils, M. Alphonse Daudet, and M. Octave Feuillet, as well as a "Rêverie" by M. Ambroise Thomas, charmingly illustrated by M. Lynch. Of the Christmas numbers of the *Illustrated London News* and the *Graphic* it is not necessary to say much. The text of the former consists of a story by Bret Harte; the text of the latter of a story by Mr. W. E. Norris, to which an interesting note is appended. It seems that it had been originally intended to include a story by Mr. F. Anstey; but, owing to a miscalculation of the space required for "other matter," this appears only in the copies despatched to the colonies. Is it possible that this colonial edition will at some future day become an object of desire to bibliomaniacs? Certainly, the exigencies of "other matter" make the reading of a story in one of these Christmas numbers not very desirable on its own account. In addition, we have *Yule-Tide* (now published by Messrs. Cassell), with a story by a yet greater name—Mr. R. L. Stevenson—and coloured plates that combine delicacy and brightness with unusual success; and, finally, the *Chatterbox*, which retains the old custom of short tales by different writers, and of which the pictures have been printed—by no means badly—by Messrs. W. H. Keep & Co.

NOTES AND NEWS.

HITHERTO Lewis Carroll's two famous books—*Alice's Adventures in Wonderland*, and *Through the Looking Glass*—have only been obtainable at 6s. each, with, we believe, no reduction to the trade. We are glad to hear that we are soon to have, not only a "people's edition" of both of them, with all Mr. Tenniel's original illustrations; but also the two bound up in a single volume, for 4s. 6d.

MR. WALTER CRANE'S new picture book, entitled *Legends for Lionel*, will be published by Cassell & Company early in December. It will contain a number of original illustrations in colour.

MESSRS. MACMILLAN announce a new novel by Mrs. Oliphant, in three volumes, entitled *The Second Son*; and also a collection of *Four Ghost Stories*, by Mrs. Molesworth.

MESSRS. GRIFFITH, FARRAN & Co. announce, for publication by subscription, *The Parishes of Warwickshire*, by the Rev. George Miller, vicar of Radway, author of "Historical Sketches of the English Church for the People of England," to be followed by *The Parishes of Worcestershire*, thus completing the whole diocese of Worcester. A brief account will be given of the history of each parish and its church. The endowments of the churches will be traced from the *Taxatio*, 1291, to the present time, together with the value of land, labour, agricultural produce, stock, and capital required for farming. The population of the parishes, with the classes of which it is composed, and their relative numbers, will be given, from time to time, from the Norman Conquest downwards; and also the rateable value of land at different periods, and the steps taken for the relief of the poor. The book will be published in four parts or volumes, one for each hundred of the county. The whole will contain about 750 pages. Part i. will be issued towards the end of January.

The History of the Family of Borlase, by Mr. W. Copeland Borlase, late M.P. for St. Austell and vice-president of the Society of Antiquaries, is announced for publication by Mr. William Pollard & Co., antiquarian printers, Exeter.

A CHEAP edition of *Robert Burns: an Enquiry into Certain Aspects of his Life and Character*, by a Scotchwoman, is announced by Mr. Elliot Stock. In this reissue the new preface is

signed by M. S. Gairdner, whom we understand to be a sister of Mr. James Gairdner, of the Record Office.

MESSRS. SWAN SONNENSCHNEIN & Co. will shortly publish a cheap edition of Mrs. F. C. Philips's last novel, *The Strange Adventures of Lucy Smith*.

THE forthcoming number of the *Political Science Quarterly*, published in this country by Mr. Henry Froude, will contain, among other papers, "English Local Government," by Frank J. Goodnow; "Profits under Modern Conditions," by Prof. J. B. Clark; and "The Natural Rate of Wages," by Franklin Giddings, editor of *Work and Wages*.

WE understand that the Cape Government has ordered 100 copies of Mr. George McCall Theal's *History of the Boers in South Africa*.

PROF. ZUPITZA has just completed, for the Early English Text Society's Extra Series for 1887, Part II. of his edition of the romance of *Guy of Warwick*, two parallel texts from the fourteenth-century Auchinleck MS., and the fifteenth-century Caius MS. Dr. C. Horstmann's late illness has prevented his finishing his "Forewords" to his long-printed editions of the *Lives of Saints* (about A.D. 1375), and H. Bradshaw's *Life of St. Werbergha* (A.D. 1521), for the same society.

MR. T. GOLLANZ, of Christ's College, Cambridge, has undertaken to re-edit, for the Early English Text Society, the Exeter Book—the well-known collection of Anglo-Saxon Poetry in the unique MS. in Exeter Cathedral—with a fresh modern English translation, not a mere revision of Thorpe's archaic version. Mr. Gollanz hopes to finish the work early in 1889.

MR. PERCY FURNIVALL, of St. Bartholomew's Hospital, having abandoned the cinder-tracks of cycling for serious work, is about to edit for the Extra Series of the Early English Text Society two early treatises on medicine and surgery, by an old worthy of his hospital, its chief surgeon in Tudor days, Thomas Vicary, a man who held—doubtless with the approval of the women of his time—that all doctors should be good-looking men.

MR. G. J. GOSCHEN'S inaugural address as President of the Statistical Society on Tuesday next, December 6, will be delivered at Willis's Rooms, and not at the usual place of meeting of the society.

MR. ANDREW LANG will give a lecture at the London Institution, on Monday next, December 5, at 5 p.m., on "The Wanderings of Puss-in-Boots."

PROF. JULIEN VINSON has just printed, in the *Bulletin* of the Société des Sciences et des Arts de Bayonne, the third Fascicule of "Pièces Historiques de la Période Révolutionnaire en Français et en Basque." The same author has lately published *Les Religions actuelles: leurs doctrines, leur évolution, leur histoire*, forming tome v. of the "Bibliothèque Anthropologique" (Paris: Delahaye.)

UNIVERSITY JOTTINGS.

MR. INGRAM BYWATER, reader in Greek at Oxford, has just been nominated a corresponding member of the Berlin Academy, in the department of history and philosophy, which also includes philology in the German use of that word.

COMMEMORATION at Trinity College, Cambridge, is to be celebrated on Monday next, when Dr. Glaisher will deliver an address in the ante-chapel on "The Bi-centenary of the Publication of Newton's *Principia*."

SIR WILLIAM WILSON HUNTER, late director general of statistics to the Government of India, has just retired from the India Civil Service, on the completion of his twenty-five years of service. He is at present living at Oxford, where he will deliver a lecture on Tuesday next, in the hall of Balliol College, on "The Delta of Bengal and its Ancient Capitals." We may add that he has announced a wish that no notes be taken of his lecture, for it will probably be published as an article in the *January number* of the *Nineteenth Century*.

WE are glad to record that the Rev. G. F. Browne, of St. Catherine's College—whose studies have thrown so much light upon the obscure subject of early sculptured art in England—has been elected to the Disney professorship of archaeology at Cambridge, vacant by Prof. Percy Gardner's removal to Oxford. Prof. Gardner's introductory lecture on "Classical Archaeology, Wider and Special" has, we may add, just been published in pamphlet form by Mr. Henry Froude.

THE general board of studies at Cambridge has approved the name of Mr. Charles Waldstein, director of the Fitzwilliam Museum, for the degree of Doctor in Letters.

ON Tuesday last Convocation at Oxford voted the following grants: £250 for removing the Arundel marbles from the Bodleian to the University Galleries, where they will be under the charge of the Professor of Archaeology; £730 for additional accommodation at the Bodleian Library and the Radcliffe Camera; £500 for building a lodge for the caretaker of the new Clarendon Laboratory; and £1200 for continuing the arrangement and cataloguing of the Pitt-Rivers anthropological collector.

THE grant from the Worts Travelling Scholars' Fund of £150 for archaeological research in Cyprus (mentioned in the *ACADEMY* of November 12) has been transferred from Mr. H. B. Smith to Mr. M. R. James, of King's College; and Mr. James has also obtained leave of absence from his duties as assistant director of the Fitzwilliam Museum for Lent and Easter terms of next year.

THE senior Kennicott scholarship at Oxford has been awarded to Mr. D. S. Margoliouth, of New College, for a dissertation "De prisca Oratione Siracidae e versionibus eruenda." The dissertation is in three books with an appendix.

THE subject chosen for the Yorke prize essay at Cambridge next year is "The History of Land Tenure in Ireland."

THE Oxford branch of the English Goethe Society meets this day (Saturday) in the hall of New College, when Mr. Cuthbert Shields, of Corpus, is to read a paper on "Goethe's 'Lehrjahre' as exhibited in *Wahrheit und Dichtung*."

THE Oxford Historical Society has just issued two new volumes, a continuation of the register of the University from 1571—when the register of matriculations begins—to 1622. The work has been undertaken by the Rev. Andrew Clark, of Lincoln College, who has traced in the first volume all the subtleties of the Elizabethan degree, with the numberless dispensations habitually granted. The second part contains the matriculations, with tables showing the counties from which each college drew, the average age at entrance, and the like. A third volume is necessary to complete the period, giving the degrees, and a general index; and this is ready for the press. The volumes are numbered x.-xi.; but volume ix. (Letters from Queen's College in the Eighteenth Century) is not quite ready for issue.

THE *Oxford Magazine* printed in its numbers for November 16 and 23 a rough bibliography of the chief books and pamphlets interesting to

Oxford residents which were issued during the years 1883 and 1884. The compiler is Mr. F. Madan, of the Bodleian.

TRANSLATION.

FROM THE ANGLO-SAXON OF CAEDMON.

BOUND hand and foot with cruel fetters I
Lie helpless, and the gates of hell are barred.
How shall I scape these bonds, these massive bars
Of iron forg'd hot, which God hath welded round
My throat? Too well God knew my thought;
too well
The Almighty knew I would work Adam woe
About heaven's realm if I could wield these hands.
But in the dire, unfathomable abyss
Of fire and darkness we now woe endure,
Bereft of light, to direst torment hurled,
Though he to us can lay no crime or sin
We wrought in heaven. Now this we may avenge,
Spite him who roft us of heaven's light, for he
Another world hath since created where,
In his own image, he hath fashioned man,
With man's pure soul to people heaven again.
Thither bend all our thoughts to wreak revenge
On Adam and his race; contrive how we
May interrupt their joy; for hope of light
Or bliss amid the angelic throng, which man
Now deemeth all his own, we must forego,
Nor ever hope to soothe the Almighty's wrath.
But from the heaven God drove us let us drive
The race of man; seduce them to fall off
From their Creator, and transgress his will,
That he in wrath may spurn them from his grace,
And headlong hurl them to partake with us
These bonds in hell's grim depths.

GEORGE R. MERRY.

MAGAZINES AND REVIEWS.

THE most important papers in the *Revista Contemporanea* for October are "The Notion of a simple Body in Chemistry," by Rodriguez Mourelo, and a clever allegorical tale, "Camino de Trapisonda," by Ramiro Blanco. Mariano Amador writes on the development of conscience, maintaining the religious and orthodox view in opposition to the materialism of Letourneau's *L'Evolution de la Morale*. "Art and Literature in the Philippine Islands" draws attention to the beauty of the popular poetry and of the Songs and Romances of the Passion, sung by the Indians during the Holy Week. An article on the authorship of plays exhibits the folly of those who attempt to write dramas without knowledge either of the theatre or of life. Carlos Cambronero gives a pleasant account of the introduction of the dragon into the escutcheon of Madrid. Vicente de Arana has a graceful anaerontic poem to "Elisa"; and Perez y Oliva concludes in these numbers his treatise on "Capture at Sea."

THE October *Boletin* of the Real Academia de la Historia opens with an inedited contemporary "Relation of the Autos and Antillos of the Inquisition in Toledo from 1485 to 1501." The narrative is written in evident good faith, and proves that the larger numbers of the victims of the Inquisition are nearer to the truth than was supposed. In these seventeen years 260 persons were burnt in Toledo alone, and about 6,000 reconciled—i. e., allotted various degrees of punishment and penance. Nearly all were condemned for Judaising; and among them are canons, priests, monks, and persons of high social standing, whose descendants generally changed their names to avoid perpetuation of the obloquy. This publication is due to Padre F. Fita, who prints, also with observations, the Carta-puebla of Pera (1246), near La Guardia, and now a "desplorado." Fernandez Duro gives an excellent summary of the history of the "Valle de Aran," with its Roman inscriptions to Keltic or Iberian deities. The Martorell prize has been awarded to M. M. H. and L. Siret of Belgium for a work on the

archaeology of the south-west of Spain, and to Dr. E. Hübnér, of Berlin, as *accessit*, on the Roman archaeology of Spain.

CORRESPONDENCE.

INGULFUS REDIVIVUS.

London: Nov. 26, 1887.

Mr. Birch's "relief" at my having at length pointed out his "worst mistake" is premature. I have not yet touched upon it, and will continue to spare him its revelation unless he wishes to see it in print. I may add that I warned him of it personally beforehand, but, it seems, in vain.

I still keep to the original subject—that of "Ingulf."

To my enquiry whether Mr. Birch really believes that his Countess Lucy married and became the mother of a family, when some eighty years of age (on his own showing), he replies that he declines to follow me into a "labyrinth of physiological paradoxes," and that his statement

"rests on good authority—an authority of three separate and independent chronicles [sic], which have none of the Ingulfine taint in them."

Does it? Let us see.

Now the essential point to bear in mind is that the well-known difficulty to which I have referred above springs from the acceptance of two statements:

(1) That the Countess Lucy was a daughter of Earl Ælfgar (who died, according to Mr. Birch, in 1059).

(2) That she married, and became a mother, in the reign of Stephen.

If these statements are both true, the "physiological paradox" results. If, on the contrary, they are both erroneous, the "physiological paradox" disappears. If this had been clearly seen, and steadily kept in mind, the difficulties with which antiquaries and historians have struggled for more than half a century would have been materially lessened.

Mr. Birch, therefore, has to establish that both the above statements are true.

He adduces, for this purpose, three "independent chronicles" (sic) which have, of course, been referred to throughout by those who have written on the question. I propose to take these in their order of relative importance.

(A) "The Registrum de Spalding." I fear that Mr. Birch only knows this "reputable MS.," as he terms it, from the extract printed from it in the *Monasticon*. It is, however, the least untrustworthy of his three so-called authorities, and the passage he quotes is avowedly but a *résumé* of the evidence in the Spalding Charters. But, unfortunately for him, it is *nihil ad rem*, for it makes neither of the statements in support of which he invokes it.

(B) The "Ann[als] of Peterborough." Here, again, Mr. Birch, I fear, has quoted this "irreproachable MS." from the extracts printed in the *Monasticon*. For, though there spoken of as "The Annals of Peterborough," its real title is "The Chronicle of John Abbot of Peterborough," as correctly given in Sparks' *Scriptores*, where he will find it printed in full. It occupies a middle place in Mr. Birch's three authorities, being so far from "irreproachable" that it is looked upon as of small authority. Moreover, it has distinctly (*pace* Mr. Birch) "the Ingulfine taint" about it, notably on the subject of Lucy and her connexions, and on that of Hereward "the Wake." It makes, moreover, only one of the statements that Mr. Birch has to establish—namely that Lucy was Ælfgar's daughter.

(C) The genealogy "at the end of a MS. of Florence of Worcester." This, which is demon-

strably the worst of Mr. Birch's three authorities, is that which he has specially selected, we learn, to follow word for word. It has no more to do with Florence of Worcester than have the MS. notes in a family Bible to do with that Bible's contents. It is only known to us from Dugdale's *Monasticon*, iii. 192, and cannot be earlier than the reign of John, to whom its compiler refers. From start to finish it is full of glaring impossibilities, of which the only redeeming feature is that the compiler's blunders can so easily be detected and traced to their source. Mr. Birch now tells us, with pride, that he has preserved, in his narrative, "the strict signification of the words" of this extraordinary concoction. The sole authority for both the statements Mr. Birch has to establish is this worthless document, which has, indeed, proved the source of all the confusion on the subject.

Before explaining how its blunders arose, I would raise a point which, so far as I know, would seem to have escaped notice. Mr. Birch reminds us that this "separate and independent" chronicle has "none of the Ingulfine taint." Now, on collating this document with the so-called chronicle of Ingulf, I have been greatly impressed with the resemblance. It is sufficient to prove that they are not "independent," and that the compiler of one of the two must be acquainted with the other. In support of this view, I append some parallel passages.

"INGULF."
"Erat enim iste Leofricus comes vir devotissimus, et eleemosynis multum deditus, fundator ac ditator multorum monasteriorum: Alvaro filio Leofrici Leycestrensis Comitissis . . . [1057] illustrissimus et optimus Comes Leycestrie Leofricus obiit, et apud Coventriam . . . sepultus requiescit."

"Strenuissimus etiam Comes Algarus . . . saepius ab aemulis insectatus, saepe terram marique jactatus . . . obiit . . . relictis tribus liberis, duobus filiis scilicet Edwino et Morkario, postea Comitibus, et unica filia, quae nunc superest, Comitissa Lucia."

"Predicti germani Comites Edwinus et Morkarius ambo a suis per insidias trucidati. . . Yvoni Taylboys post necem praedictorum duorum fratrum Comitum Edwini et Morkarii, Luciam sororem eorum, cum omnibus terris et tenementis ad eosdem pertinentibus, inclutus Rex Willielmus dederat in uxorem . . . ne radices altas figerent in mundo spuria vitulamina, omnem sobolem securi Domini succulente deperit linea viri malefici maledicta."

" . . . Illustri adolescenti Rogero de Romara, filio Geroldi de Romara maritata [Lucia], et a seniore fratre sui Willielmo de Romara, Comite Lincolnie, plurimum honorata."

* From this point onwards the extracts are taken from the *Continuatio*."

THE ANONYMOUS MS.
"Leofricus tertius nobilis fundator multorum coenobiorum . . . genuit Algarum postea Comitum. Iste Leofricus jacet apud Coventream."

"Algarus tertius, tempore regis Edwardi, saepius exlegatur et toties strenuissime cum rege reconciliatus, genuit Edwinum et Morcarum, postea Comitum, et filiam nomine Luciam postea Comitissam."

"Edwinus Comes Warwike, et Morcarus Comes Eboracensis ambo fratres . . . suorum insidiis occisi sunt; obtinuitque Lucia soror eorum terras paternas, quae nupta est primo Yvoni Taylboys, e qua nullam suscepit sobolem, tempore Willelmi Conquestoris et Willelmi Rufi."

"Lucia comitissa, tempore Henrici primi nupta Rogero filio Geroldi."

I venture to think that to competent critics these parallels will prove my point. In any case, however, this compiler is the sole authority for the fact that Lucy married and became a mother in the days of Stephen. Now, this blunder was evolved by what we may term "projection." Lucy was "projected" a generation. She is well known to have been the wife of Randulf, Earl of Chester, temp. Henry I., whose widow she was in 1130. Instead of this the compiler marries her to Randulf's (and her) son and namesake who lived in the days of Stephen. But the odd thing is that in the *Continuatio* of Ingulf, assigned to "Peter of Blois," Lucy is similarly "projected," being made sister-in-law to the Earl of Lincoln, to whom she was really mother, just as above she is made wife to an Earl of Chester, to whom she was really mother. Does not this strongly suggest that all this gang of "authorities" are tarred with the same brush? For my part I rejoice to see that Dr. Stubbs has denounced "Peter of Blois" as well as Ingulf himself; nor am I able to understand how Mr. Eyton and Mr. Chester Waters can have relied on a passage in the former chronicle for their supposed discovery of the true date to be assigned to the Lindsey Survey.

Oddly enough, the anonymous compiler repeats what I term his trick of "projection," converting, it will be found, in his closing paragraph, the Countess Lucy's sons into their own sons or grandsons.

Thus, I have now knocked from under him one of Mr. Birch's legs, and nailed, as it were, to the barn-door the blunders of the sole "authority" for his "physiological paradox," by showing how they arose. It would seem that the point, as yet, has been imperfectly grasped, for the funniest part of the whole business is this. Mr. Freeman, who, of course, repudiates this narrative, and justly ridicules it as "still swallowed by novelists and local antiquaries," has, in this very passage, fallen himself into the trap. He states, in his remarks on the Countess Lucy (I quote from the third edition, 1877, vol. ii., p. 682) that she was undoubtedly "alive in 1141 (*Ord. Vit.*, 921 B)." On turning to the passage here referred to, we find that Ordericus is speaking of the wife of the then (1141) Earl of Chester. This wife, according to the compiler, whom Mr. Freeman so justly denounces, was the Countess Lucy herself, who however, as everyone now knows, was not the wife, but the mother, of the earl. Thus the worst and most obvious of all these confusions is enshrined, by implication, in the *Norman Conquest* itself.

Of these confusions Mr. Birch asks: "Can Mr. Round smooth them away? If so, he will deserve everybody's gratitude." Well, I will do my best, although with some diffidence; for many able writers have dealt with this difficulty. And one can do little more than sum up the arguments as they stand.

But this letter has already reached an excessive length. J. H. ROUND.

THE GENEALOGY OF BOOKS OF ADVENTURE.

Loughton, Essex: Nov. 23, 1887.

I have no reason to be dissatisfied with your notices of my two books—*Her Two Millions* and *A Queer Race*. That of the former is all I could desire, and almost more, I think, than I deserve; and albeit your criticism of *A Queer Race* is less favourable, I take exception to it only in one particular. You say that it would never have been written but for its predecessors, meaning thereby *Treasure Island* and *King Solomon's Mines*. This being averred as a fact, and not given merely as an opinion, you will, perhaps, allow me, for the satisfaction of my literary *amour propre*, to make a correction and offer an explanation.

The true predecessor of *A Queer Race*, in the sense of your remark, was *The Phantom City*. Had the latter story proved a failure, the other would assuredly never have seen the light. I should not, in that case, have tempted fortune with a second tale of adventure; and I thought out *The Phantom City* before the appearance either of *Treasure Island* or *King Solomon's Mines*. Some twenty years ago, while voyaging in the West Indies, I heard from an engineer of the Royal Mail Company an account of his experiences during a cyclone at St. Thomas's, the main incidents of which I have reproduced in the first chapter of my story. Some time afterwards, while reading Morelet's *Travels in Central America*, I came across the legend of a fabled city in the unexplored regions of Guatemala and there and then I resolved to make it the ground-plan of a romance. Little by little the idea took form and substance, and save for the pressure of other engagements would have been carried into effect long ago. There are two writers of fiction whom I more admire than Mr. Stevenson and Mr. Haggard, or whose gifts of imagination and power of expression I would more gladly possess, yet, so far as I know my own mind, I have neither borrowed from the one, nor imitated the other. A coincidence is not a plagiarism. Imaginary voyages and quests for hidden treasures are the monopoly of no writer. They are as old as literature itself. *Peter Wilkins* and *The Golden Bug*, to say nothing of *The Voyage of the Argonauts* and *Robinson Crusoe*, were written before Mr. Stevenson and Mr. Haggard were born.

Had you said that my book would never have been written but for its predecessors generally (without any special reference), I should no more have taken exception thereto than I should take exception to a statement that, but for my forefathers, I should never have been born. WILLIAM WESTALL.

London: Nov. 23, 1887.

In the last number of the *ACADEMY*, Mr. R. L. Stevenson's delightful *Treasure Island* was named as being the first book of the special class to which it belongs, and as having thus set a fashion. Let me point out that Mr. Harry Collingwood's *Secret of the Sands* is somewhat earlier, and is a noticeable story. Indeed, though I rank Mr. Stevenson's tale higher as literature, I incline to believe that a jury of schoolboys would find for Mr. Collingwood, if it were only for a fight with a pirate vessel which is one of his leading incidents.

RICHARD F. LITTLEDALE.

[Mr. Collingwood's *Secret of the Sands* was, it seems, published as long ago as 1878, as a two-volume novel, by Messrs. Griffith, Farran, & Co. The particular statement in last week's *ACADEMY* was intended to refer, not to any question of literary originality, but simply to the chronological sequence of a series of books issued in similar form by one publisher.—ED. *ACADEMY*.]

THE PRETERITE OF "TO COLLIDE."

Berlin, S.W. Kleinbeerstrasse 7: Nov. 23, 1887.

In the current number of Miss Braddon's *Mistletoe Bough*, p. 21, I read:—"I ran violently against him. He was hurrying out of the booking-office, and I was dashing off post-haste to 'collar' my box, as Foxe would say, and we *collode*" (the italics are mine). I should like to know whether this strong preterite of "to collide" owes its appearance in black and white only to a slip of the author's pen, or is in actual use among educated people.

JULIUS ZUPITZA.

[We should ourselves be disposed to conjecture that the form in question is a survival of the silly fashion of a few years ago—set, we

fancy, by Artemus Ward—of inventing strong preterites from fancied analogies of sound. Anyhow, our esteemed correspondent may rest assured that "collode" is not yet in actual use among educated people.—ED. ACADEMY.]

THE ETYMOLOGY OF "EMBELIF."

Cannes: November 25, 1837.

With reference to the word "embelif" (ACADEMY, October 8 and 29), it may interest those who are concerned in establishing its ancestry to observe that *beslong*, *bislong* (final *g* having the hard sound given by the illiterate to the same letter in "thing," "nothing," &c.), fem. *beslongue*, *beslonga*, *bislonga*; plur. *beslong*, *bislong*, is a current word used to this day in the sense of "oblique" not only throughout Provence but also on the Italian side of the Alps. J. GONINO.

ALL POINTMENTS FOR NEXT WEEK.

MONDAY, Dec. 5, 5 p.m. Royal Institution: General Monthly Meeting.

5 p.m. London Institution: "The Wanderings of Puss-in-Boots," by Mr. Andrew Lang.

8 p.m. Society of Arts: Cantor Lecture, "The Elements of Architectural Design," II., by Mr. H. H. Statham.

8 p.m. Aristotelian: Symposium, "Is Mind synonymous with Consciousness?" by the President, Messrs. S. Alexander, B. Bosanquet, D. G. Ritchie, and G. F. Stout.

8 p.m. Victoria Institute: "The Botany of Syria," by Prof. G. E. Post.

TUESDAY, Dec. 6, 7.45 p.m. Statistical: Inaugural Address by the President, Mr. G. J. Goschen.

8 p.m. Biblical Archaeology: "A Jewish Apocalypse of Moses," by Dr. Gaster; "Histoire des deux Filles de l'Empereur Zénon," by Prof. Amélineau.

8 p.m. Civil Engineers: "Electrical Tramways: the Bessbrook and Newry Tramway," by Mr. E. Hopkinson.

8.30 p.m. Zoological: "The Fauna of Corea and the adjoining Coast of Manchuria," by Prof. H. H. Giglioli and Count T. Salvadori; "Liste des Oiseaux recueillis en Corée par M. Jean Kalinowski," by Mr. L. Taczanowski; "The Piguus Hippopotamus of Liberia, *Hippopotamus liberiensis* (Morton), and its claims to distinct Generic Rank," by Prof. W. H. Flower.

WEDNESDAY, Dec. 7, 8 p.m. Geological: "The Age of the Altered Limestone of Strath Skye," by Dr. A. Geikie; "Theospondylus Davisi, Seeley, with some Remarks on the Classification of the Dinosauria," by Prof. H. G. Seeley; "The Discovery of Trilobites in the Upper Green (Cambrian) Slates of the Penrhyn Quarry, Bethesda, near Bangor, North Wales," by Dr. H. Woodward.

8 p.m. Society of Arts: "The Chemistry, Commerce, and Uses of Eggs of various Kinds," by Mr. F. L. Simmonds.

THURSDAY, Dec. 8, 8 p.m. London Institution: "Material of Music—I. Characters," by Mr. W. A. Barrett.

8 p.m. Mathematical: "The Algebra of Linear partial Differential Operators," by Capt. MacMahon; "A Theorem, analogous to Strling's, relating to certain Functions of Variables subject to a Linear Relation," by Mr. J. J. Walker; "The Solution of Green's Problem in the Case of the Sphere," by Mr. A. E. Johnson; "Junctional Paraboloïds," by Mr. A. G. Greenhill; "Unibrocoidal Triangles and their Inscribed Triangles," by Mr. R. Tucker.

8 p.m. Telegraph Engineers: Annual General Meeting; Election of Council and Officers; "Safety Fuses for Electric Light Circuits, and the Fusing Points of various Metals usually employed in their Construction," by Mr. A. C. Cookburn.

8.30 p.m. Antiquaries: "Some of Shakspeare's Waiting-Women," by Miss Grace Latham.

FRIDAY, Dec. 9, 8 p.m. New Shakspeare: "Some of Shakspeare's Waiting-Women," by Miss Grace Latham.

SATURDAY, Dec. 10, 3 p.m. Physical: "Optical Properties of Phenylthiocarbimide," by Mr. H. G. Madan; "Recalescence of Iron," by Mr. H. Tomlinson; "Rotation of a Copper Sphere and of Copper Wire Helices when freely suspended in a Magnetic Field," by Dr. H. O. Shettle.

3.45 p.m. Botanic: General Meeting.

SCIENCE.

The Life and Letters of Charles Darwin, including an Autobiographical Chapter. Edited by his son, Francis Darwin. In 3 vols. (John Murray.)

(First Notice.)

No biography of recent years has been looked for, especially by men of science, with greater eagerness than that of the late Mr. Darwin.

Now that it has appeared, the scientific world will certainly not be disappointed, and the larger reading public ought not to be. We have of late years been surfeited with biographies, the publication of which has been warmly defended or vehemently attacked. The biography of Darwin will find none to cavil at the way in which it has been done, and it will need no defence. The apology for the life of Darwin is in his work.

The world of letters has been dimly conscious that we have had living and moving among us—until he was laid to rest in Westminster Abbey in April 1882, in the presence of one of the most distinguished companies that even that building has ever held—a man whose influence on the developments of thought we are only yet beginning to recognise. So retired a life did Mr. Darwin lead for the last forty years, the consequence of uninterrupted ill-health, so rarely did he make his appearance at any public gatherings, that there are only too few to whom the recollection of even slight personal intercourse will be one of their most precious memories, comparable to that of the Roman poet when he exclaimed—*Tantum Virgilium vidi*. In one of the most interesting chapters in these volumes, written by Prof. Huxley, he places the name of Charles Darwin alongside those of Isaac Newton and Michael Faraday. The comparison scarcely seems to me adequate. Great as was the importance of the discoveries of those illustrious men, it can hardly be said that the influence of their discoveries extended beyond the domain of physical science. On the other hand, into what department of human knowledge have not the hypotheses of evolution and natural selection intruded themselves within the last quarter of a century? How have they influenced our conceptions of the very laws of thought themselves! The exact position of Darwin in the development of these laws cannot be determined until the generation which knew him in the flesh has passed away, until his personality has been absorbed in the ideal of the founder of a system; but it has long seemed to me that the judgment of posterity will allow him among his predecessors—if we exclude purely religious teachers—but very few peers. If the greatness of a man is to be judged by the influence of his writings on the currents of human thought, then the peers of Darwin are not Galileo and Newton, Harvey and Faraday, but Plato, Aristotle, and Bacon. And herein lies the great value of such a biography as this. It will be a *κρῖμα εις dei*—a picture to all future generations of the inner workings of the mind of one of the greatest of the world's masters, of his life as it showed itself to those of his own household and to his intimate friends. What would we not give for such a picture of the genesis of the *Republic*, or of the *Metaphysics*, or of the *Organon*?

Mr. Francis Darwin has very wisely left his father, to a large extent, to tell the story of his life himself. With the exception of a short piece here and there of connecting narrative, and a very valuable chapter by Prof. Huxley, the remainder of these three volumes consists almost entirely of an autobiographical sketch written in 1876, and of letters to his most intimate scientific friends—

Sir J. D. Hooker, Sir Charles Lyell, Prof. Asa Gray, Prof. Huxley, and others.

It is often stated that, up to the time that he left Cambridge, Darwin showed no indications of remarkable genius, and no special tendency towards natural history pursuits. No doubt there was an entire absence in his childhood of that marvellous precocity with which we are familiar in the case of John Stuart Mill; but that he had already exhibited a decided bent towards natural science is shown by some of his letters written during this period, by the avidity with which he attended Prof. Henslow's lectures on botany, and by the fact that, immediately on leaving Cambridge, although at that time he intended to become a clergyman, he was recommended by Sedgwick and Henslow for the post of naturalist to the five years' cruise of the *Beagle* under Capt. FitzRoy. His letters home, while engaged on this expedition, showed, in the opinion of competent judges at home, promise of a brilliant future.

Darwin was not a specialist; and herein lies one of the secrets of the position which he ultimately attained. I mean, he did not devote his life to the exclusive study of some one group of plants, of animals, or of natural phenomena. The range of his scientific knowledge was very wide. Although in later life he disclaimed the title of botanist, he had an accurate acquaintance with the phenomena of vegetable physiology. He was an accomplished zoologist, and his knowledge of geology was such that he served for three years as one of the honorary secretaries to the Geological Society. No doubt he did specialist's work; and his *Monograph of the Cirripedia*, published by the Ray Society in 1851 and 1854, is one of the most valuable contributions of the kind to scientific literature. Such work is essential to the young naturalist, whether botanist, zoologist, or geologist, for it is the only way in which that intimate acquaintance with the phenomena of nature can be obtained which is indispensable for future generalisations. But to spend one's life in the observation and record of minute resemblances and differences is not congenial to a mind of the highest powers; nor does it develop faculties of the highest kind. The specialist must usually lay the foundation on which other men may build. Not only in natural science but in other departments of knowledge, specialists have ever been the last to admit new ideas. In no branch of natural history has specialisation been carried further than in entomology; and Darwin records (vol. iii., p. 69) how serried a front the entomologists at first presented against the admission of the theory of evolution. The late Mr. George Bentham, the prince of botanical specialists, the highest authority of his day in descriptive botany, wrestled long and hard against the hypothesis of natural selection; and it was only the fairness of his mind, and the strength of his logical faculty, that ultimately won the day against almost insuperable prejudice. The cramping influence over men's minds of these "eidola of the cave" is further illustrated by the fact that at the present day hardly a single special lichenologist has accepted the theory of the compound nature of lichens, now taught by the leading physiologists.

Nothing strikes one more forcibly in reading Darwin's Life and Letters than his extraordi-

nary power of recognising the proportionate value of the facts and phenomena which came under his notice—the result of most careful and painstaking observation, but the evidence of true genius. He seemed to detect at a glance, not whether a particular fact was favourable or otherwise to his theory—that consideration never had any weight with him; but whether it was a fact of primary or secondary importance, or of no importance at all, in obtaining a correct view of the laws of nature. Mr. Geikie describes very happily (vol. i., p. 329) this “remarkable insight in all that Mr. Darwin ever did.” Darwin was a great believer in his relative Mr. Galton’s views on the hereditary transmission of mental peculiarities; and it is interesting to find (vol. i., p. 13) that his father possessed a precisely similar unerring insight into the characters of men.

But what can be said, beyond what has already been said, on Darwin’s private and personal character, as known to everyone who came into personal contact with him, and as admitted by all, whether friend or foe, who knew him only through his letters or his books? So courteous and gentle, so ready to assist all who came to him for advice, so free from all unworthy jealousy; and, withal, so humble, and modest, and depreciative of his own great services to science. If I were asked to name the one leading feature of Darwin’s character, it would be his love of truth, which amounted to an absorbing passion. All the world knows the history of the joint publication by Darwin and Wallace of the first Essay on Natural Selection, so honourable to the kindly feeling and generous self-renunciation of both parties concerned. In illustration of these points in his character, I cannot refrain from giving two extracts—the first from his autobiographical sketch (vol. i., p. 89):

“I have almost always been treated honestly by my reviewers, passing over those without scientific knowledge as not worthy of notice. My views have often been grossly misrepresented, bitterly opposed and ridiculed; but this has been generally done, as I believe, in good faith. On the whole, I do not doubt that my works have been over and over again greatly over-praised. I rejoice that I have avoided controversies . . . as it rarely did any good, and caused a miserable loss of time and temper. Whenever I have found out that I have blundered, and that my work has been imperfect, and when I have been contemptuously criticised, and even when I have been overpraised so that I have felt mortified, it has been my greatest comfort to say hundreds of times to myself that ‘I have worked as hard and as well as I could, and no man can do more than this.’”

The second is from a reminiscence by Dr. Lane of his life at a public water-cure establishment (vol. i., p. 131):

“He was surrounded by multifarious types of character, mostly very different from himself, commonplace people, in short. . . . And never was anyone more genial, more friendly, more altogether charming than he universally was. . . . He never aimed at monopolising the conversation. It was his pleasure rather to give and take, and he was as good a listener as a speaker. He never preached nor prosed; but his talk, whether grave or gay (and it was each by turns), was full of life and salt—racy, bright, and animated.”

A glance at the lines on Darwin’s face, in truth, would show that he was free from that defect, so common with great men—an absence of the sense of humour. This is illustrated by the following delicious anecdote related by the Rev. J. Brodie Innes, for many years vicar of Down (vol. ii., p. 289):

“On my last visit to Down, Mr. Darwin said at his dinner-table, ‘Brodie Innes and I have been fast friends for thirty years, and we never thoroughly agreed upon any subject but once, and then we stared hard at each other, and thought one of us must be very ill.’”

Before passing to a more critical account of Darwin’s scientific work, which we must reserve for another number, may I be allowed, for a very few lines, the reviewer’s privilege? The letters in these three volumes are, with few exceptions, to Darwin’s scientific friends, and relate to his scientific work. It is true that we learn his opinion on slavery, on the secession war in the United States, on the conduct of Governor Eyre in Jamaica, and on the proposal for the total suppression of vivisection; but one would like to have had more of these views of men and things. Not that Darwin’s views on any question of the day outside his own work would have had any special value in guiding the judgment of others; but that we should have gained from them even a fuller and more complete idea of the man. Possibly letters to his family or private friends bearing on extraneous subjects were not accessible to the editor, or possibly there were reasons against their publication. Secondly, the illustrations hardly seem to me fully worthy of the book, with the exception of the charming sketch (vol. i., p. 108) of the study in his house at Down, in Kent, his home for forty years—a spot which will be as worthy of the visits of future pilgrims as Shakspeare’s birthplace at Stratford or Scott’s home at Abbotsford. Instead of the two portraits given here, a far better presentation of the man, to my mind, would have been afforded by a reproduction of Collier’s magnificent portrait executed for the Linnean Society, or of Boehm’s statue in the Natural History Museum at South Kensington.

ALFRED W. BENNETT.

PHILOLOGICAL BOOKS.

Die arische Periode und ihre Zustände. By F. Spiegel. (Leipzig: Friedrich.) A work on the common culture of the Indians and Iranians before their separation is very welcome, more especially when it comes from the authoritative pen of the veteran Avestan scholar, Prof. Spiegel. The philology of the Asiatic branch of the Aryan family of speech has now arrived at a point which makes it possible to determine what is the exact character of the ties which bind the India and Iranian members of the group together, and mark them off from their European sisters. Where we find two cognate languages giving the same names to the same objects we may conclude that the objects were known to the speakers of the two tongues while they still lived together, and we can thus form a picture of the social condition and religious ideas of the latter. It is this picture of primitive Indo-Iranian life which Prof. Spiegel has drawn for us in his new work. He has gone patiently and exhaustively through all the words which throw any light on the social and religious life of a people. The result of his survey is to show more clearly than ever how intimate must once have been the relations

between the speakers of the Iranian and Sanskritic dialects. It is more especially in terms that refer to religious beliefs and practices, to the worship of the gods and the institution of a priesthood and a ritual, that an intimate relation is found to exist, though there is also a surprising similarity in the use of geographical expressions. When we compare the religious ideas and institutions of the Indo-Iranians with those which “linguistic palaeontology” has shown to be common to the Aryan communities of Europe we are struck by the wide difference, not to say contrast, between them, and the immense social advance which Indo-Iranian religion implies. A similar advance in culture is made evident by comparing the “Aryan” social life as depicted by Spiegel with the utter barbarism which Otto Schrader’s researches have proved to have characterised the primitive Indo-European community. The latter, for instance, still lived in the stone-age, while the Indo-Iranians were acquainted with the use of bronze and iron. Like many other recent writers Prof. Spiegel is inclined to look to Europe as the original home of the Aryan-speaking peoples. Thus he tells us that “the view formerly prevalent which brought the Indo-Kelts from Central Asia has been rendered more than doubtful by recent investigations”; and he concludes that “without forgetting that the determination of the original seat of the Indo-Kelts must always remain a mere hypothesis, we must, nevertheless, allow that the hypothesis of their origin in Central Asia has become extremely improbable.” It is needless to add that Prof. Spiegel’s book should be added to the library of every comparative philologist. The student of human history and culture will also find it of value and interest.

Zur Sprachgeschichte. By H. Winkler. (Berlin: Dümmler.) Dr. Winkler continues his researches into what may be termed universal syntax, making the Ural-Altaic languages the starting-point and text of his studies. His new volume is primarily devoted to an examination of the ideas underlying the use of the noun and the verb in the Altaic dialects; but in order to test and establish his conclusions he passes most of the other languages of the world under review. As a contribution to comparative syntax the work is a valuable one. We regret only that Dr. Winkler has fallen into the besetting sin of his countrymen and written ten pages where one would have sufficed. He is also too much inclined to regard language from an abstract point of view, and so to find in syntactical constructions depths of thought which the actual employers of them have never dreamed of. Wilhelm von Humboldt did infinite harm by his discovery of “the inner form of language”—an expression which savours more of metaphysics than of philology; and, though Dr. Winkler is careful to assure us that he not only does not undervalue “the formless languages,” but finds in them forms of greater force and meaning than those of the so-called formal tongues, he would do better not to believe in a “formless fundamental type” at all. The first object of a language is to be intelligible, and it can be made intelligible only through the form which it assumes. To speak, as Dr. Winkler does on p. 115, of “the grammatical form of the verbal expression” being “not always the adequate expression of the thought,” is little else than nonsense. Our thought can never be adequately expressed by language, for the simple reason that language is necessarily symbolical; on the other hand, if our meaning is understood by another, it is adequately expressed, whatever may be the grammatical form of the verbal expression.

Studi sulle antiche Lingue italiane. By C. Moratti. (Florence: Le Monnier’s Successors.)

of Moratti has published a limited number of copies of a work which is full of labour and learning. He essays in it to show that Armenian and Albanian furnish the key to the Etruscan, Messapian, and other less-known dialects of ancient Italy, constituting, along with Phrygian, a chain of languages which extend from the mountains of the East to the Iberians of the West. Part of the work consists of translations of the Etruscan, Messapian, and Euganean inscriptions, in which almost every word is interpreted without even the addition of a note of interrogation. Our confidence in these translations is shaken, however, by our finding equally fluent renderings of Mordtmann's copies of the Phrygian execratory formula, which Prof. Ramsay has shown to be a mass of blunders. In fact, we may say that Prof. Moratti has succeeded in proving anything, it is that Etruscan has nothing to do either with Armenian or with any other Indo-European language. When will "Etruscologists" learn that they must follow Pauli's example, and decipher before they compare?

Unless the meaning of a word or form can be made out from the internal evidence of the inscriptions themselves so as to win the acceptance of every scholar, no amount of comparisons with other languages is of any value. Prof. Moratti tells us that the Etruscan *thura* is the word "door"; other scholars see in it merely a suffix; and his explanation of *Acnanasa* as "I have begotten," the latter part of the word being the Sanskrit *āsa* "I have," will hardly win the assent of those who see in it a proper name. Where the signification of a word is accepted on all hands, as in the case of *sekhē* "a daughter," and *clan* "a son," we notice that he has no Indo-European comparisons to offer, or else falls back on the exploded notion that *clan* is the Erse *cland*. Most of his grammatical explanations relate to cases about which the decipherer can say nothing, since, with our present materials, we have no means of determining the sense; but some are contrary to the more probable explanations put forward by others. Thus *mi* is identified with *εμί*, though Pauli has shown that it is a demonstrative; and the suffix *-si*, in which we ourselves see a sort of dative, is analysed into a genitive *-s* and an enclitic pronoun *i*. Until the Indo-European origin of the Etruscan numerals can be demonstrated, however, the theory of the Indo-European affinities of the language may be safely left on one side. In spite of the arbitrary values assigned to them, Prof. Moratti, like Deecke and Bugge, has only succeeded in making it clear that whatever else they may be they are not Aryan; at all events, we may say of the attempts by which they have been tortured into something like an Aryan form, "credat Judaeus Apella." If comparison goes for anything, Mr. Robert Brown's comparison of them with the Arintzi numerals in the ACADEMY (November 27, 1886, and May 21, 1887) is far more convincing than anything yet put forward by the "Indo-European school." As regards the Euganean inscriptions, it seems to us that *rehtiaah* must correspond to the Latin "dedit" rather than to "beneficio"; and it is curious that it did not occur to Prof. Moratti to render the words *khetor ri* by "four years." His comparisons of certain Romanic words of doubtful etymology with Albanian is interesting, and merits further examination. But we must not forget that our knowledge of the Albanian dialects extends back for hardly more than three centuries, and that in an earlier period of its existence Albanian must have borrowed a good deal from the languages with which it came into contact. Nor can we share the author's belief in the superiority of the consonants over the vowels as a test of primitiveness in the Indo-European tongues, and we are

sorry to find him harking back to the old doctrine that the Indic *ā* is more original than the European *a*, *ē*, *ō*.

CORRESPONDENCE.

RECENT EMENDATIONS OF THE ARISTOTELIAN TEXT.

Oriel College, Oxford: Nov. 23, 1887.

THE ACADEMY of November 19 contains an abstract of a paper read at the Cambridge Philological Society by the President, upon several passages of the *Ethics* of Aristotle. In four of them emendations are proposed, and in another the reading of certain MSS. is preferred to that of the ordinary printed text.

The first two emended passages are I. vii. 7-8, and VII. xiii. 2. I. vii. 7-8 is as follows:

"τοιούτων δὲ τὴν εὐδαιμονίαν οἰόμεθα εἶναι. ἔτι δὲ πάντων αἰρετώτατην μὴ συναριθμουμένην."

Of this it is said:

"Both here, and in vii. 13 § 2=1153 b 9, γῶσι δὲ καὶ ἀναγκαῖον . . . αἰρετώτατην εἶναι, the sense seems to demand the substitution of αἰρετώτατον for αἰρετώτατην."

The text should not be changed in these passages. The first is an instance of an easily understood assimilation of the gender of the predicate, with εἶναι, to that of the subject, in an idiom common with superlatives. See Kühn, *Gr. Gr.* § 363. The assimilation has its point, for the subject in the first passage is not expressed, but understood from the previous sentence. In the second the subject does not appear in its own clause, where it would be accusative. But in the second it is not even necessary to assume any special idiom.

The third passage is II. vii. 14:

"ἡ γὰρ αἰδῶς ἀρετὴ μὲν οὐκ ἔστιν, ἐπαινεῖται δὲ καὶ ὁ αἰδήμων,"

with the note:

"Williams translates—'Shame, for instance, is not a virtue, and yet he who shows a proper shame is praised'; and to all appearance the commentators, with the one exception of the paraphrast, interpret in this way. But, (1) when the sentence is thus read, punctuated, and understood, the καὶ which stands before ὁ αἰδήμων is absolutely meaningless. And (2) the implication that αἰδῶς is not praised—which implication is the sole justification of the anacoluthic introduction of a new subject—is unknown, not only to the paraphrast, who writes τῶν ἐπαινουμένων δὲ ἔστιν· ὁ γὰρ αἰδήμων ἐπαινεῖται, but also to Alexander Aphrodisiensis, who in his *ἁπορία καὶ λύσεις*, iv. 21=p. 270 Spengel, plainly affirms that Aristotle in this place alleged αἰδῶς to be praiseworthy: ἀλλ' ἐκεῖ μὲν ἐπαινετὸν αὐτὸ πάθος εἶπεν, ἐνταῦθα δὲ κτλ. Hence, we should either read ἡ γὰρ αἰδῶς ἀρετὴ μὲν οὐκ ἔστιν, ἐπαινεῖται δὲ <ἐπαινεῖται δὲ> καὶ ὁ αἰδήμων, or, at any rate, place a comma after ἐπαινεῖται δὲ, and mentally supply ἐπαινεῖται with the three concluding words."

The text is sound here also. The use of καὶ is a familiar idiom. The meaning is "αἰδῶς is not a virtue, but yet he who has it is in the number of those who are praised." Literally—"is praised as well as (others)"; or simply—"αἰδῶς is not a virtue, yet it too is praised." Thus the text does not imply that αἰδῶς is not praised, but that it is; and it has been so understood by the authorities which the writer of the paper quotes.

The next emendation is as follows:

"vi. 5 §§ 4, 6, λέπεται ἔρα αὐτὴν [sc. τὴν φρόνησιν] εἶναι ἔξιν ἀληθῆ μετὰ λόγου πρακτικῆν περὶ τὰ ἀνθρώπων ἀγαθὰ καὶ κακά. . . ὥστ' ἀνάγκη τὴν φρόνησιν ἔξιν εἶναι μετὰ λόγου ἀληθῆ περὶ τὰ ἀνθρώπινα ἀγαθὰ πρακτικῆν. In spite of the etymology in § 8, it is difficult to believe that Eudemus ever spoke of a ἔξιν as ἀληθῆς. Now, in § 6, M^b, the Latin version, and Eustratius, read not ἀληθῆ, but ἀληθοῦς. In § 4, however, MSS., version, and scholiast agree in giving ἀληθῆ."

It is then pointed out that Alexander Aphro-

disiensis, on *Met.* 981^b 25, quotes: ἔξιν μετ' ἀληθοῦς λόγου πρακτικῆν, which seems approved.

The balance of evidence here seems in favour of the text. The only important objection, if it were well founded, would be the first. The difficulty seems to be that ἀληθῆς would be the epithet of a thought or statement rather than of the corresponding disposition of mind (ἔξιν). But this is by no means certain, whether we take Aristotle or Eudemus. In the case of a man who ἀληθεύει (speaks the truth), ἀληθῆς is applied not only to his statements but to himself—ἀληθῆς τις (cf. *Nic. Eth.* II. vii. 12 with *Eud. Eth.*), and clearly, therefore, his character could have the epithet ἀληθῆς, or be identified with ἀλήθεια. In this book (*Eth.* VI.) the soul is said ἀληθεύειν (to think the truth) so far as it possesses the intellectual virtues or ἔξεις, of which φρόνησις is one (ii. 6 καθ' ἂρ . . . ἔξεις ἀληθεύσει. iii. 1 ἔστω δὲ οἷς ἀληθεύει ἡ ψυχὴ . . . πέντε τὸν ἀριθμὸν, ταῦτα δ' ἐστὶ τέχνη ἐπιστήμη φρόνησις κ.τ.λ.); and so, as in the other use of ἀληθεύειν, there seems no reason why the ἔξιν itself should not be called ἀληθῆς.

The evidence of the MSS. is in favour of ἀληθῆ in both passages. It is far more likely that the rare variant ἀληθοῦς in § 6 is corrupted from ἀληθῆ, than that the converse should have happened.

As to Eustratius and the Latin version, it is hardly safe to quote them as reading only ἀληθοῦς in § 6. By "the Latin version" is doubtless meant that called "*vetus* or *antiqua translatio*." A Bodleian MS. of this (fourteenth-century, Coxe) reads *verum* (= ἀληθῆ) in the first place, and *vera* (= ἀληθοῦς) in the second. But one of the printed copies which I have consulted in Prof. Chandler's library (Paris 1500, a fine edition, professedly made under the supervision of Tartaretus) reads *verum* (ἀληθῆ) in both places.

Eustratius, quoted *simpliciter*, I suppose means the Aldine. The excerpts from the *Ethics* which precede the commentary in Eustratius read here ἀληθῆ in both places, not ἀληθοῦς. (Two MSS., by the same hand, A.D. 1495 and 1497, at Corpus and New College, Oxford, have ἀληθοῦς.) The commentary itself in the Aldine (and in the two MSS.) repeating the text, with slight alterations, has ὡς ἀναγκαῖος ἐπομένου τοῦ τὴν φρόνησιν ἔξιν εἶναι μετὰ λόγου ἀληθοῦς. If this is to indicate a reading ἀληθοῦς, it is not accurate to represent Eustratius as indicating only ἀληθῆ in the first place (§ 4). For, while the excerpt from the *Ethics* there has ἀληθῆ (Ald. New Coll., Corpus), the commentary following has λέπεται ἔρα αὐτὴν εἶναι ἔξιν ἀληθῆ μετὰ λόγου πρακτικῆν περὶ τὰ ἀνθρώπων ἀγαθὰ καὶ κακά. τὸ μὲν ἔξιν ἀληθοῦς μετὰ λόγου κοινὰ λαμβάνων τῆς ἐπιστήμης τε καὶ τέχνης κ.τ.λ. If the text is right, this union of two formulae, either of which describe φρόνησις, suggests that the commentator may have passed from one to the other of himself. The second formula is the simpler, and occurs in the definition of τέχνη (ἔξιν μετὰ λόγου ἀληθοῦς ποιητική). Alexander Aphrodisiensis, in the passage quoted from him, had given the definition of τέχνη a few lines above, and he or the copyists may have been affected by it. But no stress need be laid on these latter considerations. The inference from the data is hardly that the author of the *vetus translatio* and Eustratius found only ἀληθοῦς in § 6; but rather that there may be a variation in these texts themselves, or that Eustratius indicates a double reading in the *Ethics* MSS. of the second passage. And the significant fact is that all known MSS. and authorities for both passages support ἀληθῆ in the first; that the second, where there is a variant, is precisely that in which from the position of ἀληθῆ after λόγου a corruption of the harder reading might be expected; and that even here only one of the principal MSS. seems to have it.

The proposal to read *ἀληθοῦς* in both places has been already made, with some hesitation, by Sussehl in his edition, and with the same authorities, except that he adds Par. 1417, and has not the passage from Alexander Aphrodisiensis. He does not alter the order of the words in the first place (§ 4).

The passage in which another reading is preferred to the one commonly adopted is II. vii. 1:

“ἐν γὰρ τοῖς περὶ τὰς πράξεις λόγοις οἱ μὲν καθόλου κενώτεροι εἰσιν, οἱ δ' ἐπὶ μέρους ἀληθινώτεροι. The editors almost without exception prefer κενώτεροι, the reading of O^b and the Latin version, to κοινώτεροι, the reading of K^b L^b M^b. What is wanted is, however, not unqualified praise of οἱ ἐπὶ μέρους λόγοι, and unqualified condemnation of οἱ καθόλου, but such a recognition of the merits of both as will justify the application of the general statement to particular instances. This consideration seems to me decisive in favour of κοινώτεροι.”

It is hard to see what this adds to Grant's commentary. He prefers κοινώτεροι, and for the same reason (see his note and translation). Grant, however, does not think the reason “decisive,” but only that κοινώτεροι is “more natural”; and that this is a more judicious attitude appears from a passage which Grant partly quotes in his note from *Pol.* I. xiii. 10:

“ἄλλο δὲ τοῦτο καὶ κατὰ μέρος μᾶλλον ἐπισκοποῦσιν· καθόλου γὰρ οἱ λέγοντες ἐξαπατῶσιν ἑαυτοὺς· ὅτι τὸ εὖ ἔχειν τὴν ψυχὴν ἀρετή, . . . ἢ τὶ τῶν τοιοῦτων· πολλὸ γὰρ ἔμεινον λέγουσιν οἱ ἐξαριθμοῦντες τὰς ἀρετὰς, κ.τ.λ.”

This is about a subject kindred to that in the passage before us; and it is clear that it is not a “recognition of the merits” of οἱ καθόλου λόγοι, but of their demerits. Obviously, therefore, the probability is on the side of κενώτεροι. Aristotle's inclination to inuendo against Plato may account for the turn of his remark in both places.

The remaining passages discussed are V. vii. 1 and I. vi. 1. V. vii. 1:

“ὡς τὸ μὲν λυτροῦσθαι, ἢ τὸ ἀγαθὸν εἶναι ἀλλὰ μὴ δύο πρόβατα. In my edition of book v. I expressed a doubt about the words ἀλλὰ μὴ δύο πρόβατα. It seemed to me that, in contrasting the sacrifice prescribed with the sacrifice not prescribed, the author would oppose, not ἀγαθὸν τὸ δύο πρόβατα, but ἀγαθὸν τὸ πρόβατα, or μίαν ἀγαθὸν τὸ δύο πρόβατα. Why should the sacrifice which was not prescribed be more precisely defined than that which was prescribed?”

The answer to this question is so obvious that one must wonder it was ever asked. Of course the specification of the number of the sheep (cf. “a pair of turtle doves, or two young pigeons”) shows that two known forms of sacrifice, prescribed possibly in different places, are being contrasted. The writer of the paper now sees this, because he has noticed the sacrifice of two sheep in Aristophanes (*Aves*). But one would think that everyone reading the Aristotelian passage must have inferred from it alone that “two sheep” was a customary sacrifice somewhere. The citation from Aristophanes is, of course, valuable, and ought to appear in the note of every future editor; but it is not in the least necessary for the translation. In fact, if we had no other authority for or against, the Aristotelian passage might fairly be *locus classicus* for the custom. I. vi. 1:

“ἀμφοῖν γὰρ ἔντοιν φίλων δειον προτιμᾶν τὴν ἀλήθειαν. The thought which this phrase has made familiar seems to have been a traditional commonplace of the Platonic school, descending perhaps from Socrates himself, and at any rate recalling his teaching. Compare (besides Aristotle, *Metaphysics* Λ 8. 1073 b 16) Plato, *Charmides* 166 d; *Republic* 595 c, 607 d; *Phaedo* 91 c; *Philebus* 14 b; *Sophist* 246 d.”

The commonplace is surely common to all disputants, and one cannot seriously assign it to a definite school. Such comparisons are only

interesting when there is some striking similarity in the manner of putting this commonplace, as showing how one writer has been affected by reading another. From this point of view only one of the passages quoted from Plato is of real use, but it is a very good one:

Rep. 595 c: “ἀλλ' οὐ γὰρ πρό γε τῆς ἀληθείας τὴν ἡττοσύνην ἀνήρ.”

It is important to notice such coincidences, even in trivial matters. In Plato and Aristotle there are enough of them to show how full Aristotle's mind was of the thoughts and words of Plato, which may sometimes have influenced his expression unconsciously. Take, for instance, the following:

Arist., *Eth.*, I. vii 17: δόξειε δ' ἂν παντὸς εἶναι πρῶτα γαίην καὶ διαρθρῶσαι τὰ καλῶς ἔχοντα τῇ περιγραφῇ.

Plato, *Λωος*, 770 n: . . . ἀπερίγητον καθάπερ τὴν περιγραφήν. τοῦτο δὲ δεήσει συμπληρῶν ὑμᾶς τὸ περιγηθῆναι.

J. COOK WILSON.

PHILOLOGY NOTES.

MR. LEWIS RICE, the compiler of the official Gazetteer of Coorg, and now secretary to the adjoining native state of Mysore, has recently published (Bangalore) a small quarto, entitled *Coorg Inscriptions*. It contains the text (printed in Roman characters) of some twenty-three Canarese inscriptions on stone or copper, together with translations of all, and lithographed facsimiles of the three most important. Prefixed is an introduction, in which Mr. Rice traces the annals of the Ganga dynasty, with the help of other inscriptions, from the third century A.D. We are glad to hear that this work is only preliminary to a more elaborate one on the inscriptions of Mysore.

THE Clarendon Press has just issued Part III. (HWISTLUNG-SÄR) of Prof. Toller's new edition of Bosworth's *Anglo-Saxon Dictionary*. The editor has evidently profited by the just, though perhaps too harshly expressed, strictures which have been passed on the two earlier parts. The execution of the present part shows marked improvement, especially with regard to the accentuation and the etymologies. Some rather important changes of method seem to have been adopted during the progress of the work; for example, the letters of the alphabet have special articles as far as N, but no further. The practice of printing the primary words in capitals is continued (though, latterly, in a seemingly capricious and uncertain way) down to the middle of M, and is afterwards dropped; and in the selection of the typical forms of words the spelling *i* is in the later pages chosen for the umlaut of *eu*, for which, previously, *y* was preferred. We are not quite sure about the expediency of the last-mentioned change. It results in puzzling inconsistencies in the case of compound words, and the spelling with *y* is much more frequent in the text usually read, and, indeed, in Prof. Toller's own quotations. The additions to Bosworth's material are much more numerous than in the earlier parts, some recently published sources, such as Kluge's glosses in *Anglia* for 1885, having been used with good results.

DEAN BYRNE'S *Origin of the Greek, Latin, and Gothic Roots* (Trübner), is a work of great industry. The author has taken all the root-words of the three languages named, and grouped them under seven “phases of utterance,” according to the position of the vocal organs when employed in pronouncing the

words. The recognised principles of etymology are necessarily ignored. In Latin *cetera* besides Sanskrit *yas* and Greek *ἕτερος* “the *c* replaces *y* and *h*,” while in *jocus* “the *c* is from *v*”; *πῶς* and *πῶτος* go together, *tiber* and *lympha*, *campus* and Sanskrit *sama*, *sitis* and English *soot*. The book has an excellent index.

WE have received the first Heft of the *Orientalische Bibliographie*, which Prof. Aug. Müller, of Königsberg, has undertaken to edit, with the collaboration of Prof. Bezzenberger, also of Königsberg; Prof. Strack of Berlin; Dr. John Müller of the Royal Library at Berlin; and Dr. Vollers of the Khedivial Library at Cairo. It is issued by the well-known Oriental publishers, Reuther, of Berlin, and may be obtained in this country from Messrs. Williams & Norgate. There are to be four parts in the year, to be obtained at the low subscription price of seven marks. The present part consists of sixty-nine pages, and catalogues no less than 1106 works, including articles in periodicals but not including reviews. The main classification adopted is as follows: (1) General, including anthropology, the comparative history of religion, and—nearly a dozen treatises on “Volapük”; (2) Northern and Central Asia and Eastern Europe—which is very poorly represented; (3) Eastern Asia and Oceania, subdivided into China, Korea, Japan, Indo-China (including Burma), Oceania, the Malay Archipelago and Madagascar; (4) Indo-Germanic, subdivided into India (including Gypsy), Iran, the Caucasus, and Asia Minor; (5) Semitic, subdivided into Assyrio-Babylonia, Syria and Mesopotamia, Palestine and Hebrew—which is especially numerous—Phoenicia, and Arabia and Islam (with a special section on Arabic works printed at Cairo); (6) Africa, subdivided into Egypt, North-Eastern Africa, North-Western Africa, and the remainder of Africa. Most of these sub-divisions are again treated separately with regard to language, literature, history, &c.; and at the end of each section are collected reviews which have not been given under other titles.

WE have also received Part I. (A—DA) of the fourth edition of F. Kluge's well-known *Etymologisches Wörterbuch der Deutschen Sprache*. We hope to review this valuable work at length on the completion of this new edition. The present part contains several new articles, and many material corrections and improvements.

MEETINGS OF SOCIETIES.

ARISTOTELIAN SOCIETY.—(Monday, November 21.)

SHADWORTH H. HODGSON, Esq., president, in the chair.—Messrs. W. Macdonald, R. J. Quelch, and G. F. Stout were elected members.—Dr. J. McK. Cattell, of the University of Pennsylvania, read a paper on “The Psychological Laboratory at Leipzig.” He explained how experimental psychology undertakes to analyse and measure mental phenomena, and advocated the systematic work of the laboratory, both for the education of students and for the advancement of knowledge. Whenever experiment has been introduced into science a rapid advance has followed, and there are good grounds for hope that methods which have been so fruitful in physics will not prove barren for psychology. The study of consciousness is, as we all know, fraught with peculiar difficulties. It is not easy to be at once the observer and observed. “The eye sees not itself,” and the phenomena are both complex and transient. The best results have been obtained when introspection has been combined with the objective manifestations of the contents of other minds, more especially when they have on the one hand become fossilised as in language, customs, art, &c.; or, on the other hand, are relatively simple, as in children, in savages, and in disease. But under circumstances the most favourable to scientific observation, there are serious difficulties in the way of exact analysis and measurement; and it will be found that in psycho-

ty, as elsewhere in science, experiment gives the most trustworthy and accurate results. Experiment calls up the phenomena to be studied in a constant and by keeping certain conditions constant, and by altering others, gives the best chance for analysis; above all it enables us to photograph the transient phenomena, and subject them to objective examination and measurement. An account was then given of the psychological laboratory at Leipzig, founded by Prof. Wundt in 1879, and of the researches which have been undertaken in it, including experiments on the measurement of sensation, the duration of mental processes, attention, memory, and other subjects.—The paper was followed by discussion.

ANTHROPOLOGICAL INSTITUTE.—(Tuesday,
Nov. 22.)

PROF. FLOWER, vice-president, in the chair.—Canon Isaac Taylor read a paper on "The Primitive Seat of the Aryans," in which he discussed recent theories as to the region in which the Aryan race originated. The prescientific Japhetic theory and the Caucasian theory of Blumenbach have long been abandoned. A few years ago the theory advocated by Pott, Lassen, and Max Müller, which made the highlands of Central Asia the cradle of the Aryans, was received with general acquiescence, the only protest of note coming from Dr. Latham, who urged that the Asiatic hypothesis was a mere assumption based on no shadow of proof. The recent investigations of Geiger, Cuno, Penka, and Schrader have brought about an increasing conviction that the origin of the Aryan race must be sought, not in Central Asia, but in Northern Europe. These writers have urged that the evidence of language shows that the primitive Aryans must have inhabited a forest-clad country in the neighbourhood of the sea, covered during a prolonged winter with snow, the vegetation consisting largely of the fir, the birch, the beach, the oak, the elm, the willow, and the hazel, while the fauna comprised the beaver, the wolf, the fox, the hare, the deer, the eel, and the salmon—conditions which restrict us to a region north of the Alps and west of a line drawn from Dantzic to the Black Sea. It has also been urged that the primitive Aryan type was that of the Scandinavian and North German peoples—dolichocephalic, tall, white skin, fair hair, and blue eyes; and that those darker and shorter races of Eastern and Southern Europe who speak Aryan languages are mainly of Iberian or Turanian blood, having acquired their Aryan speech from Aryan conquerors. It has been urged that the tendency in historic times has been to migration from north to south, the inhabitants of the fertile and sunny regions of Southern Europe, where the conditions of life are easy, having no inducements to migrate to the inhospitable north. Moreover, in Central Asia we find no vestiges of any people of the pure Aryan type, while the primitive Aryan vocabulary points to the fauna and flora of Northern Europe rather than to that Central Asia. Fair races have a greater tendency to become dark in a southern climate than dark races to become fair in northern regions, as is proved by the fact that the complexion of the polar peoples, such as the Eskimo, the Lapps, and the Samoyeds, has been unaffected by their sojourn for uncounted centuries in the north, while there is much evidence to prove that the noble classes in the Mediterranean lands were formerly lighter in colour than at present. A vast body of evidence, of which the foregoing is a brief summary, has been adduced to show that Northern Europe rather than Central Asia was the home of the undivided Aryan race. But the Aryans must have had forefathers from whom they were developed; and the inquiry suggests itself, what could have been the race from which the Aryans might have been evolved? A Semitic, an Iberian, an Egyptian, a Chinese, a Turkic, or a Mongolic parentage is out of the question; and the author proposed to show that both from the anthropological and from the linguistic point of view that the Finnic people come closest to the Aryans, and are the only existing family of mankind from which the Aryans could have been evolved. The Tchadic branch of the Finnic family approaches very nearly to what we must assume to have been the primitive Aryan type. The Tchuds are either mesocephalic or dolichocephalic. They are a tall race, the hair yellow, reddish, or light brown, the

skin white, while blue or grey eyes are usual. As we go eastward from the Baltic we find that the Ugro-Finnic tribes approximate more and more to the Turko-Tatar ethnic type, just as when we go southward the southern Aryans conform increasingly to the Iberian type. Hence in the Baltic provinces of Russia we discover what seems to be the centre of dispersion, a region where the ethnic characteristics of Finns and Aryans do not greatly differ. Of this fact only two explanations are possible. Either the Baltic Finns have been Aryanised in blood while retaining their Finnic speech, an hypothesis supported by no evidence, and in itself improbable; or else we have here in their original seats a survival of the people from whom the Aryans were evolved. Anthropological considerations tend therefore to show that the Aryans are an improved race of Finns; while, on the other hand, the Finnic speech approaches more nearly than any other to the Aryan, and is the only family of speech from which the Aryan languages can have been evolved. The only argument for deriving the proto-Aryans from Central Asia was the belief that Sanskrit comes the nearest to the primitive Aryan speech. It is now believed the Lithuanian, a Baltic language, represents a more primitive form of Aryan speech than Sanskrit, and hence the argument formerly adduced in support of the hypothesis that the Aryans originated in Central Asia becomes an argument in favour of Northern Europe. The separation of the Aryan from the Finnic races must have taken place at a period so remote that we cannot expect to find any marked identity in their vocabulary. The culture words common to the Aryan and Finnic tongues are, for the most part, loan words. But the words denoting the primary relations of life, the names for father, mother, son, daughter, brother, and sister, can hardly be loan words; and these are substantially identical in the Finnic and Aryan languages. The same is the case with a few of the numerals, the pronouns, and the names for some of the primary necessities of life, such as the words denoting salt, shelter, food, and the rudest implements. But when we go back to the verbal roots which constitute the very basis of language, we find a remarkable identity between the Aryan and Finnic tongues. Thus the eighteen trilateral roots beginning with *k*, given in Skeats's *Etymological Dictionary*, are all found in Finnic with the same fundamental signification. It is quite incredible that this identity in the ultimate roots can be accidental. Both in Aryan and Finnic these verbal roots are combined with formative suffixes to form nominal stems. We have the same formatives with the same significations. The conjugation of the verb is also effected in the same way, by the addition of identical pronominal suffixes to the verbal roots. The accusative, the ablative, and the genitive, which appear to be the three original cases, are formed in similar fashion by the addition of identical post-positions. The only fundamental differences between Aryan and Finnic grammar lie in the absence of gender in the Finnic language, and in the wholly different formations of the plural. But Professor Sayce has shown reasons for believing that the proto-Aryan speech possessed no gender, thus agreeing with its Finnic prototype; and he also believes that it possessed only the dual, the plural being a later development. But the dual is formed in precisely the same manner in the Aryan and Finnic languages, while the comparatively recent origin of the Finnic plural is proved by the fact that in the Finnic and the allied Turkic languages the plural is diversely formed. Hence the proto-Finnic speech agrees in every respect, both as to the grammar and the roots, with the proto-Aryan speech; and there is therefore no difficulty in the supposition that the one represents an archaic stage out of which the other was developed. These considerations modify considerably our conceptions as to the way in which we may conjecture that the Aryan race originated. Instead of supposing a single Aryan tribe in Central Asia, which sent off successive swarms to the west and south, we may rather conceive of the whole of Northern Europe from the Rhine to the Vistula as occupied by a Finnic race, whose southern and western members gradually developed ethnic and linguistic peculiarities of that higher type which we associate with the Aryan name. The Baltic Finns are survivals of this race. The Celts, owing to their remoteness, diverged at an early time from

the eastern type, while the Lithuanians and the Hindus preserved many archaic features both of grammar and vocabulary. The Slaves must be regarded mainly as Ugrians, and the South Europeans as Iberians, who acquired an Aryan speech from Aryan conquerors. The time of the separation of the Aryan from the Finnic stock must be placed at the least 5,000 or 6,000 years ago. At that time the linguistic evidence shows that the undivided race possessed only the rudiments of civilisation. Of the metals they possibly knew gold and copper, but their tools were mainly of stone or horn. They sheltered themselves in rude huts, they knew how to kindle fire, they could count up to ten, and family relations and marriage were recognised. They were acquainted with the sea, they used salt, and they caught salmon; but it is doubtful whether they were acquainted with the rudiments of agriculture, though they gathered herbs for food and collected honey. They possessed herds of domesticated animals, consisting probably of oxen and swine, and perhaps of reindeer; but the sheep seems to have been unknown. If this hypothesis as to the primitive identity of the Aryan and Finnic races be established, a world of light is thrown upon many difficulties as to the primitive significances of many Aryan roots and the nature of the primitive Aryan grammar. We are furnished, in fact, with a new and powerful instrument of philological investigation, which can hardly fail to yield important results. Comparative Aryan philology must henceforward take account of the Finnic languages as affording the oldest materials which are available for comparison.

FINE ART.

ART BOOKS.

Notes on some Early Persian Lustre Vases. By Henry Wallis. (Quaritch.) *Notes on Some Examples of Early Persian Pottery.* By Henry Wallis. (Henry Wallis.) Our information with regard to early Persian ware is so scant that we should be thankful to any one who tries to add to it—especially in so serious and scholarly a way as Mr. Wallis. What is known may be said roughly to consist of two facts: (1) That certain brown lusted tiles are dated in the thirteenth century, and (2) that most of the later pottery that forms the bulk of the collections at South Kensington and elsewhere belongs to the period of Shah Abbas the Great (1585-1627) and afterwards. In the first of Mr. Wallis's books of notes, he shows reason why certain lusted bottles and vases may be ascribed to the thirteenth century; and in the second he gives reasons for thinking that certain unlusted plates recently discovered "in digging the foundation of a Persian town" may belong to the same period, together with a certain well-known and beautiful class of vase, specimens of which are at the South Kensington Museum, the Cluny Museum, and the Museum at Sévres. The latter vases are distinguished by the beauty of their shape, the boldness of their decoration, with panels of floriated ornament, Arabic inscriptions, &c., and the charm of their colour and surface. They have hitherto been much of a puzzle to connoisseurs. South Kensington, we think, has not ventured to assign them to any fabrique, simply calling them vases of the thirteenth century, but those in France have been assigned to the little-understood section of Siculo-Arabesque. Mr. Wallis advances his views on all these questions with moderation; and, by means of illustrations, some of which are admirably executed in colours by Mr. Griggs, he has put the points of his argument with great plainness.

Great Minds in Art. By William Titebuck. (Fisher Unwin.) A curious title this, and a curious selection of great minds. Raphael and Landseer, Dürer and Doré, Rembrandt and Wilson, Velasquez and Wilkie—evidently a collection of stray articles which have served

a current need, and are now gathered together in book-form. It would have been well if Mr. Tirebuck had been contented to publish them so, without any pretence that the whole book is governed by a preconceived idea. They are separate beads, and in threading them on a string he has only shown how different they are in size and shape and colour. As separate articles they might pass, notwithstanding that the author has peculiar notions as to the meaning of English words and the proper way of arranging them. They are pleasant enough to read, and the article on Doré brings his interesting personality vividly before the reader. The "Introduction" is the mistake. In his desire to give his volume the appearance of organisation, the author's ingenuity has been put to a strain it cannot bear. We are told that "As personalities these men were eight in number, but as artists, they were virtually one"; and that "The eight painters whose biographies appear in this volume may be regarded as the eight parts of speech in the one great language of pictorial art." These eight parts of speech are comic enough. We will give them for the instruction of art students. 1. Grace in form and colour. 2. Imagination. 3. Pathos. 4. Sentiment. 5. Moral inference. 6. Contrast, or light and shade. 7. Realism, or fidelity to what the artist sees; and 8. Idealisation, or the power of adding to what he saw something finer which he imagined. Which painter is to be identified with which part of speech we will partly leave our readers to decide. Mr. Tirebuck's judgment is certainly in favour of modern art, for he selects Doré to represent imagination, Landseer sentiment, and Wilson idealisation. We not unfrequently, however, agree with Mr. Tirebuck; and his opinion that "the painter, as the disseminator of beauty, feeling, and thought, serves a most *utilitarian* purpose in the social system," is good sense, if not good English.

PROFESSOR MASPERO.

PROF. MASPERO has just completed the text of *Mariette's Monuments Divers*, which (as arranged between Mariette and himself, before the lamented death of the former) is entirely from his pen. With this important work, which will be given to the world with all reasonable promptitude, ends the colossal task which Prof. Maspero undertook some sixteen years ago—the task of seeing the bulk of Mariette's works through the press. Eight years of collaboration with the living man have been followed by eight years of laborious editorial work consecrated to the memory of the departed *savant*; and there now remain but a few fugitive papers on Mariette's excavations at El Assasif in Western Thebes, on "Alexandria in the time of the Caesars," &c., which will be published by Prof. Maspero in the pages of the *Recueil des Travaux*. Only those who know the difficult character of Mariette's handwriting, the fragmentary and unfinished condition of many of his MSS., and the immense mass of documents which have had to be sifted, deciphered, completed, and reduced to publishable form, can appreciate the amount of self-sacrifice and devotion with which Prof. Maspero has performed this onerous duty.

Prof. Maspero's second memoir on the Royal Mummies found at Dayr-el-Bahari in 1881 is in the press, and will shortly be issued. He has also just completed a *Catalogue Raisonné* of the Egyptian collection in the Museum of Marseilles, which not only describes and explains the objects in their order as seen by the visitor, but is designed to serve at the same time as a practical introduction to the study of Egyptian archaeology. This excellent catalogue will, we venture to think, serve as a type for all future handbooks of the same kind.

In the meanwhile, Prof. Maspero's *magnum opus*—his long-promised history of Ancient Egypt—progresses slowly but surely. Begun before he accepted the position left vacant by the death of Mariette, it has long been arrested by pressure of official work in Egypt. Even now, we can scarcely hope to see the publication of the first part earlier than 1889.

A. B. E.

CORRESPONDENCE.

EXPLORATIONS IN EGYPT.

Bromley, Kent: Nov. 23, 1887.

As I presume the Egypt Exploration Fund will be continuing the excavations at Tell Basta in the coming season, I should wish to urge on the subscribers and committee the necessity of making a complete plan of the remains of the temple and statues as they are uncovered. It is true that everything was more or less disturbed in ancient times; but that is the more reason for recording carefully where and how each sculptured block now lies. It is only thus that any attempt at a restoration can be successful. Not a block should be moved until its position is recorded and a reference number given connecting it with the copy of inscription or sculpture upon it. A merely sketch-plan, made with a plane table, would be quite inadequate; for if a scientific body undertakes to clear and turn over a great site, it would be inexcusable not to provide a proper record of the positions of objects. When no plan is made the information is lost for ever, as has been so sadly the case in past ransackings in Egypt, both government and private. If a first-class survey cost £50, it would be none too much for a proper record; and I hope that the services of some thoroughly scientific surveyor in Egypt may be obtained. I feel at liberty to say this, as the very eminence of scholars in linguistic attainments is the best reason for not expecting of them an equal mastery of surveying.

For my own part, I shall be working in the Fayum this winter; as, to my surprise, private resources for excavating have been placed in my hands since I withdrew from the present organisation of the fund.

W. M. FLINDERS PETRIE.

"DIE FRONICA."

London: Nov. 20, 1887.

Will you kindly allow me space for a few remarks on Mr. Weale's friendly, not to say indulgent, review of *Die Fronica* in the *ACADEMY* of November 12.

In the first place, I think the distinction between the Veronica and Abgarus legends of the Christ-face is more marked than Mr. Weale would perhaps allow. I found they could be kept quite distinct, and had had a quite different evolution. On the other hand, the artistic representations of the two legends are, as Mr. Weale rightly remarks, very much intermingled. So far as I have been able to investigate the Aquitaine version of the Veronica legend, I believe it to be of a comparatively late date, and the chief work dealing with it is thoroughly unscholarly and untrustworthy (see footnote, p. 2). The version, indeed, seems to have no bearing on the sweat-cloth incident, and would have led me away from those German sources with which I was more competent to deal.

In the next place, I think Mr. Weale is just a little bit hard upon Heaphy. That Heaphy is not a trustworthy critic is very apparent to all readers of his book, but I believe he honestly stated what he had seen and copied. Also I think that, owing to Cardinal Antonelli's assistance, he had access to certain portraits not

usually exhibited. I do not believe that the Christ-representations in Heaphy's sketch-book in the Print-Room of the British Museum are copies of post-mediaeval pseudo-copies of the Roman sweat-cloths. To judge them and their value, the sketch-book itself, and not the lithographed prints in *The Likeness of Christ*, must be examined. I should, however, write much less confidently on this and other points were I now re-writing the book, which I ought perhaps to have stated was compiled in 1883-4, and has been practically printed from the manuscript of that date.

A few words of *Corrigenda* and *Addenda* may, perhaps, be serviceable to readers. Mr. Weale recognised, but indulgently passed over, some rather stupid MS. misreadings. In particular, I would refer to the Dutch MS. on pp. 67-9. The proof of this I sent to Mr. J. H. Heasels; but, unfortunately, he mislaid it till it was too late to use the corrections he kindly sent me. The more important of these I now give. Some are printer's errors, some misreadings. P. 67, for "spieghal," read *spiegel*; for "ghesalscap," read *gheselscap*; p. 68, for "welcke," read *welck*; for "behoerlicste," read *behaechlicste*; for "beerste," read *keerste*; for "St.," read *A(men)*; for "Inocenaus," read *Innocencius*; for "ghedeyckket," read *ghedenckket*; for "ie," read *ic*; for "nac," read *nae*; p. 69, for "gothed," read *gotheden*; and for "St.," read *A(men)*.

The following Veronica hymn occurs in a Darmstadt MSS. (2,772) recently examined by F. Roth (*Germania*, 1887, p. 256). It introduces the Vernicle as a charm against evil, and thus throws a new light upon the many-sided use it was put to in the Middle Ages. It should be added to chap. ii.:

Dicor Veronica Christi solius amica
Et ego demonstro Christi faciem tibi panno
Hanc si scripturam leges inspiciendo figuram
Illo nempe die pietatis munere divine
Non formidabis hostes tutusque meabis.
Nec facies aliqua te concitabit iniqua
Consilium sanum decrevit Gregorianum
Vultum formosum, Christi forma speciosum
Semper adorari, venerari, glorificari,
Hinc prece non ficta valet hec oratio dicta
Trecenti verum sibi quadraginta dierum
Pro culpa varia datur indulgentia sana.

A last remark as to my statement on p. 89 that Dürer copied no Greek Zeus model, but evolved his Zeus-Christ by seeking the most perfect human ideal. I was aware at the time of writing it that Dürer had occasionally used himself as a model for Christ. This point had been brought out by Thausing in 1876. I have, indeed, often found the *Selbst-Bildniss* at Munich mistaken for a Christ portrait. But this portrait is not the type of the sweat-cloth-faces (see plates xvii. and xix. of my volume and compare with *Thausing*, p. 355).

The following passage, however, taken from the Dürer MSS. in the British Museum is of singular value on this point. It shows that Dürer had really had a notion of adopting Zeus and Apollo as Christ-types. It would appear to refer, indeed, to the dimensions of the body, but is still of importance in measuring the classical influences at work in Dürer's conception. I owe this reference to Miss L. Eckenstein, who has recently been transcribing the MSS.:

"Plinius schreibt das dy alten moler vnd bildhauer / als abelles protognes vnd dy anderen haben gar künstlich beschriben wy man ein wolgestalten glidmas der menschen sol machen nun ist woll möglich das solche edle pücher seyen im anfang der kyrchen fertrugt vnd aws getilgt worden vnd has der abgötterey willen / dan sy haben gesagt der jupiter soll ein solche proportz haben der abollo ein andre / dy fenus soll also sein der ercules also desgleichen mit den andren allen / [corrected : ach wer ich aber do gewest so het ich gesprochen] [added : solt iwch meinem zwfall—im also sein vnd wer dy selb zeit entgegen gewest so het ich gesprochen] o libn heiligen heren vnd fetter vnd

des pösen willen wölt dy edlen erfundennen kunst dy do durch gros müe vnd erbet zw samen pracht ist nit so jemerlich tötten dan dy kunst ist gros schwer vnd gut vnd wir mügen vnd wöllen sy mit grossen eren in das lob gottes wenden / dan zw gleicher wels wy sy dy schonsten gestalt eines menschen haben zw gemessen irem abgot abblo also wolln wyr dy selb mos prawchen zw cryste dem herren der der schönste aller welt ist / vnd wy sy prawcht haben fenns als das schönste weib also woll wir dy selb zirlich gestalt krewschlich darlegen der aller reinsten jungfrauen maria der muter gottes / vnd aws dem ercules woll wir den somson machen des gleichen woll wir mit den andrn allen tan solcher pücher hab wyr aber nymer vnd dorum / So ein ferloru ding vnwider pringlich ist / als dan mus man noch ein anderen trachten / söichs hat mich pis her bewegt das ich vnder standen hab mein nochfolgette meinvg für zw legen / awff das so es etlich lesen / im weiter noch denken / vnd das man deglichs zw einem neheren vnd pesserer weg vnd grunt kumen müg / vnd will aws mas zall vnd gewicht mein fürnemen anfohen wer achtung dorawf hat der würtz hernach also finden."

As I said before, my conclusions date from 1883. It must be left to others to correct or modify them, as my work in 1887 lies in a very different direction.

KARL PEARSON.

THE AGE OF THE WALLS OF CHESTER.

Liverpool: Nov. 15, 1887.

As I hope shortly to print my views in an essay form, I will at present only briefly reply to Mr. Brock, who seems in his last letter to have travelled over the old ground again. Met at every other point he, as a last resource, asks me (as he did in the *Builder*) to produce the accounts for repairing the walls in the time of Charles I., and in that of Queen Anne. I must give the same reply as before. The Parliamentary army on entering the city after the siege would repair the large breach by the forced work of their own men, and by impressed labour, using up no doubt most of the old material, and obtaining such fresh stone as was required close at hand. The excavations on the north wall, where the discoveries were made, are on the site of this breach. As to any accounts (properly so called) existing for these repairs in the city archives, it is hardly likely there will be any. With regard to the repairs in Anne's reign, the inscription set up by the Corporation at Pemberton's Parlour still exists, almost immediately above the reparations, stating that in 1708 *divers breaches*, &c., were rebuilt, and the decayed part of the walls repaired, adorned, &c., at the cost of one thousand pounds and upwards. Here is the account for these repairs. For me this is sufficient. I can at least trust the Corporation in the matter. If Mr. Brock chooses to ransack the city archives for further particulars, he can do so.

But Mr. Brock adds a portion a passage from Dr. Stukeley's *Iter Boreale* (p. 31) with the view of proving that there is an example of "something like" the wall of a Roman *castrum* in Britain, built without mortar. It is to the effect that the Chester east gate was so built, and that it was a Roman arch. It is a pity that Mr. Brock did not quote the whole passage, as I have done in *Roman Cheshire* (p. 106), and also that he had not read the evidence of both previous and later writers on the subject. Dr. Stukeley saw no Roman arch. In fact, he did not, and could not, see what he engraves. His drawing is a purely fanciful one, and is contradicted both by his own text, and by the evidence of other writers. The gate remained a single archway (with a second parallel one blocked up) from the time of the siege until its demolition *circa* 1766. Randle Holme (*Harleian MSS.* No. 2073) has a drawing of it, showing a single pointed arch,

with turrets at the angles of the upper part. The gate, as it existed in Edwardian times, remained encased in later pointed architecture till its demolition (a drawing taken at this time by Broster and Wilkinson I have engraved in *Roman Cheshire*); and then the before-named parallel archway of equal size was brought to light, and is engraved by Pennant, Broster, Sir F. Palgrave, and Musgrave. But Stukeley states that he saw three arches abreast—a large centre one, and a small one each side—while he engraves three arches of almost equal size, with the "Ichnography" of the structure. This was in 1725, and more than forty years before the houses represented in Broster and Wilkinson's sketch were pulled down. These latter stood against the blocked-up arch.

In fact, though the credulous doctor saw Roman remains in many places where they never existed, he says nothing about the wonderful cornice near the north gate, the stones on the Roodeye, or the north wall, near the Phoenix Tower, being Roman. And why not, if he was really able to distinguish Roman wall-work? But he tells us, on the contrary, that he thought between the east gate and the river (*i.e.*, towards Newgate) some Roman work existed. His statements are quite on a par with his idea that the stones in the north gate of Newark were "of a Roman cut," with his being hoaxed by Bertram to believe that the forged Itinerary of Richard was genuine, with his invention of an Empress Oriana, and with his remarks dated August 16, 1750, "This day I walked to Caesar's Camp at Pancras, where he pitched his tent 1804 years ago this day, where he made King Cassivelan and King Mandubrace friends," &c. No one was more useful than Dr. Stukeley in recording a find of coins, the discovery of a villa, hypocaust, or pavement; but on such matters as the age of a gateway or a wall, his authority is *nil*. As the Rev. W. C. Lukis remarks with regard to the above camp, "It required the enthusiasm and ingenuity of a Stukeley to make this discovery and invent its history." His idea of the Edwardian gateway, cased in pointed work, being Roman is another instance. I need not tell Mr. Brock that an arch may be often built without mortar, where a wall cannot; but Stukeley describes the gate as being very ruinous and shaky, and the mortar had possibly become decomposed and had fallen out, though I see no reason why it should not have been built without mortar in Edwardian times. With Dr. Collingwood Bruce and other authorities I believe that the Romans never built the wall of a *castrum* without mortar. There is no instance in Britain, and the so-called continental examples have all been disputed.

The excavations at the Roodeye stones seem, so far, to bear out my idea of their having been placed to keep the bank from being washed away, and at the same time serving as a landing-place, or abutment of a bridge. The concrete backing making a thickness of thirteen feet seems to show this; but until the completion of the excavations it is premature to say anything. That the stones have been part of the wall of the Roman *castrum*, or of the mediaeval city wall, few, I think, will now believe. Whether put there in Roman times or later, they have been taken from a Roman building. I have to-day had in my hands some of the crumbling mortar which occurred, in two courses of them only, on the ground level, as reported by the city surveyor (February 24, 1884). It can be easily broken between the finger and thumb, and then, in fact, ground to powder by the same means. This is the only mortar found on the face of this wall. Of that which is behind I will speak at some future time.

Since this correspondence began, I believe

that a boulder foundation (two courses) has been found beneath the Kaleyards part of the wall, though I have not yet learnt all particulars. This would seem to point to what I have previously said that when Roman work was come upon it would be the concrete or boulder foundation, as in the south wall in Bridge Street. If Roman work be found at the Kaleyards, the Edwardian walls have been built upon it; and I have long thought the wall at this point would be found to be composed of similar materials to the north wall—*i.e.*, sculptured fragments, tombstones, &c. The tombstone found at the Corn Exchange steps, which I take to be a surplus stone cast aside, seems to confirm this. But as no breach was ever made here the foundation has probably remained; while the breaches in the north wall have been the cause of the foundation having been removed from that quarter, and the tombstones, &c., previously in it, with fresh additions, have simply been built up again from the ground level. For symmetry's sake (at least) the plinth has been renewed to match the other portions of the wall.

Finally, the conclusion come to in *Roman Cheshire*, and endorsed by the Archaeological Institute, that no Roman work remained in the walls above ground, is not only maintained but confirmed. With this, my correspondence with Mr. Brock must cease.

W. THOMPSON WATKIN.

[Those who have followed this discussion may be interested to know that the presidential address, delivered by Sir Jas. A. Picton at the opening meeting of the British Archaeological Association on November 16, entitled "Notes on the Walls of Chester, Historical and Constructive," has been printed as a pamphlet (Liverpool: Walmsley), though without the illustrative plates which will appear in the *Journal* of the association.—ED. ACADEMY.]

NOTES ON ART AND ARCHAEOLOGY.

MR. JESSE HAWORTH, of Bowdon, Cheshire, owner of the famous throne-chair of Queen Hatasu, or Hatshepsu (XVIIIth Egyptian Dynasty), which has for the last seven months been the centre of attraction at the Manchester Exhibition, has munificently presented this venerable and unique royal relic to the nation. The throne-chair has, we understand, arrived at the British Museum.

AN important collection of water-colour drawings and pencil sketches by the late Hablot K. Browne will be sold on Monday next by Messrs. Sotheby. How many years have gone by since "Phiz" first began to illustrate Dickens's novels! Those of us who are middle-aged can well remember how, on the happy day on which the monthly number came out, we always first turned to the two illustrations, not only for the sake of their humour, but also as the quickest means of ascertaining how the plot of the story was being worked out. When we had read the number, we once more turned back to them to see how far the artist had satisfied our conceptions of the scenes which he illustrated. Dickens and "Phiz" were then so inseparably connected that they almost seemed to make a kind of firm of literary and artistic monthly benefactors to the human race. Among the pictures which are announced for sale we observe "The Fat Boy discovering Mr. Tupman kissing Rachel," "Mr. Pickwick in the Middle-aged Lady's Bedroom," "Mr. Pickwick on the Slide," and "Barnaby Rudge and the Hangman."

MR. ROSCOE MULLINS has all but finished the life-sized statue of the Dorsetshire poet—

the late Rev. William Barnes. It is now about to be cast in bronze, and will then be placed prominently in the town of Dorchester—the poet's county town, into the streets of which he was for many a year accustomed to walk from his remote country home. The statue represents the poet of Dorsetshire folk and of familiar landscape standing bareheaded, but in a thick and well accustomed coat, which in a measure has shaped itself to his figure, and in great knickerbockers and buckled shoes. The poet is chiefly bald; he wears a beard. The aspect of his features is as of one engaged in thought. The work has already, in various stages of its progress, been seen by several of his friends, among them by his daughter and by Mr. Thomas Hardy, the great Dorsetshire novelist.

THE exhibitions to open next week are the Royal Society of Painters in Water-Colours, of which Mr. Holman Hunt has just been elected a member; a collection of water-colour drawings of Eton by Mr. Russell Dowson, at the Fine Art Society's; and some sketches of the Venetian Lagoons, by Mr. Wilfrid Ball, at Mr. Dunthorne's in Vigo Street.

MISS AMELIA B. EDWARDS will lecture on "The Buried Cities of Ancient Egypt" for the Natural History, Geological and Antiquarian Society, at Tamworth, on Monday evening next, December 5.

THE STAGE.

STAGE NOTES.

THE interest in the French plays at the Royalty has been sustained as best it might, since we wrote last, by the appearance of M. Febvre. Febvre is a very sound actor—long esteemed by the English public, as he is valued in Paris; but he is not an actor of genius. And there is, of course, no particular novelty in the "Demi Monde," in which he has appeared. The "Demi Monde" is, nevertheless, a sufficiently welcome change after the somewhat overrated "Monde où l'on s'ennuie." Dumas is greater than Pailleron; a more caustic observer, a more pungent and brilliant chronicler of our follies.

FROM the Globe Theatre a piece, which could not in any case have long remained there, is to be removed immediately. Mr. Sydney Grundy's "Arabian Nights" is now going to the Comedy. There it is likely to have a very good run; and, as it is allowed to be extremely smart—conceived in a true vein of comedy, and very neatly acted—we shall hope to have something further to say about it.

MR. CHARLES WARNER is to be the recipient of an extraordinary and well-deserved tribute on the morning of Friday next, at Drury Lane. Mr. Warner is going to Australia—with his great performance in "Drink," no doubt, and with many other of his impersonations—and before he departs the whole profession does him honour by the performance of next Friday. The programme is phenomenal, both as to importance and as to length. At half-past one the doings of the day will begin—we should be extremely rash if we prophesied when they would be over.

ON Monday last there was produced at the Ladbroke Hall a piece styled "By the Sea," which was announced as an adaptation from the French of M. Theuriet—evidently from his "Jean Marie." The heroine's part was played by Miss Eleanor Marx. It is right to state that an adaptation of "Jean Marie," by Mr. Frederick Wedmore, has previously been performed several times under the title of "Under

the Farm by the Sea"; and that Miss Eleanor Marx had the advantage of appearing in one of these performances.

MUSIC.

WAGNER'S SYMPHONY.

WHEN Wagner fled from Dresden in 1849, he left behind him a portmanteau full of music. Among other things there were the band parts of a Symphony written in 1832, and performed at a Gewandhaus concert at Leipzig on January 10, 1833. About a year later the composer sent the score to Mendelssohn, then conductor at the Gewandhaus. Mendelssohn appears to have taken no notice whatever of it, and after his death the MS. was not to be found. But after many years the portmanteau was discovered by an old friend of Wagner's. The orchestral parts of the Symphony were restored to his possession; a fresh score was made; and the work was performed under the direction of the composer at Venice, on Christmas eve, 1882, less than two months before his death.

The work was heard for the first time in England at Mr. Henschel's third concert last Tuesday evening at St. James's Hall. The music was written at a time when Wagner was studying counterpoint, canon, and fugue, and when Beethoven was his idol. Dorn thus describes his enthusiasm for Beethoven: "He went to sleep with the quartets, sang the songs, and whistled the concertos." Hence we find the young musician making parade of his skill, and imitating his idol. Wagner, in a letter addressed to Herr Fritsch, editor of the *Musikalisches Wochenblatt*, in 1882, criticises his own work, declaring that some of the themes "do very well for counterpoint and express very little," pointing out that he took Mozart and Beethoven as models, and frankly acknowledging that, but for the Andante of Beethoven's C minor and the Allegretto of the A major, the slow movement of his Symphony would never have seen the light. Had he continued to write Symphonies there is little doubt that he would have shown more and more of his own individuality, and that his music would have shown fewer traces of the influence of the two great masters. So was it afterwards with his works for the stage. Weber is visible in "Rienzi" and even "Lohengrin," but not in "Tristan" and "Parsifal." The question might be asked—Has the world lost or gained by the resolution of Wagner not to go on writing Symphonies? The best way of answering this question is to point to "Tristan," "Meistersinger," and "Parsifal." He felt that it was impossible to equal, far less surpass, the great symphonic master in his own particular line; and this very despair prompted him to follow a path almost of his own finding, and, like all independent thinkers, to gain, for a time, the admiration of the few, and the hostility of the many.

But now a few words about the Symphony itself. The first movement contains little that is original; the first theme recalls Beethoven, and the second the Preciosa march, and it is spun out to very great length. But the constant activity and the confidence which the young *maestro* displays are very striking. Wagner has given a good description of the Andante. There can be no doubt about the truth of his indebtedness to Beethoven. And yet there are some touches of harmony and orchestration, as in the coda after the second subject, which remind one of the Wagner of later years. The Scherzo is the most compact, the most original, and the most interesting of the four movements. In the Scherzo proper, besides the rhythm of the Choral Symphony, the composer appears haunted by a passage in Schubert's great Symphony in C. But this

is a mere coincidence, as he can have known nothing of that work. The analyst reminds us that Wagner in the Trio has the same instrumentation and similar harmonies as the Trio of Beethoven's Symphony in A; but beyond these two points there is little in common between the two movements. In the Finale we are reminded more of Mozart than of Beethoven, excepting at the close, where, as the analyst somewhat sarcastically remarks, that there are "as many tonic and dominant chords as in the close of Beethoven's C minor." In the working-out section there is a good display of contrapuntal skill. Wagner wrote for a large orchestra, including three trombones and a double bassoon. Looking at the Symphony as a whole, it is of considerable interest, and quite as full of promise as any of the early symphonies of Schubert.

Mr. Henschel deserves the thanks of the English musical public for introducing to them Wagner's first and last symphonic attempt. The work takes in performance about three-quarters of an hour. It will be repeated on December 21, and ought to draw a large audience.

J. S. SHEDLOCK.

RECENT CONCERTS.

A *Fantaisie* for orchestra, entitled "Eroica," by Rubinstein, was a novelty at the Crystal Palace last Saturday afternoon. It proved, as is usual with that composer's later works, long and tedious. Some of the themes—such as the opening one in F, and the March in D minor near the close—are attractive, but by repetition one wearies of them. Then, again, by the side of some excellent orchestral effects one meets with others which are decidedly commonplace, not to say vulgar. Mr. Manns had evidently rehearsed with great care—with greater care, indeed, than the piece deserved. M^{de}m. de Pachmann played Schumann's pianoforte Concerto in A minor, but her reading of this romantic work was weak. Not only did she fail to catch the spirit of the music, but she dragged the time in all three movements, especially the last. It would seem as though M^{de}m. de Pachmann had never heard this Concerto played by M^{de}m. Schumann. Later in the programme she gave some short solos, and was probably heard to greater advantage. M^{de}m. Nordica sang well "Isolde's Liebestod" in English, but not with sufficient declamatory power. The programme commenced with a grand Concerto in B flat by Handel, No. 7 of the set of twelve written for strings. It is in Handel's usual fugal style. It wants, however, the *Cembalo* to fill up the middle; as performed, it sounds all top and bottom.

Miss Agnes Zimmermann gave a selection of pieces by Scarlatti at the last Monday popular concert. The beautifully finished and artistic playing of this lady contrasted favourably with some rough and jerky performances heard lately at these concerts. Miss Zimmermann was much applauded, and gave for an encore Mendelssohn's Etude in B flat minor. The programme included Mozart's Quartette in E flat, and Grieg's Sonata in F, for piano and violin. Miss M. Hall was the vocalist.

The principal novelty at Mr. Henschel's third Symphony concert has been noticed above. M^{de}m. Norman Néruda also played in her most dainty style Spohr's Dramatic Concerto, and was enthusiastically received. The programme contained overtures by Gluck and Beethoven.

DELICIOUS PRESERVE.—The most attractive of all preserves is MORELLA MARMALADE, made from the celebrated Kent Morella Cherry. The stones being extracted, double weight of fruit is given. Sold in 1 lb. pots by grocers, &c. Makers—THOMAS GRANT & SONS, Maidstone, and 46, Gresham-street, E.C.

SATURDAY, DECEMBER 10, 1887.

No. 814, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

Loocrine: a Tragedy. By Algernon Charles Swinburne. (Chatto & Windus.)

OLD Geoffrey of Monmouth did an ill service to English literature when he startled the twelfth century with his tale of the conquest of Britain by Brutus the Trojan, putting forth as veritable history a fiction which had not even the merit of high poetical capabilities to excuse it. "The Poets' Poet" fails to enchant with it in the second book of his *Faerie Queen*. The "sacred feet" of Milton "lingered there," as Mr. Swinburne says, but eventually passed on; and who can doubt that it was a happy impulse which diverted his poetic fancy from ancient legendary Britain to the recorded beginnings of all humanity? The fact is that poets cannot always find nutriment in the food which chroniclers supply; and it would be well if the desperate attempt to link our English beginnings with "the tale of Troy divine" failed to attract them to fields where fancy has little room for its higher flights.

If the story of *Loocrine*, son of Brutus, were potentially a great poem, Mr. Swinburne could not fail to make a great poem of it. He has not done so, and the choice of subject is the cause. He has told us in the graceful stanzas of dedication to his sister which introduce the drama how the case stands with the material which he has chosen; and, were it not that introductions are usually written after what they introduce, one is led to wonder why he proceeded to his task. Nevertheless, although the poet knows that "these wan legends" have no part in the sun whose glory lightens Greece and gleams on Rome" he has not been deterred from giving us the drama of "*Loocrine*," attempting what smaller men would have left alone. He has even enwrapped it in the atmosphere, if not in the sunlight, of Greece; and has put forth a tragedy in Attic shape in many ways, though, as will presently be shown, devoid of much that serves to relieve the austerity of Attic drama.

The story of *Loocrine*, which may be read either in canto x. of book ii. of the *Faerie Queen*, or in Milton's *History of Britain to the Conquest*, may be briefly told here. *Loocrine*, *Albanact*, and *Camber* are the three sons of King Brutus, of whom *Loocrine*, as the eldest, rules *Loegria*—i.e., England, except Cornwall; *Albanact* has Scotland, and *Camber*, Wales, for his portion. On the occasion of an irruption of fierce strangers, who land on the Humber bank (probably historically true), *Albanact* is killed in a battle where *Loocrine* is victorious. *Estrild* or *Estrildis*, a German princess forcibly carried off by the invader

from her own land, is found by the conqueror in the camp of the enemy, after the fight is over; and, though he is previously affianced to *Guendolen*, daughter of *Corineus*, the giantkilling king of Cornwall, and eventually marries her, *Loocrine* makes *Estrild* his paramour and by her has a daughter, the *Sabrina* of Milton's "*Comus*." When *Guendolen* discovers the relations between *Estrildis* and *Loocrine* she levies war against her husband, with the help of their son *Madan*, and *Loocrine* is mortally wounded in battle.

Mr. Swinburne has varied some of the details of this legend; but is there any obligation to abide by the original statement of a pure fiction? The tragedy is written in five acts, each of which consists of two scenes. There are only seven speaking characters in the *dramatis personae*; and of these never more than three are present at a time, which suggests the limitations of Attic tragedy, rendered necessary by the small number of actors employed. The jealousy of the injured wife supplies the keynote to the drama, which contains much upbraiding and recrimination, undergone not only by the unfaithful husband, *Loocrine*, but also by the contemptible *Camber*, king of Wales, his brother, but no friend to him. Indeed, it may safely be said that the chief defect of the poem is that there is too much railing in it, and too little dignity of tone in some of the leading characters. It has been said above that "*Loocrine*" is in many ways a tragedy in Attic shape; but it lacks the choral interludes which throw their glamour of loveliness around "*Atalanta in Calydon*," and there is no herald with his *rhetoric* to compensate in a passage of vivid description for the absence of the stir of action on the stage. As a result, one is reminded somewhat of *Racine* rather than of *Sophocles*, despite the *Procrustean stichomuthia* which Mr. Swinburne, along with Milton, admires. At the risk of seeming to play with words we must, therefore, call "*Loocrine*" a bloodless tragedy, which certainly serves to show this, if nothing else—how wide is the range of the poet who has written *Songs before Sunrise* and the present drama.

Mr. Swinburne's rich vocabulary, which to our mind serves him in ill stead where it is employed in scenes of an angry nature, enables him to enchant us whenever love is to the fore. Anyone reading the plot of "*Loocrine*" might safely anticipate that the best scenes would be those where the cause of the lawful wife's jealousy, *Estrild*, appears, especially as with her is her daughter and *Loocrine's*, *Sabrina*, for our poet has studied childhood deeply, or else has an instinctive sympathy with child-nature. Had *Estrild* and *Sabrina* filled the stage during the main scenes of the drama, and had *Camber* and *Madan* been kept more in the background, the result would have been a poem of far greater beauty.

In justification of the contrast drawn between the more turbulent scenes and those where *Estrild* and *Sabrina* are present, two quotations may be given for the reader to choose—not which is the pleasanter reading, for it is not the special business of tragedy to be pleasant—but which consists best with his ideal of the dignity and artistic excellence of a great drama. Here is the

one quotation, in a speech of *Madan* to *Camber*:

"Let the loud fierce knaves thy brethren
quelled
Ward off the wolves whose hides should line thy
throne,
Wert thou no coward, no recreant to the bone,
No liar in spirit, and soul, and heartless heart,
No slave, no traitor—nought of all thou art.
A thing like thee, made big with braggart breath,
Whose tongue shoots fire, whose promise poisons
trust,
Would cast a shieldless soldier forth to death
And wreck three realms to sate his rancorous lust
With ruin of them who have weighed and found
him dust.
Get thee to Wales; there strut in speech and
swell;
And thence, betimes, God speed thee safe to hell."
And here the other, in a scene between
Estrild and *Sabrina*:

"ESTRILD.

"Dost thou understand,
Child, what the birds are singing?"

"SABRINA.

"All the land
Knows that: the water tells it to the rushes
Aloud, and lower and softer to the sand:
The flower-fays, lip to lip and hand in hand,
Laugh and repeat it all till darkness hushes
Their singing with a word that falls and crushes
All song to silence down the river-strand
And where the hawthorns hearken for the
thrushes.

And all the secret sense is sweet and wise
That sings through all their singing, and replies
When we would know if heaven be gay or grey,
And would not open all too soon our eyes
To look, perchance, on no such happy skies
As sleep brings close and waking blows away."

Unfortunately, though there are other passages in "*Loocrine*" like this, or nearly as beautiful, there are several like that, in which Mr. Swinburne seems to forget for a while that strong language does not make strong situations. Indeed, the absence of "situations," in the stage sense, is so marked that it is difficult to imagine an audience sitting out "*Loocrine*," though a student may find much delight in reading it. The confronting of leading characters with each other in two instances, where much could be made of their meeting, seems to be carefully avoided. *Guendolen*, the lawful wife, never stands face to face with *Estrild*, the paramour; nor does *Camber*, the intriguing inferior brother, meet *Loocrine*, who, with all his faults, is morally his master, and could be made to show it in telling fashion by Mr. Swinburne in an interview between the two. *Loocrine* is a well-drawn personality, and an uncommon one, admirably summed up by his wife at the end of the drama: "Fair face, brave hand, weak heart that wast not mine"; and these last four words supply the explanation of the whole tragedy.

It has been already hinted that the character of *Estrild* has not been developed with any minuteness in "*Loocrine*," and this seems to be an instance of the self-restraint which Mr. Swinburne exhibits throughout the poem. It certainly would be far more congenial to him, one would think, to dwell more fully on her and her child, instead of on the angry *Guendolen*, the mean and miserable *Camber*, and the disagreeable *Madan*, of whom we are not surprised to read in *Spenser* that eventually he

"raignd, unworthie of his race,
For with all shame that sacred throne he fild."
More unpromising material than these three

characters supply it would be difficult for any dramatist to choose, and the wonder is ever-recurrent: Why was such a subject chosen? or, if chosen, why was it treated with such rigour of form and severe simplicity of plot? It is true that the rhymes are managed with a rich variety, which savours of romantic origin, of which more anon, and in a way which is only possible to a consummate master of word-music, such as Mr. Swinburne is; but the resultant impression is one of contrast rather than of harmony between the matter and the manner of the poem.

The present reviewer is old-fashioned enough to think that blank verse, as employed in "Hamlet," in "Samson Agonistes," and in "Atalanta," is the one ideally excellent form for tragedy; and on that ground, among others, he sets "Lochrine" below "Atalanta." The first act of "Lochrine" commences with rhymed heroics, the metre of Dryden's choice; and very well is the rhyme managed; that is, it is made as unobtrusive as possible—brought in to be put out of the way. The second scene, however, is written in 210 lines, this total being a multiple of 14—the correct sonnet number; and, indeed, it is, metrically, nothing else than fifteen sonnets, on the true or Italian model, running on, without break at the end of each, and divided into two rhyme-linked quatrains and two tercets apiece (we believe that Mr. Swinburne could, without effort, have written it in sestinas—a far more difficult mode—but doubt whether the effect would have been so good as could be produced by the simplest metrical schemes known). Various systems of rhyme, which it would weary the reader for us to analyse here, prevail in subsequent scenes, and then again in act v., scene i., we have ninety-eight lines, or seven sonnets, this time in the spurious form, if there is forgiveness for calling spurious the form which Shakspeare loved—viz., three independent quatrains followed by a couplet; while the last scene of the drama takes up again the heroic couplets with which the first act began, and thus rounds off the whole metrical effort with the following beautiful lines, spoken by Guendolen as she contemplates the consummated tragedy—Lochrine, Estrild, and Sa brina dead.

"The gods are wise who lead us—now to smite,
And now to spare. We dwell but in their sight
And work but what their will is. What hath
been
Is past. But these, that once were king and
queen,
The sun, that feeds on death, shall not consume
Naked. Not I would sunder tomb from tomb
Of these twain foes of mine, in death made one—
I, that, when darkness hides me from the sun
Shall sleep alone, with none to rest by me.
But thou—this one time more I look on thee—
Fair face, brave hand, weak heart that wast not
mine—
Sleep sound—and God be good to thee, Lochrine.
I was not. She was fair as heaven in spring
Whom thou didst love indeed. Sleep, queen
and king,
Forgiven; and if—God knows—being dead, ye
live,
And keep remembrance yet of me—forgive.

It was necessary to dwell at some length on the metrical element in "Lochrine," because it is so elaborate, as compared with that of other dramas, and, very possibly, supplies some explanation of the unreal and artificial character which seems to cling to the com-

position. To write a scene in fifteen sonnets, metrically, must divert much of the writer's attention from the subject-matter to the way of expressing it; and, without agreeing altogether with Milton's views on rhyme, one may ask, Is it not still true that

"some famous modern poets" have paid over-much attention to it, "carried away by custom, but much to their own vexation, hindrance and constraint to express many things otherwise, and for the most part worse, than else they would have expressed them?"

A word in conclusion. Wherever in this review the language of disparagement has been employed, the standard of comparison in the writer's mind has been one supplied by Mr. Swinburne himself. The grievance, if any, is not that the poet is unequal to the task of treating the story adequately, but that the story was not worthy of his treatment; and that consequently he has given us a masterpiece of metrical art with but little living interest entwined with it—the well-cut and richly-faceted jewels without the inner flash. Were there no gems of purer ray to hand?

HERBERT B. GARROD.

Greek Life and Thought, from the Age of Alexander to the Roman Conquest. By J. P. Mahaffy. (Macmillan.)

THESE studies of Greek life and thought may be regarded as complementary to more than one of Prof. Mahaffy's other volumes upon Greek affairs. They carry further the account of *Social Life in Greece*; they take note of authors later than the point at which the *History of Greek Literature* ends; and they supply the domestic and literary features necessary to body-out the brilliant sketch of *Alexander's Empire*.

Mr. Mahaffy vindicates, in an eloquent introduction, the importance of his subject. Perhaps *Hellenistic* would have more nearly expressed its real limits than any other word. But then it would have cut out the strictly Greek society of the time, as distinguished from the Hellenism of Jews or Bactrians; and the author wishes to embrace in one account the characteristics of the age, whether they have to be looked for in Asia, or Africa, or Europe. The subject is a grand one, and the author's opportunity is the better because the subject has been comparatively neglected. The political and social experiments of the time; the spread of Greek culture, necessary for the future of humanity; the actual achievements in architecture and sculpture, in poetry and in painting—these things arouse instantly the interest of the historian and the artist, while the philosopher will be curious to see how Mr. Mahaffy justifies his favourable opinion of the morality and the daily life.

This splendid subject has now found an English historian competent to do it justice. Mr. Grote's prejudice against monarchy made his survey of it hurried and his judgment bitter. Mr. Freeman has glanced at it in two essays; but has dealt fully with one aspect of it only in the first part of his *History of Federal Government*. (That first volume still remains the only volume; but we earnestly wish with Mr. Mahaffy that it could be republished in a cheap form.) Of course, the

difficulty in dealing with the whole lies not so much in the state of the evidence—though the "literature is fragmentary and scattered by the winds of time in a manner almost unexampled for an epoch of culture and of books"—as in its own extremely divided nature. The countries of which Hellenism took possession were as far apart as countries could be in ancient history, and were generally at war one with another. There is no single thread running clearly through the whole number of countries and of generations. The unity is factitious—a unity rather of culture than of history. This difficulty Mr. Mahaffy has not perfectly got over, but he has gone as near as is possible to writing a flowing and a connected account of a scattered subject. Very naturally he looks for some historical bond of union among the fragments of Alexander's empire, and he puts forward the Celtic invasions as such a bond. The little cities of Hellas proper had found union in resisting Persia, and the states of the Diadochi needed something which should call out their patriotism and emphasise their Hellenic character.

"It is hard to estimate what would have been the loss to Hellenism, and so to succeeding ages, had not the want been supplied by a new and terrible kind of human being, the scourge of the world, giving depth to curses and to prayer, splendour to conflict and to victory, just pride and thankfulness to the champions of civilisation. For as the Northern heathens are to the legendary Round Table of Arthur, so are the Celts (Galatae) to Hellenism. Coming in with an irresistible tide of invasion from the North, strange in stature and in tongue, impious in religion and utterly inhuman in cruelty, these barbarians devastated Northern Greece far more terribly than the Oriental hordes of Xerxes had once done; and they were repulsed only by the most splendid patriotism of noble men, combined with the visible interposition of the blessed gods" (p. 156).

It is not unlikely that, if we had all the materials, we should find that smouldering hostility to Rome played a like part among the later generations. The Romans always meant far more kindly to the Greeks than the Greeks felt to the Romans.

A full account of the Hellenism of this age, while it includes the social, religious, and literary phenomena, must start from a survey of the political circumstances which made the diffusion of Hellenism possible, and must point out the varying fortunes of the greater and smaller kingdoms and republics which either shared in this diffusion or supplied from the quiet mother-country fresh currents of genuinely Greek blood and Greek taste. This political history the professor has already outlined in another book; but he now refreshes the reader's memory with a chronological table and some convenient summaries.

The social aspects of the time are more fully treated, with such success as the tried skill of the author of *Social Life* would lead us to expect. He points out that the Athens of Demetrius Phalereus does not deserve the moral censure of Droyen; and that among the Hellenistic states "private life and manners were both purer and more refined than they had been in the great days of Greece." To this verdict we cannot object, if it be understood with the qualification that it is true in proportion to

the degree in which the country spoken of was Greek or Grecised. The more Greek, the greater virtue and the better taste—that was true then, whatever might be the case in Juvenal's day.

About the religious tendencies of the age we are not half so well informed as we could wish to be. The situation was far simpler in religious matters than it was after the absorption of all Hellas by Rome. There were fewer factors at work; but our means of information are scanty. They may, however, increase—indeed they are increasing—with the study of new evidence from Egypt; and the story of Zeus Hades, brought from Sinope and identified with Serapis, show how what is found in Egypt may have threads of connexion with the religious history of other lands. But one is still left to conjecture much, and there is ample scope for Mr. Mahaffy's ingenuity in framing hypotheses.

"The whole story [of Zeus Hades], as told by Tacitus and Plutarch, points to a secret discussion among the various priests, under the king's direction, and a deliberate assertion of signs and wonders to establish the amalgamated cult. So completely did religion enter into the statecraft of the Lagidæ!" (p. 188).

We are on firmer ground when he points out how successive Ptolemies took up different attitudes to the native religion of Egypt—how Ptolemy Philadelphus, in his "complete devotion to the Greek world," showed no interest in Egyptian religion or manners, while Euergetes I. built truly Egyptian buildings and conciliated the national priesthood; and how, this conciliation coming too late, the fourth and fifth Ptolemies were plagued with mahdis and insurrections. The translation of various native documents gives local colouring to the story. No one of these is more amusing than a passage which does not properly belong to our period, and which relates how King Amasis took more Kelebi wine than was good for him.

Mr. Mahaffy's readers are placed in a good position for judging of the literary achievements of the age by the admirable plan of quoting or translating largely from the surviving Greek writers, from Polybius, Callimachus, or Aratus. He has a strong objection to "pedantry," which seems from a comparison of passages in his book to mean "exactness" or "accuracy"; and this is the more curious because he himself takes pains to be accurate, and because he points out that the pedantry of Alexandria was a necessary antidote to the contamination of Greek by barbarism. If the question-begging word of "pedantry" were tabooed, we believe his judgment of all the authors would be more favourable. He can see their merits, as it is, as clearly as anyone, and express them better than most critics can do.

Another thing which gives great interest to the generations as they pass is the skilful use of biography. Now and again some character—statesman or general, dissolute king or laborious student—receives a detailed treatment which does much to bring his time before us and which clothes it with the living attraction of flesh and blood. One of the best of these portraits is the (partly conjectural) restoration of Antigonos Gonatas, who stands forward as a Stoic king. This view (which derives some support from

Diogenes Laertius) would give to the lonely Marcus Aurelius a companion figure in history; and, when the comparison is once suggested, we see several points of likeness in situation and even (if it be not claiming too much for Antigonos) in character. A philosopher compelled to fight; a statesman compelled to defend his northern frontier against barbarians, and liable all the time to lose his throne by troubles behind him—this reads like the history of the Stoic emperor who dated his Meditations from Carnuntum and wished for the opportunity to pardon Avidius Cassius.

There were two lands in which the fortunes of Hellenism were not so prosperous as in Egypt or Syria or Asia Minor. In Italy and among the Jews it was not so readily welcomed or so successful. Following Josephus and the books of Maccabees, Mr. Mahaffy thinks that Hellenism did really make great progress in Judæa. He lays stress upon the building of a Greek gymnasium in Jerusalem, and on the fact that even the priests were "eager to share in the unlawful allowances of the palaestra, attending the summons of the discus." But, whatever this may have amounted to, the chance was ruined by the haste or cupidity of Antiochus Epiphanes. "Humanly speaking, we may thank Antiochus IV. for having saved to us that peculiar Semitic type." How near the world may have been to the loss of Judaism and Jewish books! The importation of Hellenism into Rome has a chapter to itself, but is by no means fully treated. The wealth of material is so great that justice could not be done to it in a concluding chapter. Mr. Mahaffy holds out hopes of a future book upon the spiritual life of Hellenism under the Roman empire; and there perhaps he may find room for what we should like to receive from his hands—an estimate of the changes in Roman usages and ideas due to contact with Greek literature and civilisation. The topic is very large; but it is not too large for the professor, and it is not more alien from Hellenism than the history of the struggle in Judæa.

May we express a wish that if Mr. Mahaffy writes again he will keep out of sight his antipathy to Oxford and Cambridge? He has a perfect right to his opinion; but sneering at "the superannuated schoolboy who holds fellowships and masterships at English colleges, and regards himself as a perfectly trained Greek scholar," might have been omitted by an Honorary Fellow of Queen's College, Oxford.

FRANKLIN T. RICHARDS.

What I Remember. By Thomas Adolphus Trollope. In 2 vols. (Bentley.)

"I HAVE been a very happy—I fear I may say an exceptionally happy—man. As usual, my cards turned up trumps. Despite this, I do not think that were I called upon to advise a young man in precisely similar circumstances to mine at that time, I should counsel him to follow my example; for I have been not only a happy, but a singularly fortunate man." Such is the summing-up which Mr. Adolphus Trollope, aged seventy-seven, passes upon himself.

Certainly, these volumes bear him out. From the time when, nearly seventy years

ago, he and "Katy 'Bon" were saved by the merest chance-spoken word from tumbling precipitously into an unfenced well at Harrow; past the time when he did *not* put fish-hooks in his pocket at Naples to trap handkerchief stealers, and, consequently, was *not* one night stabbed to the heart as his friend was; all through the time when "dead beat, wet through to the bone, unprovided with any wrap of any kind, and when it was freezing hard," he took his seat outside the coach to get from Canterbury to London, and reached his destination none the worse—fortune does seem to have smiled on our autobiographer. He need not tell us after this that he was "a thoroughly healthy and well-constituted child," for whom "wet feet had to remain *in statu quo* till they were dry again." We will take Mr. Trollope's word for it.

An autobiographer puts himself in a twofold attitude towards his reviewer: as a man, and as an author. Mr. Trollope disarms one at once:

"I wish," he says, "to mark the social changes in English life since my young days. I have been here so many, many years; and these years have comprised the best part of the nineteenth century."

Yet, as a man, Mr. Trollope is no less interesting than as a chronicler. To the position of philosopher he does not pretend. He has got a store of tales to tell us—sometimes almost Herodotean in style, as, for instance, in the case of the dead colonel and the 'cello—and he tells them. It is, indeed, as a *raconteur* of old stories that Mr. Trollope shows himself in his most pleasing light. He is at his best when talking about Whately, or Dr. Drury, or Cardinal Massaia, or Fanny Bent. The surface of things is far too entrancing to Mr. Trollope for him to need to probe beneath it; and we take his *Storia*, as he would himself say, *quantum valeat*.

Therefore these volumes consist of the most delightful *pot-pourri* that we could desire of the time just anterior to our own. The anecdote which Mr. Trollope tells of himself at four years old is characteristic of the book and of the man:

"My mother used to tell how, when once I had been attentively watching her dressing for dinner, while standing on a chair by the side of the dressing-table, I broke silence when the work was completed to say very judiciously, 'Now you have made yourself as fine as possible—and you look worse than you did when you began.'"

The child is father of the man. How often does some such anecdote of early years show the bent of the child's whole future course! Think of Kingsley, with his sermon to the chairs at four years old; of Newman, at ten, with the cross and beads in his schoolbook; and then think of Trollope addressing those sage remarks to his mother.

Mr. Trollope was educated at Winchester; and to many the pages about his school-life may be the most interesting in the book. To some his disclosure of Wykehamical "notions" will seem nothing short of sacrilege; for he tells with absolute candour what he remembers about the place. He was never miserable, as his younger brother, Anthony, was. He is quite certain there is no such

dear and mutton now as in the days "when George III. was king"; corporal punishment was "a mere farce" ("I myself have been scourged [?] five times in the day")—and, in fact, we suspect Winchester was the best of all possible schools. But *audi alteram partem*—as Mr. Trollope would say. Here is Anthony's account, which we extract from the *Autobiography* published two years ago:

"Over a period of forty years, since I began my manhood at a desk in the Post Office, I and my brother, Thomas Adolphus, have been fast friends. There have been hot words between us, for perfect friendship bears and allows hot words. Few brothers have had more of brotherhood. But in those school days he was of all my foes the worst. In accordance with the practice of the college, which submits, or did then submit, much of the tuition of the younger boys to the elder, he was my tutor; and in his capacity of teacher and ruler he had studied the theories of Draco. I remember well how he used to exact obedience after the manner of that lawgiver. Hang a little boy for stealing apples, he used to say, and other little boys will not steal apples. The result was that, as a part of his daily exercise, he thrashed me with a big stick. That such thrashings should have been possible at a school as a continual part of one's daily life seems to me to argue a very ill condition of school life."

Boys will be boys, and Mr. Adolphus Trollope will forgive us for recalling a touch of nature which makes all schoolboys kin. In fact there was no time, so far as we can make out, in Mr. Trollope's life when he was not a boy. He shakes hands with you at the end of these volumes as though he were ready to race you down "hills" to-morrow.

Mr. Trollope's only ill-luck seems to have befallen him when he went to Oxford. He just missed by one place his election to New College in 1829. His father sent him to St. Alban's Hall simply because Whately was head of it (Newman had left it, it will be remembered, in 1825), when Whately told him, "We don't want any New College ways here, sir!" He had not been there more than a very short while before Whately sent for him, and told him he must take his name off the books for what seems an inconceivable reason. And so Trollope left what was at the best of times, he says, only "a refuge for the destitute"; and the only person who would take him was Dr. Macbride, at Magdalen Hall. No wonder Mr. Trollope took to racing the mail and reading Gaffarel's *Curiosities*. It is an interesting picture of Oxford in 1829.

Mr. Trollope left Oxford to become his mother's faithful attendant and guide, and from this time his acquaintance with *le beau monde* commences. They went together to Paris, where he met all sorts of interesting people. He met Chateaubriand, who was then in everybody's mouth, and he found him a "tinkling cymbal"; Guizot, who looked "for all the world like a village schoolmaster"; Thiers, "who might have been mistaken for a prosperous, busy, bustling, cheery stockbroker"; and he gives us a *chronique scandaleuse* about George Sand, and her escapade with the well-known Abbé de Lamennais. (By the way, Mr. Trollope spells the name incorrectly "Lamenais.") But the Abbé was fifty-three at the time, and we may take the story for what it is worth.

We could go on multiplying impressions

and anecdotes indefinitely, but to do this would be to miss to a considerable extent the importance of the book. Mr. Trollope is equally good at pointing out the social changes "which he remembers." Take, for instance, this sketch—how delightfully written!—of the Exeter of to-day:

"It was not so much that the new rows of houses and detached villas seemed to have nearly doubled the extent of the city and obliterated many of the old features in it, as that the character of the population seemed changed. It was less provincial, a term which implies quite as much that is pleasant as the reverse. It seemed to have been infected by much of the ways and spirit of London, without having anything of the special advantages of London to offer. People no longer walked down High Street, along a pavement abundantly ample for the traffic, nodding right and left to acquaintances. Everybody knew everybody no longer. The leisurely gossiping ways of the shopkeeper had been exchanged for the short and sharp promptitude of London habits. I recognised, indeed, the well-remembered tone of the cathedral bells. But the cathedral and its associations and influences did not seem to hold the same place in the city life as in my young days. There was an impalpable and very indescribable, but yet unmistakably sensible, something which seemed to shut off the ecclesiastical life on one side of the close precincts from the town life on the other, in a manner which was new to me. I have little doubt that if I had casually asked in any large, say, grocer's shop in High Street who was the canon in residence, I should have received a reply indicating that the person inquired of had not an idea of what I was talking about; and I am very sure that half a century ago the reply to the same question would have been everywhere a prompt one."

There is no sadness here. Only a silent acceptance of the facts. On one point, indeed, Mr. Trollope seems to be strangely inconsistent. Old as he is he has not learnt the beauties of provincialisms in speech. He is rather shocked when Lady Musgrave calls a cow a "coo," and suspects "she would have left Westmoreland behind her if evil fate had called her to London." Nor can he forgive "Quakerlike" Fanny Bent, who was "as well known in Exeter as the cathedral towers," for talking Devonshire *when in Devonshire*. Even the Florentines he does not quite forgive with their *Hasa* for "Casa" and *hâpitala* for "capitale," and the like.

It is impossible, and it would be out of place, to give more than a passing allusion to the many friendships and acquaintances which Mr. Trollope has formed in the course of his long life. Figures flit across the stage and are gone, and Mr. Trollope stands by and chronicles them. In this way we catch a glimpse of Dickens, of Landor, of Prince Metternich, of Garibaldi, of Mr. and Mrs. Browning, of George Eliot and G. H. Lewes, of Tennyson, and of Mary Mitford. We are told a good deal about Lady Bulwer, better known to the present generation as Rosina, Lady Lytton; and something about Julius and Mme. Mohl. Yet these friendships and acquaintances have been, we cannot but see, the most important factors in Mr. Trollope's life. The question, as he says, is not what one has done, but what one has become; and for that reason these pages are worth all the *Bebbos*, *La Beatas*, and *Histories of Florence* wherewith he once delighted the world. Not books

but men. We shall remember the altered *tempora et mores* when "liveried footman snuffed the candles" in Keppel Street, and "when 'Evangelicalism' and 'Low Churchism' were a note of vulgarity"; but Mr. Trollope has served us and himself best when he preserves for us the delightful, racy stories of his youth and the youth of the century, and when he gives us glimpses of those loved or worshipped faces which vanished before our time. To do the *one he must*, of course, have done the other, and hence the success of his written remembrances. From what we read in these two volumes, we gather that we may yet expect another in the fulness of time; and there is certainly room for it. Mr. Trollope provokingly draws the curtain where we would not inquisitively, I hope, pry; and he has moreover given us much which perforce is here, but only to the exclusion of what many of us would prefer. Mr. Trollope will forgive our correcting him on one point. Miss Fanny Bent, whom he used to visit half a century ago, lived not at Hoopern Bowers but Lower Hoopern; and our informant tells us that "she was the most untidy old woman who ever lived, and she carried a huge green umbrella with brass fittings."

Upon how many biographies these two volumes bear will very readily be seen. Mr. Trollope is another of that extraordinary group of men who were all born about 1810; and, though differing from them in many respects (Mr. Trollope does not accuse himself of writing one line of poetry in his life, and in the course of seventy-seven years he has only once—"and that for the fun of the thing"—been at an election), his autobiography will be extremely valuable for those who are yet to come. And so we leave Mr. Trollope's volumes, hoping that he will yet give us more, and—in the words of his own favourite author, "that jolly fellow, fine gentleman, and true philosopher, Horace"—*serus in colum redeat, diuque lactus interest populo*.

CHARLES SAYLE.

Venetian Studies. By Horatio F. Brown. (Kegan Paul, Trench, & Co.)

To proclaim the excellences of this fascinating book must indeed prove a grateful task for any critic. Mr. Brown's previous volume, *Life on the Lagoons*, buoyant, bright, picturesque as it was, at once established his right to the position of an authority upon Venice and matters Venetian. This new collection of studies, where he goes deeper, covers wider ground, touches graver themes, will certainly but strengthen that position. Not only have long residence and continuous study in Venice fitted him in a particular degree for his task. These, indeed, gave him the first and best advantage of special knowledge; yet that was but as the colour upon his palette. Without a fine faculty for analysis and luminous exposition, without the real historic sense or the charm of a style marked by much grace and strength, he could not have given us this sound and true piece of work. That, without any touch of flattery, is what we may call *Venetian Studies*. It adds to history; it adds to literature.

Of these eleven essays the first shows the rise to pre-eminence of the lagoon city of Rialto, the modern Venice, built on the ruins of rival townlets, Heraclea and Malamocco, as the seal of their reconciliation, and as the enduring monument of Pepin's ill-starred assault and defeat. It was then, after the Franks' repulse, that Venice broke with the empire of the West, asserted her individuality, came out from her ordeal an independent state. It was then that she attained homogeneity, that the unity and fusion of her rival elements was wrought, and her people became one with the place of their abode.

"Venetian and Venetian lagoons had made and saved the state. The spirit of the waters, free, vigorous, and pungent, had passed, in that stern moment of struggle, into the being of the men who dwelt upon them; now the men were about to impose something of their spirit, too, and built that incomparably lovely city of the sea. Venice, in this union of the people and the place, declared the nature of her personality; a personality so infinitely various, so rich, so pliant, and so free, that to this day she wakens, and in a measure satisfies, a passion such as we feel for some life deeply beloved."

The island of Rialto, as the surest rallying-point, a citadel and asylum in the hour of peril, was, therefore, in the year 803 chosen as capital; and here the government had its seat, with the Doge Angelo Participazio at its head.

Bajamonte Tiepolo forms the subject of the second study, in which are presented to us the causes, climax, and failure of his famous conspiracy. With Tiepolo's collapse, the old nobility which had fought an unequal fight for predominance in the state died, broken up, crushed out by the tyranny of the new aristocracy. Tiepolo, as the writer justly asserts, was no merely factious rebel and traitor. He raised a great question, he championed a just cause. But he had neither the *finesse* nor the force to make it a triumphant one. The year of his defeat and banishment, 1310, as marked on the little marble slab in the Campo Sant' Agostino, saw the creation of the terrible Council of Ten as the iron power destined to rule Venice. In the month of cherries, as a popular rhyme tells us,

"Del mille tresento e diese,
A mezzo el mese delle cerese,
Bagiamonte passò el ponte [the Rialto]
E per esso fu fatto el consegio di diese."

Limited first to a few days, its tenure of office was later prolonged from two months to five years. On July 20, 1335, it was proclaimed permanent, and, as Mr. Brown points out, "became the lord, the Signore, the tyrant of Venice; more terrible than any personal despot, because impalpable, impervious to the dagger of the assassin." This is what the Tiepoline conspiracy had given Venice—the very essence of tyranny, a rod of iron, and yet a preservative force which determined the internal aspect of the state for the rest of its existence.

To these two remarkable essays, others on the Carraresi and on Carmagnola succeed. The former as ambitious, restless tyrants, and the latter as a mercenary *condottiere*, both played fast and loose with Venice; and both received fearful retribution at her hands. Venice never forgave. She would wait, she would temporise; but, when the moment was ripe

for her revenge, she would coldly strike. Carmagnola's story is a good illustration of this, type as he was of the intriguing soldier of fortune, double-faced, half-hearted, who played a perilous game and lost it.

No more accurate and exhaustive account of the state archives of Venice than that prepared by Mr. Brown has, we believe, ever been offered to Englishmen. It appeared originally in the *Quarterly Review*; and the author has done well to reprint it here, as the fifth essay of the series. Another excellent paper is the one on Cardinal Contarini and his friend Reginald Pole, "the gentle cardinal," the *spirito angelico*, wherein is shown the pleasant intimacy of two fine spirits who neither of them found terrestrial quiet or content, yet who, when together in Italy, enjoyed an interval of most delightful calm. To pass lightly over the exciting story which Mr. Brown rehearses of Marcantonio Bragadin, the alchemist, will surely be less easy for readers than to miss the pages he devotes to Caterina Cornaro, Queen of Cyprus. For in these last the writer's excellences of style are less apparent; and there are touches here and there not quite in the right key. But a most valuable and impressive chapter is the one on "Cromwell and the Venetian Republic," where we see how eagerly Venice sought to have England on her side against the Turk.

And to put a fitting close to his book the writer appends his delightful paper on "The Venice of To-day," a piece of poetry in prose, that, when it appeared in the *English Illustrated Magazine*, Miss Montalba's charming sketches richly served to embellish. It appeals to Venice lovers, not to Laodiceans, not to those who term the Sea Queen "a fetid, foreign city, full of dirt and mosquitoes," but rather to such as look upon her as

"the enticing house of true serenity."

One questioning phrase for the printer and one for the author shall escape us before we end this brief notice. Why has the former regularly, systematically, printed "*Giustiniano*" for "*Giustiniano*" (p. 62); "*Guidici*" for "*Giudici*" (p. 61); "*Guidicca*" for "*Giudecca*" (twice on the same page, 278); and so on, wherever the syllable "giu" occurs? There are misprints, too, in the footnotes to the Cornaro essay which should be set right when the volume is in its next edition. Our question for the author is this. Why has he kept out any example, any illustration of Venetian art from his book? Will he not follow up these studies by another set, in which some one of Venice's immortal painters or musicians shall receive particular regard? We sincerely hope it. And, impatient for its sequel, we recommend his present volume to book-lovers as to book-makers. It will surely contain much useful matter for the indefatigable author of *Madonna Mary*, who, as the prints tell us, will soon give her public a skilful compilation to be called *The Makers of Venice*.

PERCY E. PINKERTON.

Life and Labour; or, Characteristics of Men of Industry, Culture, and Genius. By Samuel Smiles. (John Murray.)

As years roll on the author's store of apt illustrations becomes ampler, while, in the case of Dr. Smiles, his skill in dealing with

them shows no signs of failure. *Life and Labour* is a companion volume to *Self-Help* and *Character*, and its publication at this season will be regarded as opportune by those who have the troublesome task of selecting prize-books. No more suitable volume could be found to bear the inscription *Laboris prae-mium*.

Perhaps the first chapter is the least interesting, or, at any rate, the least happily entitled. These are certainly not days when it is necessary to prove that work is not ignoble so long as it is honest. This is admitted on all hands. And what the "gentleman" by birth is constantly seeking is the chance of employment, and not the terrible alternative of idleness. No fear of trade being a disgrace keeps him out of the commercial world. We wish we could add that his birth always keeps him from bringing a disgrace upon trade. It may, however, be necessary to point out to the successful tradesman that success does not, as a matter of course, make him a gentleman; and that courtesy, consideration, and charity are graces that may be acquired as well as inherited.

In the aristocracy of labour the brain-workers rank highest; and Dr. Smiles is, of course, quite right in including among such those whose thoughts have found expression through the brush or chisel. The passion for work seems to be strongest among artists; but Scott and Southey are wonderful examples of literary fecundity; and—if quantity and not quality be the test—even they have been surpassed by pamphleteers and controversial theologians, whose works have happily been forgotten. Prynne is said to have written an average of eight quarto pages daily from the time he reached manhood to the day of his death, and Lope de Vega's contributions to literature are numerically astounding.

"He himself states that of his dramas about one hundred had been composed in as many days. During the fifty years of his working life he produced upwards of twenty millions of verses which are in print, besides twenty-one quarto volumes of miscellaneous works."

It is well to remember, on the other hand, that Bishop Butler spent twenty years upon the *Analogy of Religion*, and Montesquieu twenty-five upon his *Esprit de Lois*. It is of less interest to know that Rogers gave fourteen years of his leisurely life to *Italy*; and that he told Babbage (we hope in more intelligible language) "that he had never written more than four, or at least six, lines of verse in one day in his life."

As to the period of life when work is best done there is much difference of opinion. In most cases great men begin to show their greatness soon; and where promptitude, vigour, and imagination are demanded, youth has the advantage over age. The list of those whose genius has been what Dr. Smiles calls precocious is a long one, and includes such names as Pascal, whose brilliant career ended at thirty-nine; Melancthon, who at twenty-one was appointed Professor of Greek at Wittenberg; Pitt, who at twenty-four was Prime Minister; and Newton, whose discovery of the law of gravitation was made at twenty-five. But the greatest names in the list are, as might be expected, those of men of action. Alike in ancient, mediæval, and

modern times, the most successful commanders scored their successes at an early age—Marlborough and Von Moltke being exceptions which serve to prove the rule. Not that middle life is barren of examples of greatness. Goldsmith, as Johnson said, was "a plant that flowered late," and so also was Swift; Priestley, Buffon, and Humboldt did their best work in mature years; and it can never be forgotten that Milton was fifty-seven when he finished his greatest poem. That the exercise of one's natural powers has no tendency to shorten life, but rather to prolong it, there is abundant proof. "It is a poor wine," said Lord Jeffrey, "that grows sour with age;" and, we may add, the best clusters of grapes are often found on the oldest vines.

Dr. Smiles has introduced some very useful chapters on "The Literary Ailment: Over Brain-work," and how to ensure health amid the necessary conditions of toil. He insists very strongly upon the superiority of a country life. "City life," he says, "is a foe to intellectual work. There is too much excitement and too little repose." On the other hand, it must be borne in mind that "Home-keeping youths have ever homely wits"; and that contact with one's fellow men has a tendency to sharpen the intellect and correct—what is a fertile source of failure—a false estimate of one's own powers.

We need scarcely add that Dr. Smiles's book affords plenty of pleasant reading, though the introduction of examples in rapid succession has rather a bewildering effect on the mind, for there seems as much to be said for one side of each case as for the other.

CHARLES J. ROBINSON.

NEW NOVELS.

An Old Man's Favour. By the author of "Dr. Edith Romney." In 3 vols. (Bentley.)

Mrs. Sharpe. By the author of "Shadrach." In 3 vols. (Bell.)

A Prince of the Blood. By James Payn. In 3 vols. (Ward & Downey.)

The Sport of Chance. By William Sharp. In 3 vols. (Hurst & Blackett.)

Ireland's Dream. By Capt. Lyon. In 2 vols. (Sonnenschein.)

Pine and Palm. By Moncure D. Conway. In 2 vols. (Chatto & Windus.)

The Hundreth Man. By Frank R. Stockton. (Sampson Low.)

Birth-Rights. By Edgar Ray. (Fisher Unwin.)

An Old Man's Favour fully sustains the level of the author's previous books, if no great advance is visible. There is a fairly good plot, with well-accentuated motives; and two or three of the characters are drawn with some graphic faculty. The main situation is that the son of a merchant who has died ruined is gifted with musical genius, especially for the violin, which may easily lead to fame and wealth if he can give it free scope, as he is strongly urged to do by his instructor, Marmaduke Ward, an excitable, enthusiastic, and unpractical personage, evidently a favourite with the author. But an uncle, the "old

man" of the title-page, offers assistance to the family on condition that Wilfrid Leigh abandons a musical career for a commercial life, to be persevered in for a certain term of years, after which he shall be free to choose finally between the two courses. The scene is laid in Newcastle-on-Tyne; under the name of Newminster; and the sketches of business life there are vivid and telling. Along with the Leigh family another, called Dering, has come down in the same crash; and there is a good deal of pains spent on the description of the mutual relations of husband and wife in consequence, he being unable to believe that he has not forfeited her affection, and she, in her turn, being gradually changed from a cheerful, genial woman into a morose and austere one. One other detail is cleverly treated—the grinding effect of constant poverty, with the dismal need of keeping up appearances in public. There is also a good drawing, with just a spice of malice, suggesting a portrait from the life, of the *dilettante* type of amateur, who is made to serve as the foil for the more genuine article. The dialogue is pretty fluent; and altogether the story is readable.

Mrs. Sharpe is mainly a novel of character, the aim being rather to delineate a single personality than to work out a plot. The portrait in this instance is that of a domineering, capricious, exacting woman, with some good qualities overshadowed by her persistent craving for power, and her unscrupulousness in getting her way. The figure is drawn with a good deal of force and vividness; but a reviewer may be pardoned for doubting whether the thing was worth doing at all.

In *A Prince of the Blood* new ground has been broken by Mr. Payn, but scarcely to his own advantage or that of his readers, and he has not achieved more than a *succès d'estime*, if even that. Nor has he been so careful as usual in workmanship and accessories, though the old deftness shows in the plot and several of the incidents. The hero of the book, Prince Tarilam, is the heir to the Malayan king of a small island in the Indian Ocean, and is, in fact, an idealisation of Prince Lee Boo, the description of the island, its people, and the intercourse between them and the crew of a wrecked English vessel having been evidently borrowed from Capt. Wilson's account of the wreck of the *Antelope* in 1783 on the Pelew Islands, which was published from his journals by George Keate. But Mr. Payn has passed the reasonable limits of artistic freedom in dealing with Tarilam and his sister Majuba. They not only learn to speak English in an incredibly short space of time, and that better than any Frenchman has succeeded in speaking it yet, but the ideas and diction which come fluently to them are such as are entirely incompatible with the intellectual level of their race and stage of development. The purely European part of the story is better managed, but the two sections do not join neatly; and though Mr. Payn cannot fail to make us read him, he has for once shown that we may not always praise him.

The Sport of Chance is a highly sensational story, with a plot of the kind we used to get formerly from Miss Braddon and Mrs. Henry Wood. A prologue shows us the

rescue of a single survivor from a wreck on the Cornish coast. Then we are carried back a long time to a scene in Scotland, where a merchant's happy home is suddenly disturbed by a cloud coming between husband and wife in consequence of the advent of a stranger, plainly mixed up in some large forgeries upon the husband's firm, and seemingly on such terms of secret understanding with the wife as to point to her complicity. Soon after she disappears along with her baby, hiding herself with her old nurse; and the story continues for several years, busied with her husband's search for her, as he believes her to have sailed for Australia with a seducer, and with the fortunes of the child she had carried away. Where the interest depends wholly on the evolution of the plot, as in the present instance, it is unfair to disclose it, and it will suffice to say that it is a clever one, with some single episodes forcibly delineated. But the villain of the story is made altogether too black. Not only is he thief, forger, and murderer (he commits no fewer than three homicides in the course of the narrative, besides attempting one or two more), but there is a malignant love of evil for its own sake, when there is nothing to be got by it, ascribed to him, which is a little out of drawing, except on just the hypothesis of moral insanity which is inconsistent with the author's intention. The English is rather shaky in places, "irrelative," for instance, appearing for "irrelevant," and the construction of many sentences being awkward and clumsy, if not actually ungrammatical.

Ireland's Dream is a political and polemical novel, forecasting what would happen in Ireland if the programme of legislative independence were carried out. Capt. Lyon's prophecy is of national impoverishment, executive bankruptcy, judicial corruption, administrative anarchy, civil war, and general collapse. He is so far impartial that he represents the instinct of barbarous retaliation as seizing hold of the Unionists as well as of the Separatists; and if the latter have massacred the garrison of a boycotted country-house, the former wreck with dynamite a railway bridge in front of a train containing the doers of the deed, and destroy them totally. The book is written with every semblance of conviction upon the author's part, and with a directness and vigour which make some amends for the visible lack of literary experience.

Pine and Palm is a story of North and South in the United States, beginning shortly before the outbreak of the Civil War. Two young men at Harvard, idealised types of Northerner and Southerner, quarrel over the slavery question, and are about to fight a duel. They are prevented from so doing; and are induced each to travel into the other's part of the Union, to study the situation at first hand, and to learn what can be said in favour of the view he has hitherto opposed. As matters fall out, both are considerably modified in their opinions by their new experiences; and it has been, in part, Mr. Conway's aim to show what palliations can fairly be allowed by sincere abolitionists for the attitude of the slave-holding aristocracy. His two heroes are a little too admirable in their several ways—a fact of which he is not at all unconscious; but

he has chosen his leading incidents carefully, and put them together in a workmanlike fashion, making a book which is pleasant to read, at the same time that it is a real help to Englishmen who want to understand something more of the true issues of the Civil War than the *Uncle Tom* class of literature can singly teach them.

The Hundredth Man is on a rather larger scale than that which best suits Mr. Stockton's peculiar humour. It is exceedingly clever in parts; but the parts of this kind do not lie close enough together. The notion of the book is that one of its characters has a theory that somewhere among every hundred men whom we meet, one will stand out from all the others by virtue of a more distinctive personality, and that it is worth while looking for and identifying him. In this case, the searcher proves to be the desired object himself. The best sketches in the book, however, are not the characters assigned the first places, but Enoch Bullripple, a Down-East farmer, and Matilda Stull, a New York young lady of remarkably practical gifts.

Birth-Rights is an exceedingly crude story on the theme of "breaking birth's invidious bar," by a beginner in literature, who does not understand yet that long sermonettes to the reader are not legitimate fiction, and that gush is not art. There are possibilities of better things perceptible by a kindly eye; but achievement has not come yet. And it would have been just as well to have named the *stola*, rather than the *toga* several times over, as the distinctive dress of ladies in ancient Rome. RICHARD F. LITLEDAL.

GIFT-BOOKS.

WE take the liberty of noticing in this place the two latest additions to the pretty series of "Clarendon English Classics," which are bound in ornamental parchment, with uncut edges and gilt tops, and yet are not extravagant in price. These are Goldsmith's *Selected Poems* and Johnson's *Rasselas*, edited, with introduction and notes—the former by Mr. Austin Dobson, the latter by Dr. George Birkbeck Hill. When we have mentioned these names, it is superfluous to add that two fitter editors could not be found. Nor will anyone suppose that either of them has acquitted himself of so congenial a task in a perfunctory manner. Each little book contains, indeed, a load of learning worthy of an ancient scholiast, which Mr. Dobson, at least, bears with the lightness of a flower. Of Dr. Birkbeck Hill, also, it should be said that he has been able to illustrate the Abyssinian morality with apposite quotations from his own edition of *Colonel Gordon in Central Africa*. On one point only will we venture to exercise the reviewer's privilege. In his table of Chief Events in the Life of Samuel Johnson Dr. Hill records, under the year 1763, "got to know Boswell"—which, by its curious inversion of thought, recalls Elliston's saying embalmed by Charles Lamb. "I like French," said a friend to Elliston, "because he is the same natural, easy creature on the stage that he is off." "Just my case," retorted Elliston, "I am the same person off the stage that I am on." After this digression, we cannot conclude without recommending either of these volumes to those in search of a present at this season for a good boy. No more alluring guide could be imagined into the pleasure garden of English literature.

Familiar Wild Birds. By W. Swaysland. With coloured plates. (Oassell.) This is the third volume of a series of which the two preceding ones have already been praised in the ACADEMY; and we are glad to hear that a fourth is yet to come. When completed, the series must, to some extent, belie its title; for it cannot be said that the capercaillie is "familiar," except in poulterers' shops, or the kite, except in literature. But to cavil thus would be to show ingratitude for a most welcome gift, which, for its conspicuous merits, can only be compared to Lord Walsingham's show-cases of natural groups at South Kensington. We refer not so much to the descriptions of Mr. Swaysland himself—though these are brief and to the point—as to the truly admirable coloured plates, all of which, in this volume, are reproduced from the drawings of Mr. A. Thorburn. Besides these plates, there are a couple of woodcuts illustrating the life of each bird, as well as coloured representations of their eggs of the natural size.

Run Away from the Dutch; or, Borneo from South to North (Sampson Low), is the attractive title of a thrilling tale of Eastern adventure, adapted by Mr. A. P. Mendes from Maurice Blok's translation of the original by Mr. Perelaer, late of the Dutch Indian Service. It is written quite in the Jules Verne style, with the same obvious intention of combining pleasure with instruction, but lacking the peculiar fascination of that brilliant storyteller. Nevertheless, the interest is well sustained from first to last; and a great deal of useful information on the physical geography, natural history, and inhabitants of Borneo has been skilfully woven into the texture of the plot. This turns exclusively on the adventures of three Europeans and a native, who, growing tired of their treatment in the Dutch Service, execute a well-concocted scheme to regain their freedom, and make their way under incredible difficulties from the southern to the north-western part of the island at that time governed by the famous Rajah Brooke, of Sarawak. The characters of the Europeans—a Belgian and two Swiss—are consistent enough; but Johannes, the native, is an absurd prig, who is endowed with lofty European conceptions about man and the universe, and who refers in the following style to the reported tailed tribes of the interior:

"Yet it is a positive fact, which many savants have accepted, that here in Borneo tribes do exist rejoicing in the luxury of a tail. According to them, this tail is nothing but a small, motionless elongation of the spinal column," &c.

Hamadoc, the Dyak belle, who captivates Wienersdorf, the Swiss, and is ultimately converted by him into a "grande dame de par le monde," is a still more preposterous impersonation—a "proud child of nature," with "a heart and a character of the noblest mould," and so forth. Still, the book will, no doubt, be eagerly devoured by young folks possessing the insatiable taste for "blug, blug," characteristic of *Helen's Babies*. Repulsive scenes of horror follow in rapid succession, and passages such as the following are of far too frequent occurrence:

"Human bodies, completely flattened out, were seen buried in the deep and hard ruts made by the rolling blocks of stone. Here a fractured skull, there a ripped chest or gaping abdomen, farther on dis severed hands and feet—everywhere blood." There are several good illustrations; and the translation is generally free from such solecisms as "at the side of," in the sense of "compared with," occurring at p. 238.

Perils in the Transvaal and Zululand, by the Rev. H. C. Adams (Griffith, Farran & Co.), is as successful an attempt as we have read to reproduce for the delectation of boys the more

sensational incidents in the Zulu and Transvaal wars, with the battles of Isandhlwana, Rorke's Drift and Majuba Hill. The leading characters in it are mainly young Englishmen of the ordinary proud and vigorous type, the chief of whom are named Hardy and Rivers; but there is also a not less proud and vigorous Dutchman, Vander Heyden by name, who hates Englishmen as a rule, but can also fight bravely by their side. His sister is an admirable study—though not, perhaps, for boys in their teens; and there is a revengeful enemy in the book, one Cargill alias Bostock, who is as desperate as Balfour of Burleigh, but not quite so religious. By way of relief, too, we have adventures with lions and pythons, and what not. Altogether *Perils in the Transvaal* deserves very high praise indeed.

A Son of the Morning. By Sarah Doudney. (Hodder & Stoughton.) This is a strong story in every way, but particularly from the ethical standpoint, the strength being embodied in Doctor Lansdowne, the good genius of Edgar Halliford, the rather susceptible and impulsive hero of the story, who is not much of "a son of the morning" to begin with, although he improves under good tuition towards the end. Irene, the heroine, is ever so much better than the hero, who only comes to deserve that name when he is contrasted with the still weaker Neal Everstone, who was her first *fiancé*. Edgar Halliford has also a first-love affair, which very nearly drives him mad; and Miss Doudney makes a skilful use of the "lost love" of Edgar, in her widowed condition, to awaken in the breast of Irene a healthy jealousy. Literature and art have both a slight place in the evolution of such plot as *A Son of the Morning* can be said to possess; but, on the whole, they might well have been dispensed with, except in a very pretty frontispiece, which is the one illustration in this book. Doctor Lansdowne, however, who is capable of infusing his own strength of will into his friends and patients, could not have been dispensed with. He is, indeed, one of the best of Miss Doudney's characters.

Sir Walter's Ward: a Tale of the Crusades. By William Everard. (Blackie.) This book will prove a very acceptable present either to boys or girls. Both alike will take an interest in the career of Dods, in spite of his unheroic name, and follow him through his numerous and exciting adventures. These lead him to the East, from whence he returns to Germany to regain possession of the home from which a wicked uncle had ousted him. The illustrations are excellent, and we must add a word of praise for the print and binding.

On the Banks of the Ouse. By Emma Marshall. (Seeley.) This is a story of life in Olney a hundred years ago. We thought on opening the volume that the author had been happy in the choice of a subject, and on closing it we may say she has been no less happy in its treatment. Not that we altogether sympathise with her in her views of Cowper, and still less of the Rev. John Newton; but the references to both poet and preacher give an air of healthy realism to the story. In these days when so much of our fiction is marred by frivolity and cynicism, it is refreshing to read so earnest a book as this. The style too, is simple and clear. It is religious in its tone, but neither narrow nor sectarian, as is shown by the following passage (p. 274):

"Even in the great gift of the Beloved Son, such men and women can only see the satisfaction of wrathful indignation by sacrifice rather than the gift of love freely given by the sinless One in obedience to the Will which he came to do."

The illustrations give a distinct charm to the volume, and we cannot but compliment the

publishers on the manner in which they have turned out Miss Marshall's last work.

John o' London: a Story of the Days of Roger Bacon. By Somerville Gibney. (Ward & Downey.) The days of Roger Bacon are about as shadowy as those of King Arthur, and his doings and discoveries belong rather to the realm of romance than to that of science. These, however, are no obstacles to the storyteller, who has really constructed out of his materials a book which boys will enjoy. Whether Adam de Gordon be either in name or in other respects quite in harmony with the era of Henry III. must be left to the antiquary to determine. His adventures in company with the hero, who bears the unassailable name of John, are sufficiently amusing and, in a minor degree, may be even termed instructive. The author's courage in the selection of a subject deserves recognition, and we do not doubt that it will be widely given.

By Order of Queen Maude: a Story of Home Life. By Louisa A. Crow. (Blackie.) The monarch, who ruled the schoolroom in somewhat autocratic fashion, learnt by her failures how to rule herself; and, as her love of setting her brothers and sisters right had in it no small admixture of genuine affection, her majesty in the end gained a rightful supremacy in the kingdom of home. The tale is brightly and cleverly told, and forms one of the best children's books which the season has produced.

Cross Corners. By Anna B. Warner. (Nisbet.) This is an American story with a strong religious bias, but Eunice is a character who will find favour with many young English readers. Her visits to the ladies at the Cross Corners Cottage are entertaining, and the Transatlantic flavour imparts some piquancy to the conversations. The illustrations are inartistic, though the treatment of the rearing horse gives some evidence of skill.

Equal to the Occasion. By Edward Garrett. (Edinburgh: Oliphant, Anderson & Ferrier.) Mr. Garrett has done better work than this. The story is dull and commonplace, and so are the chief actors in it. Chrissy follows the usual type of conscientious daughters, whose goodness would be more attractive if it were less perfect. The book is well got-up and, of course, is thoroughly unexceptionable.

The Story of John Marleck, by Emma Marshall (Nisbet), recounts not the musical but the reforming career of this well-known English composer. Dealing with the sufferings of the band of martyrs of whom Marleck was the chief, the story is rather painful; but the historical environment seems to be reproduced with considerable accuracy.

Armour Clad. By G. P. Dyer. (Shaw.) This is a well-meant but not particularly successful story of the trials of Arthur Brandon, who commences life as one of W. H. Smith & Son's newsboys. The book is written in a strain of religious gush which is too unnatural to be pleasing. The author does not seem aware that a strong sense of religious duty in boys is mostly combined with reticence and emotional restraint.

Two of Them: a Story for Boys. By the author of "Mike and his Brother Ben." (S.P.C.K.) The conception of this little tale is good, but it is not told with either vigour or completeness, and is not particularly suited for the young. The author opens his story with some care and minuteness; but, seeming suddenly to doubt whether the narrative is interesting, hurries over several years in the hopes of finding something exciting, and failing in this concludes abruptly. The binding and illustrations are unusually good.

A Minor Chord, by Niall Herne (S.P.C.K.), is in outline an affecting story, though hardly narrated with sufficient simplicity and directness. Old John Duniseith with his quaint oracular sayings, conveyed in the broadest Doric, is a decidedly amusing personage.

NOTES AND NEWS.

WE are to have a new edition of Chaucer. The editors will be Dr. F. J. Furnivall, the founder and chief worker of the Chaucer Society for the last twenty years; and Mr. A. W. Pollard, of the British Museum, editor of the two volumes of *Selections from the Canterbury Tales* in the "Parchment Library." Only the poet's genuine works will be given; and the exclusion of the many spurious poems included in former editions will make room for the inclusion of his prose works. The edition will be in six volumes, octavo; and then the text, with shortened forewords, will be issued in a Globe edition. Messrs Macmillan will be the publishers. The volumes will be also included in the issues of the Chaucer Society to its members, inasmuch as their subscriptions have furnished the material on which the edition will be based. So far as possible, the best MS. of each work will be taken as the basis of its text, and not altered, save where it is plainly wrong. And though, if the MS. be Shirley's, his known personal peculiarities—like that of his retaining the Anglo-Saxon *eo* for *e*—will be changed, the spelling will not be normalised or otherwise made uniform. The notes will not be overloaded with all the various readings of all the MSS.; but only those held important will be given, students being referred to Dr. Furnivall's "Parallel Texts" in the Chaucer Society for the rest, which are so often plainly mistakes or later unauthorised changes.

DR. CHARLES MACKAY has now finished his *Dictionary of Lowland Scotch*, with explanations and etymological derivations. The work is not only a glossary of the more important words, but also a storehouse of anecdote and poetic illustration, while the historical and literary development of the language is dealt with in an introductory chapter. The first edition, to be published by private subscription, will be printed on Whatman paper, and limited to 125 copies, numbered and signed by the author.

MR. ARNOLD FORSTER has been engaged in the preparation of a new work uniform with the *Citizen Reader*. It will be entitled *The Laws of Everyday Life*, and is intended as a reader for the upper standards of elementary schools and for use in night schools. A revised edition is now printing of the *Citizen Reader*, for which a number of new illustrations have been prepared. This work has attained a circulation of upwards of 50,000 copies in less than two years.

WE understand that the Autotype facsimile of the Black Book of Carmarthen is now ready for the binders. The work, which is limited to 250 copies, forms Vol. II. of the Series of Welsh Texts, and will be issued to subscribers only by Mr. J. G. Evans, 7, Clarendon Villas, Oxford.

THE new work by Prof. Roberts, of St. Andrews, entitled *Greek, the Language of Christ and His Apostles*, is now nearly ready. It will be published by Messrs. Longmans & Co.

MESSRS. T. & T. CLARK, of Edinburgh, announce that, by special arrangement with Prof. Franz Delitzsch, they will publish next year a translation of his *Neuer Commentar über die Genesis*, which was reviewed in the last number of the ACADEMY.

WE learn from the *Pioneer* that Lala Kashi Nath Khattri has undertaken to produce a

translation of Sir Alfred Lyall's *Asiatic Studies* for the Aryan Patriotic Association of Sirsa. The committee of the Rohilkhand Patriotic Association, represented by Pandit Ganesh Prosad Chouba, late Chief Justice of Kashmir, have offered an honorarium of £25 to the translator, that sum having been subscribed by several native gentlemen of the district.

A TRANSLATION of Herr Karl Emil Franzos's well-known novel *Ein Kampf ums Recht* will be published immediately, in one volume, by Messrs. James Clarke & Co., with a preface by Dr. George Macdonald. The translation has been made by Miss Julie Sutter.

Half-Hours with the Early Fathers is the title of a new volume by the Rev. C. H. Leonard, of Bristol, which will be issued by Mr. Elliot Stock almost immediately.

MESSRS. F. V. WHITE & Co. will publish immediately a novel, in 3 volumes, by Philip Gaskell, entitled *A Lion among the Ladies*.

MR. SPENCER BLACKETT will publish early in December the second year's issue of *The Playgoer's Pocket-Book*, considerably enlarged and improved, and illustrated with upwards of seventy portraits and sketches of scenes and characters from all the plays of the year.

TINSLEYS'S Christmas Annual, entitled *Stars and Spangles*, written by Miss Lily Tinsley, will be issued immediately.

AN important contribution to the history of playing-cards was made by Mr. George Clulow in a paper read before the Sette of Odd Volumes at Willis's Rooms on Friday last, December 2. In particular, it disposed of some of the popularly received notions as to their origin and chronology. A large collection of examples from Mr. Clulow's remarkable collection of playing-cards was exhibited during the evening.

IN the second number of the *Annals of Botany*, just published by the Clarendon Press, Prof. Bayley Balfour makes a timely protest against the current mistake whereby the "coco-nut," the fruit of the *Coccoloba*, is erroneously spelt "cocoa," and thus confounded with the produce of the *Theobroma cacao* of tropical America. He shows, from quotations supplied by Dr. Murray, that "coco" is the original and proper name, and was always used by the early writers; and that the spelling "cocoa" appears to have originated with the [erroneous] notion of Dr. Johnson that *cocoa* and chocolate were made out of *coco-nuts*, which caused him to confound the two words in his Dictionary under the spelling "cocoa," although he afterwards rejected his own lexicographical authority and correctly used "coco," plural "cocoas," in his *Life of Drake*. But his erroneous precept was more powerful than his correction in practice; and, though botanists long stuck to "coco-nut," the uninformed *vox populi* went in for "cocoa-nut." Prof. Balfour calls upon botanists to unite in putting an end to the blunder, and to use the correct spelling "coco," as the Laureate has done in "Enoch Arden":

"The slender coco's drooping crown of plumes," and as "careful writers" and "those who know," actually do.

WE regret to record the sudden death of that charming writer, Miss Margaret Veley, which took place at West Kensington on December 7. Her first novel to attract attention was "For Percival," which appeared in the *Cornhill* during 1877; and her last work, we believe, was "A Garden of Memories" in the *English Illustrated Magazine* last year, since republished with two other stories in volume form. All her work was marked by freshness of sentiment and delicacy of expression.

UNIVERSITY JOTTINGS.

MR. CHARLES VILLIERS STANFORD has been elected professor of music at Cambridge, in succession to the late Sir George Macfarren.

MR. THOMAS WILLIAM ALLEN, of Queen's College—to whom the ACADEMY is indebted for several contributions on Greek palaeography—has been elected to the Craven fellowship at Oxford. Since the reconstitution of the Craven trust, the fellowship has become not a mere prize, but an endowment for research, after the pattern of the Radcliffe travelling fellowships in physical science, which have yielded such good results. The value is £200 for two years; and the holder is required to spend eight months of each year in study abroad.

THE Craven fellow of last year, Mr. D. G. Hogarth, of Magdalen—the first on the new system—has recently submitted a report of his work. After spending some time at the British School of Athens, he visited Salonica to copy inscriptions, and then accompanied Prof. W. M. Ramsay on an archaeological journey through Asia Minor. He has since been working in the museums of Constantinople, Vienna, and Berlin. The special subject that he has chosen for study is the history of Alexander's empire.

WE regret to record the death of the Rev. Coutts Trotter, fellow of Trinity, Cambridge, for many years tutor and lecturer in physics, and at the time of his death vice-master of the college. But his name will be held in remembrance still more for his services to the university at large. Since 1874 he has been a member of the council of the senate; and to his reforming zeal and administrative capacity is largely due the marked success of recent changes in the academical system—notably the increased study of the physical sciences.

MR. GEORGE SIMMS, of Broad Street—whose name is well known to many generations of Oxford men—will read a paper at an early meeting of the Architectural and Historical Society upon "The Defences of the City during the Civil War." He claims to have found abundant remains of the earthworks thrown up not only by the defenders but also by the Parliamentary army. *Inter alia*, he maintains that the ruins at Godstow date from this time.

THE following is the text of the address from Oxford to Prof. Mommsen:

"Viro doctissimo Theodoro Mommseno natalicia septuagesima gratulantur alumni Oxonienses LXII., die xxx. mensis Novembris MDCCCLXXXVII. Nomina qui subscripsimus, Academiae Oxoniensis graduati, Theodoro Mommseno septuagesimum natalem adepto pie et laeto animo gratulamur, ingentem tuam laudem, quam de antiquorum litteris tam praeclare meritis es, testantes, sicut id nunc universitatis doctorum comprobavit assensio. Patere te nos quod confirmamus edoceri, nusquam illa merita neque ab ullis majoris aestimari quam inter nos aestimantur, quos ut vivendo diu adjuves institutione tua et exemplo speramus et precamur."

THE *Transactions* of the Oxford Philological Society for 1886-87 have been published in pamphlet form by the Clarendon Press. The papers, in accordance with a fundamental rule of the society, deal solely with Greek and Latin. Prof. Nettleship writes on the recent theories of Keller and Havet about the Saturnian verse, himself maintaining the old view that the basis of the metre is quantitative, though modified by the influence of Oxford. The most important historical papers are those by Mr. Pelham, on "The Provincial Organisation of Gaul and Spain"; and by Mr. Macon, on "The Significance of the Lot in Ancient Athens" and on "The Political Constitution of Corcyra in 433 B.C." Mr. Prickard contributes notes on Horace, *Epistle*, II. 2; Mr. R. L. Clarke on Vergil, *Eclogues*, I. and IX; Mr. J. Cook Wilson on some passages in Plato's *Republic* and Aristotle's *Ethics*; and Mr. Haigh on a passage in Isaeus.

ORIGINAL VERSE.

AN APRIL DAY.

BREEZES strongly rushing when the north-west
stirs,
Propheysing summer to the shaken firs;
Blowing brows of forest, when soft airs are free,
Crowned with heavenly spaces of the shining sea;
Buds and breaking blossoms that sunny April
yields,
Ferns and fairy grasses, the children of the fields;
In the fragrant hedges hollow brambled gloom,
Pure primroses paling into perfect bloom;
Round the elm's rough stature climbing bright
and high,
Ivy-fringes trembling against a golden sky;
Woods and windy ridges darkening in the glow,
The rosy sunset bathing all the vale below;
Violet-banks forsaken in the fading light,
Starry sadness filling the quiet eyes of night;
Dew on all things drooping for the summer rains,
Dewy daisies folding in the lonely lanes.

R. L. BINYON.

MAGAZINES AND REVIEWS.

PERHAPS the very best thing in an exceptionally good number of *Macmillan* is Miss Probyn's little poem headed "Uncertainties," though we see no great felicity in the choice of the title. Next to this what most takes our fancy is Mr. Augustine Birrell's sparkling paper on "Authors in Court." Mrs. Oliphant, writing of the author of "John Halifax," and Mr. Henry James, writing of Emerson, will be sure to attract many readers; and the articles will not disappoint expectation. The recently published life of "Ferguson the Plotter" is very ably reviewed, the writer's conclusion being that the attempt to reverse the judgment of history on this notorious intriguer has signally failed, though the great interest of the book is fully acknowledged. An anonymous paper on "Social Oxford" is well worth reading, and Mr. H. S. Salt writes not uninterestingly on "Moultre's Poems." The number contains the opening chapters of a novel by Mr. W. E. Norris, entitled "Chris," which seems to promise well.

Blackwood has nothing very noteworthy this month, except the first instalment of M. Charles Yriarte's paper on "The life of Caesar Borgia," as illustrated by recently discovered documents. The Marquis of Lorne's Maltese ghost story looks at first like a genuine personal experience, but before the reader comes to the end he discovers it to be a feeble imitation of Poe. The articles on "Hannah More," "Literary Voluptuaries," "Rabbits in Australia," and "The Academical Oarsman," are readable, but not of striking merit. On the political articles it is not our custom to remark; but we should like to know whether the reference to "a case of undistributed muddle" on p. 864 is a bad joke of the writer's, or a very good joke on the part of the compositor.

In the *Expositor* for December Prof. Westcott concludes his attractive essays on the Revised Version of the New Testament, and Prof. Cheyne begins a rapid survey of that of the Book of Isaiah; Prof. Findlay discusses the reference to Titus in Gal. ii. 1-5; Dr. Dods sketches Malachi and his times; and Prof. Salmond gives a very useful account of recent foreign literature on the New Testament.

MR. G. LAURENCE GOMME has made the subject of Open Air Assemblies peculiarly his own. His paper in the December number of the *Antiquary* is little more than a collection of new material; but it is a gathering made by one who knows what to reject as well as what to preserve. Vestiges of the old open air courts remain in so many widely separated places that it must now be obvious to every-

one that they are really survivals from a very remote period, not, as some have imagined, customs due to merely local influences. A strange rite, it seems, is, or was, recently performed at Thornton, near Sherbourne, Dorsetshire. The tenants of the manor are accustomed on a certain day to go before twelve o'clock at noon to a certain tombstone in the churchyard and deposit in a hole therein the sum of five shillings. This is held to bar the lord of the manor from taking tithe of hay during the year. It would be interesting if this custom could be explained. The tithes were, of course, at one time due to the Church, and we apprehend the five shillings was originally a voluntary offering made in lieu thereof. Mr. P. Hampson Ditchfield communicates an amusing paper on "Hawking," which, however, does not, so far as we can see, contain new knowledge. Sir J. H. Ramsay concludes his notices of the accounts of King Edward IV. The labour of working them out must have been very great. These papers will be invaluable to anyone writing a history of English finance.

BOHN'S SHILLING LIBRARY OF STANDARD WORKS.

FORTY-ONE years ago Mr. Bohn commenced that series of books which, in the opinion of Emerson, "have done for literature what railroads have done for internal intercourse." The continued favour in which the Libraries are still held is attested by the fact that they have been increased year by year, until they now number 700 volumes, and have had a sale from the commencement of about 4,000,000 volumes. The proprietors, however, feel that a time has come at which they may make the more important works of standard literature accessible to a still larger section of the public; and with this object they purpose publishing, under the above title, a series of smaller and cheaper volumes, each complete so far as it goes, comprising select works of English and foreign literature. The text will in all cases be printed without abridgment; and where introductions, biographical notices, and notes are likely to be of use to the student, they will be given. The volumes, well printed and on good paper, will be issued at 1s. in paper covers, and 1s. 6d. in cloth.

On January 1 will be published (1) Bacon's *Essays*, with introduction and notes; (2) Lessing's *Laokoon*, Beasley's translation, revised, with introduction, notes, and synopsis of contents; (3) Dante's *Inferno*, translated, with notes, by the Rev. H. F. Cary. These will be followed, at intervals of a fortnight, by Goethe's *Faust*, Part I., translated, with introduction, by Anna Swanwick; *The Vicar of Wakefield*, Goldsmith's Plays, Plato's *Apology*, Hauff's *Caravan*, Molière's Plays, Helps's *Life of the late Thomas Brassey*, Stewart's *Life of the Duke of Wellington*, &c., &c.

THE KAMA SHASTRA SOCIETY.

SIR RICHARD F. BURTON has just issued to his subscribers the third volume of his "Supplemental Nights," the printing of which was delayed through his illness during the early part of the year. We are glad, however, to say that the latest reports of his health are much better. Among his recent visitors at Trieste was Dr. Schliemann, who has now begun archaeological explorations in the island of Cythera. Sir Richard himself intends to pass the winter at Fiume, where the climate is less trying than at Trieste. He hopes to come to England in May, bringing with him the MS. of the fifth and last volume of the "Supplemental Nights." The fourth volume is already in the hands of the printers to the Kama Shashtra Society.

This third volume of the "Supplemental Nights" was originally intended to be the fourth; but the order has been altered on account of the difficulties which Sir Richard experienced in transcribing the Wortley Montague MS. in the Bodleian, as narrated by himself in the ACADEMY of November 13, 1886. Students, however, will not regret the change, in consideration of their delight at here finding for the first time the true Oriental version of "Aladdin," which has hitherto only been known through Galland's French. As Sir Richard announced in the ACADEMY of January 22, 1887, an Arabic original of "Aladdin" and some other tales was quite recently purchased for the Bibliothèque Nationale by M. Hermann Zotenberg, who will shortly publish a full bibliographical description of his discovery. Meanwhile, he has placed a copy of the MS. at Sir Richard's disposal; and from this the translation of "Aladdin," or rather, "Allaeddin," has been made. "Ali Baba" is another of the most familiar of the "Arabian Nights" stories, for which no Arabic original has yet been found. In order to produce a genuine Orientalised version of this, Sir Richard has had recourse to the following device. After much searching in vain among Persian and Turkish MSS., he at last found a Hindustani version containing the missing tales, which Mr. J. F. Blumhardt, of Cambridge, helped to English. He was thus enabled to escape from the plan he had originally contemplated—of turning Galland's French into Arabic, and then translating that.

In addition to these welcome novelties, the volume is noticeable for its bulk, for Sir Richard generally gives his subscribers more than he promised. We have here the popular English form of Galland's "Aladdin," to compare with the version now first made from the original Arabic; and also an appendix of about 100 pages, contributed by Mr. W. A. Clouston, which describes in detail the variants and analogues of all the tales in the volume.

In the meantime, the Kama Shashtra Society has begun a fresh undertaking—the production of a literal and unexpurgated translation of three famous Persian works:—(1) The *Gulistan*, or "Rose Garden," of Sa'di (A.D. 1258), which may be called not unfamiliar in incomplete versions; (2) the *Nigaristan*, or "Picture Gallery," of Mu'in-uddin Jawini (A.D. 1334), which has never been translated into any Western language; and (3) the *Beharistan*, or "Abode of Spring," of Jami (A.D. 1487), of which one chapter or "garden" was translated a few years ago by Mr. C. E. Wilson, under the title of *Persian Wit and Humour* (Chatto & Windus, 1883). For a popular account of these authors and their rank in Persian literature, we may refer our readers to a little volume published by Mr. Bernard Quaritch in the early part of the present year called *Persian Portraits*. Of the three translations which the Karma Shashtra Society propose to issue to a very limited number of subscribers, the *Beharistan* of Jami—the latest in date but the greatest in reputation—is now ready. It forms a volume of less than 200 pages, with a few notes.

THE LATE MR. JOHN HIRST'S LIBRARY.

DURING the nine days from December 14 to December 23 Messrs. Sotheby will sell the library which the late Mr. John Hirst, J.P. of Ladcastle, Dobcross, Lancashire, had collected during a great number of years. It is an astonishing and at the same time a very creditable circumstance that a gentleman of the activity of the late Mr. Hirst, who up to the time of his death was an industrious woollen and cotton manufacturer, not only found time to collect such a number of books, but, as we can personally testify, that he himself used and

enjoyed these books. Libraries in general reflect to a certain extent the minds of their makers. Being without the advantages of any academical education, Mr. Hirst used to say "I always wish to know what others know," and he collected his books accordingly. This, perhaps, accounts for the fact that we cannot attribute any specific character to his library, though we find in it some sort of system which guided his mind while collecting.

As a staunch Churchman, his attention was, of course, first directed to the Bible, and several rare specimens are brought to market; likewise books on theology and its branches extending over all denominations and sects, several with marginal notes of great writers, such as Melancthon. There may be mentioned also an important collection of MSS., which, it is to be hoped, will not go out of England. As a prominent magistrate, Mr. Hirst naturally gave to the topography of England, and more especially that of his nearest counties—Lancashire, Yorkshire, and Cheshire—an adequate place in his library. These books it was that gave him such intimate local knowledge, and rendered him particularly fitted for an arbitrator in the numerous cases he was constantly asked to decide. Finally, as a business man, and a man of the world, he directed his eyes upon history and biography, voyages and travels, transactions of learned societies, and on books of science, principally relating to his own calling in life. That he did not neglect art may be seen from his portfolios of engravings on copper, steel, and wood; and that he did not omit the literature of the world, from a great quantity of standard authors in various languages. L. S.

CORRESPONDENCE.

AN AUTOGRAPH OF JOHN HARVARD.

Dec. 5, 1887.

Those who are acquainted with the biography of John Harvard, founder of Harvard College, are, of course, well aware of two facts: one being that the only writing of his hitherto known is that preserved in a record deposited in the Registry of the University of Cambridge, consisting of two autograph signatures; the other that he and his brother Thomas jointly held certain property by lease from the Hospital of St. Katharine, near the Tower of London.

It appears desirable to record in the ACADEMY that a third signature has now been found, the discovery of which was on this wise. At the suggestion of the writer, and with the kind and ready assent of the hospital authorities, search was made among their muniments, under the direction of Sir Arnold W. White, Chapter Clerk. The result was the unearthing of the original counterpart lease, dated July 29, 1635, by which the hospital demised to "John Harvard Clerke and Thomas Harvard Cittizen and Clothworker of London," certain tenements in the parish of Allhallows, Barking; and the counterpart is executed by John Harvard and Thomas Harvard.

There is one circumstance which invests the present discovery with peculiar value and interest. The document containing the signature has not passed into the domain of antiquarian curiosity; it has not been picked up for an old song, to be resold for a large sum at a literary auction; nor have we to trace its history from one person to another, as best we can, during a period of two centuries and a half, because it is to-day in the same custody to which it was committed the moment the ink was dry from the pens of the brothers Harvard.

It is very agreeable to be able to conclude with the statement that, thanks to permission courteously accorded, facsimiles of the entire

document, which measures some seventeen inches by twenty, are now being executed. They will be of the full size of the original, and will leave nothing to be desired in style of production. D.

THE COUNTESS LUCY.

London: Dec. 3, 1887.

I propose, in this letter, to trace, as briefly as possible, the solutions offered, up to the present moment, for that difficulty which, according to Mr. De Gray Birch, has "long been felt in English history." The time has, perhaps, now come when their points can be recapitulated with advantage.

So far back as 1826, Sir Francis Palgrave, in the *Quarterly Review*, delivered a slashing attack on the so-called Chronicle of Ingulf, denouncing it as "a mere monkish invention," and as "little better than a historical novel" (xxxiv. 294).

In his introduction to the Record Commission's *Records illustrating the History of Scotland*, Sir Francis thus returned to the subject:—"I have shown on another occasion that there are the strongest reasons for supposing that the chronicle which passes under the name of Ingulfus is spurious," &c. (pp. cvi.-cvii). But the "Lucy" problem he left untouched.

In the meanwhile, Messrs. Bowles and J. G. Nichols, in their *Annals and Antiquities of Lacock Abbey* (1835), repeated all the old story of Lucy without hesitation, in treating of "the family of Romora," just as Sir Henry Ellis, in his *Introduction to Domesday* (1833) had accepted in full (i. 490) the worst of all the "Lucy" authorities, namely, the blundering genealogy in *Monasticon* (iii. 192). But at this point intervened the great authority on Anglo-Norman genealogy, Mr. Stapleton. His communications to Mr. Nichols resulted in the latter's recantation, and in the addition to the book of a special *excursus* (pp. 65-79) signed by Mr. Nichols, but based, avowedly, on Mr. Stapleton's notes. Alluding to the criticisms of Palgrave and Petrie, Mr. Stapleton showed that the feat of the Countess Lucy was "physically impossible." But the mistake he made, as did those who followed him, was this. He ought to have seen that this "paradox" (as shown in my last letter) was caused solely by the acceptance of two statements of fact, of which one is a blunder which a moment's reflection would dispose of, while the other rests on no proof. Instead of attacking these props of the paradox, he boldly cut the Gordian knot by a new judgment of Solomon; and, dividing the unfortunate Lucy in two, he bestowed half of her on Yvo Taillebois, and the other half on Roger FitzGerold and the Earl of Chester as co-parceners:

"There can, therefore, be little doubt that there were two Lucias, the second the daughter of the first (p. 71). "It appears probable that the Countess Lucia was the daughter of Taillebois, instead of his wife" (p. 65).

Thus was Lucy first "dimidiated" more than fifty years ago.

Mr. Stapleton urged at the same time that Roger (*sic*) FitzGerold was identical with Robert (*sic*) FitzGerold of Domesday; and that William de Romara, the castellan of Neufmarché in 1118, was his son by "the younger" Lucy. Both these hypotheses were erroneous, and the former was clearly abandoned afterwards by Mr. Nichols and himself.

The theory thus started of a mother and daughter Lucy was thenceforth given as fact by Mr. Stapleton (*Norman Exchequer Rolls*, 1844, II. cliii.), and repeated by Mr. Nichols in 1841 (*Col. Top. et Gen.* vii. 130), and in a learned and able paper on "The Earldom of Lincoln" in 1846, for the article is plainly his (*Top. et Gen.*, vol. i.). Again, in his paper read

at Lincoln in 1848, Mr. Nichols upheld the same view, though this was by no means (as Mr. Freeman implies) the birth of the hypothesis. Mr. Nichols however, only spoke of it as "the most probable explanation" of the great Lucy difficulty.

Now, I boldly assert that the double Lucy was as yet an unauthorised guess. Dismissing the obvious blunder of the *Monasticon* writer (iii. 192) her performance ceases to be impossible, and becomes only improbable. If we further reject her being a daughter of Ælfgar, the whole difficulty vanishes; and she may, after all, have been but one, and have had her three husbands.* Mr. Nichols, however, oddly enough, accepted throughout the statement of the "monkish historians" (being those quoted by Mr. Birch) that Ælfgar was her father. And in this he was followed by Palgrave (*Normandy and England*, 1864, iii. 472).

But, meanwhile, an advance had been made. In the introduction to the volume of Pipe Rolls for Cumberland, Westmoreland, and Durham, published at Newcastle by the Messrs. Hodgson (probably a clue to the writer) in 1847, it was denied on "authentic evidence" that Ælfgar was Lucy's father (because Ordeiricus gives Ealdgyth as his only daughter); and it was urged that his sons' possessions, which, according to our friends the "monkish historians," passed to her, were, in fact, "distributed among a host of Norman adventurers" (p. xvii.). It was further, apparently for the first time, urged that (1) the Countess Lucy is entered as paying a fine "for livery of her father's lands"; (2) that the fief of Yvo Taillebois is found in the *Testa* in possession of William de Roumare, which it could only be if Lucy was the daughter, not the widow, of Yvo (pp. xvii.-xviii.). This argument was repeated in 1859 by Mr. Hodgson Hinde in his paper on the early history of Cumberland (*Arch. Journ.*, xvi. 230); and, if the statement as to the *Testa* be strictly correct (a point which Mr. Eytton's Lincolnshire MSS. would at once decide), we have here a real argument for the existence of a double Lucy.

But, except for this argument, there is nothing, I contend, to prove the fact; for the Stapleton-Nichols hypothesis is nothing but a guess to explain a difficulty, which difficulty does not, in fact, exist, the two statements upon which it rests being both unworthy of credit.

So late as 1870, in his "second edition, revised," Mr. Freeman still wrote of Lucy: "I know of nothing to connect her either with Yvo Taillebois or with the House of Leofric" (ii. 631); but in the third edition (1877), the words I have italicised were tacitly omitted, and the "mother and daughter Lucy" hypothesis fully adopted (ii. 682). But its first appearance in the *Norman Conquest* is probably to be found in a footnote (vol. iv., p. 472) in 1871. Mr. Freeman there wrote that "Mr. Nichols has made it clear . . . that Ivo's wife, Lucy, was a kinswoman at once of William Malet and the Sheriff Thorold. . . . The younger Lucy, the countess, was her daughter by Ivo." Reference may also be made to *William Rufus* (ii. 549), and to an appendix on "the English connexions of William Malet" in the second edition of vol. iii. (pp. 776-781) of the *Conquest* (1875).

Allusion should here be made to the learned paper of Mr. Riley (1862) on "the History and Charters of Ingulfus" (*Arch. Journ.*, xix., 32, 114), though it is rather valuable for its criticism than germane to the present issue.

* Messrs. Stapleton and Nichols, somewhat disingenuously, referred, in their lack of evidence, to a statement of "Peter of Blois" as to her having a daughter by Yvo Taillebois. They omitted to add that this daughter is specially said to have died young and childless.

To sum up. The Stapleton-Nichols hypothesis (1835), though too readily accepted, was premature, and a needless guess. The fresh arguments advanced in 1847 have created a real probability that there were two distinct Lucies, mother and daughter. The evidence available is so limited that no further progress, so far as I know, has been really made since. In any case, however, the "difficulties" to which Mr. Birch alludes—namely, the "physiological paradox" about the Countess Lucy—are caused solely by his own acceptance of the two erroneous statements of fact to which I have referred throughout. Whether we declare for two Lucies, or for one Lucy with three husbands, the rejection of those demonstrably erroneous statements removes the "difficulties" in question.

Criticism, however, is but a vain thing to those to whom one "authority" is as good as another—and better. J. H. ROUND.

"RASENNA" AND "TURSĒNOI."

Queen's College, Cork: Nov. 26, 1887.

The name Rasenna depends, so far as I am aware, on one solitary passage in Dionysius of Halicarnassus (i. 30):

αὐτοὶ μὲν τοὶ σφᾶς αὐτοῦ ἀπὸ τῶν ἡγεμόνων τῆς Ρασένας τῶν αὐτῶν ἐκείνην πρόπον δνομάζουσι.

Reiske's note is as follows:

"*Ρασένας* Vat. Razenua in versione Læpi. Atque apud Berosum Tyrrenos a quodam Razenuo Razenuos appellatos prodit *Sylb*[urgius]."

I cannot find any such statement in the fragments of Berosus in Müller's *Fragm. Hist. Græc.* Now, according to the *Etymologicum Magnum*, *Ταρσηνοί* = *Τυρσηνοί*. A form **Τρασηνοί* might easily come from *Ταρσηνοί* (cf. *Τρασημῆν* beside *Ταρσημῆν*). The next step might give our form, *Ρασηνοί* (*Ρασένας*), always supposing that the word is not corrupt, in which case we should possibly read *Τρασηνά*. Thus, Greek *Τυρσηνοί*, Lat. *Ē-trus-ci*, and *Tus-ci* (= *Turs-ci*), are simply foreign attempts to represent the native name. This suggestion seems so obvious that I felt certain that it must have been made long since; but I cannot find it in any of the ordinary books of reference. The article in the *Encyclop. Brit.* treats the Rasena and Tursenoi as two distinct races.

WILLIAM RIDGEWAY.

A HITTITE SYMBOL.

London: Dec. 5, 1887.

I was not intending to pursue this subject further; but, since my last letter was written, a fact of very considerable importance has presented itself. There is in the British Museum a broken tablet giving ancient Babylonian hieroglyphs with their value in cuneiform characters. Unfortunately, of these hieroglyphs, on which the cuneiform characters are based, we have on this and some other fragments a very small proportion. But, of the few remaining, there is one which is, with regard to the "Hittite symbol," of great interest. This is an equilateral triangle peculiarly formed. It is disappointing to find the cuneiform character which gave the value of the triangle almost entirely broken away. Menant gives *din* "life," having regard, no doubt, to the form of the archaic cuneiform character *din*, which is found still bearing the semblance of an equilateral triangle. Mr. Pinches, whose opinion on a question of this kind is entitled to much consideration, thinks this view of the matter very probable with reference to the small fragment of the character remaining.

But apart from the meaning, the peculiar form of the hieroglyphic equilateral triangle is also important with respect to the "Hittite symbol of life." The two sides are formed very carefully

with doubled lines; the base has only one line. This accentuation of the sides is in accordance with the fact that the base, as such, is dropped in the Hittite symbol, as it is in the analogous symbol on the Cypriote coinage. We have thus evidence tending towards the conclusion—the truth of which has been already suspected—that the Hittite hieroglyphs are essentially connected with those of ancient Babylonia.

Another piece of evidence wearing a similar aspect may be mentioned. When, some seven or eight years ago, my attention was first directed to the Tarkutimme seal, I came to the conclusion that, while the taller cones engraved thereon denote "king," the very much smaller cones have the meaning of "man," "men," these symbols being of phallic origin; and this conviction has been subsequently confirmed. On a very ancient Babylonian inscription which the British Museum some time ago acquired, "king" is represented by a cone of very similar shape, though the lengthening is otherwise effected, and not, as in the Hittite, by mere extension of size. It was formerly thought that the Babylonian symbol is a rude representation of a man or a mummy. But this view—never, perhaps, very probable—is quite inapplicable to the symbol as it appears on the inscription just alluded to. Here, again, we have a point of connexion between the Babylonian and Hittite; though I do not suppose, even if we should ever recover in any considerable proportion the Babylonian hieroglyphs, that we shall find them identical with either of the classes of Hittite which are now known to us.

THOMAS TYLER.

STRONG PRETERITES.

London: Dec. 5, 1887.

The humorous coining of strong preterites is much earlier than Artemus Ward's mintage. His first book was published, if I do not mistake, in 1862; but I remember the strong preterites in fashion some ten years earlier, as an indirect result of the application of comparative grammar and philology to the study of English. I was held to have "taken the cake" myself by extemporising the preterite "pope clew" from "to pipe clay."

A PHILOLOGIST.

"MORT," "AMORT."

New York: Nov. 24, 1887.

May I recall that Keats, in the eighth stanza of "The Eve of St. Agnes," uses the word "amort" in the same sense that your correspondent, Mrs. Edmonds, gives it in the ACADEMY of November 12.

CLARENCE COOK.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, Dec. 12, 5 p.m. London Institution: "The Future University of London," I., by Prof. H. Morley.

8 p.m. Society of Arts: Cantor Lecture, "The Elements of Architectural Design," III., by Mr. H. H. Statham.

8.30 p.m. Geographical: "Explorations in British North Borneo, 1883-87," by Mr. D. D. Daly.

TUESDAY, Dec. 13, 8 p.m. Anthropological: "The Maori and the Moa," by Mr. E. Tregear; "The Shell-Money of New Britain," by the Rev. B. Danks.

8 p.m. Colonial Institute: "Emigration," by Mr. Walter Hazell.

8 p.m. Civil Engineers: Discussion: "Electrical Tramways: the Beesbrook and Newry Tramway," by Dr. E. Hopkinson.

WEDNESDAY, Dec. 14, 8 p.m. Society of Arts: "Commercial Education," by Sir Philip Magnus.

8 p.m. Shelley Society: "Shelley's Socialism," by Dr. E. Aveling.

8 p.m. Microscopical: "A New Medium," by Mr. A. D. Michael; "The Generative Organs of Ostracoda," by Mr. T. B. Rooster; "The Genus *Micrasterias*," by Mr. W. M. Mackell.

THURSDAY, Dec. 15, 8 p.m. London Institution: "Material of Music—II. Combinations," by Mr. W. A. Barrett.

8 p.m. Chemical: "An Apparatus for Comparison of Colour Tints," by Mr. A. W. Stokes; "The Sulphonation of Naphthalene," by Dr. Armstrong and Mr. W. P. Wynne; "Isomeric Changes in the Naphthalene Series, Nos. 1, 2, 3, and 4," by Dr. Armstrong and Messrs. Amplett, Williamson, and Wynne; "The Reduction of Chlorates by the Copper Zinc Couple," "The Oxidation of Oxalic Acid by Potassium Bichromate," and "A Method of separating Supernatant Liquids," by Prof. O. H. Bothamley; "The Alloys of Copper and Antimony and of Copper and Tin," by Dr. E. J. Bell.

8 p.m. Linnean: "Myriopoda of Mergui Archipelago," by Mr. R. J. Pocock; "Devergent Evolution through Cumulative Segregation," by the Rev. J. T. Gulick; "Apogony and Apospory in *Trichomanes*," by Prof. Bower; "Fertilisation of *Aranjo sericifera*," by Messrs. Johnston and Morgan.

8.10 p.m. Antiquaries: "Jocelin, Bishop of Bath, 1206-1242," by Canon Chubb.

FRIDAY, Dec. 16, 7.30 p.m. Civil Engineers: Students' Meeting, "River-gauging at the Vyrnwy Reservoir," by Mr. J. H. Parkin.

8 p.m. Philological: "Volapük," by Mr. K. Dornbusch.

SCIENCE.

THE SEPTUAGINT.

The Old Testament in Greek according to the Septuagint. Edited by Henry Barclay Swete. Vol. I. Genesis—4 Kings. (Cambridge: University Press.)

A Handy Concordance of the Septuagint: giving Various Readings from Codices Vaticanus, Alexandrinus, and Ephraenis, with an Appendix of Words from Origen's "Hexapla," &c. (Bagster.)

THE beautifully printed volume which stands first of these books is the first instalment of an important scheme which was proposed to the syndics of the Cambridge Press so long ago as 1875 by Dr. Scrivener. Dr. Scrivener's own ill-health, which all scholars will have regretted, seems to have been the principal reason for the delay in its execution; but in 1883 it was definitely placed under the direction of Dr. H. B. Swete, who has had the benefit of the advice of a committee nominated by the syndics, and consisting of Dr. Westcott, Dr. Hort, Prof. Kirkpatrick, and Prof. Bensly.

With such a council-board we are not surprised to find that the details of the plan are remarkably practical and well-considered. It was decided to issue first a smaller, manual edition, with a brief *apparatus criticus*, to be followed, as the work can be carried out, by a larger edition, with a fuller, but yet select, *apparatus*, representing all the most important evidence, not only that of MSS., uncial and cursive, but also that of the leading versions and early quotations. A simple dividing-line was taken. The smaller edition was to confine itself to uncials, and was to give the variants of those MSS. only which had been already published in sufficiently reliable form. All the evidence that would require renewed collations was reserved for the large edition. We may be sure that it was only by a limitation of this kind that the publication of the present volume within so short a period was made possible. The text of the two editions was to be the same. In each case it was to be not a mere reprint of any existing edition but the actual text in every case, as nearly as practicable (for there were, of course, obvious clerical errors, &c., to be removed), of the oldest extant MS. Thus B is followed wherever it is extant; where B fails, N; where N fails, A; and so on. By an excellent method—similar to that of Tregelles, and worthy of all imitation—it is shown on the margin of each page what MS. is being

followed, and also in the notes what MSS. are being collated. This is especially necessary in the case of the Septuagint, where so much of the evidence is fragmentary. The reader can also tell by this means (what in so many editions, not merely of the LXX, he is unable to tell) what may be safely inferred *e silentio*. Another feature which deserves special notice is the great care which is used in discriminating (so far as is possible from printed editions or facsimiles) the various hands in the MSS. Two points in particular which might with advantage be copied by future editors are the reserving of the notation B¹ for the *diorthota* of the MS., whether the scribe himself or a contemporary hand, and the use of B^a, B^b wherever there is any doubt as to the hand to which the correction is to be referred. As the early correctors of NB have really the value of original MSS. these precautions are by no means superfluous. Equal caution is observed in quoting the readings of Cod. Cottonianus (D), the destruction of which by fire in 1731 was so great a calamity. Fortunately it had been well collated by Grabe before this event; and since the destruction all has been done that was possible with the charred remains. The presenting of the readings of this MS., with those of the Bodleian Genesis (E) and the Ambrosian MS. (F), in so handy and trustworthy a form, would alone entitle this edition to our gratitude.

All that has been said will show that the edition has been executed in the very best style of Cambridge accuracy, which has no superior anywhere; and this is enough to put it at the head of the list of editions for manual use. In the succinct and interesting account of the MSS. and of previous editions, the only thing that it seems to us might be desiderated is a little more generosity in the notice of the really great work of Holmes and Parsons. Those editors were obliged to employ collators all over the world, and their work was, no doubt, unequal; and it may be true that those editors were not completely masters of their vast material; but when shall we see so magnificent an undertaking again? There is a tone of disparagement in Dr. Swete's remarks which one would wish away, and which is hardly in proportion with the treatment of Tischendorf in the next paragraph (*cf.* Wellhausen *op. Bleek, Einleitung*, p. 593, 4^{te} Aufl., 1878). Lagarde, too, is another editor with a grand and truly scientific conception, who seems to have met with somewhat less than his due. Nor is the reference to Lagarde quite accurate. He does not answer the question as to the possibility of recovering the three great reconstructions of Lucian, Hesychius, Eusebius, and Pamphilus, with a simple affirmative. His words are:

"Über Hesych. sind wir zu mangelhaft, über die *κοινή* Palæstinus fast gar nicht unterrichtet, und Hesych. durch *ΠΩ* [= Memphitic and Thebaic versions] und Cyrills citate herzustellen wird noch auf lange Zeit nur unvollständig gelingen" (*Ankündigung e. neuen Ausgabe d. griech. Uebersetz. d. A. T.*, p. 25, Göttingen, 1882).

Excellent as is the work before us, it must not be forgotten that it is, and only claims to be, an *ad interim* edition. In the present stage of Septuagint study, it was inevitable that such an edition should have its draw-

backs, and it is very possible that those drawbacks could not be less than they are. In so unsettled a state of things there were certainly great advantages in printing the text of actual MSS.; but was it best to print simply the oldest? The result is a patchwork text representing a number of different families. Imagine a New Testament text in which a few verses were taken from B, and then a few from D, and then a few from A (for that would be a truer analogy for the result obtained than a combination of B and S)! We should hardly consider this satisfactory. However, such a supposed case is of course an exaggeration, which is only used to show the principle of the procedure in the clearer light. For nearly all the present volume, except the Book of Genesis, B is extant; and in the Book of Genesis there are only a few places where A needs to be supplemented by D. A more serious doubt is raised by the further question, Is B really the nearest to the true text of the Septuagint? Only those who have worked at the Septuagint more directly than the writer of this notice can claim to have done should speak on such a point. But there are signs in the air that the long supremacy of B will be contested, if not shaken. Lagarde has pronounced against it (*ap. Cornill, inf. p. 81*); and Cornill, in the closest analysis which has as yet been published of any portion of the text of the Old Testament, has expressed the opinion that B is an extract from Origen's "Hexapla" made at Caesarea, and formed by leaving out the passages marked with an asterisk as interpolations (*Ezechiel, p. 81, Leipzig, 1886*). Now if that were so, it would not indeed lose all its value—for Origen probably made use of good MSS., and his text would therefore have a good base; but it would lose much of its value. Well as Origen's work was calculated to serve his immediate purpose, the object which he had in view was different from ours. He wished to improve the text of the Septuagint by bringing it more into conformity with the original Hebrew. We wish not to improve it, but to find out what the text of the Septuagint originally was. In the search for this, a good MS. of the *κοινή* would really help us more. It would be premature to assume that Cornill's conclusion was proved. It will need to be tested in other books beside Ezekiel; but it is at least a hypothesis which has an important bearing on the criticism of the Septuagint, and especially upon the plan of the Cambridge edition.

A word of warning is, perhaps, necessary to point out that, however true Cornill's theory might prove to be, it would lend but little support to the view that the text of B in the New Testament is also based upon the critical labours of Origen. There was no Hexapla of the New Testament. And this supposed relation of the text of B to Origen in the New Testament is disproved (1) by the absence from B of the most distinctively Origenian readings; and (2) by the fact that many of the readings in which it coincides were certainly older than Origen's time. The text of the New Testament and of the Old Testament must be treated separately, each on its own merits, and so far as possible without prejudice brought from the one to the other. All that it is sought to do here

is to express the hope that the Cambridge editor, in carrying out his admirable work on the larger scale, will not commit himself too much in advance, and that the framing of his text will be considered with as much care as the details of his apparatus.

The anonymous Concordance, published by a firm to which students of the Bible owe much, is an honest, thorough, and useful piece of work so far as it goes. In order to justify the title—*A Handy Concordance*—many limitations were necessary. It was decided to give up the attempt to represent the different renderings of different Hebrew words, as in Trommius, and the confusing variations in proper names. Pronouns and prepositions were also omitted; nor was it possible to add the *lemmata*, or short extracts containing the indexed word, which are given by Trommius and Bruder. These were all omissions which could not well have been avoided; but by far the most regrettable of the omissions, from a scientific point of view, is that of the Apocrypha. In any attempt to form an induction as to the meaning of a word the Apocrypha is most important. It is perfectly true, as urged in the preface, that Trommius could not be followed, and that the whole work would have had to be done afresh from the beginning. But something very like this must have been done already for the Canonical Books; and it was clearly not from the labour that the editor shrank. However, the inclusion of the Apocrypha must, no doubt, have caused delay; and it will be remedied before long in the Concordance, which is about to be published by the Clarendon Press. The great point in a work like this was that the references should be accurate; and this they seem to be in a very high degree. On comparing carefully with Trommius eleven words taken from different parts of the volume, *not one of the lists of references was found to be without some correction*. Of course, in many cases the correction only consisted in adapting the versing to Tischendorf's edition of 1880, which was taken as a standard; but, besides these, there were a number of real corrections and no less than twelve additions—not counting some fifty new examples under the single word *περισκόρια*, which had been all thrown together in one general statement by Trommius. The points verified with Tischendorf were all equally satisfactory. And not less striking than this conspicuous accuracy was the modesty which laid so little claim to it. The book is especially adapted for use along with Trommius, or by those for whom Trommius, or the forthcoming Clarendon Press edition, may be too expensive.

W. SANDAY.

SOME CLASSICAL BOOKS.

Mélanges Renier: Recueil de Travaux publiés par l'École Pratique des Hautes Etudes en Mémoire de son Président Léon Renier. (Paris: Vieweg.) As the admirers of Dr. Mommsen published some years ago a volume of *Commentationes* in his honour, so the admirers and the grateful pupils of the late M. Léon Renier have joined together to do honour to his memory by a collection of thirty-five essays; and these go far toward realising the wish of M. Renier—"replacer la science française au niveau qui lui appartient." M. Ernest Desjardins gives a

very pleasing sketch of M. Renier's early struggles, his adventures in Africa, his services to epigraphy, and his well-deserved honours. He tells also of his co-operation with M. Duruy in founding the *École Pratique*, and claims, as among his services to the cause of learning, "le sérieux et la conscience ramenés dans l'érudition," and, as it were, a "transfusion du sang qui a rajeuni l'Université et la science française." The papers themselves here published are unequal in length and importance, but they are all marked with that bright charm of style which it is so much easier to admire than to copy. The topics treated are very various, and we have not space to do them justice; but every taste in literary or historical study seems to be consulted. There is Persian matter, and Egyptian; there is a paper on points of Sanscrit grammar, and one on teaching children to read by alphabetical cakes. The Dorian tribes in Crete, early Christian usages, Cyrus the Great, and the *communis* of the Middle Ages, occur among the subjects. Nor is palaeography neglected. We find a paper on some Greek palimpsests in Paris, and one on a fragment of Virgil (Bibl. Nat. Latin 7906), which seems to support some modern conjectures, while it also contains some of the readings mentioned, though not preferred, by Servius. This report (by M. Emile Chatelain) holds out hope that discoveries of value may yet be made in the National Library, which "semble avoir été délaissée en ce qui concerne les manuscrits de Virgile." M. Félix Robion, using Egyptian documents, decides that the teaching of Pythagoras was original as to the theory of numbers, but owed much to Egypt in morals and religion. The comparison with Egyptian material is striking, but might be held to be vitiated by our real uncertainty as to the teaching of the Master. Our material is defective on the Greek side. M. Jules Nicole has been looking for some trace in ancient literature of the ridicule which must have overtaken Athenæus for saying that Dercylidas was nicknamed *σκύφος*, for his cunning (p. 500 C.). Casaubon corrected this to *ζίσυφος*, from Xen. *Hell.* 3.1.8; and now M. Nicole finds an echo of the contemporary laughter at the blunder in Lucian, *Vola* 21, *ὁ σκύφος ἀλλὰ ζισύφοβοντι βῆρος*. But how is this possible if, as is generally said, Athenæus did not publish till after 228, while Lucian died at latest in 200? M. Nicole tries to amend these dates. What is the evidence for the date of Athenæus's publication? The appearance in the dialogue of one Ulpianus, identified with the juriconsult who was butchered in 228. But his character, as sketched, does not quite suit, and the remark, *ἀπίθανον εὐρυχῶς*, is not too applicable to the victim of a mutiny. The Ulpianus is therefore a different man, and there is no other evidence except such as would point to an earlier date—*e.g.*, Suidas, who places Athenæus under M. Aurelius. As to Lucian, we know nothing certain of his dates; but the treatise *Quomodo Historia sit conscribenda*, written after 165, is not the work of a very young man, and the *Apologia* speaks of his extreme old age. Now, if he was forty years old in 165, he would be only seventy-five if he lived to 200 A.D., and might well have lived longer. This is certainly plausible, and the chronology of Greek literature is far from being definitely settled; but the weak point is that Lucian may have been much more than forty in 165.

The new edition of Madvig's *Opuscula* (Copenhagen: Gyldendel) will be heartily welcomed by students of Latin. The two volumes, in which they were originally published, have long been scarce and costly; and, although much of the teaching which they contain has found its way into the current textbooks during the half-century or more which has passed since the first collection of them, no

one can afford to neglect the masterly discussions on which it was based. The additions in the present edition are not numerous or very important. They consist of an occasional footnote, and of some *miscellanea critica* reprinted from the *Philologus*, the *Neue Jahrbücher*, and the preface to Madvig's fourth edition (1858) of select speeches of Cicero. But there are complete indexes; and, according to an excellent practice, which ought to be made imperative on publishers, the pages of the earlier edition are given in the margin. A capital portrait has been prefixed, which will make the benignant features of the veteran scholar familiar to many to whom he has hitherto been only a name.

DR. SWEET'S LECTURES ON PHONETICS.

In his fifth lecture at Oxford on "Phonetics," Dr. Sweet described the formation of the stopped and nasal consonants, treated of the acoustic qualities of the consonants, and of the relations between vowels and consonants, showing that for every vowel articulation there is a corresponding consonant articulation. He then went on to analyse the general modifications of which consonants are capable, of which the most important are front-modification (palatalisation) and rounding (labialising), drawing his illustrations mainly from Russian.

In his sixth lecture Dr. Sweet passed on to the synthesis of sounds. He began by defining force or stress, and showed how the sense of unity and separation was dependent on it. He then went on to describe the glides, or sounds produced in the transition from one fixed configuration to another, under the two heads of vowel-glides and consonant-glides, dwelling especially on the various forms of aspiration, and the varieties of stopped consonants.

In his seventh lecture Dr. Sweet treated of syllable-division, consonant-doubling, and other phenomena dependent on stress or force. He then went on to speak of intonation, and gave illustrations of the use of the simple rising and falling and the two compound tones from colloquial English; and, lastly, he pointed out the distinction between the English sentence-tones and the word-tones of Greek and Sanskrit, which are still preserved in the Scandinavian languages.

In his eighth and last lecture Dr. Sweet completed his revision of the vowels, and then went on to describe some abnormal sounds, especially those formed without expiration, such as the suction-stops, or "clicks," of the South African languages. He then pointed out the general principles which determine the "organic basis" of any one language, and finally gave a sketch of the sound-systems of French and German.

OBITUARY.

PROF. T. S. HUMPIDGE, PH.D., B.SC.

THE chemical world will learn with regret of the loss of Prof. Humpidge, of the University College of Wales, who died at his residence at Aberystwyth on Wednesday, November 30, at the early age of thirty-four.

Dr. Humpidge was a Gloucester man, and in early life had little prospect of a professional career. Leaving the Crypt Grammar School at fourteen, he entered a corn-merchant's office, where he remained seven years. But while in that position he was so successful at the evening science classes in connexion with the Science and Art Department (gaining, among other distinctions, the silver medal for geology) that the department offered him facilities for taking a chemical course at South Kensington under Prof. Frankland. Here he published his first investigation, entitled "The Coal-Gas of the

Metropolis," which showed such promise that in 1875 Prof. Frankland recommended him for one of the Jodrell scholarships. About the same time he took the second place in honours and an exhibition in chemistry at the London University Intermediate Science examination. He continued his studies at Heidelberg under Bunsen, and while there he and W. Burney carried out an elaborate research on "Yttrium and Erbium." He also received there the degree of Ph.D., *summa cum laude*.

As a teacher Dr. Humpidge was very successful—both at the De Fellenberg Institute, near Berne, where he held the appointment of science master, and at Aberystwyth, where he occupied the chair of chemistry for eight years. His students, both past and present, speak of him with respect; and he succeeded in gaining not only their confidence but their love. He was most assiduous in his duties, and completely wrapt up in the success and work of his college and students. He also translated and edited for the advantage of his pupils Kolbe's *Inorganic Chemistry*, which has now become one of our recognised text-books, and is just entering on a second edition.

While thus carrying out to the utmost the heavy duties of his chair, he did not, however, neglect scientific research, but spent most of his leisure time at this his favourite pursuit. It was under such conditions that he carried out the investigations into the atomic weight of beryllium, the results of which were from time to time laid before the Royal Society. He attacked this question from the two points of view of the specific heat of the metal and the vapour densities of the chloride and bromide. His researches showed, among other things, that the specific heat of beryllium, like those of carbon, boron, and silicon, only agrees with Dulong and Petit's rule at high temperatures, and did much towards fixing the atomic weight of beryllium as 9.1.

He also planned, and partly prepared, the materials for carrying out the re-determination of the specific heats of many of the metals; but both materials and apparatus perished in the fire which destroyed the college in the summer vacation of 1885. Soon after the fire Dr. Humpidge's health began to fail, and in the summer of 1886 acute nervous prostration necessitated a complete cessation from work. A year's rest, spent partly in the South of Europe and partly on the Cotswold Hills, seemed to have done much towards his recovery, and he returned to Aberystwyth last August with the intention of resuming work. But a relapse set in, and this intention had to be abandoned. Still he busied himself with the plans of the new college; and much of the arrangement and convenience of the new laboratory will be due to his experience and careful thought. Early in November he became much worse, and shortly took to his bed, from which he never rose again. His illness was, there is little doubt, due to the effect of the fire on a constitution already weakened by long-continued and close application, together with the extra strain (at the expense of his entire vacation) entailed by the arranging of temporary premises in which to carry on the work of the science department.

His body was interred in Llangorwen churchyard (near Aberystwyth) on December 3, the whole of the staff and students of the college attending as a token of the esteem and respect in which he was held by them. His loss is deeply felt among both his scientific and private friends, and much sympathy is felt with his wife and two children thus early bereaved.

L. T. T.

CORRESPONDENCE.

THE INITIAL POINT OF THE CHÊDI OR KULACHURI ERA.

Göttingen: Nov. 23, 1887.

In the Central Provinces of India there are found a large number of inscriptions which have reference to the Chêdi rulers of Tripuri, Ratnapur, and other places. A few of them have been edited by Dr. F. E. Hall; a list of the Ratnapur inscriptions was given as early as 1825, by Mr. (afterwards Sir) E. Jenkins; and the contents of most of them have been referred to in the volumes of the *Archaeological Survey of India*. Many are dated in years sometimes called Chêdi-samvat, or Kulachuri-samvatana, which, on historical and palaeographical grounds, cannot be referred to the Vikrama, or to the Saka Era; and it was Dr. Hall who first suggested that they should be referred to an unknown era, the initial point of which must be sought somewhere near the middle of the third century (A.D.). Afterwards, Sir A. Cunningham stated that the dates of these inscriptions referred "to a period close to A.D. 249 as the initial point of the Kulachuri, or Chêdi Samvat"; and the same scholar subsequently, in his *Indian Eras*, felt satisfied that A.D. 249 = 0, and 250 = 1, is "the true starting-point of the Chêdi era."

Having prepared for publication editions of several of the Ratnapur inscriptions, I have for some time suspected the conclusion, thus arrived at by Sir A. Cunningham, to be slightly erroneous. At present, an examination of all the years from A.D. 201 to A.D. 275, by means of excellent tables, which have been constructed by Prof. Jacobi, of Kiel, and placed at my disposal before publication, enables me to state with confidence that the only equation which yields correct weekdays for the ten known Chêdi inscriptions in which the weekday is mentioned, is

A.D. 248 = 0, AND A.D. 249 = CHÊDI-SAMVAT 1.

Starting from this equation, I have obtained the following results:

1. A Benares copper-plate inscription, according to the *Archaeological Survey of India*, vol. ix., p. 82, is dated: Samvat 793 Phalgunâ ba. di. 9 Sômê, i.e. on a Monday. The corresponding English date is Monday, January 18, 1042.
 2. The Ratnapur inscription of Jajalladêva is dated: Samvat 866 Mârگا su. di. 9 Ravau, i.e. on a Sunday. The corresponding English date is Sunday, November 8, 1114.
 3. The Râjim inscription of Jagapâta is dated: Kulachurisaivataarê 896 Mâghê mâsi s'ukla-pakshê rathâshâtmyâm Budha-dinê, i.e. on a Wednesday. The corresponding English date is Wednesday, January 3, 1145.
 4. The Sêrinârâyan inscription, according to Sir A. Cunningham, is dated: 898 Âsvina su. di. 2, on a Monday. The corresponding English date is Monday, September 9, 1146.
 5. The Bhêra Ghât inscription of Alhasadêvi is dated: Samvat 907 Mârگا su. di. 11 Ravau, i.e. on a Sunday. The corresponding English date is Sunday, November 9, 1155.
 6. Another Bhêra Ghât inscription, according to Sir A. Cunningham, is dated: 928 Mâgha ba. di. 10, on a Monday. The corresponding English date is Monday, December 27, 1176.
 7. A Sahaspur inscription, according to the *Archaeological Survey of India*, vol. xvii., p. 45, is dated: Samvat 934 Kârtika su. di. 15 Budhê, i.e. on a Wednesday. The corresponding English date is Wednesday, October 13, 1182.
- While in the preceding inscriptions the figure for the year denotes the current year, in the following the figure for the year denotes, as so often is the case in Indian inscriptions, the year elapsed:
8. A Têwâr inscription, according to Sir A. Cunningham, is dated: 902 Ashâdha su. di. 1,

on a Sunday. The corresponding English date is Sunday, June 17, 1151.

9. The Bharhut inscription, according to the *Archaeological Survey of India*, vol. ix., p. 94, is dated: Samvat 909 Śrāvana su. di. 5 Budhē, i.e. on a Wednesday. The corresponding English date is Wednesday, July 2, 1158.

10. The Têwâr inscription of Narasimhadêva is dated: 928 Śrāvana su. di. 6 Ravau Hastê, i.e. on a Sunday, the moon being in the asterism *Has'a*. The corresponding English date is Sunday, July 3, 1177, on which day the moon was in the asterism *Hasta*, as required.

In conclusion, I would only add that the calculation of the dates under (1) and (6) proves the Chêdi year to have been an ordinary northern year, i.e. a year in which the dark fortnight precedes the bright fortnight of the month.
F. KIELHORN.

A HEBREW NICKNAME.

Owens College, Manchester: Nov. 23, 1887.

In Nehemiah x. 20, we find יָרֵיחַ among the list of those who sealed the covenant. In 1 Chronicles xxiv. 15, we also read of a יָרֵיחַ. Noeldeke is probably right in regarding the punctuation with "Sere" as a euphemism, and in suggesting that the correct reading should be יָרֵיחַ, "swine."

How are we to account for the existence of such a name among the Hebrews? Is it a proof of totemism? May it not be explained by what the Arabs call Tanfir? We find in Lane's Lexicon, s.v. *Nafara* II.:

"Give thou to him a Lagat, a nickname that is disliked, as though they held such nicknames a means of scaring away the jinn and the evil eye. An Arab of the desert said, 'When I was born, it was said to my father Naffir 'Anhu, so he named me Qunfudh (יָרֵיחַ), hedge-hog.'"
L. M. SIMMONS.

"WESTERN ASIA IN THE ASSYRIAN INSCRIPTIONS."

Louvain: Dec. 4, 1887.

It is but a few days ago that my attention was called, for the first time, to the remarks in the ACADEMY of March 20, 1886, on my short treatise, entitled *L'Asie occidentale dans les inscriptions assyriennes*. The reviewer asserts that I have "adopted a tone of superiority towards [my] predecessors which is not justified by actual fact."

Allow me, sir, to oppose to this criticism the very statement with which I begin my *exposé* of Assyrian geography:

"We specially take advantage of the works of Messrs. Fried. Delitzsch and Eb. Schrader, which on many points complete previous researches and open new horizons; but we freely discuss their results, and concerning some questions we are the first to pronounce ourselves."

"The sincere homage rendered to the exceptional merit of Fried. Delitzsch and Eb. Schrader reconciles itself perfectly in our mind with the admiration we have ever felt for the labourers of the first hour, those lucky pioneers, who have cut the ways and planted immutable stakes on every domain of Assyriology. We here appraise works which, if well analysed, are an outcome of Messrs. Oppert and Rawlinson's discoveries. These two savants have gathered in a rich harvest from the field of Assyriology. Their disciples have gleaned after them, and, by collecting ear after ear, they have still formed goodly sheaves."

This, sir, and no other has been my attitude in the incriminated work. I dare hope that you will be obliging enough to insert this letter in your esteemed journal. If my request comes at a late hour, it is owing to the fact that I have but recently come back from a foreign country, where, for the past two years, I have not had the pleasure of reading the ACADEMY.

A. DELATRE.

SCIENCE NOTES.

PROF. J. D. DANA is to be congratulated on having accomplished at his age a journey to the Sandwich Islands for the purpose of re-investigating their volcanic phenomena. The journey extended over ten weeks, and involved upwards of 10,000 miles of travel. When engaged with the Wilkes exploring expedition, in 1840, he visited these islands, and has ever since taken great interest in the phenomena of their volcanoes. His recent mission was to examine afresh the great lava-lake of Kilauea; to study the rocks of its crater; and to compare the Wilkes map with the present outlines. The first results of this journey have been published in the November number of the *American Journal of Science*, and further details will appear in succeeding issues.

PHILOLOGY NOTES.

THE *Classical Review* for December (David Nutt) contains two articles connected with recent correspondence in the ACADEMY—a review of Mr. Gomme's *Romano-British Remains*, by F. Haverfield; and one of Reitzenstein's *Verriatische Forschungen*, by Prof. Nettleship.

Correction.—In Mr. J. Cook Wilson's letter on "Recent Emendations of the Aristotelian Text," in the ACADEMY of last week, in page 375, col. 3, line 48, after ἀλλ' ἐθεύ; insert the words "in the second place"; and in page 376, col. 2, line 2, for "this" read "the."

MEETINGS OF SOCIETIES.

ROYAL ASIATIC SOCIETY.—(Monday, November 21.)

SIR T. WADDE, president, in the chair.—The secretary, Prof. Rhys Davids, read an abstract of a paper by Dr. Edkins, of Peking, on "Foreign Elements in Early Japanese Mythology," in which it was argued (1) that there were distinct traces of fire worship and other Persian ideas in Ancient Chinese History, and that the Japanese in borrowing from China had also adopted Persian ideas. Quotations were given from the legends of Izanagi and Izanami, and other myths, and the conclusion drawn that the Persian elements in Japanese religion were (1) that the dual principle is made the basis of the universe; (2) that many powerful spirits were formed before the physical universe; (3) that things were created in the same order; (4) that the Japanese Yadders Amaterasu is a form of the Persian Mith-ras; (5) that the great angels ruling the wind, fire, earth, water, wood, &c., resemble the Persian; (6) the purification ceremonies; (7) the dedication of white horses in their sun temple.—Mr. Satow did not think that the evidence adduced justified the conclusions arrived at. In order to argue as to the sources of Japanese belief, it would be necessary to go to older documents than those quoted from. That white horses were sacrificed was evidence rather of their having been thought precious than of Persian influence; and that they were offered not only to the sun-god, but to other gods. Purification played an important part not only in the Persian, but also in other forms of faith.—Mr. F. V. Dickins, Mr. Bouverie Pusey, and Mr. Freeland continued the discussion, which was summed up by the president.

BROWNING SOCIETY.—(Friday, November 25.)

DR. E. JOHNSON in the chair.—Dr. Furnivall announced the purchase by the Committee of 250 copies of Mr. Fotheringham's book on Browning's poetry, a copy of which each member would receive in the ensuing week. In view of the recent death of Mr. Alfred Domett, who was the hero of the poem "Waring," whose grand head members had so frequently seen at the society's meetings and entertainments, Dr. Furnivall proposed a vote of sympathy from the society to his widow and family, which was unanimously carried.—The chairman then introduced Prof. P. A.

Barnett, of Sheffield, who read a paper on "Browning's Jews in Comparison with Shakspeare's Jew." The paper began by insisting that the rendering of universal truths is the greatest thing that the poets of each age can do. Homer has given us fighting heroes in an age of fighting; Shakspeare has given us romantic heroes in an age of romance; and so Browning renders for us the best thought of our age. These poets are great, not because of the properties with which they work, but often in spite of them. Shakspeare was great for all time in spite of antiquarian inaccuracy; Browning, the Shakspeare of our time, is great in range and depth of thought in spite of the encyclopaedias. What does it matter whence Shakspeare gets his Lear, his Macbeth, his Hamlet? To all time they are very people who have lived and moved. And so with Browning's work—the tragedy of Andrea del Sarto's life is a tragedy for every age. This age of criticism in which the poet lives has failed to affect his work or limit his scope. Both poets have been attracted by the interesting problem of Jewish consciousness, of that exclusive tribal life maintained in spite of enviroing society. Some of Browning's Jews, as Rabbi Ben Ezra, deal with nothing specially Jewish, but with higher consciousness common to all noble minds. The Jews, however, of "Filippo Baldinucci" and "Holy Cross Day" are real persons, and Browning deals with their souls as Jewish souls at particular crises. So with Shakspeare's Shylock. The histories of Lear, Hamlet, and Macbeth, are histories concerning the human soul; that of Shylock is the history of the Jewish problem at a special period, not the Middle Ages, but later, when Christianity was becoming more human and less brutal. The two poets are alike in historical synchronism. Both indicate honestly the fact of persecution. Antonio grossly insults Shylock without shame, for the opinion of all Venice is at his back. "Holy Cross Day" shows the opinion of all Florence quite as strongly. In both, too, the persecutors show a strong desire to convert the Jews—first rob them and then convert them, for the Christian persecutor had but a small acquaintance with Christ. In both cases, too, the Jews were usurers, for Venice and Florence had what Jews they deserved. In both cases, too, the persecutors were Pagans of the least pleasant type. Both Shakspeare and Browning admit kin-affection in the Jews, and allow them high general morality, probably due to their isolation in an actively criticising society, while the low tone of current Christian morality struck Shakspeare, and made the irony of the social complication a feature in his drama. In both, again, the Jews are patient and courteous. The distinctive note of Browning is that he has penetrated the national consciousness of the Jews; and this is due to his time, for he is a Christian and religious, not a romantic poet. Both are commended for their accuracy in small matters, and yet both show inaccuracies in their acquaintance with Jewish customs; but in both the external matters little, the higher gift makes no error. In "Holy Cross Day," the self-respecting pride of the Jews is well indicated, that consciousness of being reserved for higher things—that incompleteness and perpetual hope of the Messiah, so that "they lived in life and not in act, at watch and ward." Then their contempt for the jumble of Pagan and Christian art which their persecutors delight in—the Madonnas and saints among the heathen rout of gods and satyrs—is expressed. And is it not true that art destroys religion; and that, in proportion as a special religious attitude becomes familiarised by artistic expression, it loses its significance? Who that sees a picture of hell can continue to believe in it?—Dr. Johnson thanked Mr. Barnett for a paper certainly one of the most thoughtful ever read to the society.—Dr. Furnivall asked why art was destructive of religion?—Dr. Berdoe reminded members that the title High Priest used in "Filippo Baldinucci" was an anachronism, as it has been out of use since the destruction of the Temple.—Mr. Revell was much interested in the remark about the destroying power of art, and thought it probable that dramatic forms of art might hasten the decay of some religious beliefs.—Mr. Coleridge contended that realistic imagery has kept religion alive in the hearts of the uneducated.—Miss Whitehead instanced the "Passion Play" at Oberammergau,

as an instance that dramatic art does not necessarily destroy religion. — Mr. Slater suggested that there are two classes of minds—one supported religiously by art, the other diverted from religion by art.—Prof. Barnett replied to the members who had discussed his paper that he was aware that the Jews were not entirely blameless of persecution themselves, as they had joined the Pagans in oppressing the early Christians. The oriental religious sense in its highest developments had considered that all sensuous representations of the Divine Being were wrong, and calculated to destroy the most spiritual conceptions of his existence.

THE ROYAL SOCIETY OF LITERATURE.—(Wednesday, November, 30.)

J. HAYNES, treasurer, in the chair.—A paper was read by Mr. Mackenzie Bell on "The Literary Characteristics of Crabbe and Beckford." The paper formulated a theory that Crabbe, though writing in verse, had few of the higher attributes of the poet as we now understood them, though doubtless, judged from an eighteenth-century standpoint, he did not fall short even in this respect; while Beckford, though writing little verse, was by virtue of his marvellous imagination a great poet. A poet possessed in some degree, however small, genuine imagination and passion—Crabbe possessed neither of these qualities in a high degree, therefore he should not properly be regarded as a poet of high rank; but he had one great quality which would ever keep his name in remembrance, and it was even possible that he was not sufficiently consulted in days when the actual conditions of life among the poor in our rural districts was receiving such close attention and exciting such controversy. The poems which he devoted to the conventional poetic themes of the eighteenth century were worthless, or nearly so. The verses in which he treated of what he saw around him had every attribute of value except the highest poetic quality. In support of his views, Mr. Mackenzie Bell read a passage from "The Library," and then to show Crabbe's extraordinary power of minute description, a long passage from the "Parish Register." In the second half of the paper the reader contended that Beckford was a great poet, though his claim to that title rested mainly on his prose poem *Vathek*. Crabbe had little imagination, and merely described what he saw. Beckford, full of imagination, was an idealist, and by the aid of his imagination conjured up a wonderful romance which almost appeared a narrative of real events, so strong was its hold on the mind. Numerous illustrative extracts from *Vathek* closed the paper.—In a discussion which ensued, Mr. J. W. Bone maintained that however considerable might be the genius evinced by Beckford in *Vathek*, yet its pages were so defiled by the description of abominable things and by defective moral purpose that its perusal produced repulsion.—Col. J. L. Hartley held that the author set out with a moral purpose, though he allowed himself great latitude in working it out.—Mr. F. Shum gave some interesting details regarding Beckford's collections first at Fonthill and subsequently at Bath; and said that Beckford had not only possessed books, but had read them, as shown by marginal remarks.—Mr. Hobbes followed with further information touching Beckford's relics, and Mr. E. Gilbert Highton, the secretary, after in some measure combating Mr. Bone's views, pointed out indications in *Vathek* of Beckford's derivation of ideas from Shakspeare, Milton, Dante, Goldsmith, and even Bunyan.

FINE ART.

GREAT SALE of PICTURES, at reduced prices (Engravings, Chromos, and Olographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—GEO. REES, 115, Strand, near Waterloo-bridge.

The Saône: a Summer Voyage. By Philip Gilbert Hamerton. (Seeley.)

THIS book, with its hundred and forty-eight illustrations, most of which are from the wonderfully vivid pen of Mr. Joseph Pennell,

and its clear and faithful chronicle by Mr. Hamerton, commemorates a remarkable, if not very eventful, voyage on the Saône—a river probably less known to Englishmen than the Nile. It is remarkable, because the enterprise was one which would have scarcely occurred to any but an Englishman, and could only have been performed successfully by one well acquainted with France and Frenchmen. A certain power of organisation, a love of scenery and a love of art, a love also of boating and quiet and meditation, seem other indispensable requisites for such a voyage; and, though these are all possessed by Mr. Hamerton, even he could scarcely have enjoyed it without well-chosen companions. And yet it is not probable that many persons will be induced by his example to spend weeks in a *berrichon*, pursuing the mazes and canals of the Upper Saône at the tail of a steamer or a donkey.

These are reasons why we should be all the more grateful to Mr. Hamerton and Mr. Pennell for giving us so many glimpses of a land (or water) of interest and beauty which few of us will ever be able to explore for ourselves. The deliberate progress of the *Boussemroum* (a long narrow barge on which Mr. Hamerton erected a series of deck tents for living and sleeping) is at least sufficiently reflected in the series of letters which he addressed at irregular intervals to his friend and publisher Mr. Richmond Seeley—letters doubtless delightful to receive, on account of their frankness and simplicity, their clear record of daily difficulties and achievements, their reflections, philosophical and social, their painter-like and sometimes poetical descriptions of scenery, and their occasional incidents of relative importance, such as their temporary arrest as spies at Pont-tailleur, and their narrow escape from the same fate at Verdun. The jealousy of the military authorities in France as to the operations of artists in the vicinity of fortifications is reasonable enough, and has been well known in England since the days of Hogarth; but it is a little surprising to find that even landscape sketching within a *myriamètre* of a French fortress may subject an artist to arrest, and that Mr. Pennell had to give up the notion of sketching near Lyons. When we remember that Mr. Hamerton's party included himself (a well-known Englishman long domiciled in France), an American artist, and an officer in the French army, the suspicion with which their movements were watched is even more extraordinary.

Mr. Pennell's remarkable dexterity in drawing in pen and ink has never been more fully exhibited than in his drawings of the Saône. With an artist's eye for the selection of those "bits" which are natural compositions, he also has a sure sense of the capacity of his tools and materials. His merest sketch has at least the germ of a picture, and he does not try to depict anything which is not within the compass of a definite black line. Nevertheless, within these limits his range of expression is great. He usually leaves the sky blank, but he is quite able to express the power of sunshine, and give softness to its darkest and most defined shadows, as in "On the Quay at Tournus" (p. 250); he can distinguish accurately between many varieties of wall or roof surface, as in "The Church of

St. John Le Losne" (p. 166); he can "tint" by means of pen touches with almost as much gradation as though he washed with colour, as in "The Church at Rupt" (facing p. 102); he can suggest the colour and lightness of innumerable leafage, as in "On the Canal, near Savoyeux" (facing p. 116); and in such little finely finished vignettes as those that adorn pp. 178-80 we have a perfect suggestion of the mysterious shades of evening. It is, however, perhaps in his "Towers of Tournus" (facing p. 236) that we have the most triumphant example of his power in black and white—a drawing masterly alike in what it includes and in what it omits, uniting much suggestiveness with perfect clearness of statement.

Mr. Hamerton makes us so intimately acquainted with the merits and eccentricities of his *patron* and his pilot, of Franki the donkey-boy and Zoulou the donkey, that we share his feeling of regret when the voyage in the *berrichon* comes to an end, and he leaves the captain and the artist to pursue his travels on the Lower Saône, with his son and nephew in his own catamaran. Perhaps it may be a great convenience to be able to sleep and eat on board your vessel, but you certainly see a little more of humanity if you have to seek occasionally for board and lodging. So, at least to the reader, the loss of his former companions has compensation in the pleasant glimpses we get of host and hostess and riverside inns which consoled the crew of the *Avar* for contrary winds and hard towing. Pleasant is the picture of the hostelry kept by the fisherman, surnamed "the Pope," at Port d'Arceat; and inviting the description of the *matelots* which they ordered for dinner. This part of the volume also includes a description of Chalon and one of Tournus, with its memories of Greuze, and is perhaps more generally entertaining, if less special in its interest, than the log of the *Boussemroum*.

COSMO MONKHOUSE.

THE ROYAL SOCIETY OF PAINTERS IN WATERCOLOURS.

DAINTY, delicate, pretty—neither daring great things, nor ever very lamentably failing—such, taken as a whole, is the art of the Water-Colour Society. It is an art in which imagination holds comparatively little place. Few of these pictures bear evident signs of being the expression, in colour and form, of some strong definite feeling, or have power to produce an analogous feeling in the spectator. As we go round the walls of the gallery, recognising in work after work each old friendly familiar style, we come across many admirable transcripts of nature—of nature for the most part in her gentler moods—and much pleasurable and deft brush-work, and we are greeted almost everywhere with a tone of refinement and easy grace. But anything that should come to us as a direct message from nature's heart or man's experience, we do not get.

This, however, is a kind of churlish carping, against the undue indulgence in which the critic should be specially careful; for he too, perchance, has his art, and would like to build up his word-pictures, and quote his Victor Hugo's "Orientales," and Browning's "Easter Day," in illustration of such works, for instance, as Mr. Goodwin's "Gate of Zoar" (198), where the black solid cloud mass looms horrible over Sodom, or Mr. Brewtall's "Uttermost Parts of the Sea" (5),

with its one tree all wind-vexed and tortured, and its desolation of water and sunset. But the temptation to weigh unduly on pictures that lend themselves to verbal description is one that the writer ought obviously to resist. Rather should he dwell gratefully upon what the gallery offers to us of charming and delightful. Here are Mr. George Fripp's "Study in October" (44) and "View from Ardchattan" (50), which are perfect in their golden tone. Here is a most delicately graded piece of chalk down in Mr. Alfred Fripp's "Arishmell" (170). Here are studies of places in which Mr. Alfred Hunt has been so often before—"Whitby" and "Robin Hood's Bay"—studies that remind one of Turner by their scheme of light and shade, and of which I prefer the "Robin Hood's Bays" (163), especially; for in the confusion of "Whitby," Mr. Hunt seems sometimes to find it difficult to keep his sense of atmosphere. As to Mr. Goodwin, he appears to have been everywhere—to English cathedral cities, to Bath, to Switzerland, and, possibly, to Zoar. "The Bristol" (347), with its bow of a vessel for frame, is a beautiful dainty sketch. So is the "Old Bridge, Lucerne" (211). Indeed, if we might "hint a fault," without, most certainly, "hesitating dislike," it would be that the "Rochester" (298) becomes almost unreal through over-refinement.

But how attempt to enumerate here every one of the 368 works in the gallery that deserve recognition? "J'en passe et des meilleurs," as de Silva says in "Hernani." One would like to linger over the works of old favourites such as Mr. Powell and Miss Montalba, and many another. One would like also to say a word of Mr. Hopkins's "Old Market Cross" (239), a pretty piece of silvery colour; and Mr. Beavis's "Outside the Fortifications at Calais" (303), and Mr. Waterlow's "Cottage Home" (17), and Mr. H. Moore's glowing "Sunny Afternoon" (41), and Mr. Herbert Marshall's smaller sketches of seaside picturesqueness, and Mr. Brewtall's varied contributions, of which 210 and 350 are specially noticeable. Mr. Hale, too, has some interesting "impressionist" qualities that might be discussed with advantage. And Mr. Charles Robertson's careful and elaborate "Lawn Tennis" (112) suggests one or two points as to the use of garden flowers in landscape. There is a freshness in Mr. Eyre Walker's work—see specially the "Summer Morning" (283) and "Vale of Meifod" (185)—which is very pleasant; and in the work of Mr. Allan a certain distinctive gravity and weightiness that show curiously beside the airier brushwork of his peers. His "Queen's Jubilee" (69) seems to me over-charged in colour; but, save for one awkward blot of foliage, "On the Seine" (77), with its line of clipped French trees and great reach of river, is very satisfactory.

The society scarcely shows very strong this year in its figure pictures. Mr. Marks, however, does his duty as a valiant Academician should, and his "Secretary" (183) is a sturdy piece of work. Mrs. Allingham charms us as usual, and almost of course. "East and West" (174)—a young mother sitting on the shore reading a letter from far away, a distant ship carrying her thoughts thither, an ayah and a child—you can fill up the story as you like; but in doing so remember to note how well the ayah's dress fits into the general scheme of the picture. As to Mr. Marsh, one can at least say for him that he is evidently filled with a praiseworthy desire to avoid that besetment of English art which consists in making the lower classes look pretty. "Daddy" (107) is a real sailor, and his wife a real sailor's wife—which is more than can well be said of the young lady in Mr. Hopkins's "Son of Neptune" (49). Oh, for an English

Millet to bring home to us by what stern labour and sweat of brow man wrings his living from hard mother earth!

FRANK T. MARZIALS.

CORRESPONDENCE.

ROMAN INSCRIBED AND SCULPTURED STONES.

South Shields: Nov. 28, 1887.

Those readers of the ACADEMY who are students of Latin epigraphy will be interested in hearing that the Roman inscribed and sculptured stones (*Lapid. Sept.* 83, 84, 85, 88, 89, 91, 102, 103 and 200; *C. I. L.* vii., 558, 559, 559a, 574, 573, 572 and 661c)—the most important from Milk-ing Gap Mill Castle, the others from Halton Chesters (*Hunnun*), and hitherto preserved at Matfen Hall—have been most generously presented to the museum of the Society of Antiquaries of Newcastle. They form an important addition to the already large collection belonging to the society.

ROBT. BLAIR.

NOTES ON ART AND ARCHAEOLOGY.

A NEED has long been felt for a periodical which should deal adequately with the higher branches of archaeological research in a scientific spirit, and with constant reference to the progress of archaeological scholarship in this country, on the Continent, and in America. This need will, it is hoped, be met by the issue of a new monthly review edited by Mr. G. Lawrence Gomme, and published by Mr. David Nutt. The review will be divided into sections, devoted respectively to Anthropology, Archaeology, History, and Literature. While mainly concerned to further these studies by the publication of original articles appealing at once to the specialist and to all readers of general culture, the editor will also endeavour to make the review a record and index of antiquarian research in all parts of the world. The first number will, it is hoped, be ready early next year.

It is so rarely that any of the notable pre-Raphaelite pictures come into the market that it may be interesting to note that the famous "Ophelia," of Sir John Millais, painted in 1852, is now for sale, at the gallery of Messrs. Agnew's, Bond Street.

MR. ANDREW MACCALLUM has now on view at his studies, 77 Bedford Gardens, Campden Hill—Smirke's old house—four pictures of Burnham Beeches in the four seasons of the year, of which "Golden October" and "Grey November" are very striking productions. All the ferns and foliage are done with the palette-knife, heavy masses of paint, sharp edged and sharp pointed, being laid on the flat brush background. By this method the foreground stands out in relief, and a depth of shadow, variety of surface, and richness of effect are attained which are impossible to the brush alone. The November picture is a solemn and poetic one. Sombre leafless trees are set against a crimson and golden sunset sky. The dark boles are strongly and finely wrought; the deeply shadowed turf rightly and dimly lighted. The scene grows on you and takes possession of you as you gaze at it.

THE Hogarth Club is about to remove to more commodious premises at 36, Dover Street, W.; and, in order to preserve its individuality as an artists' club, it has been decided to admit one hundred additional artists without entrance fee.

THE STAGE.

STAGE NOTES.

MRS. BERNARD BEERE has resumed, at the Opera Comique, the powerful performance of Lena Despard in "As in a Looking-glass," which was interrupted in the late summer.

At the Haymarket Theatre, under the new régime, the grass is by no means suffered to grow under the manager's feet. When "The Red Lamp" and "The Ballad-monger" are withdrawn, Mr. Buchanan's piece—now in an advanced stage of rehearsal—will be produced. It is, indeed, practically ready. As soon as it shall cease to attract, "The Pompadour" play (by Mr. Wills and Mr. Sydney Grundy) will take its place; and a play by another esteemed writer will—it is already arranged—succeed in due time to that. Meanwhile, people who have not seen the present spectacle should hasten to do so. We criticised the "Red Lamp" at length when it was first brought out. The freshest feature in the performance is the impersonation of the Princess Mourakoff by Mrs. Tree. The author affords almost no opportunity for the study of the Princess as a character; but the circumstances of the story compel her to be torn by conflicting emotions, and of these emotions Mrs. Tree has made herself—not wholly without reference to French methods—a really competent and powerful exponent. For our own part, however—skilled as the actress has become in what are doubtless accounted the great moments of the piece—we like Mrs. Tree best for her capacity of endowing the character, such as it is, with naturalness and dignity at all moments. She says the simplest things with meaning and thoughtfulness; she gives interest to a simple gesture or a position of rest. The part is not only the most trying that she has yet performed: it is unquestionably, also, her greatest success. The "Red Lamp" affords occasion for interesting acting; but, in "The Ballad-monger," we are allowed the opportunity of seeing a piece which is not only good stagecraft but excellent literature. It is written—that is, the original French by M. de Banville is written—with singular force and point; and the translation, by Mr. Besant and Mr. Pollock, is in the best spirit of the original. As regards the acting, Miss Marion Terry is by no means unskilled, even though she may not be very moving as the heroine. Mr. Brookfield is very effective as Louis XI.; but some portion of his effectiveness—the effectiveness, for instance, of his easy cynical "asides"—he has learnt apparently from Mr. Henry Irving. Mr. Beerbohm Tree as Gringoire, the starving ballad-monger, the wandering poet, is as picturesque as wild, as much a creature of the Middle Ages as it is possible to be. His recitation of the ballad of "The Orchard of the King" is admirable. He declines to perfection. The drawbacks to the performance—if it is worth while to name them—are that once or twice, when Mr. Tree would do well to address Louis or Louis' god-daughter individually, he still declaims a little; and that here and there the piece seems to demand Gringoire's quiescence where it gets only his restlessness. Even these things, however, are things which it is possible to contest, and we should be among the first to allow the general excellence of Mr. Tree's creation. It is a performance eminently worth seeing.

THE Kendals have come back to the St. James's with a further representation of "Lady Clancarty."

As a second edition of "Miss Esmeralda" is coming out at the Gaiety on Boxing-day—and as the piece will therefore continue to be played throughout the holidays in the afternoon, while a yet more amazing new extravaganza will hold

the evening bill—it is worth while to draw attention now to the exceeding smartness—spectacular, rather than literary—of the performance. History, upon the stage, does not exactly repeat itself, and the success of "Monte Cristo, Junior," is not precisely matched by the success of "Miss Esmeralda." Still, here we are in those dull weeks just before Christmas, which are notoriously unfavourable to theatrical commerce; and here, still with us, and destined to remain, is "Miss Esmeralda." Mr. Lonnen contributes the comic element to the piece, and he does as much for it in this direction as any one actor can possibly do. His quaint activity is indeed admirable. Miss Marion Hood acts pleasantly and sings with real charm. She is a blonde heroine, in dove-colour and white. Miss Letty Lind dances with extreme agility and some grace. As to colour, she—a blonde lady also—is a very satisfactory "arrangement" in pink and grey. We are bound to smile to ourselves, and to treat the thing as a spectacle. At the Gaiety it is not dramatic (but that which passes for criticism that is wanted, and so we shall venture to comment on the presence of charming "notes" in red, and of engaging "symphonies" in gold and sunny green. As the ballets are danced in long and full and flexible skirts, they are—we feel sure—the delight of the truly cultivated.

CORRESPONDENCE.

AN EXPLANATION.

London: Dec. 6, 1887.

In the ACADEMY of December 3 is a notice of "By the Sea," and the paragraph is a scarcely veiled innuendo that Dr. Aveling was indebted to Mr. Wedmore for his adaptation.

The facts are these. Remembering the extreme baldness of Mr. Wedmore's translation, I suggested that another version might be attempted which should strive to retain something of the charm and poetry of Theuriet's work. This was seven or eight years after I acted in "The Farm by the Sea." I never saw the whole of Mr. Wedmore's MS. My own part I at once returned after playing in the piece. Of the whole of Mr. Wedmore's translation I only remember three lines: two at the end of one of the verses of the ballad, and the final line ("Il ne reviendra plus"), rendered respectively thus by Mr. Wedmore and Dr. Aveling:

"But Saint Azenor, she comes too late
To save from sea, to save from fate."

WEDMORE.

"Wings of the blessed saint are heard
Across the sea like some sea bird."

AVELING.

"He will never come back any more."

WEDMORE.

"He will never come back again."

AVELING.

Not a line, not a suggestion, not one word of Mr. Wedmore's translation was ever seen or heard by Dr. Aveling; and, so far as my memory serves me, there is absolutely nothing in common between the two adaptations save their common origin.

ELEANOR MARX AVELING.

[We understand that the question of Dr. Aveling's indebtedness to Mr. Wedmore in this matter has been made the subject of a communication to Dr. Aveling from Mr. Wedmore's solicitors.—ED. ACADEMY.]

MUSIC.

RECENT CONCERTS.

MR. F. C. COWEN'S "Ruth" was given, for the first time in London, at the second "Novello" Concert on Thursday, December 1. It is often said that the Bible is an exhausted mine, and that, for oratorio purposes, composers must turn to the lives of the saints or to secular subjects. The same story can, however, be used more than once. Everything depends on the mode of treatment. Mr. J. Bennett, in arranging the pastoral tale of "Ruth," has entered into the spirit of the day, and given it dramatic form. But why, as in his book of the "Rose of Sharon," spoil the effect by an epilogue pointing to future times when a "branch" is to spring from the root of the son of Naomi? It spoils the unity of a very good book, and, musically, the last chorus is an anti-climax. The score is full of the composer's happiest thoughts; and, throughout, everything is expressed in a smooth and natural manner. The famous answer of Ruth to her mother, the scene between Boaz and Ruth at the end of the first part, Boaz's air in the second part, and the duet between Ruth and Boaz in the fourth scene are all admirable. For simple utterance, pleasing expression, and agreement of word and tone these portions will compare favourably with anything previously written by Mr. Cowen. The dance of gleaners, with chorus of reapers, is particularly characteristic of the composer. But there is something more than simplicity and charm. In the choruses "The Lord hath done great things" and "Praise Him, call upon His name," there is vigour, striking effects of contrast, and contrapuntal skill of a high order. We have already mentioned one drawback to the work—the epilogue. And we are inclined to think the composer might have presented some numbers in more condensed form. In other words, the picturesque story would surely have been set off to greater advantage in a Cantata, rather than an Oratorio, frame. The performance under the composer's direction was, on the whole, an excellent one. Of the solo vocalists, M^{me}. Albani and Mr. E. Lloyd carried off the chief honours. The contralto music was sung somewhat coldly by Miss Hope Glenn; and Mr. Watkin Mills interpreted the bass part in an efficient, if not always sympathetic, manner.

Herr Heckmann and party commenced a short series of chamber concerts at Prince's Hall on Thursday, December 1. The programme contained a novelty by Beethoven. How is it that the *Grande fugue, tantôt libre, tantôt recherchée* for strings (Op. 133) has never been performed at the Popular Concerts, and, so far as we can ascertain, never before in London at all? Well, Mr. Chappell has so many works of Beethoven which act as magnets to draw the public—such as the "Rasoumofski" Quartettes, the "Kreutzer," or the "Moonlight" Sonata—that it probably never occurred to him to select a piece with which Beethoven was not fully satisfied. He was not exactly the kind of man to be led by public opinion; and yet Herr Nottebohm assures us that the composer, dissatisfied with the reception given to it when performed as the Finale to the B flat Quartette (Op. 133) at Vienna in 1826, withdrew it, and wrote the movement which now concludes the work. And for this he must have had his reasons. The resemblance between the theme on which this fugue is built and the opening theme of the great Quartette in A minor cannot escape notice. In fact, in a sketch-book of the year 1824, sketches for this fugue are found lying side by side with sketches for the first movement of this A minor Quartette. The fugue is an extraordinary piece of music, full of clever devices and daring effects; but there is such an evident

sense of labour, and the combinations are at times so harsh, that the result is more curious than pleasing. Some of the wildest passages sound like a debate of demons in Pandemonium. There is a charming episode in 2-4 time which forms a welcome contrast to the wild confusion of the rest of the music. Herr Heckmann deserves the thanks of the musical public for this opportunity of hearing the fugue. It is by no means easy to play; but the leader and his associates, Herren Forberg, Allecotte, and Bellmann, had evidently rehearsed it with the utmost care; and, for neatness and precision, the performance left nothing to desire. The programme included Beethoven's B flat Quartette (Op. 130), Haydn's in C (Op. 33, No. 3), two movements from Dittersdorf's Quartette in E flat, and Brahms' new Sonata in A for piano and violin, played with much taste and finish by M^{me}. Haas and Herr Heckmann.

Signor Alberto Geloso gave a correct but tame rendering of Mendelssohn's Violin Concerto at the Crystal Palace last Saturday. Mr. G. A. Clinton played with admirable tone and taste a Concerto for clarinet by Julius Rietz, the friend and adherent of Mendelssohn. The Concerto, good in form and style, bears traces of his friend's influence. The programme included a Symphony in E flat by Haydn, one of a set of six composed in 1786 for the *Loge Olympique* at Paris. It was given with due effect under Mr. Manns' direction. The Crystal Palace choir was heard to great advantage in Ravenscroft's clever madrigal, "In the Merry Spring," which was encored.

Much quiet but good work is being done in and around London by various choral and orchestral societies. Those that do not become weary of well-doing may one day shine as stars of the first magnitude in the musical firmament. The Westminster Orchestral Society, now in its third season, gave a concert at the Westminster Town Hall on Wednesday evening last. The band is composed chiefly of amateurs, and the painstaking conductor is Mr. C. S. Macpherson. The playing was creditable. The conductor succeeded by a note in the programme-book in doing what the most eminent conductors have failed to accomplish. In the Mendelssohn Violin Concerto, played with spirit by Miss L. Riley, the break between the first and second movements was not interrupted by applause. M^{me}. Frickenhaus gave some showy pianoforte solos. The society deserves encouragement in its aims and efforts.

M^{me}. Adelina Patti made her farewell appearance previous to her departure for America at Mr. Kuhe's evening concert at the Albert Hall on Tuesday, December 6. The gifted prima donna was in excellent voice, and was rapturously encored after her two last songs. M^{me}. Trebelli, and Messrs. Lloyd and Santley, added to the evening's pleasure. Miss Kuhe played two movements from a Concerto by Hiller. The hall was very full.

DELICIOUS PRESERVE.—The most attractive of all preserves is MORELLA MARMALADE, made from the celebrated Kent Morella Cherry. The stones being extracted, double weight of fruit is given. Sold in 1 lb. pots by grocers, &c. Makers—THOMAS GRANT & SONS, Maldstone and 46, Gresham-street, E.C.

SATURDAY, DECEMBER 17, 1887.

No. 815, *New Series*.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

Memorials of Coleorton: being Letters from Coleridge, Wordsworth and his Sister, Southey, and Sir Walter Scott to Sir George and Lady Beaumont, 1803—1834. Edited by William Knight. In 2 vols. (Edinburgh: David Douglas.)

THERE is not a great deal in the *Memorials* that is new, though many of the letters are now printed for the first time. It does not appear that what we already know about Wordsworth, Coleridge, and Southey is sensibly affected by the present publication. The biographies of the poets will not require to be rewritten in order to include new facts from these sources. Nevertheless the volumes are pleasant reading and have a real interest, if not a distinct value.

The most material part of them concerns Coleridge. Though Coleridge's own letters are not of the first importance, and though the little that he says of himself reveals no side of his character with which we were not already familiar, he is, nevertheless, the leading figure in the book. His health, his domestic troubles, his aims, his literary difficulties, his wanderings and his home-comings are the vein of chief interest. And there is much in these letters that revives speculation on dubious points, but little or nothing that sets old discussions at rest. For example, these letters cover the whole period usually assigned to Coleridge's opium-eating, but give no facts whatever concerning it. Strangely enough, the letters of Wordsworth, which are full of solicitude as to Coleridge's many failures in health, contain, so far as I can see, nothing on the opium troubles. Dorothy Wordsworth's letters hint at Coleridge's occasional excesses in the use of spirits, but say nothing of the drug. Not even in Southey's letters is anything definite on that head to be found. But then Southey, who knew that in 1803 Coleridge was quacking himself with opium cures for the gout, appears to have known nothing with certainty of the habit which Coleridge had contracted until Cottle mentioned the matter in 1814. There is nothing so strange about these memorials as that, with so much about Coleridge's "health or un-health," there is little or nothing about the one pernicious habit which is usually thought to have been the generating cause of nearly all Coleridge's troubles of body and mind. That Wordsworth, his sister, Southey, Sir George Beaumont, and Lady Beaumont, should exchange many letters from 1803 to 1827, and discuss Coleridge on every side of his life and character without betraying a painful knowledge of his opium-eating, shows that the opium-eating was a much less serious element than we now consider it, or

that Coleridge successfully practised an extraordinary concealment amounting in its effect to duplicity. That Coleridge tried to conceal his degrading weakness we know. That (when-ever he began) he concealed it from himself down to 1803 we also know. But that he hid his opium-eating throughout the eleven years from 1803 until he betrayed himself to Cottle in 1814 we cannot believe. He told De Quincey of it in 1807. Is it likely that he lived nearly a year with Wordsworth's family in 1809 without once revealing his daily habit? Or, again, is it probable that Wordsworth and his sister, who did not shrink from discussing with Sir George and Lady Beaumont the most intimate relations of Coleridge with his wife, shrank from the disclosure of his opium-eating? It seems to me that all probability, as well as all the knowledge which we possess of Coleridge's singular openness of mind and his proneness to give free expression to his feelings, compel us to believe that whatever the extent of his habit, it was known to the friends about him. It was not fully known to his brother-in-law, and perhaps it was not fully known to his wife; but after 1803 these two were not among the friends about him.

Little as the light is that these letters afford on the opium troubles, I perceive that in various quarters there is a disposition to use them in support of conjectural statements as to when the opium-eating began. A writer in the *Athenaeum* (November 19) tells us, with the emphasis of certainty, that by the time that Southey, "reconciled to his brother-in-law" (they had then been several years reconciled), was about to arrive at Greta Hall, Coleridge

"had become a confirmed opium-eater," and that "the habit had attained such proportions, that the signification of the symptoms could only be disguised by the most frenzied attributions of the wretched condition of his health to gout, to climate—to everything, indeed, save the true cause."

This is the use to which a writer, who is well-informed on the facts of Coleridge's life, puts a letter written by Coleridge (September 22, 1803) a week after his return from Scotland. The ascertained facts are too few to justify so sweeping a charge of downright deceit on Coleridge's part. What grounds are there for supposing that Coleridge was a confirmed opium-eater when Southey reached Keswick in September 1803? There are next to none. Mr. Traill inclines to the opinion that Coleridge began the use of the Kendal Black Drop about April 1801. He is influenced by Coleridge's letter of that date to Southey, partly quoted by Cuthbert Southey. Prof. Brandl seems to think that Coleridge was a confirmed opium-eater in January 1801 (*Life of Coleridge*, p. 283), but gives no authority whatever. He has none to give. Coleridge himself says that in 1803 he first realised that he had contracted a habit of taking opium. There is no fair reason to accuse the writer of the letter of September 22, 1803, of either self-deception or conscious duplicity. At that time Coleridge was ill. He thought he was suffering chiefly from the gout, and in obvious sincerity he tried various gout medicines. It is something worse than unnecessary to say that all this time he knew full well that it was not chiefly the gout that troubled him.

This may seem to be a small matter, but it is really a large one, for it touches the important point of whether Coleridge is a truthful witness about himself. The writers who question his veracity on this head do not stop at giving him the *lié direct* on matters of less moment. Thus the critic just quoted will not believe that Coleridge spoke the truth when he said that he had suffered a three-months' attack of gout in 1794, and that he had then composed some verses on the terrors of his dreams. We are told that "the verses . . . may have had no existence until he, about this time, composed 'The Pains of Sleep.'" Also, let us add, they *may* have an existence under the title of "Visionary Hopes." Moreover, though Sara Coleridge fixes the date of "Pains of Sleep," as 1803, it is at least possible that the lines may have been composed in 1794, and never written down until 1803, when the return of the complaint recalled them, and they were transcribed for enclosure in the letter of September 22 to Sir George Beaumont. Surely the proper course is to believe Coleridge where we have no overwhelming reason for disbelieving him. The exact opposite of this appears to be the constant habit of some recent writers.

Passing from Coleridge's opium troubles to his home troubles, we find in these letters some definite information on a painful subject. Little has hitherto been known with certainty as to the form taken by Coleridge's differences with his wife. The reticence observed by those who have possessed knowledge of the facts has, perhaps, been a wise one; but it is just as well that there should no longer be any appearance of concealment, for it might come to be thought that there must be something serious to conceal. There has been nothing serious to conceal; and the whole truth, as these letters appear to show it, improves our opinion of Coleridge, without doing injury to any reasonable opinion of his wife. During his lifetime Coleridge was more than once accused of deliberate desertion of his family. It now appears from a letter of Dorothy Wordsworth's that, in 1806, Coleridge parted from Mrs. Coleridge with her full consent. That her consent was, on the whole, an unwilling consent, qualified by many fears as to what gossip would say of them, must certainly be allowed. But that she finally agreed to part from her husband, and made conditional arrangements concerning their children, is only to be questioned by those who are prepared to say that when Coleridge joined the Wordsworths at Coleorton late in 1806 he told them a tissue of falsehoods. It was already known that Southey was against the separation, and that as such he never really countenanced Coleridge's long absences from home. But it was not so fully known that, after a short period, ending with Coleridge's return to Keswick in the autumn of 1806, the Wordsworths were warmly in favour of the separation. They took Coleridge's side absolutely, and without any apparent reservations in Mrs. Coleridge's favour. In their view Coleridge was most unhappily married to a woman who bore to him no single point of resemblance. She was a thrifty housekeeper, and had other good qualities that might have made her a suitable wife for another man; but neither by temper nor by education was she fit for Coleridge, who

would only waste his pains in trying to bring her into sympathy with him. For a time Wordsworth appears to have thought that the best course for Coleridge was to make the best of a bad business, to recognise that it was a bad business, and not to fume or fret overmuch. Thus, he might not be happy, but need not be miserable. But even this negative attitude Wordsworth seems to have abandoned; and, so far as I can see, he spurred Coleridge's moral courage to the making of a definite separation. From 1806 onward Wordsworth acted consistently with his uncompromising view of the situation. He did not meddle with his friend's domestic troubles; but when Coleridge had taken a definite course, he showed sympathy in a very positive way—by inviting him to his house, and keeping him there, or at least suffering him to remain without remonstrance. On the point of Coleridge's care for the material welfare of his wife and children these memorials have nothing new to say.

The business of *The Friend* is much discussed in the letters of 1809. I see nothing here or elsewhere to justify the fine fun which some folks find in the way the journal was managed. Indeed, I begin to suspect my risible faculties when I read with grave bewilderment of "the puzzledom" of Coleridge's "despair" as the defects of his "execrable printing and publishing arrangements made themselves manifest." I cannot for the life of me see where the "puzzledom" comes in. What I do see is that, of all the circle at Grasmere, Coleridge was the person who took the least sanguine view, and perceived the most clearly that the real disasters sustained by his journal were due to the "execrable" "arrangements" of certain of his friends. But then what a joke it is that Coleridge should never suspect in advance that Clarkson had given him—no doubt unwittingly—a bogus subscription list! What fun that the rats at the printing-office should eat up a portion of a MS. ! And what high jinks that the Earl of Cork should quietly accept copy after copy, keep all, and pay for none! It must be that *that* is where the "puzzledom of despair" comes in; only the puzzledom is not Coleridge's, but the exclusive property of his critics. Something to Coleridge's disadvantage is made of the circumstance that during the time of *The Friend* he worked by fits and starts, sometimes not writing a line for weeks and weeks, and then producing an entire number of the journal in two days. This is at least natural, and among imaginative writers a familiar experience. The marvel is not that it was so; but that any man of letters, with habits short of the regularity of the habits of a mill-horse, should express surprise that it was not otherwise.

The reader of these memorials who has exhausted their Coleridge episodes will not find much else to hold his attention. What we read of Wordsworth and Southey adds nothing, so far as I can see, to what is already known. The few letters of Scott are immaterial. Certain side pictures of other people have an interest. De Quincey is lightly sketched by Dorothy Wordsworth as he appeared about the time he went in search of Coleridge at Bridgewater. Wilson (Christopher North) is also well described as he appeared in his early days at Windermere.

Wordsworth's brother-in-law, Henry Hutchinson, the sailor, is the subject of a letter by Coleridge. I have just heard that Hutchinson died in the Isle of Man, and was buried at Braddon, where an inscription by Wordsworth is over his grave. Some of the letters are good reading for their humour and some for their picturesqueness, and one or two for their pathos. Coleridge gives a happy sketch of his fellow-passengers on the way to Malta. Wordsworth describes very finely a view of Fleet Street at early morning, when it was pure white with a sprinkling of new-fallen snow, not a cart upon it, silent, empty, and with St. Paul's beyond solemnised by a thin white veil. No less fine, and of the same kind, is a letter in which Wordsworth describes a view of the Isle of Man from under Black Comb, with the snow on the peak of Snaefell, and under the peak a long body of cloud stretching the whole length of the island and poised above it. These descriptive passages in Wordsworth's letters seem to me to be as good as the very best of their kind in his poetry. There is a noble letter from Southey to Lady Beaumont on the death of her husband. Coleridge's letter, referred by the editor to 1811 (vol. ii., p. 164), seems to me, as to others, to be misplaced; but where it should stand in this correspondence I cannot say. Certainly not in 1804, unless Coleridge visited the Beaumonts at Coleorton on his way to London. Clearly it was written when Coleridge was under the same roof with Sir George and Lady Beaumont. This may have been at Keswick in the summer of 1803; but I should guess from the references to Keswick, Dunmow, and London, that the date was later and the place Coleorton.

The general tone of this correspondence is of the best; and though three of the writers were men of genius, the tone might, under the circumstances, have been other than good. Sometimes as we read we are conscious of a little stiffness and formality, as if the idea were never very remote from the consciousness of the writers that they were addressing persons who had the power to dispense favours. Perhaps the letters of Dorothy Wordsworth are the easiest and most familiar. Wordsworth's letters are often very formal; Southey's are nearly always so; and Coleridge's betray a little excess of warmth. Nevertheless, where money is in question there is never any servility or sham delicacy. In 1804 Coleridge declines a hundred pounds towards his expenses on going to Malta, and in 1825 Wordsworth declines his expenses to Italy; but in neither case is money regarded as too precious a thing to be exchanged between friends whose fortunes are unequal. The relations which this group of men bore towards each other were nearly always free from the faintest trace of uncharitableness. In one instance Coleridge shows his teeth in rather a bitter smile at the absurd over-praise of Southey, and now and again Southey's references to Coleridge are of a piece with nearly everything else written by him on that subject from 1807 to 1834. But, on the whole, the relations were those of mutual goodwill; and, in one instance, Coleridge says that the chief cause of Wordsworth and Southey having been classed with him as a school originated in their their not hating or envying each other. He considered it unusual that friends

should take pleasure in each other's welfare and reputation. If he were living still it is probably that he would still think it unusual.

The attitude of this group of writers towards the rest of the world was fearless and manly. Perhaps in Wordsworth's case it amounted to indifference. There is nothing finer in these volumes than the letter (already well known) written by Wordsworth to Lady Beaumont, telling her to be as easy-hearted as he was concerning the immediate effect of his writings on the reading public. Nevertheless, when the *Edinburgh Review* assailed Wordsworth rather bitterly, Coleridge's silence was not reckoned to his credit. Coleridge professed a great indifference to criticism, but when criticism seemed to empty his pockets he thought that Southey ought to have used the weapon (the *Quarterly*) which was always at his hand. Southey, again, believed he had brought himself to a high disdain of literary assaults by the time he published his *Vision of Judgment*, but Byron enabled him to find out his mistake. On the whole, this group of poets were about as free from envy as is natural to rivals in public favour, and about as superior to public criticism as it is possible for men to be who have to live by public money.

Very beautiful, no doubt, is the calm assurance of ultimate fame which Wordsworth's letter to Lady Beaumont shows, and it has been abundantly ratified. But, then, Southey professed fully as much indifference to immediate reputation and as firm a confidence in his future, and time has not justified him of his faith. There is nothing sure about the fate of books, whether they be good or bad. Chance seems to have most to do with it. And, so far as I can see, the chances are, and always have been, about equal that a good book will fall flat and that it will make a noise. But I fancy the chances are as ten to one that if a good book fails of all immediate effect it will also fail of ultimate fame.

HALL CAINE.

THREE CONTRIBUTIONS TO THE CONTEMPORARY HISTORY OF FRANCE.

Recollections of Forty Years. By Ferdinand de Lesseps. Translated by C. B. Pitman. In 2 vols. (Chapman & Hall.)

Recollections of a Minister to France, 1869-1877. By E. B. Washburne. With Illustrations. In 2 vols. (Sampson Low.)

Memoirs of Count Horace de Viel Castel: a Chronicle of the Principal Events, Political and Social, during the Reign of Napoleon III. from 1851 to 1864. Translated and Edited by Charles Bousfield. In 2 vols. (Remington.)

THESE recollections of M. de Lesseps are disappointing because those which he gives are so interesting. M. Renan, congratulating M. de Lesseps upon election to the French Academy, assured him that, on the Day of Judgment, the Creator will not reproach him for having modified His handiwork, because there he would "continue to play the charmer's part." We know that M. de Lesseps is not unaccustomed to such extravagant language; that he is the most distinguished of living Frenchmen, "next to Lamartine,

the most beloved man of our century, the man upon whom the greatest number of legends and dreams have been built." These volumes, however, contain ample material for an accurate judgment upon the real qualities of the man—his courage, his perseverance, his never-failing hope, his great good humour and resource. There is enough to lead us almost to believe with his French adorers that he was born to cut isthmuses. There is a little which is new concerning the political difficulties of his great undertaking, but scarcely any account or record of the construction of the Canal which would have had permanent interest; and of these volumes the greater part is occupied with dispatches upon the affairs of Rome in 1849, and with essays upon consular duties, steam, Algeria, Abd-el-Kader, and Abyssinia, as to which others might possibly write more effectively than M. de Lesseps. It is interesting to know that it was Lamartine's opinion that, "in the event of a foreign war, a good understanding with Spain is equivalent to 200,000 men on the Pyrenean frontier," and to note how, in another direction, the practical de Lesseps baffled the visionary Mazzini. "I am informed," said the Frenchman to the Italian, "that you have meditated sending proclamations to the French troops. The French soldier would burn down his mother's house if he received orders to do so. You have consequently made a great blunder."

"The origin of the Suez Canal" was that "the government tried to make out that I was mad, and I resigned my functions in the diplomatic service." M. de Lesseps got one hundred friends to join in forming the preliminary company. "We each of us put in a share of £200, and this share is now worth over £40,000." The arrangement of the book is very disorderly, and the early chapter from which we take this quotation contains a promise that the Panama Canal "will be open in 1889." But it will help people to understand M. de Lesseps. He jumps his horse over a fearful wall, and rejoices that "this foolhardy act was one of the reasons which induced the viceroy's *entourage* to support my scheme." When none of a company of Egyptian soldiers could hit a target at 550 yards, the man born to cut isthmuses was asked to try a shot, and twice hit the bull's eye, and then declined a third "so as not to endanger my reputation of being a good shot." Half suffocated and very badly burnt in his cabin on the Nile, M. de Lesseps assured the viceroy, from his bed of suffering, that his accident was of good omen for the rest of the journey as they had acquitted their debt to ill luck.

Of M. de Lesseps' recollections, the most historic is that his father, who was political agent in Egypt in 1803, selected Mehemet Ali for the Pashalik of Cairo. Another is that Louis Napoleon, while a prisoner at Ham, having received powers for organising in Europe a Panama Canal Company, asked to be allowed to leave for America to undertake this mission, and M. de Lesseps has "reason to believe that he was on the point of going there from London when the revolution of 1848 opened the gates of France to him." How M. de Lesseps courted the aid of Cobden and combated the hostility of Palmerston is recorded; as, also,

the early favour with which the Duke of Cambridge and Mr. Gladstone regarded the Suez Canal. In 1856, the duke "expressed very freely and without the slightest reserve his sympathies with the project." In the same year, Prince Metternich advised "regulating by means of a convention the perpetual neutrality of the passage through the Suez Canal." But while M. de Lesseps strove with English energy for English support, he knew that "in France the opposition of England will be the chief source of attraction for us. You may rely on me that this will be so." With Napoleon III. he had so much power that, on asking for the recall of M. Sabatier, the French Consul-General in Egypt, the emperor replied: "If that is all you want, it is easily done. You can tell Walewski so." Again, the emperor aided him by refusing, one New Year's Day, to acknowledge the presence of the Turkish ambassador. The sultan's representative begged to know the cause of offence, and "the only answer he got was an expressive gesture accompanying the single word 'the firman.'" After this, and having said that "France could not allow England to take peaceable possession of Egypt," M. de Lesseps' recollections drift away from the Canal. M. de Lesseps is probably too much occupied to write a better book; and this, which is largely composed of desultory compositions with little or no reference to himself, is consequently marred by many repetitions and by conspicuous lack of methodical arrangement.

Mr. Washburne's recollections are much more consecutive. They are interesting as those of a shrewd, honest, kindly man who, during the siege of Paris and the rule of the Commune, occupied a remarkable position. They are prolix and apt to ramble far from the scene of action. Any competent editor, save the author, would have omitted or abbreviated most of the dispatches which occupy so many pages. There is matter of real value in these volumes; but it might have been contained in one. Louis Napoleon illustrated to Mr. Washburne "the great trouble of the French," their lack of self-help, by the story of "an old woman who stated to him with great earnestness that she had lost an umbrella, and she thought the government ought to furnish her with another." Mr. Washburne gives some original matter, such as Bismarck's dispatch, in which, after sanctioning the passage of General Burnside and Mr. Forbes through the German lines, he says: "This liberality of ours has been rewarded by those excellent cigars you have been kind enough to send me." The most extraordinary political occurrence in Paris was the appointment by a crowd of the National Defence Government. Gambetta threw out the names on slips of paper from a window of the Hôtel de Ville. The crowd approved, "and the men, without any other warrant of authority, were received and acknowledged by all the officers of the departments." Mr. Washburne has much scorn for some of the ways of the Parisians during the siege—their meetings with talk "for hours, calling it 'saving France'"; their mural inscriptions, "such as *Mort aux Prussiens, Deux têtes pour trois sous, Bismarck*

et Guillaume. And that is called making war!" Of their twenty-three daily newspapers, he says: "The amount of absolute trash, taken altogether, surpasses anything in history." But he admits that the French fought bravely around Paris, though they were badly led. Of their general, he says: "Trochu was too weak for anything, weak as the Indian's dog which had to lean against a tree to bark; the most incompetent man ever entrusted with such great affairs."

The second volume deals with the Commune. Among the decrees of that government, Mr. Washburne notes one "exempting tenants from the payment of rent for the previous nine months." The burning of the guillotine Mr. Washburne regards as "a piece of foolery and absurdity." On the day of the great struggle around the Hôtel de Ville with *pétroleurs* and *pétroleuses*, one of the employés of the legation "counted in the Avenue d'Antin the dead bodies of eight children, the eldest not more than fourteen years of age, who, in distributing these incendiary boxes, had been shot on the spot." A Versailles officer told Mr. Washburne "that the order was to shoot every man taken in arms against the government." When the Communal Government was declared the Bank of France had 3,000,000,000 francs in gold and silver. It "got off by paying, during the Commune, only 7,500,000 francs." The bulk was preserved by the skill of the sub-governor, who said to the Communist leaders: "The day you lay your hands upon the Bank of France its notes will not be worth more than the old assignats. All your National Guards have their pockets full of 20 franc notes, and you will ruin them at one blow." In the conclusion of Mr. Washburne's pages, we learn that his brother, a manufacturer in Minneapolis, had sent two blankets for presentation to M. Thiers, on whose behalf M^{me}. Thiers wrote appointing a day to receive Mr. Washburne and the fraternal offering. Before the day arrived, M. Thiers died; and, after his funeral, M^{lle}. Dosne told Mr. Washburne that "the last words he uttered were in reference to my coming to see him the next day." Among the last words of great men, it is worth remembering that those of *le libérateur du territoire* had reference "to a pair of carriage blankets of American manufacture." As an interesting sample of much irrelevant matter in these volumes, we may give Mr. Washburne's testimony as to the customs arrangements of New York, where he says:

"Persons going from the United States to Europe, desirous of taking back with them large quantities of dutiable goods, make their arrangements with the Custom-house officers before leaving New York, and on their return home and arriving at the port, their trunks were passed through without examination; but if arrangements had not been made beforehand bribery was openly resorted to at the time of landing." He adds that "the consequence was to induce many persons to go abroad having in view the purchasing of such articles as they wanted and defraying the expenses of the trip by the saving effected by the non-payment of the duties."

Of the six volumes before us, the most original and interesting are those containing memoirs of Count Horace de Viel Castel, who, though disposed to give most people a bad name,

had undoubted opportunities of seeing the inner life of the Court of Napoleon III., and we cannot help regretting that his notes do not extend to the catastrophe of 1870. Of the translator and editor much need not be said. His spelling—"Bourquency," "Violetle Duc," "Madier de Monjau," "Palikoe," "Constitutional," "pronunciamento," and "laqueys"—is strange. As to the count's temper, a judgment may be formed perhaps from two passages:

"My old friend, La Guéronnière, . . . has committed all the crimes that tarnish a man, though they do not come within the code, . . . and the foul petticoats of a miserable woman have become the winding-sheets of his honour. . . . My poor friend Marshal Canrobert, an excellent fellow and a very brave officer, though a wretched general, . . . is one of those frogs who presume too much upon the elasticity of their skin."

But there can be no mistake as to the count's picture of corruption. He says of the court:

"Ever the same disgraceful jobbery, immoral collusion, and trafficking in places, dignities, and so-called honours." Persigny was "as much like a gentleman as chicory is like coffee. . . . All the emperor's family, with very few exceptions, are a blackguardly set, and do him infinite harm."

Throughout, the emperor himself appears to be the best man of his court. Slow, cautious, sometimes irresolute, but with one idea and object—the glory of his dynasty—Napoleon is ready to make use of the English alliance, of any one, or anything, to that end. The count thinks his ruling idea was to avenge 1815:

"It is my conviction that Napoleon III. does not like England. . . . With that calm dissimulation, the power of which he possesses in a greater degree than any one in the past or the present, with that patience, the practice of which he acquired during the solitude of a long captivity, he continues by a different process his uncle's work."

The furnishers of his palaces were "obliged to give receipts for a third more than the value of the goods supplied, and the difference goes into the pockets of the officers of the household." The emperor complained of the notoriety of St. Arnaud's losses on the Bourse, and gave Fould as his informant:

"Fould!" exclaimed St. Arnaud. "Why, sire, he has been speculating for a fall and I for a rise. I believed your Majesty's Government would inspire confidence, and I lose; your Minister of State has calculated on a panic, and he wins."

As for honours, the Count says: "It is no longer a legion, it is a rabble of honour." This is strong, but not so epigrammatic as the remark of another French writer: "Once they hung thieves on crosses, now they hang crosses on thieves." Prince Napoleon has the full weight of the count's contempt, of whose sister, Princess Mathilde, he was the intimate friend:

"In appearance he is like Napoleon I., without his expression; all that was grand in his uncle's nature is mere astuteness and vulgar instinct in the nephew's. The bitter enemy of Napoleon III., any favour conferred on him he attributes to the fear he inspires. If he were brave, one might pray that a bullet might carry him off, but there is no such hope."

According to the count, Prince Napoleon replied to La Guéronnière:

"The advantage of my position consists in my bad reputation. It would be almost a misfortune for the heir to the throne not to have a bad reputation. . . . The least act of virtue is consequently appreciated at a hundred times its real value."

When our queen visited Paris, this prince received the Order of the Bath.

"Censorious wits," says the count, "assert that this will not make him clean, and that the Queen would have done better had she simply send him a good-sized cake of Windsor soap."

The character of the Empress Eugénie is unblemished in these scandalous chronicles by anything except the accusation of political and pecuniary imprudence:

"The empress only thinks of herself and of getting what diamonds, jewels, and money she can out of the emperor. . . . The empress has 100,000 francs a month, and is found in everything. . . . She compromises the imperial policy with regard to Poland. . . . She wishes to support the insurrectionary movement in that country at whatever cost."

The emperor said to her one day, when they were not alone: "Really, Eugénie, you seem to forget that you are French and that you are married to a Bonaparte." She prayed for the pardon of Orsini because "he is such an excellent patriot"; and Gen. Espinasse said roughly to her Majesty: "Why do you meddle in this matter? If you are so unfortunate as to obtain Orsini's pardon you will not be able to show yourself in the streets of Paris without being hissed." As to Poland, the empress seems to have been moved by her religion; and as to Orsini, by dislike for Austria.

The count is a good hater of England. At the time of the Orsini attempt he thought "the policy of England infamous." He rejoiced to hear from London that "An association of working-men called the 'Trades Union' are raising the flag of Socialism, and presuming to dictate terms even to the manufacturers themselves." He inclined to think the fogs of Paris "another of the results of free trade." That the Queen of England should "bring a fleet to Cherbourg at the time our squadron is there, and not stay and assist at the fêtes," he thought "the very alpha and omega of impertinence." The count was a pamphleteer, and one of his productions bore the title, "English Sentiments of Justice and Humanity with regard to the Question of India." He seems to have felt pleased when the *Times* attributed it to "Canrobert or a Russian agent."

ARTHUR ARNOLD.

Industrial Peace. By L. L. F. R. Price, with a Preface by Prof. Alfred Marshall. (Macmillan.)

THEORY and fact are seldom so happily united as in this work. Prof. Marshall, in an important preface, explains the rationale of arbitration and conciliation between employers and workmen. A theoretical exposition of this subject was much needed. It lies beyond the scope of the text-books, which for the most part assume a law of supply and demand based upon competition. As

long as we suppose the force of competition to have free play, it is comparatively easy to work out an exact theory, "like the exercises of a chess player," to use Prof. Marshall's happy metaphor, "delighting in brilliant combinations, and without a sigh for the knights or the pawns who may be sacrificed on the way." But when we are not entitled to assume that each individual is independently trying to make the best bargain for himself—when combinations act in concert—the exact character of economic science becomes blurred and obliterated by the action of political and ethical elements. What is now required is the sort of considerations which regulate a commercial treaty between two communities, rather than the laws appropriate to a perfect market.

Upon this obscure topic Prof. Marshall throws a ray of light. He does not, like so many of his predecessors, shrink from analysing the popular notion of "a fair rate of wages." He abandons, indeed, or defers to a distant future, the application of an abstract ideal justice. "An absolutely fair rate of wages belongs to Utopia." The working principle seems rather to be a justice based upon custom.

"The starting-point in our search for the rate of payment for any task, in the limited sense of 'fair,' with which alone we are here concerned, may be found in the average rate that has been paid for it during living memory; or during a shorter period, if the trade has changed its form within recent years. But this average rate is often very difficult to determine; and, therefore, for practical purposes it is generally best to take in lieu of it the rate actually paid in some year when, according to general agreement, the trade was in a normal condition."

The difficulty of ascertaining the normal year is aggravated by additional complexities. It appears that the notion of fairness, as above described, is not the only regulative idea which is present to the mind of the contracting parties. While making peace they may have an eye to the possibilities of war. The terms of the pact are often adjusted with reference to "the general tendency of economic forces," if not, indeed, to "the extent of the preparations for war on either side."

The theory of Prof. Marshall is consistent with the exemplifications contributed by Mr. Price. The book, like the preface, is free from the affectation of an abstract simplicity unsuited to the subject. Mr. Price does not fall into the error which has been called—by Jevons, if we remember rightly—the fallacy of a single principle. He is aware that there cannot be "any single panacea for social ills." He expects to see "the old relation of wage-payer and wage-receiver continuing side by side with the new developments" of co-operation and industrial partnership. He does not attempt to confine within strict classifications the endless variety of affairs and institutions. At the same time, by a judicious arrangement, he enables us to grasp the immense mass of heterogeneous details which he embraces. He illustrates by numerous examples both the possibility and the difficulty of determining a normal rate of wages.

"If wages are to be regulated by selling prices, there must be some agreement with regard to the time when the two are to be considered as

standing in a normal relation towards one another.

"But this agreement upon a fair and normal relation is by no means easy of attainment; and the history of arbitration in the iron trade of the North abundantly illustrates this."

In fact, a "fair rate of wages" would seem to be, like Aristotle's standard man, serviceable when found. The parallel is not altogether discouraging. Just as, in spite of philosophical disputes, common sense is agreed upon the general maxims of morality, so in the special department of justice with which we are here concerned, the examples adduced by our author show that a definite solution, though by no means easy, is yet not so hopeless as it may appear from a speculative point of view. Good sense exercised on the merits of each particular case, under the control of good temper, appears to be of more avail than abstract theory. For detailed illustrations we refer the reader to Mr. Price's exhaustive work. We must content ourselves here with the summary encomium, that the book is worthy of the preface. Or, if a standard of excellence *in pari materia* should be applied, we venture to pronounce that Mr. Price's work is not unbecoming a place beside the celebrated studies upon *Sliding-scales* which have been executed by Prof. Munro.

F. Y. EDGEWORTH.

THREE TOURISTS IN THE WEST.

A Year in the Great Republic. By E. C. Bates. (Ward & Downey.)

A Lady's Ranch Life in Montana. By I. R. (W. H. Allen.)

The Making of the Great West, 1512-1883. By S. A. Drake. (Fisher Unwin.)

OF these three books, two are the record of the writers' personal impressions of America. The third rehearses seventy years of "old deeds in countries new," and, on the whole, is the more useful of the three.

What a lady thinks of certain people, or of certain cities, is to a large extent dependent for its weight on the opinion which the reader may entertain regarding the value of her verdict; hence, the uncertain price at which Miss Bates's views will be appraised. The latest American tourist undeniably writes with ease, and often with force. But she has not much to tell that was worth telling, and nothing whatever, except experiences and impressions of a merely personal character, which has not been told many times before. She visited Canada, Boston, New York, and Philadelphia, crossed "the Plains" to California, went North to Vancouver Island, "did" the Yellowstone Park, Salt Lake City, and Chicago; and she seems to have religiously seen everything that everybody else sees, from the Yosemite Valley to the pig-slaughtering place on the shores of Lake Michigan. Such a journey, if made twenty or thirty years ago, would have meant fame. Performed in these prosaic days of railways and great hotels, it becomes singularly commonplace. In any case, the tale of her holiday could have been told in less space than two volumes. Much of it is padding—interviews with more or less eminent people, and descriptions of Boston preachers—while

nearly a hundred pages are devoted to a most unimproving account of spiritualism in America, though, in truth, it might just as well been an account of that folly in London, or in Sydney. As a rule, however, Miss Bates writes to the purpose, and with feminine good taste. She has the redeeming merit of being rarely dull; and if she steels her heart so far to apply the pruning-knife freely to her next edition—padding, passage over, fellow-passengers, preachers, spiritualists, guide-book, and even to the cackle of Boston *literati*—we could safely recommend it as a readable narrative of the commonplaces of travel along the beaten tracks of the New World. Only she would in future show wisdom in being very chary of statements which are evidently of second-hand origin. The steamboat or hotel acquaintance is seldom a safe informant, if the kind of social gossip he imparts is on a par with that in the first ten lines of the fourth paragraph of vol. ii., p. 149. These cannot be pleasant reading to the family of the most famous governor who ever ruled British Columbia, or to those who, like the reviewer, can look back on the friendships of half a lifetime. This statement regarding a much-esteemed lady is, as Miss Bates puts it, absolutely erroneous. Indeed, the entire paragraph is so out of place that, if she desires to keep in the good graces of old North-Westerns, she will delete it, and a few more of an equally "man-in-the-street" appearance.

Mrs. "I. R." is a much less pretentious writer. Her little book consists of letters from an English horse-ranch in Montana, which, though not containing anything of either political or geographical moment, may be commended for their unaffectedness and the freshness that first impressions generally impart. At the same time, it is one of those volumes which are more interesting to the home circle than to the wider world, who have not the pleasure of the young bride's acquaintance. An index or a table of contents would have improved the volume, as the former would have made Miss Bates's memoranda more accessible than they are.

Mr. Drake's prettily illustrated contribution to the current literature of American travel is of an entirely different character. It is a narrative of adventures, though the adventures are not those of the author, but of the men who explored and opened up the great West, from De Soto to Brigham Young. The Spanish, French, and English civilisations are traced, the birth of "the American idea" described, and the gold discoveries in California and what they led to limned in language as clear as might be expected from a writer so practised as Mr. Drake. The cuts are numerous and appropriate; and, though not always new, are not likely to be very familiar to the readers of this volume. No more welcome present could be offered to an intelligent boy; indeed, there are not many parents whose knowledge of American history is so thorough that they will find this story of the Western pioneers a twice-told tale.

ROBERT BROWN.

NEW NOVELS.

A Devout Lover. By Mrs. H. Lovett Cameron. In 3 vols. (White.)

Harmonia. By the author of "Estelle Russell." In 3 vols. (Macmillan.)

Seth's Brother's Wife. By Harold Frederic. In 2 vols. (Chatto & Windus.)

The Plan of Campaign. By F. Mabel Robinson. In 2 vols. (Chatto & Windus.)

The Yoke of the Thorah. By Sydney Luska. (Cassell.)

Propsy. By J. B. Douglas. (London Literary Society.)

Daddy's Boy. By L. T. Meade. (Hatchards.)

Briar and Palm. By Annie S. Swan. (Edinburgh: Oliphant.)

Most readers will think that the susceptibility of Mrs. Lovett Cameron's hero-lover is quite as remarkable as his devotion, and it is certainly more entertaining—that is, at the outset, for as the story goes on it becomes a little tiresome. While prowling aimlessly about the lanes on Sunday morning, instead of going to church to set a good example to his father's parishioners, Geoffrey Dane meets a young lady curiously attired in a poke-bonnet and a long black cloak, who has, however, a pale, oval face, curved red lips, eyes of divine and heavenly blue, and a figure "whose absolute perfection of outline a Juno might well have regarded with envy and despair." We are, of course, prepared to learn that Geoffrey falls in love at first sight with the paragon in the poke-bonnet; but the rapidity with which he betrays his passion is somewhat startling, and the promptitude of the lady's response still more so. Madame de Bréfour is living in seclusion with her father-in-law at the Hidden House, for she has a husband who is an imbecile, and who ought to be a convict, and she professes to have retired from the world of men and women to the world of books. Perhaps, like the Lady of Shalott, she has become "half-sick of shadows"—even the shadows of Bacon and Erasmus—so when Geoffrey, at her own request, calls upon her, she first leads him to suppose that she is a widow, then allows him to go down upon his knees and cover her hand with kisses, and finally dismisses him with the tender words "God bless you, Geoffrey." This kind of thing goes on at intervals throughout the story; but as both the young man and the grass-widow are—to use the American humourist's phrase—"virtuous to the verge of eccentricity," there is no nearer approach to anything like impropriety. Unfortunately, as a rule, a record of philandering between a young married woman and a man who is not her husband, is, if not improper, at least dull and unlife-like; and to this rule *A Devout Lover* is not an exception. Geoffrey's secondary love-affair—if such it can be called—with Angel Halliday, whom he marries because Madame de Bréfour requests him to do so, is hardly more natural; indeed, human nature, as most of us know it, is to be found only in comparative unimportant persons like Miles Faulkner and Angel's sister Dulcie, who conduct their affairs, love-making included, after the fashion of ordinary beings. It would be unfair to

leave the impression that *A Devout Lover* is destitute of good things. It has a few well-conceived situations, and some of the conversations are bright and easy; but the mirror it holds up to nature has a good many non-reflective or distorting patches which stand sadly in need of re-silvering.

I hope I shall not raise expectations which will not be fulfilled when I describe *Harmonia* as a sort of rough-hewn American *Cranford*. It is, like *Cranford*, not so much a story with the orthodox hero, heroine, and plot, as a sketch of a little community whose character is simple and well marked and whose manners are more or less primitive. The author of *Estelle Russell* is not a Mrs. Gaskell, for she has not Mrs. Gaskell's inimitable lightness of touch or peculiar grace and humour; but she possesses some of what may be called Mrs. Gaskell's minor qualities—her quick observation, her aptitude for arranging effective groups, and her power of indicating character by a few simple descriptive or dramatic strokes. *Harmonia* is a new "city"—English readers must remember the American significance of the term—in one of the United States lying south of "Dixie's line," and the story deals with the characters and fortunes of some of the earliest citizens who constitute a rather miscellaneous crowd. Harry Tregellas and his young wife, who stand out well in the foreground, are a well-bred and admirable, rather than specially interesting, young couple. But the unscrupulous Major Forepaw, who intends to make his pile out of *Harmonia*; the ignorant, greedy, pig-headed parson, Mr. Bloss, whose aims, though humbler, are not one whit more exalted; the easy-going, somewhat dissolute young Englishman Raine, of whom love makes a man; the Haverstocks and the Ellacombes—all are really entertaining portraits. The chapter devoted to the meeting of the committee for fixing Mr. Bloss's salary, at which Tregellas wins golden opinions by contributing twenty dollars and a "shote"—*Anglice*, a half-grown pig—is specially good; but, indeed, the book is good throughout, though not, perhaps, with that special kind of goodness which attracts the ordinary English novel reader.

Seth's Brother's Wife, like the book just noticed, is an American story; and if Mr. Harold Frederic be a new writer, which, apparently, is the case, he is a writer from whom something good may fairly be expected. His present story is very good indeed—simple but exceedingly workmanlike in construction, and with a really strong capable grasp of character. One cannot but feel that Seth Fairchild proves a fool of the first magnitude when he allows himself to be fascinated by the mean, shallow, heartless woman whom his brother Albert has been unfortunate enough to make his wife; but there is at least a grain of folly in the composition of most of us, and the writer's skill is shown in letting us see how Isabel Fairchild worked upon the weak side of a man who was not by any means altogether weak, but whose weakness, such as it was, she had thoroughly mastered. In the general conception of Isabel there is nothing new—it is as old as the story of Delilah; but the presentation is as fresh as if the author were dealing with a type of character hitherto unutilised in fiction.

There is fine art in the way in which the New England temptress begins her spells by a factitious claim upon Seth's gratitude; and she is so astute and self-possessed throughout that even the reader does not really know her for what she is until the moment when she rapturously greets the lover whom she supposes to have come red-handed from the murder of her husband. It is Isabel Fairchild who really makes the book, and it is, therefore, well named; but the purely bucolic and political chapters are admirable studies, though the latter will have a rather caviare quality for the English reader.

I had hoped against hope that *The Plan of Campaign*, in spite of its title, might not turn out to be a political novel—though readable political novels *have* been written, and will, I suppose, be written again; but, when I discovered that the opening was laid in a Dublin drawing-room, hope died within me, and I resolved to suffer, and be strong. There has been less suffering and less need for endurance than there might have been. The political talk is kept within quite reasonable limits, and the eviction scenes are among the best things in the book. Nor is the story a one-sided polemical affair. Miss Mabel Robinson is as keenly alive to the sorrows of impecunious landlords as to the sorrows of impecunious tenants, and probably sturdy partisans on both sides will think *The Plan of Campaign* terribly wanting in backbone; but sturdy partisans are not the best of literary critics, and ordinary readers will not make this a ground of complaint. A more valid ground of objection to the book is its overflowing sentimentalism. The amorous raptures and despairs of the Nationalist leaders—especially of Talbot, who is in other respects a really heroic figure—are about as undignified as they well could be, and excite not sympathy, but a certain half-contemptuous pity, which we are certain is not the emotion we are intended to feel. For a story of Irish life, *The Plan of Campaign* is almost curiously wanting in humour; but there is a good deal of sombre power in the chapters which follow the account of the murder of Lord Roeglass.

If the second half of *The Yoke of the Thorah* had been equal to the first it would, I think, have been really a remarkable story. As it is, it is disappointing, and even irritating; all the more so, of course, because it promises so much. Still, even the inartistic second part has an interest of its own as a sketch of middle-class Jewish life in New York, evidently written from the inside; and if Mr. Sidney Luska had divided his materials he might have produced two unequivocal successes instead of one comparative failure. For the first part, taken by itself, no reader will have words other than those of enthusiastic praise. The love-story of the young Jewish painter, Elias Bacharach, and the sweet American girl, Christine Redwood, is a beautiful city idyll; and there is true and powerful tragedy, in the legitimate sense of the word, in the chapters which tell how the morbidly sensitive rather than weak nature of Elias came under the yoke, not of the Thorah, which for him had lost its sacredness, but of a stronger, calmer, and more persistent will than his own—a will, too, whose volitions seemed able to command supernatural aid.

The Rabbi Gedaza is one of the most impressive figures in recent fiction; and the pages which follow Elias's confession to his uncle of his approaching marriage to a Gentile woman are rich in a quite remarkable intensity of imaginative realisation. In the scene at the marriage ceremony the interest culminates; and then, unfortunately, the story falls to pieces, and all that follows is weariness and vexation of spirit. It is very sad, but the sadness does not kill hope for the future of the author of certain striking chapters in *The Yoke of the Thorah*.

There is not much to be said about *Propsey*. It is conventional in structure, very amateurish and slightly vulgar in style, and not specially interesting. Work which is purely imitative, and which has no individual character, is only tolerable when good models are chosen; and as the models chosen by Mr. J. B. Douglas are not good, it is difficult to speak of the book even in those terms of faint praise which are equivalent to critical damnation. It can only be said that it is not absolutely unreadable; and to some novels even this faint praise cannot be awarded.

Daddy's Boy is not one of its author's best stories; but its weaknesses, such as they are, will not be felt as weaknesses by the young readers for whom it is evidently intended. The book, in its general conception, will remind adult readers rather too strongly of Miss Florence Montgomery's pretty, though too sad, story *Misunderstood*; but the details are altogether different, and, happily, little Ronald does not die. He is a sweet little hero, who is sure to be a favourite; and we do not care to inquire too curiously whether his portrait is altogether true to child-nature. It is best to accept so pretty an idealisation without asking questions.

In *Carlowrie* Miss Swan achieved a success which she does not seem able to repeat; at any rate, she has not repeated it in *Briar and Palm*, which is a creditable piece of hack-work, but nothing more. The natural features of the coast of South-west Lancashire, where some of the scenes are laid, is well described; but the characters are all conventional, and therefore unimpressive.

JAMES ASHCROFT NOBLE.

GIFT BOOKS.

The Earth and its Story. By Robert Brown. (Cassell.) This fine volume ought to be popular with the large class that loves science made easy and adorned with plenty of illustrations. The work is meant either to serve as a companion to the treatises on ethnology and political geography brought out by the same editor, or to take an independent place as a popular manual of physiography. It is based on Prof. Kirchhoff's *Allgemeine Erdkunde*, of which it was at first intended to publish an English edition; but it was found necessary to make such extensive alterations, especially in the way of abridging local and technical details unsuited to the English taste, that the whole proportions of the work had to be modified. Enough of the original has been retained to afford a full explanation of all that appears in the well-known illustrations, and a great number of new cuts have been added.

Insect Ways on Summer Days. By Jennett Humphreys. (Blackie.) Something after the fashion of that old friend of our youth,

The Butterfly's Ball, Miss Humphreys introduces a variety of common insects to the inquiring looks of the young. The tiger moth, hornet, death-watch, water boatman, and a number of other familiar creatures are described, and their marvellous economy expounded in the simplest of language for the very little ones. These insects generally tell their own stories in an artless and amusing manner, and the author has frequently inserted rhymes on them which candour compels us to state are often sad doggerel. But if they fulfil the purpose for which they may be supposed to have been inserted—that of impressing the names and habits of any of these common objects of daily life in the country upon infantile faculties, no exception can be taken to them, though (as in the lyric of the cantharides), they must provoke a smile:

"Mrs. Lister
Wished to blister
Her poor sister
For a twister," &c., &c.

The account of the insects' habits and metamorphoses is, however, the chief end of the book, and this is carefully and skillfully written. The chapter on the turnip-fly is excellent; only, by way of popularising the subject, it is headed "Black Jack, the Nigger." Similarly that on cockroaches is styled "Mistress Blatta has a Chatta." Passing by these affectations, however, which may lend animation when the stories are read to the young, we must carp at the introduction of the scientific names of the creatures. "Long words," says the author, "but do not be afraid of long words." When the "cuckoo-spit" insect is called *Aphrophora spumaria*, or the "woolly bear" of the nettle beds *Arctia caju*, the tendency of the chapter would, to our minds either repel the young entomologist or send him to sleep. It would have been better to have avoided the minutiae of science in a book professing to give instruction after the fashion of Horace's schoolmaster, who tempted boys to learn with "crustula." Still the book will prove not only instructive but delightful to every child whose mind is beginning to inquire and reflect upon the wonders of nature. It is capitally illustrated and very tastefully bound, and just the book for a sensible Christmas present.

Gossips with Girls and Maidens. By Lady Bellairs. (Blackwood.) Books of advice to the young, whether youths or maidens, are generally useless and foolish, but Lady Bellairs' volume is an agreeable exception to the rule. The "Gossips" are divided into five books, to which eleven short appendices are added. The chief characteristic of the treatise is its sound commonsense, and the practical nature of its contents. Lady Bellairs endeavours to avoid generalities, and give definite and accurate information on all the subjects she treats of. Whether she is speaking of personal habits, household management, women's occupations, savings banks, marriage settlements, cooking or education, her information is equally accurate, systematic and useful, and always brought down to date. She has no sympathy with unwomanly women, but she earnestly protests against the idea that "women meant to do God's work in the world should be kept in perpetual baby-clothes"; adding that "ignorance is not innocence after a certain age, and parents can no more keep their daughters' minds childish than they can their bodies." The passage on the "natural evil results of ill-assorted unions" is a noble and courageous piece of wisdom for which all good citizens will thank Lady Bellairs. The binding, paper, and printing of the book are charming. No woman in any class of life can fail to find the book useful. There ought to be a cheap edition.

Short Biographies for the People. By Various Writers. (Religious Tract Society.) This series of careful and interesting biographies was at first mainly devoted to eminent reformers; but in the volume before us we have sketches of Dr. Chalmers, David Livingstone, Palissy the Potter, Prof. Faraday, and Alderman Kelly. The lives of the brothers de Valdés, by the Rev. J. R. Thomson, and of John A'Lasco, by the Rev. A. H. Drysdale, are the only additions made to the list of biographies of reformers. The former are interesting as throwing light upon the condition of religions thought in Spain, and the latter from his connexion with England. Mr. Thomson calls attention to the circulation in Spain of the works of Erasmus, especially the *Enchiridion* and *Colloquies*; and his remarks on this point will serve to correct Mr. Drysdale's mistakes, who speaks of Erasmus as the "chief apostle of culture" and "not much of a theologian," with "no great depth of spiritual sympathy or insight." But in spite of this unjust estimate of Erasmus, Mr. Drysdale's biography is a valuable contribution to the series, which, so far, successfully maintains its standard of excellence.

A Country Mouse. By Mrs. Herbert Martin. (Griffith, Farran, & Co.) This is a well-written and amusing story, and Mrs. Martin can draw characters so clearly that she will probably write a much better one. The sisterless but spoilt Lena, and her cousin, the "country mouse," form an excellent contrast. Both seem to be studied from nature, and of the two Lena is the greater success. Wilful, impulsive, vain, and silly as she is, it is yet impossible not to be interested in her, and to believe that there is some good *au fond*, though we get few glimpses of it as long as she is surrounded by the flatterers of her rich father and herself. Luckily for her she has a day of humiliation, and her false friends disappear with her prosperity. There is no home left for her but that of the "country mouse." Then the good comes out, and a spirit of independence is born in her which makes her quite a heroine. Story interesting—characters lifelike—humour and pathos of a genuine kind—moral unimpeachable—clearly a book to recommend. But the end is weak. That turning-up of the scapegrace uncle is a poor device; and, if it was necessary to make everybody happy with a good lump sum at the end, ten thousand pounds was hardly enough for a large family.

The Dragon of the North. By E. J. Oswald. (Seeley.) The conquest of Apulia by the Normans affords an excellent field for romance, especially when the artist knows how to use the gossip of the monkish chroniclers about spectres and Saracen wizards and grisly "dragons of the slime." Our Northern dragon is of a more familiar kind, a war-drake from the Bay, one of the golden-headed galleys which carried brave warriors and bright ladies to Sicily or Micklegarth. The Northmen are of the mild type first introduced by the author of *Sintram*; but there is plenty of adventure in the book, which ends seasonably with the destruction of all the villains and a general triumph of law and order.

Their Pilgrimage. By C. D. Warner. (Sampson Low.) This bustling story of American watering-places, filled from cover to cover with amusing and well-drawn illustrations, ought to be received at once into popular favour. One of the characters thinks it just enchanting to "get a thousand people crowded into one hotel under a glass roof and let them buzz around"; and from this point of view Mr. Warner's story is certainly most successful. A brisk tale, mostly of picnics and seaside adventures, will be a relief to those who have become

somewhat tired of the painstaking, but rather dismal, kind of analytical novel which has found so many admirers on both sides of the Atlantic.

The Little Royal Highness. By Ruth Ogden. (Griffith, Farran, & Co.) This is a very American and a very pleasant story. Regie (H.R.H.) and his bodyguard Nan and Harry are a nice little trio. Then there is a nurse, Sister Julia, who is all that is sweet and lovable, and a shipwreck and a rescue, and a dear old clergyman and an unsuccessful attempt at suicide, and a fine old skipper of the name of Murray, some dogs, and a pony. Moreover, Miss Ogden shows us that our American cousins are one with us in their love for what is childlike and noble, and manly and refined. After all this, we wonder whether Miss Ogden will think us very unkind if we say that the illustrations by W. Rainey are even better than her story.

Captain Fortescue's Handful. By C. Marryat Norris. (Griffith, Farran, & Co.) A very nice handful too, but a little hard for a lone widower to manage—Poppy and Flop, Pet and Joy—growing up anyhow without a mother or an aunt, or even a housekeeper to look after them. Healthy and natural, and the delight of their father, but a little wild and untidy, and sadly wanting in respect for their prim uncle from London, who was shocked at finding beds still unmade in the afternoon, and objected to a monkey chained in the dining-room. Naughty but nice children, careless but affectionate father, what would have happened to you all if that aunt had not come from India? Well, goodness only knows! But the aunt did come; and she prevented Pet from breaking her heart over a worthless lover, made Flop read sensible books, weaned Poppy from the stables, and at last conquered even Joy's rather stubborn but noble little heart. Then, as a general steadier all round, the Captain is shot by a smuggler, and when he recovers, his handful is no longer unmanageable. Notwithstanding, however, their great improvement, the language of these four young ladies has, even at the end of the book, a freedom which their uncle would fail to admire, however much it may endear them to the reader. Altogether, it is a very nice book, and nicely illustrated by Miss Edith Scannell.

A Flock of Girls. By Nora Perry. (Boston: Ticknor; London: Trübner.) Welcome, sisters from over the sea, Tacy and Jim, Violet and Marigold, Tib and Con, and the rest of you! How is it possible to introduce such a number of young ladies all at once, and how to make distinctions when all are almost equally nice and clever and unaffected? A general recommendation is the only way out of it. And this should be enough, seeing that on either side of the Atlantic a flock of nice girls is always welcome; and on this side you have the advantage that you are just a little strange, go to schools not quite like English schools, spend dollars instead of shillings, and "own up" instead of confessing when you are naughty.

Historic Girls. By E. S. Brooks. (Putnam's.) An excellent book in every way. The story of Woo—a little girl who afterwards became Empress Supreme and Sovereign Divine of China, A.D. 635—will be fresh, we guess, to many grown-up readers. It can hardly fail to interest the young to find that their old friend King Cole was a British king, and that, owing to his fondness for "his pipe and his bowl," he would have come to grief had it not been for the tact of his daughter Helena.

Seeking a City, by Maggie Symington (Cassell), is a very pretty little story of its kind, in

spite of the rather affected title. Nan Styleman, the girl heroine, and her grandfather with the expressive *alias* of "King Pippin," and her "dawg" Sailor, and her tormenter Kemp Wilderspin—not to speak of a good squire and others—are arranged and rearranged into a number of very effective groups. The story is one with a purpose, of course; and its object is to show how goodness, as personified by Nan, and still more by her grandfather, triumphs over not the wickedness, but the mischievousness and the undisciplined nature of Kemp Wilderspin, and how he, by way of thanks, does a good turn for those who have done so much for him. "King Pippin" is as good a character in every sense as has figured in any gift-book of the season.

The Willoughby Captains. By Talbot Baines Reed. (Hodder & Stoughton.) There are symptoms of falling-off in Mr. Reed's new public-school story. It is not a bad book of its kind; but it is rather a poor story for its author, who has, perhaps, exhausted this particular vein, and should try another. One gets a little tired of the virtues of Riddell, the captain of Willoughby school, who is practically deposed for the sake of another boy, but whose good qualities are ultimately recognised and triumphant, and wish he had been willing (or able) to administer a good thrashing to Silk and Gilks, the villains (or villain and dupe) of the story. *The Willoughby Captains* is chiefly valuable for the careful photographs it contains of certain school-scenes and interiors. From one or two of these we gather that there is still a great deal of rough-and-tumble work in public schools—at least in some them.

My Life and Balloon Experiences. By H. Coxwell. (W. H. Allen.) The veteran "air-captain" has wisely determined to deal very shortly with the uneventful portions of his life, and to gratify his readers with a full account of his principal adventures in cloud-land. Mr. Coxwell does not confine himself to his own experiences, but has added an interesting account of the chief ascents of this century, including the celebrated ascent in which Green and Rush attained a height of over five miles. An essay on military ballooning contains some instructive information as to the prospects of an art which is still in its infancy, and as to the proper methods of dealing with balloon-mines and aerial torpedoes. It is satisfactory to learn that the flying dynamiter can be blown out of his car by means of a bullet of "spongy platinum."

Dacie Darlingsea. By Mrs. Dambrell-Davies. (Simpkin, Marshall, & Co.) The author of this pleasantly written book has, like the author of *Childe Harold*, "loved the sea." The story itself is slight, and the various chapters serve as frames for pictures of the sea. The heroine, Dacie Darlingsea, was born—metaphorically speaking—on the shore, and it nearly proved her last resting-place. The book is charmingly illustrated. There is many a pretty view of the beautiful Isle of Wight, and besides of Scotland and even of distant Norway.

Letters to a Daughter and a Little Sermon to School Girls. By Helen Ekin Starrett. (Edinburgh: Oliphant, Anderson, & Ferrier.) Short and practical, these letters seem to include every counsel that it is possible to give to girls beginning to go out into society or to become a help at home. And the advice is backed up with excellent quotations from various authors, the chapter on conversation being especially noteworthy in this respect. Confucius said "It is not easy to find a man who has studied for three years without coming to be good." The "Little Sermon," on the contrary, reminds us that too often our intellectual faculties are highly educated, while our moral feelings are disregarded. We are

reminded, too, that genuine culture is of the heart, not of the mind.

Both Sides, by Jessie W. Smith (Nisbet), is a story of a gentle widow who learns to look at both sides of everything. A good book with an excellent moral.

The Christmas Number of the Monthly Packet, (Smith & Innes), edited by Charlotte M. Yonge, contains a series of tales on the motto "Where the King is, there is the Court." To many, the name of Miss Yonge will be a guarantee that the tales are worth perusal.

NOTES AND NEWS.

MR. T. FISHER UNWIN will publish next week three volumes of collected pieces by the late Edward Thring, of Uppingham: *Addresses*, with a portrait; *Uppingham School Songs and Borth Lyrics*; and *Pems and Translations*. We understand that the contents of these volumes were sent to the printers by Mr. Thring just before his fatal illness. They have been seen through the press by his daughter.

DR. JOSEPH JACKSON HOWARD, of Blackheath, has been appointed, on the nomination of the Duke of Norfolk, herald of arms extraordinary, with the title of Maltravers. Dr. Howard is well known as the editor of *Miscellanea Genealogica*, and as one of the founders of the Harleian Society, for which he has edited several volumes of Visitations. The work on which he is now engaged is a history of the great Catholic families of England.

READERS at the Public Record Office will be glad to learn that Mr. Maxwell Lyte has made an important modification in the rules. Up to now only three documents at a time were allowed to a reader, and he could not write from more than three at a time. In future, when a reader is going through a consecutive series of records he may give notice to the attendant in the room, and he will be supplied with them as rapidly as he requires them. By the old rule, for instance, it took quite a fortnight or three weeks to run through the subsidy notes for a single county; by the new rule this can be accomplished in two or three hours. The old rule, which was not of old date, was practically prohibitory, and the number of readers had fallen off greatly in consequence. Now it is to be hoped that students will be again attracted to the study of our great national records.

DURING the absence in America of Mr. Ernest Rhys, his editorial duties in relation to the "Camelot" series have been entrusted to Mr. W. H. Dircks, of Newcastle-on-Tyne. As the writer of the introduction to the *Walden* of Thoreau, Mr. Dircks has already been connected with the series.

The Fleet: its River, Prison, and Marriages, by John Ashton, with seventy drawings by the author from original pictures, will be published next week by Mr. T. Fisher Unwin.

MR. ALEXANDER GARDNER will shortly issue a new and limited edition of Pinkerton's *Vitae Sanctorum Scotiae*, which, as originally published in 1789, contained Adamnan's life of St. Columba, the lives of St. Ninian, St. Kentigern, and St. Margaret, and Ailred's eulogium of St. David. It is now proposed to add to these the life of St. Serf and the legend of St. Andrew; and the offices of the saints, including the office of St. Macha, with the only known fragments of his life.

MESSRS. HURST & BLACKETT announce for publication during this month *Bandobast and Khabar: Reminiscences of India*, by Col. Cuthbert Larking, with twelve illustrations from original drawings by the author; a new novel, in three volumes, entitled *A Breton Maiden*, by

the author of "Till my Wedding Day"; and also Lodge's *Peerage and Baronetage* for 1888.

A VOLUME of sermons that the Rev. Baldwin Brown was preparing for the press at the time of his death will be issued immediately by Mr. T. Fisher Unwin, under the title of *The Risen Christ*.

The Story of the Cross is the title of a new poem to be issued immediately by Mr. Elliot Stock.

WE understand that the first edition of the English translation of M. Forneron's *Louis de Keroualle* has been sold out, and that a second edition is already nearly exhausted.

A STAINED glass window in memory of Milton will shortly be placed in the church of St. Margaret's, Westminster. It is the gift of Mr. G. W. Childs, of Philadelphia, who presented the drinking fountain to Stratford-on-Avon, and the window in honour of Herbert and Cowper to Westminster Abbey. At the request of the rector the following inscription has been written for the Milton window by Mr. Whittier:

"The New World honours him whose lofty plea
For England's freedom made her own more sure,

Whose song, immortal as its theme, shall be
Their common freehold while both worlds endure."

The Raleigh window, presented to St. Margaret's by American citizens, has an inscription from the pen of Mr. Lowell; and the Caxton window, presented by the printers of London, an inscription by Lord Tennyson. Caxton and Raleigh lie buried in the church, and also the wife and infant child of Milton, whose banns are recorded in the marriage register.

THE FORTHCOMING MAGAZINES.

THE next number of the *Westminster Review* will contain a reply by Mr. Gladstone to Dr. Ingram concerning the question how the union of Ireland with Great Britain was effected.

MR. RUSKIN will contribute to the January number of the *Magazine of Art* an article entitled "The Black Arts," which will be illustrated with reproductions of three of his own original drawings—"Lucca," from a tinted pencil drawing; "Mont Blanc de St. Gervais," from a watercolour drawing in 1832; and "The Cathedral Spire, Rouen," from a pencil drawing, 1835. The frontispiece to the number will be an etching of Mr. J. W. Waterhouse's "Mariamne."

WITH the new year, *Time* will take a new departure, under the editorship of Mr. Walter Sichel. The previous character of the magazine will be maintained, but numerous new features are to be added. Among them is a series of articles contributed by specialists, and entitled "Work and Workers," which will deal both critically and practically with several of the more important branches of English labour. The January issue will contain a paper on the "Moral Aspect of the Economical Problem," by Prof. Edward Caird, of Glasgow.

WITH the new year *Little Folks* magazine will be permanently enlarged, and will be published with uncut edges. To the January number Mr. Walter Crane will contribute a series of humorous drawings under the title of "Lancelot's Levities," and Mrs. Molesworth a complete story entitled "His Right of Way." The editor has also arranged with L. T. Meade, Talbot Baines Reed, Edward S. Ellis, to furnish stories; while the artists who will supply the illustrations include Dorothy Tennant, Gordon Browne, W. S. Stacey, Walter Paget, J. Finnimore, Jane M. Dealy, M. E. Edwards, J. W. Clark, and Paul Hardy. Two serial stories will be commenced in the January issue.

The *Century* for January will contain "John Ruskin," with portrait, by W. J. Stillman; "The Catacombs of Rome," by Prof. Philip Schaff; "Meisterschaft," a play in three acts, by Mark Twain; and "Russian Provincial Prisons," by George Kennan.

The *St. Nicholas* for January will contain "The Brown Dwarf of Rugen," by Whittier; "Sara Crewe," by Frances Hodgson Burnett; "London Christmas Pantomimes," by E. R. Pennell; "The Clocks of Rondaine," by Frank Stockton; and "The Amusements of Arab Children," by Henry W. Jessup.

In issuing a prospectus of the *Homilist* for the coming year, Messrs. Houlston and Sons announce that, in addition to containing some new and distinctive features, this old-established magazine will be considerably enlarged.

"FAIR FACES; or, Types of Female Beauty," is the title of a special series of full-page engravings—from drawings by Miss Margaret Thomas—to be commenced in the January number of Mr. Heath's *Illustrations*.

A NEW series, under the title of *Bow Bells Weekly*, will commence with the opening year. To the first number Mr. Wilkie Collins contributes a tale, entitled "The First Officer's Confession." The romantic school is represented by "Psyche: a Lakeland Mystery," from the pen of Miss Florence Warden. Several new features—Notes and Queries, Graphology, and Household Hints—will also be introduced.

Notes and Gleanings, a monthly magazine devoted to all matters connected with the counties of Devon and Cornwall ("a snapper-up of unconsidered trifles"), is the title of a new antiquarian venture announced for publication in January, by Messrs. William Pollard & Co., of Exeter.

MESSRS. HOULSTON & SONS publish this month the first number of a new monthly, entitled the *Scots' Magazine*. It takes the place of the *Scottish Church*, and will be under the same editorship and maintain the same principles as that review.

CORRESPONDENCE.

PHILOLOGY VERSUS LITERATURE.

London: Dec. 12, 1887.

I should like, with your permission, to make a few remarks on a pamphlet recently published by Messrs. Parker, entitled *The Study of Modern European Languages and Literature in the University of Oxford*, by Prof. Henry Nettleship. Prof. Nettleship is the champion and protagonist of that party in the university who are bent on subordinating the interests of literary culture to the interests of philological study—who, having themselves no connexion either as teachers or writers with literature in the proper acceptation of the term, but being professedly philologists, entertain not unnaturally the most exalted conceptions of the scope and functions of philology, both generally as an instrument of education, and particularly as a method of exegesis, and who maintain that the only sound interpretation of literature, the only interpretation worthy of academic recognition must be philological. Of this party Prof. Nettleship's pamphlet may be regarded as the manifesto; and as it is not adorned with any of the Gothic graces of Prof. Freeman's style, or enfeebled with repetitions of the mild ineptitudes of Prof. Earle, it will probably be not without influence in a controversy which the vote of congregation last November has no doubt rather suspended than settled. It is for this reason that I am asking your permission to make some reply to Prof. Nettleship's strictures on certain remarks of mine in the *Quarterly Review*. His attempt to brand my proposal to associate the study of ancient and modern literature as a proposal to "legalise superficiality," to "establish and endow the worship of the god of shoddy," and his obscure facetiousness about Plutarch's parallel lives, I can only regret, for his own sake. Nor shall I stop to expose his perversion and travesty of the *Quarterly* scheme for a school of literature; but I shall merely remark that there can be no more certain indication of the weakness of a cause than when it is necessary to mutilate and misstate the case of an opponent before it can be confuted.

But my gratitude to Prof. Nettleship for giving me an opportunity of enforcing and illustrating what I said of philologists in their relation to literary and aesthetic criticism far outweighs any little irritation which a sense of being misrepresented may

have caused me. The remarks to which Prof. Nettleship directs attention are these:

"Philological study contributes nothing to the cultivation of the taste. It as certainly contributes nothing to the education of the emotions. The mind it neither enlarges nor refines. On the contrary, it too often induces or confirms that peculiar woodenness and opacity, that singular coarseness of feeling and purblindness of moral and intellectual vision which in all ages been characteristic of mere philologists, and of which we have an appalling illustration in such a work as Bentley's 'Milton' (*Quarterly Review*, January 1887).

"When one reads," says Prof. Nettleship, "that a coarseness of feeling and a purblindness of moral and intellectual vision has in all ages been characteristic of mere philologists, one wonders what is meant." I have little doubt that Prof. Nettleship will, after the illustrations which I am about to give, still continue to wonder at what is meant; but I am not without hope that less confirmed philologists will find in them a proof of the justice of the remarks which have so much perturbed the professor.

In January 1732 the greatest philologist which this, or perhaps any other, country has produced gave to the world his edition of *Paradise Lost*. Dipping into it at random, I extract the following emendations and notes:

MILTON.

"No light, but rather darkness visible,
Served only to discover sights of woe."
(I. 63, 2.)

BENTLEY'S NOTE.

"'Darkness visible' and 'darkness palpable' are in due place very good expressions; but the next line makes visible here a flat contradiction. 'Darkness visible' will not serve to discover sights of woe through it, but to cover and hide them. Nothing is visible to the eye, but so far as it is opaque, and not seen through. To come up to the author's idea we may say thus—

"'No light, but rather a transpicuous gloom.'"

MILTON.

"Nor sometimes forget
Those other two equall'd with me in fate,
So were I equall'd with them in renown:
Blind Thamyris and blind Mæonides,
And Tiresias and Phineus, Prophets old."
(III. 32-6.)

BENTLEY'S NOTE.

"Here we have got the editor's flat again, for the mark of it is easily discovered. What more ridiculous than to say *these other two*, and afterwards to name *four*? But let's see what wise choice he has made of them. Thamyris, a barbarian Thracian, who, out of lust, not superior skill in music, challenged the Muses. . . . a fine person to rival in renown! And what occasion to think *at times* of Tiresias or Phineus, old *Prophets*. Did our poet pretend to prophecy? He might equally think of any other blind men. Add the bad accent *and* Tiresias. To retrieve this passage it may be thus changed:

"Nor at times forget
The Grecian bard, equall'd with me in fate;
O were with him I equall'd in renown."

"The particle *So* is not English."

MILTON.

"Thus with the Year
Seasons return, but not to me returns
Day, or the sweet approach of Ev'n or Morn."
(III., 40-2.)

BENTLEY'S NOTE.

"There must be some mistake here. *Thus seasons return*? Not a word has been said of it before to give countenance to Thus. From the mention of the Nightingale, it seems requisite to alter it thus:

"Tunes her nocturnal note, when, with the year,
Mild Spring returns."

"Day, or the sweet approach of Ev'n or Morn,' can hardly be right; the poor man, in so many years' blindness, had too much of evening."

MILTON.

"Him, thus intent, Ithuriel with his spear,
Touch'd lightly." (IV. 810.)

Bentley, here observing that the presence of a toad, into which Satan had transformed himself, in Adam's bower, must have puzzled Ithuriel, suggest that a line should be inserted:

"Him, thus intent, Ithuriel with his spear,
Knowing no real toad durst there intrude,
Touch'd lightly."

MILTON.

"Hell heard the insufferable noise, Hell saw
Heav'n ruining from Heaven." (VI. 867-8.)

BENTLEY'S NOTE.

"'Twas not the noise of the fall, but the clamour
of those that were falling. And "insufferable" fills
the verse rather than it does the sense. Rather,
thus,

"Hell heard the hideous cries and yells. Hell saw
Heav'n tumbling down from Heaven."

MILTON.

"Four speedy Cherubim." (II. 516.)

BENTLEY'S NOTE.

"Not much need of swiftness to be a good
trumpeter. For "speedy," I suspect the poet gave
"Four sturdy Cherubim."

Stout, robust, able to blow a strong blast."

MILTON.

"Our torments also, may, in length of time,
Become our elements." (II., 274, 5.)

BENTLEY'S NOTE.

"This argument Mammon steals from Belial's
speech. To keep just decorum he should ascribe
it to its true author, and say it thus:

"Then, as 'twas well observ'd, our torments may
Become our elements."

MILTON.

"As from the Centre thrice to the utmost pole."

BENTLEY.

"From the Centre to the utmost pole" is vicious.
The distance is much too little, and might have
been doubled thrice with ease; but I would express
it thus, without any comparison:

"Distance, which to express all measure, falls."

Bentley's note on the last verses of the poem
beggars parody. I have not space to give the
note in full, so I must content myself with the
last part:

"They, hand in hand, with wandering steps and
slow,
Through Eden took their solitary way."

BENTLEY'S NOTE.

"Why 'wandering'? Erratic steps? Very im-
proper, when in the line before they were guided by
Providence. And why slow, when even Eve pro-
fessed her readiness and alacrity for the journey?
(614.)

"But now lead on,
In me is no delay."

"And, why their solitary way, when even their
former walks in Paradise were as solitary as their
way now, there being nobody besides these two,
both here and there? Shall I, therefore, after so
many prior presumptions, presume at last to offer
a distich—

"Then, hand in hand, with social steps their
way
Through Eden took with heavenly comfort
cheer'd."

In all this Prof. Nettleship evidently sees
nothing ridiculous. Bentley's notes and emenda-
tions are reprehensible in his eyes, not because
of their portentous stupidity, but simply
because a settled text made them superfluous.

"Bentley's Milton was no doubt," he observes,
"a great blunder, but why? Because Bentley
made the mistake of treating a modern writer,
whose text was well ascertained, in the same way
as some ancient authors, whose texts are corrupt."
Is there not something—I say it with all
respect—something of the "opacity" and

"purblindness" of which I spoke discernible
in Bentley's apologist? I have not the presump-
tion to enter the lists against the professor
on points of Latin scholarship; but, as he has
chosen to take his stand on Bentley, I will
boldly assert that two-thirds of Bentley's
Horatian emendations are as contemptible,
tasteless, and impertinent, as his emendations
of Milton. Take a very few out of very
many. In *Od. I. vi. 18*, by altering "*sectis*
in juvenes unguibus" into *strictis*, he robs
the poet of his most delicious touch of
playful humour.* By substituting in *Od. I. iv. 8*,
the variant of the Paris MS. "visit" for
the authentic reading "urit," a splendidly
graphic picture is obliterated and mere inanity
takes its place. In *Od. I. xxiii. 5-6*, the
words—

"Nam seu mobilibus veris inhorruit
Adventus foliis."

A touch of magically poetic beauty is trans-
formed into flat, bald prose by the altera-
tion of "veris" into "vepris" and "adven-
tus" into "ad ventum." In *Od. I. iii. 22*,
by altering "dissociabili" into "dis-
sociabilis (es)," thus separating it from *Oceano*,
and associating it with *terras*, an exquisitely
felicitous epithet is deprived of all its propriety.
Take, again, *Od. III. x. 7*:

"positas ut glaciis nives
Puro numius Jupiter."

One would have thought that the densest of
critical perception would have appreciated the
clairvoyant force of that epithet; but, alas!

"Turn what they will to verse their care is vain,
Critics like these will make it prose again."

And "puro" becomes in the text of Bentley
"duro" (!). So, again, *Od. III. xxv. 8-9*:

"in jugis
Exsomnis stupet Eulias."

Here the vivid and picturesque epithet
"exsomnis" is altered into "Edonis"; for,
as the "awful Aristarch" sagely observes:
"tantum abest ut exsomnes manserint Bacchae
ut prae nimia lassitudine frequenter somnus
iis obreperit." And this statement he proceeds
to gravely prove by references to Propertius,
Statius, Sidonius, and to the fact that Euripides
(*Bacchae*, 682) distinctly describes them as taking
a nap. Nor is Bentley's immense stupidity less
apparent in dealing with the "sermo pedestris"
of the Satires and Epistles, witness his altera-
tion of "male tornatos versus" (*Ars Poetica*,
441) into "ter natos"; his ludicrous presump-
tion in almost re-writing verse 60 in the same
poem; &c., &c.

Pope said no more than literal truth when
he said of Bentley that he

"Made Horace dull and humb'd Milton's
strains."

He was, with all his prodigious erudition,
a tasteless, unilluminated pedant; and I can only
express my surprise that even Prof. Nettleship
should mention Porson in the same breath with
him.

"But," writes the professor, "with what
admiration have I heard Matthew Arnold
speak of Bentley!" Jeffrey, as we all know,
was in a moment of irritation capable of speak-
ing disrespectfully of the North Pole. It is
quite possible that Mr. Matthew Arnold, when
he is pleasant, is capable of speaking respect-
fully of Bentley as a literary critic. I have
not the privilege of knowing Mr. Matthew
Arnold; but, as I am familiar with his writings,
I confess I should feel a little embarrassed if in
conversation he began to expatiate to me on the
beauties of Bentley's conjectural emendations.
My thoughts would turn unasily to the
dialogue in which Socrates asked Ion how it

* I am perfectly aware of Ritter's interpretation
of "sectis."

was that he was not in command of the Athenian
forces. In any case, I am quite willing to accept
Mr. Matthew Arnold as a *κρίσις κριτής*; and if
Prof. Nettleship will show that Mr. Matthew
Arnold seriously approves of Bentley's contri-
butions to literary and aesthetic criticism—
τότε μοι χάραι εὐπεία χέρον, and if I emerge
may I emerge to sit humbled and repentant
at the feet of Prof. Nettleship.

One word more and I have done. Prof.
Nettleship mourns over the degeneracy of the
Quarterly Review.

"The *Quarterly*," he says, "has in times past
done good service to philology. It has published
articles—unique, I believe, in the English litera-
ture of the last thirty years—on the Scaligers,
Casaubon, the Stephenses and Huet. But it has
now changed all that. It treats philology with a
contempt," &c.

Now the author of those articles was Mark
Pattison, whose views on the relation of phil-
ology to literature were, it is notorious, pre-
cisely similar to those which I expressed in the
columns of the same periodical, and still more
recently in the *Nineteenth Century*. I speak
advisedly. I speak confidently. I have not ex-
pressed one opinion on this subject for which I
have not his authority. I am not speaking
of details. I am speaking of the general
question. He always said that the worship of
the letter and the neglect of the spirit was the
curse of the classical system at Oxford—that
philology was killing literary culture and eating
out the life of classical literature; and that, as
long as a premium remained placed on pedantry,
so long would the universities retard, instead
of furthering, national education. It was not
with the object of glorifying philology, as Prof.
Nettleship absurdly supposes, that Pattison
wrote the articles on Scaliger, Casaubon, and
the Stephenses. It was to hold up to a society
of listless and frivolous triflers—a society for
which he never disguised his contempt—the
picture of the true scholar, of the *laboriosus et
diuturnus sapientiae miles*. It was to glorify
the sublime self-sacrifice and heroic enthusiasm
of men who, finding that a humble and dreary
task had been imposed on them—that the ancient
texts had to be settled, the force and sig-
nificance of words ascertained, allusions eluci-
dated, and the like, before the modern world
could have the key to the poetry, the philo-
sophy, the oratory of antiquity—cheerfully
dedicated their lives to obscure and unremune-
rative drudgery. The task of the modern
scholar—and no man knew this better than
Pattison—is widely different. It is for us to enjoy
and utilise the treasures which the noble labours
of Scaliger or Casaubon unlocked. And if the
scholar of the nineteenth century performed
his task as faithfully and effectually as the
scholars of the sixteenth and seventeenth cen-
tury performed theirs, we should not, perhaps,
be hearing that "the classics are a lost cause,"
and witnessing their gradual elimination from
the curricula of modern education.

I should like to have said a word or two in
answer to Prof. Nettleship's attack on the
University Extension Lectures; but I must
content myself with referring him to Mr. John
Morley's speech at the Mansion House, and
to Mr. Goschen's recent appeal to the University
—and he will, perhaps, forgive me for reminding
him also of the story of Mrs. Partington.

J. C. COLLINS.

TENNYSON'S INSPIRATION FROM THE PYRENEES—
Combe Vicarage, near Woodstock: Dec. 3, 1887.

In the ACADEMY of June 14, 1884, there
appeared a letter from me bearing the above
heading. In it I quoted passages in some
letters which Clough wrote from the Pyrenees
while Mr. Alfred Tennyson also was in that

region, and which (under the erroneous heading, "London") are in Clough's *Poems and Prose Remains* (1869), vol. i., pp. 264-269. Here are the passages:

"Luz, St. Sauveur, September 1 [1861]. . . Tennyson was here, with Arthur Hallam, thirty-one years ago, and really finds great pleasure in the place; they stayed here and at Caunterets. *Omons*, he said, was written on the inspiration of the Pyrenees, which stood for Ida."

"Caunterets, September 7. . . I have been out for a walk with A. T. to a sort of island between two waterfalls, with pines on it, of which he retained a recollection from his visit of thirty-one years ago, and which, moreover, furnished a simile to *The Princess*. He is very fond of this place evidently, and it is more in the mountains than any other, and so far superior."

After quoting these passages, I went on thus:

"The simile referred to is, no doubt, that in the following lines:

'not less one glance he caught
Thro' open doors of Ida station'd there
Unshaken, clinging to her purpose, firm
Tho' compass'd by two armies and the noise
Of arms; and, standing like a stately pine,
Set in a cataract on an island-crag,
When storm is on the heights, and right and left,
Suck'd from the dark heart of the long hills roll
The torrents, dashed to the vale.'

Last May 11 I found out the "sort of island between two waterfalls, with pines on it." It is just above, and close to, the bridge called Pont d'Espagne. Readers of Tennyson will remember his lines headed "In the Valley of Caunteretz."
J. HOSKYNs-ABRAHALL.

JOHNSON'S SPELLING OF "COCO-NUT."

Oxford: Dec. 11, 1887.

Prof. Bayley Balfour is in error if he says that while "Johnson confounded the two words [coco and cocoa] in his Dictionary under the spelling 'cocoa,' he afterwards rejected his own lexicographical authority and correctly used 'coco,' plural 'cocoas,' in his *Life of Drake*."

The dictionary was not published till 1755, while the *Life of Drake* appeared in the columns of the *Gentleman's Magazine* in 1740-1. It is true that there (vol. x., p. 510) he uses "cocoas" as the plural. The same spelling is retained in a reprint of the *Life* in Davies's *Miscellaneous Pieces*, published in 1773, but this collection was published without Johnson's knowledge.
G. BIRKBECK HILL.

"STEERMAN."

London: Dec. 10, 1887.

Has not this word a claim to a place in our language? In Hearne's edition of Hening's *Cartulary of Worcester* (i. 81) we read of "Edricus qui fuit tempore regis Edwardi *stermannus* navis episcopi et ductor exercitus ejusdem episcopi." In the next century we read in the Pipe-Roll of 2 Richard I. of the *sturmanni* who were engaged for Richard's crusading fleet. These latter must equate the "rectores navium" of Richard of Devizes ("Ascribitur navis regimini rector unus doctissimus"), and in each case the word must represent a Latinisation of the English "steerman."
J. H. ROUND.

"RASENNA" AND "TURSĒNOI."

Queen's College, Cork: Dec. 14, 1887.

Pereant qui ante nos nostra dixerunt! I hasten to make restitution to a great scholar now, alas, no more! The first (as yet the only) volume of the new edition of *Dionysius*, by Jacoby, has reached me since I wrote my letter. In the apparatus criticus, on the word *Ῥασέννα*, he has the

note "*Ῥασέννα* vel *Ῥασέννα*, Lepsius, p. 24," by which from a preceding note he means Lepsius *de Pelasgis*. I have not as yet been able to procure this work, but it is evident that Lepsius had already forestalled my suggestion.

WILLIAM RIDGEWAY.

[Mr. Robert Brown, jun., writes from Barton-on-Humber that Canon Isaac Taylor (*Etruscan Researches*, p. 338) had anticipated Prof. Ridgeway's remarks concerning the Rasenna. Another correspondent also calls attention to the fact that J. W. Donaldson at one time suggested that "Rasena" was a doubtful reading, probably representing a form, "Ta-rasena," equivalent to *Ῥασέννα*.]

APPOINTMENTS FOR NEXT WEEK.

MONDAY, Dec. 19, 5 p.m. London Institution: "The Future University of London," II., by Prof. Henry Morley.
8 p.m. Society of Arts: Cantor Lecture, "The Elements of Architectural Design," IV., by Mr. H. E. Statham.
8 p.m. Aristotelian: "Philosophy during the Period of the Renaissance," by Miss O. E. Plumptre.
TUESDAY, Dec. 20, 7.45 p.m. Statistical.
8 p.m. Civil Engineers: Discussion: "Electrical Tramways: the Beesbrook and Newry Tramway" by Dr. E. Hopkinson.
8.30 p.m. Zoological: "Hooker's Sealion," by Mr. F. E. Bedford; "A New Genus of Lizards of the Family Teiidae," by Mr. G. A. Boulenger; "Revision of the Japanese Species of *Endomychidae*," by the Rev. H. S. Gorham.
WEDNESDAY, Dec. 21, 8 p.m. Geological: "The Correlation of some of the Eocene Strata in the Tertiary Basins of England, Belgium, and the North of France," by Prof. Prestwich; "The Cambrian and Associated Rocks in North west Caernarvonshire," by Prof. Blake; "The Law that governs the Action of Flowing Streams," by Mr. R. D. Oldham.
THURSDAY, Dec. 22, 8 p.m. Egypt Exploration Fund: Annual General Meeting.
6 p.m. London Institution: "Materials of Music—III. Contrivances," by Mr. W. A. Barrett.
FRIDAY, Dec. 23, 8 p.m. Egypt Exploration Fund: "Bubastis and the City of Onias," by M. E. Naville.

SCIENCE.

The Life and Letters of Charles Darwin, including an Autobiographical Chapter. Edited by his son, Francis Darwin. In 3 vols. (John Murray.)

(Second Notice.)

CONSIDERING that Darwin himself tells us that all his real pleasure was in observing, and that writing was always an effort, his literary industry was remarkable. When we glance over the eight pages of titles of independent works or minor papers at the close of the third volume, or at the row of closely printed volumes on the naturalist's bookshelf, it is difficult to realise that, at his best, Darwin was not able to write on an average more than about an hour and a half a day, and that often even this limited time was interrupted by weeks of distressing sickness.

Darwin's larger works—excluding the *Origin of Species*, which we will consider last—may be grouped under the heads Geological, Zoological, Botanical, and Anthropological. Of purely geological works the most important is *The Structure and Distribution of Coral Reefs* (1842). An interest of a special kind attaches to this work, as the theory therein propounded—that the building up of coral reefs must have been always accompanied by a gradual subsidence of the bed of the ocean—is almost the only one of Darwin's that is not at the present day almost universally accepted by the scientific world. Mr. John Murray, the able naturalist to the *Challenger* expedition, has propounded an opposite theory; and reference was made quite recently in the ACADEMY (November 26, p. 347), in a review of Dr. Guppy's work on the geology

of the Solomon Islands, to the controversy in the public press on this subject between the Duke of Argyll on the one hand, and Profs. Huxley and Bonney on the other. The text of the duke's homily was the danger of idolatry, whether in politics or in science—on both of which points, I, for one, heartily agree with him. But, of all men, Darwin would have deprecated the most earnestly the setting up of himself or of any other man as an "idol." On this very subject, after reading Mr. Murray's essay, which did not convince him, he says, in a letter to Prof. Agassiz (vol. iii., p. 184), "If I am wrong, the sooner I am knocked on the head and annihilated, so much the better." It is instructive to note, in relation to the doubts thrown on this theory, that, as Darwin tells us himself, "no other work of [his] was begun in so deductive a spirit as this."

After his *Monograph of the Cirripedia* (1851 and 1854) already alluded to, and a *Monograph of the Fossil Cirripedia* (1851 and 1854), Darwin published no exclusively zoological work. In his later years it did not seem to him a point of supreme importance whether any particular form was, according to the older theory of special creations, a "God-made barnacle" or not. The *Variation of Animals and Plants under Domestication* (1868) was of a combined zoological and botanical character, and was the bulkiest of his writings. It is a work of immense labour and research. Although, of course, the main points were in Darwin's mind when he wrote the *Origin of Species*, yet it was not until the publication of this book that the scientific public realised the enormous array of facts proving the variability of species under domestication, from which Darwin argued the possibility of an equal or greater variation of species in nature, when exposed to constantly changing external conditions, those variations only surviving which were most fitted for the altered conditions.

Darwin's love for the country, and his long seclusion in one of the most fertile of our counties, specially inclined him to botanical pursuits; and it was in these studies and observations that his extraordinary faculty for minute, careful, and long-sustained observation was most strongly manifested. His more important botanical works are: *On the Various Contrivances by which Orchids are fertilised by Insects* (1862), *Insectivorous Plants* (1875), *The Effects of Cross and Self-fertilisation in the Vegetable Kingdom* (1876), *The Different Forms of Flowers on Plants of the Same Species* (1877), and *The Power of Movement in Plants* (1880). To the special study of orchids Darwin was no doubt attracted by the abundance of some of the more remarkable of our native species on the chalk hills near his home. In the first of these works we have brought home to the reader the substitution of the old or arbitrary by the new or natural teleology. Every organ is no doubt adapted, or is in the process of becoming adapted, for the purpose it is designed to serve; or, if it has become hopelessly unadapted, is gradually disappearing. But this is not effected by the constant direct interposition of a Great First Cause, but by the slow, gradual, and no less wonderful operation of general laws. The *reductio ad absurdum* of the older teleology is afforded

(vol. iii., p. 274) by the example of a Madagascan orchid, *Angracum sesquipedale*, where, according to the older theory, "we must suppose that the flower was created with an enormously long nectary, and that then, by a special act, an insect was created fitted to visit the flower, which would otherwise remain sterile." The *Effects of Cross-fertilisation, &c.*, is an exhaustive defence of the proposition contained in the motto prefixed to the earlier editions—that "Nature abhors perpetual self-fertilisation." The work on *Insectivorous Plants* furnishes, perhaps, the most striking illustration of the delicacy and minuteness of Darwin's observations. He there makes and demonstrates the accuracy of the astounding statement (vol. iii., p. 324) that the weight of a grain of phosphate of ammonia is sufficient to cause the "tentacles" which bear the secreting glands on the leaf of the sundew to bend through an angle of 180°. In *The Power of Movement in Plants* the same marvellous patience and persistence are applied to the phenomena of "spontaneous" movement, which he shows to be very widely distributed in the vegetable kingdom. These facts were, no doubt, to a large extent already well known; but it was in this work, written within three years of his death, that Darwin startled the botanical world by proving that the tips of the rootlets of growing plants are, like the apex of the stem, constantly performing movements of revolution or gyration in the soil.

Not to trespass too long on the forbearance of an indulgent editor, I must pass over without further notice the first of Mr. Darwin's important works, the *Narrative of the Surveying Voyages of H.M. Ships "Adventure" and "Beagle,"* in 3 vols. (1836); his last, *The Formation of Vegetable Mould through the Action of Worms* (1881); and the two which are more especially anthropological in character—*The Descent of Man* (1871) and *The Expression of the Emotions in Man and Animals* (1872)—merely calling attention to the well-known fact that Darwin—more logical than his coadjutor, Mr. Wallace—unflinchingly applied to the origin of man the same laws which he believed to govern the evolution of other forms of animal and of vegetable life. "Our ancestor," he says in a letter to Sir Chas. Lyell (vol. ii., p. 266) "was an animal which breathed water, had a swim-bladder, a great swimming tail, an imperfect skull, and undoubtedly was a hermaphrodite." Any one of the works which we have named would have entitled its author to an honourable place among observers and discoverers. There still remains his *magnum opus*—*The Origin of Species by Means of Natural Selection* (1859).

The heira of the new faith was not, however, the publication of this work, but the reading of the joint paper by Darwin and Wallace—"On the Tendency of Species to form Varieties, and on the Perpetuation of Varieties and Species by Natural Means of Selection"—before the Linnean Society on July 1, 1858. Sir J. D. Hooker thus describes the reception of this paper (vol. ii., p. 126):

"The interest excited was intense; but the subject was too novel and too ominous for the old school to enter the lists before armouring.

After the meeting it was talked over with bated breath. Lyell's approval, and perhaps in a small way mine, as his lieutenant in the affair, rather overawed the fellows, who would otherwise have flown out against the doctrine."

And in a letter written twenty-four years later (vol. ii., p. 294), Mr. Bentham tells how the reading of this paper induced him to withdraw one which he had down for reading the same evening, and, though still unconvinced, to cancel all that part which urged original fixity.

No more valuable or interesting contribution to the history of science has been written than Prof. Huxley's chapter, contained in these volumes, on "The Reception of the *Origin of Species*." It is quite evident from the narrative here given that, so early as 1836, Sir John Herschel and Sir Charles Lyell had both accepted the view that it is "probable that the origination of new species may be carried on through the intervention of intermediate causes"; and the speculations on the possibility of evolution by Lamarck and the anonymous author of the *Vestiges of the Natural History of Creation*—lately disclosed as Robert Chambers—are familiar to all. But the theories promulgated by these writers were purely deductive, and rested on no foundation of well-ascertained facts. Darwin's method was wholly different. In the early days of the battle, no weapon was more freely hurled against him by ignorant or unscrupulous opponents than the charge that he had abandoned the Baconian method; and no charge could have been more absolutely opposed to fact. There is no more perfect chain of inductive reasoning in existence than that contained in the *Origin of Species* and the *Variation of Animals and Plants under Domestication*. To his observations of the laws of nature Darwin owed everything; to the writings of others almost nothing. He himself writes, in a letter to Lyell (vol. ii., p. 215): "You often allude to Lamarck's work. I do not know what you think about it, but it appeared to me extremely poor. I got not a fact or idea from it." It was the perfection of the inductive method employed that took such hold of the scientific world, and brought about a revolution unprecedented in rapidity. Prof. Huxley tells us how he himself, almost up to the time of which we are speaking, fought against the theory of transmutation with Mr. Herbert Spencer. If, he says, a general council of the church scientific had been held in 1860, the theory of transmutation would unquestionably have been condemned by an overwhelming majority; while, if such a council were held now, the decree would be of an exactly opposite character. If we except Mr. A. R. Wallace, who had independently come to the same conclusions as Darwin, and who was then absent from England, the only prominent scientific men that, at the time of the publication of the *Origin of Species*, had partially or entirely abandoned the view that species were fixed and unchangeable, were Lyell, Hooker, Asa Gray, Huxley, and Sir John Lubbock; and all of these, except Lyell, may be regarded as captives to Darwin's bow and spear. The extraordinary rapidity of the change is shown by the fact that now, when the new faith has found almost universal acceptance, all but one of their earliest apostles are still among us.

And now, what is the lesson to be learned from this life of Darwin—a noble memoir of a noble man? Surely that the true scientific spirit is the love of truth for its own sake; that to him who steadily treasures this path, regardless of allurements on his right hand and on the left, will come the highest guerdon. It is as true in science elsewhere that

"The man's whose eye
Is ever on himself doth look on one,
The least of Nature's works."

In Darwin's career we have before us the lesson of a life wholly devoted to the pursuit of truth, the life of a man of the highest rank in science, and yet a Christian gentleman—I use the word advisedly, notwithstanding the avowed agnosticism of his last years—teaching us, his disciples, if only we are worthy of so honourable a name, the dogmatism, jealousy, and egotism are foreign to the spirit of true science as they are to the spirit of true religion.

ALFRED W. BENNETT.

CORRESPONDENCE.

"ERASMUS DARWIN" AND "EVOLUTION, OLD AND NEW."

London: December 14, 1887.

On Saturday last a new edition of the late Mr. Charles Darwin's *Erasmus Darwin* was advertised, of which till then I knew nothing. In this edition a foot-note, which runs as follows, is added to the original preface:

"Mr. Darwin accidentally omitted to mention that Dr. Krause revised, and made certain additions to, his essay before it was translated. Among these additions is an allusion to Mr. Butler's book, *Evolution, Old and New*."

Mr. Francis Darwin, who appears to be responsible for this foot-note, fails to see that what I have always complained of was not an accidental omission, but a deliberate *suppressio veri*. In the original preface, the late Mr. Darwin told his readers he was giving them a certain article, and went out of his way to state expressly that "Mr. Butler's work, *Evolution, Old and New*," had appeared "since the publication" of that article. When Mr. Darwin said this he knew that he was not giving the original article which he said he was giving. He knew that Dr. Krause had recast his article, had had *Evolution, Old and New* before him while doing so, and had turned the revision into an attack upon that book. It is idle to say that Mr. Darwin did not know he was suppressing a material point, which, if expressed, would have done away with the appearance of independent condemnation of my views which, as it was, was offered to the public.

In his recently published autobiography Mr. Darwin refers to his *Erasmus Darwin* as follows: "In 1879 I had a translation of Dr. Ernst Krause's 'Life of Erasmus Darwin' published, and I added a sketch of his character and habits from material in my possession. Many persons have been much interested with this little life, and I am surprised that only 800 or 900 copies were sold."

There is not here a word of compunction about the alleged oversight. The only thing that seems to exercise him is that he did not sell more copies; and yet in Mr. Francis Darwin's *Life and Letters* of his father we read that "he had a keen sense of the honour that ought to reign among authors, and had a horror of any kind of laxness in quoting" (vol. i., p. 157).

Mr. Francis Darwin has now stultified his father's original preface; and this, I suppose, I ought to take as an *amende*. Very well, I take it, somewhat, I am afraid, in the same spirit as that in which it is offered; and shall return to

the silence which I had kept for some years, and which, if Mr. Francis Darwin had not recently reopened the subject, I should not have broken.

SAMUEL BUTLER.

THE FINNIC ORIGIN OF THE ARYANS.

Oxford: Nov. 5, 1887.

It is certainly a matter of some surprise to me that Canon Isaac Taylor should have repeated his views on the "Finnic origin of the Aryans" without noticing the difficulties I suggested in my letter to the ACADEMY of October 8. As the reading public may be inclined to accept the views of a person of such high repute merely on authority, may I ask Canon Taylor if he will give us (1) those few numerals which he believes to be sister-words or aunt-words to the corresponding Aryan forms; (2) those family-names on which he relies so much. It would be extremely interesting, for example, to know what Aryan complexion he discovers in the Finnish words for "father, son, or brother." To discover the connexion in the numerals would require, it seems to me, the eyes of a philological hawk.

With regard to the historical side of the question, is there really nothing which makes it probable that the Fins have become "Aryanised in blood"? It can scarcely, I venture to think, be denied that there has been from the early dawn of Scandinavian history constant intercourse, commercial and otherwise, between Sweden and all the Baltic peoples, extending to the centre of Finland. Is it, then, so altogether unlikely that the ethnological and anthropological characteristics of the stronger race should have gradually impressed themselves upon the weaker? Would not this, in itself, quite as well account for the fact that the Fins of the West more closely approximate to the Swedish type than those of the east of Finland and the neighbouring eastern districts, as the theory which Canon Taylor advocates? At present it is certainly the case that Finnish is not universally spoken throughout the country. On the western coasts and the southern parts of Finland, Swedish is not merely the literary language, but the common language of the people. The children in the streets do not know a word of Finnish.

Again, is it not fatal to Canon Taylor's theory that, according to the views expressed by the advocates of the European centre of the Aryan family, the beech must have been a native tree? The beech certainly does not grow in Finland, and almost certainly is not a native in the lands immediately to the south of the gulf of Finland. In Sweden the extreme northern limit lies very near the Vetter Lake. But this is not all. The investigations of Scandinavian botanists in the Danish peat-bogs have proved that even in Denmark, where the beech is now abundant, that tree is comparatively of modern origin, its place having been previously occupied by the oak, and in still earlier times by the pine and spruce. That the latter trees, now not found in Denmark, were abundant in the Stone Age, in which period Canon Taylor would place the breaking up of the Aryan family, is proved beyond dispute by the discovery of the bones of capercailzie, a bird which feeds on these trees, in the Danish "kitchen-middens." It is obvious, then, that at the time when the Aryans formed, according to Canon Taylor's hypothesis, a united family, their "cradle" would have to be placed considerably further South than any Baltic countries. But why should not some bold ethnologist start the speculation that a united Aryan family is itself a mere speculation, and that there is no absolute proof that the movements and divisions of the language have followed the movements and divisions of what was originally a single race?

F. H. WOODS.

A HEBREW NICKNAME.

Oxford: Dec. 11, 1887.

It has been often urged that too frequent comparison between Arabic and Hebrew is most mischievous for Hebrew lexicography, and this is certainly one of the greatest errors continued by the new editors of Gesenius's dictionary. Mr. Simmons, in his last letter, in which he would consider the name *Hezir* (Neh. x. 20 and 1 Chron. xxiv. 15) as a nickname like a *Tanfir* in Arabic, affords another confirmation of the danger which Arabic supplies to Hebrew scholars when applied at haphazard. That "swine" was a totem among the Hebrews even Prof. Robertson Smith does not like to affirm (*Journal of Philology*, ix., p. 98). And the very name of the family, *bne Hezir*, which occurs in a tomb-inscription near Jerusalem, the date of which cannot be earlier than the first Seleucid, and not later than A.D. 60 (see Chwolson's *Corpus Inscriptionum Hebraicarum*, p. 64 sqq.), proves that *Hezir* does not mean "swine," for no Jewish family would have continued to hold such a name. Besides, the name *Hezir* in Chronicles is that of a priestly family. And it is just the punctuation of *Hezir* (LXX. in Neh. חֲצִיר; in Chron. חֲצִיר for חֲצִירָה), and not *H'azir*, which is intended to indicate that it does not mean "swine," but most likely a pomegranate, as in the Targum and in the Talmud, analogous to the name of *Bne Rimmon* in 2 Sam. iv. 2, 5, 9. Family names, with the names of trees and plants, occur among the Semites in general, and the Israelites in particular, as often as that of animals. That the pomegranate was a symbol of veneration can be seen from the name of the god *Rimmon* and from the pomegranates on the garments of the high priest. The localities of *Rimmon* are those where this fruit was worshipped, just as the names of *Tamar*, "palm-tree," and *Tappuah*, "apple," which are also proper-names of persons. Compare also the four plants used for the service of the feast of tabernacles (Lev. xxiii. 40; Baudissin, *Semitische Religionsgeschichte*, ii., p. 209).

A. NEUBAUER.

[In Mr. Simmons's letter in the ACADEMY of last week, for "Lagat" read "Laqab."]

SCIENCE NOTES.

IN consequence of the attention which is now being directed to the existence of gold in the Mawddach Valley in Merionethshire, Mr. T. A. Readwin has consented to read a paper on "The Occurrence of Gold in North Wales," at the next meeting of the Geologists' Association, on Friday, January 6, 1888.

MR. VAN VOORST'S successors, Messrs. Gurney & Jackson, will shortly publish the volume of the *Zoological Record* for 1886, being the twenty-third annual issue. Originally published by Mr. Van Voorst, under the editorship of Dr. Günther, the *Record* was long supported by an "association," and has now become the property of the Zoological Society.

MESSRS. GURNEY & JACKSON have also nearly ready *A Flora of Hertfordshire*, by the late A. R. Pryor, edited by Mr. B. Daydon Jackson, with notes on the geology, climate, and rivers of the county, by Mr. John Hopkinson, who has added a useful map to the book.

MR. F. MOORE, having completed the *Lepidoptera of Ceylon*, has now in preparation a much more extensive work, comprising the Lepidopterous insects of the entire Indian region. It will be issued in monthly parts to subscribers only, by the publishers of his previous work, Messrs. L. Reeve & Co.

PHILOLOGY NOTES.

THE forthcoming part of the Palaeographical Society's facsimiles will include the inscription of Lygdamis of Halikarnassos, 460-455 B.C.; a section of the Harris Homer, book xviii., on papyrus; two pages of the Oodex Amiatinus of the Bible, at Florence, one of them containing the dedicatory verses; specimens of the Exon Domesday and the Textus Roffensis, of two early MSS. of the Ancren Riwle, and of some Latin MSS. in the Bodleian Library; and charters of the twelfth century.

THE December number of the *Babylonian and Oriental Record* (David Nutt) is the first of a new volume, and this bold enterprise to make English readers acquainted with the results of Oriental research at first hand now enters upon the second year of its existence. We hope, too, that boldness has met with a material reward, for we find the number of pages increased from sixteen to twenty-four, while both type and paper are improved. The name of Prof. Terrien de Lacouperie also appears for the first time as director of the editorial committee, to which Mr. W. St. Chad Boscawen has been added. The present number does not contain anything of such special interest as Prof. Hartwig's Derenbourg's two recent papers on "The Glaser Inscriptions from Yemen." But, apart from Babylonian documents, Prof. Sayce suggests the identification of "Jareb" in Hosea (v. 13, x. 6) with the Assyrian monarch Sargon; and Prof. de Harlez, of Louvain, contributes the introductory article of a series upon the polyglot Buddhist vocabulary known as the "Man-han si-fan tayeh Yao," which contains Tibetan, Mandchu, Mongolian, and Chinese versions of an early Sanskrit text. We would add that the annual subscription to this monthly magazine is 12s. 6d.

Corrections.—In Prof. Kielhorn's letter in the ACADEMY of last week, on "The Initial Point of the Chèdi or Kulachuri Era"—under No. 5, for November 9, 1155, read November 6, 1155; under No. 9, for Samvat 609, read Samvat 909.

MEETINGS OF SOCIETIES.

CLIFTON SHAKSPERE SOCIETY.—(Saturday, Nov. 26.) Mrs C. I. SPENCER, president, in the chair.—Mr. Walter Strachan read a paper on "Some of the 'Humours' in 'Every Man in his Humour,'" singling out for comment the following foibles of his day, which Jonson intended to satirise: bombastic language, affected oaths, tobacco-smoking, the sport of hawking carried to excess, extravagance in dress. Some of these failings remain; one not even a royal tractate could extinguish. As one reads this comedy, one feels that two and a half centuries have changed human nature but little. Some of the follies of 1616 have their counterparts in 1887, in a greater or, it may be, in a less degree. May we hope that we possess painters like "Rare Ben Jonson" who will depict the follies of their contemporaries for the benefit of future generations as well as he has done!

UNIVERSITY COLLEGE LITERARY SOCIETY.—(Monday, November 28.)

T. G. FOSTER, Esq., president, in the chair.—Mr. Hill read a paper on "Necessity in Euripides and Browning." The object of this paper was the comparison of the methods of Euripides and Browning, two dramatists of the Romantic School, in regard to their use of Necessity. The development of the idea of Necessity may be traced from its first appearance in the struggle between men and the gods, as a justifying element in the otherwise irreconcilable discord of the universe. Euripides was under the influence of all the contemporary movements of art, science, and philosophy. Anaxagoras had insisted on the supremacy of mind, and on its differentiation from matter. Protagoras had made the human mind supreme. Euripides felt that there was a unity in nature, and that mind and matter were connected in an inseparable union. Necessity was, to him,

the determination of the individual spirit, by its relation to the other parts of the organised universe. It was no longer something external and separate from man. Euripides' method may be illustrated from the "Medea." Many elements combine to form the necessity of the plot. The semi-civilised nature of Medea, her pride, the Greek terror of exile, the peculiar nature of her passion, half love, half hate, her loneliness. Browning resembles Euripides in many points. His method may be illustrated from "Luria." The struggle in Luria's soul is brought out into relief by means of antithesis, concentration, and elaboration of surrounding details. Around his own mental struggle are grouped those of the minor characters. Browning's method is to seize a character in some critical moment, and, by elaboration of the circumstances involving the soul, to sketch its working as it is coloured by these circumstances. Development of character is not what is depicted, but some particular phase of it. This is the method of the introspective drama in its latest phase—the only form of romantic drama which is compatible with the present conditions of thought.

POLISH HISTORICAL SOCIETY.—(Annual Meeting, Wednesday, November 30.)

AFTER the usual tribute had been paid to the memory of Lord Dudley Coutts Stuart, the most devoted and indefatigable friend of the Polish cause in this country, the secretary, Mr. Nagowski, read a paper describing the present condition of the Poles under the rule of Austria, Prussia, and Russia. In Prussia, since the expulsion of 37,000 Poles on the plea that they were subjects of other states, the government has been attempting to introduce German colonists into the Polish districts on advantageous terms, but so far with very little success. In order to counteract as much as possible the government scheme of colonisation, the Poles have combined to form a "National Land Bank," which has already been able to make some important purchases of land for occupation by Polish farmers. Another measure taken by the Prussian government for denationalising Prussian Poland is the prohibition of the use of the Polish language in the elementary schools. A meeting of 3,000 Poles, representing all classes of the population, at which several of the speakers were peasants, was held at Posen a fortnight ago, to protest against the arbitrary proceedings in Prussian Poland. Notwithstanding the incessant persecution of the Polish nationality, Polish intellectual life is stronger than ever, and the peasantry steadily resist the efforts of the Prussian authorities to incite them against the landowners. As to the Austrian Poles, they are to be congratulated on the steady and brilliant development of their autonomous institutions, and on the popularity and weight of their statesmen in the cabinet and Parliament of the Austrian Empire. Overtures have been recently made to the Poles by the semi-official Russian and German papers, doubtless, in view of the probability of a Russo-German war; but the Poles have had too much bitter experience of the crafty policy of their powerful neighbours to be deluded by such baits.

FINE ART.

THE INSTITUTE OF PAINTERS IN OIL COLOURS.

IF the intention of the Institute is, as we believe, to give an opportunity for bringing together once a year a thoroughly national collection of oil pictures of moderate size, the present exhibition carries it into effect. Such large works as the Hon. John Collier's "Priestess of Bacchus" (125), and Mr. S. J. Solomon's "Remorse" (657), may be looked upon as exceptions to the general rule. The priestess is striking in aspect and finely painted, and the same may be said of the Oriental damsel who in Mr. Solomon's picture is suffering the pangs of repentance; but Mr. Solomon's figure is more remarkable for its freedom of execution and the difficulty of its foreshortening than for its attractiveness. Striking, for a different reason, is Mr. John

Reid's "Old Battens Farm" (588), "one boundless blush of mingled blossoms." It is not from the blossoms that the blush comes, but from an unseen portion of the sky; and the blush extends over the farmhouse and the trees, and is intensified by the local red colour of a portion of the girl's costume. The picture is another instance of Mr. John Reid's real gift as a colorist, but it is a little puzzling to know what is blossom and what is cloud; and, while we acknowledge that it is perhaps the most powerful and original of the pictures here, we should prefer it if the aim of it were not so obviously professional. This fault—and it surely is a fault—affects a great deal of the most accomplished work of the day. It cannot be the best art which makes us think more of the way in which some effect has been got than of the beauty of the picture as a whole. In another way Mr. E. J. Gregory's undoubted success in his portrait of Master Geoffrey Phillips is largely professional. A red velvet dress and a red silk lining could not be painted much better than these; and, though the child has character, it is the dress which attracts. Again, in Mr. J. J. Shannon's portraits of "Mrs. Thornton" (69) and "Lady Maude Hooper" (178), it is the *chic* of attitude and the deftness of painting rather than the subjects which are most brought forward. Those who are old-fashioned enough to like the art which conceals itself will perhaps prefer Sir J. D. Linton's quiet, refined, and subtly-painted head of "Henriette" (310) to many other pictures which appeal more clamorously for notice; and will find in even so simple a composition as M. Fantin's "Double Larkspurs" (449) a grateful rest for eye and brain in the midst of clever crudities.

The strength of the exhibition, despite a number of clever little bits of *genre* in which Messrs. Seymour Lucas, F. Dadd, H. R. Steer, and one or two others maintain their reputation, lies most in landscape and seascape. Many of the best figure painters who are members are absentees this year, and it may fairly be said that the rest have not greatly exerted themselves. Mr. F. D. Millet sends an interior with figures, called "Piping Times of Peace" (454), delightful enough in its cool sweet greens and browns, but the composition is uncomfortable. There is a pretty but tame Staniland, a tolerable Frith, and Mr. Storey sends a bright sketch of a classical woodland with Pan and Syrinx. Scattered about here and there are other clever and nice pictures which would be pleasant possessions enough, but for which it is hard to find discriminating epithets of the right pitch.

In landscape the pictures of Mr. Wimperis, good as they are, scarcely console us for the absence of Mr. Thomas Collier, and a fine Macallum hardly makes up for the loss of Mr. Colin Hunter; but it would take a great many defaulters to make the Institute poor in this branch of art. Mr. Henry Moore sends one or two of his masterly studies of blue heaving sea in sunlight; and Mr. Edwin Hayes has three pictures, one of which—"Summer-time—South-west Wind and Ebb Tide" (718)—is a magnificent example of his well-known but perhaps not yet sufficiently appreciated skill. Grand and simple in style, fine in its subdued colour, with its liquid and weighty grey waves and well-drawn shipping, it yet, from its very truth and sobriety, may fail to attract the admiration it deserves. Another very good picture is Mr. James Webb's "Salisbury," with its vaporous sky and rainbow, its grandeur of design, and beautiful play of broken colour. It is a pity the foreground is not a little stronger and more interesting. Mr. Cotman's fine "Evening by the Willows" (378), Mr. Frank Dillon's bright scene at Osaka, Japan (669), and Mr. George Chester's "Village Farm" (722), are very different pictures which should not

be missed; but it would be difficult to find any part of the galleries without some landscape large or small of which something both true and pleasant might not be said. And this remark applies not only to such well-known artists as Messrs. Frank Walton, Harry Hine, Arthur Severn, Aumonier, C. E. Johnson, Hargitt, MacWhirter, Robert Allan, Fulleylove, Alfred East, and Fahey, but to such comparative unknowns as Miss Saltmer, Mr. Parker Haggarty, Miss Corbould-Haywood, Mr. Alfred Withers, Mr. A. E. Proctor, and others too numerous to mention.

COSMO MONKHOUSE.

CORRESPONDENCE.

THE WALLS OF CHESTER.

South Shields: Dec. 9, 1887.

The well-known French antiquary, M. de Caumont (*Abécédaire d'Archéologie*, i., p. 52), describes two modes, among others, of wall building practised by the Romans, one so exactly like the construction of the underground portion of the north wall of the city of Chester in the Deanery field that it may be of some importance in the discussion as to the age of it.

1. "Murs de grand appareil," he says, are constructed of fine square stones, two feet to three feet, and sometimes four feet to five feet, long, by one foot or two feet thick. These stones are placed *without mortar* ("juxtaposées sans ciment"), and are adjusted with so much precision in some buildings that the joints can scarcely be distinguished. He then describes (2) "Murs de petit appareil" which are more usual. These are formed of small stones, almost square, measuring from four to five inches. In walls of this construction horizontal courses of brick are very often found. The mortar between the stones is very thick. No points are in immediate contact, the stones being encrusted (*incrustées*) in mortar. The centre of the wall between the two faces is filled in with grouting. The writer gives woodcuts showing both modes of construction. The former is the one adopted at Chester below the present level of the ground, the latter (but without the courses of brick) in the stations on the Wall of Hadrian and in the Wall itself, and perhaps in the Chester walls above ground.

In the same volume, at p. 490, is an illustration of a tombstone representing a figure in a recessed niche wearing a dress similar to that of the so-called mediaeval priest; and not only so, but he has a chalice in his right hand, or rather what the middle age advocates of the Chester stone would say was one. The face is also knocked off. As regards the age of this there can be no question as it is inscribed along the top:

D. TICILLAE M.

ROBT. BLAIR.

ROMAN INSCRIPTIONS AT CHESTER.

Liverpool: Dec. 12, 1887.

Further acquaintance with the inscriptions found at Chester, which I have recently described, suggests some slight emendations. Thus in No. 3 of the list in the ACADEMY of September 24 there is room at the end of the third line (broken off) for two or three letters, and the CIA at the commencement of the fourth line I simply gave as it appeared in a rubbing. But CIA should be CLA, and is no part of the word before it. The correct reading, there is little doubt, should be BELLIC(VS) CL(A)UDIA CELEIA. Bellicus is a much more common cognomen than Bellicianus, and there is only room on the stone for the former. We know also that Celeia was styled Claudia Celeia, and in Orelli (No. 501) we have CLA. CELE as the abbreviation.

In No. 6 in the same list, as to which I stated (ACADEMY, October 1) that PVB preceded the centurial mark in the first line, it is possible that the deceased person had held the office of Curator operum publicorum, and that PVB is the surviving portion of the abbreviations CVRAT. OP. PVB. From the massive nature of the tombstone he was evidently a man of mark in Deva.

Out of five fragmentary inscriptions found one bears the letters

G. XX. V. V
X. AN.
H. F. C

evidently part of the words Leg(ionis) XX. V. V. Vix(it) An(nos) * * * H(eres) F(aciendum) C(ura-vit). Another, I am inclined to think, refers to a member of the Claudian tribe, who was a native of Savaria.

W. THOMPSON WATKIN.

NOTES ON ART AND ARCHAEOLOGY.

MR. QUARITCH is about to publish, for Dr. Lippmann, the Fine Art director of the British Museum, an English edition of *Italian Wood-engraving in the Fifteenth Century*, illustrated with a great number of facsimiles from the rarest of the woodcuts described in the text. It is not a mere translation from the German treatise, produced at Berlin some three years ago (frequently quoted in Mr. Fisher's recent volume on the *Early Italian Prints* in the British Museum), as a great quantity of new matter and of corrections have been added by the author, and his English edition thus supersedes the original. Many of the woodcuts are reproduced from unique or excessively rare impressions, and several have been added to the number of those which appeared in the German book. As a critical writer on the subject, Dr. Lippmann's views are of the first importance. His remarks on the early Florentine examples, on the work of Sandro Botticelli and Baccio Baldini, on the Zoan Andrea group, on the Poliphilo designs, and on the career of Jacopo dei Barbari, must attract considerable attention.

THE Rev. G. F. BROWNE, the new Disney professor of archaeology at Cambridge, proposes to deliver a course of six lectures next term on "Sculptured Stones of Pre-Norman Type in the British Islands"—a subject which, we believe, has never been treated in any university. The inaugural lecture will be given in the Senate House on January 31; the other lectures in the museum of archaeology. The present course will be confined to Anglian stones; and opportunity will be taken to discuss Runic and other inscriptions, the relation of the Christian emblems and the Sagas, and the connexion with Rome, Ravenna, &c. In subsequent courses, to be delivered during his five years' tenure of the chair, the professor hopes to treat of the Scottish, Irish, Cornish, Welsh, and Manx sculptured stones.

THE annual general meeting of the Egypt Exploration Fund will be held on Thursday next, December 22, at 3 p.m., in the great room of the Society of Arts, when we understand that Mr. John Fowler—to whom the association owes so much, and in particular its Fowler fund for the exploration of Zoan—will be proposed for the office of president, which has been vacant since the death of Sir Erasmus Wilson. Another meeting will be held in the same place on the following day (Friday, December 23, at 8 p.m.), when M. Naville will deliver a lecture on "Bubastis and the City of Onias."

MM. BOUSSOD, VALADON, & Co. will exhibit next week, at the Goupil Gallery in New Bond Street, a collection of French and Italian paintings. There will also be on view next

week a small collection of Mr. W. Strang's oil paintings, together with his etchings from pictures in the National Gallery, at Messrs. Clifford's, in Piccadilly; while Messrs. Agnew are showing Mr. Macbeth's etching after Fred. Walker's famous "Bathers."

THE STAGE.

"THE WOMAN HATER."

TERRY's new theatre—to judge from the advertisement at the back of the playbill—offers, as the principal inducement that you should get into it, the fact that you can get out of it with the utmost facility. Furthermore, we are informed that it is built of a material which age cannot wither. Woe to the gentleman who unthinkingly—in that moment of ease which belongs to the comedian—lights a cigarette upon the boards, for "the whole stage is dominated with a system of sprinklers"! Woe to the occupants of the stalls, and to the musicians—who are heard occasionally, underground, like that "old mole," the ghost of Hamlet's father—for, at a few moments' notice, the stage "can be deluged with a perfect sheet of water"! Clearly, under these circumstances—when so much has been done to make the visitor comfortable—it is a pure gratuity on Mr. Terry's part to do anything, in addition, to make him merry. Yet this gratuitous, and, as it would seem, almost superfluous, effort, is not withheld. Mr. Terry's presence is one of those which conduces to happiness—one is always a little blither, a little less morose, when he is on the stage; and in "The Woman Hater" he exhibits himself—his quaintness, his good humour, and his eccentricity—throughout the greater part of the evening. Mr. Terry's talent does not submit itself to analysis; his genius is essentially volatile. The personality of the comedian—and not the accomplishments he has acquired—constitutes his charm. He knows his business; but other people know theirs. It is not the knowing of his business that makes him the favourite actor that he is.

As literary work, we cannot honestly say very much for the first new piece which Mr. Terry has played in his own playhouse—Mr. David Lloyd's "Woman Hater." The subject gives no occasion for a single line of beauty; and the amusement which the piece affords is derived rather from ingenious construction—the continual creation of comic situations—than from the dialogue of literary comedy. A lively imagination and a knowledge of stagecraft have done excellent service in default of brilliant wit and dialogue of high finish. What we go to see may be described as, on the whole, a well-arranged farce in three acts. Mr. Terry impersonates the supposed "Woman Hater"—an eccentric, who, though often solitary, is by no means morose—a gentleman, indeed, whose geniality and capacity for romantic associations are such that he has spent a considerable portion of his leisure in planning imaginary wedding tours, and, as far as lay within him, executing them. He has been on one-and-twenty wedding tours, indeed—always by himself—and when the play opens he is not undesirous of undertaking a twenty-second; and this time under the ordinary conditions. He is much in love with a young widow. But a widow of more mature years, when in the act of

receiving not his protestations but his confidence, insists upon fainting on his shoulder, and, on recovery, accepts an offer that was never made. The Woman Hater—since he lives, remember, but in the world of farcical comedy—lacks the strength to free himself from this entanglement. He finds himself under the obligation of writing duplicate love-letters—probably by the carbon-paper process. Eventually he is involved in so many complications that some of his friends are not without excuse in considering him to be suffering from mania. He is conveyed to a private asylum. Here the third act passes. It is less ingenious, perhaps, than the other two, the chief amusement being derived from the continual assumption that this or that entirely sane person is really among the afflicted. But of farcical comedy—however funny it may be upon the stage—one cannot, in cold blood, narrate the plot upon writing paper. Patience and time are lacking. It must suffice to say that by the sudden appearance of two or three outsiders of unclouded brain—especially the Woman Hater's young wife and his young nephew—matters are cleared up, and the curtain falls upon Mr. Terry's timely release—upon his departure for his first—or is it his twenty-second?—honeymoon.

On the whole, this two hours' agreeable buffoonery has the advantage of a good cast. We have paid our tribute already to Mr. Terry's obvious quaintness and good humour. He has never been more vivacious, more fertile in resource. Mr. Kemble is the actor who seconds him the best. Dickens himself might have been satisfied with the presentation of these two peppery partners and excellent and blameless friends—Mr. Bundy and Mr. Dobbins, who quarrel once a day and once a day shake hands with touching cordiality. Mr. Kemble's rich voice—his manner of solidity and importance—make him the best possible contrast to his brother comedian, so airy and so rapid. Mr. Alfred Bishop's Doctor Lane is a bit of "character-acting," discreet rather than brilliant. The pushing widow of the *bourgeoisie* is well enough represented by Miss Victor; while the fascinations of a widow at least a grade above her in station—and very much above her in feeling—are represented by Miss Clara Cowper, large, handsome, and bright. The younger lovers are played by Mr. Erskine, who does little, but looks as if he could do more with effect; and Miss Florence Sutherland, who is somewhat amusing in the third act, but whose quality of voice is, we think, against her, and who has yet to acquire the virtue of style in her art.

FREDERICK WEDMORE.

STAGE NOTES.

WE understand that Mrs. Kendal—who has once before had the matter under consideration—has now almost, if not entirely, decided to indulge the special students of Mr. Browning by appearing, on at least one occasion early in the year, in the immensely subtle and arduous part of the Queen in "In a Balcony." Miss Alma Murray, whose Constance of two or three years ago will not be forgotten, would, of course, again be the Constance. And with a fitting Norbert, an entirely satisfactory performance may thus be anticipated.

AT the Criterion Theatre, "Two Roses" has just been revived. It has not been seen for

several years. The cast, with the exception of Mr. Farren and Mr. David James, is entirely fresh, and it is in some respects interesting. We may, therefore, very shortly have something to say in regard to a performance of the only piece by Mr. Albery that has managed to hold the stage.

We wish to direct attention to the performance of "Othello," which is to take place at a Vaudeville *matinée* next Tuesday, since the Desdemona of the occasion—on whose account in chief, no doubt, the performance is organised—will be no raw pupil of the elocution master, and no merely fashionable person bitten with the passion of stage notoriety, but one of the most rising of the serious actresses of the day. Miss Janet Achurch—whose performance in the "Devil Caresfoot" of Mr. Stanley Little and Mr. Haddon Chambers gave her the right to essay the part of any "juvenile heroine" of the legitimate drama—chooses to essay Desdemona. Miss Achurch will be supported by Mr. Charrington as the Moor, and by Mr. Hermann Vezin as Iago.

THE "Little Comedies' Company"—headed by Mr. William Poel and Miss Grace Latham—has begun its winter work; and its work at this time of the year naturally lies about as much in large country houses as in the double drawing-rooms of London. This week the company has been acting in the Midlands.

MUSIC.

RECENT CONCERTS.

THE Heckmann party gave their second concert at the Prince's Hall, on Friday evening, December 9, and introduced an interesting novelty. This was a quartet for strings in D flat by Signor G. Sgambati, an Italian pianist and composer, and a pupil of Liszt, who visited London some few seasons back. In writing the quartet, the composer seems to have taken Beethoven's later works of the kind as his model. The model is a good one, but difficult to copy. Signor Sgambati, however, if at times vague, has much to say, and expresses his thoughts in an able manner. The second and the third (Andante) movements appeared, at first hearing, the best. The programme included a quartette by Rheinberger, and Schubert's seldom-heard one in G (Op. 161).

There was nothing of special interest at the last Crystal Palace concert, so far as the music was concerned. But Herr Bernhard Stavenhagen gave an admirable reading of Beethoven's Pianoforte Concerto in C minor. The tone was liquid, the technique clear and firm, and there was none of that affectation which marred his Beethoven playing last season. He won a brilliant and well-deserved success. The rendering of Beethoven's Symphony in A was admirable; but of the Palace band this is an oft-told tale. Mr. Santley was the vocalist.

The pupils of the Royal College of Music gave a concert at Prince's Hall last Saturday evening. The orchestral playing, under the direction of Prof. Holmes, showed the neat technique and good intonation of the pupils; but the orchestra has been heard to greater advantage at some of their ordinary college concerts. Miss Marian Osborn deserves a word of praise for her brilliant and artistic rendering of Mendelssohn's uninteresting Rondo (Op. 29), and Mr. Price sang well a recitative and air from "Don Carlos."

Mr. E. Prout, true to his policy of encouraging native art, gave a performance of Mr. F. Corder's "Bridal of Triermain" at the second concert of the Hackney Association last Monday evening. This cantata, it may be remembered, was produced last year at the Wolverhampton festival, and was first given in London at the Bow and Bromley Institute. Having already described the work, it is only

necessary to say that fresh hearing makes one feel that Mr. Corder possesses true dramatic power, but that he has not yet shown it to its fullest extent. There is a certain freshness and unconventionality about the music; there are picturesque effects of harmony and orchestration, and, moreover, great variety of rhythm; so that the impression left on the mind is good, if not thoroughly satisfactory. The reason of this seems to be that one is oftener attracted by the manner than by the matter. The soprano music was sung at short notice by Miss Gertrude Turner; and hasty preparation, coupled with nervousness, prevented her doing herself full justice. Miss Mary Chamberlain, who has a good contralto voice, sang with much intelligence. Mr. Percy Palmer (tenor) and Mr. M. Tufnail (bass) were fairly successful. The choir sang well; but there were signs now and then, both in band and chorus, that more rehearsal would have improved the performance of a work full of difficult passages and uncomfortable intervals. The programme included Mendelssohn's 114th Psalm, and Haydn's Symphony in E flat (No. 3).

Mr. Henschel gave his fifth symphony concert on Tuesday evening. It commenced with a good performance of Brahms' fine Tragic Overture. This was followed by the "Good Friday" music from the third act of "Parsifal." The tenor part was sung by Mr. O. Niemann, son of the well-known artist. He interpreted the part with much feeling and intelligence, but the quality of his voice is not altogether pleasing. Mr. Henschel took the part of Gurnemanz, and sang with his accustomed fervour. A short excerpt like this from "Parsifal" unfortunately gives little idea of Wagner's great work. The performance was conducted by Mr. Barnby. Schumann's symphony in C, under the direction of Mr. Henschel, was well received. The first movement lacked colour, the second, spirit; but the *adagio* and *finale* went well. Signor Piatti played two solos; and Mr. Niemann sang songs by Schubert and Schumann with much success. The programme concluded with a Marche Slave by Tchaikowsky. The first part is interesting, but afterwards it becomes noisy and commonplace. J. S. SHEDLOCK.

MUSIC BOOKS.

Neue Beethoveniana. Von Dr. Th. Frimmel. (Vienna: Carl Gerold's Sohn). A new book about the greatest of tone-poets! But the world is never tired of reading about its heroes. Dr. Frimmel has curiously taken the same title as that adopted by the late Herr Nottebohm for articles which he published in the *Musikalisches Wochenblatt* from 1875 to 1879. Herr Nottebohm devoted himself entirely to describing, and commenting on, the sketch-books left by Beethoven. The first chapter of the present book treats of the composer as a clavier player.

Dr. Frimmel begins with the early days at Bonn, and gives many interesting details of Beethoven's lessons with his father and with Van Edén and Neefe. Passing on to Vienna he collects all sorts of notices about the master as a performer. The following is amusing. Czerny, in his autobiography, relates that Jelinek, a brilliant pianoforte player, told Czerny's father that he was invited to break a lance with an unknown clavierist. "I'll give him a drubbing," added Jelinek. The next day, Czerny's father asked the result of the contest. J. replied: "Satan is in that young man. I never heard such playing." The "unknown" was Beethoven. Cherubini heard Beethoven between 1805-6, and simply characterised his playing as "rough." J. A. Stumpff, who heard the master in 1823, in his worst period of deafness, says: "I must, however, mention that, when he plays the piano, he generally strikes it so that from twenty to thirty strings suffer." The year 1802

was, indeed, Beethoven's high-water mark as a pianist. After that he gradually neglected the instrument, and is said not to have been able to interpret his own last five sonatas.

The chapter of the book entitled "Letters" contains six hitherto unpublished; and the rest, although they have appeared in various papers and books, are not easily accessible to the general public, and therefore most welcome. The first of the new letters is to Zinenskall, one of the composer's early Vienna acquaintances. The second is to Ignace Pleyel, about the publishing of his fourth symphony and other important works. The third is a short note to Artaria, the publisher. The fourth, the original of which is in the possession of Dr. Schebek, is addressed to "Werther Freund," and the signature is cut away. The document, however, appears to be perfectly genuine. In it Beethoven speaks of his symphony in A as "one of the happiest products of my weak powers." The fifth is a letter addressed to Del Rio, principal of the house into which Beethoven's nephew was received in 1818. This interesting document belongs to Frau Professor Anna Pessiak-Schmerling, who is said to possess many other papers relating to Beethoven. Dr. Frimmel gives also a little song, and a short canon of Beethoven's, of which Frau Pessiak possesses the autographs. The sixth letter is to H. V. Hauschka, a well-known member of the *Gesellschaft der Musik Freunde* at Vienna.

The chapter entitled "Aus den Jahren 1816 und 1817" contains an interesting account of a visit paid by the author to a certain Friedrich Hirsch at Oberdöbling, near Vienna. This Hirsch—a grandson of Albrechtsberger, Beethoven's teacher—was eighty years of age at the time of Dr. Frimmel's visit, but in possession of all his faculties. Our author, having compared Hirsch's reminiscences with facts and dates given by Nottebohm and other authorities, believes his statements to be true generally, certain allowances being made for trifling mistakes in describing events which happened "more than sixty years ago." Hirsch received harmony lessons from Beethoven at a time when the latter was working at the Ninth Symphony. False fifths and octaves appear to have thrown the master into great anger; but "after the lesson he again became charming," said Hirsch. Beethoven's room he described as most untidy—notes, music, books, some on the writing-table, some on the floor.

After a short chapter on Mödling, the summer resort of Beethoven, comes a last and long one on the outward appearance of the master and his portraits. Dr. Frimmel reproduces a silhouette of Beethoven at the age of nineteen, which appeared in the biographical notices of Wegeler and Ries. Carl Pleyel, in 1805, in a letter to his mother, describes the great musician as follows: "C'est un petit trapu, le visage grêle, et d'un abord très malhonnête." The earliest portraits of Beethoven appear to date from the year 1801. A beautiful miniature portrait on ivory was taken in 1802 by Chr. Horneman, a Danish artist. It was given to Steffen Breuning by way of reconciliation after a quarrel, and has ever since remained in the Breuning family. A painted portrait of Beethoven is now in the possession of Frau C. van Beethoven, widow of the composer's nephew. "In it," says Dr. Frimmel, "there is no trace of the *Beethovenfriau*, as adopted by so many of our young virtuosi." The volume contains a heliogravure of Beethoven from the bust of the sculptor Klein, and another from the engraving of Eichens, in 1812, after the portrait by Schimon. J. S. SHEDLOCK.

DELICIOUS PRESERVE.—The most attractive of all preserves is MORELLA MARMALADE, made from the celebrated Kent Morella Cherry. The stones being extracted, double weight of fruit is given. Sold in 1 lb. pots by grocers, &c. Makers—THOMAS GRANT & SONS, Maidstone and 46, Gresham-street, E.C.

SATURDAY, DECEMBER 24, 1887.

No. 816, *New Series*.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

The Life of William Barnes, Poet and Philologist. By his Daughter, Lucy Baxter ("Leader Scott"). (Macmillan.)

ALTHOUGH it is not easy to subscribe to the eccentric judgment recently pronounced at Oxford, which ranks William Barnes second among the poets of the Victorian age, there can be little risk in affirming that his rightful place is far higher than that generally accorded to him, even by those who know and find pleasure in his work. The fact that his best poems were written in the "folk-speech" (as he would have called it) of his native county has led to their being often regarded from a mistaken point of view. Although from the first appearance of the Dorset poems there have always been some who judged more correctly, the prevailing impression even now among ordinary readers is probably that William Barnes is a poet of about the same rank as Bloomfield or John Clare. Such an estimate is certainly for more wide of the mark than even the paradox of Mr. Palgrave. It is true that Barnes was a poet of limited range. Intensity of passion has as little place in his poetry as in his gentle and peaceful life; and from the darker aspects of human life he simply turned away with a shudder. But many poets whose sphere was no wider than his are numbered among the immortals; and it is no extravagant prediction that when time shall have done its work upon the poetic reputations of the past fifty years, his name will be one of the half-dozen that survive. Among his contemporaries there were assuredly some far greater poets, but there was no more genuine poet, nor any whose work is more perfect in its own kind.

This life of William Barnes by his daughter is, as might be expected, an extremely interesting book, but it contains some things which illustrate the familiar observation that a man's life can seldom be quite judiciously written by one of his own children. I should be sorry to think that Mrs. Baxter does not appreciate her father's eminence as a poet; but she has fallen into a strange mistake, which, in a biographer who was not a member of Barnes's own family, could only be accounted for on that supposition. She has deliberately set herself to correct what she deems the mistaken view that her father was above all things a poet. "The making of poems," she says in her preface, "was but a small part of his intellectual life. His most earnest studies and his greatest aims were in philology." It is evident, from the whole tone of the book, that she believes her father's work in philology to be at least equal (if not superior) in value to his work in poetry.

It is not difficult to see how Mrs. Baxter came to entertain this unfortunate notion. Like many another man of genius, William Barnes seems to have undervalued, or at least to have taken as a matter of course, his success in his true vocation. His poems were so truly the spontaneous expression of his nature that he could not understand how they could possibly be a more valuable achievement than the works that had cost him so much toil and thought. If he had estimated his poems at their true worth, he could not have looked upon himself—which it seems that he did—as being in the first place a scientific worker and only secondarily a poet. If this was William Barnes's opinion of the nature of his own claim to distinction, it is natural and excusable that his daughter should take the same view; nor can she be severely blamed if—partly from filial reverence, partly (as it is easy to discern) on the principle of *ignotum pro magnifico*—she speaks of her father's work in philology with a ludicrous extravagance of eulogy which his own modesty would surely have deprecated. None the less, however, is the attempt to claim for him the rank of a great philologist a regrettable injustice to his fame, as it can only excite ridicule on the part of those who know how far the claim is from being well founded.

The truth is that, so far as William Barnes's philological writings are concerned, his was the not uncommon case of a man of genius who makes an ill-advised attempt to reconstruct a science from its foundation, without thinking it worth while, or without having had opportunity, to make himself thoroughly acquainted with what has been done by other and better-equipped workers. Such a man is sure to imagine that he has made many brilliant discoveries. Many of these will be simply old and acknowledged truths of the science, often disfigured almost beyond recognition by the paradoxical form in which they are presented; others will be mere illusory inferences from imperfectly known facts; and a small proportion, very likely, may consist of really new and valuable ideas, which the contemporary scientific world is unable to appreciate on account of the author's unintelligible dialect. The most famous instance of this kind of scientific speculation is Goethe's theory of colours. It is no real disparagement to William Barnes's memory to say that his original speculations on comparative philology can, from a scientific point of view, be ranked little higher than the chronemics of the illustrious German. Barnes's knowledge of languages was certainly wide and, considering that he was essentially a self-taught man, positively marvellous. But with the work of scientific philologists he had no acquaintance whatever. In one of his latest books I remember being puzzled by the frequently recurring mention of certain linguistic facts as illustrations of "Grimm's Law." The facts in question had no connexion with the formula so called by philologists, so that it was clear that the writer was using the term in some altogether erroneous sense; but what that sense could be I failed to discover, until I came to a passage in which "Grimm's Law" was defined to be the principle that "like cases have like changes." William Barnes's writings on language contain many acute and

sagacious remarks, and the interesting aspect of his genius which they exhibit undoubtedly deserved to be recognised in his biography. If the subject had been properly handled, it would have been evident that Barnes really did possess a considerable share of the scientific faculty which is so rarely found associated with poetic genius. But no one is likely to draw this conclusion from Mrs. Baxter's indiscriminating and obviously unintelligent praise, so that this biography is in effect unjust even to that side of William Barnes's intellectual character which it unwisely attempts to exalt above its due place.

Except where her father's philology is concerned, Mrs. Baxter has, on the whole, performed her task with judgment and good taste. Each of the chapters is prefaced by an illustrative passage from William Barnes's own poems. The personal anecdotes and the extracts from letters, though not so numerous as could be wished, are delightful, and give a vivid impression of the poet's singularly attractive character. Barnes's life was anything but eventful in the ordinary sense of the word, though its course was certainly somewhat peculiar. He was born at Sturminster in the second year of the century, and at the age of fourteen passed from a village school to a country lawyer's office. After about nine years spent as a clerk, during which his leisure hours were given to assiduous and varied study, he became a schoolmaster. Shortly before his fiftieth year he took orders, and lived until the age of eighty-six as a country parson. As a man of letters he "knew his art but not his trade"; and his writings, while they brought him fame beyond his modest ambition, never added much to his income. His life, though at one time not free from the cares arising from poverty, seems to have been an eminently happy one—his only great sorrow being the death of his wife, which happened in 1853. According to many testimonies, he was both an admirable schoolmaster and an admirable parish clergyman. In each capacity he was following his chosen calling, and in both he worked with the same whole-souled enthusiasm and the same disregard of routine. His methods of school management, as here described, exhibit the unmistakeable stamp of genius. For instance:

"The only visible register was an invention of the master's own, called the 'topograph.' It consisted of a large flat box in which lay a board pierced with holes and painted in lines of colour—white, red, blue, &c., and ending with black. The boys' names were placed at the top of the board opposite each file of holes, and according to his want of diligence the peg was moved down, only to be put up again on the completion of a voluntary task. Of course, if a boy were too careless to redeem it he could leave it; but a low standing was a kind of disgrace which they all felt so keenly that generally the boys lost no time in reinstating themselves. To have one's peg in the 'blues' caused the loss of a holiday; that a peg reached the 'black' was a thing almost unheard of."

This is not a plan which commonplace teachers could safely be recommended to follow, but there is no difficulty in accepting the assurance that in William Barnes's own hands it was perfectly successful.

Mrs. Baxter contributes some interesting particulars throwing light on her father's

poetic work. It seems that the novel metrical effects which he employed with so much felicity were not seldom deliberately imitated from foreign models; in some instances, from Persian poetry. The inferiority of the "Poems in Common English" to those written in dialect is accounted for when we learn that most of the former were actually translations, having been first written in the Dorset vernacular. It is true, no doubt, that Barnes loved his native folk-speech far better than he loved book-English, and that in the use of the latter for poetical expression he was comparatively unpractised. But one or two poems which Mrs. Baxter says were, by way of exception, written originally in literary English are certainly little inferior in beauty to the best of the dialect pieces.

The volume contains a list of Barnes's literary works, both published and unpublished. The latter include "A Second Set of Poems in Common English," "Studies in Poetry of Less Known Schools," "Dorset Dialogues," and some other works with promising titles. Now that William Barnes's fame has become established, and is likely to grow, it may not be unreasonable to suggest that a judicious selection from his unpublished writings, and from those which are out of print, might find a sufficiently extensive sale to justify its publication.

HENRY BRADLEY.

Some Official Correspondence of George Canning. Edited by E. J. Stapleton. In 2 vols. (Longmans.)

WHEN Mr. Canning's private secretary had completed the two works—*The Political Life of George Canning* and *George Canning and his Times*—in which he vindicated the reputation of his chief, there still remained in his hands, over and above the materials which he had there employed, a considerable body of Mr. Canning's correspondence and papers. These MSS. Mr. Edward Stapleton has now arranged, annotated, and printed. Apart from the intrinsic importance of the subject his book is a good and workmanlike performance. Here and there, as circumstances seemed to require, he has inserted long notes explaining the situation of affairs at various junctures, and more particularly discussing and marshalling the views, policies, and motives of the different personages or powers concerned. These notes are clear, appropriate, and highly interesting. The notes, however, upon the several letters are somewhat less satisfactory. They suggest that they have been prepared by a different hand, as a *précis* of the contents of the correspondence, and then inconsiderately included in the collection of letters. Too often they are merely brief and superfluous repetitions of the letters which they purport to explain. As a calendar of the Canning documents they would have been well enough; but in conjunction with the letters, instead of in lieu of them, they are redundant.

These volumes form one more fragment of that vast and evergrowing heap of raw material which awaits the smelting furnace of the next Macaulay. Portions of the correspondence have been published before, and these volumes admittedly aim at completing

gaps in earlier publications. Over and over again a note of this sort confronts one—

"Portions of this letter have been published in the 'Political Life,' as well as the memorandum referred to in the first paragraph; the reply will be found printed in the Wellington Despatches, second series, vol. iii., page so and so."

Though not Mr. Stapleton's fault, this makes hopeless confusion. It involves a constant hide and seek from one to another of half a score of bulky volumes. Then, too, so much consists of mere business record—that copies of such and such despatches have been sent to this person or are sent to that, to be returned or placed in the embassy archives or what not; all of which involves a vast deal of reiteration. This is very necessary for the conduct of public affairs, and as diplomatists are a class of men who enjoy a reasonable amount of leisure they may be able to cope with it; but in the general reader, and even in the student, it produces perplexities and despair. It destroys the continuity of his reading. By the necessity of the case these volumes must be chiefly works of reference; but, as works of reference, their utility is halved by the unaccountable omission of an index, which the table of contents cannot adequately replace.

The general estimate of Canning, so long in controversy, is now fairly agreed upon, and there is nothing in this correspondence that need much change it. He was not, on the one hand, the unique genius of his generation, the statesman to whom is due all the wisdom of modern politics that is not traceable to Pitt, as some do falsely boast; nor was he, on the other hand, the intriguer and the charlatan, who stole the Liberal policy and marred it in the stealing, as others do vainly talk. This is pretty well settled. Mr. Stapleton discusses with considerable minuteness the motives of his conduct at two important junctures—his period of absence from office in 1821 and 1822; and his conflict with the Duke of Wellington, when he was forming his ministry in the spring of 1827. Singularly enough, with all his profound admiration for Canning, Mr. Stapleton places upon his conduct on both occasions a construction which is not only sinister, but gratuitously so. In the first instance, he thinks that, under pretence of the proceedings upon the Divorce Bill, Canning was really masking a determination, which he dared not openly avow, neither to serve under Castlereagh, nor to sanction his policy. In the second, he suspects him of a deliberate discourtesy to the duke, for the purpose of working upon his punctiliousness and inducing him to forego any claim to enter the new ministry. The special pleading, ingenious though it be, to which he resorts in his arguments, is itself their best refutation. That Canning's position in 1827 was so difficult as to invite, if it did not excuse, some shiftiness in getting rid of the impracticable high Tories, and coming in as a Tory minister with strong Liberal support, is plain enough. That he was determined, with all the strength of his strong will, that he and he alone should be the real first minister is clear also. But the incompatibility of further union between him and the duke is also so clear as to make that of itself,

especially in the visibly failing state of Canning's health, sufficient, without any strategy or finessing, to account for the occurrence of misunderstandings between them.

On the whole, these letters are favourable to Canning's reputation for simplicity and straightforwardness. He behaved loyally to his predecessor, though at some cost to himself, in the matter of the diplomatic arrangements, which were pending but not completed when Castlereagh died. The letter of July 2, 1826, effectually determines that, much as it looked like an intrigue of Canning's, Sir C. Stuart's conduct in accepting the task of carrying to Lisbon the constitution granted by Dom Pedro to Portugal, was quite spontaneous and highly embarrassing to the Foreign Secretary, though he endeavoured to make the best of the *fait accompli*. From the author of the memorandum which darkly describes the king as Man, the Queen as Dirce, and himself as Marcus, one is prepared for much in the way of mysterious language. In fact, however, in the field which he thoroughly loved and understood, Canning habitually expressed himself with the most pellucid clearness and convincing force; and many of the shorter letters are models of how much a few brief and business-like sentences can convey in the midst of the multifarious toils of a Foreign Secretary, who also leads the House of Commons, as the longer despatches and memoranda are of luminous and pointed argument. Methodical and hard-working himself, Canning is constantly giving Viscount Granville, though his intimate friend, the smartest raps on the knuckles for his indolence and carelessness, which, to do him justice, Granville seems to have taken in very good part. In the last three years of his life—overworked, anxious, and often a prey to the gout—Canning yielded to an occasional asperity in his private letters which would have startled its objects mightily. He writes to Granville:

"You ask me what you should say to Metternich. In the first place you shall hear what I think of him: that he is the greatest rogue and liar on the Continent, perhaps in the civilised world."

And a fortnight later he says:

"I contemplate great pleasure in reading my note to Lieven, Esterhazy, and above all to the odious and offensive Malzahn."

And to Huskisson he writes:

"I do not know who drew the Order in Council about cannon, &c. . . . Of one thing I am quite sure, that it was thoroughly discussed in cabinet whether the references under it should be to the Secretary of State or to the Admiralty or Treasury, and it was decided for the latter. Nevertheless, that blunderheaded fool at the council office continues to plague me with references."

Indeed, with a party in the cabinet hostile to him, of whom Lord Westmoreland was the most offensive, with intrigues going on to prejudice him with the king behind his back, with the French Army in Spain, and Russia hankering after a Turkish war, there was enough to try his temper; and it is wonderful with what tenacity of resolution and coolness of head he maintained and triumphantly enforced his own foreign policy in the midst of such difficulties.

Some of the voluminous correspondence of, and to, private individuals is very interesting, some of it funny, some of it dull. Canning would appear to have kept nearly everything that he received—it was Sir Robert Peel's rule too; and a good many things have thus come to be printed here which had better have been burnt. But there are several attractive letters: one from Wordsworth soliciting Canning's assistance on behalf of his son, who was a candidate for a fellowship at Merton; one from Canning which mentions that he never was in correspondence with Mr. Sheridan, and believes Sheridan had but few correspondents; several from old Gifford, dying slowly and confronting his fate with fortitude, but despondent about the future of the *Quarterly Review*. But most of them are the conceited offers of projectors or spies, or begging letters in all the moods and tenses of solicitation. To one of these his reply is very neat. A parson had written to beg for a subscription to a volume of "Lives of the Bishops of Winchester," which he was bringing out under the patronage of the bishop of that diocese. Canning replies:

"Mr. Canning has already subscribed to Mr. Cassan's 'Lives of the Bishops of Salisbury,' but he confesses he does not take such interest in episcopal biography as to wish to subscribe to the histories of all the bishops of all the sees in England. Besides, Mr. Canning really thinks that the ample income and princely patronage of the Bishop of Winchester must render any other countenance unnecessary."

That Canning should have died on the very morrow after coming into his kingdom, on the threshold of a career as first minister in which he might have developed his policy unthwarted and in freedom, seems a hard fate. But in his five years at the Foreign Office he had accomplished much, more perhaps than any other man would have done. With the aid of the present volumes, added to those of Mr. Augustus Stapleton, we can now fully realise how much he effected and how well he deserved of his country.

J. A. HAMILTON.

Guatemala, the Land of the Quetzal: a Sketch. By William T. Brigham. (Fisher Unwin.)

THE title conveys no adequate idea at all of the rich and varied contents of this "sketch," which is, in fact, an encyclopedic contribution to our knowledge of the great Central American republic, and, in some respects, of the surrounding states lying between Mexico and Grenada. The book professes to be merely a selection from notes made during three journeys in that region—apparently between the years 1883-1885, without pretending even to the dignity of "a monograph on Guatemala," or claiming to "add to the general knowledge of Central America." But these "notes"—which, however, comprise a graphic account of the author's main expedition from Livingston on the Atlantic through Coban and Quetzaltenango to San José on the Pacific, and thence through the capital and Quirigua back to the starting-point—occupy considerably less than half of the volume, and are sandwiched in between several valuable chapters devoted to a general geographical description of all the Central

American states, and to a more detailed account of the physical features, history, traditions, religion, arts, government, social usages, commercial relations, and prospects of Guatemala itself. The whole has been supplemented by an appendix, to which have been relegated "several long notes and some longer lists" which could not be conveniently incorporated in the text, but which convey much useful information on a surprising variety of subjects, such as the local nomenclature, the cabinet woods and other forest growths, weights, measures, and monetary system, a long list of heights as determined by the French expedition, the native cuisine, with old and new receipts, and, finally, a copious bibliography of Guatemala and surrounding lands. Certainly, to describe all this as a mere "sketch" is a refreshing instance of modesty in these days of pretentious or sensational titles.

Nor is the book in the least overburdened by the almost excessive quantity of dry facts placed at the disposal of the reader, for it is everywhere relieved by a judicious seasoning of that peculiar American humour which is so pleasant when kept within due limits. Even in the appendix this feature unconsciously obtrudes itself, as when it is suggested that

"perhaps the people of Guatemala are as cleanly as others; but, according to our observation, the common practice was to allow the dogs to lick the dishes, which received no additional washing. It was the custom, also, at the table d'hôte in the hotels, to finish a meal by filling the mouth with water and squirting it on the tiled floor. Once when we stopped at a wayside house to get some coffee the señora made a little fire out of doors, put the coffee in a very black pot to boil; and, after fanning the reluctant fire with her straw hat, threw herself on the ground near by to rest and smoke her *puro*. When the pot was near to boiling she reached out her bare leg and tested the temperature of the contents with her toe, as a Northern cook might have used his finger. Frank was scandalised; but, after all, it was merely a matter of taste."

Elsewhere, the strange forms of marine fauna exposed for sale in the seaports suggest the idea that "the man who first ate them must have been very brave or very hungry"; and fricasseed iguana is declared to be "perhaps the best native dish"—surely with an obvious touch of irony. At Panzos, where by-the-by the soldier on guard gets pitched into the River Polochic for refusing to let them pass, a disagreeable night is spent at the inn, one of the party sleeping on the dining-table without a mosquito-net, the other in a dirty bed with a net "full of mosquitoes and other things," so that next morning they are unable to decide "which had had the least comfort."

But Mr. Brigham possesses the rarer quality of directness of exposition, combined with the power of presenting things with a few vivid strokes of the pen. We seem at once to realise the social conditions when we read that the lighthouse at the free port of Livingston, "which all incoming vessels are taxed to maintain, consists of a stout pole, but the lantern has been broken and not replaced"; or that at the "hotel" in the same place

"a tablecloth served also for napkins, and the

dishes were of many patterns, colours, and degrees of dirtiness. It seemed absurd to call for a clean plate, but we did so to see what would happen. A large tame duck used to waddle under my chair, and at last would take bits of tortilla from my hand. Several mangy dogs and cats had to be driven out whenever we sat down to eat; but the hens were not disturbed, for they contributed so much to our larder that they were privileged; and one nested in an old felt hat on a corner shelf, while another came cackling out of one of the dark bedrooms that opened on either side."

From one or two slight references it may be gathered that one object of Mr. Brigham's visit was to "prospect" the country, with a view to ascertaining how far it offered a field for the investment of American capital, or settlement by American citizens. The different results of his inquiries on the spot, according as he is regarded as a passing traveller or an interested observer with an eye to business, are characteristically put in this way:

"As a *stranger* I was told that the place was an el dorado; that limitless crops grew without urging from a soil of unequalled richness; that the climate was salubrious, and eternal summer reigned; that business was brisk, and constantly increasing under wise laws and a favouring government. As a *settler* the song was sung to me in a minor key; labour was not to be had; no good lands could be obtained; the steamers were the tyrants of the place, and all earnings were eaten up by freights. Then there were the warning cries of those unfortunate men who wanted to make money in a newly opened country, but had not the necessary courage and endurance for a pioneer. They had not met success, and they had not grit enough to seek it. Micawbers far from home, they waited for something to turn up."

The outcome of personal investigations in various parts of the country is a balance between these extremes, inclining, however, much more to the favourable side than will be expected by most readers. Even the climate is rehabilitated; and many will be surprised to hear it described as "remarkably healthy," with a lower rate of mortality than Boston or London, for instance, although the statement is qualified by the admission that "yellow fever was common through the hot lowlands of the Pacific coast in 1883, and whooping-cough, measles, and small-pox prevailed in many parts of the country." Although systematic cultivation is unknown, crops growing "very much as they did in the Garden of Eden," such is the exceeding fertility of the soil that maize rudely planted in slight holes sometimes grows to a height of seventeen feet, the stalks averaging three ears each, and maturing in ninety days; so that favoured districts yield no less than three harvests in the year. Two heavy crops are also raised of what is stated to be "the finest rice known," while sugar-cane has yielded as much as three tons per acre for twenty years without replanting—"a result unknown in any other sugar-country." It follows of itself that there is here room not only for "a wise investment of capital," but even for actual colonisation; and perhaps somewhat too alluring prospects are held out to the Northern farmer, who

"wears out his life in the consumptive fields of New England, where his crops grow only four months in the year, instead of settling here where he can plant any day in the year (except

ts' days, unless he employs coolies), and reap a rich harvest in due season."

Mr. Brigham is certainly a clever "prospector," although still a prospector, as shrewd Northern and other farmers of British stock will be wise to remember.

He has also a naturalist's eye for the beautiful and endlessly varied forms of animal and vegetable life in these exuberant tropical lands. On the Chocon, a scarcely known northern affluent of the Rio Dulce (Lower Polochio), tall reeds with feathery blossoms more graceful than the pampas-grass, palms with bluish-green foliage, flowers of the arum family more lovely than the calla; blue herons, butterflies of the most gaudy colours, fish transparent as glass, beautiful grossbeaks with scarlet breast and metallic green back, tall forest trees laden with masses of white, greenish, and other blossoms, are passed in rapid succession; but are all noticed and photographed with a few skilful touches of the pen. More space is given to the curious semi-parasitic climbing orchids deriving their nutriment partly from the soil, partly from the supporting tree-stems; the uncanny-looking, but harmless iguana with green glittering eye, mouth like a toad's, large hanging dewlap, row of lancet-shaped dorsal spines, and long tapering tail; the lovely humming-birds flashing a brighter fire than the brightest ruby or sapphire, and building dainty nests of the golden down of the tree-fern and shingled with delicate lichens; the leaf-cutting ants, Mr. Belt's graphic account of whose strange habits is fully confirmed by our author's observations.

At Quirigua Mr. Brigham carefully explored the remarkable group of Maya-Quiché ruins, which have undergone considerable change since Catherwood's sketches—taken forty years ago—were first published by Stephens. These monuments are chiefly of the monolithic type; but, instead of being mere rough-hewn blocks like those of Stonehenge, they are for the most part elaborately carved on two or more surfaces with hieroglyphs, human and animal heads, in a style analogous to, but apparently not quite identical with, those at Copan and Palenque. Mr. Brigham, who obtained some successful photographs of the inscribed stones, fancies that they are in the nature of the denominative cartouches on the Egyptian obelisks—a view which, in the present state of our knowledge, can neither be proved nor disproved. He also detects a very Egyptian cast of countenance in one, and "a decidedly Aryan head with mustache and flowing beard," in another of the human faces. The "Egyptian" might pass, as a stereotyped and sufficiently elastic expression, which may always be expected from a certain class of theorists. But the "Aryan," especially with the characteristic hirsute appendages, would be apt to raise a protest were all criticism not disarmed by a timely rider, which, although relegated to a footnote, is not the less expiatory. Here we read that,

"although on the stone, and in the photograph as well, this head has the appearance noted in the text, a more careful examination of the photographic image magnified shows that the upper portion of the seemingly human face is in truth that of a tiger, while the flowing beard is the remaining part of a mutilated human face."

So we breathe again, and ethnologists must feel grateful to Mr. Brigham, who, having no theories, had the happy thought to examine his "Aryan head" on a large scale and find it a tiger's. When they hear in future of Aryan or Chinese, Malay or Japanese remains discovered by antiquaries of the Charay and Brasseur de Bourbourg school among the Maya or Toltec ruins, they will be able to suggest—perhaps "tiger," if examined on a sufficiently magnified scale.

This word, "tiger," which, of course, stands for "jaguar," is persistently spelt *tigre* in this volume, which otherwise betrays little traces of "American," except its irrepressible humour. It is provided with an index, several maps, and numerous photographs—not all, however, quite so successful as those illustrating the Quirigua ruins.

A. H. KEANE.

Irish Songs and Poems. By William Allingham. With Music. (Reeves & Turner.)

WERE not Mr. Allingham such a ruthless pruner of his own work, we might feel a little aggrieved with him for presenting us with a volume, under a new name, consisting for the most part of selections from his old poems. There is hardly a poem here which we have not in some shape seen before, though the eight or nine pieces of musical accompaniment (by Mrs. Tom Taylor and from other sources) are an entirely new feature. This Invocation, however, placed upon the flyleaf is to me fresh in more senses than one:

"The Western Wind blows free and far
Beneath a lovely evening Star
Across the ocean vague and vast,
And sweeps that Island Bay at last;
Blows over cliff there, over sand,
Over mountain-guarded land,
Rocky pastures, lonely lakes,
Rushing River that forsakes
His inland calm to find the tide;
Homes where Men in turn abide;
And blows into my heart with thrills,
Remembered thrills of love and joy.
I see thee, Star, above the hills
And waves, as tho' again a Boy,
And yet through mist of tears. O shine
In other hearts, as once in mine,
And thou, Atlantic Wind, blow free
For others now, as once for me!"

—a poem which fairly represents Mr. Allingham at his best, marred, as usual, by one great blemish.

The volume commences with the long poem called "The Lady of the Sea," which appeared under the name of "Mervanee" in his *Songs, Ballads, and Stories* in 1877. This remains unchanged. But in others the pruning process has led to disastrous results. Take, for instance, the following out of "The Pilot's Daughter," which was first published in 1850. The seventh stanza now runs thus:

"Yet not alone the palm grows dull
With clayey delve and watery pain:
And this for me—or hourly pain;
But could I sink and call it gain?
Unless a pilot true, 'twere vain
To wed a Pilot's Daughter."

This seems to me harsh and very involved when compared with the original:

"But not alone the palm grows dull
With clayey delve and watery pull,
And Labour sends a sleepy class
To school, a childish school to Mass:
True love will raise, not sink—alas!
How fades my Pilot's Daughter."

Or, again, in the "Invitation to a Painter" why has Mr. Allingham changed so good a line as

"British Mammon in his glory, in his breathless
race and rush,"
to

"Fashion's costly idle pomp, Mammon's furious
race and rush."

Surely the old is better? Of course, in other cases his instinct has led him right. The version of 1855 of the "Morning Plunge" began thus:

"I sprang from my lightly preest pillow
To tread the gay sunshiny floor;
O welcome, that glittering billow
Whose surf almost reaches our door."

How much he has improved this, which was the blur upon the poem before, in the present edition:

"I scatter the dreams of my pillow,
I spring to a sunshiny floor;
O New Day! how sparkles the billow,
How brilliant are sea, sky, and shore!"

And, perhaps, the happiest lines in "Our Mountain"—the poem through which more than any other breathes the genius of his native scenery (one of those published in 1850)—are those which have been interpolated since the last edition:

"Men have not tainted this atmosphere,
Wing'd thoughts only can follow here,
Folly and falsehood and babble stay
In the ground-smoke somewhere, far away.
Let them greet and cheat
In the narrow street—
Who cares what all the city-folk say?"

As to the selection as such, it seems very successfully made. There are only one or two poems which we cannot spare, noticeably, "The Maids of Elfen-mere," which was brought out in 1855 with that drawing by D. G. Rossetti, of which, while writing, I find Mr. Burne-Jones has said: "It is, I think, the most beautiful drawing for an illustration I have ever seen." Have we not something of a right to ask why this too has not been reproduced, as well as the poem? It is, of course, next to impossible to get it.

Of the, to me, new poems, one, perhaps is the most powerful and dramatic in the book, "A Stormy Night."

"A wild west Coast, a little Town,
Where little Folk go up and down,
Tides flow and winds blow:
Night and Tempest and the Sea,
Human Will and Human Fate:
What is little, what is great?
Howso'er the answer be,
Let me sing of what I know."

The story is told in sixteen short stanzas—a tale of two brothers, of murder, robbery, and suicide; in which the villain becomes the instrument of his own destruction, and the murdered man, unawares, his own avenger. Another of these, treating of the Ban-shee legend, is very weird. The volume ends with the "Familiar Epistle to a little Boy," which appeared in *Evil May Day* in 1883.

It is not for me here to criticise William Allingham as a poet. The judgment has been passed on him long ago, and it will last until he is "revived" again in a century or two. He is often a careless writer, carried away by the very boisterousness of his melody, writing what is little better than doggerel. His rhymes are often very far from inevitable. He allows them to be often much too forced, and he has no fear of platitudes. He will always,

in our mind, be associated with—of course, before all, the "Fairies"—with his "Boy's Burial," with "Our Mountain," with the "Morning Plunge," and with, I hope, "A Stormy Night." In these one can get what is most characteristic of the man, his healthy tone, his love—equal to that of Burns—for his native district,

"On that wild verge of Europe, in dark Donegal,"

his great mastery over rhythmical law, his exquisite imagination, his kindness, and reverence. For all these he will be remembered, and certainly all may be forgiven the man who can give us one, even if only one, perfect couplet:

"If any radiancy divine
Doth straight into thy spirit shine,
Lo, it is thine—not singly thine.
The wondrous light that shone to thee
A child, the children saw, and see."

CHARLES SAYLE.

Letters of David Ricardo to Thomas Robert Malthus, 1810—1823. Edited by James Bonar. (Oxford: Clarendon Press.)

MR. BONAR, the editor of these letters, is already known as the author of an admirable book on *Malthus and his Work*, published two years ago. Apart from its other merits, among which was its calm treatment of controversies crusted with prejudice, his previous work showed in every page the pains which the author had taken to inform himself comprehensively and accurately on his subject. The letters of Ricardo to Malthus may be regarded as a continuation of that work; and Mr. Bonar has performed the humbler part of editor with an equal conscientiousness. It is enough to say that there are few allusions to events or persons of the time on which he fails to give sufficient information to the reader.

The letters themselves, we are bound to say, are not easy reading. Ricardo frequently expresses his regret that he makes "no progress in the very difficult art of composition." "My speaking," he says, "is, like my writing, too much compressed. I am too apt to crowd a great deal of difficult matter into so short a space as to be incomprehensible to the generality of readers." His speeches appear to have been freer from the fault than he himself believed; but, applied to his writings, the criticism is perfectly just. In the correspondence before us, he has to repeat his points again and again, simply because he failed to make himself understood; and it is plain that Malthus was not to blame. Whatever was the cause, whether an obscurity of style or his abstract and often unreal habit of mind, Ricardo is not a writer who can compel an unwilling reader. McCulloch was more than justified in his adaptation of Quintilian's phrase—*Ille se profecisse solet cui Ricardo valde placebit*. If Mr. Bonar had been able to give us the whole, instead of half, of the correspondence, we should have fared better; but, as he tells us, Ricardo's representatives have searched in vain for the corresponding letters of Malthus. In following a difficult argument, we are thus placed at a disadvantage in being able to hear only one side. All the same, the collection is of great interest in bringing

out the personality of Ricardo and the growth of his economical opinions.

The letters extend from February 25, 1810, shortly after the publication of Ricardo's pamphlet on "The High Price of Gold Bullion," to August 31, 1823, less than a fortnight before his death, and cover, as his editor says, the whole period of the friendship of the two men. Among the subjects which they discuss, and on which they differ profoundly, are the currency and the importation of foreign corn—then as now two burning questions, the causes determining the rate of profits, rent, over-production, the meaning of value, and the measure of value. We may quote a few sentences to show the position of Ricardo in regard to some of these matters: "I never was more convinced of any proposition in Political Economy than that restrictions on importation of corn in an importing country have a tendency to lower profits" (p. 35). But he was willing to impose a proportionate countervailing duty wherever taxation bore with unequal effect on agricultural land (pp. 64, 76). Referring to the causes which make capital scanty compared with the means of employing it, he says: "I am led to believe that the state of the cultivation of the land is almost the only great permanent cause" (p. 43). The arguments of many letters are summed up in the neat statement, which comprises the substantial articles of Ricardo's economical creed:

"Profits depend on wages, wages under common circumstances on the price of food and necessaries, and the price of food and necessaries on the fertility of the last cultivated land" (p. 122). "A bad harvest does not, perhaps, very much check the progress of wealth; but it materially interferes with the general happiness" (p. 139). "Nothing is to me so little important as the fall and rise of commodities in money. The great enquiries on which to fix our attention are the rise or fall of corn, labour, and commodities in real value, that is to say, the increase or diminution of the quantity of labour necessary to raise corn and to manufacture commodities" (p. 198).

Lastly, as showing the excellent temper in which the two economists carried on their controversies, let us quote the concluding sentences of the final letter:

"And now, my dear Malthus, I have done. Like other disputants, after much discussion, we each retain our own opinions. These discussions, however, never influence our friendship. I should not like you more than I do if you agreed in opinion with me."

It could not have been otherwise with two such men, of whom we should find it hard to say which was the more open-minded or the less influenced by any ambition other than that of finding the truth.

G. P. MACDONELL.

NEW NOVELS.

Illusions. By H. Musgrave. In 3 vols. (Bentley.)

His Sisters. By Herbert P. Earl. In 2 vols. (Sampson Low.)

Paul Patoff. By F. Marion Crawford. In 3 vols. (Macmillan.)

The Nun's Curse. By Mrs. J. H. Riddell. In 3 vols. (Ward & Downey.)

Home Again. By George Macdonald. (Kegan Paul, Trench & Co.)

In at the Death: a Tale of Society. By George F. Underhill. (Sonnenschein.)

Who is John Noman? By Charles Henry Beckett. (Cassell.)

THERE is so much that is good in the first novel on our list that it is a pity the author should not have cultivated a rather less slipshod style, so as to avoid the danger of irritating his readers. Although there is plenty of incident, the book is chiefly remarkable for its extremely clever studies of character. Medea Longstaff, the heroine, is as noble a woman as any in modern fiction, while for a thoroughly unscrupulous, clever little minx commend us to Miss Rachel McCracken; and old Aunt Dorothea is as lovable as eccentric—which is saying a good deal. There is nothing, perhaps, very new in Medea's story. It is only that of an unsophisticated girl with lofty aspirations, whose very nobility of soul brings about her misery, because she cannot understand that everybody is not as single-minded as herself, and surrenders at once when love seems to have found her. As for Bruce Onslow he is only a rather commonplace scoundrel, in spite of his beauty and accomplishments. It strikes one that a man must have been either very conceited or very dense who could think that, after throwing over a girl in the most cold-blooded manner, he could whistle her back at will; and we are not disposed to envy pretty Flora her bargain. In fact, the men are the weakest drawn of the actors in the piece. Rachel's manoeuvres to get into county society are described with a good deal of quiet humour. Really the girl was so clever that the reader submits, like all her neighbours, to her fascination, and quite rejoices when she triumphs. Her success implied nothing short of genius, considering how she was handicapped by that terrible old vulgarian her father. The scene of her ball, where Bruce and Medea meet again unexpectedly, is one of the best in the novel, though it must yield in intensity to that in which the false lover is denounced and rejected by the woman whom he had deceived. Philomela's death, too, is pathetic. We should rather like to know what Mr. Musgrave imagines a pivot to be; something of the nature of a magnet apparently, since he says of Rachel in relation to the Proteus family—"She did not yet know that the baronet was a pivot which would certainly bring them."

Notwithstanding a reasonable amount of sensation *His Sisters* is rather tedious reading, chiefly because of the prodigious amount of sermonising with which it has pleased the author to pad out his narrative. The title might have been better chosen, for Ralph Marston is practically a nonentity; and either Charles Sumner or Eustace Verrall would better fill the part of hero, which cannot be allotted to Mapleton, although he is, in many respects, the most important figure of the four. The unscrupulous lawyer Littiman is well drawn, and Mr. Earl shows genuine art in relieving the darkness of the man's character by the one natural touch of his love for his niece. Clara herself does not compel much sympathy with her trials; and it strikes one that, to say the least of it, she lost no time

in re-engaging herself after her husband's death. As for her sister Mildred, one must take her charms on trust; for, as depicted, she is the merest shadow of a shade, not to be compared for a moment with the lowly-born Margaret. Mr. Earl seems most at ease when dealing with humble life. The scenes in which the Lisburn family take part are among the best in the book. On the whole *His Sisters* may, with judicious skipping, be read with a certain amount of amusement.

As good a story as was to be expected from the author's former work is to be found in *Paul Patoff*. It is supposed to be told, by request, to a certain lady unnamed by one Paul Griggs, an American who, together with his friend Balsamides Bey, plays a highly important part in the action. The plot turns upon the mysterious disappearance of a rather objectionable young Russian officer, Alexander Patoff, who vanishes as if by magic from his brother's side during a religious ceremony in the mosque of St. Sophia. Their mother, an Englishwoman, has always loved the missing man, and neglected her other son; and she now takes up the insane notion that the latter has made away with her favourite. It is partly the stigma attaching to him through this craze which goads Paul into resuming his search for Alexander, although he had already prosecuted it vainly with prodigious energy; and it must be left to the reader to discover what was the result, and what had been the young Russian's fate. As a matter of fact, the solution of the mystery was due to the American and his friend, and Patoff had very little to do with it. The way in which they construct their chain of evidence is as ingenious as their consequent course of action was daring, and the whole episode is exciting to a degree, the death of the wicked old Khanum rising to a height of tragic horror almost worthy of Webster. It is all the more striking because of the way in which modern science is made to play its part in the weird Eastern scene. As a pleasant set-off to the more stirring portions of the book, the Carvel family, with their quiet English country life, are one and all excellently conceived. Hermione is a sweet and gentle heroine. Her parents are well-imagined, both the bluff squire and his dreamy, semi-mystical wife; and as for the aesthetic old maid, Aunt Chrysochrasia—"Phoebus, what a name!"—she deserves a place in all future galleries of comic portraits. Mdme. Patoff, with her assumed (?) insanity, is also a striking, if slightly unpleasant figure; and so is the hardened scientist Cutter, who would have sacrificed anything or anybody to the working out of a psychological problem. The fall over the parapet at Weissenstein is an effective scene, and so is the last terrible one of the burning of the kiosque. But one hardly looks on an Englishwoman of fifty-two as "old." Did space permit, we should like much to quote many wise passages in this delightful book, notably the remarks on insanity (vol. i. pp. 255-82), and on the breaking of marriage engagements (vol. iii., p. 119); and we cannot refrain from one short quotation, it is so true and pregnant: "It is before all things important that youth should be young, lest it should not know how to be old when age comes upon it." By-the-by, it strikes the insular mind strangely, and rather un-

pleasantly, to find Mr. Crawford insisting so upon the cleanliness of people's hands. One is accustomed to take it as a matter of course in this country that a gentleman's hands are clean.

We cannot consider *The Nun's Curse* as among Mrs. Riddell's happiest efforts. The story is far from being a pleasant one, and the characters are not particularly attractive, if we except Mark Barry. Why on earth the family objected to that warm-hearted, rather demonstrative Irishman we fail to understand, unless it was because he swore when he was excited; and, after all, that is a habit which, though doubtless reprehensible, should hardly be punished by ostracism. Terence Conway, the unlucky inheritor of the mysterious curse, is just a happy-go-lucky young Irishman, amiable enough, but so weak and purposeless as to induce in the reader's mind a feeling of something very like contempt; while as for Philippa Dutton, she is a thoroughly odious young woman, selfish to the core, and not free from a suspicion of hypocrisy. Poor little untutored Grace was worth a million of her. And here we must enter a solemn protest. Mr. Malet, the rector, is made to argue in the most worldly way in order to dissuade Terence from making the only reparation in his power for the wrong he had done Grace, and we fail to see how he could reconcile such conduct with his duty as a priest. It is no answer to say that the proposed marriage was the result of pique at Philippa's conduct. The wrong had been done, and it had to be atoned for, even at the risk of loss of social position. Why was the slur to be left upon both mother and unborn son? Such a doctrine would strike at the root of all morality. *The Nun's Curse* is not pleasant reading, and its conclusion especially is eminently unsatisfactory.

One feels almost nervous in noticing Dr. Macdonald's new book, because he is so very severe upon the evil doings of reviewers. We would fain hope that there are but few critics so unscrupulous as those upon whom he comments. After all, a gentleman does not cease to be a gentleman because he takes to journalism. The story is rather a good one, of the trials and ultimate purification of Walter Colman, a farmer's son, who, fancying himself a poet, despises his father's calling and goes to London, with results that may be discovered from the book. We really cannot see that Lady Lufa was so bad as the author and Sefton make out. Silly no doubt she was, and something of a flirt; but it is hardly sufficient evidence of her being "soulless" that she did not fall in love with her cousin, whom she confessed bored her, and, being an earl's daughter, declined to marry a farmer's son. If Walter had not been a perfect fool he never could have cherished such an absurd hope. However, the book is well worth reading, and the scene of the prodigal's homecoming is as pathetic as anything that even Dr. Macdonald has written. Is it not rather a sweeping assertion to make that "as a savage cannot be a citizen so cannot people of fashion belong to the kingdom of heaven"?

Mr. Underhill seems to have met with an informal critic who, in our opinion, talked great nonsense, for his novel is, if not a work

of art of the first order, eminently readable and full of promise. Grammar and style leave something to be desired at times. We incline to believe, for instance, that when the author speaks of a banking account as being "phenomenal" (p. 143), he meant "nominal." But the career of the reformed gambler Hugh Muirson is cleverly told, though it seems more than doubtful whether such a man as he is at first depicted would ever have turned to any good. Possibly the author changed his mind; but Massinger was no young scape-grace sowing his wild oats, but a hardened youthful blackleg. There is little to be said about the other characters, except that Miss Aura Belgart transferred her affections from Stanhope to his wealthy rival with suspicious facility. The general massacre of principals at the end is suggestive of weariness on the author's part, but his readers need anticipate none.

The worst thing about *Who is John Noman?* is that the conclusion of a decidedly exciting sensation novel leaves the question of the foundling's identity still as undecided as when the Master of the Mountains adopted him. Why that eccentric nobleman should have settled it in his mind that the ragged waif was his heir is another mystery, inasmuch as he did not even know the sex of the missing child. But that is a trifle. John is a fine fellow throughout, and one wishes him well when he disappears from sight after so many perils and trials. Nothing more ghastly or powerful has been written for some time than the murder of Devoe or John's incarceration in the riverside hut. It is undoubtedly a book worth reading.

B. MONTGOMERIE RANKING.

GIFT BOOKS.

For God and Gold. By Julian Corbett. (Macmillan.) Like the romance recently published by Mr. Oswald Crawford, *Beyond the Seas*—which we are glad to find is now accessible in a cheap edition—*For God and Gold* succeeds in combining the excitement of adventure with the realism of history. We will venture yet further, and say that, within its limitations, it is not unworthy of being compared with that memorable novel of the Elizabethan age—*Westward Ho*. The real hero is Francis Drake; and the main subject is his third (or rather fifth) voyage to the Indies in 1572-73, with John Oxenham as his second in command, when he took Nombre de Dios and first "gazed upon the Pacific" from the tree in Panama. Of all this part it is enough to say that it closely follows the authentic narrative published by Drake's nephew in 1626, though we doubt the identification of the Cimaroons with negroes. So much might have been done by any book-maker. The literary interest arises from the framework in which the story has been set. According to the prevalent fashion, it is written in the first person, the narrator being a Puritan gentleman of Kent, who knew Drake's father when he preached at Upnor, and who was himself at Cambridge with Cartwright. At first, it would seem as if the development of this man's moral nature were to be the chief interest of the book; but the author shows his art in allowing the self-consciousness of the earlier chapters to be swept away by the realities that come later. The narrator has ceased to be a prig, and has become a hero almost without our perceiving the change. The other characters also stand out with individual clearness, with the exception, perhaps, of Harry Waldrye.

From what we have said, it will be inferred that this is no ordinary boy's book, but a romance that shows reading, thought, and power on every page.

Dick o' the Fens: a Tale of the Great East Swamp. By G. Manville Fenn. With twelve full-page Illustrations by Frank Dadd. (Blackie.) Mr. Manville Fenn has been not unsuccessful with novels in the regulation three volumes, and we believe that he has also written for the stage; but it is as a writer of books of adventure for boys that his name will be remembered. As Messrs. Blackie hold the first place in this class of literature, so, in our judgment, does Mr. Fenn hold the first place among Messrs. Blackie's writers. And it is pleasant to be able to add that Mr. Fenn has never written a finer story than this. We did not care so much for those of his earlier books in which the scene was laid in foreign parts—Asia Minor, New Guinea, or Peru—though he has no reason to be ashamed of those efforts of the imagination. He is best where he is most at home—whether in describing the romance that still lingers on the shores of the west country, or in creating a glorified market gardener's boy. On the present occasion he takes us to the fens of Lincolnshire, about a hundred years ago, so that the time and the place alike permit some boldness of imagination. In accordance with his rule, his heroes are boys, and no love is introduced. Otherwise, we might say that he has written a page of social life in the past that may challenge comparison with *Mehalah*. And, if we may venture upon another literary reminiscence, it may be said that we find here the last stage in the process of civilisation of which the first is described in Kingsley's *Hereward*. Hitherto, Mr. Gordon Browne has been associated with Mr. Fenn as an illustrator. Now we have Mr. Frank Dadd, of the Institute, who excels in depicting humorous scenes, and is perhaps the more finished draughtsman, though we somewhat miss the happy audacity of Mr. Browne's movement. And, by the way, we cannot think that the artist has rightly interpreted what the author meant by a "punt."

North against South: a Tale of the American Civil War. By Jules Verne. With numerous Illustrations. (Sampson Low.) This is the second volume that M. Jules Verne has given us this year; and, like some others of his recent works, it is divided into two parts, each with a subtitle and—what is less justifiable—each with a separate pagination. It belongs to the author's second manner, in which he abandons any appeal to the marvellous or the scientific, and trusts simply to the vivacity of his narrative to carry his readers along. While we cannot include this among his most happily inspired productions, we are glad to report that in it the champion storyteller of our generation proves that his hand has by no means lost its cunning. From the point of view of picturesqueness, the author has probably done wisely in limiting the scene to Florida, though he has thereby deprived himself of the opportunity of introducing the most dramatic incidents in the War of Secession. Nor can we quite forgive him for the subordinate and unworthy part assigned to the descendant of our boyish hero, Osceola, with the very un-Indian name of Squambo.

Memoirs of an Arabian Princess. (Ward & Downey.) The author of this amusing autobiography is a real princess, half-sister to the Sultan of Zanzibar, who some years ago married a German merchant and settled at Hamburg. The palace-revolutions and domestic wars in which she played a distinguished part seem to have left a somewhat bitter feeling in her mind, if we may judge by the strange state-

ments about the character of some of her relations. With these we have nothing to do; but the public will be interested in all that she says about her early life in what seems to have been a happy but somewhat crowded home. She shared it with about a hundred brothers and sisters and seventy-four stepmothers, including the haughty Sultana ruling supreme over the coffee-coloured Abyssinians and blue-eyed "Circassian cats" who shared the prince's affections. The idea about the cats is as old as Pliny, who tells us of a sort of people in "Albania" who have owl's eyes, and can see better by night than by day. The family seems to have been fond of breakfasting to the sound of barrel-organs, and to have found cock-fighting "by no means uninteresting, and often intensely amusing." The reader will probably pass a similar verdict on the chapters about the daily life in the harem, and the toilet, matchmaking, visiting, and other entertainments and occupations of Eastern ladies.

The Boy Travellers on the Congo. By T. W. Knox. (Sampson Low.) This is a condensation of Mr. Stanley's travels through the Dark Continent. In the letter in which Mr. Stanley himself suggested the compilation, he expresses an opinion that his work in its original form would be too tough of digestion for boys; but he believes that it may be made interesting to them by being told over again in the "chaste and forcible style" which is familiar to the readers of the Boy Travellers' Series. Frank and Fred, with their bland tutor—who seems to have stepped out of *Sandford and Merton*—have already explored the greater part of the habitable globe. Mr. Stanley now wishes them to travel to Uganda and the great lakes, "to descend the magnificent and perilous Congo," and to repeat the adventures and discoveries which made his own journey famous. In one sense the result is disappointing, since the imaginary boys mostly take turns in reading out selected passages from the original book in the cabin of an Atlantic steamer. On the other hand the reader has the advantage of a story told in the great traveller's own words, with the heavier passages conveniently abridged. The illustrations are admirable, but we miss the maps and portrait mentioned in the American preface.

My Friend and my Enemy. By Paul Blake. (Griffith, Farran, & Co.) Boys with a passion for adventure (and it is for such evidently that nine gift-books in ten are written) will be grateful to Mr. Blake for his new story, if only on account of a mysterious, Herculean, and vindictive Malay who figures in it, and who must surely have been the very Malay that, in De Quincey's presence and on his offer, swallowed opium as if it had been bread. The little hero of the story and his friend, an English sailor, who passes for a time under the name of Jack Brown, do not go far afield, fortunately; for they get no farther than France from the English country-town of Peddlebridge, where the first scene of the story is laid. But they are followed wherever they go by their enemy, the Malay, whom they cannot seriously injure, though they hurl stones and even rocks at him. It is only in the end that he gets his deserts, and not at their hands after all. Yet, in spite of his villainy, we are not quite sure that "the enemy" of the story is not a certain "Uncle Sol," who is a very good (or bad) specimen of the social swindler on a small scale. This is a good compact story, and a considerable amount of humour is shown in some, both of the English and of the French, scenes in it.

The Life and Adventures of a very Little Monkey, and Other Tales. By the author of "Stories of My Pets," &c. (Sonnenschein.) In this pretty little book eighteen chapters are devoted to a pet marmosette. It travelled

with its owner through Wales, which gives an opportunity for the country folk and a few of the most important places to be described for children. A few pages are given at the end to an account of Arcachon, its oysters and processional caterpillars, and to a tame black-bird. The author writes in a spirit of the utmost humanity for all creatures, and of sympathy with all that is beautiful in nature. No more delightful book could be placed in the hands of children who are fond of pets. We would only suggest that if a monkey is supposed to talk it might as well speak grammatically, and not say, "It wasn't me!" Also "dim Sasneg," the unvarying words of the Welsh peasant "who has no English," ought of course to be "dim Sassenach."

A Garland for Girls. By Louisa M. Alcott. (Blackie.) Miss Alcott has, we believe, been called the American Maria Edgeworth. For our part, we should be more disposed to compare her with the late Mrs. Craik; for, though none of her novels have won much success, her short stories are all animated by the same spirit of sympathy with the practical needs of the "little women" of to-day. The present collection is, perhaps, less marked than usual by those reminiscences of the early days of New England which have lent such a charm to Miss Alcott's former volumes. But it can be heartily recommended for its artistic simplicity and its wholesome teaching. We note that this is described as a "copyright edition."

Ships, Sailors, and the Sea. By R. J. Cornwall-Jones. With Illustrations. (Cassell.) Here we think we have found the book of which we have long been in search—one that will tell a land-boy all about the life of those that go down to the sea in ships, in an interesting but yet accurate way, without an excess of technical details. It is sufficiently illustrated, and altogether forms an excellent companion volume to Mr. Clements Markham's *Famous Sailors of Former Times*, issued by the same publishers a year or two ago.

Juan and Juanita. By Frances Courtenay Baylor. With Illustrations by Henry Sandham. (Boston: Ticknor; London: Trübner.) Those who have followed the adventures of these two Mexican children in the monthly numbers of *St. Nicholas* will be glad to have the complete story before them with additions, and to hear that it is "true in its essential facts." The faithful dog is, doubtless, due to the imagination of the author; but he adds much to the interest of the story. The volume is beautifully printed, and the illustrations both explain and adorn.

Jack Frost's Little Prisoners. (Skeffington.) This is a collection of ten quite short and simple stories by different writers, told to young children with the object of brightening confinement within doors during the winter. Among the writers are such familiar names as Miss Thackeray, Mrs. Molesworth, Miss Charlotte M. Yonge, Lord Brabourne, and the Rev. S. Baring Gould. To some it will be enough to know that the volume is a companion one to that entitled *Just Tell me a Tale*.

The Duke's Own. By J. Percy Groves. (Griffith, Farran, & Co.) This is an interesting and exciting book for boys, written by one who has seen service. It is exciting because of war and other adventures, and interesting because one meets with historical characters and events. Peter Daly, the hero of the tale, witnesses the landing of General Humbert on the Connaught coast in the memorable year 1798, and some of the subsequent fighting between French and British. He is next a volunteer in the Indian army, and we hear all about the famous campaign under Colonel Wellesley, when Seringapatam was stormed and Tippoo Sahib slain. The book contains some good illustrations.

Mademoiselle, by Mrs. Ryffel (Griffith, Farran, & Co.) is a French governess, who goes to Lady Hepburn to teach a tom-boy called Willie. With her and with everybody whom she meets, Mademoiselle gets on admirably, and ends by duly marrying her Gustave. The young ladies do not marry; one finding her vocation in the Mildmay Training Institute, the rest are awaiting their fate when the book comes to a somewhat abrupt end. It strikes us there are too many servants at Lady Hepburn's; but Jimmy the Buttons, who ate jam so fast that her ladyship put salt in the pot, is amusingly sketched.

Two and Two. (Griffith, Farran, & Co.) Mrs. Seymour has written an account of the doings of four children—now on that, now on this side of the Channel. It is an admirable lesson-book too for teaching children to read aloud, as all the words on which emphasis should be laid are carefully italicised.

How Dante climbed the Mountain. By Rose E. Selge. (Cassell.) This modest volume of "Sunday Readings with the Children from the *Purgatorio*," contains a preface by the Bishop of Ripon which concludes with the wise words: "In days of little books, any effort to make great books part of the inheritance of childhood should be welcomed and encouraged." Miss Selge has done her work well. The only improvement we can suggest is that she should introduce more frequently than she does, quotations from the original. The occasional introduction of a fine line or picturesque epithet, literally translated, would lend her narrative the vitality it somewhat lacks. But, perhaps, this is hypercriticism. The children who have had the benefit of Miss Selge's teaching will be able, when they are older, to study for themselves Dante's great poem with an appreciation quite impossible without such help as Miss Selge has given. The Bishop of Ripon emphatically points out the worthiness of her work. The quotations at the heads of the chapters are from Dean Plumptre's translation, and the eight illustrations are carefully reduced from Doré. The book will be found useful by all beginning the study of Dante.

Word-Portraits of Famous Writers. Edited by Mabel E. Wotton. (Bentley.) Miss Mabel E. Wotton has hit upon a happy idea in going to contemporary sources for the "Word-portraits" which she gives us of these writers. As, however, she has only edited a hundred authors, ranging from Chaucer to Mrs. Henry Wood, her work is inevitably scrappy. The book is, of course, only "made," but might by some be found interesting.

The Story of a Nursery Rhyme, by C. B. (Field & Tuer) should be read by, or to, all clever little brothers who are too fond of asking clever questions. The illustrations, by Edwin J. Ellis, are remarkably good, and a vast improvement on those with which *The Story* was last accompanied when brought out in a more expensive form by the same publishers. The present volume is only one shilling.

Parlour Pastimes. (Edinburgh: Paterson.) This is a charming little book for country children, who are denied the pleasures of winter amusements in town. "Parlour Magic" will specially recommend itself to them—possibly more than to their parents.

A neat pocket edition of the *Paradiso* has just been brought out by Dr. Angelo de Gubernatis. Each canto is accompanied by a short introduction, and "delphinised" by a free prose paraphrase. There are no notes, or discussions of difficulties, nor does the edition profess to be in any sense a critical one. It is a popular and familiar introduction to the poem written for and dedicated to the author's young son. The fatal omission of the number-

ing of the lines (especially as the printed text is interrupted at irregular intervals by portions of the paraphrase) renders the edition almost useless for purposes of reference.

NOTES AND NEWS.

MESSRS. MACMILLAN announce a library edition of the works of Lord Tennyson, which is described as containing everything that the author has published. There will be twelve volumes in all, to be issued monthly—the first in January next.

THE same publishers also announce a new edition of J. R. Green's *Short History of the English People*, of which we may mention that more than 126,000 copies have been sold since its first publication in 1874. This edition has been carefully revised throughout by Mrs. Green, so as to bring its details into harmony with the latest views held by the author, being chiefly those shown in his larger history.

MR. ROBERT BUCHANAN's new poem, *The City of Dream*, will be published in a few days by Messrs Chatto & Windus. It is a kind of modern pilgrimage, written in blank verse, and deals entirely with religious and speculative problems. It is dedicated "to the Sainted Spirit of John Bunyan."

AT the desire of the executive council, Mr. Buchanan has agreed to write the inaugural ode for the International Exhibition in Glasgow. The music will be composed by Dr. Mackenzie; and the ode will be performed chorally next April, on the opening of the exhibition by the Prince of Wales.

THE two works upon which Mr. Walter Besant is now engaged are a memoir of the late Richard Jefferies, which will be entitled a "eulogy"; and an amplification of his "jubilee" article on the Queen's accession, illustrated with numerous full-page plates and woodcuts.

MR. WILLIAM BLACK's two new novels will both appear forthwith in serial form—"In Far Lochaber" in *Harper's Magazine*, and "The Strange Adventures of a House Boat" in the *Illustrated London News*.

MESSRS. LONGMANS will publish next month *The Long White Mountain*, by Mr. H. G. M. James, of the Bombay Civil Service, being the narrative of his recent journey through Manchuria, with an account of the history, administration, and religion of that province. The book will have a map and illustrations.

MESSRS. GEORGE PHILIP & SON will shortly publish *Emin Pasha in Central Africa*: Letters and Journals, collected and annotated by Dr. G. Schweinfurth, Dr. Ratzel, Dr. G. Hartland, and Dr. Felkin, translated from the German by Mrs. Felkin. The book will be illustrated with a portrait, and two maps specially compiled by Mr. E. G. Ravenstein.

THE next volume of Mr. Elliot Stock's "Gentleman's Magazine Library" will be on *Literary Curiosities*. Among the articles on literary property, which occur in this section, will be found some contributions by Dr. Johnson.

MESSRS. SEELEY & Co., the well-known art publishers, announce a new monthly magazine for children, to appear with the new year, under the title of *The Children's Illustrated Magazine*, at the price of twopence. Some idea of its special aim may be gathered from the contents of the first number. These comprise a story of "Three Greek Children," by Prof. A. J. Church, illustrated with two woodcuts after Flaxman; "Recollections of a Tour in Wales Forty-five Years Ago," by Mr. P. G. Hamerton; the beginning of a serial story by

Mrs. Marshall, called "Chris and Tina"; a full-page drawing of Old London Bridge," by Mr. Herbert Railton; two plates printed in colours, by Mr. Edmund Evans; and an air by Cherubini, with new words expressly written for a Christmas song. We venture to think that the new-comer will occupy a place of its own amid the crowd.

THE new edition of Dod's *Peerage, Baronage, and Knightage* of Great Britain and Ireland, with all the Jubilee creations, promotions, and appointments, will shortly be published by Messrs. Whittaker & Co.

THE Rev. J. B. Boyle is about to publish a series of reprints of tracts relating to the counties of Northumberland and Durham, under the title of *Bernician Traits*.

THE January number of the *Practical Teacher* will contain the first of a series of articles by Sir Philip Magnus, entitled "Technical Instruction in Elementary Schools."

OWING to the press of other duties, Mr. J. Stanley Little has resigned the secretaryship of the Shelley Society. Mr. T. J. Wise will act as hon. secretary in future.

MR. DOVE, the hon. secretary and treasurer of the Selden Society, has just received from France, through the Bishop of Chester, an anonymous donation of 300 frs. for the society "from one of the relatives of the famous lawyer."

DURING the past few days the editor of *Little Folks* has distributed among some of the children's hospitals and kindred institutions throughout the United Kingdom many hundreds of dolls, scrap-books, articles of clothing, &c., which had been sent in competition for prizes by readers of that magazine.

MR. HAVERFIELD'S *Model of Syracuse* has been much praised by Prof. Freeman, who has lately returned from a visit to Sicily. Noticing the map in a contemporary, he says "We may recommend the model, which really gives a very good idea of Syracuse, and brings out the main features very well."

TRANSLATION

"CHRISTMAS IN ROME," FROM PAUL HEYSE.

I.

No tree with tapers lit, no Christmas joy,
We sit alone in silence, side by side,
And wherefore?—Each one knows, yet each will
hide;
Three little graves afar our thoughts employ,
This feast for us is silent; childish toy,
Nor Christmas bells, nor mirth with us abide,
For ever round our hearth there seem to glide
The pale sad semblance of each darling boy.
Ah well! Although we oft must quail and shrink,
And quaff in haste the bitter cup of pain,
One bit'r'er still might yet be ours to drink,
And this our very life blood's fount would drain,
And life itself would ebb if 'tween us train,
True hearts fastbound, once broken were the link.

II.

I'd many talents in the olden days,
Could cut out tinsel stars and tapers light,
And when the Christmas-tree was sparkling
bright
Would ring the eager watchers in to gaze.
The well-built fortress I could boldly raise
With leaden soldiers marching, after fight
Store of sweet ammunition bring to sight
From bomb-proof bastions, spreading glad amaze.
I had a comrade then, I loved him well,
As were he part of me, how great a part!
In many wars we fought, my gallant boy,
He'll never hear again the Christmas bell,
Nor rush to me with full and merry heart,
Clapping his little hands with childish joy.

iii.

Yet we to Christmas feast, we too were bid,
 Not the green northern fir decked out with
 light,
 An avenue of cypress, black as night,
 Below the silent Cestius pyramid.
 Slowly we wandered there the toombs amid,
 And read the long-forgotten names; in fight
 They too were wounded and have passed from
 sight,
 And the kind mother-earth their wounds has hid.
 Far, far above the misty blue appears
 The Capitol's calm giant head, grown grey
 Watching the generations rise and fall.
 You plucked two violets from a grave, and tears
 Burst from your eyes, list'ning, while loud and
 gay
 The birds were singing on the garden wall.

B. L. TOLLEMACHE.

OBITUARY.

LUCIANO BANCHI.

Perugia: Dec. 9, 1887.

SIENA has experienced a calamity which excites regret throughout Italy, and wherever a love of literature extends.

The Syndic Commendatore Luciano Banchi died on December 3, after lingering eight months since his paralytic seizure last spring at Florence, where he had gone for medical advice. He was buried on Monday, and his funeral was attended by representatives of all the *contrade* in mediaeval dress, and of every public institution of the city.

He was born of humble parents at or near Radicofani, an old hill-village beyond Monte Amiata—more familiar to the sight of the past generation than to ours, as before railways it was visible from the high road to travellers from Tuscany bound for Rome. Early in life he came to Siena, where by study and force of character he rose to almost every office of trust open to merit. Three times elected syndic, his ambition was directed for many years to induce the King and Queen Margherita to pay a visit to Siena at the time of the annual *Festa*, which, as a revival of mediaeval types and costumes of the fifteenth century, has no compeer elsewhere. As everyone knows, his wish was gratified this year. But the guiding spirit was irremediably broken; and greatly to the gracious queen's regret, he was unable to devote himself, as her most competent *cicerone*, to the display of the marvellous treasures of art abounding in this most fascinating of Italian cities.

Had Banchi been merely a successful syndic this notice would never have been written. He found, indeed, that office a wearisome duty; and the world is the poorer for the waste of his talents in a position which any respectable citizen could equally well have filled. His real claim to general interest was his zeal and capacity in the post he held as chief custodian of the archives of the ancient republic of Siena. Probably none are more complete; and in 1878 a pupil of Prof. Mommsen was employed by the Russian Government to trace the rise of municipal institutions and liberties through the mass of records preserved in the Palazzo Piccolomini.

The collection of seventy-eight *Tavole della Biccherna*, or painted covers of the account books of the city's income and expenditure, dating from 1257 to 1689, are in themselves a succinct history of the gradual progress of the art of painting. Only these seventy-eight remain; thirty more are at Cologne in Germany, and the rest, more than 300 in number, are, as my friend Prof. Mussini says in his pamphlet concerning them, "gone to dealers in old rubbish."

It was Luciano Banchi who selected and arranged under glass cases in a large room of

the palace the rich historical series of Papal Bulls, Charters, parchments (the earliest of which bears date A.D. 726), MSS. and autograph letters of eminent personages that may now be examined and read there. They are the choicest fruit of 50,000 documents disposed in perfect chronological order.

It was Luciano Banchi who, in the preparation of his unfinished book on Dante, based on MSS. unknown until he began his work of exploration, discovered that it was impossible that the Pia of the *Purgatorio* could have been a Pia of the family of the Solomei of Siena. Commentators had all led us astray. And when Signor Lisini, the coadjutor of Banchi, continues his researches it will be found, as already half revealed, to what noble Siena matron of right belonged the radiant crown of sorrow worn so long by another. My letter to the ACADEMY in 1883 first burst the bubble reputation, and brought forward enquiries into the truth of my statement from all countries to Siena. Signor Banchi, when appealed to, confirmed in detail the destruction of a myth, never of Dante's creation, but formed out of the inner consciousness of successive writers. I have no doubt that Dean Plumpton, in his new translation of the *Divina Commedia*, has referred to the subject in a note, taken from my further letter to the ACADEMY in 1886, which included Signor Banchi's own clear exposition of incontrovertible dates, ages, and incidents, putting Pia dei Solomei outside any pretension to celebrity as one of Dante's heroines.

Another of the services to literature we owe to Signor Banchi can be read of by all in an article entitled "A Condottiere of the Fifteenth Century," written by M. Yriarte in the *Revue des Deux Mondes*, dated, I think, in 1881. M. Yriarte tells how, in search of papers to serve as personal memoirs of the famous Free Lance Malatesta, he sought in vain through the archives of Rimini, Rome, Milan, and wherever his trade of war had led the fierce and terrible captain. Chancing to visit Siena, this well-known author discussed with Banchi the total disappearance of all written memorials of the Malatesta family; when Signor Banchi produced a roll of parchments. They were in part letters from Isotta degli Atti, wife of Sigismondo Malatesta, who, to judge from the verses of contemporary poets and flatterers, was the most learned, beautiful, and wittiest woman of her time. The story which the Siena Chronicles give, Signor Banchi related. Malatesta was engaged by the Senesi to serve them in defence of their city; but, learning that he was plotting to turn traitor, and seize it for himself, they sent out by night to his camp an armed troop of soldiers to capture him. Alarmed by his guard, Malatesta fled hastily, leaving behind, it is conjectured, this bundle of letters. Those from his wife are written in her name by another hand, and are curious for their proofs both of jealousy and of devotion to her husband. On the strength of her employment of an amanuensis, Banchi and Yriarte both agreed in thinking that Isotta, called the "Sappho of Italy" was too illiterate to know how to write. If so, medals struck in her honour by order of her adoring lord must have lied like epitaphs; for in the Siena library is one with her not over-lovely profile, encircled by this inscription: "Isote Ariminensi Forma et Virtute Italie decori." Upon the reverse is the elephant of the Malatestas, with the name and date of the medallist, Matteo de Pastis, 1446.

The Italian press has already given many notices of Signor Banchi's death, and such as regard him only in his official career know where to find that information. To his friends he was invaluable as the delightful possessor of a very rare kind of knowledge; and the habit acquired from his surroundings, and

from the familiar reading of antique and dusty chronicles, seemed to have transplanted him out of our prosaic nineteenth century deep into the Middle Ages, when Siena was a cradle of new-born art and architecture. Its checkered story now sounds to us like a tale of dim and only half-remembered romance; but none knew how to give it lustre better than Luciano Banchi, who served Siena faithfully and well while his brief life of fifty years lasted.

WILLIAM MERCER.

MAGAZINES AND REVIEWS.

THE first number of a new German review, entitled *Archiv für die Geschichte der Philosophie*, has recently appeared. The new organ, which is to be published quarterly, will number among its contributors nearly all the chief living authorities on the subject with which it deals. Germany, as the classic land of the history of philosophy, will, of course, be most largely represented, but a good sprinkling of English, French, and Italian names is also to be found on the list; and papers in their respective languages, as well as in Latin, will be inserted. One half of the review will be filled with contributions containing original matter; while the other will be devoted to criticisms and summaries of new books, and articles classified according to the different periods in the history of philosophy and the different countries in which it is studied. Those who value the science chiefly as elucidating the meaning and origin of the ideas and systems from time to time promulgated by the world's greatest thinkers will, it is to be feared, not find much that is nourishing in the first number. A general introduction from the pen of the venerable Prof. Ed. Zeller does indeed outline such a programme as might be expected from the writer's antecedents; but the succeeding papers are almost exclusively occupied with minute chronological and biographical questions. The one exception is an attempt, more ingenious than convincing, on the part of Prof. Ziegler to re-interpret a famous utterance of Anaximander, touching the ultimate absorption of all finite things in the infinite "as a punishment for injustice," in the sense of a retribution for human misdeeds. Prof. Pappenheim endeavours to show, with great erudition, but in a remarkably bad style, that Sextus Empiricus composed his sceptical works neither in Alexandria, nor in Athens, nor in Rome, but in some still unknown city. The argument *e silentio* against Rome would, by the way, apply equally well to the *Enneads* of Plotinus. Prof. Benno Erdmann proves very satisfactorily, but, perhaps, at unnecessary length, that Kant, who, it seems, could not read English, became acquainted with Hume's ideas through a German translation of the *Essays* at some date between 1756 and 1759. The *pièce de résistance* of the number is evidently an account, to be continued in future issues, by the editor, Prof. Ludwig Stein, of the great literary find of the year, the packet of unpublished letters of Leibnitz (whose name, one observes, is again spelt with the *t*), discovered last May in the library of Halle. The extracts here communicated are chiefly interesting as giving evidence that the great mathematician spent a considerable amount of time and money in an unsuccessful attempt to construct a calculating machine. One can hardly agree with Prof. Stein when he argues from this fact that Leibnitz was not so fond of money as is commonly supposed. Surely a man may be very grasping and yet be ready to lavish his gains on some pet scheme. Mr. Bywater sends an account (in English) of "The Literature of Ancient Philosophy in England in 1886"; and Mr. Schurman, an American scholar, of "The English Literature of Recent Philosophy"

during the same period. The latter has evidently not been corrected by the writer, and is full of sad misprints.

CORRESPONDENCE.

THE CAMBRIDGE EDITION OF THE SEPTUAGINT.
Cambridge: Dec. 14, 1887.

Dr. Sanday's kindly review (ACADEMY, Dec. 10) of vol. i. of the Septuagint, as lately edited by Dr. Swete for the Cambridge University Press, contains one or two erroneous state-

ments which I feel sure he will be glad to have corrected.

According to Dr. Sanday the text to be adopted "was to be" that "of the oldest extant MS." "Thus B," he proceeds, "is followed wherever it is extant; where B fails, N; where N fails, A; and so on." And again he asks, "Was it best to print simply the oldest?" The answer is that no such principle has been contemplated or followed. It is enough to quote Dr. Swete's Preface, p. xi: "The text of the Vatican MS. has been selected as that 'which on the whole presents the version of the Septuagint in its relatively oldest form.'" That is to say, the choice was determined, not by the relative age of B as a MS., but by the (presumed) relative age of the text which it predominantly contains. Dr. Swete is exclusively responsible for his own Preface; but the words here marked by italics are quoted by him from a recommendation made by the Septuagint Committee of the Press Syndicate, and for these I fully accept a share of responsibility, only asking that they may be taken to mean neither more nor less than they say.

Another error follows, respecting the MSS. employed to supply the text where leaves of B have been lost. Under the influence of the misapprehension about age, Dr. Sanday writes that, "where B fails, N" [is followed]; though nothing is anywhere said or implied by Dr. Swete about any such use of N. Dr. Swete's words are again explicit:

"Where the Vatican MS. is defective, its defects are supplied from the Alexandrine MS., or, in the very few instances where both these MSS. fail us, from the uncial MS. which occupies the next place in point of age or importance."

No one, I imagine, will doubt that the Cottonian MS. "occupies the next place" to B and A, "in point of age" and of "importance" alike, for the few verses of Genesis xiv. -xvi. in which both primary MSS. fail us. Except for about a dozen lines, there is no other competitor but the Hexaplaric Coislinianus. Thus, here too there is no preference given to MSS. on account of their own age alone.

Thus much on matters of fact. I trust it will not be unbecoming to say a little more on what are to a considerable extent matters of opinion. Recognising clearly the *ad interim* nature of the Cambridge edition, and the advantages of now "printing the text of actual MSS.," Dr. Sanday complains gently that "the result is a patchwork text, representing a number of different families" (say rather, two "families," and possibly for some twenty-eight lines a third). But what else could have been done? A has lost leaves as well as B; and for all great sections of the Old Testament both B and A are preserved in much greater completeness than any other uncial, of whatever age or character; so that if "actual MSS." were to be followed, the only way to escape patchwork would have been to follow one of the very few complete cursive MSS.; not a satisfactory result. The course adopted in Dr. Swete's edition is not likely to mislead a careful reader; for the source (or sources) of the text is indicated by a letter (or letters) at the top of every page, and the exact limits of defect are similarly indicated in the margin.

Perhaps it may be thought by some that, after all, it would have been best to construct some sort of critical text, avowedly provisional. But the truth is that the time has not come, nay, is still far off, when such an attempt might be made without serious risk of doing more harm than good. Not only are the materials as yet too imperfectly collected, but the study of them in a scientific spirit has hardly begun. Thus, to take a single instance, in spite of Lagarde's efforts, few critics seem to have mastered the elementary truth that the texts

of existing MSS. need not be identical with the great ancient types of text from which they may be chiefly derived; that is, that they may contain elements differing in ancestry.

Another question of higher interest is raised further on by Dr. Sanday. The courtesy of his language cannot conceal the suspicion which he evidently entertains that, in electing to have recourse to B rather than A for the text of our two preliminary editions, we have followed a common prejudice which the latest criticism seems likely to render antiquated. This latest criticism is to be found in Cornill's singularly instructive edition of the text of Ezekiel. It consists of evidence illustrated by comments, intended to support and carry further an old dictum of Lagarde's, that the text of the Septuagint in B was formed by a carelessly executed attempt to extract the original form of text from a "glossed" MS. i.e., apparently a MS. with Hexaplaric symbols and interpolations. It is but fair however to Cornill to repeat his final warning (pp. 94 f. that he "gives utterance to his result with the greatest reserve, as the matter can be established only by a careful testing of the whole of B." Thus much only, he says, he definitely maintains as absolutely required by the evidence of Ezekiel, that B, the two confessedly Hexaplaric Greek MSS. of Ezekiel now extant, and the Hexaplaric Syriac "belong to a recension of the text." Moreover, whoever will read between the lines of Lagarde's own review of Cornill, published in the *Göttingische gelehrte Anzeigen* for June 1, 1886 (pp. 413 ff.) can hardly fail to see that on this question the master has, in the course of years, been led to fall back on yet greater reserve than the disciple has imposed on himself.

What Cornill does seem to me to have proved is that in Ezekiel B and the LXX. text of the Hexapla have an element in common at variance with most other texts. But he has omitted (1) to consider the relation of this common element to each of the two texts as wholes; and (2) to enquire whether the hypothesis that the text of B was critically and yet clumsily picked out of a Hexaplaric MS. (either the mighty original at Caesarea, or a transcript of the LXX. column of it) is indeed the only, or the most probable, explanation of such partial correspondence of text as does exist. In a matter demanding such long and careful examination it is best to imitate Lagarde's present caution, however unwelcome, as he says (p. 452), it may be "to students and dogmatists." As far however as my imperfect knowledge goes, the facts suggest that in the Septuagint was copied from a MS. or MSS. partially akin in text to the MS. or MSS. from which Origen took the fundamental text for the LXX. column of his Hexapla, adapting it to his purpose by "Hexaplaric" doctorings, interpolations, and accompaniments. On this supposition the question as to the relative priority of the text which predominates in B, or the text which predominates in A, remains as it was before Lagarde and Cornill wrote. Assuredly it needs a much more searching investigation than it has ever received. But, notwithstanding the unquestionably high antiquity of the type of text which is loosely called the text of A, and its great value as evidence for the earlier history of the Septuagint, I have a strong impression that the rival text will ultimately be clearly ascertained to be that "which on the whole presents the version of the Septuagint in its relatively oldest form."

F. J. A. HORT.

Oxford: Dec. 20, 1887.

I am extremely glad to be corrected on the two important points mentioned by Dr. Hort, and I think it very probable that the emphasizing of them will be a help to the right

appreciation of Dr. Swete's work by others besides myself. It is one of the penalties of attempting to write in the midst of other heavy and distracting duties that one is apt to take in an impression at one time, and to set it down to another, without having the passages on which it is founded actually before the eye. Now, I have no doubt that the intrusion of *re* arose from the effort to define by concrete examples my recollection of the phrase, "the original MS. which occupies the next place in point of age and importance." Something, too, may have been due to the feeling which was, I confess, present to my mind, that to fall back from B upon N would be, under the circumstances, the natural course. I do not wish to urge the point by way of objection. I am not, indeed, even sure of my facts. But does not the principle which Dr. Hort lays down to some extent sacrifice homogeneity of text to antiquity? For instance, in the latter part of the Psalms, would not the text of N be nearer to what the text of B would have been, if it were extant, than the text of A? The text of A may be an older representation of its type, but is not that type more divergent from that of B than N would have been. That was my only doubt; and the underlying idea which I had was that it might have been better (whichever text had been chosen), in places where the leading MS. was deficient, to supplement it from the nearest representative of the same type of text, even if it had to be sought in a cursive MS. rather than from an older representative of another and widely divergent type. I hardly know whether this could have been done, and, if it could, whether the loss would not have been greater than the gain; but it is, I think, important for the student to be fully aware that in passing from B to A, he is not merely stepping over from one MS. to another, but that he is passing, as it were, into a wholly different region of text.

If I am grateful to Dr. Hort for his corrections, I am even more grateful for his estimate of the present position of Septuagint criticism. He has called attention to an article by Lagarde which I had not seen and which does somewhat alter the balance of the situation. I did not feel that I had earned the right to express an opinion of my own; and I was quite prepared for the possibility that recent investigations might be found to have been moving in a wrong direction. Some such hypothesis as that which Dr. Hort propounds in explanation of Cornill's phenomena was hovering before me. But I thought it right to point out that the present tendency of criticism was rather in favour of A as against B. Since I wrote, an additional item to the same effect has come to my notice. I see from the *Theol. Literaturzeitung*, No. 23, p. 550, that Kamphausen has recently been writing an essay in defence of the Masoretic text of the well-known sections in 1 Sam. xvii. and xviii., which are usually regarded as a stronghold of the supporters of the Vatican text of the LXX. I do not know how far Kamphausen's arguments hold good; but it would seem as if they might also be applied, to some extent at least, in defence of Codex Alexandrinus. However, I shall be well content to leave this, and all other points, to the consideration of the accomplished critics who are supervising and executing the Cambridge edition. W. SANDAY.

THE UNIVERSITY EXTENSION SCHEME.

Oxford: Dec. 17, 1887.

In his notice of my pamphlet Mr. Churton Collins represents me as hostile to the scheme of University Extension. The fact is that I have always been favourable to it, and that there is nothing in my pamphlet which lends any support to Mr. Collins's assertion.

H. NETTLESHIP.

THE STOWE MISSAL.

Mitchelstown: Nov. 28, 1887.

The "mis-statements" attributed to me and the fresh matter brought forward in the ACADEMY, No. 803, demand explanation.

1. Dealing with the scribe of Rawl. B. 512, I said (ACADEMY, No. 802): "His fidelity as copyist is shown in *pecaid* (as gen. sg.), *le* (corrupted to *re*), *dar* and *tre* governing the dative in place of the accusative." These five statements my critic now passes over; perhaps because the evidence was not formulated as hereunder.

Rawl. B. 512.	Old Irish Forms.
1. <i>pecaid</i>	1. <i>pectho</i>
2. } <i>re taisechaib</i>	2. } <i>le toisechu</i>
3. } <i>dar cridaib</i>	3. } <i>dar cride</i>
4. } <i>tre airdib</i>	4. } <i>tre arda</i>

2. *Ataebi*, we are told, the MS. has "quite rightly." It comes, this disputant found out "about three years ago," from *atoibim*. If so, the discovery bears as hard as anything I have said on that "careful and learned person," the transcriber. For *ae* in place of the Old Irish *oi* is a gross corruption. The Zeussian MSS., however, present a few instances of *ai* for *oi*. Accordingly, it is here said with charming simplicity, "*Ataibi*, being, not as Dr. MacCarthy supposes," &c. But, prythee, where has Dr. MacCarthy written *ataibi*?

3. "*Leth ataebi* signifies context—literally *side that adheres*." According to the old-fashioned notion, the detached portion it was that adhered to the context; not *vice versa*. Such too was the opinion, fairly pertinent in the present discussion, of the Tripartite Homilists. Part II. is introduced by Matt. xxviii. 19, 20. Whereupon we read: Herent haec ubi dicit: Data est mihi, &c. (Eg., p. 36). That is, vv. 19, 20 adhere to v. 18. Part I., in like manner, opens with Isaiah ix. 2. Upon which the Irish Version (for, so "careful" was the scribe of Rawl. B. 512, that he did not copy the Latin original) says: "The place of adherence (*leth atoib[th]e*), i.e. the page where the verses quoted fit in: cf. herent haec) is the narrative where the prophet said previously: Primo tempore, &c. [v. 1]. So that it is on the track of those words he said: Populus qui sedebat, &c. [v. 2] (Eg., p. 2)." The second verse, namely, is the natural sequence of the first; not, as this commentator would have it, the first of the second. Six or seven similar examples could be quoted from Lebar Brecc. But they are all, of course, stark nought in presence of the newly-found hysteron-proteron.

4. *Ataibi* is "not a corruption of *atoibthe*, but pres. ind. of *atoibim*." But, methinks, even the bookish theorick ought to have saved the grammarian from such a conclusion. For had the writer intended *leth*=subject of *ataibi*, he would have employed the article, and written *al leth*. On the other hand, as a rule, the noun, when followed by a dependent genitive (*G.C.*, p. 915), does not take the article. Moreover, *articulo fere caret* says Zeuss (*ib.*, p. 483) of the verbal substantive. *Leth atoib[th]e*, therefore, is the only reading consonant with sense and grammar. The phonetic form (infected *t* being silent) the Lebar Brecc scribe—more "careful and learned" than the Bodleian—wrote accurately *atoibe*.

5. "Lebar Brecc, 251a, line 68," is quoted to prove that *toibe* is gen. sg. of *toeb*. "L. B., 251a" looks new. But readers of my paper on the Stowe Missal will recognise at once the B-text of the Irish Tract on the Mass, there given and translated, p. 259, sq. The declensional value of that copy I estimated thus: "It has been sadly marred by corruptions of form and meaning in the transcription (*ib.*, p. 148)." No one has yet arisen to dispute this decision.

In addition, the true form is preserved in the Stowe transcript.

A—Text, p. 251. B—Text, p. 264.
in oxil in *twib deiss*. isind achsail *twibe deiss*.

6. The gen. Ruasin, I showed, was employed by the writer of the fourteenth-century inscriptions on the Stowe reliquary. "The inscription in question," I am informed in reply, "reads very clearly: Orait do Gilla Ruadan, &c." Not to bandy contradiction, let Dr. Todd decide. "The remainder of this inscription is possibly [Gill]a ruasin, the same as Gillaruadan, which occurs on the next or fourth inscription, on the left-hand side of the square (Tr. R. I. A., xxiii., p. 15)." *Utri creditis, Quirites?*

7. The taunt of having abandoned Mr. Warren has elicited the instructive fact that, towards proving Maelruain a bishop, "the master" has nothing to communicate to the disciple. His search for "documentary evidence" has not gone farther afield than Lebar Brecc and O'Conor (Rev. Hib. Script.). Why, I can help him to four more:—Annals of Four Masters, Annals of Innisfallen, Martyrology of Donegal, and Aengusius Auctus, a MS. in the Franciscan Convent, Dublin. How far these are reliable, it will be time enough to discuss when anybody appeals to their authority.

Meanwhile, I shall deal with the two put forward. The statement in Lebar Brecc occurs in one of numerous notes on the Calendar of Oengus—a work purporting to have been composed in the reign of King Aed, 793-817. The hagiographic standard of these Notanda can be tested by the following. John Cassian is made Bishop of Constantinople, and Pope Gregory the Great an Irishman. Bishop Mel, of Ardagh, conferred episcopal orders upon St. Brigit of Kildare. At May 13, a distich respecting Tigernach is suggested as the true reading. The saint is identified as Tigernach of Bairche. The annotator, namely, was such "a careful and learned person" as to overlook the fact that this Tigernach died, abbot of Moville, county Down, in 1061—two centuries and a quarter after date! Lebar Brecc, accordingly, may pair off with the Four Masters, Book of Hymns, Bodleian Tripartite, and, if I may anticipate, the Annals of Ulster.

8. The extract from the last-mentioned Annals runs thus: Maelruain Tamlectai, Aidain Rathain, Aidan hua Concumbu, episcopi et milites Christi, in pace dormierunt. (The Trinity College MS., H. 1 8, fol. 24b, is in agreement.) Coming from one who considers this excerpt conclusive historical evidence, "The Rolls" edition of the Tripartite must prove a notable addition to Irish hagiography. What, it is pertinent to inquire, are the claims of Maguire, the Ulster compiler, to be deemed a reliable chronicler? *Ex pede Herculem*. At the year 814, he writes: *Direptio organorum Ecclesiae Clooncreve*. Herefrom O'Conor and the tribe of copyists have charmed the national vanity with the knowledge that organs were employed at an early period in the Irish Church. But the commonplace original, which is still in existence, knocks all the music out of the transaction—Orgain Cluana Cremha, Plundering of Clooncraft (near Elphin, county Roscommon). Things have come to a pretty pass, when a disputant, who is nothing if not critical, thinks the cause finished by handing in a quotation from a source like the foregoing.

To come to the matter under discussion, the entry, there is evidence cumulative and conclusive, is commentitious as it stands. In the first place, obits of religious in the Ulster and similar Collections were supplied from the respective monastic establishments. See, then, what a coincidence is here implied. That, forsooth, in one year, and in one only, one and the same verbal form of eulogy was employed

in three independent communities. Secondly, the gen., Aidain, which is the true lection, is meaningless in this place. The nom., Aidan, is required. Thirdly, the corresponding paragraph in the Four Masters (O'D., I, 392), which is plainly derived from different sources, (a) inverts the sequence of the Aidans; (b) does not call the monk of Rahen a bishop at all; and, what decides the question, (c) restricts the panegyric to Aidan hua Concumbu: A. h. C., epscop ocus milidh tocchaidhe do Crist, d'ec; A. h. C., bishop and soldier select of Christ, died.

We can accordingly restore the reading, as follows:

[Dormitatio] Maileruen Tamlectan; Aidain Raithin; Aidain hui Concumbu, episcopi et militis Christi.

But the "casket of wisdom" (so Maguire is styled with unconscious irony by his Continuator) referred the "epitheta ornantia" to all three: adding "in pace dormierunt," to eke out the sense. So "careful and learned" was he, however, that he failed to detect the necessity of changing the gen., Aidain, of one of his originals into the requisite nom., Aidan.

The obit of Maelruain, supplied from his own foundation in Tallaght, is thus in accord with the other original authorities in not describing him as a bishop. He was, in fact, bona-fide students will be interested to learn, a presbyter-abbot, who had in his community a well-known bishop-monk for the performance of episcopal functions. B. MACCARTHY.

P.S.—*Erratum*. In the ACADEMY, No. 802, p. 186, col. 1, l. 12, for "countrymen" read "countryman."

SPELLICANS.

London: Dec. 19, 1887.

In the *Digha Nikāya* we find a list of games to which certain Samanas and Brahmins are said to be addicted. The phrase is put into the mouth of the Buddha; and the list occurring in one of the very oldest fragments imbedded in the Buddhist Scriptures (in the Silas) dates back very probably to the time when Gotama was living. Of each word in this list we have the traditional interpretation preserved to us in the great commentary by Buddhaghosa, who wrote about A.D. 430. One of the games is called *Santikam*, and Buddhaghosa explains it:

"Little pieces [or men of the kind used in games] or bits of crockery are put all in a heap together. Then these they remove or replace with the nail, and, if any object in the heap shakes, he [the player] is beaten."

See the *Sumangala Vilāsinī*, just edited for the Pali Text Society by myself and Prof. Carpenter, p. 85.

Santikam may be rendered "Neighbourhoods"; but the game is clearly what is now called *Spellicans*. As now played, each piece has a number on it, and each player continues to withdraw (with a hook) one or other of the various pieces until in so doing he shakes the rest. Then the other player has his turn; and, when all the pieces are removed, the numbers on those taken by each player are added up, and the player with the highest number wins.

Is anything known of the history of this game in Europe? The name for it is evidently old, and connected (not with *spielen*, "to play") but with our words *spill* (a bit of paper or wood) and *splinter*. That it should have existed 500 B.C. in India need not surprise us. A study of the migration of games might be expected to yield results as interesting as that of the migration of stories.

T. W. RHYS DAVIDS.

APPOINTMENTS FOR NEXT WEEK.

TUESDAY, Dec. 27, 3 p.m. Royal Institution: "Astronomy, I. the Sun," by Sir R. S. Ball.
THURSDAY, Dec. 29, 3 p.m. Royal Institution: "Astronomy, II. the Moon," by Sir R. S. Ball.
SATURDAY, Dec. 31, 3 p.m. Royal Institution: "Astronomy, III. the Small Planets," by Sir R. S. Ball.

SCIENCE.

Aboth di-Rabbi Nathan: hujus libri recensiones duos, etc., edidit Salomon Schechter. (David Nutt.)

THE editor of the *Opera Posthuma* of Spinoza gave on the title-page not the full name of the writer, but only the initials "B. I. Sp." He did this in deference to the express request of the philosopher, who desired that his writings should be estimated by their intrinsic value, and that his theory should stand or fall according to its own merits, and not according to the weight of the author's name. In ancient Hebrew works this principle seems to have been applied more consistently, and many title-pages do not even contain the initials of the authors' names. Who compiled the *Mechilta*, *Sefra*, *Sefri*, or any of the *Midrashim*? A glance at the introductions of Friedman, Weiss, or Buber to their editions of the above *Midrashim*, or at the respective articles in bibliographical works or encyclopaedias, suffices to convince us of the great difficulty which scholars experience in solving problems of this kind. Equally uncertain is the answer given by historians and archaeologists to the query, Who gave the *Mishnah* its final touch? Who compiled the *Babylonian Talmud*? Who the *Jerusalem Talmud*? Vague traditions in subsequent ages have supplied names in some cases, but these rather contribute to the perplexity than to the enlightenment of the student on these questions. The uncertainty as to the author's name naturally implies the uncertainty as to the date and place of his existence. Hints and traces suggested by the contents of the book can only be employed as evidence of a negative character; and frequently even evidence of this kind cannot be obtained, on account of omissions, additions, and corruptions made by untrustworthy copyists. According to a Talmudical saying—*hakkol taluj bammazzal*, "all depends on fortune"—some parts of the Talmudical literature received due attention from the earliest times, and were, therefore, preserved in a fairly correct and original condition, while other parts were altogether neglected and have come down to us in a sadly mutilated state.

The work before us, *Aboth di-Rabbi Nathan*, is a fair example of the latter treatment. In the ordinary editions of the *Babylonian Talmud* it has its place in the ninth volume among the smaller treatises (*Masechtoth Ketannoth*) after *Masecheth Horajoth*. Few Talmudists considered it necessary to expound *Aboth di-Rabbi Nathan*, although its near relative or parent, the *Pirke Aboth*, on account of its simplicity and excellence, has always enjoyed great popularity, has been translated into various languages, and has been distinguished by numerous editions and equally numerous commentaries. But, after a long period of neglect and slight, the treatise has at last received its due reward and just compensation in the splendid edition prepared

by Mr. Schechter. A desideratum of long standing has now been supplied in a systematic and scholarly manner. The editor, in the learned introduction, written in fair and intelligible Hebrew, fully satisfies the reader's curiosity about the literary history of the book. In the first place, it is, of course, interesting for us to know the meaning of the title, *Aboth di-Rabbi Nathan*. In opposition to the view of Frankel and others, who hold that the principal object of *Mishnah Aboth* ("Sayings of the Fathers") is to record the chain of tradition, Mr. Schechter rightly assumes that the treatise purports to be, and in reality is, a collection of practical, moral maxims. Probably this is the meaning of the term *aboth* (lit. "fathers," but frequently used in the Talmud in the sense of "first," "chief," or "principal"; here "principal rules"). *Rabbi Nathan* is held by Mr. Schechter to be identical with *Rabbi Nathan*, the *Babylonian*, an older contemporary of *Rabbi Judah*, the *Prince*. He is not, however, the author of the treatise before us, and we shall presently see what relation exists between *Rabbi Nathan* and the book *Aboth di-Rabbi Nathan*.

Various theories have been suggested by Zunz, Frankel, Hayuth, Geiger, Graetz, and Weiss. These are discussed in the volume before us in a fair and impartial manner. Mr. Schechter resolves the *Mishnah Aboth* into four different elements, viz.: (1) Chap. i, 1-11, sayings of the couples; i.e., of two contemporary Rabbis, the heads of the Synhedrin. (2) Chap. i, 12-ii, sayings of Hillel and his descendants, and of R. Jochanan ben Sakkai and his disciples. (3) iii-iv, miscellanea without any particular system or order. (4) Sayings based on the numbers 10, 7, 4, and 3. In an analogous manner Mr. Schechter divides *Aboth di-Rabbi Nathan* into four sections. The first two (i-xi. and xii-xviii.) form a kind of exposition—*Midrash* or *Gemara*—on the first two parts of *Mishnah Aboth*. The second section seems to be based on a *Mishnah* text different from the received one, and, according to Mr. Schechter, in a more primitive form. The third and fourth sections (chaps. xix.-xxx., and xxx. to end) are written in a style like that of the *Mishnah* or *Tosefta*, and differ from each other in the same way as the corresponding parts of *Mishnah Aboth*.

In addition to the ordinary text, as printed in the editions of the Talmud, Mr. Schechter's book contains a second text which has never been published before. As the two texts are printed side by side, a comparison of their respective merits is easy. At first sight they would appear as two different works—as two sets of sayings and *Midrashim* without any relation to each other. But on closer examination it is discovered that both have the same fundamental structure, and differ only in the form and the extent of the superstructures. There may have been in existence a *Mishnah Aboth* contained in the *Mishnah* collection of *Rabbi Nathan*, the *Babylonian*, which was older than that of *Rabbi Judah*, the *Prince*. This original *Aboth di-Rabbi Nathan* was then expounded, illustrated, and enlarged. According to Mr. Schechter, the second text, though far from being preserved in its original form, has fewer traces of transformation and growth than the first.

Mr. Schechter has spared no trouble or expense to make his edition of the two texts as

correct and as complete as possible. All MSS. and all works that contain any reference to Aboth have been diligently searched, and in the footnotes we are presented with the fruit of that arduous labour. Additions, found in various MSS., and not embodied in the text or in the footnotes, have a separate place assigned to them at the end of the book, under the title "Additamenta" (*Hosafoth*). The various indexes of Biblical and Mishnic quotations and of proper names enhance the value of the present edition. Mr. Schechter has dedicated the work to Mr. Claude Montefiore; but he has earned the admiration and thanks of all students and friends of Hebrew literature by his patient, painstaking, and sound judgment, of which the present edition of *Aboth di-Rabbi Nathan* gives ample evidence. M. FRIEDLÄNDER.

PHILOLOGICAL BOOKS.

PROF. W. W. SKEAT'S *Principles of English Etymology* (Oxford: Clarendon Press) is a clear and interesting analysis of the "native" element in English. In some points it shows a distinct advance on the author's *Etymological Dictionary of the English Language*. The misleading theory of "root-determinatives" has disappeared, and the laws of vocalism have become far stricter, though a vowel-scheme like that given on p. 33 of Brugmann's *Grundriss* (a book which the author mentions, p. 293, but does not seem to have used) might with advantage have been inserted in chap. v., on the English long vowels. It is only incidentally (pp. 174 and 225) that we learn the correspondence of original *ā* with Teutonic *ō*; γινώσκω and English "know" are equated without hesitation (p. 121), though Ags. *cnāwan* can only come from *gnē*, not from *gnō*. The statement of Verner's law, p. 148, might, perhaps, be improved: after an accented vowel an Aryan *k t p* becomes not *h th f* but *g d b*. To say that Ags. *hjd* is the "precise equivalent" of Latin *cūlis* (p. 208) shows a seeming disregard of quantity. The "vocalic" nature of the liquids in certain combinations is frequently alluded to, but little appreciation is shown of the phonetic value of the discoveries of Brugmann and De Saussure: Eng. "corn" (p. 239) is equated with Lat. *grānum* "for *garnum*." Kuhn's connexion of *gōrii* and κλέος (p. 285) is quite impossible. The view that *l* and *r* interchange at random in European languages (p. 278) has long been superseded: the author's one instance, "smoulder" (p. 376), is rather a case of dissimilation. Whitney, writing in 1868, is unhesitatingly quoted (p. 281) as authority for the opinion that our ancestors "talked in roots"—an idea which few would now maintain. The analysis of the suffix *isto* (p. 265) would be better omitted. The word "jetsam" (p. 478) the author now derives from Lat. *jactationem*. Vowel-length is throughout marked by the acute accent, which causes inconvenience when Verner's law has to be discussed (p. 148). The first element of the Ags. diphthongs *ea* and *eo* is here accented (as being long). Is this an oversight? Especially interesting is the account of Middle English, chap. iv., and of Grimm's law, chaps. vii.—ix. (with copious examples in an appendix). The author justly ridicules the idea that *r* can be said to be "pronounced" in such a word as *barn* (an idea, however, which the *Saturday Review* still expresses at frequent intervals by its objection to the rhyme "dawn" and "morn"); but his own pronunciation is sometimes curious. He makes "hoarse" = "horse" in sound (p. 55), and seems to think the *h* may be dropped in "human" and "humid," as well as in "humour" (p. 359).

The dropping of the *h* in "what," &c. (p. 338) is really universal except in dialects. All English poets but Mr. Swinburne lengthen the *i* in the substantive *in ind* (p. 403), in order to extend the field of possible rhymes beyond "pinned," "sinned," "thinned," "skinned," "tinned," the two last of which are somewhat unpoetical. The *f* in the archaic word "hereof" (p. 373) is seldom pronounced as *v*. Is "geyser" ever pronounced *geezzer* (p. 475)? The chapter on accent (xxv.) is very good. But perhaps the most practically valuable part of the book is the protest against our modern (un-phonetic) mode of spelling; and especially against the extraordinary view, derived, it seems, from Archbishop Trench, that it is the etymologist, of all people in the world, who objects to spelling reform. If printing had been invented 2000 years ago, we should know very little about etymology. What we want to know is how people actually do pronounce their words, not how the printers think proper to spell them for us. The book is, on the whole, the best guide to English etymology that has yet appeared.

The Poems of Laurence Minot. Edited, with Introduction and Notes, by Joseph Hall. (Oxford: Clarendon Press.) All that is known of Laurence Minot is that he is the author of a few short poems written in Northern English about 1330-1352, relating to various events of the wars of Edward III. Minot's verses have little poetical merit, and they do not add much to our knowledge of historical facts; but they have a certain degree of importance from a philological point of view, and are interesting as illustrations of the English patriotic feeling of the period. The poems have been edited several times already, but Mr. Hall's edition far exceeds all its predecessors in value. The introduction especially is a marvel of minute and painstaking research. Mr. Hall's careful examination of the documents relating to the Myniots of Yorkshire and Norfolk has failed to discover any mention of Laurence Minot; but some of the results obtained tend to justify the assumption that he belonged to that family. The historical allusions in the poems are so exhaustively elucidated that this edition will really be indispensable to students of the history of England under Edward III. Not the least valuable part of the book is the appendix, containing the version of Merlin's prophecies found in the same MS. with the poems of Minot, and three other pieces of verse (in English, French, and Latin) treating of the same events as are celebrated by Minot. The Latin poem on the battle of Nevil's Cross will be new to most readers, though the editor states that it has been previously printed in Hutchinson's *History of Durham*. It was well worth reprinting. In its rugged vigour it bears a good deal of resemblance to the well-known account of the same battle in the so-called Lanercost Chronicle. Both Minot's text and that of the poems in the appendix are given from a fresh collation of the original MSS. The glossary is very good; but we do not always like the manner in which the etymology of Romanic words is indicated, and we observe one or two slight inaccuracies. We know no ground for the statement that *ascrī*, meaning the cry of a scout on desecrating an enemy, is a different word from *ascrī*, "the shout of onset." The "auxiliary" *mun* in Northern Middle-English means "shall," not "must" as in the modern dialects of Yorkshire. Instead of *forcinuculum* in the Latin poem Mr. Hall ought to have printed *forcinuculum*, or at any rate to have suggested this correction in his notes. The word is a diminutive of the Low-Latin *fortia* (*fortia*), a fort. The use of the neuter instead of the feminine form is nowise remarkable in the fourteenth century. The text of Minot rests only on a single MS., not of contemporary

date, and the same is the case with regard to most of the pieces in the appendix, so that conjectural emendation is frequently necessary. Mr. Hall's suggestions are for the most part highly probable. We cannot, however, accept the proposed change of *tyde* into "cyde" in App. ii. 51. The passage seems to need correction; but how could Mr. Hall come to think that "cyde" is a possible fifteenth-century spelling of "kith" (O.E. *cýððu*)? We have noticed a few more small points which are open to question; but, on the whole, the book is one of unusual excellence.

CORRESPONDENCE.

NEW INDIAN INSCRIPTIONS.

Jaunpur: Nov. 18, 1887.

During a recent visit to Dehra Dūn district, where I made complete estampages in duplicate of the Asoka inscription at Kālsi (not Khālsi), I was so fortunate as to obtain a new historical epigraph of the Gupta period, at the small village of Madhā on the upper Jamnā. The inscription is in excellent preservation, and is cut in clear Gupta characters in fourteen lines. It gives the following genealogy of a dynasty, possibly the *Sūryavamsa* of Nepāl—Senavarmā, Āryavarmā, Harivarmā, Pradīpavarmā, Īsavarmā, Vriddhivarmā, Simhavarmā, Yajñavarmā, and Divākaravarmā, who founded a temple, and was apparently a feudatory of Śrī Chandragupta. If this was Chandragupta II., who ruled about A.D. 382-410, the inscription must be ascribed approximately to about A.D. 400.

I may add that the boulder bearing the Kālsi inscription is called *Chitra śīla*, "the engraved stone," not *Chhatra śīla*, "the canopy stone," as General Cunningham states. The natives pronounce it clearly and explain it correctly.

The inscription found by Dr. Führer in March last, on the face of the rock over the small cave at Prabhāsa, near the ancient Kausāmbī, is in seven lines, and in a character two or three centuries later than that of the Asoka inscriptions. It reads thus:

- (1) Rāno Gopālaputasa
- (2) Bapasatimitasa
- (3) mātulena Gopālīni
- (4) Vaipidarīputena
- (5) Āsādhasenena lenam
- (6) kārītam pūrakadasa-
- (7) masavachhare Kārttikikavada 1 sukkvāre.

"Bapasatimitra, the son of king Gopāla," is a king hitherto unknown to us.

On the west wall of the cave inside was found an inscription in three lines, covering a space 32 by 11 inches, and in the same character, reading—

- (1) Adhichhatraya rāja-Sanakayanaputrasya cha Gopālasya
- (2) putrasya rāja-Bhāvānīputrasya Bhāgavatasya putrena
- (3) Vaipidarīputrena Āsādhasenena kārītam.

Here we have a longer genealogy—Bhāgavata, the son of rāja Bhāvānī, the son of Gopāla, the son of the warrior rāja Sanakayana.

On the stone couch inside, in four short lines in Gupta characters, was found the following:

- (1) Om Śrīnāmah
- (2) Sri-Priyagamdhadhāra datta Lāvānakaḥ
- (3) pātidhāra akhanditah
- (4) āsanami dam dattam.

On the same stone bed are also the following, in Gupta characters:

No. 4.—Śrī - Nabhamyēvara[na] divirena kritih.

No. 5.—Ūrajaguptasya deyadharmmo yam mātāpitaram udisya.

No. 6.—Sākya bhikṣhoḥ bhadamta-Samha-guptasya.

No. 7.—Nandadattā Pundarikolī, perhaps the names of two bhikṣunis or nuns.

The next five are in characters ranging from the fifth to the eighth century A.D.:

No. 8.—Vijayasenasya, "Of Vijayasena.

No. 9.—Śrī-Krishnagoparūpasya.

No. 10.—Upāsaka Dharmatrātasya. the lay-disciple Dharmatrāta."

No. 11.—Laso Jako, "Jaka the dancer."

No. 12.—Aom kittiā svarati Lamke dariyā bhūmyāh, "The fame of this cave resounds in Lanka."

In Gupta characters, on the west side of the inner cell, is the name "Iāvavirakirti"; and, lastly, on the west side of the cave, and also in Gupta characters, is cut—

No. 14.—Devadāsabhataḥ Lāvānakaḥ.

It will be seen that these are mostly the names of persons—pilgrims who have visited, or ascetics who from time to time had resided in, the cave; but the first three are of some importance, and may yet be linked on to other historical data. JAS. BURGESS.

THE CHĒDI ERA.

Göttingen: Dec. 18, 1837.

Since writing my letter of November 28, published in the ACADEMY of December 10, I have calculated the necessary new and full moons for the ten dates mentioned, also by the Tables for calculating the Phases of the Moon, published by P. Lehmann at Berlin in 1882, and I have found the results given by me confirmed in nine dates out of the ten. With regard to No. 5, the Bhēra Ghāt inscription of Alhanadēvi, however, I find that I have not sufficiently taken into account the longitude and latitude of the place where the record is found. But this one exception rather proves the general result arrived at to be correct. For, taking 907 to be the number of years elapsed (as in the case of the inscriptions 8, 9, and 10), Mārḡa su. di. 11 comes out to be November 25, 1156, which was a Sunday, as required. And this result, again, is confirmed by the circumstance that there was a new moon (and a solar eclipse) about two hours before sunrise of November 15, i.e., on November 14, 1156 (November 14 + 11 = November 25).

F. KIELHORN.

THE ORIGIN OF THE ARYANS.

London: Dec. 20, 1837.

On the subject of the origin of the Aryans I should like to point out a fact which seems to be generally overlooked, that is the hybrid character of their languages as shown by the oldest specimens. These characteristics are, among others, (1) the inconsistencies found in the syntax—noticed already by Prof. Sayce; (2) the promiscuous use of postpositions and prepositions; (3) the numerous words or so-called roots to express the same ideas or objects; and (4) the use of three genders. The inconsistencies of syntax are always due to foreign influence, or to the result of the fusion of two languages into one. Pure languages, like the Semitic or Turkish, make exclusive use of either postpositions or prepositions, but do not mix both in their grammar. When a language has many words to express the same notion, it may be safely concluded that we have the result of two or more languages fused into one, as, e.g., in English "to end" and "to finish," "house" and "mansion," the differentiation of meanings being a late development. Lastly, the genders attributed to words appear to be the result of a classification into two groups, either animate and inanimate, as in Turkish, or male

and female, as in the Semitic tongues. The origin of the third gender (neuter) must be the amalgamation of two languages having different classifications. If we suppose these two languages to become united, the animate gender of one will be split into two, some words passing into the masculine class, others into the feminine, while those which could not find a place among either of these classes were thrown into a new one—the neuter.

Now the study of Akkadian might put us on the track of one of the languages which contributed to form the primitive Aryan. Akkadian, as it is known to us, has been strongly influenced by the Semites, but not to such a degree as to destroy its value for comparative purposes. Among the pronouns we have *gu* = I, *zu* = thou (comp. *ἐγώ, σὺ*); among the numerals I will only mention *ash* = one. Every time an Akkadian paper is read before a learned society the Sanscritists are struck by the number of common words which exist in Akkadian and Sanscrit. The conclusion is that a language closely related to Akkadian must have been one of the elements which served to form the primitive Aryan. What was the other? I should not like to say just yet, though a careful examination of the languages of Central Asia may give the answer.

G. BERTIN.

A BILINGUAL LIST OF ASSYRIAN GODS.

London: Dec. 17, 1887.

In the Proceedings of the Society of Biblical Archaeology for June of the present year (p. 377) is a note by Dr. C. Bezold upon the tablet K. 2100—a text the nature of which was entirely overlooked by Mr. G. Smith; and which—recognised by me some time ago as a bilingual list—revealed, on being cleaned by Mr. Ready, a most important list of gods in different languages. Of this text Dr. Bezold quotes, in the original character, part of the last section; and, referring to the word *malahum*, which occurs there, says:

"If *ma-la-hu-um* is to be connected with מלח, the Sumerian origin of the word should be abandoned, and the Babylonian-Assyrians must have borrowed their word for 'sailor' from Phoenicia, as the Arabs, according to Paul de Lagarde, borrowed their *faḥk* from Greece (ἐφόλλκιον)."

In order to test the explanation suggested, I give herewith, transcribed into Roman characters, the whole paragraph in full:

Qa	—	ad	—	mu	i	—	[lu]
di	—	gi	—	ru	—	u	do. li-li-bu-u [: do.]
e	—	ne	:	do.	Su	(ki)	nab: do. Nim (ki)
ma	—	ia	—	lu	—	um	do. Mar (ki)
ki	—	u	—	ru	—	um	do. Lu-lu-bu (ki)
ka	—	ash	—	lu	do.	Kash-shu — u	
du	—	ur	—	du	—	u: il-tum	
il	—	tum	:	ish	—	ta-ru	
ki	—	ri	—	ir	do.	ash-ta-ru: do. Mar	
				usan	do.	Nim (ki)	
nigin		dingir	—	ri	—	e-ne	
Bu	—	ru	sha	—	mu	—	
						ilāni	

To get at the meaning of the words quoted in this section, *malahum* included, we have only to look at the seventh and following lines (the first line, being defective, does not give the needful indications). We there see the words *durdū* and *kanulu* explained by *iltum*, meaning "goddess." *Iltum*, in its turn, is explained by *ishtaru*, and *ashtarū* is given as the equivalent word in the land of Mar or Phoenicia. The two following lines give the word for goddess in the land of Nim or Elam—namely, *kirir*, and *usan* (the latter being represented by an ideograph accompanied by a gloss giving the pronunciation). The last line of the paragraph reads *nigin dingirāne* = *naphar ilāni*, "the whole of the gods," in Akkadian and Assyrian respectively; and is followed by

the first line of the next section, which gives *buru* as = *shamū* "heaven."

As the text itself is a list of gods, and with a statement that it is, in fact, a list of "all the gods," it is quite clear that the meaning character in the first line of the section is to be restored as above, and the second line may therefore be filled in with the two words indicating a division (represented by a colon in the transcription), followed by the two words wedges signifying "ditto." We have therefore the following words for "God" (the various languages named):

Qadmu (he who is before), possibly Assyrian; *Dingirū* (for *dingirū*, an Assyrianised form of *dingir*), Akkadian.

Hilibu, probably Akkadian.

Ene (lord), in the language of Su.

Nab, Elamite.

Malahum, Phoenician.

Kiurum, Lulubite.

Mashhu, Kassite.

The word *malahum*, therefore, is not a well-known *malah* "boatman"; but the ancient Phoenician word for "god," with the Assyrian nominative case-ending *u*, and the so-called immation. The etymology is uncertain. It possibly the same word as מלח (מלח), with a guttural pronunciation of the *l*.

Of these words I have already published a list in my article, "Observations upon the Languages of the Ancient Inhabitants of Mesopotamia," in the *Journal of the Royal Asiatic Society*, vol. xvi., part ii.

In the same number of the *Proceedings* (p. 233-240) is an article by Prof. E. and Dr. V. Revillout, entitled "Un Nouveau Texte Royal Perse." This new royal Persian text occurs, in the printed text (p. 238) as *Shal-mar-shu*; and the alternative transcripts *Sal rag marsu*, *Rag sal marsu*, *Sal sal-maru* and *Rag rag marsu* are given. All these forms, however, are so strange that the question naturally arises, Are the characters correctly reproduced? Now, I have not seen the original, but it seemed to me, on thinking the matter over, that what the scribe had really written was probably *Ah-shi-mar-shu* (= *Ahshiwaris*, one of the Babylonian forms of the well-known name Xerxes, "king of the city of Parsu and the city of Madāa" (as the tablet has it). I give this suggestion with reserve; but, taking all the circumstances into consideration, it seems very probably the right one.

THEO. G. PINCHES.

SCIENCE NOTES.

THE International Geological Congress will hold its fourth session in London, commencing on September 17 and ending on September 25, 1888. The organising committee has nominated the following officers—namely, honorary president, Prof. T. H. Huxley; president, Prof. J. Prestwich; vice-presidents, the president of the Geological Society, the Director-General of the Geological Survey, and Prof. T. McK. Hughes; treasurer, F. W. Rudler; and general secretaries, J. W. Hulke and W. Topley.

Scientific News, which has hitherto been published monthly, will appear weekly from the first week in January. At the same time several novel features will be introduced.

ETHNOLOGISTS will be glad to have their attention directed to a comprehensive work on tattooing by Herr Wilhelm Joest, recently issued by Messrs. Asher, of Berlin and London. The German text, which covers the whole field of tattooing, with the associated practices of painting, scarifying, mutilating, &c., is enriched with separate contributions by Herren Finch and Jubary, well-known workers in this field. Special attention is paid to the origin of these

practices, many weighty arguments being advanced to show that they were, at all events in the first instance, in no way connected with religious ideas, or even with totemism or other less and tribal distinctions, but grew out of the love of finery common to all savage races even in the very lowest state of their evolution. The work forms a large quarto volume beautifully printed, and illustrated with twelve coloured plates and thirty zinc etchings from original designs by Pinsch, Jubary and other observers. The Japanese figures are especially elaborate, and serve clearly to show, how, in some instances, the practice of tattooing was continued and elaborated among cultured peoples as a substitute for clothing.

THE *Proceedings* of the Linnean Society of New South Wales, vol. ii., part 2, June, 1887 (Triebner), contains "Memoirs on New Australian Fishes," by Messrs. Ramsey and L. D. Ogilby; "Australian Birds' Nests and Eggs," by A. J. North; "Description of Ninety-five new Species of Beetles of various families from the Cairns District, Northern Queensland," by Mr. MacLeay; "A new Tribolite from Reefton, New Zealand," by Prof. Hutton; "Australian Earthworms," by J. J. Fletcher; several articles on "Bacteriæ," by Dr. Oscar Katz; "Australian Land Planarians," by Messrs. Fletcher and Hamilton; "Australian Polyzoa," by T. Whitelegge; with several memoirs on "Australian Plants," by Baron von Mueller, E. Haviland, E. P. Ramsay, and Alex. G. Hamilton.

MEETINGS OF SOCIETIES.

ENGLISH GOETHE SOCIETY—MANCHESTER BRANCH.
(Saturday, October 22.)

DR. WARD, president, in the chair.—After some music contributed by friends, Dr. Ward delivered his presidential address. He sketched briefly the work of the branch during the past session (eight meetings), referring particularly to Prof. Dowden's admirable lecture on "The Friendship of Goethe and Schiller," and alluded to the contents of the first volume of the *E. G. S. Transactions* and of the *Goethe Jahrbuch* for 1887. He then went on to notice more particularly the great event of the year to Goethe students—viz., the bringing to light of a copy of what seems undoubtedly to be the *Urfaust* made by Fräulein von Göchhausen, and found among her papers by Prof. Erich Schmidt. He pointed out how entirely this new find—so unexpected, so un hoped for—would seem to confirm the views arrived at through purely critical methods by the late Prof. Scherer. After a brief account of Scherer's work as a literary historian, Dr. Ward concluded with an eloquent tribute to the memory of that great scholar, in whose death, on August 6, learning and letters at large has suffered an irreparable loss.—A brief interval followed, during which members of the Manchester Liedertafel sang with much effect "Wanderers Nachtlied." After this, Mr. G. Schelling read a paper on "Freiherr von Löer, Director of the Weimar Theatre," who, together with Scherer, was most prominent in founding the Weimarer Goethe Gesellschaft. He died on April 23; and thus within the space of one year the society found itself deprived of its two vice-presidents.

(Wednesday, November 23.)

THE Rev. F. F. Cornish read a paper on "The Erdgeist in the 'Faust' Fragment." The "Faust" Fragment of 1790 is still embedded in the completed work, the main additions to the earlier scenes being the prologues, Faust's attempted suicide, Easter walk, and bargain with Mephistopheles. In it the Erdgeist takes a position like the ghost in "Hamlet." Faust is not the deeply-disillusioned man of the later additions, but a shy student, knowing neither the world of nature nor man. He is a teacher, but is weary of words. He is a scholar, but loathes the dry-as-dust toil. He might have taken to literary production, but the old legend is followed,

and he takes to magic. With its aid he tries the world of gods—god-like men—but this Jacob's Ladder world is an "Idol of the Theatre" ("Ein Schauspiel nur"). He tries to approach Nature as a superior being. Magic brings him the apparition of the Erdgeist, with its revelation. The earth of the Lisbon earthquake is no kindly mother; man is no peer of her subtle pervading forces. He cannot even conceive them. All his ideas are anthropomorphic, and so his nature must be human nature, and his spirit one like himself. Faust's advances thus repulsed by Nature, and the bare idea of approaching her as "servant and interpreter" being precluded by magic, he resolves to be a colossal man, and finds himself associated with Mephistopheles—a humorist, purveyor of pleasures, and lord of witches. This gift, like the ring of Gyges, sweeps away at a stroke most of the obstacles to the gratification of his wishes; and, with some natural misgivings, he starts with Mephistopheles "to see the little world and then the great." So far the scenes date at latest from 1774; and in 1789 Goethe probably added in Italy the scene Wald und Höhle, which seems a poetical working up of an earlier prose scene, of which we have remains in the scene Trüber Tag, added in 1808. The Erdgeist Goethe seems to feel, though it cannot be got rid of, must be made something more or something less. In this scene he has tried the former course; and Faust thanks the Erhabener Geist for giving him his enjoyment of nature—a concession of which the Erdgeist's apparition and revelation contain no trace, any more than of the assignment of Mephistopheles as companion, of which Faust in the same breath complains. But Goethe found as he went on that the Erdgeist, with all its red fire, brought neither "airs from heaven nor blasts from hell"; and, finally, he dwarfed it by the addition of the Prologue in Heaven and the Wager, and changed it from a maker of a revelation into a horrible apparition which frightens Faust into attempting suicide. The inconsistent language used about it testifies to this change.

NEW SHAKSPERE SOCIETY.—(Friday, December 9.)

DR. F. J. FURNIVALL in the chair.—Miss Grace Latham read a paper on "Some of the Waiting-Women of Shakspeare." Premising that these women were to be divided into two classes: the young gentlewomen who went into great ladies' households for training and education; and the domestic servants, of a rougher and coarser type than those of the present day. Miss Latham said that certain of Shakspeare's shorter characters were best studied when grouped with others of a like nature, which illustrated them; and the waiting-women were to be studied in connexion with their mistresses, who influenced them for good or evil in every case. She then spoke of Lucetta as nervous and cowardly, and made still more so by a harsh, capricious mistress, who was evidently the social inferior of the other gentlewomen; of Nerissa as independent and downright, but shrewd and affectionate, influenced for good by Portia, and in love with Gratiano, as shown by the personal interest she takes in Bassanio's arrival. Maria was characterised as a bright, clever girl, neglected, and left to run wild with Sir Toby and his associates by a weak, good-natured mistress, and, in consequence, deteriorating and hardening. Ursula was the quiet companion of silent Hero; silly and imprudent Margaret went her own way to her own humiliation, refusing to heed her gentle mistress. Miss Latham concluded by sketching the characters of two domestic servants—Mrs. Quickly, in the "Merry Wives" and the nurse in "Romeo and Juliet," showing how the latter was influenced towards crime by the corrupt society round her, and by the character of the lady whom she served.

FINE ART.

GREAT SALE of PICTURES, at reduced prices (Engravings, Chromos and Olographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—Geo. REES, 115, Strand, near Waterloo-bridge.

ART BOOKS.

Colour. By Prof. A. H. Church. New Edition. (Cassell.) This is one of those new editions

which may almost claim to be considered as a new book. The appreciation which Prof. Church's manual met with when published in 1871 was shown by the prompt exhaustion of the edition, and it is at first sight somewhat difficult to understand why we have had to wait so long for another. It occupies ground which is otherwise almost clear; and we may safely say that there is no book of the kind which contains so much about colour in so small a compass, or arranges what is known on this difficult subject so usefully for students. It is a difficult subject, and the continued experiments of devoted men of science have been only partially successful in establishing the fundamental laws of it. They are now agreed that colour has no objective existence, that the term primary is most properly applied to red, green, and violet or blue. They have given up altogether the old primary yellow, and have demonstrated that a mixture of blue and yellow light does not produce the sensation of green. They have (or at least Prof. Church has) shown the absurdity of the term "tertiary" as applied to colour, and have invented ingenious contrivances to measure the luminosity of different tints and to determine the exact complements of even the most "broken" hues. Thousands of experiments have been made, thousands of facts recorded, but we still seem to be almost as far off as ever from the reduction to science of the puzzling phenomena of colour. Fortunately, we do not know how much we lose by our ignorance; and it is very easy to argue that we lose very little. The subject is principally of importance to artists; and what amount of science will ever make a good colourist, what amount of ignorance can prevent a really good colourist from showing his genius? Titian lived before Young, or Clerk-Maxwell, or Helmholtz; and the three together would never make a Turner. It is true that colours have also a practical importance, and that many lives may be lost by the signalmen and engine-drivers on railways, and officers and look-out men at sea, who cannot distinguish danger from safety signals, red lamps from green; but this danger is reduced to a minimum by the examination of such men before employment, and science has discovered a plan by which even the colour-blind can distinguish red from green. But because we may be able to minimise to our minds the importance of a perfect science of colour, that is no reason why we should not be interested to learn all we can about it, nor that what we may learn may not be of great use to us. With regard to "interest," it may be that our curiosity is all the more excited by the difficulty of the quest; and the knowledge we may attain to, as Mr. Church says, "if insufficient to form a good colourist, must at least prove useful in explaining the causes of failure, and in suggesting the conditions of success." These are admirable words; but there is really no stimulus needed by any one interested either in science or art to follow with eagerness the lost track into this fascinating region of research. Necessarily, a great part of Mr. Church's book is occupied about the laws of light, of reflection and refraction, about the spectrum and the phenomena of fluorescence, phosphorescence, and the like; but he finds room to say a good deal about colour as applied to art, and the practical value of the treatise is at least as great as its scientific interest. Such a book could only have been written by one who, like its author, can claim authority as an expert not only in science but also in art.

The Anatomy of Pattern. By Lewis F. Day. (Batsford.) The series of which this book is the first instalment is likely to supply a very palpable want. The tendency of the art fashion, if not of the art teaching, of the present day is to dispense with all rules, to let the

natural spirit of fancy and taste which every one supposes him or herself endowed with to have full play unencumbered with law or rule. This may be all very well so long as the effort of the designer does not go beyond the setting of a spray in the corner of an antimacassar; but when it comes to the decoration of a certain given space, or the construction of a pattern (or repeated ornament), the amateur genius finds that a certain amount of organisation is necessary, and that, however terrible the fact, it is nevertheless true that there are rigid geometrical limits which the greatest imagination cannot disregard. Alas, that even genius must dance in fetters, but so it must; and the sooner it gets used to them, so that they become a second nature, and neither the genius himself nor his admirers are conscious of their restraint, the better for him and them. There are few men who know the science of their profession better or can teach it as well as Mr. Lewis Day, few also who are more gifted as practical decorators; and in anatomising pattern in the way he has done in this manual, a way beautiful as well as useful, he has performed a service not only to the students of his profession but also to the public, if they will only incur the slight expenditure of time and money necessary to purchase and read his book.

ILLUSTRATED BOOKS.

The Song of the River. By Charles Kingsley. Illustrated. (Macmillan.) This is one of those handsome volumes of pictures by which American artists show their admiration for English poets. "The Song of the River," we need hardly say, is the song which the beck sings to Tom at the end of the first chapter of *The Water Babies*, and which is entitled in Kingsley's Collected Works "The Tide River." Undoubtedly, it lends itself exceptionally well to the mode of illustration here adopted, by which each couplet (and sometimes each single line) has a large photogravure to itself. Considering the number of artists employed, and the great variety of subjects, the general result is far more satisfactory than might have been expected. The worst fault is a tendency to Gallicism in some of the figure drawings. The landscapes are all good; and we would choose for special mention two by Mr. J. D. Woodward—those illustrating "the crag where the ouzel sings" (worthy of a Northumbrian dale) and "Cleansing my streams as I hurry along." To obviate perplexity to future bibliographers, it may be as well to state that the monogram on the cover represents the initials of the American publishers, Messrs. Estes & Lauriat.

Feuilles Glanées. (Paris: Librairie de l'Art.) In France the most distinguished writers and artists do not disdain to join in the making of what we call a gift book, and our neighbours call a "livre d'étrennes." The handsome volume before us contains twenty short pieces of verse, never before published, written by poets of such note as François Coppée, Sully-Prudhomme, Th. de Banville, Catulle Mendès, Armand Silvestre, André Theuriot, Paul Bourget—in short, by all of those whose names are celebrated in this particular genre. And to each poem there is an etching by one of the leading practitioners of the art—Rajon, L. Flameng, Oh. Waltner, Brunet-Debaines, Edm. Hédouin, Jacquemart, A. Lalauze, &c. Two or three of these etchings are original; the others are after pictures by such living painters as Meissonier, Boucher, and Henner, or by such deceased masters as Paul Potter, Millet, and our own Constable. We venture to think that so brilliant a company has not been brought together in this country since the days when "Keepsakes" flourished. It is unnecessary for us to praise the illustrations, though one or

two of them—and of the verses too—are not quite according to English taste. We will content ourselves with commending the technical skill of M. Brunet-Debaines's interpretation of Constable, and the faithfulness of M. Rajon's rendering of the Meissonier. Some of our readers may be interested in having before them M. Paul Bourget's stanzas "Sur un Portrait":

"Quel âge! Devinez, et devinez quelle âme?
A-t-elle aimé? Cherchez à lire dans ses yeux
Où réside un esprit deux fois mystérieux:
Cet esprit de la femme et de la grande dame.

"O mensonge des yeux! Il en est dont la flamme
Brûle sur les débris d'un cœur si froid, si vieux!
Et d'autres dont l'azur languissant et pieux
Est un rideau tendu sur une toile infâme!

"Mais les yeux le voilà sont fins autant que fiers.
On se plaît à rêver dans leurs abîmes clairs
Quelque noble roman où rien ne fut souillé.

"Roman qui pour toujours demeurera caché! . . .
Toute femme est coquette, et même le plus pure
Sait taire sa vertu comme un joli péché."

L'Extrême Orient. Par Paul Bonnetain. (Paris: Quantin.) This is another volume of a series called "Le Monde Pittoresque et Monumental," of which the first was devoted to Great Britain, and the second to the environs of Paris. Like the book just noticed, it shows how lavishly French publishers get up popular books for the *Nouvel An*. It consists of about 600 pages, large quarto, finely printed on thick paper, with a picture on almost every other page. Most of the illustrations are of scenery, reproduced by some process from photographs; but many are from original drawings. By "l'extrême Orient" is, of course, to be understood mainly the French possessions and protectorates in the Indo-Chinese peninsula, both China and Japan occupying a subordinate place, Burma being barely mentioned, and Java altogether ignored. The author writes throughout in a strain of patriotism that occasionally leads him to be unjust, as, e.g., when he describes the recent occupation of Burma as undertaken "avec ce mépris du droit dont s'indignent nos instincts généreux" (p. 35). It may well be doubted whether the impartial verdict of history will draw much distinction on this ground between the English conquest of Burma and the French conquest of Tonquin. It is, therefore, the more gratifying to read his praise of Heng-Kong—"cette belle et superbe cité . . . si riche, si pratiquement organisée et gouvernée . . . la plus belle ville européenne de l'extrême Orient" (p. 413)—and to find that he attributes its prosperity to the true cause, freedom from customs duties. But the great attraction of the volume is its illustrations, the merits of which naturally culminate in the chapters on Japan, where the publisher has been able to use some engravings from M. Gonse's *L'Art japonais*. Some one, however, has been guilty of a hoax in palming off upon him the landscape entitled "Source de l'Iraouaddy," for the spot in question has assuredly been seen by no European eye.

FROM Messrs. Chapman & Hall comes an edition of De la Motte Fouqué's *Undine*, with illustrations by Mr. Heywood Sumner, and an introduction by Miss Julia Cartwright. The illustrations (unless we are mistaken), as well as the introduction, have already appeared in the *English Illustrated Magazine*. Of the latter it is enough to say that it is in the approved style of the modern folklorist. The illustrations show an advance upon those which the artist drew four years ago for *Sintram*, though he has not yet freed himself from some of the faults which were then manifest. Mr. Heywood Sumner has imagination in plenty, and a boldness that encourages him to attack the most difficult scenes. But his composition is frequently clumsy, his figures are sometimes

extraordinarily stiff; and he seems to delin in unnecessary ugliness. He draws, in short, if he were designing a painted window, rather than for a wood engraving. It would, however, be unjust not to say that he has here risen to his subject, and given us in the two *Undines* on the frontispiece and title-page a representation of the changed existence—with all that symbolises—such as Fouqué himself would have approved. The design on the cover, sometimes happens, is much more happily reproduced than the corresponding picture in the text, of Undine disappearing beneath the waters of the Danube.

MESSRS. SAMPSON Low have published new edition of Haus Andersen's *Fairy Tales and Stories*, freshly translated from the Danish by Carl Siewers, with more than 200 illustrations specially drawn by "eminent" Scandinavian artists. The translation seems to us though we do not know that a new one was wanted. About the "eminent" Scandinavian artists the less that is said the better. With few exceptions, their work throughout is an outrage alike on good drawing and on good taste.

THE ROYAL SOCIETY OF BRITISH ARTISTS.

AT the rooms of the Royal Society of British Artists, a more extensive assemblage of pictures than was seen last season is now visible. The old and the new school would appear to be in conflict there; and the arrangement of the show may be less pleasantly symmetrical, and its effect less harmonious than on the last occasion. We are ourselves, we are free to confess, chiefly interested in the work of the newer men, from Mr. Whistler down to the last of his pupils—though a dramatic piece like Mr. Gordon's is in no way without merit, though Mr. Healy's contributions are painted with daintiness and present a generally engaging model, and though Mr. Arthur Hill's "Slave Girl" is a thoroughly studied and finely coloured nudity. Mr. Whistler's works here exhibited are chiefly notes of colour, and slight, though extremely expressive, etchings and lithographs. To the lithographs—most of them belonging to the set lately issued by Bousso, Valadon & Co. and so artistically printed by Mr. Way—we may refer on another occasion. Among the paintings, let us commend especially that tiny one of the crowd on the Ostend beach, and the larger "Symphony" in a small room— unquestionably a beautiful design in gladsome colour.

We forget what Mr. Edwin Ellis calls his huge and impressive study of the cliffs at Flamborough; but whatever he calls it the originality of the composition, the disposition of light and shade, the forcibleness of colour, will not be likely, among qualified judges, to pass unnoticed. He is a most unequal man; at times inclined, it would seem, to be merely brutal, but here possessed of a more chastened and better-directed power. Mr. Leslie Thomson's, Mr. Jacob-Hood's, and Mr. Aubrey Hunt's visions of the coast must likewise commend themselves to the visitor. M. Claude Monet, the French impressionist—some of whose work was seen at the Messrs. Dowdell's a few years ago—sends more than one dazzling canvas. He deals, with great dexterity, no doubt, with primary hues. The impressionisms of Mr. Alfred Stevens—who has written what, for a painter, is not at all a bad book upon art—is, to many, more agreeable. He records, indeed, with delicacy, delicate effects. As regards figure-pieces by the younger men, the most engaging in what is called "ideal design" are those contributed by Mr. William-Stott, "of Oldham"—as he likes to be called—and by M. Roussel. Great

jection has been taken to Mr. William-tott's "Birth of Venus"; but whatever the genus be, she is not vulgar. She is in many ways finely painted, and the treatment of her *attourage* of shell and sea ensures a canvas that is at least decorative. We enjoy the work. M. Coussell's "Bathers" is a composition of various grace, a poetic thing undoubtedly, and so valuable. He has a portrait of Mrs. Morimer Menpes, pleasant to behold; and other important portraiture comes from the hands of Mr. Sidney Starr, Mr. Leon Little, and Mr. Solomon. Mr. Little's is a very unconventionally treated portrait group of two friends and *ol'aborateurs*—Mr. Rider Haggard and Mr. Stanley Little. They face each other at a writing-table, the extraordinarily popular *velist* being beheld almost full-face, and Mr. Stanley Little in *profil perdu*. The thing is boldly painted, and is full of character, though it has not quite the "style" about it that belonged to the same painter's portrait of Mr. Haddon Chambers. Mr. Starr's portrait is of Mr. Willard, the actor, to whom lovers of the stage are looking so much just now. He stands in a morning dress, with head raised; and there is true character in the pose, and a great suggestion of flexibility and energy. The artist has set himself the difficult technical problem of the treatment of various blacks; and he has not quite solved the difficulty he has chosen to create, but it is a striking and very interesting picture.

One of the rooms is occupied almost entirely with the incomplete but generally engaging studies of a deceased exhibitor, Mr. Potter. We are glad to see them here, thoughtfully gathered together. He had a great feeling for grave, tender illumination, even for subtle colour; and his reputation, now that he is no longer able to personally profit by it, will grow under the influence of a display which has been, we believe, the pious office of friendship.

CORRESPONDENCE.

DR. SCHLIEMANN.

London: Dec. 17, 1887.

All those interested in pre-Hellenic lore were glad to learn that on the island of Kerigo (the ancient Kythera) the remains of one of the oldest temples of Aphrodite, which is mentioned by Homer, Herodotus, and Pausanias, have been discovered by Dr. Schliemann.

Herodotus (i. 105) declares that the temple in Kythera was "set up by Phoenicians." Hesiod, who lived four hundred years before Herodotus, makes Aphrodite first rise from the waves near Kythera, and afterwards land in Cyprus—a significant journey from west to east. Homer knows an Aphrodite who was the daughter of the Epirote Zeus and of Dione. Goddesses of Love, of partly Aryan, partly Semitic, possibly even other origin, were gradually blended into one figure in the Greek Pantheon. As to the building of the temple in Kythera, the statement of Herodotus may well hold good. However, the discussion of the questions referring to the mixture of cults in the Hellenic creed will best be left to the time when the details of this last achievement of the successful pathfinder in Greek and pre-Greek archaeology shall come to hand.

In this connexion, it is but simple justice to a much-wronged man if I ask permission to draw more general attention to the most important declaration made by Mr. Penrose, the late director of the British School of Archaeology at Athens, after a careful inspection of the remains at Tiryns and Mykene, in company with Dr. Dörpfeld, now the director of the German Archaeological Institute at Athens. Over and over again had Dr. Schliemann in-

vented his antagonists to such a journey. The invitation was once more issued on July 2, 1886, at the "battle of archaeologists" in the rooms of the Society of Antiquaries. In September of the present year, Mr. Penrose at last acted upon the invitation. And now he is thoroughly converted, and has stated this in an explicit, argumentative letter, with a frankness and scientific honesty which merit the fullest praise.

All the objections raised against the pre-historic character of Dr. Schliemann's excavations—objections founded on the vestiges of the stone-saw, the badness of the construction and the smallness of the stones used in the Tirynthian walls, the alleged occurrence of kiln-burnt bricks, and so forth—are effectively overthrown by so distinguished an authority as Mr. Penrose. He now acknowledges "the parallel antiquity of Dr. Schliemann's recent discoveries and the great Pelasgic works." The bough on which the opponents of the discoverer sat is thus sawn off by an experienced hand; and the triumph, though late, is all the greater.

KARL BLIND.

NOTES ON ART AND ARCHAEOLOGY.

At the end of February the Fine Art Society—which will by that time have got its Japanese Exhibition well over—proposes to open a show of studies and sketches in Cornwall—landscape, sea, and people. The sea or coast pictures will be by Mr. Ayerst Ingram; Mr. Gotch, who now lives somewhere in Cornwall, has charge of the Cornish folk; while landscape proper is to be illustrated by the brush of Mr. Alfred East, who went into Cornwall for the summer and early autumn, and has since then been painting a winter landscape in Perthshire.

THE *Reliquary* for January will contain the following articles:—"The Norman Doorways of Yorkshire—St. Margaret's Walmgate, York," by Mr. J. Romilly Allen; "The Friar Preachers of Truro," by the Rev. C. F. R. Palmer; "Haddon Field Barrows," by Mr. John Ward; "Precedency and the Peerage, temp. James I.," by Mr. Roach le Schonix; "Recent Roman Discoveries in Britain," by Mr. W. Thompson Watkin; "Will of Alice Pretter," by the Rev. Chas. Kerry; "A Lead Cistern at Nottingham Castle," by Mr. George Bailey; "The Castle of the Peak and the Pipe Rolls," by Mr. W. H. St. John Hope; "Some Inscribed and Sculptured Stones from the Walls of Chester," by Mr. W. Thompson Watkin; "Gleanings from Close Rolls of Henry III.," by Mr. Justin Simpson; "The Plate of the Guild of the Trinity House, Hull," by Mr. T. M. Fallow.

The Society of Medallists held its annual meeting on Thursday, December 15, when the Hon. C. W. Fremantle, Deputy-Master of the Royal Mint, was re-elected president, and Mr. R. S. Poole and Mr. H. A. Grueber, of the British Museum, secretaries for the ensuing year. The society, which has been formed with the object of encouraging the art of designing and making medals, has again decided to offer £20 to be competed for as a prize for medals or models of medals.

THE STAGE.

THE MATINÉE OF "OTHELLO."

It was said in these columns last week that Tuesday's performance of "Othello," at the Vaudeville, would be worth going to, and so it proved—abundantly. It was, to begin with, a good all-round performance, and reminded many people of what they very much required to be reminded, that Shakspeare may actually be interesting on a stage

too small for the massing of picturesque crowds, and on an occasion too exceptional to justify elaborate scenery. We have seen great crowds, and we have seen elaborate scenery in theatres, where only two or three of all the persons of the drama were acted as well as nearly all were acted at the Vaudeville last Tuesday. It was refreshing, for once, to dispense with scenery and crowd, and even with "star" performers to ensure a general interpretation on a high level. Such a rendering would prove, we believe, to have a power of attraction not limited to one day or to a few days. That, indeed, is the sort of rendering which the really intelligent manager must shortly attempt, in the inevitable re-action from gorgeousness. It was not perfect, of course, and yet was extremely creditable. But let us come to particulars.

Mr. Charles Charrington—clearly a studious actor, to be remembered now for something stronger and more varied than his Devil Caresfoot—was the Moor. His earlier scenes wanted sometimes, we thought, authority and dignity—especially the dignity of quietude. But his passion for Desdemona was very real; his sufferings were very real. He presented that emotional being, ruled by feeling and not by reason, and in private matters simple almost to stupidity, whom it pleased Shakspeare to contrast with the cunning and policy of the Italian—not only with the wiliness of Iago, but with the "super-subtlety" of Desdemona, and with that immediate acceptance of the *fait accompli* which characterises Brabantio—a Venetian man of the world after all, who will never cry over "spilt milk" or over a daughter who has made a mad love-match. Mr. Charrington—it has been implied already—did not entirely satisfy, but he did much—he knew how to interest, and that justly. More, even, he knew how to move, by here a startling change, by there a cry. His next important performance will be waited for with curiosity. It will never be want of intelligence that will prevent its success. Brabantio—whom we chanced to have named already—was played sympathetically enough by Mr. Vollaire; Roderigo, very naturally, and with the necessary spirit in feebleness, by Mr. Mark Ambient; and, while we are among the somewhat minor characters, let it be mentioned that the Doge was played by Mr. R. de Cordova, made up, and dressed, so far as might be, in resemblance to Bellini's austere and splendid portrait of the Doge, Loredano, in our National Gallery. Mr. Fred Terry made a distinct hit in the part of Cassio. He was gallant and attractive: in his cups he was still a gentleman. The ripest and most finished performance of all was that of Mr. Hermann Vezin as Iago. The phrase "honest Iago," strikes its key-note. If you can believe that Iago roused in no one even a suspicion of his true character, the Iago of Mr. Vezin is perfect. He is, it may be, a little bit too hurried; but nothing is ever really lost, and Mr. Vezin (unlike so many of his comrades) is never once guilty of an inappropriate emphasis.

Emilia found in Miss Carlotta Addison a representative somehow rather modern in character at first—with little trace of the Venetian carriage—but always in earnest.

Miss Janet Achurch's *Deademona* was a study in realism of a skilful and varied sort. All the courteous play with the officers in Cyprus, in the first scene of the second act—a trifling which is seen to be nothing at all when Othello enters and she rushes to greet him—all the sudden and happy kitten-like cajolery with which she seeks to win from him the forgiveness of Cassio later on, all the nervous disturbance of the fifth act, the gathering of the bed clothes about her knees, a score of gestures and movements and glances besides—prove the presence of the recent student, who has worked in her own way, felt in her own way. Intense now, now vehement, affectionate, and now not less admirably light, the *Deademona* of Miss Achurch can hardly have disappointed the most cordial expectations it had given rise to. After this performance, even the least sympathetic spectator cannot affect to consider Miss Achurch *une quantité négligeable*. Among our pitifully few poetic and inventive actresses, she is one who is to be counted with.

FREDERICK WEDMORE.

STAGE NOTES.

MR. WILSON BARRETT opened the Globe Theatre on Thursday, with Miss Eastlake, Mr. George Barrett, and a full company, in Mr. Sims's new piece, "The Golden Ladder." We shall go to see the play to-night, and shall next week be able to speak of it as it deserves.

MISS AGNES HEWITT's management seems to have come to an end rather suddenly at the Olympic. "The Pointsman"—fairly successful as it was, and made remarkable by the performance of Mr. Willard—has been withdrawn; and a revival of "Held by the Enemy"—under new control—is to be the next production.

WE understand that Miss Rosina Filippi—the young comedian who is still playing with such extreme finish her famous scene with Mr. Beerbohm Tree, in the "Red Lamp"—leaves the Haymarket in a few days, when the run of the piece is over. Miss Filippi joins Mr. Clayton's company at the New Court Theatre, appearing on the occasion of the first performance there.

MUSIC.

RECENT CONCERTS.

MR. J. F. BARNETT's "Ancient Mariner" was given at the "Novello" concert last Thursday week; and to many, as to ourselves, it may have proved a novelty, for it was produced at Birmingham twenty years ago. It would be unfair to complain of the Mendelssohnian character of the music, for it was written at a time when the influence of Mendelssohn was paramount in this country. And it would also be unfair to reproach Mr. Barnett for having adhered to well-known forms, and for having written music which would catch the ear of the public and, at the same time, would commend itself by its skill to the notice of those who had to pass judgment upon it. In the Cantata the composer has expressed himself simply and naturally. His work was successful at the time of its production, and the applause at the "Novello" concert showed that the "Ancient Mariner" still has life. The choir evidently enjoyed the music, and sang with enthusiasm. The solos were taken by Miss A. Williams, Mme. Patey, and Messrs. Lloyd and Santley. The programme included Stanford's "Irish Symphony," conducted by the composer, and Mendelssohn's 114th Psalm, by Mr. Bandegger.

The Bach Choir gave an interesting concert at the Prince's Hall on Tuesday afternoon. A Magnificat in eight parts, by G. Gabrieli, and two Psalms, by Sweelinck, revealed the skill, the boldness, and, at times, the grace of two of the most famous masters of the so-called Venetian school. They were both pupils of the celebrated Andrea Gabrieli, founder of that school. These were divided by Samuel Wesley's fine Motet "Omnia Vanitas," and followed by a quaint Christmas carol by Praetorius, the learned author of the rare book *Syntagma Musicum*. Palestrina's "Stabat Mater" (eight parts) was perhaps the chief attraction of the concert. This work, so praised by Dr. Burney, was edited by Wagner. Palestrina's compositions, as they stand, are but a dead letter. They need editing and providing with marks of expression. Wagner was quite in sympathy with this music, in which rhythm is expressed, as it were, by colour, i.e. harmony, and music, which, according to the contention of Wagner, "brings us nearer than aught else to a notion of the essential nature of religion." An exceedingly clever Motet of Brahms, a graceful Madrigal of Gibbons, a charming Volkslied harmonised by Brahms, and two of Pearsall's characteristic part songs, completed the vocal music. The Bach Choir sang with much refinement. The *Stabat Mater*, went well, but the two chief successes of the afternoon were the Brahms pieces. Dr. Stanford was, as usual, the conductor. The vocal music was pleasantly interrupted—first, by a Sonata in G for violin by Tartini; secondly, by a Partita in D minor for violin and piano by Dr. Parry. The former was rendered by Miss E. Skinner, the later by the same lady and the composer. The Partita is an effective piece of writing, the old and new being cleverly combined. The *Bourrées fantastiques* are very original, and the final movement is exceedingly pleasing. The performers were much applauded at the close. Miss Skinner played with delicacy and intelligence. The hall was filled in every part.

MR. HENSCHL gave his sixth Symphony Concert on Wednesday afternoon. He commenced with Weber's "Freyschütz" Overture, and his interpretation of it was most impressive. With more strength and brilliancy in the strings it would have compared favourably with any performance we have heard elsewhere. Mr. Bernhard Stavenhagen played Liszt's Piano-forte Concerto in E flat, and displayed excellent technique. His tone was certainly hard at times, but for this the instrument on which he performed was certainly in some measure to blame. He afterwards was heard in Bach's Chromatic Fantasia and Fugue. The Fantasia was given in rough and exaggerated style; but the Fugue was rendered with very neat mechanism, and its various points were brought out with remarkable clearness. Wagner's Symphony in C was played for the second time, and it was capably rendered. A second hearing of this work by no means diminishes its interest. In spite of its length and its many reminiscences, it is attractive; and throughout one cannot but admire the bold utterance and skilled workmanship of the young master. The attendance was very good.

J. S. SHEDLOCK.

MUSIC NOTES.

MR. DANNREUTHER will commence his eighteenth series of concerts at Orme Square, on January 5. The dates of the remaining concerts will be January 19, February 2 and 16. On the first evening a new pianoforte quintette, by Karl Nawratil, is announced; on the second, a new sonata in C minor, for pianoforte and violin, by Greig; and on the fourth a new quintette for piano and strings, by A. Becker.

HIGHEST AWARDS.

London, 1884. Edinburgh, 1886.
Adelaide, 1887.

The System recommended by the "Society of Arts."

Pitman's Shorthand

(PHONOGRAPHY).

The Times.—"Generally in use, and now the favourite system. Other systems lay claim to greater merit but none have succeeded in ousting Mr. Pitman's from pride of place."

The Standard.—"Rapidly superseding all other systems. Two hundred and eighty-one systems have appeared since Pitman's, though a large proportion of them are merely imitations of Pitman's."

The Daily News.—"The best system of shorthand. The most practical of all systems of phonography."

The Globe.—"Has practically displaced all other systems. Is nearly universal among the shorthand writers of the present day."

Athenaeum.—"The work that Mr. Pitman has done throughout the English-speaking countries of the world—to say nothing of his efforts on behalf of English Reform—marks him out as the leading character in shorthand history—one of the men whom nature should delight to honour."

The Illustrated London News.—"A perfectly scientific system of shorthand. Unquestionably superior to every other."

Schoolmaster.—"Despite the appearance of hundreds of new systems, a large proportion of them are, totally unrecognised, or practically useless. Phonography still holds the field as the best system."

Lord Roseberry.—"I hope with all my heart and with all the earnestness that I can command, that shorthand will penetrate into every crevice of our civilised life. It is a great agency in the present day and an agency that is likely to be tenfold useful in the future."

LITERATURE.

The Invasion of the Crimea. By A. W. Kinglake. Vols. VII. and VIII. (Blackwood.)

(First Notices.)

THE last volumes of Mr. Kinglake's history are marked by the excellencies and the defects conspicuous in those which have appeared before them. We admire the industrious toil of the author. He has studied his subject with extreme care in a work that has been the labour of a life. And though his information on the Crimean War, from the French side, is, we believe, inadequate, he has, perhaps, exhausted the stores of knowledge that can be drawn from English and Russian sources. His narrative, too, many as are its faults, has the special merit that, though it enters elaborately into military details, it is easily understood by the general reader; and this, in the case of a work that sets forth the technical incidents of a great siege, is certainly a merit of a high order. Mr. Kinglake, moreover, has a good deal of the creative and the artistic faculty, if he is not a candid or a right-minded critic. His portrait of Pelissier in these volumes stands out in clear and striking relief; and we are happy to perceive that, in this part of his book, he does tardy justice to the French army—most unfairly treated by him previously. Having given it, however, the praise it deserves, this conclusion of the great work of the author, we regret to say, is disfigured and marred by faults and blemishes of the gravest kind. It is wanting in impartiality and sound discernment; it often conveys a false impression of the events which it professes to describe; and even as a composition it is not successful. Mr. Kinglake repeatedly views facts through a medium of such distorting prejudice that he wholly fails to perceive the truth. He seems almost to lose his head when he has to deal with the late Louis Napoleon; and his account of the conduct and acts of the emperor, during the period comprised in these volumes, is ungenerous, unfair, and very misleading. From the same want of insight he occasionally hazards opinions that may be dismissed as absurd. For instance, his theory of the shortcomings of Pelissier, at a crisis of the siege, is simply unworthy of a serious writer; and his sneers and carplings at the late Marshal Niel reveal—not ignorance of the science of war—but incapacity to form a sound judgment. The narrative, too,—though in parts good—in these, as in the preceding volumes, very often dwells at excessive length on petty incidents and trivial details, and does not place events in their true proportions. Its march, besides, is ill-ordered, slow, and very deficient in skill and unity;

and the style of the author, though always lucid, and sometimes even attaining eloquence, is often marked by extremely false taste, and injured by a bad pedantic mannerism. The siege of Sebastopol forms a subject for an historian as grand as that of Syracuse; but English literature may hide its diminished head, if the masterpiece of the art of Thucydides be set beside these very imperfect volumes.

Mr. Kinglake has fairly described the state of the contending armies after the great day of Inkerman. That victory—no adequate account of it has yet appeared on the page of history—saved the allies from a tremendous peril; but a few weeks sufficed to bring out the difficulties of their situation with fearful distinctness. Having recoiled from Sebastopol after the Alma, and failed to take the fortress after a brief bombardment, they found themselves committed to a protracted siege, on a desolate coast, in the depths of winter, with numbers quite inadequate to their task, and without many appliances needed for it; and they were confronted by an enemy superior in strength, holding what had become a vast entrenched camp, well fortified and open on one whole front, and not only possessing an army in the field, but able to turn to the best account the resources of a great fleet and an arsenal, and to draw reinforcements from all parts of an empire. The positions of the belligerents were, in fact, reversed. The besiegers had suddenly become the besieged; and it has often been argued that if a great effort had been made again by the generals of the Czar the invaders might even yet have been driven into the sea. This catastrophe was, perhaps, averted by the extraordinary moral effect of Inkerman—a point Mr. Kinglake has not brought out; and if the allies were forced to give the Russians time, the Russians, too, made a like concession, with consequences possibly disastrous to themselves. Mr. Kinglake scarcely alludes in these columns to the horrors of the Crimean winter, and to the terrible sufferings of the British army. He had, doubtless, noticed the subject before; but he has nowhere dwelt enough on a topic which it was incumbent on one who has written to prove that Lord Raglan was all but a faultless commander to pass over as lightly as possible. From December 1854 to March 1855 very little progress was made in the siege. The allies, in truth, were largely employed in constructing lines to defend themselves; and though no master mind was to be found in their camp, this comparative inaction was in the main due to circumstances from which there was no escape. The approaches to the fortress, however, advanced; the French attained good results in mining; the enemy's sorties were bravely repelled; and a new plan of attack was formed, the Malakoff and not the Flag Staff Bastion being now treated as the main objective—a questionable change, whatever may be said, if we are to believe the best Russian authorities. In these circumstances complete scope was given to the art of the great engineer who was the life and soul of the defence of Sebastopol; and, disposing of his immense resources against an enemy scarcely able to strike, Todleben covered the menaced front of the fortress with a vast system of counter-approaches,

which enormously increased its powers of resistance. Mr. Kinglake has elaborately described—but with a mannerism that offends a reader accustomed to a good narrative of war—the positions and characteristics of this series of works; and we should be the last to detract from their author's merits. Yet Todleben's constructions were not, as Mr. Kinglake hints, the mighty creations of genius inspired by original thought. They simply illustrated on a large scale what Carnot had taught and achieved before; and Mr. Kinglake, full as he is of details, fails to explain what is the chief value of these counter-works in the defence of a strong place—how, when properly designed, they perplex, baffled, and interfere with the besieger's projects.

The position of the allies, and the undoubted fact that Canrobert was a feeble chief, completely account for the condition of affairs before Sebastopol in the spring of 1855. Mr. Kinglake, however, has a theory of his own to explain the delays that occurred in the siege; and this, containing as it does half truths, but in its main conceptions essentially false, is, in our judgment, a caricature of history. Louis Napoleon, Mr. Kinglake asserts—pursuing the emperor with the malicious spite conspicuous throughout the whole of this book—eager to emulate his uncle's exploits, wished to take the field in the Crimea in person, and to finish the war by a great stroke of generalship; and, as this was not possible before the approach of summer, he deliberately retarded the progress of the siege, and kept his army inactive around the fortress; and, concealing his purpose from his allies, disloyally imperilled the common cause in order to satisfy mere selfish vanity. In these grave charges there are grains of fact, but, taken as a whole, they are simply shameful. The emperor undoubtedly did desire to lead a French army against Sebastopol; and Mr. Kinglake is probably right in saying that the plan of a descent from Alousta, though in conformity with the rules of war, was made on very imperfect data, and might have ended in a disastrous failure. Napoleon III., too, acting on the advice of Niel, and in accord with plain military rules, unquestionably recommended that an attempt should be made to invest Sebastopol and to hem in the garrison before the siege should be actively pressed, and the great hazard of an assault risked; and in this, as Mr. Kinglake lets out, the best English authorities agreed with him. We will admit, besides, that the imperial strategist was somewhat reticent as regards Lord Raglan; and it would have been better, on the whole, had he not attempted—though his general views were in the main correct—to direct the movements of a great war from the Tuileries. But that Napoleon III., from a sinister motive, kept his "army tethered" around Sebastopol, prevented the siege from becoming "active," and played false to the allied cause, is, we believe, a most reckless calumny; and Mr. Kinglake is gravely to blame for not publishing the evidence of a damning charge which he asserts can be made forthcoming, and for resting his case on hints and inferences. The accusation, in its main features, appears to us to be plainly confuted. The advice of Napoleon III. to Canrobert "to be prudent

and not to compromise anything," condemned as "miserable" by Mr. Kinglake, was dictated by the necessities of the case, and certainly reveals no crooked purpose. As for the emperor's desire to suspend operations of an active kind until the investment of Sebastopol should be made complete, this, we have said, was perfectly right in principle, and was sanctioned by what we may fairly call a great council of war assembled at Windsor; and it deserves special notice that at no time, with the possible exception of two or three days, did Lord Raglan dissent from the imperial view that an assault on the fortress should not be ventured while the allies were in their present state of weakness. Granting, too, even that the emperor was wrong, it does not follow that he acted in bad faith; and it must be remembered that, on a hint from England that his presence in the Crimea would not be opportune, he abandoned a design which must have seemed a duty to the heir of the traditions of Napoleon I.

The circumstance, however, that tells most against Mr. Kinglake's theory has to be yet noticed. Canrobert, weak and easily led at Sebastopol, as at Metz afterwards, was exactly a tool for the emperor's purpose on the supposition that he was playing false; and Pelissier was the only French general who, even in the spring of 1855, was the least eager to press on the siege. Yet Canrobert was practically dismissed from his command after the recall of the expedition to Kertch, and Pelissier was placed at the head of his army; and though Napoleon III., when this event occurred, was probably not completely aware of the projects formed for the siege by Pelissier, he must have known the bent of his lieutenant's mind. This consideration seems to us decisive; and we refuse to accept Mr. Kinglake's judgment until distinct evidence is adduced to sustain it. We pass on to the next phase of the siege—the second great bombardment of April 1855. Mr. Kinglake's account of this prolonged effort is minute, and even in parts graphic; but, as is the case generally with his descriptions of war, it wants unity and dramatic effect, and is expressed in pompous and too studied language; and it has the special defect, with him common, of making too much of unimportant incidents. The general results of the bombardment were that the counterworks along the front assailed were greatly injured, and in part destroyed; but scarcely any impression was made on what had become the chief points of attack—the Malakoff and the adjoining defences. The Flag Staff Bastion, however, was, no doubt, silenced—a proof of the insight of Bizot and Niel; and Mr. Kinglake, for this conclusion quoting the authority of Todleben himself, insists that had a determined assault been made, as Lord Raglan for a moment wished, the fall of Sebastopol would have ensued; and for this omission he throws blame on Canrobert and the false-hearted emperor. Todleben's view may have been correct; but it was founded on knowledge confined to himself, and wholly beyond the reach of the allies, of the extreme weakness of this point in the defence; and it does not follow that it would have been judicious, with the information the allies possessed, to have risked an attack of this kind on the fortress. It must be borne in mind that, at

this time, the Malakoff had become the chief objective, and that, except at one spot, the main defences of Sebastopol were completely intact; and, in these circumstances, it would have been most hazardous to imperil two armies in a desperate attempt to penetrate into a first-rate stronghold through an entrance made in a single work. No general, in truth, could stand the test of the captious criticism of Mr. Kinglake, resting as it does on the absurd assumption that a commander has all the facts before him. Had Massena known what was going on in Wellington's camp, he might, perhaps, have carried the lines of Torres Vedras. Napoleon, after the capture of La Haye Sainte, might possibly have forced the British position by summoning his reserves to make a great effort, had he been aware how severely the duke was pressed.

WILLIAM O'CONNOR MORRIS.

Personal Remembrances of Sir Frederick Pollock, sometimes Queen's Remembrancer. In 2 vols. (Macmillan.)

THIS is a season of biographies and autobiographies. Sir Frederick Pollock's book is mainly the gossip of a lawyer, and, therefore, does not compete with the scientific memories of Mr. Darwin, the artistic stories of Mr. Frith, or the literary anecdotes of Mr. Adolphus Trollope. Sir Frederick's legal remembrances began very early, as his father, the Lord Chief Baron, while he was still a rising lawyer, took him on circuit when only ten years old. Indeed, they even begin before that, as one of his earliest recollections was a story against Queen Caroline, to whom, as a strong Tory, Pollock *père* was zealously opposed.

"We were all taught she was a very bad woman, and curiosity led us to ask what she had done bad. In reply, we were told that she took things from other people's plates at dinner, and put things on their plates from her own. This was, in fact, one of the instances given in evidence of her unseemly familiarity with Bergami, her courier. It had, therefore, as an answer, the merit of being historically authentic, and also pointing a moral of good conduct for the nursery dinner-table."

When ten years old, Pollock was present at the great case of *Angell v. Angell*, which forms the groundwork of the real action in Warren's *Ten Thousand a Year*, and occasioned some people to attribute to Pollock the authorship of that once famous, but now almost unreadable, book. On his youthful circuits he became known to Macaulay, of whose startling memory he gives a striking instance; to Brougham, and the other members of the Northern circuit who have become famous in law, letters, or life, and the hosts who entertained them; to Lord Lowther, Dr. Lingard the historian, Archbishop Vernon Harcourt, and other magnates of old. At Cambridge, as the son of the attorney-general, he had an equally good start, with the result that we have a report of a conversation between Sidney Smith and Whewell, in the course of which Sidney Smith remarked on Sir John Herschel's voyage to the Cape: "I suppose that you astronomers, when you are ill, are advised to change your stars just as we ordinary mortals are to change our air;" and Whewell concluded a discussion on the notion that a blunt razor, if kept unused, will get

an edge again, by saying he "wondered how long an iron garden-roller would have to be put by before you could cut with it." He speaks well, by the way, for the greater Liberalism of Cambridge, as compared with Oxford, that at that time the great question at the Cambridge Union was Sunday opening, whereas at Oxford this did not become a burning question till nearly forty years afterwards. The undergraduate majority, however, was in politics as Tory as at Oxford; and 800 of them signed a petition against the admission of dissenters to the university—one of those Liberal measures which, like the Reform Bill and the five points of the Charter, were each in turn (as appears from Sir F. Pollock's pages) thought by despondent Tories to pre- tend a cataclysm involving the dissolution of the empire—those fatal and inevitable consequences of reform which now, as ever, are predicted with equal certainty and reasonableness. Oddly enough, the party of loyalty and order took much the same way then as now of displaying their loyalty and love of order when the Crown was against them. Sir F. Pollock relates an incident in 1836 (his dates are a little mixed) which strangely reminds us of a celebrated utterance as to kicking the Queen's crown into the Boyne. At a Conservative banquet held at the Lyceum, because Lord Melbourne was then Prime Minister, and Queen Victoria was supposed to favour Liberal views, her health was received "with scant honour, while all the loyal enthusiasm of such an occasion was reserved for the toast of Adelaide, Queen Dowager." A youthful sign of the same feeling towards the powers that be was afforded by Sir F. Pollock himself. When reading the lessons in chapel, he found a note from the dean, Thorpe, telling him to read a chapter of Isaiah instead of the regular lesson of the day, which was the apocryphal story of Bel and the Dragon, and he contemptuously stuck to Bel and the Dragon. This Thorpe gave occasion to a very neat epitaph. One of the undergraduates kept a cat, whom, "in order to show his respect to the authorities," he called Thorpe; and when "Thorpe the cat" died his epitaph took the shape of

"Here lies the corpse,
Was Thomas Thorpe's,"

finally condensed into the admirable inscription:

"Thorpe's
Corpse."

Grand Court on the Northern circuit is productive of some good stories. When Sir F. Pollock joined the circuit two of the leaders were those great twin brethren, the classic reporters, Adolphus and Ellis, whose reports, alas! are now at a discount. "Adolphus, in Grand Court, invented the names of Fidelia Fanny and Caleb Samuel for the twins of an eminent pleader, in order that they might be affectionately called by the abbreviations of Fi. Fa. and Ca. Sa.; and he wrote for their especial use the nursery rhyme," which suggests the junior Pollockian *Leading Cases done into English*:

"Heigh ho, Richard Roe,
Why did you break the closes so,
Which the Bishop demised to poor John Doe?
Good Mr. Doe had done you no harm
When you ejected him from his farm.
Fie on you, naughty Richard Roe,
How could you break the closes so?"

Among the judges who went the Northern circuit was Mr. Justice Williams, who, like Lord Thurlow, in a previous generation, was celebrated for the strength of his expletives. His wife being a woman of fashion, they lived in Grosvenor Square, of which he used to say, "I live in Grosvenor Square, but I'm damned if I know where the other judges live." The word "damned" had become with him so little of an *epitheton ornans* and so much of an *epitheton constans* that in reading another judge's notes on an application for a new trial, he read "d—d" into his favourite expression, thus, "When the plaintiff was asked to pay for the goods he said he would see them damned first." Counsel interrupted "We have it that he would see them delivered first." Whereon Williams thus delivered himself: "What I have is d—d, and if that does not mean damned I am damned myself." The only other judicial story of any noteworthiness is one by that putative father of half the legal jokes in the country—Mr. Justice Maule. He was sitting as judge in a Mint case in which Sir F. Pollock was prosecuting. After the chief witness, a barmaid, had given her evidence the prisoner said to her, "Go away! I know the jury won't believe you." Whereon the girl said she was not going away for his telling her, and a battle royal of words ensued. Maule, looking up from his notes, said, "My good girl, you have given your evidence very well, and you can go; and remember you have this advantage over the prisoner—that you can go and he can't." Roebuck, of Sheffield fame, was then on the circuit, and a Radical; and on one occasion he entered a solemn protest against the unworthy institution of Grand Court, but next time took his part in it like a lamb, though he sat next to Sir Frederick and descanted to him on the virtue of political assassination and the necessity of a side door to the stomach for the introduction of meals, so as to avoid long dinners. But, our author says, he became *mitior et melior* as he grew older; and the last time they met was at a Skinners dinner in the City—an occasion calculated indeed to abate any wish for a side door for the admission of nutriment to the human body.

A rather funny example of similar modification of general views in the case of the individual holder was a certain Lady Olivia Sparrow, who gave the Chief Baron and Sir Robert Peel a grand entertainment when they were members for Huntingdon. Lady Olivia was noted in the religious world, but lived in great luxury; and on Col. Peel remarking that creature comforts were not absent, she replied, "Yes, there is the more to thank God for." The most singular conflict, however, between general and personal views recorded in the book is a story of Carlyle, too long to quote at length, but exceedingly characteristic. It was, shortly, this—that Carlyle, the stern preacher of duty, having sat on a jury, and having in consequence stormed and raved as if the most frightful torture had been unjustly inflicted on him, when a summons for another sitting in the same case arrived, Mrs. Carlyle burnt it; but, having fortunately told Sir Frederick, he saved Carlyle from the fine, which would probably have awaited him, by making Carlyle go, though he had given his word of

honour to the official of the court that he would *not* come back. The *Life of Cromwell* was nearly being sacrificed to Carlyle's ravings on the subject; and even four months after the trial was over, poor Mrs. Carlyle says, in a letter to Stirling, that she was only just recovering from the deplorable plight into which they had been thrown by this awful incident. One story more, and we have done. Mrs. Grote, having offended Louis Napoleon when in London, met him at Paris in 1849, just after he had become president of the Republic. He received her very coldly, and only asked her, "Do you stay long in Paris?" when she had her revenge by answering "No, do you?"

Here we must end; but, in conclusion, we warn the reader, first, that he has been shown most of the purple patches in the book; and, secondly, that he should on no account read Sir Frederick Pollock's letters, which are characterised by effort rather than by effect. Happily, judicious skipping is easy. It is certainly necessary, since, after Sir Frederick left the Bar, the autobiography has a tendency to become a mere list of names of distinguished persons he has met at dinner, with anecdotes concerning them at very long intervals indeed.

ARTHUR F. LEACH.

Austral Africa: Losing it or Ruling it, being Incidents and Experiences in Bechuanaland, Cape Colony, and England. By John Mackenzie. In 2 vols. (Sampson Low.)

A more competent authority on South African affairs than Mr. Mackenzie does not exist. We trust that the size of his two bulky volumes will deter no one from studying them. His style, if not strictly correct, is far from being unattractive. Diffuse he certainly is; but he succeeds in holding the reader's interest and attention, and his transparent candour and impartiality carry conviction with them. His high character and knowledge of native affairs entitled him to a hearing from those in authority; and when the Liberal party succeeded to office in 1880, being apparently of the same political complexion, he communicated his views respecting Bechuanaland to Mr. Grant Duff, but he met with kind words and nothing more—to use his own expression, he was *pigeon-holed*.

In 1882 he came to England resolved to push his views, in spite of the advice of a friend he met on his way just returned from home, who said to him:

"Mackenzie, if you say a good word for South Africa you'll get insulted. They won't hear a word on its behalf in England—they are so disgusted with the mess that has been made. They won't listen, they will swear at you—even missionary-people are as prejudiced as the rest."

This was discouraging; but Mr. Mackenzie admits that it was not far from the truth as to public feeling in 1882. He had interviews with various influential men—a member of Parliament, a pushing man of business, and an ardent politician; with the editor of a well-known newspaper, a pungent writer; with a large manufacturer, a local magnate; with an author and politician—all equally narrow and prejudiced, and indifferent to the true state of the case. Mr. Mackenzie

describes these interviews amusingly; but he was mortified and disappointed. Lastly, when he urged on "X," a leading politician on South African affairs, that there would be a change in public opinion could the public know the truth, the great man exclaimed:

"The public know the truth! When will that happen? No; we go by hot and cold stages here. We were very hot a while ago; we are chilly just now; whether we shall ever be hot again, I don't know—I think not."

Mr. Mackenzie nevertheless got the assistance of Lord Shaftesbury, Mr. Forster, and others; a South African Committee was formed in London, and an address to the Secretary of State for the Colonies was so influentially supported that it was not convenient to disregard it. The result was that in 1884 Mr. Mackenzie was appointed Deputy Commissioner of Bechuanaland. There was no mistake as to his views with regard to natives, white settlers, and freebooters, and as to the necessity of upholding Imperial authority. He tells us that a thorough distrust of England's sincerity and steadfastness prevailed through South Africa, produced by our own treatment of South African questions.

"I do not refer," he says, "specially to the retrocession of the Transvaal, but to what may be called the practical abandonment of South Africa by England after that event. To have given back to the Transvaal the right of local self-government was a small matter as compared with what was actually done. We are chargeable with the gravest dereliction of duty—that of having left South Africa, divided and incompetent as it was, to look after its own general affairs, without establishing, or assisting to establish, any form of general government by means of which this necessary work could be done. It is still more to our discredit that this virtual retreat from South Africa was accompanied by open protestation in England that we were not retreating at all, and that we still intended to uphold our position in the country as the supreme power and the protector of the weaker races. But there was nothing to show for this in South Africa itself. Politicians went from town to town in England advocating desertion of South Africa, retaining only the Cape as a coaling station, thus constituting another Gibraltar in the Southern seas. Who can wonder at the direst result in South Africa—the formation of the Africaner Bond? The anti-English people naturally thought of a republic, and prepared for it; the English and loyal Colonial population ground their teeth and remained silent and downcast, as colonists who were deserted by the mother country. A few Cape politicians of English race were perhaps the most rabid against the old country. They, rightly or wrongly, nursed a sense of personal desertion, and shrieked rather than said that they would never trust England again. Young English colonists left the country, in cases where that could be done. Older men set to work to learn the Dutch language, and be prepared for future possibilities. And yet the great body of the Cape Colonists, of whatever extraction, were far from being disloyal to England, and far from endorsing with their approval the deeds of the freebooters. They were the victims of misunderstanding and mismanagement. Why could not the English Government know its own mind, and abide by it?"

We fear the appointment of Mr. Mackenzie can be attributed only to a desire for temporary popularity. Probably, as in the case of Gordon, it was thought a popular move; and, like Gordon, as soon as he was out of

sight, Mr. Mackenzie was forgotten. Had he possessed a little more worldly wisdom he would have made his own terms with the Government before accepting so onerous a charge, but he was too honourable himself to anticipate the way in which he was to be treated. It would seem that it was indifferent to the Government at home whether he succeeded or not, and the Government at the Cape were rather desirous of his failure. That he failed to settle matters in Bechuanaland and reduce all the freebooters of Stellaland and Goshen to order without the assistance of a single soldier, or even one policeman, cannot be wondered at. The wonder is that he accomplished as much as he did. Here again his high character stood him in good stead. He found a universal distrust of the British Government prevailing.

"Mr. Mackenzie," said a colonist to him, "I'm sorry to have to say it to you, because we have all known you so long; but, honestly speaking, I hope you won't succeed. The English Government doesn't deserve to succeed, after what they have made us all, Englishmen and loyal colonists, suffer in the Transvaal. We all trusted, and we were deceived. For a long time scarcely a day passed when we were not insulted by the more ignorant Boers, till we were almost tired of our lives; and yet we could not go away, having invested our all in the country."

This was a specimen of the general feeling. Nevertheless Mr. Mackenzie succeeded in establishing the British Protectorate in Bechuanaland and in bringing back Stellaland to its allegiance.

It is impossible not to admire the patience and temper with which Mr. Mackenzie recounts the way in which he was treated by Sir Hercules Robinson and the Government at the Cape. Not only was he never supported, on the contrary he was continually thwarted and almost insulted. At last he had no resource but to resign. His successor, Mr. C. Rhodes, seems to have been sent to Bechuanaland with the express purpose of undoing all that he had done, and of playing into the hands of the freebooters and the disloyal; and in this he was ably assisted by Capt. Bower. Mr. Rhodes found the great body of the people of Stellaland well pleased with the Protectorate. He told them it was at an end, and Capt. Bower removed all traces of it.

"There can be no doubt," says Sir Charles Warren, "that Mr. Rhodes's action, supporting and upholding the Transvaal party, tended to a considerable degree to prevent peace being established in Stellaland. I consider that the difficulties which occurred in Stellaland since August last were entirely of his own causing; and that had he not come into the country, Stellaland might have been in a quiet state when I arrived."

While the High Commissioner at the Cape and his agent, Mr. Rhodes, were doing all in their power to crush the loyal party in Bechuanaland, Mr. Forster at home ably and nobly vindicated the administration of Mr. Mackenzie; and he so roused public feeling in England that the Government thought it politic to be hot once again, and Sir Charles Warren was sent out as Special Commissioner of Bechuanaland, with a force adequate to establish order in the Protectorate. The

success of that able administrator is fresh in the memory of all. He probably would be the first to admit that had Mr. Mackenzie been furnished with the same means, he would have been equally successful.

The lesson to be learnt from the events detailed by Mr. Mackenzie is that the policy pursued in the retrocession of the Transvaal, the abandonment of loyal subjects to the Boers, and the encouragement given to the freebooters of Stellaland and Goshen, is as impolitic as it is base. It is abundantly clear that a bold and honourable assertion of British sovereignty would have been the far easier course. Mr. Mackenzie tells us that the numbers and influence of the anti-British party in Austral Africa are greatly exaggerated. The bulk of the white population of whatever descent, and the whole of the native population, desire a firm imperial rule. This is amply proved by the partial success of Mr. Mackenzie, with no means whatever at his disposal, and by the triumphant march of Sir C. Warren. That Englishman should have been found ready to pursue the baser policy is a bad sign of the times; but that any could have sided with the murderers of Bethell and Honey would, had it not happened, have seemed impossible. Two more atrocious murders were never perpetrated; and it should have been a preliminary to all negotiations that the murderers should have been punished.

Mr. Mackenzie is confident of the future. He does not look on England as a decaying state, but has the fullest confidence that she is a vitally sound and growing commonwealth, whose great public questions invariably secure for their settlement not only the services of capable statesmen, in whose judgment the public have confidence, but the attention and conscientious study of the people themselves. We wish we could feel the same confidence; but, while our system of colonial government remains as it is, so long is there a danger of recurring "hot and cold stages"; and it is only after some fatal mistake or disaster that the attention and conscientious study of the people themselves is directed to the affairs of a remote colony.

We have confined ourselves to the main features of Mr. Mackenzie's work, which besides contains abundance of collateral information, both valuable and interesting. Each volume is furnished with a good map—a great convenience to the reader; and the index appears to be carefully made.

WM. WICKHAM.

DR. PELAYO'S HISTORY OF AESTHETICS IN SPAIN.

Historia de las Ideas Estéticas en España.
Por Dr. D. M. Menéndez y Pelayo.
Tomo III. (Vols. I., II.) "Siglo XVIII."
(Madrid: Dubrull.)

THESE fresh volumes of Menéndez y Pelayo's extensive work on the history of the literature of aesthetic ideas in Spain possess all the characteristics of their predecessors. There is the same exhaustive fullness, the same careful attention to bibliographical details, which make the work absolutely indispensable to all who would really study the history of Spanish literature. There is the same fondness for formal analysis, even of foreign

authors, carried perhaps to excess—analysis not only of printed texts, but also of MSS, and sometimes even of MSS left incomplete. Yet it is difficult to understand what influence these unknown and imperfect writings could have had on the literary development of the age, however much they may enable us better to understand the complete standpoint of their authors.

The literature of the eighteenth century in Spain is, perhaps, the least peculiarly Spanish of any century in its history. From first to last the age is dominated by foreign influences—by the French classical school in poetry and the drama, by the Scotch school in philosophy, by Italians in architecture, and by the Bohemian Mings in painting. Its best writers on aesthetics of every class are chiefly to be found among the exiled Jesuit fathers who lived and wrote in Italy; and these our author claims as belonging to Spanish literature even when they wrote only in Latin or Italian. Towards the close of the century there is a faint dawn of better things. Some few precursors appear of the advent of the Romantic school, and of a return to the models of the older literature of Spain. It is pleasant to observe how our author, like Antæus, rises refreshed from contact with his native soil. His style becomes more lively and vigorous, he kindles into real enthusiasm, and his pages glow with eloquence, whenever he treats of Jove-llanos or of other worthies of his native Asturias.

But it is seldom that the work is thus enlivened by passages which appeal to the popular ear. It is, nevertheless, full of examples of sound criticism, of decisions which commend themselves to the judgment of the student, and which he will carefully store in his memory for future use and application. The wide learning of the author is everywhere apparent; and, while not concealing his own preferences, his power of appreciating the excellencies of most diverse schools of thought and art is very marked. Thus, in vol. i., pp. 107-8, we find an excellent appreciation of the Scotch school of philosophy from Hutcheson to Sir W. Hamilton and Prof. Mansell. On the standing quarrel between naturalists and idealists he quotes with approval the conclusions of Arteaga:

"There is no idealist who does not draw from nature the elements wherewith he forms his mental pictures, just as there is no naturalist who does not add much of the ideal to his portraits, however like and however close to nature he may deem his work to be. Every naturalist is an idealist in his execution, just as every idealist must necessarily be a naturalist in the first materials for his execution" (vol. i., 246).

In music he asserts, both in vol. i., pp. 252-3, and in vol. ii., 562, that Arteaga's conception of music and the opera as the union and crown of all other arts is identical with that which Wagner has more fully developed in our own day. Noticing, in the course of this history, how often a dull correct work, without a particle of real genius in it, like Addison's "Cato," for example, will carry off the suffrages of foreign nations, he remarks, *a propos* of Montiano's impossible tragedies, so much praised in France and also by Lessing, how difficult it is for a foreigner to judge of style, and lays it down as a rule

that "no one can feel the beauties of poetry except in his native language, with the exception of those great works of universal genius, which move us, even though we cannot appreciate their form" (vol. i., 394). This consideration may give us cause to question whether the judgment of foreigners is so near to that of posterity as we sometimes imagine it to be.

The eighteenth century was peculiarly an age of description and of didactics in poetry. The old enthusiasm and mystical fervour of religion had well-nigh died out, and had been replaced by cold rational systems of ethical conduct. Hence the wearying didactic poems on the *Ars Poetica*, on music, on architecture, on painting, on hunting, and on almost every subject to which a pedagogical form could be given in verse. As a corollary to this, it was eminently an age of translations. Every nation seemed to distrust its own native genius, and to be engaged either in an unreal imitation of ancient classical art, or in endeavouring to transfer to itself the beauties of other lands. The greatest foreign influence on Spain was the pseudo-classicalism of the French school. This influence our author believes not to have been solely due to the accession of a French Bourbon dynasty. It would have come all the same even if Philip V. had never ascended the throne of Spain. Pseudo-classicalism was a universal malady of the time in all forms of art—in architecture, where it produced the abominations of the plateresque and churrigueresque schools; in painting, where it commenced with the eclectic classicalism of Mengs, to end in the still falser classicalism of David; in drama, in the vain attempt to reduce all action within the unities. Next to France, Italy had the greatest influence on Spain; but the works of several English poets were translated at this time. In 1754 Milton's *Paradise Lost* was first translated, then followed versions of Pope, of Thomson's *Seasons*, and of Young's *Night Thoughts*; but especially of Ossian, whose reign seems everywhere to have been of longer duration and more powerful than at home. But while Spaniards were thus adopting the literature of other nations there was no corresponding hospitality abroad for their own. Spanish literature was wholly neglected, as our author complains (vol. ii., p. 184), "A Spanish book was as though it did not exist, or as if it were written in the dialect of the island of Otaheite."

Still the nation was slowly rousing itself. The latter part of vol. ii. gives us the history of the Academia de San Fernando y de las Bellas Artes, from its first meeting in September, 1744; and many of the subsequent pages are occupied with analyses and extracts from works read at its meetings. The term "Estética" seems to be of later introduction, being first used by the Abate Marchena in 1828. We must pass over the criticisms of the better-known writers of this period—Melendez, Iriarte, Quintana, the Moratins, Duque de Frias, Martinez de la Rosa, &c., all of whom find some mention. On architecture the remarks are brief but noteworthy. The immense value of the *Viaje de Pons, 1771-1792*, is insisted on. Tolerant of all styles except the churrigueresque "his work is more than a book: it is a

date in the history of our culture. It did as much for the arts as the voyages of Burriel, Flores, and Villanueva did for history, or that of J. Jorge y Ulloa for science." A citation from Capmany will find a response with many of our readers: "To me Gothic architecture seems always ancient, and Roman always modern." But the writer who did most to turn the national taste from a false classicalism was the statesman Jove-llanos. It is remarked that in all departments of art the reform to a truer taste was brought about not by artists or architects or specialists, but by amateurs of no practical skill or special knowledge of the arts. It is Jove-llanos who first proclaimed Velasquez the king of all Spanish painters, and with this verdict our author thoroughly agrees.

The volumes issued up to the present terminate with a chapter of criticism and bibliography of such minor arts as the ballet, pantomime, theatrical declamation, landscape gardening, equitation, and bull-fighting, on all of which the best books of the period are indicated. It is to be hoped that a full index, at least of authors' names, many of whom are here mentioned for the first time, with their dates, will accompany this great work when concluded; otherwise its utility as a manual for consultation for the ordinary student will be greatly diminished.

WENTWORTH WEBSTER.

NEW NOVELS.

Nadia. From the Russian of R. Orloffsky. In 3 vols. (Sonnenschein.)

One Maid's Mischief. By G. Manville Fenn. In 3 vols. (Ward & Downey.)

A New Face at the Door. By Jane Stanley. In 2 vols. (Hurst & Blackett.)

The Frozen Pirate. By Clark Russell. In 2 vols. (Sampson Low.);

Fools of Nature. By Alice Brown. (Trübner.)

Germinie Lacerteux. By E. and J. de Goncourt. (Vizetelly.)

Fanny. By Ernest Feydeau. (Vizetelly.)

The Mystery of the Hansom Cab. By Fergus W. Hume. (Hansom Cab Publishing Co.)

THE influence of the vague immensities of the steppes seems to affect all the great Russian novelists. Sensationalism, as commonly understood, does not exist in the writings of men like Tolstoi, Dostoiévsky, Tourguénief. Passions, terrors, agonies of mind and body, are, of course, brought into play, and incidents as thrilling as any detailed by our own romancers are described with picturesque and occasionally with dramatic effect. But the echoes of these passions and despairs have something of the remoteness of the thunder and storm which the traveller on the plains sees or hears amid the heights of the Kavkaz. These exciting events move so slowly, are introduced so circumspectly, that they affect one no more startlingly than, during a journey, would the gradual drifting of rain-clouds from the steppe-horizons. This dilatoriness with incident, this indifference to sudden and startling surprises, this calm spectatorial method of narration, is not without charm to readers satiated with the

morbid fever of popular French *romans* or the overwrought sensationalism now so prevalent in our midst. On the other hand, it must be admitted that much of the charm is due to the soothing influence of unfamiliar placidity; just as the mountain-lover, coming suddenly from the Alps, may find a new content and pleasure in the plains of Lombardy. Save in the Cossack tales of Gogol, and in the early romances of Tolstoi, there is little dramatic intensity in Russian fiction, although the chief Slavic writers certainly betray their tendency to take dramatic views of life in the abstract. One would ere long tire of the Russian literary method, if for nothing else than the infrequency of its dramatic revelations and the dominant bias towards a redundancy of trivial and wearisome details. Even Dostoiévsky, whose sombre romances afford a surfeit of human pain and misery, seldom introduces his dramatic incidents dramatically, while he constantly ruins his most effective situations by a dire enumeration of trivialities of the most inopportune nature. While Orloffsky cannot for a moment be compared with the great masters of Russian fiction, he is of quite sufficient eminence and popularity to deserve translation; and he is fortunate in having secured so satisfactory an interpreter as the Baroness Langenan. It is not always easy for a critic, ignorant of the language in which the book he is reviewing originally appeared, to assert the merits or demerits of a translated version. Special felicities of phrase and epithet are apt to be wholly missed or but indifferently rendered; while an interpreter with a literary bias is tempted to improve upon, or at least expand, certain passages of striking effect or import. But, so far as I can judge, the Baroness Langenan's translation from the Russian of Orloffsky is exceptionally painstaking and readable. The story itself is far too long. It is not, like Tolstoi's *Anna Karénina*, for instance, a novel where a host of minor events and records of fragmentary conversations constitute a consistent whole. Two-thirds of it could be spared, and if the deletion were skilfully executed the result would be a tale of considerable interest and psychological value. *Nadia* is a girl of earnest but very vague Nihilistic proclivities; yet she duly suffers for her faith, and is the cause of agony to herself and others through her bitter and weary imprisonment of eighteen months. A double love-story runs through the novel, and Volodia and Jenny afford a bright contrast to the unhappy and distraught Dmitry and *Nadia*. In the end all is well, though but a brief space of happiness is allotted to the heroine. *Nadia*, or *Out of the Beaten Track* is much less sombre than the generality of Slavic novels; and as a vivid and presumably accurate picture of Russian provincial life it deserves to be widely read and appreciated.

Mr. Manville Fenn's new book has the indubitable advantage of novelty of scene. A story of ordinary social life interwoven with one of semi-civilised personages, with a Malayan settlement as a background, must in itself prove attractive to the jaded reader. *One Maid's Mischief* has reference to the evils and miseries wrought by the coquetry of a beautiful girl named Helen Perowne. The early part of the story is told with un-

necessary and wearisome expansion of minor matters, but when once Helen Perowne and her friend Gray Stuart are fairly settled at Sindang the interest becomes engrossing. The descriptions of life and scenery upon the great Malayan river are admirable, and the evolution of a sensational and startling plot should satisfy the most insistent craving for excitement. The Rajah Murad and the Inche Maida take leading parts in the tale, which is always most enthralling when dealing with the machinations and love affairs of these two amorous potentates. The best portions are those descriptive of Capt. Hilton's and Lieut. Chumbley's abduction by the Inche Maida; Helen's seizure by, and terrible experiences under, the lustful tyranny of the Rajah Murad; and the narrative of the "maid's" escape with the Malay girl, and, ultimately, with Dr. Bolter. Helen is too insufferably the coquette to win— notwithstanding her extreme beauty—the reader's sympathy; until at last she is discovered in the harem of the Rajah, and rendered in colour and otherwise like unto the Malay women. The other personages are lightly but ably sketched, although Scots will smile derisively at Mr. Stuart, the Caledonian merchant, with his impossible dialect. The Resident of Sindang, the officers Hilton and Chumbley, Dr. Bolter, Arthur Rosebury, the dreamy, impractical, botanising chaplain, are all true to life, and are pleasant acquaintances to meet. Mrs. Bolter, "the little lady," as Mr. Fenn refers to her about a thousand times, is meant to be an amusing example of female jealousy; but she simply wearies the reader by her vulgar stupidity, and, with all her estimable qualities, becomes ere long an intolerable bore. Wary readers will skip Mrs. Bolter as much as practicable. The real hero of the book is Chumbley, whose delightful and characteristic "fate" is something to envy from the depths of one's heart. Murad is "a very proper villain"; and when, despoiled of his rajahship for his crimes, he dies horribly, after running *amok* through the streets of Singapore, one is glad to know that *finis* can be written to the record of his life. With all its good qualities, *One Maid's Mischiefs* exemplifies the evil of the serial system. I am unaware whether or not this novel appeared serially, but it certainly must have been written for that purpose; and the result is unsatisfactory, so far as the book in its present form is concerned. There are also innumerable signs of hasty composition, which may have been unavoidable, but are none the less regrettable.

A New Face at the Door is, of its kind, an excellent story. The intriguing governess has, perhaps, become a superfluity in fiction; but when she rises to crime there is undoubtedly a malign fascination about her which her equally troublesome, but less dangerous, sister wholly lacks. Opal Carew is a very heartless, but a clever and unscrupulous, young lady, although, as is nature's way, she occasionally acts aright, and, moreover, even finds her wrongful intentions turn into fortunate events. There is a well-constructed plot; and the trial for the murder of Jack Daman is sufficiently thrilling. The reader feels from the outset that the accusation of Greta Charlstrom is baseless. Who the actual assassin was, and how the secret came to

light, need not be here disclosed. In point of literary finish, Miss Stanley's new story is an advance upon *A Daughter of the Gods*.

In *The Frozen Pirate*, the most enthralling romance which Mr. Clark Russell has written since *The Wreck of the Grosvenor*, one must be content to accept as possible the impossible germinal idea. The story turns upon two motives—the finding of a rich piratical ship frozen securely in Antarctica, and the recovery to active life, after close upon fifty years of stagnation, of Tassard the buccaneer. Whether or not the latter, the germinal idea, is original in its working-out I cannot say; in itself it is, of course, a modified and otherwise altered restatement of the case of the late Rip van Winkle. Probably more readers will be disposed to accept the marvellous restoration to life of the frozen pirate, Tassard, than to acknowledge the possibility of Mr. Rider Haggard's *She*; but the least discriminative can hardly fail to discern how almost grotesquely inferior is the account of the collapse through age of the infamous Tassard compared with the appalling end of Ayesha. No doubt the Tassard incident will be considered by many, especially by boy-readers, the strongest thing in the book; but I admit it seems to me so emphatic a demerit that it may prove a mill-stone round this romance when it comes to strive with the waters of oblivion. The restoration is a physical impossibility of so palpable a kind that one cannot deceive oneself into sympathetic credulity. Granted the possibility, however, it by no means follows that the weight of his passive years would speedily overcome the resuscitated pirate. If nature be capable of the arrestment of all the functions of mind and body, as is set forth by Mr. Clark Russell, she could simply begin to react, when the spell of passivity was broken, at the point where her potency had been abruptly interfered with. The story, however, is so rich in exciting detail, and is narrated with such rare power and skill, that the most carping critic must acknowledge its excellence. There has been no finer story of Antarctic adventure, at once so thrilling, so strange, and so realistic. Mr. Clark Russell's exceptional faculty for descriptive narrative is here exemplified at its best. In vivid beauty and effect there are passages transcending anything in *The Wreck of the Grosvenor*, or in *The Golden Hope*—and than this no higher praise could be given. It did not need *The Frozen Pirate* to place Mr. Russell indisputably foremost among all living writers of sea-life, but if there were any lingering doubt this romance would settle the uncertainty. Of necessity, the excitement somewhat flags after the grotesque death of Tassard, but the conclusion is reached with a skilful preservation of unexhausted interest.

To appreciate *Fools of Nature* one would need to be not only familiar, but in sympathy with, the phases of new England life therein described. It is of the wearisome school of Mr. W. D. Howells's narratives of nothing in particular, but without the charm of style which we find in the best productions of the author of *A Foregone Conclusion* and *The Lady of the Aroostook*. The motive of Miss Brown's story seems to be the exposure of the charlatanism of mediumistic spiritualists,

and from her point of view she makes out a damning case. But though one cannot regret having made the acquaintance of good, genial, foolish "Uncle Ben," it is with no sense save that of the relief which cometh from bored indifference that *Fools of Nature* is finally laid down.

Of the most radically distinct kind are the two translated French novels next on my list—both, however, already so well-known to all students of French fiction that a passing word will here be sufficient. That Emile Zola has expressed himself enthusiastically upon *Germinie Lacerteux*, as a supreme model for the "realistic" novelist pretty well explains the kind of book it is. It is a cold, skilful, intensely French narration of the retrogression of a human being towards a kind of swinish animalism. To term it a romance would be to betray an absolute incapacity to comprehend the true significance of that much-abused word; and yet it is not a novel as commonly understood. The medico-analytical school of fiction is working out its own destruction, and the best that can be said for such books as *Germinie Lacerteux* is that they conduce towards that end.

I do not suppose many people in France read Ernest Feydeau now. It is, at any rate, more complimentary to our neighbours to take their negligence in this respect for granted. But in its day *Fanny* caused such an amount of disputatious discussion that comparison thereof with the clamour which prevailed after "the battle of *Hernani*" would not be altogether inapposite. The book has thus a literary interest quite distinct from that of the record of *Fanny's* love affairs. The famous balcony scene, once regarded by *jeune France* as a piece of daring and powerful realism, seems now rather flat, and the agonies of the indignant and thwarted lover mere epileptic frenzy. The book's value, such as it is, is certainly enhanced by the author's long prefatory note, wherein, with overweening conceit, he recounts the genesis and development of his masterpiece.

Even extreme exuberance of puffing could hardly send a book into its seventy-fifth thousand unless it had exceptionally sensational literary fare to offer. *The Mystery of a Hansom Cab* has, it is asserted, taken Australia by storm—a fact which says a great deal for the genial patriotism of our countrymen overseas. The story is of the *Leamington Case* kind, but the absorbing interest is neither so skilfully maintained nor so ably set forth as in that popular tale. Mr. Fergus Hume's book is replete with grammatical and other errors, not all of which can be due to careless printers. When he has time to write with care and discrimination he will doubtless follow up his first brilliantly-successful but, from a literary point of view, valueless venture with a novel that will better deserve the plaudits of his fellow-Australians.

WILLIAM SHARP.

GIFT BOOKS.

Lady Burton's Edition of her Husband's "Arabian Nights." Vol. V. (Waterlow & Sons.) Another of these beautiful volumes—the fifth of the series—reached us a few weeks

ago; and yet another may shortly be expected. The present instalment (which, by the way, is especially rich in learned and interesting foot-notes) contains *inter alia* the story of Hasan of Bassorah and the bird-maidens—an Oriental version of the "Swan-maidens"; one of those primitive myths which are the common property of the whole Aryan race. The description of the garden and pavilion in this story is justly characterised by the translator as "one of the most gorgeous in the Nights"—and to its gorgeousness his glowing and embroidered diction does ample justice. Told with Sir Richard Burton's consummate skill, and power of language, these old-world stories are ever fresh. Princes and king's daughters, barbers and fishermen, jinns and afrits succeed each other like the figures in a kaleidoscope. There is an unquestionable sameness of material; yet the combinations are infinitely varied, and the effect is always new. To weary of them is impossible. As Gray wished that he could lie for ever on a sofa and read "everlasting new novels of Crebillon and Marivaux," so, in truth, we might ask of fate no better boon than to sit by the fire all our winter evenings' long, reading everlasting new volumes of "Lady Burton's Household Edition of her Husband's 'Arabian Nights.'" And if such delicious leisure is denied to ourselves, we can, at all events, bestow it upon others. It would not be easy to imagine a more charming Christmas present for young people, at this "boxing" time of year, than Lady Burton's dainty and delightful series.

Tales of Ancient India. By Edmund C. Cox. (Bombay: Thacker.) All true national epic poems without exception have been made up from folk tales. To say this is, indeed, nothing more than to say that men and women must first have talked familiarly about those things which have furnished the materials for these poems; and if of the epics thus put together many have come down to us, many more probably have been lost, and many have died in early stages of their growth. The old folk tales of India have been embodied into epic poems more intricate and ponderous than those of my other country; and Mr. Cox in this little volume has made an effort to separate some of them from the contexts in which they are imbedded. The stories are thus brought into a form similar to that of his father's *Tales of Ancient Greece*. Of the twenty-four tales which make up the series, twelve relate to the birth, life, and death of Krishna; the rest reproduce the myths of Surya, Rama, Varuna, Indra, and other of the Vedic and Puranic gods and heroes. They are all given in a way which is likely to attract and interest children; and, apart from any amusement which the perusal may afford them, children will get some solid knowledge if they will compare them with the myths which they will find in the *Iliad*, the *Odyssey*, and elsewhere. They may, perhaps, think them not so well worth reading as the familiar tales in Grimm's collection. And, perhaps, they are not; but they will find the old features in a condition which shows the strangely flexible character of the Vedic deities. Taken as a whole, for instance, Krishna is the counterpart of the Hellenic Apollo more nearly, perhaps, than of any other of the Greek gods; but he is also the stealer of the cows, and his mode of stealing them as well as his defence after the theft carries us straight to the language of the Hymn to Hermes. Like Hermes, he is also the first to discourse sweet music; but as Hermes produces his melody from the strings stretched across the tortoise shell, so Krishna draws forth his harmonies from a reed which he hollows out and pierces with holes. The little book is dedicated to Mr. Cox's many Hindu friends.

It is to be hoped that these friends will tell their children that stories not altogether unlike them may be found in other parts of the world; and that it is a task for the wisest to try and see how such tales took shape, and from what source they come.

Indian Fables. By P. V. R. Raju. (Son-nenschein.) Mr. Ramaswami Raju has brought together, in a very pretty little volume, the collection of illustrated Indian fables which has appeared during the last two years in the columns of the *Leisure Hour*. They are mostly beast-fables of the old-fashioned kind, and many of them have been known to the world since the times of Bidpai and Lokman. Their editor appears to have taken great pains to preserve the traditional form of the stories, if we may judge by the fact that the incidents of his version are very nearly the same as in that of Galland, who translated some of them from the Turkish early in the last century. The book ought to be a favourite with children as well as with the collectors of folklore.

The Seven Wise Scholars. By Ascott R. Hope. Illustrated by Gordon Browne. (Blackie.) The experienced writer for boys who prefers to be known to them only under the pseudonym of Ascott R. Hope won his reputation by his hearty descriptions of school-life. On the present occasion, the school is a mere vehicle for telling a series of marvellous stories, the extravagant fun of which has been aptly interpreted by Mr. Gordon Browne's facile pencil. This artist has his limitations; but he is never more happy than when giving expression to the humours of the modern boy.

The Diamond Lens. By F. O'Brien. (Ward & Downey.) This is a rather late republication of the tales of mystery and imagination which Mr. Fitz James O'Brien used to contribute to the *Atlantic Monthly* and other American magazines about the time of the war. The stories savour rather of Hoffmann than of Poe, and have a quaint weirdness of their own which entitles them to the praise of originality. The mesmerists, alchemists, and Dutch ghosts are somewhat conventional; but the wicked Wonder-Smith slain by an army of animated toys, and the loves of the Microscopist and the lady in the water-drop, are very excellent fooling. The story of the "What was it?" utilises the mediæval idea of demoniality, and presents us with a new kind of Christmas ghost or invisible vampire, caught and killed in an American boarding-house, which really deserves to be popular.

Little Margit. By M. A. Hoyer. (Griffith, Farran, & Co.) Good fairy tales are always welcome to little folks; and, although *Little Margit* and the story that follows it seem insipid, some of the other tales are very pretty, and will be sure to take with children. The adventures of a bad boy—who climbed the church steeple and put a cap on the weather-cock and made the wind blow wrong, and played many other pranks for which he got turned out of the parish—are very interesting. So, too, is the "Old Château."

UNDER the title of *The Little Wonder Box*, Messrs. Griffith, Farran & Co. have published a collection of Miss Jean Ingelow's short stories, bound up in six little volumes, as pretty as they are quaint.

SOME RELIGIOUS BOOKS OF THE SEASON.

The Church's Holy Year; Hymns and Poems for all the Sundays and Holy Days of the Church. By Rev. A. C. Richings. (Parker.) No more tempting subject to the religious poet can be imagined than verses set to the varying

tones of the Church's Sundays and Holy Days. Two such books at once occur to every reader—the *Christian Year* and the late Bishop Wordsworth's *Holy Year*. Between the stately music and somewhat melancholy views of the one and the wealth of Scripture lore shrined in the prosaic garb of the second, Mr. Richings may be said to hold a middle place. He weds some thought which comes out prominently in the teachings of the day with smooth and facile verse, without much sounding of its deeps, and yet in a strikingly felicitous manner. We are not surprised that these poems have reached a second edition. They are polished, and free from the doggerel which defaces so many hymns; and they cannot fail to be, as the author hopes, a devotional companion to many lovers of careful verse. A few lines may be quoted from the 20th Sunday after Trinity as a sample:

"How many hear the story read
Within God's sacred fane;
Nor heed the lesson, but go forth
Prepared to sin again.

"Thus we may mingle in God's House
Without the raiment white,
Which fits the soul for sacred feasts
And realms of pure delight;

"But when the King Himself appears
Who gave the loving feast;
The seamless robe He will require
For every wedding guest."

An Office of Prayer for the Use of the Clergy. By Rev. P. G. Medd. (S.P.C.K.) This little book consists of the office of special prayer, a collection of prayers for private use by the clergy, and an essay on the country clergyman's ideal, as it may be gathered from Keble's *Christian Year*. The first part—the office of special prayer—is mainly a cento from the Common Prayer-Book; the private prayers of the second part are far exceeded in depth and scriptural wealth by Bishop Andrews's well-known manual; and Herbert's "Country Parson" supplies a far nobler and simpler ideal than any which can be gathered from the *Christian Year*. But Mr. Medd's book may be useful to those who do not know the others, although the essay is somewhat cumbersome and verbose.

The Church and her Ministry; a Catechism. By Rev. E. J. Boyce. (S.P.C.K.) This is the book which has been so long wanted for all who have learned the Prayer-Book Catechism. It carries on and supplements its teachings in some thirty pages on the doctrines and ministry of the Church of England. No better manual could be used for the instruction of pupil teachers and candidates for confirmation.

THE author of *How to be Happy, though Married* (Rev. E. I. Hardy, Chaplain to the Forces), has collected a series of short and telling sermons under the title *Faint, yet Pursuing* (Fisher Unwin). About half of them were preached to soldiers; and all are, as might be expected, short, but weighty and incisive. Mr. Hardy does not waste time in introductions or circumlocutions, but at once states his subject, drives it home in a few concise sentences, adds a few anecdotes, illustrates it in a mode which must keep a congregation's attention, and ends with a few home-thrusts which ought to touch the most careless. Whether for pulpit use or as literature these sermons are much above the average.

Proverbs from Plymouth Pulpit. By William Drysdale. (Charles Burnet & Co.) This "selection from the writings and sayings of Henry Ward Beecher" was "revised in part by Mr. Beecher, and under revision by him at the time of his death." Dr. Parker prefixes an "introductory note," in which he informs us that he "often thought of Mr. Beecher as a

kind of intellectual volcano—awful, sublime, talking fire"; but that "men would talk less about his greatness if they knew more about his gentleness. I have seen his tears." This note would be better away. The proverbs are classified under different heads, such as Nature, Character, The Family, Religion, Christ; and they have been very carefully chosen and arranged. Mr. Beecher's writings yield a large harvest of pithy sayings, which are rarely very deep, but are always smart and sensible, and at their best indicate a wide and thorough acquaintance with the life and thoughts of the American citizen. Mr. Beecher's style, like his thought, will please the practical man rather than the contemplative. It is certainly not volcanic; but it is brisk and clear, and never for a moment dull.

Clare Vaughan. By Lady Lovat. (Burns & Oates.) Though boasting the imprimatur of Cardinal Manning this book cannot, for the majority of English readers, be pronounced wholesome reading. It is an addition to the not inconsiderable gallery of phthisical religionists, those eminent and saintly women with whom the hagiology of Romanism abounds, and of whom truth compels us to state that their morbid asceticism and devotion is so blended with defective organisation and physical disease as to make it difficult to analyse the resultant product, which may be termed without offence hypernatural sanctity. Cardinal Manning introduces the book to its readers as "a witness to the world of the sanctity of the only [*sic*] church of Jesus Christ, for on no other stem do such fruits grow." We may readily and unregrettingly assent to the latter clause without concurring in the causal inference suggested by the word "for."

Flash Lights. By Edith E. Smyth. (Nisbet.) This is a series of short chapters for Sunday reading, purporting to point out the "flash lights" to be found in God's Word. The author has been in the habit of flashing out such lights upon her Sunday scholars; but listening to such excellent sermonettes is happily a different thing from reading them. Little boys seldom read anything "goody" not in the form of a story; and, even then, they are apt to skip the moral. However, the book is simple and profitable, and, as such, we ought to be thankful for it. Some of the lines which end off each sermonette are likely, in the author's words, "to take up a little niche in the memory." Here is one set:

Lo! my Father me arrays
In a garment new of praise;
It shall last me all my days.

The Life of St. Paul, by Rev. J. Stalker (Edinburgh: Clark), forms one of the series of "Handbooks for Bible Classes" now being issued by the enterprising firm of Messrs. Clark. It is a useful but not particularly striking compilation from larger works on the same subject.

The Continuity of Scripture. By Lord Hatherley. (S.P.O.K.) Lord Hatherley's useful little work is so well known that we need do no more than welcome its appearance in a new and revised edition.

NOTES AND NEWS.

MR. T. FISHER UNWIN will publish, about the middle of January, a volume of essays by Prof. Karl Pearson, of University College, London, which will take its title from the introductory essay on "The Ethic of Free Thought." The essays are fifteen in number, arranged in three groups of five each. The first group will deal generally with the philosophy of free thought in relation to science and morals. The second group is historical, and will give special atten-

tion to the German reformers and revolutionists of the sixteenth century. In the third group of essays the author directly addresses himself to the social and economical questions of the day from the standpoint of socialism.

MR. H. C. BANISTER, having undertaken the preparation of a memoir of the late Sir G. A. Macfarren, will feel obliged by the loan of any letters of interest, especially such as bear upon musical matters, or which illustrate his personal character and opinions. Such letters, which may be forwarded to the care of Messrs. George Bell & Sons, York-street, Covent Garden, will be most carefully preserved, and returned at the earliest opportunity.

WE hear that the Rev. John Owen, author of *Evenings with the Sceptics*, and other works, is a candidate for the Gifford Lectureship in Natural Theology in the University of Edinburgh. He has been urged by his friends to apply because they recognise in his book on the Sceptics the free, and at the same time reverential treatment of the subject which the Gifford bequest prescribes.

MESSRS. BENTLEY & SON will begin at once the publication of a new edition of the late Mrs. Henry Wood's novels at a popular price. *East Lynne* will appear in the middle of next month, to be followed by *The Channings* in February, and *Mrs. Halliburton's Troubles* in March, and so on in monthly volumes until the total of some thirty novels is finished.

THE same publishers announce a new monthly periodical, to be called *Men and Women of the Day*. Each number will contain three portraits of contemporary celebrities, of what is called "panel" size, printed in permanent photography, together with brief memoirs. The contents of the first part, to appear in January, will be the Marquis of Hartington, Cardinal Newman, and Miss Mary Anderson.

THE next volume in the series of "Canterbury Poets," published by Mr. Walter Scott, will be *Australian Ballads and Rhymes*; or, Poems inspired by Life and Scenery in Australia and New Zealand. The selection has been made by Mr. Douglas B. W. Sladen, himself an Australian and a poet.

MR. CHARLES MARVIN has in the press a pamphlet, entitled *English Africa*: shall Boer and German sway it? dealing with the Delagoa Question, the proposed protectorate over Amantongaland, and the rivalry between Germans and English in South Africa.

Christ the Key of the Psalter is the title of a new volume by an Oxford Graduate announced by Mr. Elliot Stock.

MR. HORACE WEIR has written a local story for the *Derby Reporter*, under the title of "At the Sign of the White House."

THE Senatus Academicus of the University of Edinburgh will proceed to appoint a Gifford lecturer on natural theology about the end of January. The tenure of office is for two years, and may be renewed once only for a like period. The emoluments consist of the yearly interest of Lord Gifford's bequest of £25,000. The lecturer is required to give at least twenty public lectures annually, and he may, in addition, form a special class for teaching the subject to university students. The lecturer will probably be required to enter upon his duties in January 1889.

A SERIES of nine free lectures on "Centres of Spiritual Activity" will be delivered by representatives of different religious bodies at the South Place Institute, Finsbury, during the months of January and February, on Sundays, at 4 p.m. The introductory lecture of the series, to be given to-morrow, will be on "The Common Ground of the Religious Sentiment," by Mr. Edward Clodd. The other lectures

include Canon Curtis, the Rev. Edward White, Mr. Frederic Harrison, Prof. D. W. Marks, and the Rev. Henry W. Crosskey, of Birmingham.

THE Society of Gymnrodorion will hold an educational conference on Thursday and Friday next, January 5 and 6, in the Guildhall of Shrewsbury. The subject of discussion is "The Future Development of the Welsh Educational System, considered from the Scholastic Point of View."

THE third meeting of the west branch of the English Goethe Society was held at Craven Hill House, the residence of Miss Emerson, on Thursday evening, December 22, when Goethe's *Lustspiel*, "Die Wette," was read by the members, after which Miss Lena Little sang "Der König von Thule," "Wanderer's Nachtlied," and "Mignon" to Liszt's music, accompanied by Mr. Walter Bache. The evening terminated by a pianoforte solo of Liszt's "Goethe-Marsch," by the same gentleman. For the next meeting, on January 21, the committee are preparing, under Mr. Walter Bache's direction, a "Faust" evening, in which Liszt's symphony, arranged for two pianos and a male chorus, is to be performed.

MR. COLLINS requests us to state that when he represented Prof. Nettleship as opposed to the University Extension Lectures, he simply deduced what he asserted from Prof. Nettleship's own words on page 19 of his pamphlet.

ORIGINAL VERSE.

IRENE (*ætat* 13).

I.

AMONG the purple mountain-folds I sought
And sought, in vain, for peace. I sought in vain

In dreamy woods; along th' enchanted main;
In kindly hamlets. Then with books I wrought,
Seeking for peace in toil, which only brought
Dull discontent and weariness of brain.

"Where art thou, Peace?" I cried: "Oh,
soothe this pain

Of tearful longing and of throbbing thought."

A sweet voice answered. Laughter glad and clear
Set the birds singing. Beautiful bright eyes
Made a new dawn. A sweet voice answered:
"Cease

From further fruitless searching. I am here—
In flower of flesh and blood, of perfect size,
Quite loving—Your Irene! I am Peace!"

II.

Peace, with her chatter and infectious glee;
Peace, swinging mad-cap on a springy bough,
With bright hair blown and tumbled anyhow;

Peace, paddling in a shoal of summer sea;

Peace, at high revel upon an apple-tree;

Peace, reading with a bent and dreamy brow;

Peace, on a footstool—very peaceful now—

Listening with hands clasped fondly on my knee:

No abstract noun, no mythic shape divine,

No sweet elusive dream of who knows what,

But just a child, she brings my heart surcease

Of care; and, when she puts her cheek to mine

Bliss, and complete contentment with my lot.

Yes, this is my Irene—this is Peace.

WILLIAM CANTON.

MAGAZINES AND REVIEWS.

THE principal articles in the *Revisita Contemporanea* of November are on the Chinese immigration to the Philippine Islands, by Ramon Jordana. He warns his countrymen of possible future danger by the history of the insurrections and wars incited there by the Chinese in the past. Cristoval Botella gives a good historical sketch of French social theories. There is a sacred epithalamium on the golden wedding of Leo. XIII. both in Latin and in Spanish elegiacs. We prefer the former. But we wonder if the future historian will accept as literally

true from contemporary documents such phrases as :

“*Quamvis nunc, alter Petrus, detrusus in atro Carcere permanens.*”

Catalina Garcia continues his “Brihuega and its Fuero,” arriving at last at the text of the document. We have also the report by Eduardo Abela of the Agricultural Association of Spain. Among other imperious needs the primary one of security to the labourer and isolated farmer is still lacking in many parts of that country.

We learn from the November *Boletín* of the Real Academia de la Historia that it has sent a request to the Historical Commission in the Canary Islands to photograph, or have casts made of, all inscriptions found there, and promises speedy publication. Dr. Rudolph Beer has discovered at Leon a palimpsest of the *Lex Romana Wisigothorum*, of which no previous MS. was known in Spain. He also describes the five volumes which Bernard of Brihuega made for Alfonso the Wise, which are still unpublished. Adolfo de Castro gives some curious notes on the colonies of Orientals at Cadiz in the last two centuries. But the bulk of the number is occupied with historical documents relating to La Guardia, collected by Father F. Fita. Their chief interest lies in the history of the Jews. In 1236 the chapter of Toledo complained to Rome of Archbishop Roderic for employing Jews as his fiscal agents. There are also some valuable texts of the time of the expulsion (1491-3), and of the appeals of the Jews for protection to the kings. Some recently found Latin inscriptions seem to prove that Talavera la Vieja was the Augustobriga of the Romans.

CORRESPONDENCE.

WILLIAM BARNES AND CONTEMPORARY CRITICISM.

Athenæum Club: Dec. 28, 1887.

In his review of the *Life of William Barnes* (December 24), Mr. H. Bradley states his dissent from “the eccentric judgment recently pronounced at Oxford, which ranks William Barnes second among the poets of the Victorian age.” And for this “paradox” he must, apparently, refer to a few words in the memorandum of a visit to the aged poet, which Mrs. Baxter has honoured me by quoting in the *Life*; as in the lecture on Barnes, given at Oxford in November, 1886, and printed in the *National Review* for the February following, I have only said that “contemporary critical judgment is always so thoroughly insecure that it will be best to make no attempt to assign the place, due to the poet whom England has lost, in our literature.”

To this rule it might have been best had I conformed strictly. But, to clear myself from the rash dogmatic judgment above assigned to me, I quote the words which I used from p. 313 of the *Life*: “This aged poet seems to me to stand second only to Tennyson in the last half century.” Of the interpretation given by Mr. Bradley, I have no complaint to make. It was naturally enough deduced from a phrase written down without thought that it would go further. My meaning, however, was that putting Tennyson as (in my eyes) our greatest “Victorian” poet—Wordsworth, who died in 1850, having done almost all his work before 1837—Barnes seemed to me, by clear right, to rank in the foremost line of those after Tennyson—a band whom I should not desire or presume to enumerate, but *with*, not *above*, whom Barnes should be recognised. This opinion (it claims to be no more), containing not one but two items of “contentious matter,” may very likely also seem eccentric and paradoxical to many readers, although, from the general tone of Mr. Bradley’s criticism, I should hope he might be disposed not to look on it with such disfavour.

From this personal explanation, with which I regret to trouble you, let me return for a moment to the general question of the validity of contemporary criticism. It is so natural to compare our favourite writer with his fellows past or present, and to fix his place among them, that of the—ten or twelve shall I say?—English writing poets of our time who, in different ways, may be called leaders, there is hardly one whom we have not seen in turn confidently hailed as lord paramount of Parnassus, and destined (if not resolved into a myth, or into someone else) for the too shadowy Valhalla of literary immortality. Among these verdicts doubtless one will be approved by the “wise testimony of the years to come”; yet, although in our hearts we each believe that the lucky and lasting verdict is our own, should we not be warned by these contradictory judgments of the day, and, even more, by the vast number of dead forgotten writers, each heralded as an immortal in his age, to refrain—and this in the interest

of our own special favourite and benefactor? It is but a truism that over-praise is fated to precede under-estimation. Are there not visible signs that the enthusiastic worship now paid in many quarters to recent or contemporary poets of genius is already bringing on the inevitable reaction? It is becoming a proof of the vital power and greatness of some that they survive the dangerous idolatry paid by over-ambitious biographers, or by the societies of which they are the patron saints. Those wise words of Tacitus—“*Pessimum inimicorum genus laudantes*”—seem to have been written to warn against excesses which, however well intended and natural, in the end do but serve the cause of Philistia. If any readers think that your correspondent has sinned thus, *habebis confidentem reum*. F. T. PALGRAVE.

THE ISIS, THE OCK, AND OXFORD.

Nottingham: Dec. 17, 1887.

Mr. Bradley (*ACADEMY*, September 24) admits that “*Ise*” (which, according to the map cited by Mr. Murray, is the earliest form of the name of the Isis) is a possible river-name; and he instances the Northamptonshire “*Ise*.” He remarks that “if the A.S. form is *Ys*, it might descend from a prehistoric [Celtic] *Uisia*, related to, though not identical with, *Ouse*.”

I find that this Northamptonshire *Ise* is recorded in a Kettering charter of A.D. 956, printed in Birch, *Cartularium Saxonicum*, iii., p. 121, and in Kemble, iii., p. 439. The boundaries proceed from “*Cranlea brig*” (Cranley), &c. to the long dyke or ditch, thence to “*Wiclea forda andlang Ysan pæt [hit] cymð to Pihes-lea [Pythley] forda*,” &c. The nominative of this name would be, I suppose, “*Yse*,” declined as a *-jón* stem. This does not exactly support Mr. Bradley’s suggestion; but the difference in form is of slight consequence. The *Ise* is recorded in the list of river-names printed at the end of Vigfusson and Cleasby’s Icelandic dictionary as *Ysa*, which supports an O.E. *Yse*. Perhaps the same name may be recorded in the Hampshire “*Ysan*” or “*Isan pyttas*, A.D. 854 (*Cart. Sax.* ii. 71, 11), and “*isen gráfas*,” in the same county (*id.* ii. 44, 19), and the “*isen hyrst*” of *Cod. Dipl.* iii. 130, 27; 131, 19, A.D. 976, may possibly be derived from “*Yse*,” rather than from *isen*, “*iron*,” from which Kemble derives it.

The Abingdon history supports the opinion that the portion of the river now known as the Isis was anciently known only by the name Thames. There are many references to this river in the Abingdon charters, but it is nowhere called the Isis. It is called the Thames even above Oxford; and the earliest version of the Chronicle (*MS. Cott. Claud., c. ix.*) states that “*Mons Abbandone ad septemtrionalem plagam Tamese fluvii, ubi prætermeat pontem Oxenefordis urbis, situs est*” (vol. i., p. 1, note). At p. 181 it is called the “*Temese*” at Hinksey (Hengesteg-ieg), and it bore the same name at its junction with the Cherwell (i. 126) and at Iffley (Giftelea? i. 89). Above Oxford, the Thames is mentioned at Kingston Bagpuiz (i. 351), at Worth in Faringdon (i. 246, 260), and at Fyfield (æt Fif-hidum? i. 325). There are several references to the river between Abingdon and its junction with the Thames; and it is called in every case the Thames; and not the Isis. With the evidence of the Abingdon charters before us, it is difficult to resist the conclusion that the Isis is a spurious name manufactured from the Latinised “*Tamesis*.”

The Abingdon charters afford proof, if farther proof were wanted, of the absurdity of the derivation of “*Oxford*” from the river “*Ock*.” That stream and its branches were known as the “*Eo-co-e*.” I give the instances of its occurrence in alphabetical order.

Abingdon: A.D. 955, "Eocen, acc.; *Cart. Sax.* iii. 68, 23; *Chron. Mon. de Abing.* i. 126, 26. A.D. 956, "Eo-coen," dat., "Eo-coenes," gen.; *Cart. Sax.* iii. 96, 14, 15; *Chron. Ab. i.* 176, 2; 177, 6.

Ashbury: A.D. 856, "Æo-cœnen," acc.; *Cart. Sax.* ii. 94, 20 (dubious charter). A.D. 944, "Æo-cœnen," acc.; *Cart. Sax.* ii. 549, 36.

Drayton: A.D. 958, "Oecene," acc.; *Cod. Dipl.* v. 397, 17; *Chron. Ab. i.* 248, 22. A.D. 960, "Oecene," acc.; *Cod. Dipl.* vi. 28, 15; *Chron. Ab. i.* 272, 4.

Fyfield? (set Fī-hídum): A.D. 956, "Eo-coen," acc.; *Cod. Dipl.* v. 386, 30; *Chron. Ab. i.* 233, 14. A.D. 968, "Eo-coan," dat., acc.; *Cod. Dipl.* iii. 466, 13, 18; *Chron. Ab. i.* 324, 26; 325, 4.

Gareford (Gáran-ford): A.D. 940, "Eo-coen," "Eo-coan," gen., acc.; *Cart. Sax.* ii. 489, 6, 8; *Chron. Ab. i.* 95, 5, 8.

Goosey (Góis-ieg): A.D. 959, "Eccen," "Eo-coen," dat., gen.; *Cod. Dipl.* vi. 8, 20; *Chron. Ab. i.* 259, 27. *Cf. Chron. Ab. i.* 14, 9.

Hanney: A.D. 956, "Eo-coene," acc., gen.; *Cod. Dipl.* v. 370, 9; *Chron. Ab. i.* 206, 4. A.D. 968, "Oecene," acc., gen.; *Cod. Dipl.* vi. 86, 17; *Chron. Ab. i.* 274, 14.

Kingston Bagpuiz: A.D. 965, "Eccene," dat., acc.; *Cod. Dipl.* vi. 109, 28; 110, 7; *Chron. Ab. i.* 350, 29; 351, 9. A.D. 976, "Eo-coene," dat., acc.; *Cod. Dipl.* vi. 107, 33; 108, 10; *Chron. Ab. i.* 353, 9, 19.

Lyford* (Linford): A.D. 944, "Eo-coene," "Eccene," dat.; *Cart. Sax.* ii. 552, 17; *Chron. Ab. i.* 107, 21. A.D. 1032, "Eo-coan," dat., acc.; *Cod. Dipl.* iv. 39, 6, 11; *Chron. Ab. i.* 440, 4, 10.

Marcham: A.D. 955, "Eo-coan," dat., acc.; *Cod. Dipl.* vi. 75, 28; 76, 2; *Chron. Ab. i.* 265, 9, 15.

Shellingford: A.D. 931, "Eo-coen," acc.; *Cart. Sax.* ii. 374, 9, 16; *Chron. Ab. i.* 65, 12, 22.

Worth, in Faringdon parish (Stevenson): A.D. 958, "Eo-coen," dat., acc., gen.; *Cod. Dipl.* vi. 8, 25; 9, 1, 2; *Chron. Ab. i.* 260, 7, 19, 20. A.D. 958, "Eccene," acc.; *Cod. Dipl.* v. 395, 33; *Chron. Ab. i.* 246, 13.

From these forms I deduce an Old-English nom. "Eocce," gen., dat., and acc. "Eo-coan." It must be remembered that the chronicle is a thirteenth-century MS; and the compiler is, no doubt, responsible for the mute *e*'s and the occasional redundant gen. *es* in such forms as "Eo-coene," "Eo-coenes." The derivation of "Ock" from "Eo-coe" presents some difficulty, for that form would have yielded "Eck." But there can be no doubt of the identity of the "Eo-coe" and the "Ock." It is called the "Eoche," A.D. 1066-1087, in vol. ii., p. 10, 28, and p. 64, 3, A.D. 1100-1135. It appears to be occasionally called the "Oce"—*e.g.*, A.D. 953-955, "Oecene [=Ocan]wyllas," the source of the Ock, at Ashbury (*Cart. Sax.* iii. 62, 24), and there is an "Ocoenes" or "Eo-coenes gærstun" referred to at Abingdon in A.D. 955-956 (*Cart. Sax.* iii. 68, 23; 97, 5, 14; *Chron. Ab. i.* 126, 26; 176, 2, 3; 177, 6). This would be, I suppose, an enclosure of grassland abutting on the Ock at Abingdon. But it may be that "Oce" is, in both cases, a mistake of the scribe for the usual "Eo-coe."

As "Eo-coe" was the Old-English name of the Ock, it follows that a ford over that river would have been called "Eo-coan-ford." It is a very long cry from such a form as this to "Oxna-ford," the Old-English name of Oxford. And it is rather an awkward thing for the

* This is evidently Lyford, and not Linford, Bucks, as Stevenson and Birch assert. Besides being on the Eo-coe, Linford was near Cillan-riv, a water-course that is mentioned at Hanney (*Chron. Ab. i.* 206, 2; 240, 291; 274, 12), at Denchworth (*id.* i. 137, 5), and at Gareford (*id.* i. 95, 5).

adherents of the "Ocks-ford" theory that there was a ford over the Ock at Abingdon, and that it was known as "Eo-coan-ford." It is called "Eo-coen-ford" in A.D. 955 (*Cart. Sax.* iii. 68, 9, 23; *Chron. Ab. i.* 126, 6, 27). It occurs about 1180 in the form that we should expect it to have by then assumed—"Eo-ckaforð" (*Chron. Ab. i.* 323, 28). This, again, is impossible to reconcile with the contemporary "Oxenford," &c. It is not consonant with reason that of two fords over the Ock, lying within six or seven miles of each other and both deriving their name from the Ock, one should be called "Eo-coan-ford" and the other "Oxna-ford." But it is really unnecessary to further discuss the fantastic dream that Oxford means "the ford of the Ock" and not "the ford of oxen," for it is a delusion that no philologist worthy of the name would cherish for more than five minutes. There seems to be a feeling among young Oxford men that the derivation of the name from "ford for oxen" is incompatible with the dignity and glory of their university, and hence many of them fly to this "Ocks-ford" theory, or to some even more impossible Celtic derivation of the name. I put these objections on record for the guidance of those who are thus misled by a mistaken sense of local patriotism, for I have not the faintest hope of converting the professed advocates of this "Ocks-ford" theory. This must be my excuse for reverting to a subject that has been so well thrashed out in these columns.

W. H. STEVENSON.

THE TODD LECTURES.

Mitchelstown: Dec 14, 1887.

Looking through the volume of the Todd Lecture Series, just issued by the Royal Irish Academy, I observed the following in the Peter and Paul Passion. The portions of the original expressed in cypher are not distinguished by the lecturer.

"Is ann-sin tra airmitnig na Cristaigi lith ocus foraitmet na da noem apstal sa; itat kalaind Iuil," &c. (p. 87). This text, an elementary knowledge shows, is impossible. To begin with, it does not contain what *ann-sin* stands for. Next, an antecedent is wanting for the relative. Finally, *kalaind* (nom. *kalne*) being the gen., *tat* has no subject.

Going on to the paraphrastic rendering (a word-for-word version is nicknamed "a slavishly literal translation," p. 276), we have: "It is at this time the Christians celebrate the festival and commemoration of these two holy apostles, on the calends of July," &c. (p. 330). Shade of the Culdee, "the feast of Paul and Peter," on July 1! *On the calends*, it is scarcely necessary to observe, has no counterpart in the Irish. The Glossary, mayhap, will clear up the obscurity. Therein we find: "Perhaps: is ann-sin (viz., on that day) i-tat kal. Iul?" [*lege* Iuil] (p. 897). But the conjecture labours under the radical defect that this sentence is not Irish.

What, then, is to be done? The crux plainly lies in *itat*. Now, the explanation is so simple that the wonder is how the muddle could have been created. Turning to the lithographed edition, p. 172 b, l. 67, one glance suffices to unravel the tangle. The form is *it*: the *t*'s joined, and a horizontal line drawn overhead. The reading is accordingly (not *it*, but) *itert*; meaning that the festival in question fell on the third of the calends of July—June 29. More unaccountably still; the self-same contraction occurs at p. 72 b, l. 46, and is here lengthened (p. 216) and translated (p. 453) with accuracy.

* "Gen. pl. *kalne* and *kalland*" (*Calendar of Oengus*, ed. Stokes, p. cccxix). Does the editor think so still with respect to *kalne*?

It is not, of course, to be assumed that a who use this volume will be able or willing to undergo the drudgery of collating 235 octavo pages with the MS. or the facsimile. Advocates for printing contracted portions in distinctive type can consequently, it must be admitted point to the foregoing in support of their contention.

B. MACCARTHY.

"MORT" "AMORT."

Nervi: Dec. 21, 1887.

May I venture to suggest that the term "smort," fem. "smorta," is used in the Piedmontese dialect to denote a pale, dejected, death-like appearance. Surely this is but a slightly modified form of the word "mort" "amort," upon which so much has of late been written and if so, would it not be interesting to trace the date of its importation into East-England? I am not in a position to find out whether it is a Provençal appellation as well. All I can say is that on this side of the Alps it is confined to the principality of Piedmont.

J. GONING.

"DIM SASSENACH."

Dec. 24, 1887.

Your reviewer (ACADEMY, December 21, p. 421) is mistaken in supposing that the Welshman's "dim Sasneg" ought, of course, to be "dim Sassenach." The latter, misspelled from *Sassunach*, is the Gaelic form; the Welsh word is *Saesneg* or *Seisneg*, contracted by pronunciation into "Saesneg" or "Seisneg."

C. S. JERRAM.

ALL POINTMENTS FOR NEXT WEEK.

MONDAY, January 2, 5 p.m. London Institution: "Visible Stars," I., by Sir R. S. Ball.
8 p.m. Royal Academy: "Painting," I., by Mr. J. E. Hodgson.
8 p.m. Victoria Institute: "Natural Selection," by Prof. Duns.
TUESDAY, Jan. 3, 8 p.m. Royal Institution: "Astronomy, IV., the Great Planets," by Sir R. S. Ball.
WEDNESDAY, Jan. 4, 7 p.m. Society of Arts: Juvenile Lecture. "The Application of Electricity to Lighting and Working," I., by Mr. W. H. Preece.
THURSDAY, Jan. 5, 8 p.m. Royal Institution: "Astronomy, V., the Comets," by Sir R. S. Ball.
6 p.m. London Institution: "Material of Music, IV., Composition," by Mr. W. A. Barrett.
8 p.m. Royal Academy: "Painting," II., by Mr. J. E. Hodgson.
FRIDAY, Jan. 6, 8 p.m. Geologists' Association: "The Occurrence of Gold in North Wales," illustrated with Specimens, by Mr. T. A. Readwin.
SATURDAY, Jan. 7, 8 p.m. Royal Institution: "Astronomy, VI., the Stars," by Sir R. S. Ball.

SCIENCE.

DE QUATREFAGES ON PREHISTORIC MAN.

Introduction à l'Étude des Races Humaines.
Par A. de Quatrefages. (Paris: Hennuyer.)

UNDER the common title of "Histoire Générale des Races Humaines," M. de Quatrefages and Hamy are editing a series of ethnographic works, to which this sumptuous volume forms an introduction. Unfortunately, with all the deference due to a master in science of the old school, it must be confessed that M. de Quatrefages has outlived his day. His persistent rejection of evolutionism, and his inability even to read himself into the position of the younger workers on anthropological and ethnographical questions, will probably render his magnificent undertaking, planned on a truly gigantic scale, of but little service to the cause of science. For a knowledge of anthropometrical and ethnological facts, of course, the veteran professor has few equals in Europe; but the problems he proposes to himself and the solutions he gives for them

ing entirely to a circle of ideas now finally behind, and no longer of the slightest port or interest to the vast mass of anthropological students.

M. de Quatrefages begins with the purely use and fantastic question whether man could be included in the animal kingdom—astonishing question at any time, and still more profoundly astonishing at the present time—which he answers by placing him separately in a human kingdom all by himself, elevated to an equality with the animal and vegetable kingdoms of popular natural history, and characterised by the possession of the attributes of *moralité et religiosité*. Next, he attacks the problem of the unity of the human species, which he defends against the thrice-slain polygenists by the analogy of geese, poultry, and pigeons. Examining, in the third place, the origin of mankind, he declares himself still the uncompromising antagonist of "transformism," and refuses in any way to account for the presence of man on the earth. Nowhere does the narrow and unimaginative French scientific spirit—the logical spirit, the determination to cling passionately to the given fact, eschewing as unprofitable all inference and all constructive effort—come out more strongly than in the mind of De Quatrefages. On the other hand, his treatment of the question of antiquity admirably displays his loyalty to fact alone, when definite facts are really forthcoming. He gives an excellent critical summary of the evidence as to quaternary man, and he accepts as genuinely human many of the alleged flint weapons from tertiary deposits. While admitting that some doubt still surrounds the Abbé Bourgeois's specimens from the Calcaire de Beauce, he figures certain flints from the Upper Miocene of Puy-Courny (Cantal), which show all the characteristic marks of human chipping and subsequent usage. He urges ably, also, for the human origin of the remarkable scratches on the *Balenotus* rib discovered by Dr. Capellini in the Sienna Pliocene; and he endorses the discoveries of Signor Bagazzoni at Castenedolo. But he cannot swallow the Calaveras mortars, nor admit the tertiary date of the remains associated with the carapace of a glyptodon in the Pampas deposits. Moreover, he insists strongly on the survival—at least, in an erratic form—of the earliest human types to the present day. Bruce, he says, had a skull of the Canstadt type, while the Cro Magnon race still exists among the Kabyles of Algeria.

On the point of geographical origin, M. de Quatrefages will have none of Lemuria—not, of course, on the grounds which would influence Mr. Alfred Russel Wallace—but simply because he does not see the necessity for any such hypothesis. In the warm tertiary times when man, as he believes, first appeared upon earth, the central Asiatic plateau was, doubtless, almost tropical in climate. On ethnographic and linguistic grounds he places here the cradle of humanity. Hence man dispersed himself right and left, mainly through the changes wrought by the coming on of the glacial epoch. His migrations brought him face to face with fresh conditions; and acclimatisation to these conditions accounts, in M. de Quatrefages's opinion, by direct action, for the formation of the various races of mankind. He does not even mention natural

selection or sexual selection. The *Descent of Man* might never have been written for any notice he deigns to take of it. This is not wisdom. You may agree with Darwin, or you may differ from him, but, at the present time of day, you cannot afford to ignore him.

As a whole, the book remains a melancholy monument of misdirected industry. Its collection of data is admirable and scientific. The use it makes of them is wholly and hopelessly behind the times. It is only in France that men of science of equal calibre could think of putting forth so great a work on lines so utterly out of date. M. de Quatrefages has his arguments with Knox and Agassiz, with Morton and St. Hilaire; when he condescends to notice the ideas of Darwin and Huxley, Haeckel and Gaudry at all, it is to brush them aside as mere passing modern extravagances. Herein he acts unwisely. It is not well in science to bring up the rear.

GRANT ALLEN.

THE YUEH-TI AND THE EARLY BUDDHIST MISSIONARIES IN CHINA.

THE nationality of the early missionaries of Buddhism in China, which we find recorded in the literature of the Celestial Empire, is an interesting matter for the history of their religion. It gives an inkling as to some of the countries which had received with favour the teachings of the disciples of Sakyamuni. I only wish here to call attention to a few of the names of countries mentioned, and especially to the Yueh-ti, because of several misapprehensions which have occurred about them.

It is after the arrival in China, in A.D. 67, of Kasyapa Matanga and Gobharana, who came on the invitation of Ts'ai-yin, sent by the Han Emperor Ming-ti in A.D. 65, that some information is fragmentarily coming to light regarding the nationality of the individual missionaries. Attention has already been called to this subject in Prof. Max Müller's *Selected Essays*, vol. ii., and also to a device frequently resorted to, which consisted in prefixing the missionary's name with a symbol suggestive of his country or of his avocation.

Such is the symbol *chu* in *Chu-fah-lan*, which are the sounds commonly and wrongly given as the equivalent of the name of Kasyapa's companion, and which call for a few remarks. *Chu*, or better *tuh*, the symbol having the two sounds and the latter being the older, ought to be read *tuh*, and not *chu*, when it refers to India. It is a rule in Chinese phonetics that the dentals pass to the hushing consonants. This is shown by the simple fact that, in the various transcriptions of the name of India, *tuh* is the sound represented, and not *chu*, and that the original name imitated is *indū*, and not *sinchu*. Should we look to the composition of the Chinese symbol, framed as it was by the Buddhists themselves, we might find reason to suppose that it was intended to be read **sentu*, **shentu*, or the like, in approximate imitation of the original name. It is composed of two signs, one above the other; the upper one is that which is read *tuh* or *chu*, while the lower one is an ancient form of *shang*, "high" or "lofty." This hypothesis finds a confirmation in a variant of spelling where this character *shang* is replaced by another one, of which the sound is *shang*, "elegant."

The syllable *fah* of *chu-fah-lan* is almost certainly a misreading. It is written with a symbol which has indeed this reading in modern Chinese. But the Buddhist missionaries generally used it as a representative of *dharmā*, the Sanscrit word of the same meaning—"law." When they employed it phoneti-

cally, as in this case, and in the syllabary of Sanghapala (Julien's *Méthode*, No. 274), it is the sound *kha*, or *kap*, which it represented. This symbol for "law" is an ideo-phonetic compound made up of the determinative 85 "water," and of the phonetic *kiuh* "to go away," which at the time of Gobharana was pronounced *k'op*, or the like. The missionaries, taking into account the value only of the phonetic, preferred, as we can easily appreciate, the symbol for "law" to that for "going away." This explanation permits us to recognise in *k'op-lan*, which we take to have been the true reading of the above name, as accurate a transcription as the clumsy orthoepy of the Chinese permitted of the name of Gobharana which has been preserved to us in the Tibetan version.

Returning to the symbols prefixed to proper names of missionaries, we may remark that in the list drawn by Bunyiu Nanjio, the Japanese pupil of Prof. Max Müller, in his valuable *Catalogue of the Chinese Translations of the Buddhist Tripitaka*, there are five of such prefixes which appear in 61 cases out of a list of 173 proper names. *Shih*, or better *Sak*, as it was pronounced in olden times, occurs 34 times, suggesting *Shākya* the family name of Buddha Gautama. The other four are geographical. *Tuh*, vulgo *chu*, has been already mentioned for India. *Tchi* or *Ti*, which appears seven times from A.D. 147 to 373, is rightly supposed to suggest Yueh-ti, the Indo-Scythians of N.W. India. *An*, which occurs only four times from A.D. 148 to 281, is apparently for *An-sek* or *Arsak*, i.e., Parthia. All these have been identified in Bunyiu Nanjio's *Catalogue*. The fifth is *Khang*, which has been wrongly identified in the same work with Ulterior Tibet. It occurs five times from A.D. 187 to 396. The Japanese scholar has rightly stated that *Khang* is here for *Khang-kü*; but he is certainly wrong when he assimilates this name to *Khambu* or *Ulterior Tibet*, or to *Kambodja*, and therefore in stating in every case when the prefix occurs that the missionary named was of Tibetan descent. *Khang Kü* appears in the annals of the first Han dynasty as the name of the country of Samarcand; and *Khang* only remained for the same until the T'ang dynasty, whose annals contain a special statement to this effect. The name *Khang* was not employed in the geography of Tibet before the Yuen and Ming dynasties. Consequently, the appearance of this symbol in connexion with names of missionaries shows them to have been looked upon as originally from Samarcand, or at least from its region.

With reference to the opening statement of the present note, the name of *Arsak*, i.e., Parthia, which we know to have been so thoroughly grecised, is interesting because of the western spread it indicates; while that of *Khang*, i.e., the region of Samarcand, shows the extension to have been also northwards.

The name of the Gwet-ti, commonly Yueh-ti, calls for some remarks. Their coins, known as Indo-Scythian, show them to have been, in Mongol-like fashion, somewhat indifferent or eclectic in matters of religion, as they bear images and names of a variety of deities—Indian, Iranian, Zoroastrian, Greek, Semitic, &c. They were not, however, Mongoloid in race, as shown by their pink and white complexion described by the Chinese, and the large size of their noses figured on their coins, which find their like only among the "Stray Aryans in Tibet" (Dards) described and illustrated by Mr. R. B. Shaw in the *Journal of the Asiatic Society of Bengal* (1878, vol. xlvii., pp. 26). The image of Gautama Buddha upright and seated, with his name plainly written BOAO and BOAO, occurs only on some coins of Kanishka (A.D. 78) after their advance southwards and their coming into contact with the Græco-Bactrians; and it does

not appear on any coin of a previous reign that we know of. His son and successor, Huvishka, is represented on several coins holding the prayer-cylinder, still so much in use in Tibet, which does not seem to have been known in India. It is a curious and instructive coincidence that the conversion of their main body to Buddhism should thus appear at the very moment when Greek influence became paramount among them. The coins of his predecessors are rude compared with those of Kanishka. The influence, obviously Greek, that they display is as yet faint; and their legends are bilingual, rude Greek on the obverse and Ariano-Pali on the reverse, while those of Kanishka are plain Greek on both sides, and the artistic finish of their design is most remarkable. The erection of many Buddhist towers and stūpas now in ruins are attributed to the neophyte-like zeal of Kanishka throughout portions of Afghanistan and Cashmere. But it seems that a portion of the Yueh-ti had become Buddhist long before his time.

The matter is singularly confused and incomplete in the Chinese compilations from which the Europeans used to derive their information; hence the divergent statements found in the works of several scholars. The Yueh-ti have been wrongly assimilated to the Tokhari and to the polyandric Ye-ta or Ephtaliti, which are different races altogether. These confusions were set right in the first case by Prof. G. de Vasconcellos-Abreu (*Le Muséon*, 1883), and in the second by Mr. E. Specht (*Journal Asiatique*, 1883). The only means is to refer to the original sources, which are the dynastic annals, as was done partly by the last-named scholar. But the notices of the Yueh-ti therein are not complete by themselves, and some facts concerning them are reported under other entries. The information below has been carefully extracted by me from the notices about the Hiung-nu Wu-sun, Kephin, the biography of Tchang Kien, besides the notices concerning the Ta Yueh-ti, the Siao Yueh-ti, the Huang-tchung Yueh-ti, and the Yueh-ti-yen, from the She-ki, and the records of the Former Han, After Han, and After Wei dynasties, and from the important evidence of numismatics.

The Yueh-ti (not Yue-chi), anciently Gwet-ti, after continuous wars raging from 201 B.C., were driven away from their settlements between the modern An-si and Si-ning on the north-west borders of China, by the Turks Hiung-nu in 165 B.C. They left behind them a certain number of weak and helpless people, who took refuge in the Nan-shan or southern range. They appear in the annals of the Former Han dynasty under the name of Siao or Lesser Yueh-ti, given to them by the Kiang or Tibetan tribes, and in the After Han annals under that of Yueh-ti of Hwang-tchung, such being the name of their habitat, which is the modern Si-ning in Kansuh, near the Tibetan frontier. They must be distinguished from the other Lesser Yueh-ti mentioned below.

The main body, known as the Great Yueh-ti, led by their elected queen, widow of the very king whose skull had just been made a drinking-cup by the Shen-vu of the Hiung-nu, made its way westwards to Ferghana, in the immediate vicinity of which they established their quarters.

About 143 B.C., their former neighbours, the Wu-sun a blue-eyed and fair-haired people, having associated themselves with the Hiung-nu, attacked them from the rear, and compelled them to flee still further. It was then that, under the command of Kitolo, they established their sway over the pacific Tchia, otherwise the Dahai of the Greeks, probably the descendants of those whom Sennacherib had vanquished in 697 B.C., and who had migrated into Bactria with the Tokhari, mentioned along

with them in the same cuneiform inscriptions. The Yueh-ti had still in 126 B.C., at the time of Tchang Kien's journey, their main settlement north of the Oxus; but their advance into Bactria had compelled the Sakas (Chinese *Shih*, anciently *Sak*) to move south, where they for a time ruled over Kopphen (Chinese *Kephin*), and broke up into several kingdoms. The Sakas on their coins, issued with legends exclusively Greek, are represented with extremely low foreheads; and their movement was coincident with, if not the cause of, the final advance of the Greeks, under Heliocles, south of the Indian Caucasus. The great king Maues, who advanced to the Bamian pass and to whom may be attributed the great Buddhist statues found there, was probably the Saka ruler at the time of Demetrius and Heliocles, if we may judge from the resemblance between some coins of Heraus the named Saka king and some of those of Maues, and from the manifest connexion between those of Maues and those of the two aforesaid Greek kings.

Kitolo, advancing southwards, passed over the Hindu-Kush, conquered the five kingdoms of Kantolo (i.e., Gandhāra, the Peshawar country), and ordered hisson to hold as a fortified post the city of Fulousha (i.e., Peshawar, and not in Tartary as wrongly supposed). The party of Yueh-ti who remained with this son of Kitolo, somewhat apart from the others, were called the Lesser Yueh-ti.

The whole dominion of the Yueh-ti formed then five principalities, two of which had Kaofu or Cabul, and Pomao or Bamian, as their capitals. One of these principalities was that of the Kut-shang (in modern Chinese Kweishuang) tribe. About 40 B.C. the chief of this tribe, K'iu-tsiu Kioh, the Kujula Kasasa or Kadphises of the Indo-Scythians coins, subjugated the four other principalities, established his sway over Bactria, Kabul, and Kopphen, and invaded Parthia. His tribal name became that of his kingdom. It appears on the coins as *Kushana* in the Ariano-Pali, *Korano* (or *Koshano*, according to the reading proposed by Dr. Stein), and also *Korrano* in the Greek legends of the coins. These variants, coupled with the rendering *Kut-shang* in the limited Chinese orthoepy (which possesses no *r* and often renders it by *t*), might suggest an original appellative, such as **Korshan*, or the like, which, however, does not appear on the coins that we know of.

Kujula Kasasa, or Kadphises I., died at the age of eighty, and was succeeded by his son, Yem-Kao-tchin-tai, obviously the Himakapissasa, Ooemo Kadphises of the coins. So that Kozola Kadaphes, or Kuyula Kaphsasa of the numismatists, does not appear in the Chinese records as successor to Kadphises I. Himakapissasa conquered India, and established therein officers who ruled in the name of the Gwet-ti, or Yueh-ti. This statement is interesting, for the name Kushan, or the like, does not appear on the coins of this ruler. And may not, after all, this form Gwet-ti be simply a Chinese imitation of an original appellative which, imitated in turn in India, was supposed there to be a Sanscrit word and became the name *Gupta*?

Stray tribes of Yueh-ti are still mentioned by the Chinese authorities of the Suy dynasty (581-618) in the mountainous region between the Taung-ling range and the N.E. of Tibet. Among them were the Yueh-ti-yen, who were thoroughly Buddhists. The Yueh-ti missionaries in China most probably did not come from the latter tribes. Their dates suggest that they must have come from the great body of their race, or perhaps from the Lesser Yueh-ti which had become Buddhist at the beginning. As recorded above, these were settled under the command of a son of Kitolo (circa 125-75 B.C.) for the keeping of the town of Fu-lou-sha (S.W. of Polo = Bolor—i.e., Chitral) or Pe-

shawar. The Chinese notice concerning this says that, in the eighth year Wu-ting of the After Wei dynasty (i.e., in 550), 842 years had elapsed since the erection of a Buddhist stūpa existing at 10 *li* eastwards of this town, their capital. Therefore it had been built in 292 B.C. Its dimensions were 350 paces in circumference and 80 *tchang* (600 feet) in height. It was commonly called "the hundred-tchang Buddha." The date is most precise, and may prove a valuable addition to the history of Buddhism. With due allowance for Oriental exaggeration the monument was important enough for justifying the step taken by Kitolo for its protection and safeguard.

It seems not unlikely that the Yueh-ti were Aryans. The survival among the Aryan Dahai of their curious physical type is highly suggestive; and the Ariano-Pali legends of those of their coins which are bilingual may be another argument in the same sense.

FERRIEN DE LACOUPELLE

OBITUARY.

PROF. BALFOUR STEWART.

DR. BALFOUR STEWART, Professor of Physics in the Victoria University, died very suddenly on Sunday, December 21, at Ballymagawey, his property in Co. Meath, Ireland, whither he had gone from Manchester on the previous Friday to spend the Christmas holidays with his family. By his death science has received a severe blow. His name was well known as that of a worker, a thinker, and an author.

Balfour Stewart was born at Edinburgh in 1828. His uncle Dr. Clouston, the minister of Stanwick, was a well-known naturalist and meteorologist. Educated at the universities of St. Andrews and Edinburgh, Stewart was, in February, 1855, on the recommendation of Prof. J. D. Forbes, nominated assistant to Mr. J. Welsh, the superintendent of Kew Observatory. This appointment he shortly afterwards resigned; but in 1859, on the death of Mr. Welsh, he was selected to succeed him, and held the office of superintendent until 1871. In 1867 he was appointed secretary of the Government Meteorological Committee, on the understanding that he should, with the concurrence of the Kew committee of the British Association, retain his office of superintendent of Kew Observatory. In the following year he personally superintended the erection of the instruments at the several stations of the Meteorological Office—Aberdeen, Armagh, Falmouth, Glasgow, Stonyhurst, and Valencia. At the close of the year 1869 Dr. Stewart resigned the secretaryship of the Meteorological committee, and the relations between the Kew committee and the Meteorological Office were consequently modified.

In 1870, on his appointment to the chair of Natural Philosophy in Owens College, Dr. Stewart left Richmond, where he had been living, to take up his residence in the neighbourhood of Manchester, but continued to act as superintendent of the Kew Observatory. It was in November of this year that, in one of his journeys between London and Manchester, he met with the railway accident which so nearly proved fatal to him. His thigh was dreadfully crushed, and it was nine months before he could be removed from Harrow, where the disaster occurred.

Dr. Stewart's earliest contribution to science was a paper on the laws observed in the mutual action of sulphuric acid and water; but his appointment to the Kew Observatory caused his attention to be more especially directed to meteorology, radiant heat, and terrestrial magnetism. The results of his researches in these subjects are contained in a long array of papers

ich he contributed to the Royal and other med societies. His papers on "Radiant at"—a subject with which his name is honourably connected—date from the year 1858, when he published a paper entitled "An account of some Experiments on Radiant at, involving an Extension of Prevost's theory of Exchanges." This was followed, in 1860, by papers on "The Radiating Powers of discs with regard to the Dark or Heat-producing Rays of the Spectrum" and on "Internal Radiation in Crystals." The results of these and subsequent researches were embodied in his *Elementary Treatise on Heat*, published by the Clarendon Press in 1866.

He was much interested in the phenomena of sun-spots and their connexion with the earth's magnetism. In 1866 the first set of results obtained from the photo-heliograph were published, at the expense of Dr. Warren de la Rue, under the title of *Researches on Solar Physics*, by Messrs. De la Rue, B. Stewart and B. Loewy. This was followed by papers on sun-spot areas, &c., published in the same manner in 1867 and 1868. The results of these researches were also communicated to the Royal Society.

Of recent years Dr. Stewart's attention had been turned to the difficult problem of terrestrial magnetism and its variations. One of his last papers read before the Physical Society of London (of which he was in his second year of office as president at the time of his death) investigated the causes of the solar diurnal variation of the earth's magnetism. In his latest remarks, addressed to the Physical Society on November 26 last, he made reference to this subject, and hinted at the probability that before long many of its obscure phenomena would receive an explanation. The article on "Terrestrial Magnetism" in the new edition of the *Encyclopædia Britannica* was contributed by him.

Dr. Stewart was elected a Fellow of the Royal Society in 1862, an honour followed in 1868 by the award of the Rumford medal for the discovery of the law of the equality of the absorptive and radiative powers of bodies. He was president of Section A of the British Association in 1875 at the Bristol meeting. For two periods he acted as examiner in natural philosophy in the University of London, and he also examined for the University of Edinburgh and other examining boards.

When in Richmond, Dr. Stewart was churchwarden of St. John's Church, school manager, superintendent of the boy's Sunday-school, and generally an active coadjutor of the vicar, Canon J. D. Hales, in parish matters. He was interested, as is well-known, in psychical science, and was president, we believe from the first, of the Society for Psychical Research. The philosophic and speculative tone of his mind was well illustrated in the *Unseen Universe*, which he wrote in conjunction with Prof. P. G. Tait. This work, which appeared in 1874, excited a profound interest, and passed through many editions. In it the authors combated the view that science and religion are incompatible with each other, and contended, from a purely physical point of view, for the possibility of immortality and a personal God. As a writer of textbooks on physics, Dr. Balfour Stewart was very successful. Among these we may mention, in addition to his *Elementary Treatise on Heat*, *Lessons in Elementary Physics* (1871), *Physics* (1872), and *The Conservation of Energy* (1874). His style is characterised by simplicity of language, clearness of argument, and copiousness of illustration. Of his work on *Practical Physics*, written in conjunction with Mr. Haldane Gee, two volumes have already appeared—namely, those on "General Physical Processes" and on "Electricity and Magnetism." The third volume, on "Optics, Heat, and Sound," is in an advanced state of preparation.

At Manchester Prof. Balfour Stewart saw the establishment of the Victoria University, and took an active part in the arrangement of the academical curriculum. A. W. R.

CORRESPONDENCE.

THE CHÊDI ERA.

London: Dec 28, 1887.

I wish to bring to Prof. Kielhorn's notice another inscription, which seems to me to offer a new and independent test for fixing the initial date of the Chêdi era, as it gives the name of the intercalary month *prathma Ashâdha* in the Samvat year 958. I take this date to be recorded in the Chêdi era, (1) because the characters of the inscription are not so old as Vikrama Samvat 958 or A.D. 901; and (2) because the stone was found within the limits of the Chêdi dominions, at Besâni, on the old road between Ajaygarh and Jabalpur. The date of s. 958 of the Chêdi era corresponds with A.D. 1207, in which year the month of Ashâdha was intercalary according to my reckoning. A short notice of the inscription will be found in my *Archæological Survey Reports*, vol. xx, p. 101.

A. CUNNINGHAM.

THE PHOENICIAN GOD MALAKHUM.

Preston, Salop: Dec. 27, 1887.

In reference to the interesting observations of Mr. Pinches on a bilingual list of Assyrian gods (*ACADEMY*, December 24), I cannot help thinking that the Phœnician god Malakhum is to be referred etymologically to the word *malakh* or *malakhu*, "a sailor," whether that word be of Sumerian or of Semitic origin. The Phœnician name of the god may refer especially to the "god of sailors" or of ships, in which the Phœnicians were known to excel. With this idea one may compare the Pataeci of the Phœnicians—i.e., the dwarf figures of gods placed at the prows of their vessels according to Herodotus, or at the prows, as Hesychius and Suidas state. The god Malakhum, as a naval deity, would certainly be very appropriate in the case of a nation that was once "very glorious in the midst of the seas."

W. HOUGHTON.

SCIENCE NOTES.

WE learn that Dr. Klein's *Histology* is now being translated into Italian. It has already been translated into French, German, and Spanish.

PHILOLOGY NOTES.

THE forthcoming number of the *Babylonian and Oriental Record* (David Nutt) will contain the following articles: "From Chaldea to China: the Shifted Cardinal Points," by Prof. Terrien de Lacouperie; "The Indo-Scythian Deities," by Sir A. Cunningham; "Royal Egyptian Cylinder with Figures," by Mr. W. M. Flinders Petrie; "A Claim of Priority about Belshazzar," by Prof. E. and Dr. V. Revillout.

MEETINGS OF SOCIETIES.

THE SELDEN SOCIETY.—(Saturday, Dec. 17)

MR. JUSTICE WILLS in the chair.—The chairman, after expressing regret at the absence of Lord Chief Justice Coleridge, said that in the specimens of what they hoped to unearth from the records of the country, which were shortly coming out under the most competent editorship of Mr. Maitland, there were many things of real and substantial interest, not only to the lawyer, but to every

student of history. Few members of the profession were ever called upon in the course of their duties to consult the "Placita de Corona." He had had occasion to examine them more minutely than most members of the Bar; and he had found them to be full of most interesting matter, and to throw a remarkable light upon the early state of society and life in the United Kingdom. It would be found, for example, that boycotting was no invention of the nineteenth century. There had been discovered an amusing illustration of the practice put into operation against the Abbot of Lillerhall. The abbot complained that the bailiff of Shrewsbury had caused proclamation to be made in the town that none should be so bold as to sell to the abbot and his men any merchandise under penalty of 10s. One of the most remarkable discoveries which he had made on one occasion in the course of a very elaborate and prolonged examination of the "Placita," and which he established not only to his own satisfaction, but to that of the court, was that in our early history the sovereign ruled exactly as the subject does now, and was subject in all respects to the same incidents; and that some of what are now considered to be royal prerogatives were interesting survivals of rights belonging to the sovereign and subject in common, which were subsequently taken away from the subject. The volume which was shortly to appear had been translated into excellent English by Mr. Maitland, and the Latin text and translation would appear side by side. They hoped before long, also, to engage in the work of preparing a glossary of ancient legal terms which would prove of great value to the profession. When at the Bar he had experienced the great want of such a work. The first attempts of the society would be in the direction of common law antiquities; but in the course of time he hoped that records of a no less interesting character with respect to equity principles and procedure would be brought to light. The results of such researches would prove of value and interest, not only to the legal practitioner, but to the historical student. —The secretary read a letter from Sir Henry Ponsonby stating that Her Majesty had much pleasure in becoming patron of the society, and enclosing a subscription for the society's publications; and a letter from the private secretary of the Prince of Wales regretting his Royal Highness's inability to attend the meeting and expressing his willingness to become a member of the society. The secretary also announced that local secretaries had been appointed in the chief towns of the United States, and that measures were being taken to make the society's work known in France and Germany. From January 29th to October 31st the receipts had been £138 12s.—Lord Justice Fry, in moving the adoption of the report of the last meeting, said that a sub-committee had been appointed to consider what were the best means of preparing a glossary of legal terms which should assist those who desired to study ancient documents. It was a work of great labour, and would be one of great interest. All students had great pleasure in referring to Professor Skeat's admirable dictionary and to the great German and French works of Grimm and Littré. He trusted that the committee would receive offers of assistance in the work proposed. Different authors would have to be studied with minute attention, and a distribution of the work would therefore be necessary, as the work to be satisfactory must contain references to the authors by whom the different words were used. He was glad to find that the society was extending its *clients* not only in this country, but in America.—Sir Richard Couch seconded the motion, which was carried.—Mr. Hyde Clarke moved the re-election of the ten retiring members of the council—viz., the United States Minister, Lord Salisbury, Lord Derby, the Bishop of Chester, Lord Aberdeen, Lord Herschell, Lord Thring, and Lords Justices Cotton, Lindley, and Bowen.—Mr. Griffith seconded the motion, which was agreed to. Mr. F. K. Munton moved the reappointment of the executive committee, consisting of the Minister of the United States, Lords Justices Lindley and Bowen, Mr. Justice Stirling, and Mr. Justice Wills.—Mr. Montague Cookson seconded the motion, and it was agreed to.—Mr. Munton urged his fellow members of the solicitors' branch of the legal profession to do all they could to further the objects of the society, from whom valuable assist-

ance might be expected. He had taken the opportunity of drawing the attention of solicitors to the society, and he hoped that as a body that profession would aid the work in which they were engaged.—Mr. Griffith, after remarking that the secretary's statement showed that if a second volume was to be issued further funds would be required, moved that the law officers of the Crown be memorialised to bring before Parliament the desirability of having all the Parliamentary rolls translated and edited. In that way the work of the society would become better known and appreciated.—Dr. Pankhurst, in seconding the motion, said that the people of this country were growing more and more anxious to know from the *origines* of our history in what hands at particular periods the effective force of society was vested. Upon such questions the Parliamentary rolls would throw abundant light. In America the same curiosity existed, and the deepest interest was felt in the early records of this country. Lincoln's-inn and the other inns might make contributions to the society in furtherance of this object. The question referred to by the chairman—how in early times the Crown engaged in litigation—was only one of the many interesting constitutional and legal questions which might be elucidated by a publication of the Parliamentary rolls.—Lord Justice Fry said that Mr. Griffith and Dr. Pankhurst had raised questions of great interest; but the society could not yet do more than its own proper work; and if they undertook to enlarge the scope of their operations, they might find themselves overwhelmed. The work suggested would require large funds. He would suggest that the resolution should be slightly changed, and that the form of the resolution should be that the executive committee should be desired to consider the best means of approaching the government with a view to the publication of the Parliamentary rolls.—Mr. Stuart Moore, speaking from a long experience of the Treasury in connexion with the Record Office, said that the Record Commission had already lost so much money that the very name stunk in the nostrils of the Treasury. Though, therefore, it was desirable to keep pegging away at the Treasury, if any good was to be done it was absolutely necessary to formulate precisely what was wanted. They must proceed step by step, as to do at once what was required might easily cost £20,000.—The amended resolution was then agreed to.

FINE ART.

THE ANNUAL MEETING OF THE EGYPT EXPLORATION FUND.

THE fifth annual general meeting of the Egypt Exploration Fund was held on Thursday, December 22, in the large room of the Royal Society of Arts, John Street, Adelphi, Reginald Stuart Poole, Esq., LL.D., vice-president, in the chair. There were present Sir Charles T. Newton, K.C.B., vice-president of the Fund; Miss Amelia B. Edwards, LL.D., hon. secretary; Hellier Gosselin, Esq., secretary; General Sir Charles Wilson, K.C.B.; Sir John Fowler, K.C.M.G.; Henry White, Esq., First Secretary of the American Legation; T. H. Bayliss, Esq., Q.C.; Prof. Percy Gardner, Litt. D.; A. S. Murray, Esq., Keeper of the Department of Greek and Roman Antiquities, British Museum; H. Grueber, Esq., of the British Museum; M. Naville; R. N. Cust, Esq., LL.D.; Prof. Hayter Lewis; J. S. Cotton, Esq.; &c. The following, who were unable to be present, sent letters and messages expressing regret at their unavoidable absence:—His Excellency the American Minister; the Lord Wynford; the Very Rev. the Dean of Windsor, Trustee of the British Museum; E. A. Bond, Esq., C.B., Principal Librarian of the British Museum; Sir W. H. Gregory, K.C.M.G.; the Rev. Canon Liddon, and Herman Weber, Esq., M.D.

The proceedings were opened by the chairman, who announced various changes in the committee, the Rev. Canon Liddon, and Mr. Meggs (U.S.A.) being among the new

members. Mr. Gilbertson, the able and much valued hon. treasurer of the Fund, having retired in consequence of ill-health, Mr. Henry Grueber had kindly consented to become his successor; and M. Carl Hentsch, of Geneva, had been elected a vice-president. The chairman next referred to the important services rendered to the Fund by Mr. Bayliss, who had advised the incorporation of the Fund, and had, with infinite pains, prepared and superintended the drawing-up of the necessary articles of association, now nearly ready for signature. He then stated the order of business to be followed, and divided the work of the meeting under three heads: (1) the reading of the reports of the hon. treasurer and hon. secretary; (2) votes of donations of antiquities to various museums; (3) election of a president and various officers.

Mr. Grueber, hon. treasurer, then read his financial report for the year 1886-7, and submitted the balance-sheet of the Fund. Mr. Grueber stated that, thanks to the great exertions of the hon. secretary, of Mr. R. S. Poole, and of Dr. Winslow of Boston, hon. vice-president and hon. treasurer for the United States, the position and resources of the society were in a satisfactory state. The total expenditure for the year 1886-7 had been £1,510 6s. 10d. The particulars were as follows:—(1) Excavations on the sites of Bubastis and the city of Onias, £551 2s. 6d.; (2) publications, including part of the account for *Tanis I.*, and the whole account for *Naukratis I.*, £495 14s.; (3) balance of Student Fund paid to Mr. Griffith, £221 12s. 7d.; (4) package, carriage, and repairs of antiquities, £70; (5) rent of office, secretary's honorarium, printing, stationery, postage, &c., £171 17s. 9d. The total receipts for the corresponding period were £1,718 13s. 11d., the chief items being as follows:—Subscriptions, £1,594 4s.; (2) sale of publications—*i.e.*, *Pithom*, *Tanis I.*, *Naukratis I.*, &c., £110 4s. 6d.; other sources, £14 5s. 5d. As compared with the financial report of last year (1885-6) the results were as follows:—In 1885-6 the gross expenditure was £1,786 11s. 2d., as against £1,510 16s. 10d. for 1886-7; and the receipts for 1885-6 were £2,160 5s. 2d. as against £1,718 13s. 11d. for 1886-7. As regards the American subscriptions, £600 was received in 1885-6; whereas the amount received in 1886-7 (including Miss C. Wolfe's donation of £200 and £50 from the University of Chautauqua) came to £860. In the receipts from sale of publications there was an advance of £36 16s. 4d. upon last year's revenue from the same source. A comparison of the cash-balance for 1885-6 and 1886-7 shows for the former year the sum of £1,880 6s. 6d., and for the present year £2,310 16s. 2d. The available balance at the bank, as declared on November 30, 1887, was £2,124 8s. 1d.; and upon this balance the budget of the society must therefore be framed for excavations, publications, &c., for the coming year, 1887-8. Forecasting these expenses, according to custom, it was proposed to devote the sum of £740 to the completion of the excavation of Bubastis under the direction of M. Naville; and a further sum of £200 to Mr. Griffith for the purpose of exploring and conducting a separate excavation in the Delta. As regards publications, *Tanis II.* and *Naukratis II.* will cost £350, *The City of Onias* £150, and the reprint of *Pithom* (third edition) £80. For the last-named work orders have already been received to nearly double the amount of the estimated cost of printing and publishing.

At the close of the hon. treasurer's report, the chairman observed that it was impossible to forecast the expense attendant on the removal of large objects from Bubastis, of which many were certain to be found; and

that such expense might amount to £400; therefore, the subscribers desired to secure sculptures for the British Museum, the Museum of Fine Arts, at Boston, and the provincial collections, they must give support, and endeavour to extend the subscription list by all means in their power.

Miss Amelia B. Edwards, hon. secretary then read her report, which, as on other occasions, divided itself into two parts, retrospect and prophecy; the former dealing with the work of the past season, and the latter with the plans of the society for the season about to begin. Her present task, however, much lightened, since M. Naville himself to lecture upon his own discoveries following evening. Touching briefly on the finding of the cemeteries of the city of Onias and the unburying of the majestic ruin the great Temple of Bubastis, Miss Edwards went on to say that not more than one-third of this magnificent structure had as yet been uncovered, and that two more months work it was calculated, complete the excavational operations would be resumed in February. In the meanwhile, Mr. Griffith, their past and promising student, had already started and was by this time in Egypt, where he proposed to make an archaeological survey of the coast-line of the Delta, and would conduct an excavation at some place of interest after which he would probably join forces with M. Naville at Bubastis. The society had retained the services of Count d'Hulst, to whom the Egypt Exploration Fund owes no more able and devoted officer. It was Count d'Hulst that had been entrusted with the onerous and ungrateful task of superintending the removal of the colossal objects discovered at Tell Nebesheh in 1885, by Mr. Fowler and Mr. Griffith; and he had carried out his work successfully through in the teeth of great difficulties, and at an uncounted cost of personal fatigue, privation, and suffering. Turning to home news, Miss Edwards rejoiced to be able to report that the cause of the Egypt Exploration Fund was becoming more widely known and more warmly appreciated throughout the kingdom. The staff of provincial local hon. secretaries was rapidly increasing, each local hon. secretary representing the centre of a district; and it was much to be desired that a similar staff of voluntary workers should be established in London and its neighbourhood. Miss Edwards said she would soon see a local hon. secretary in every metropolitan postal district, and concluded with an appeal to those present for further co-operation in a noble work which was its own "exceedingly great reward."

The business of voting donations of antiquities was next taken in order, and the chairman called upon Sir John Fowler to propose the donation to the British Museum.

Sir John Fowler said it was fitting that he should give some description of the objects about to be presented to our great national collection, and state their value and importance. These objects—not counting numerous small antiquities—were (1) the sculptured throne of a colossal statue of Userhatep III., of the XIIth dynasty, in red granite, giving the earliest known example of the mythical group of the two Niles, which belongs to a style and school not as yet adequately represented in the British Museum. (2) a fine colossal sarcophagus in grey granite belonging to a priest and high functionary of the city of Am, apparently of the XXVIth Dynasty, which as a piece of sculpture is executed in the highest style of the Saite period of art, and bears a very remarkable religious inscription. Also (3) some thirty Greek painted and inscribed vases from Naukratis, dating from about 600 B.C. to 650 B.C.

(-4) a limestone archaic statuette of Apollo the hunter-god, from Naukratis, bearing a Greek inscription down the leg—very curious and interesting.

The motion was seconded by Mr. Bayliss, C., who pointed out, as the radical difference between this society and other societies, that the Egypt Exploration Fund was a body, not of recipients, but donors; and that they unearthed priceless objects in no spirit of acquisitiveness, but in order to give them away.

The motion was carried unanimously.

Sir Charles T. Newton, in returning thanks on behalf of the Trustees of the British Museum, regretted the enforced absence, through indisposition, of Mr. Bond, the principal librarian, and added that the unanimity of the vote just passed had given him particular pleasure, because it showed that the public understood and in furthering the work of the Fund they were making a good investment for the national collection. He was, however, persuaded that, notwithstanding "bad times," the British public might give much more substantial support than it has hitherto given.

General Sir Charles Wilson, who found himself unexpectedly called upon to second Sir Charles Newton, spoke of the British Museum as the pride and glory of the land, and hoped that the Egypt Exploration Fund would carry on its work with unabated vigour till the Delta was thoroughly explored.

Mr. Alexander S. Murray, Keeper of Greek and Roman Antiquities at the British Museum, returned thanks for his department, and said that the Museum was well content with the liberality of the Fund. He referred to the interest of the painted vases of Naukratis, to their surprising beauty of execution and the boldness of the designs. This society was also bold in its designs, and the British Museum rejoiced to owe to the labours of the Egypt Exploration Fund the recovery of our lost knowledge of Egypt's relation to Greece and Rome.

The donation of antiquities to the Museum of Fine Arts, Boston, U.S.A., was moved by Miss Amelia B. Edwards, who pointed out that the American subscription was this year equal in amount to the sum subscribed on the English side of the ledger; and that the Fund could not do too much to prove itself worthy of that large support. It was not merely for support in a pecuniary sense that the Fund had reason to be grateful; but also for the trust which their American subscribers reposed in them in the matter of distributions, and for their personal sympathy. Miss Edwards then said how much her own labours had been lightened by the cordiality of her American correspondents, and how much she felt she owed to the moral support of their indefatigable and estimable American vice-president, Dr. Winslow, of Boston. Nor was this all. The Fund had unknown friends as sympathetic as the known. An anonymous donor, who gave twenty-five dollars two years ago "In Memoriam, C. G. G.," had continued that subscription ever since. The identity of this anonymous sympathiser (a lady) had but quite recently been discovered; and Miss Edwards would respect her desire to remain unknown, merely adding that her sympathy is two-fold, and that she annually gives as much to the fund under her name as she gives un-named to the memory of our hero who fell at Khartoum. Miss Edwards then proposed that, in addition to minor objects, the following works of sculpture should be presented to the Museum of Fine Arts, Boston, U.S.A.: (1.) A seated statue, of heroic size, of Rameses II., in black granite, found at Tell Nebesheh (the site of the city of Am), in 1885; (2.) A headless black granite sphinx, of the Hyksos period, formerly inscribed on the chest with the

ovals of a Hyksos king, and re-engraved with the ovals of Rameses II., being also inscribed with the names of various other kings, including that of Setnekt. This sphinx was likewise found at Tell Nebesheh. (3.) A squatting statue in black granite of the style of the XIIIth Dynasty, reworked about the head, and inscribed with names and titles of Prince Mentuherkhopeshaf, "General of Cavalry of his father," King Rameses II. This very interesting piece was found during the present year at Bubastis. (4.) A selection of Greek vases from Naukratis.

The resolution was seconded by Mr. J. S. Cotton, who said that he performed this office with especial sympathy, because of his intimate knowledge of the intelligent treatment of learned subjects by various American newspapers. He would, however, name only three: *The Nation* of New York, *The Literary World* of Boston, and *The Critic* of New York. The two former had been uniformly friendly to the work of the Egypt Exploration Fund; and the latter, which had formerly erred in following a false light, had happily been brought back to the true faith by Dr. Winslow. Mr. Cotton then referred to the American journals of archaeology and philology, which he defined as being of a higher order of merit than any publications bearing similar titles in this country. The American School at Athens had preceded our own; and the work of the American Archaeological Society, and of the American explorers along the coast of the Mediterranean, were in every sense an honour to the United States.

The motion was carried unanimously.

Mr. Henry White, First Secretary to the American Legation, regretted the absence of his chief, the American Minister, and that of his former chief, Mr. James Russell Lowell, vice-president of the Fund; but it gave him pleasure to return thanks on the part of his country on the present occasion. He congratulated the society upon its successes. The fund not only solved important problems of ancient history, but it also formed a link between the two great English-speaking nations of the world.

Mr. William Fowler then moved the third resolution: "That a selection of Egyptian and other antiquities made by the Committee be presented to the Museum of Sydney, N.S.W.; the University of Chautauqua, in the State of New York, U.S.A.; the Ashmolean Museum, Oxford; and other museums." Mr. Fowler dwelt in terms of warm appreciation upon the generosity of the American subscribers to the fund, which shamed the English body, for if they had been so liberal, we evidently had not given as freely as we ought to have given. He went on to say that there was no diminution in the interest of the work done by the fund, which interest was fed not only by the finding of new objects, but by its connexion with the great subjects of religious thought and history.

The Rev. W. MacGregor, local hon. secretary for Tamworth, seconded the resolution, and briefly referred to his own approaching visit to Egypt, where he hoped to assist M. Naville as an amateur photographer at Bubastis.

The resolution was passed unanimously.

Mr. R. N. Cust, hon. secretary of the Royal Asiatic Society, seconded the resolution. Contrasting the Egypt Exploration Fund with other societies, he remarked that in the present case subscriptions were really investments; whereas, when a subscription was paid to any other society, the payee, as a rule, saw the last of his money. In giving to the Egypt Exploration Fund one was, however, sure to see the money return in another and an improved form. He knew Egypt well, and felt that he could not speak too highly of the work of this society.

The Chairman then moved that the Act of Incorporation of the Society be authorised by the meeting; and added that the Act would require to be passed by a special general meeting.

Being called upon to give some particulars, Mr. Bayliss, Q.C., explained that the Companies Acts authorised the registration of such societies as this without the addition of the word "limited"; and that the Board of Trade had practically passed their scheme, which would, probably, be sanctioned in about three months.

The Chairman next proposed that Sir John Fowler, K.C.M.G., be elected president of the Egypt Exploration Fund, and that Miss Amelia B. Edwards, hon. secretary, and Mr. C. Hentsch, of Geneva be elected vice-presidents. He also read over the names of the retiring members of the committee, and those of the new members recently elected. Referring to Sir John Fowler, he said that the necessary qualifications of a president of the Egypt Exploration Fund were three in number. He must be eminent in either literature or science; he must know Egypt; and he must be a friend to the Fund. Sir John Fowler possessed all these qualifications. He was eminent as a man of science; he was familiar with the land of the Pharaohs; and he had been a liberal friend to the society. To find a successor to the late Sir Erasmus Wilson was no easy task, and Sir John Fowler's modest opinion of his own merits had added to the difficulty; but, happily, his objections to election had not been allowed to prevail.

The motion was seconded by Miss Amelia B. Edwards, who protested against being called upon to speak to a motion which included an honour to herself. She was very grateful to her learned colleagues for desiring to promote her, but she continued nevertheless to be the hon. secretary and servant of the society. Miss Edwards then referred in feeling terms to the late Sir Erasmus Wilson, and owned that she had long been reluctant to see another in occupation of his empty chair. But the time had come when it was impossible to leave that chair vacant; and she could only say that there was no one whom she would so gladly see occupying, or who would occupy it so adequately, as her eminent friend, Sir John Fowler.

Sir John Fowler was then elected unanimously, and, taking the chair vacated by Mr. Reginald Stuart Poole, delivered his presidential address.

Referring to the circumstances of his acceptance of the honour now conferred by the society, he said that he had at first declined it on what he believed to be unanswerable grounds; but that to his humiliation, he found that his letter—which he fondly conceived to be a very good letter, and entirely conclusive—produced no impression upon the committee, who informed him that his objections were illusory, and that he perfectly fulfilled the theoretical requirements of a president. It was quite true that he had been a donor to the fund, and it was equally true that he knew Egypt well. Twenty years ago he went to Egypt as an engineer, and was shown over the Suez Canal by M. de Lesseps one year before its completion. One year later, he had the honour of accompanying their Royal Highnesses the Prince and Princess of Wales upon their trip up the Nile, upon which occasion the party was personally conducted by the late Mariette Pasha, who spoke to him (Sir J. Fowler) on the obscure subject of the great gaps which divide certain groups of Egyptian dynasties, and expressed his belief that in process of time discoveries would be made which should bridge those gaps. This bold prophecy was already in course of fulfilment, thanks in part to the work of the Egypt

Exploration Fund. He then reminded his hearers that the remaining obelisk now standing in front of the pylons of the Great Temple of Luxor is the property of the British nation; and he related how H.R.H. the Prince of Wales went with him one morning to view the obelisk and consider the question of transport. But while there his Royal Highness, with characteristic good taste, recognised that this noble monument was most fitly seen in the place for which it was made, and decided to leave it where it is, and where it will be admired by travellers for ages to come. Very different was the case of the Alexandrian obelisk, which lay half buried in the sand, and which, had it been left there much longer, would surely have been doomed to destruction. Sir Erasmus Wilson removed and saved it, and to him we owe its presence on the Thames Embankment. Sir John Fowler then went on to say that the work of the Egypt Exploration Fund had been one stream of success from the first year of its establishment to the present day. The discovery of Pithom by M. Naville; the discovery of Naukratis by Mr. Petrie; the discoveries of Mr. Petrie at Tell Nebesheh and Tell Defenneh; and the brilliant work done by Mr. Griffith and Mr. Ernest Gardner were known to all. The discoveries of the past season were more than equal to those of preceding campaigns, and the completion of the excavation of the Great Temple of Bubastis promised magnificent results in the season about to begin.

The proceedings terminated with votes of thanks to the president, to Mr. Reginald Stuart Poole, and to the Society of Arts for the use of their rooms.

[M. Naville's lecture on "Bubastis and the City of Onias," delivered in the same place on the following evening, will be given in next week's ACADEMY.]

CORRESPONDENCE.

ROMAN INSCRIBED AND SCULPTURED STONES.

South Shields: Dec 16, 1887.

Mr. Clayton has recently made some alterations in the farm buildings at Caerworan, and during the operations a Roman inscribed stone and fragments of two others were found in the walls. The former is a centurial stone of abnormal length—3 ft. 6 in.—with the inscription

▷ FELICIS
P XXP

in an ansated sunk panel 10 in. long in the centre of the stone.

In addition to the handsome gift, by Sir Edward W. Blackett, of the Roman inscriptions, &c., to the museum of the Newcastle Society of Antiquaries, referred to in my letter in the ACADEMY of December 10, the two large altars to the god Antenociticus (each about 4 ft. 6 in. high), which have stood, since their discovery, in the *sacellum* at Benwell *per lineam valli*, so well known to tourists along the wall, have, owing to their being damaged by exposure to the weather, been kindly presented by the owner, Mr. Rendel, to the Blackgate Museum. Cement casts will take their place at Benwell.

ROBT. BLAIR.

THE WALLS OF CHESTER.

Liverpool: December 24, 1887.

I much wish that the walls of Chester, at the points recently laid open on the north face, agreed with the description given by Mr. Blair from M. de Caumont's *Abécédairé d'Archéologie*, though even then they would be distinct from the walls of a Roman castrum.

It is not for a moment denied that very

massive buildings, such as aqueducts, &c., were made of vast stones close jointed and without mortar. But the walls of a castrum were different; and in this particular instance at Chester, though *externally* the large stones are in places as close fitting as Mr. Blair states, the interior of the wall is composed of these large stones loosely put together, much resembling a field wall on a large scale. A visit to the excavations on December 19 revealed the fact that the same construction is met with in the later operations as in the former. There was, when first laid bare, no *internal* face to the wall, the stones of which projected in a most irregular manner; and it seems evident that, if the bank of earth had not been raised against it on this side, the wall would long ago have fallen to pieces.

A number of inscriptions have been found in the more recent excavations, but as yet have not been allowed by the authorities to see the light.

W. THOMPSON WATKIN.

NOTES ON ART AND ARCHAEOLOGY.

MR. A. H. SMITH, acting as deputy professor for Sir Charles Newton, will deliver a course of six lectures at University College, London, next term on "Greek and Roman Engraved Gems." The first lecture of the course—on "The Gems of the Greek Islands, and the Civilisation of Mycenae"—to be given on Friday, January 13, at 4 p.m.—will be open to the public without payment or ticket.

MR. CHARLES GREEN has made a great deal of progress with his drawing of Mr. Turveydrop's Academy, which cannot fail to be his principal contribution to the Spring Exhibition of the Institute. The institution in question was situated—Dickens informs us—in Newman Street, and the large dancing-room was built over stables at the back of the house. The room itself, dating probably from the end of the last century, was still decorated when Mr. Turveydrop's pupils—or rather, Mr. Turveydrop's son's pupils—assembled in it with the lyres which had formed a part of the original scheme. Happy possessors of the first edition of *Bleak House* will recollect Mr. Hablot Browne's treatment of the dancing class. Everything that Mr. Browne did was clever, and the design of the dancing class is no exception to the rule. Still, from the point of view of subject, "Phiz" made the mistake of making the pupils too young—in his drawing they are quite little children—and from the point of view of accuracy, he neglected to permit us to trace in the features of the elder Mr. Turveydrop that resemblance to George IV. on which the elder Mr. Turveydrop prided himself. Mr. Charles Green has a bevy of graceful damsels, in the costume of the decade between 1830 and 1840—which must be the period of the story; and, with his back to the mantelpiece, surveying the scene with pompous self-satisfaction, he has a Mr. Turveydrop whose exterior recalls that of Mr. Turveydrop's late lamented sovereign. The younger Mr. Turveydrop has the dwarf violin with which the dancing master of the day used to be provided. The drawing will have the complete finish—it has already the quiet humour—characteristic of Mr. Green.

DURING the past year Mr. William Muir has produced for his subscribers, through Mr. Quaritch, fifty copies each of Blake's *America* and *Europe* during the past year; and he hopes to issue his *Urizen*, *Song of Los*, and *Gates of Paradise* in 1888.

THE STAGE.

MR. WILSON BARRETT'S RETURN.

THOUGH the production of the "Globe Ladder" at the Globe last week may not have played any conspicuous part in making intimate the union some of us desire between the stage and high literature, it has certainly served the purpose of bringing back to the leading actor and actress in characters so tremendously suited to them—it has re-introduced us to a company excellently organised and complete for the purposes for which it was brought together. When an actor so popular as Mr. Barrett re-appears after so long an absence, the precise nature of the play is a quite so important a matter as it is upon occasions which are in themselves less interesting. The public wanted to see Mr. Wilson Barrett, Miss Eastlake, Mr. George Barrett and the rest of the troop again; and so long as there was afforded due opportunity for the display of their art, the literary merit of the piece in which they appeared was rather of secondary consideration. Mr. Wilson Barrett has made his reputation both by acting in melodrama and by acting in high poetic plays; and if for the moment he has elected to appeal to us in a part which recalls the "Silver King" rather than in a part which recalls or vies with Hamlet—Macbeth and Coriolanus, by the bye, are surely within his range, and should some day be attempted—we may rely on his not long forgetting the due development of the more strictly intellectual and poetic side of his art. Indeed, I am delighted to be told that a revival of "Hamlet" itself—at *matinées* once or twice a week—is to be undertaken somewhat soon. The return of Mr. Barrett, then, means not simply the return of the successful interpreter of more or less sensational and domestic drama, it means the re-establishment, by a highly intellectual actor, of a place of entertainment and instruction, to which even the most fastidious playgoers must enjoy to resort. This is a time at which Mr. Barrett's services in the past—his services to the stage and his personal achievements in his art—have especial need to be remembered. He has a very large and influential public to welcome him with cordiality. Lovers of thoroughness and completeness in theatrical work are glad to see him back.

The actor himself has had a hand in the composition of the new play. The secrets of collaboration—whether they be of Beaumont and Fletcher, of Meilhac and Halévy, of M. Erckmann and M. Chatrian, of Mr. Besant and Mr. Rice—are not to be too curiously enquired into; but doubtless it is the practical stage experience of Mr. Barrett, the sense of construction which that develops, and his unsurpassed knowledge of what an audience will respond to, here, and in America, and in the North, that have given value to his collaboration with a writer not only so facile, but so observant as Mr. Sims. The two workers have produced together what is more or less of a melodrama. But of melodramas or so-called sensational pieces there are at least two kinds: the kind that relies for its success wholly upon the dexterous re-arrangement of ancient material, the continued presentation of the hair-breadth 'scapes and moving incidents by flood and field; and the kind that,

ile claiming a generous allowance of these ngs, makes provision also of fresh char-er, and fresh experience, and sets forth the ry in a dialogue from which verve and mour are not banished. It is to this ter kind that the "Golden Ladder" belongs. is a good instance of this latter kind. It surely a fresh thing on the stage, though it not a fresh thing in a novel, to make a eral clergyman the hero of the story. en, in the characters of Severn, Peranza, d Jim Dixon, there are separate studies of llainy — of which Peranza, a Greek ad-nturer (the least pronounced) is the most ccessful. Then, again, cockney humour d cockney generosity of thought and deed e studied afresh in the persons of Mr. and rs. Peckaby, the suburban pastrycooks— r. Sims, of course, being rather of Dickens's inion than of Mr. Gilbert's as to the lative amounts of virtue claimed as a birth-ght in—so to put it—Grosvenor Square and e Dials. Matching the realism of several nong the character-sketches is the realism the scenery. Hampstead Heath on a inter's night — a part of it which was lustrated more than once by the brush of onstable—is here newly studied by an ex-llent scene-painter, Mr. Hann. And Mill-ank is presented with a fidelity to which sör Griffiths — its historian — would, I any, not decline to bear witness. Much, hen, has been done intelligently for the uccess of a piece constructed mainly, it is rue, upon familiar lines.

It is a distinct merit of the "Golden Ladder"—as regards its performance at the Globe Theatre—that it offers to the leading actor, the leading actress, and the most sympathetic comedian of the company, parts which bring out admirably all of the qualities these artists can display in a piece of the kind. Mr. Wilson Barrett's light was rather hidden in "Clito"; Miss Eastlake's rather hidden in "Claudian." Here the talent of neither is in any degree eclipsed. Mr. Barrett's clergyman is a being we should all of us accept. Whether he vows allegiance to the nine-and-thirty articles; or whether he talks of the church as "she," and is a stickler for ritual; or whether he holds that modern Christianity consists in providing Whitechapel with classical music, nobody greatly cares, because, in any case, he is a manly fellow, a friend, and a patriot. The different phases of his character—the priest as a lover, the priest as an Englishman, the priest as the succourer of *soi-disant* suburban workmen, the priest as husband of a woman wrongly accused of crime of violence—Mr. Barrett exhibits with equal naturalness and force. He does a very great deal (both as to look and bearing) as well as it is possible to do it—better than it is wont to be done; and that includes what one cannot but feel to be the most difficult thing of all—the reading of the letter from Frank Thornhill's imprisoned wife. In real life nobody would have to read such a letter aloud: nobody could do it. Life—even the most unfortunate and adventurous — sometimes spares people the difficulty which the exacting stage insists on their surmounting.

Miss Eastlake's love scene is full of natural touches, such as instinct suggests to rightly endowed womanhood. They have their

charm—and she looks admirably; but the actress is to be praised the most for her performance of the scene behind the prison bars. The imagination must be a potent one which deals successfully, and not conventionally, with this situation. Visits to Millbank, under special protection, may afford hints, but cannot accomplish the work. To Miss Eastlake's art belongs the credit of conducting such a scene with truth and a pathos which moves. Mr. George Barrett's Peckaby—the sunshiny tradesman with a speciality in "cough drops" and a general reputation upon Hampstead Heath on a Bank Holiday—makes the brightness of the play—gives it the relief it requires—and is an excellent foil to the various and pertinacious villainies which Mr. Austin Melford, Mr. Cooper Cliffe, and Mr. Charles Hudson (the Tetrarch who, they thought in America, resembled Mr. Irving) perpetrated with so much of energy, so much of artistic goodwill. And the quite minor parts are played with ability—not with genius that would be wasted, but with the capacity which the oversight of a manager like Mr. Wilson Barrett has always (let it be said to his credit) perceived to be necessary. The piece lacks nothing that adequate interpretation could bestow upon it.

FREDERICK WEDMORE.

MUSIC.

TWO MUSIC COMPOSERS.

Early Letters of Robert Schumann. Translated by May Herbert. (Bell.) These letters, originally published by his wife, commence with the school days at Zwickau, the composer's native town, when he was learning Homer and Sophocles. The letters to his mother are particularly attractive. His love, respect, and veneration for her are reflected in every line. The one on a "Mother's Love" is a little poem. The dull life and dark end of Schumann come strangely to one's mind on reading the lines in which he speaks of the debt which he owes his mother for preparing for him "a bright, cloudless future." The letters from Heidelberg, Switzerland, and Italy contain many graphic descriptions of persons and things; and sage, and, at times, melancholy remarks, which one would hardly expect from a boy still in his teens. In a long letter to Wieck, written at Heidelberg in 1829, we see how soon in life he became an ardent admirer of Schubert—"my only Schubert." "Which way to choose" was a difficult problem for him to solve at the age of twenty. With confidence, not conceit, he says: "My genius points towards art." Again, in another place, he writes: "If I were to stick to law, and become a clerk, I should shoot myself for weariness." Of special interest to the musical reader are the letters in which Schumann mentions his own compositions. With reference to an unfavourable criticism of his *Intermezzo* by Reilstab, he remarks: "Opposition only strengthens one." He was right; but if a man happen to be foolish, opposition may only strengthen his folly. It is the strong man who profits by antagonism. The last part of the book contains extracts from letters to Clara Weick, from 1837 to 1840, the year of their marriage. It is scarcely necessary to add that they are deeply interesting. We will close this brief notice by two short quotations: the one concerns the man, the other the artist. He says, speaking of Jean Paul's "Flegeljahre": "When you come to this passage: 'I say, Walt, I am sure I love you better than you love me.' 'No,

screamed Walt, I love you best,' then think of me."

And again:

"Don't be afraid, my dear Clara, you shall live to see my compositions come into notice, and be much talked about."

The translator deserves high praise for the clear and easy manner in which she has discharged her task.

Johannes Brahms. By Dr. Hermann Deiters. (Fisher Unwin.) The author of this book claims a thirty-one years' acquaintance with Brahms, and may, therefore, be naturally expected to write something worth reading. And we find, indeed, that he has thoroughly studied the composer's works; and, while entertaining the highest opinion of Brahms, never allows his enthusiasm to interfere with his judgment. He perceives in the master's early period a "lavish expenditure of strength," and later on intellect seems to him sometimes to outweigh imagination. He discovers even in the third Quartette "certain affectations of obscurity." Then, again, he prudently remembers that he is dealing with a composer whose race is not yet run; so he adopts the tone of an advocate rather than of a judge. The biographical part of the work is extremely short, for the simple reason that Brahms' life has been altogether uneventful. Dr. Deiters naturally commences the artistic career of Brahms by giving Schumann's famous "New Paths" article, which appeared in the *Neue Zeitschrift für Musik* in 1856, hailing the young composer as "one of the elect." He explains the profound impression made upon Schumann by the fact that Brahms was, from the first, no mere imitator but a distinct individuality. The pause in Brahms' artistic career after his Op. 10 in 1856 is remarkable. His next work, the Piano-forte Concerto in D minor, was not produced till 1859. It was a time of study and meditation. The two Serenades for orchestra (Op. 11 and 16) are justly described as neglected. We wonder that Mr. Henschel has not revived them. Dr. Dieters speaks of Brahms' peculiarity in grouping variations, and giving them a closer relationship. This he certainly did, but Beethoven was the pioneer. With reference to the German Requiem, which he rightly describes as Brahms' grandest effort, our author says: "The composer alone can say if the impulse was due to personal experiences." We cannot name our authority, but we have always understood that the work was written while Brahms was mourning his mother's death. Dr. Dieters is very enthusiastic about Brahms' songs, which are indeed the finest since Schumann. He reminds us how much Brahms recalls Schubert in charm of melody, Schumann in truth of detail, and Franz in neatness of elaboration, but adds that he is still "independent and original." A true remark, and well expressed. The book has been well translated by Rosa Newmarch, with the exception of a somewhat confused sentence on p. 25. The German appeared in 1880, so the lady has added a chapter giving a brief account of Brahms' latest works. She speaks of the Fourth Symphony as first performed at Meiningen under the direction of Dr. Bülow and Brahms himself. We cannot understand how both can have directed the first performance. Again, concerning the recently published Sonata for pianoforte and violoncello (Op. 99), she says: "That a work in F major should have its slow movement in F sharp, is, we believe, without parallel in music." We would remind the lady of Schubert's Fantasia in C (Op. 15), the slow movement of which is in C sharp minor. At the end of the volume is a complete catalogue of Brahms' works.

J. S. SHEDLOCK.

NOTES OF FRANZ LISZT IN YOUTH.

EXTRACTED FROM A CONTEMPORARY JOURNAL.

(Written November, 1832, to March, 1833.)

Hotel Westminster, Rue de la Paix, Paris.

"November 14.—We had the pleasure of hearing Liszt, the celebrated pianiste, perform in a private room. We were as much astonished as delighted with his playing, which differs from anything we ever heard. He appears an extraordinary being, and full of talent, independent of his musical genius. He has fine features and a most expressive and constantly varying countenance; but looks delicate, as if his mind were too powerful for his frame. When at the pianoforte, he seems completely abstracted from this world and its concerns, and transported to an ideal world of his own. His memory or imagination appears to supply him with some tale of interest or romance, which he clothes in a musical garb; and doubtless music speaks as clearly and intelligibly to his mind as painting or poetry does to that of others; indeed, before hearing him, I had not imagined that anything but the human voice could so express deep feeling.

"November 17.—We went to meet Liszt a second time, and found him extremely complaisant and accessible. He played from memory Weber's 'Invitation à la Valse,' which he called 'un de mes chevaux de bataille.' He supposed it to have been composed under the influence of jealousy; and no language could better have described sudden transitions of feeling, from anger to despair and gloom, with intervals of softer emotions, than did his playing. It was wonderful; and his countenance changed with each expression of the music, being at times quite farouche and wild, as if he had been really actuated by the passions he was illustrating. He afterwards played a number of variations upon a given subject, and then entered into conversation. He talked of his own talent and that of others, speculated upon the nature and exciting causes of genius, and gave us a very interesting insight into his own character. I should think he described himself exactly when he said, 'Si j'étais cordonnier, je ferais les souliers avec passion.' In the evening we met the Comte and Comtesse de Boissey, M. de Lagny, and M. de Gioray, all of whom belonged to the best Parisian society. M. de Lagny told me that Liszt at thirteen was as wonderful as he is now at twenty-two; and that, though music was his reigning passion, his talents were extraordinary to whatever he applied them. As an instance of their being so considered, he mentioned a remark made by the Italian singer, Catrucco, who had seen him in his childish days, and which was as follows: 'Quand j'ai vu Liszt, je me suis dit "Voilà un enfant," quand je l'ai entendu parler, j'ai dit "Voilà un homme," quand je l'ai entendu jouer, j'ai dit "Voilà un Dieu!"'

"On the 12th of March we went to a concert given jointly by Liszt and Manuel Garcia, and heard some fine music for full orchestra, and some distinguished solo performers; but none of them were so extraordinary or full of interest to me as that of Liszt. It gives one a sort of melancholy feeling to hear and see him play that one can with difficulty shake off. He is much wasted away since we first saw him, and his mind evidently wears out his body. When first he made his appearance this evening he seemed so languid as scarcely to have the power of moving, and the first few notes he struck partook of this languor; but, when once his fingers are on the instrument, his genius obtains the complete mastery over his frame, and he is as entirely absorbed and insensible to what is passing around him as a person in a feverish dream. Indeed, I doubt whether a kind of temporary insanity does not come over him; for at times the fury with which he strikes the pianoforte, and with which his whole countenance and demeanour correspond, resembles that of a person fighting with some dreadful phantom—and then a change comes o'er the spirit of his dream, and the expression of his countenance and the mournful shake of his head are most touching. He is a most interesting being, but one little fitted to encounter the hardships or transact the business of the world he lives in. We heard that he was in a state of complete exhaustion after his performance of this evening."
